is approached from the north end of the city, and is located in close proximity to that famous historical spot known as "McCulloch's Leap." The grounds are the property of a private company, and are pretty well filled at present writing. They contain the burial places of many of our oldest and most respected citizens, and, to the penetrative and reflective mind, the whiling away of an hour here is fraught with deep interest. Numerous impressive, familiar and even quaint epitaphs are here found, with a very large variety of imposing designs in monuments, tombs and headstones.

TWO SMALL GRAVEYARDS,

almost adjoining Mount Wood, we were informed were the burial places of the Jewish persuasion; but they present no particular features calling for special mention.

THE CATHOLIC CEMETERY,

which is located just a little beyond Greenwood, is a delightful spot, with a memorial chapel in the centre, a full account of which has already been given under the head of "The Catholic Church and Associate Institutions."

THE RED MEN'S CEMETERY OR BURIAL GROUND

is on the side of Wheeling Hill, is high and dry, orderly kept, and seems to be freely patronized—not alone by members of the order, but friends outside.

CHAPTER XXXVIII.

EDUCATIONAL FACILITIES, THE LOCAL PRESS AND PUBLIC BUILDINGS.

EARLY SCHOOLS AND SCHOOLING—DAWN OF THE LINDSLEY INSTITUTE, ORIGINALLY KNOWN AS THE "LANCASTERIAN ACADEMY," WITH A WORTHY TRIBUTE TO THE BENIFICENT DONOR—A HISTORY OF THE "LANCASTERIAN SYSTEM" AND REMINISCENSES OF OLD TIME SCHOOL DAYS—THE INSTITUTE TO-DAY—SCHOOLS IN 1839—WHEELING YOUNG LADIES' SEMINARY—FRAZIER'S NATIONAL BUSINESS COLLEGE—OUR PRESENT ADMIRABLE FREE SCHOOLS—THE LOCAL PRRSS OF THE CITY, INCLUDING THE "INTELLIGENCER," "REGISTER," "SUNDAY LEADER," "DEUTSCHE ZETIUNG," "SUNDAY NEWS-LETTER," "SATURDAY EVENING JOURNAL," &C.

FROM the earliest days of Wheeling's progression, she has never lacked in educational facilities. It has ever been —from those remotest days when twos, threes, and half dozens assembled under humble roofs to digest the old United States Speller and English Reader, without the slightes ambition to master what we now call the higher branches—that Wheeling has kept fully apace with the times in the provision of school facilities for her rising generation. And we believe ourselves fully within the bounds of accuracy when we say that her educational institutions of to-day are equalled by few cities of like magnitude in the nation. Many have been the quaint stories, told to us with a chuckle by old settlers, during our canvass for information, though, for the most part, they have hardly savored sufficiently of history to merit preservation in a work of this character, hence we insert only such as may convey interesting information, while none the less seasoned with eccentricities and humor.

LINDSLEY INSTITUTE—ORIGINALLY KNOWN AS THE LANCASTERIAN ACADEMY—WORTHY MUNIFICENCE OF A NOBLE CITIZEN WHO HAS IMMORTALIZED HIS NAME—FOUNDING OF THE PRESENT LINDSLEY INSTITUTE—ADOPTION OF THE LANCASTERIAN METHOD OF TEACHING—A HISTORY OF THAT SYSTEM—GRAPHIC AND HIGHLY INTERESTING REMINISCENCE FROM THE PEN OF AN EARLY PUPIL—A GLIMPSE AT THE ORIGINAL SCHOOL ROOM AND HOW WE WERE TAUGHT—THE INSTITUTE TO-DAY AND ITS ADVANTAGES.

We are indebted to the kindness of Miss J. B. Wilson for the following synopsis of facts, gleaned from an exhaustive and able historical sketch of Noah Lindsley, compiled by that lady, with much care.

In Mount Wood Cemetery, Wheeling, West Virginia, stands a plain marble shaft bearing the inscription:

"NOAH LINSLY,
A Native of Connecticut,
The Founder of the Lancasterian Academy,
The Friend of Youth, and the Benefactor of Mankind."

And a more truthful or nobler epitaph never graced a monument or told the story of a worthy life in fewer words.

Noah Linsley was born in Branford, Conn., February 9th, 1772, though his family was of English descent, his earliest ancestors in this country, being John Lindsley, who emigrated from London, England, in 1644, and settled here in New Haven. Noah was the third son of Josiah Lindsley, his mother's maiden name being Rachael Fowler. He prepared for college at East Gifford, under the Rev. Dr. Todd, and was admitted to Yale in 1787, graduating in 1791. Previous to 1714, the name had been spelled Lindley and Lindsley, but it was subsequently changed to Linsly, as still observed by the family and was adopted anterior to the time of Noah Linsley's death, as shown by his will. For a time after graduating, he taught school at Feathersfield, when he left for a tutorship in William's Academy—now William's College—under president Fitch.

The charter of that institution was granted June 22, 1793, and at the first meeting of the board; Rev. Ebenezer Fitch was appointed president, with Noah Linsley, tutor, at a salary of fifteen pounds per annum. During 1794–5, he was tutor in Yale, but at what salary is not known. Certainly it could not have been a very remunerative one, for President Fitch once referring to the subject, playfully remarked that Linsley did better at Yale than at William's, as he had but five cents when he left the latter place, whereas he had six cents when he quit Yale—but however poor his success may have been in a pecuniary point of view, he proved himself quite a success as a tutor, for he received freely of presents from the pupils of both colleges. Among them—from William's a copy of the Constitution of the United States, and from Yale a gold ring. The latter, by will, he subsequently bequeathed to Noah Zane. After leaving Yale, Mr. Linsley commenced the study of law at the law school in Litchfield, under Tapping Reeves, but at what time he was admitted to the bar is not known. After completing his law studies he moved in 1897–8 to Morgantown, Virginia, now West Virginia, where he remained a couple of years, and then removed to Wheeling, where he subsequently died of hemorrhage of the lungs in 1814. Among his personal associates were Noah Zane, Samuel Sprigg, Charles Hammond, of Cincinnati; Phil Doddridge, &c. Mr. Linsley was never married, nor did he ever hold any political office, though he acknowledges, in a private letter to one of his brothers, having been afflicted with a disease which he termed "political itch." A short time before his death he was a candidate for congress—but was defeated by a few votes, he being, in politics, a Federalist. Referring to the political movements of the day, he wrote to the effect that Virginia would be the last morsel to be devoured by the Democracy. In his will he made provision for the establishment and maintenance of a school in the town of Wheeling on what was known as the "Lancasterian" system, to be free to such poor white children as the trustees

might judge worthy—the laws of the state, in those days, preventing negroes from being instructed. A charter for the school, under the name of the "Lancasterian Academy" was obtained October 10, 1814, which was the first ever granted in a slave state for the free education of the poor, and proved the nucleus around which crystalized the noble sentiment "free schools for all," until permission was obtained from the legislature to establish in Ohio county (while no such institutions existed elsewhere in the state) schools free to all children, whether white or black.

THE ADOPTION OF THE LANCASTERIAN METHOD OF TEACHING,

as set forth in the will of the late Noah Linsley, was a striking evidence of his superior judgment, it being what is now known as "object teaching," which, by the best educators, has been recognized as the most desirable method for improving infantile minds. And as the school was more particularly designed for the poor, it was not deemed necessary to provide for more than imparting the fundamental studies, which could not be accomplished with equal success by any other method, at a like small cost. Once in operation, the happiest results followed, and so interesting did it present itself that we deem

A HISTORY OF THAT SYSTEM

worthy of chronicling in our pages. It was originated by one Dr. Bell, a Scotchman, in 1791, who had the superintendence of a school in Madras, established for the education of the orphans of British soldiers, where it proved so successful that on his subsequent return to England—probably in 1795–6—he introduced it into the country, from whence it spread rapidly through Europe and the United States. For a time it was more generally recognized as the Madras system—having originated there—but it soon changed its name to the "Lancasterian" system, after meeting with an enthusiastic advocate and teacher by the name of Joseph Lancaster, who did much to bring it into universal use. The principal peculiarity in the system consisted in making teachers of the more advanced scholars, under the name of "monitors," and providing them with classes—but for a thorough elucidation of its workings we cannot do better than refer the reader to

GRAPHIC AND INTERESTING REMINISCENCES FROM THE PEN OF AN EARLY PUPIL.

It has been suggested to the writer, who learned his "A B C's" while tracing them in sand in the sand-boxes at the Lancasterian Academy, that a description of the peculiar method of teaching, as well as the cruelties inflicted in the way of punishments by the masters, would be of interest to the present generation and stir up memories in the minds of grey-beards, all of which would not be unpleasant, though the cruel punishments to which they were subjected will mingle with the pleasant memories of others that will bring a flush of anger to be followed by a hearty "thank God" that the day of such heartlessness has passed forever. Leaving the history of the school for another occasion, we will endeavor to describe the school as we see it now in memory. Though fifty years and more have thrown their shadows over some of the minor points, yet the salient ones remain fresh and distinct as when we sprang from the door with a whoop on the dismissal, at noon or evening, of the school.

A GLIMPSE AT THE ORIGINAL SCHOOL ROOM.

The room was large and airy, being about forty-four by sixty-six feet, with good height of walls, nearly one-half of which was made up of windows. An aisle six feet wide skirted the walls, excepting at a platform window on the eastern side, on which was the seat of as great a tyrant as ever disgraced God's earth. In front of this platform was a cross aisle extending to the main entrance opposite. The benches and desks were arranged parallel to the shorter way of the room, and extended from aisle to aisle without any intermediate passage, the benches being filled from the ends. At close intervals blackboards six feet square were placed along the walls, in front of which semi-circles were struck with chalk on the floor for the class to toe when called to recite.

HOW WE WERE TAUGHT.

The reading lessons, which were all from the *Old Testament Scriptures*, were printed and pasted on boards fourteen by eighteen inches in size, each board at the upper end having a hole with a string in it by which to suspend it to a nail in the blackboard. Each class had a commandant styled a monitor, whose business it was to keep order in the class and instruct it. On one end of each desk was a telegraph with signals. These telegraphs were rods one and a half inches in diameter and six feet long, surmounted with a painted hexagonal block, the rods running freely in holes in the desk in which they were inserted. On the platform and on either side of the master was a monitor's desk and monitor, one of whom was styled monitor of order, the other monitor of reading. Each of the monitors were provided with a telegraphic instrument and whistle. The monitor of each class acted as a signal operator for his station and took his cue from the monitor on the platform. At a signal of the whistle for attention from the monitor, say of reading, each class monitor turned his signal to correspond to the signal shown on the platform and governed himself accordingly. If the signal was for reading, each monitor formed his class and moved to his station at the blackboard, the class toeing the chalk mark and the monitor within the circle facing the class. At a signal from the whistle each monitor wheeled and took up a pointer or long wooden rod and placed its end on the first word of the lesson. At a second signal, the head boy or girl of the class commenced to read aloud, and as every class was reading a different lesson, it took pretty good lungs to mask the voice made by the adjacent classes so as to enable the monitors to hear their own readers.

At each end of the room, and forming the first row of benches, was the sand-boxes. These were shallow, though of convenient width, and contained enough sand to make a layer one-fourth of an inch thick over their surfaces. In front of these and above the heads of the scholars in the next row of benches and supported on posts, were boards on which were painted the alphabet in large and small characters, also the numerals, and from them the beginners copied, making the characters in the sand with their fingers. All studying was done at will but aloud mostly, and to an uninterested world would have been a perfect Babel, but each soon learned to heed none but his own voice, and prosecute his studies quite as well as if none others had been studying around him. The peculiar features was in the advanced scholars acting as teachers, the master teaching only these advanced scholars not acting as teachers or monitors. The instruments of torture were in no wise connected with the plan of teaching, but belonged to the times rather than the system, and consisted of the cowhide, ferrule, cat and rattan, with the sustaining of weights in the hand with the arm extended, standing on one foot, bending down and sustaining the weight of the body on one foot and one hand holding up the other foot at the same time with the other hand. To give some idea of the extent to which punishment was carried, the writer will state that when a lad less than twelve years old, he was struck on the palms of the hands, with his fingers bent back until the master had touched his wrist, seventy-five strokes with a ferrule three-eighths of an inch thick, one and one-half inches wide and twenty-two inches long, twenty-five of the strokes being laid on with all the strength of the strong man exasperated by passion, and the other fifty licks were not love taps, and has seen others more severely punished. Others, after having been punished with ferrule or cat, were subjected to the indignity of having to wear a dunce cap and bells, and march round and round the school with a following of boys with girl's sun-bonnets on their heads, hooting him as he went.—H. B. H.

THE INSTITUTION OF TO-DAY.

From its inception, until the year 1821, the school was conducted according to the "Lancasterian system." But from that year, we learn by a minute on the books, a room was granted to a Mr. Robinson, for the purpose of teaching a classical school, and we have reasons for supposing that this school was the original of the present Lindsley Institute. From 1821, to the present time, there have been a number of teachers, among whom may be mentioned: Messrs. Jno. F. Teras, Daniel Dradley, Alexander Mayer, Thos. I. Lees, James W. McBurnie, Rev. John W. Scott, D. D., (afterwards president Washington College, and late vice-president of West Virginia University), John C. Hervey (present superintendent of schools in Wheeling), James Paull, Esq., (afterwards one of the Supreme Judges of the State), Rev. R. V. Dodge, D. D., I. F. Jones, Esq., and E. Blakely. In 1858, lots numbered eight and eleven Sixteenth street, square, were purchased from Thomas G. Culbertson and others, and the present building is well adapted for school purposes. In 1875 John M. Birch, A. M., was chosen principal and the school increased to such an extent that the following

year Jno. S. Dickey, A. M., was elected as his assistant, who with Cass F. Clark, A. B., constitute the present faculty of the institution. The school is at present conducted as an English and classical school for boys and number in its catalogue for 1878–9 one hundred and five students from the best families of the city and vicinity. It annually sends a number of well trained students to our best colleges and into the business pursuits of life. The present board of trustees is as follows: Rev. J. T. McClure, D. D., president, Hon. C. D. Hubbard, treasurer, Daniel Lamb, Esq., secretary, Hon. A. J. Sweeney, Hon. Sobieski Brady, A. W. Campbell, Esq., Robert Crangle, Esq., and Col. N. Wilkinson.

SCHOOLS IN 1839.

According to Joseph L. Wilde, Esq.'s recent sketch of Wheeling forty years ago, the principal schools of that day, and indeed about the only ones, were a school for females taught by the Rev. Mr. Wallace, mentioned elsewhere, one by Mr. McKay, at the head of what is now Chapline; one on the present Eoff street, and quite near Mendel's present factory; it was taught by a Mr. Channing. There was also a school taught on the Lancasterian system by James McBurnie, Esq. It was on the present site of the beautiful residence of Wm. Paxton, Esq. This was quite a large school, having not less than fifty or sixty scholars in attendance. There was still another school in the present Centre Wheeling, quite a small one, however, which was taught by a Mr. Templeton. Professor Hildreth, the present Dr. Hildreth's father, was quite celebrated as an instructor of youth. If he did not keep a school at this period, of which I am not quite positive, he kept one but a *very* short time previous, and some years later published a small work on Language, to which he gave the title of "City of Words." It was quite an ingenious work, and evinced much culture in the author. There are doubtless some copies of it in the possession of many citizens of Wheeling now living.

WHEELING FEMALE COLLEGE—A HIGHLY INTERESTING AND IMPORTANT INSTITUTION, AT ONCE THE PRIDE OF OUR CITY AND GRATIFYING PRIVILEGE OF OUR STATE, INCORPORATED WITH COLLEGIATE POWERS AND PRIVILEGES BY THE LEGISLATURE.

This excellent institution was chartered so far back as 1848, commencing upon its mission of usefulness two years later, and from its outset has been looked up to with pride by our citizens. The extensive building, with surrounding gardens of challiced gems and green plats, is located far above the bustle and turmoil of city life, on one of the loftiest hills in the district, commanding the most attractive views of rural scenes, the intricate windings of the Ohio river, the railroads, and though last, by no means least interesting, an ever varying panorama of busy life throughout the city. In short, no educational institution in America is more advantageously situated, combining the stillness, healthfulness and retiracy of the country, and the advantages, amusement and pleasures of the city. It is subject to a board of trustees and executive committee, consisting of many of the most influential gentlemen in the state, who, by the way, are unremitting in their interest and attentions for the welfare of the institution and to second the able and energetic efforts of

THE PRESIDENT—MISS A. TAYLOR, A. M.

This exemplary lady—whose silver wedding to her present profession was only last week gracefully celebrated by a shower of exquisite presents from her loving and much-beloved pupils, and the extensive gathering of warm friends to extend their hearty congratulations—came to this city from New York some three years ago—having previously presided with unbounded success over two of the leading institutions in this country, of a similar character, East. Miss Taylor is an accomplished lady with a wide experience, most affable and gentle in disposition, yet energetic and firm in her resolve that her administration shall continue to be fraught with that unprecedented success that has characterized the management of the college since her accession as its president. She is a favorite with unlimited attachment and kindly sentiment from our local society, and further shares the advantage of a combination of talent in the faculty, instructing in the schools, second to few, if any college in this country. And this brings us to a

DESCRIPTION OF THE BUILDING.

It is four stories high, and consists of a main building and two wings. The main part is 92 feet in length and 41 feet in width. The south wing is 43 by 41 feet, and the north 23 by 23. It fronts on Eoff street, and is but two or three squares from the post office. There are sixty-five rooms in the building, among them five recitation rooms, a chapel and study hall forty feet square, mathematical and recitation rooms, four music rooms, preparatory school room, a gymnasium forty feet square, a science hall, where is kept the best chemical and philosophical apparatus in West Virginia, a choice cabinet of geological specimens and minerals, globes, maps, charts and all else necessary for the study of natural philosophy, astronomy and kindred sciences. It is not often that so complete and extensive apparatus is found in educational institutions for young ladies. The parlors are spacious and richly furnished. The dining room is large, airy and convenient. There is water and gas throughout the building, which is heated by hot air furnaces, except the dormitories, which are heated by open fire places, as being most conducive to health. So complete is the college in all its parts and appointments that one wonders how all the many little conveniencies so often overlooked in similar institutions, were brought in happy unison to conduce to health and comfort. There are pianos and organs for the use of students in the department of music.

THE SYSTEM OF TEACHING.

The religious character of the College has always been in conformity with the liberal and Christian aim of its founders. It is a thoroughly Christian institution, in which the word of God is systematically taught and the Christian religion is made the basis and character of education. But it is distinctly unsectarian, and the religious instruction is based on the principles of Christianity as held by all evangelical denominations

The courses of studies are perfect, and comprise everything essential to the perfecting of a most cultured mind, fitting it to the highest positions in life—the accomplished grades of science, language, music and fine arts receiving the advantages of eminent tutors.

A most inviting reading room and library is at the service of pupils, and a "Sigourney Society," for the mutual improvement of undergraduates in composition, elocution and discussion, is a prominent feature. Nor is this all, as there is an "Alumnæ Association," comprising graduates of the college, probably numbering over one hundred members, having for its object mutual benefit, the promotion of the Alma Mater, encouraging learning among the female sex, and the perpetuation of the attachments and friendship of college life. The members of this association are scattered all over the States, and have even become missionaries to India, Siam, etc., while others are preparing for a like great work and other spheres of exceptional usefulness.

The several examinations, commencements and levees are made seasons of intense interest and gratification, both to the pupils and their numerous friends, while it must be a source of the utmost satisfaction to the president and management to witness the unabated interest manifested by the *elite* of Wheeling and its environs, each succeeding season, when the gatherings of this admirable institution are known to take place.

With Miss Taylor's wealth of experience and natural qualifications for her work, which have already shown themselves to a marked degree in the conduct of the college, we feel the utmost confidence in commending it to our numerous readers alike inside and outside of the state. This valued institution gives the utmost promise of extending its reputation far and wide, and it merits in every respect the sympathies and support of all devoted parents in the interest of their rising families. It is verily the leading institution of its kind in West Virginia, and one of the highest compliments to our national advancement in education, arts and science to be found in America.

FRASHER'S NATIONAL BUSINESS COLLEGE

has become so popular in its mission of usefulness that it is really looked upon as an indispensable city institution of inestimable importance to the rising generation.

Mr. Frasher is a gentleman of exceptional ability as a tutor, having accomplished much in the interest of Wheeling's sons and daughters. His excellent college is not a school for perfecting students in artificial or useless accomplishments, but the training of the young idia in the blessing of a sound commercial education and fitting them to fill any and every position in commercial life. The institution, in the People's Bank building on Twelfth street, below Main, is one of incalculable

value and conducted with an energy and success at once a credit alike to its proprietor and our state. Both day and night schools are in progress and the terms are within the reach of every one. The success of the college was singularly good last year, which it is to be hoped may prove the same this year. Parents should visit the institution in person and judge for themselves, and peruse the *Business College Journal*, issued therefrom, and we are assured they will no longer refrain from giving their sons and daughters the benefit of education, thus conferring upon them the chief blessing in life, of which they cannot be robbed, but which will assuredly work in its own time exceeding pleasant and profitable results.

WHEELING'S ADMIRABLE PUBLIC SCHOOLS.

As already stated, the public schools in this city are unexcelled for conveniences and instruction facilities, which have ever been made leading objects rather than stylish structures. The present general superintendent, J. C. Hervey, is an accomplished and indefatigable principal in charge, and the following will be found the names of the teachers employed and their positions in their respective schools in the school year of 1879–80:

RITCHIE DISTRICT.

J. C. Gwynn, principal.
Miss Josephine A. Greenlee, first assistant, grammar department.
Miss May Baron, second assistant, grammar department.
Mrs. Josie F. Rose, division A, grade 1.
Miss Emma S. Anderson, division A, grade 2.
Miss Sarah A. Scott, division B, grade 1.
Miss L. D. Hamilton, division B, grade 2.
Miss Ella S. Stephens, division C, grade 1.
Miss S. A. McKinley, division C, grade 2.
Miss S. J. Callendine, division C, grade 3.
Miss Annie E. Reeves, division D, grade 1.
Miss H. V. Whitesides, division D, grade 2.
Miss Ella I. Moore, division D, grade 3.
Miss Belle Kain, division D, grade 4.
Miss Emma Steele, division D, grade 5.
Miss Elizabeth Turk was appointed janitress for the main building, and Miss Elizabeth Hildebright, janitress of the church basement, where the sessions of division D are held.

MADISON DISTRICT.

A. M. Stevenson, principal.
Miss Stella Moore, grammar department.
Miss Julia A. Wiley, division A.
Miss Clara E. Young, division B, grade 1.
Miss Emma Snowden, division B, grade 2.
Miss Agnes Dillon, division C, grade 1.
Miss Rida Dean, division C, grade 2,
Miss M. Foster, division D, grade 1.
Miss Kate Hall, division D, grade 2.
For the Second ward colored school, W. F. Gaskins was elected principal, and Miss L. R. Wallace assistant.
The incumbents, Susan Barkley and ——— Butler, were reappointed janitors.

CENTRE DISTRICT.

H. C. Shephard, principal.
Miss Sadie Stout, grammar room.
Miss C. Hamilton, division A.
Miss Annie Moran, division B, grade 1.
Miss Minnie S. Black, division B, grade 2.
Miss Edda E. Bingell, division C.
Miss Jennie E. Patterson, division D, grade 1.
Miss Louisa Butler, division D, grade 2.
Janitress, Mrs. Eliza Colman.

SIXTH WARD.

Samuel Boyd, principal.
Miss Martha Harper, grammar room.
Miss M. J. Morrison, Division A, grade 1.
Miss S. E. Crumbacker, division A, grade 2.
Miss L. J. Clohan, division B, grade 1.
Miss Ida Richards, division B, grade 2.
Miss T. D. Sutherland, division C, grade 1.
Miss Mary Hughes, division C, grade 2.
Miss Lizzie Cross, division D, grade 1.
Miss Kate Todd, division D, grade 2.
Miss Lizzie Hamilton, division D, grade 3.
Mrs. A. M. Patterson, janitress.

FIRST WARD.

T. B. McCain, principal.
Miss Ida Iveson, grammar room.
Miss Agnes McLure, division A, grade 1.
Miss A. V. Oxtoby, division A, grade 2.
Miss Sallie Robinson, division B, grade 1.
Miss Tillie McDonald, division B, grade 2.
Miss Anna A. Johnston, division C, grade 1.
Miss Ada B. Greer, division C, grade 2.
Miss Mary Arbuthnot, division C, grade 3.
Miss E. Ellifritz, division D, Grade 1.
Miss M. C. Ryan, division D, grade 2.
Miss Mary Francis, division D, grade 3.
Mrs. Elizabeth Lowery, janitress.

FOURTH WARD.

W. H. Anderson, principal.
Miss Jane Anderson, grammar room.
Miss Annie Ewing, division A, grade 1.
Miss Lizzie Downs, division A. grade 2.
Miss Lucinda Sims, division B, grade 1.
Miss Maria Ellingham, division B, grade 2.
Miss Georgie Pender, division C, grade 1.
Miss Amy Chapline, division C, grade 2.
Miss M. G. Robinson, division C, grade 3.
Miss M. Lou McCulloch, division D, grade 1.
Miss Lizzie Carmack, division D, grade 2.
Miss Sallie Thoburn, division D, grade 3.
Miss Mary Britt, division D, grade 4.
Janitor, Mrs. Mary Downey.

SECOND AND THIRD WARDS.

Principal, Miss S. J. Meholin.
Miss Emma J. Stephens, grammar room.
Miss Ella Dillon, grammar room.
Miss Mary A. Davies, division A, grade 1.
Miss M. E. Jeffers; division B, grade 2.
Miss Mattie Stout, division B, grade 1.
Miss M. A. Bailie, division B, grade 2.
Miss Jane McColloch, division C, grade 1.
Mrs. M. Dean, division C, grade 2.
Miss Lizzie M. Swift, division C, grade 3.
Miss Lizzie McKennan, division D, grade 1.
Miss Annie E. Greer, division D, grade 2.
Miss Joanna Charnock, division D, grade 4.
Miss M. C. Griffith, division D, grade 3.
Janitor, W. J. Hope.

The following teachers in German were also appointed:
Washington and Madison Districts—Miss Emma Stroehline.
Clay District—Mrs. Helena Gelink.
Union and Centre Districts—Miss Mary Mursett.
Webster and Ritchie Districts—Rev. C. Rumph.

PRIVATE SCHOOLS.

In this respect our community is equally fortunate. In addition to the excellent institutions referred to, the Misses A. M. & T. V. Doddridge, of Twelfth street instruct in fine arts, and are ladies of accredited talent and eminent success in teaching. Miss J. B. Wilson, of 1163 Market street, conducts an excellent private general educational school, besides whom there are two or three giving instructions to private classes in music, languages, and other accomplishments.

WHEELING'S NEWSPAPER PRESS—THE EARLY PAPERS AND WHAT THEY WERE LIKE—THE VICISSITUDES OF PUBLISHING—THE PRESS OF TO-DAY.

The first paper ever published in Wheeling was issued so early as 1807, it consisted of a small quarto sheet—almost square and bearing the name of the *Repository*. A Mr. Armstrong was its proprietor, and in those days the enterprise was looked upon as something great. From the diligent inquiries we have instituted we are free to state that very few copies of that primitive production are now to be found preserved. The paper was thick, coarse, and frequently of a yellowish hue, but unquestionably stronger than most modern samples. The face of the type and the manner in which it was printed, and, indeed, the "make up," also, bore quite a contrast with our better class of journals of this day, though even yet, we must confess it is

no uncommon thing to meet with specimens such as would warrant our reversing the results from the comparison.

VICISSITUDES OF PUBLISHING.

Perusing old copies of old-time papers, which we collected with much trouble—consisting of the *Repository*, *Times*, *Gazette*, *Telegraph*, *Virginian*, *Young America*, *Advertiser*, *Union*, *Argus*, *Press*, and *News*, all of them at one time or another, published here—there was a singular uniformity in the troubles experienced by their proprietary from the first of them to the last. Of course, the most conspicuous features through them were promptings to delinquent subscribers, a press of local news crowding out communications, political bickerings and commercial disappointments, but each, nevertheless, lived out its day, and the following represent their successors at present published in our midst, which, taken as a whole, are probably the most competent and successful collection that has ever circulated, at one time, in Wheeling—the dailies comparing favorably with most of our larger metropolitan "luminaries of the fourth estate."

THE WHEELING INTELLIGENCER.

The *Intelligencer* began its career on the 24th day of August, 1852, in the midst of the Scott and Pierce presidential campaign of that year, as a whig paper, and warmly supported General Scott for the presidency. Its proprietors were J. H. Pendleton, who was principal editor, Oliver I. Taylor, city editor, and Eli B. Swearingen, business manager; the firm being Swearingen, Taylor & Co. Its cotemporaries were the *Times and Gazette*, also a whig paper, edited by James E. Wharton and published by E. R. Bartleson, and the *Evening Argus*, a democratic paper, edited and published by John T. Russell. The paper was at first issued at number twenty-one Water street, but was removed to its present building on Quincy street, on the 15th of April, 1854. On the 19th of February, 1855, Z. Beatty became a member of the firm, and the firm name was changed to Swearingen, Beatty & Co. On the 20th of March, 1855, J. H. Pendleton purchased the interests of Messrs. Swearingen & Taylor, and the firm name was changed to Beatty & Co. Mr. Taylor continued as city editor up to March 27, 1856. In May of that year he was succeeded by A. W. Campbell. On the 13th of October, 1856, the paper was sold to A. W. Campbell and John F. McDermot, and the firm became Campbell & McDermot. Shortly after this change the paper began a new departure in politics and gradually became a decided republican paper, being the only daily paper in Virginia that supported Abraham Lincoln for the presidency in 1860. It warmly supported the Union cause during the war and was also an early advocate of the movement for a divsion of the State of Virginia, which resulted in the formation of the present State of West Virginia. On the first day of January, 1866, Mr. McDermot sold his interest to John Frew, G. D. Hall and L. A. Hagans, and the firm became Campbell, Frew & Co. Mr. Frew had been connected with the job printing department of the paper since 1853. On the 13th of February, 1868, A. W. Campbell sold out his interest to the remaining partners, and the firm became Frew, Hagans & Hall. Mr. Hall had for several years, during the partnership of Campbell & McDermot, been employed on the paper, as a reporter, writer and book-keeper. On the first of October, 1873, Mr. Campbell returned to the paper, having, with Mr. Frew, bought out the interests of Messrs. Hagans and Hall. There has been no change in the paper since.

The *Intelligencer* is the oldest daily in the state, and with but two exceptions the oldest paper of any sort. It is published as a daily, semi-weekly and weekly, its price being, respectively, $8.00, $3.00 and $1.50. It circulates in West Virginia, Pennsylvania and Ohio, and is widely known as the leading Republican paper of West Virginia. It possesses the only Hoe newspaper press in the state. It has attached to it a large job printing establishment and book bindery, wherein book and job work of all descriptions is done in the highest style of art.

A BRIEF HISTORY OF THE WHEELING REGISTER.

On the 9th day of July, 1863, the Wheeling *Register* made its first issue. It was printed upon the press and with the material of the former *Press*, (a newspaper whose existence was short, and which was a successor to the *Union*, whose existence had terminated soon after the beginning of the war,) the entire stock and *debris* of the establishment having been purchased for the purposes of the new paper by Mr. Lewis Baker, from Mr. Henry Moore. In its beginning the paper was small but plucky, and, espousing the Democratic cause in the midst of the excitement and terrorism of the time, aimed to make a prudent but positive struggle against the abuses of federal power. The new paper was welcomed by many who feared to read it in public or have it seen in their stores, and it gradually extended its subscription and influence among the large number of citizens and soldiers who, while not favoring secession nor sympathizing with the Southern cause, could not approve of the violation of constitutional guarantees and could not brook the loss of their own liberties in the struggle for the abolition of negro slavery, and for the maintainance of the federal union. Advertisers were comparitively few, but a job office being established in connection with the newspaper the revenue from the job work done often eked out the scanty receipts from subscription and helped to pay the compositor's bills.

On the 9th day of July, 1864, just one year after the starting of the enterprise, the newspaper was suppressed and the office seized by the military acting under orders issued by Major General David Hunter, who had been personally offended by some strictures concerning the disastrous failure of his then recent "Lynchburg raid." Under the same orders, Mr. Lewis Baker and Mr. O. S. Long, the latter of whom had some six months before become a part owner in the concern (the paper being published in the firm name of Baker & Long), were summarily arrested and committed to the military prison at the then Athenæum Building, at the corner of Market and Sixteenth streets. After an imprisonment of nearly two months, the proprietors of the *Register* were unconditionally released by order of Major General Sheridan, and what remained of the office was restored to their possession. Immediately issuing a new prospectus and promising to make even a better newspaper than before, the office was supplied with a new and better press, new material was purchased, and with abundant assistance and encouragement the regular issues of the *Register* were resumed in September, 1864, in time to take part in the Presidential campaign of that year.

Since that time the history of the *Register* has been that of slow but steady growth. Each year has added to its prosperity and its influence, and, as rapidly as its increasing prosperity has allowed, the newspaper has itself enlarged its columns and availed itself of every facility a liberal management could devise for extending still wider the sphere of its usefulness and giving to its patrons a live, sprightly, enterprising, healthful and vigorous newspaper. To this desire on the part of the management, the people of West Virginia, of Eastern Ohio and of Western Pennsylvania have responded in a substantial manner. The *Register* has been successful in nearly every enterprise of either local or state concern which it has warmly espoused and earnestly advocated, and it is now so firmly established as one of the "institutions" of Wheeling and the state as to defy all ordinary efforts to supplant or overthrow it. Like nearly all other successful newspaper establishments, the *Register* is mainly the creation of one man. The soul of the enterprise is Mr. Lewis Baker, the present proprietor. He is a native of Ohio, and a practical newspaper man in every sense of the term. Trained in youth in a country newspaper office, he had been compositor, foreman, pressman and editor, and proprieter of two successful weeklies, one in Noble and the other in Guernsey county, Ohio, before coming to Wheeling. Added to this practical knowledge of the business, he has a rare gift for organization, and shrewdness of insight into the motives of and the manner of dealing with men, which the gift of organization implies. To these faculties and to an untiring energy which nothing could divert, and a courage which no vicissitudes could daunt, the success of the Wheeling *Register* is mainly due.

From its feeble beginning in an old building just below the Second ward market house, the office was removed in 1867 to larger and more commodious quarters in the building now owned by the McLain Bros., corner of Market and Twelfth streets. In 1872, the office was removed for better accommodation to the Cummins property, corner of Market street and alley Nine, and Mr. Baker has recently purchased from the Cummins estate the adjoining property, Nos. 1225 and 1227 Market street, where the *Register* office will be established in better and more capacious quarters than ever before. The establishment will be connected by telephone with Martin's Ferry and Bellaire, and branch offices of the newspaper are to be opened at each of those places. Thoroughly fitted with the best and latest improved machinery for all departments of the work of printing, publishing and binding, the *Register* office is to-day a fitting monument of what skill, energy and perseverance may accomplish.

THE SUNDAY LEADER.

May 9th, 1875, saw the first issue of the *Sunday Leader* in Wheeling. It was then but a small folio of forty columns. On July 4th, of the same year, it was enlarged to forty-eight columns. On the first of the year following another enlargement took place making it a fifty-six column paper, which was celebrated with an entire new dress of type.

The progress of the *Leader* since its start has been something remarkable in journalism. It is notorious that the growth of a newspaper is invariably slow, but in the case of the *Leader* not only has it grown rapidly, but most substantially. It seemed to meet at the start with the favor of the entire community in and about Wheeling. It gave every evidence of being honestly conducted, and so vigilant was it in the interests of the masses in watching public affairs and advocating needed improvements, that it soon became influential, and this power has been growing year by year until now it is conceded that what the *Leader* says can be relied on as unbiased and honest.

The *Leader* now occupies the three story building, No. 31 Twelfth street, in which is contained its own steam power and the largest job office in the state. The building is fitted throughout with all the modern appliances, and does credit to the city as a complete printing establishment.

The *Leader* claims, and unquestionably has, the largest circulation of any paper in West Virginia. On Saturday it issues an edition for points far removed from Wheeling, containing local matter sent in by its outside correspondents, numbring nearly one hundred. This edition is of great value to the wholesale trade, and this they recognize by their liberal patronage of its advertising columns.

Some disaffected individuals whose toes have been trod on by the *Leader* have, in various ways, tried to lessen the patronage of the paper but it continues to grow and extend its business notwithstanding.

The *Leader* is a strictly independent paper, but is not neutral. It is bold in exposing any kind of work detrimental to the masses who are its readers and supporters. Its literary conduct is acknowledged to be first-class, and the fact that it is weekly quoted by newspapers all over the country, both small and great, is evidence of the originality of its articles. It is a paper of which Wheeling can be proud and judging from the past, increased support will result in continued improvements in its every department. The *Leader* is owned exclusively by Mr. C. C. Johnson, who has conducted it almost since its birth.

THE SUNDAY NEWS LETTER.

This popular and excellent publication is the outgrowth of co-operation, instituted among a number of practical newspaper employees, and since its first appearance, in the fall of 1878, has it jealously—yet fearlessly—guarded alike, the city's and its people's interests, while championing the cause of the industrial classes and furnishing the entire community with a thorough digest of Sunday reading. Like most other similar enterprises, its early experience was that of changing its proproprietary and management several times, until becoming firmly established upon a solid basis, which it may fairly be claimed to have accomplished when coming exclusively into the hands of its present efficient and indefatigable proprietary —Messrs. R. Robertson, W. S. Meek, and J. H. Stull. Their vim and perseverance would seem to have been unlimited, as the circulation of the *News Letter*, to-day—(as given upon solemn affirmation)—exceeds three thousand copies weekly through this and adjoining states, even embracing territory that most other city papers have not attempted to cover, to which end the exclusive services of one of the fastest little steamers running on the Ohio—the E. R. Dale—have been liberally provided. The size of the sheet is forty columns thirty inches long, and the print is invariably *par excellence*. Its subscription price is two dollars per annum, or five cents per single copy—and the sprightliness of its editorials—the originality infused into its local columns and the excellent judgment exercised in the compilings of its general and religious reading departments, is excelled only by its present punctual and excellent business management.

THE WHEELING SATURDAY EVENING JOURNAL

Was issued first August 16, 1879, by Messrs. A. J. Halstead (for several years city editor on the Wheeling *Intelligencer*) and John T. Grubb (originally of the local department of the Wheeling *Register*) who associated in purchase of the complete newspaper outfit of the old *Evening Standard*, and from twenty-eight and thirty Twelfth street, launched their present prosperous enterprise with a flattering circulation. The *Saturday Evening Journal* is strictly independent in politics, religion and local sentiment—outspoken and seeking only the greatest good to the greatest numbers from a basis of justice and equity. It is a twenty-six by forty inch sheet, thirty-two columns, and issued at two dollars per year—one dollar for six months—or fifty cents for three months delivered, while it enjoys a very large circulation through the agency of newsboys. Though barely in existence two months, to present writing, its entire circulation each issue is averaged at three thousand copies. It is an entire new feature in journalism to Wheeling, and the satisfactory advertising patronage already bestowed upon it affords unmistakable evidence that it has struck a decidedly popular chord.

THE DEUTSCHE ZEITUNG VON WEST VIRGINIEN,

is the only German paper published in the state, and was first issued as the *Virginia Staats Zeitung*, about the year 1848. It subsequently changed hands and became the *Arbeiter Freund*. After a few years, Messrs. Guttenberg and Colmar became proprietors, when yet a third change was effected; this time to its present title—*The Deutsche Zeitung von West Virginien*. Mr. Guttenberg, however, retired on the 1st of December, 1878, since when Mr. Colmar has succeeded to the entire proprietary. It is now an eight page paper, independent in politics, and an excellent exponent of the week's news. In addition to issuing the paper weekly, Mr. Colmar conducts an excellent job printing office—in the English or German languages—at No. 31 Twelfth street, and appears to be conducting quite a successful business.

THE STANDARD PRINTING COMPANY,

organized in the latter part of 1873 as a joint stock association, for the purpose of carrying on a printing and newspaper publishing business. Mr. D. L. Hubbard was its first president, and James F. Carroll its first secretary. On the 20th December, 1873, it issued the first number of the *Evening Standard*, an afternoon daily, and on Thursday of the following week, began the publication of the *Wheeling Weekly Standard*. Both these papers were independent in politics and were published first at 5 Twelfth street, subsequently at 28 Twelfth street, Wheeling. In December, 1877, the company was reorganized, and the name changed to the "Standard Company," with C. D. Hubbard as president and J. F. Thurston, secretary. From the date of such reorganization, the *Evening Standard* and *Weekly Standard* were published as republican journals until March 8th, 1879, when the establishment having been offered for sale, it was disposed of to the "State Democrat Company," but the *State Democrat* snspended publication in June or July last, but whether to reappear or not we are unable to state.

PUBLIC BUILDINGS.

In the matter of fine architecture, Wheeling has numerous attractions of quite an exceptional character—the most extensive structure being, of course,

THE NEW CAPITOL BUILDING,

located on the northeast corner of Chapline and Sixteenth streets—reference to which has already been made in Chapter XXXI. It was completed in 1876, and erected at a cost of $120,000. Immediately on the west side of the square is also

THE MAGNIFICENT FOUNTAIN,

generously donated to the city by one of its most honored citizens in 1878. Imbued with a high sense of public duty, and sinking all narrow considerations of cost, James W. Paxton, Esq., spontaneously gave expression to his local interest by presenting the city with this magnificent and highly serviceable adornment to our State Capitol—approximating in value $10,000. A grand gala day was had at the unveiling of the beautiful gift, on which occasion Mayor Sweeney, after an able speech of acceptance, said: "I do now, by order and authority of the Council of the City of Wheeling, declare that this fountain shall be known as the Paxton Fountain, and that it is now formally accepted by the said city, and dedicated forever to the use and pleasure of the inhabitants thereof. The materials of which this work is constructed are indicative of durability; its artistic design is a suggestion of beauty; its flowing waters are typical of purity. May it remain as an inspiration of

strength, beauty and purity, to all those for whose benefit it is now dedicated." The crowning feature to which the preceding exercises led, the unveiling of the fountain, followed, and a buzz of admiration went up from the assembled multitude as the covering was lifted and the beautiful work of art exhibited. The water was turned on, and in a moment several crystal streams were springing into the air, to the inspiring strains of a selection by Kramer's band.

THE CUSTOM HOUSE

Is probably the most important architectural feature of attraction, of which full particulars appear in Chap. XXXVI. Nor should we fail to mention the Court House, Opera House, Washington Hall, McLure House, Wheeling Hospital, Exchange Bank, Peoples' Bank, National Bank, St. James Hotel, the Cathedral, etc., etc. As specimens of ecclesiastical architecture. The majority of our churches are far above the mediocracy, while the public schools of the city and many private residences are a compliment to local enterprise, to say nothing of numerous splendid business blocks on Main, Market, Eleventh, Twelfth, Fourteenth and other prominent streets are equal with those of any city in the Union of the same size.

CHAPTER XXXIX.

ORDERS, CLUBS, SOCIETIES, ASSOCIATIONS AND CORPORATIONS.

WHATEVER virtue may exist in the old proverb that "unity is strength," Wheeling is decidedly resolved to extract it, if we may venture an inference from the number of friendly, benevolent and amusement organizations within her corporate limits. It would be next to impossible for us to enumerate all, as so many are run in comparatively a quiet way—hence we propose only to enumerate some of the most prominent:

FREE MASONRY.

The oldest Masonic Lodge in the city of Wheeling was chartered by the Grand Lodge of Virginia on the 13th day of December, 1815, and was named Ohio Lodge, No 101. The charter bears the names of Archibald Magill, deputy grand master, and W. H. Fitzwhilsonn, grand secretary. The first officers of the lodge were James F. Relfe, W. M.; William Harkins, S. W.; and John Richardson, J. W. Seven years later, on the 12th day of December, 1822, a charter was issued by the Grand Lodge of Virginia for the formation of Wheeling Lodge, No. 128. The charter is signed by Charles Yancy, grand master, and by the same grand secretary as that of the former lodge. The first officers of the new lodge were Morgan Nelson, W. M.; Oliver Wilson, S. W.; and John F. Truax, J. W. These lodges are still in existence, having been re-chartered by the Grand Lodge of West Virginia, which was formed in 1865.

Of the other two lodges in the city, Nelson Lodge, No. 30, was chartered by the Grand Lodge of West Virginia, on the 24th day of January, 1867, and Bates Lodge, No. 33, on the 12th day of November, in the same year.

Wheeling Union Chapter of Royal Arch Masons was chartered by the Grand Chapter of Virginia, in 1833, and re-chartered by the Grand Chapter of West Virginia, which was organized in 1871.

Wheeling Commandery of Knights Templar was chartered by the Grand Encampment of the United States, in 1838, and re-chartered by the Grand Commandery of West Virginia, which was organized in 1874.

Cyrene Commandery was chartered by the new Grand Commandery, in 1876.

On the 30th day of November, 1875, a disastrous fire occurred by which the Masonic Hall was destroyed. It was rebuilt upon the former site, and the new building was dedicated to Masonic uses in April, 1878.

The following is a list of the officers of the several Masonic organizations in the city of Wheeling, for the current year 1879:

Bates Lodge, No. 33.—Meets second and fourth Tuesday of each month in Masonic Temple. W. B. Fisher, W. M.; L. D. Williams, S. W.; W. S. Rhodes, J. W.; W. H. List, treasurer; P. B. Dobbins, secretary; E. L. Bill, chaplain; T. W. Bliss, tyler.

Nelson Lodge, No. 30.—Meets second and fourth Thursday of each month in Masonic Temple. J. E. Hughes, W. M.; L. H. Albright, S. W.; W. R. Isham, J. W.; James Wheeler, secretary; Benj. Fisher, treasurer; W. N. Greaves, S. D.; R. Conrad, J. D.; D. R. Brooks, steward, William Nixon, steward.

Ohio Lodge, No. 1.—Meets first and third Mondays of each month in Masonic Temple. Joseph Hall, W. M.; Fred. Enboy, S. W.; A. M. Dray, J. W.; A. H. Forgey, secretary; Richard Savage, treasurer; William Y. Kemp, S. D.; Thomas W. Zink, J. D.; Timothy W. Bliss, tyler. *Trustees*—Charles H. Collier, Hugh Sterling and William H. Travis.

Wheeling Lodge, No. 5.—George Roth, W. M.; R. J. Smyth, S. W.; R. H. List, J. W.; F. P. Jepson, treasurer; W. T. Derry, secretary. *Board of Masonic Trustees.*—Dr. W. J. Bates, sr., president; O. S. Long, secretary; I. H. Williams, treasurer.

KNIGHTS TEMPLAR.

Cyrene Commandery, No. 7.—Stated Conclaves, first Friday of each month in Masonic Temple. E. Sir M. A. Chandler, E. com.; Sir J. Berger, generalissimo; Sir W. B. Fisher, captain general; Sir S. P. Hildreth, treasurer; Sir J. V. L. Rodgers, recorder; Sir Alex. Laughlin, trustee; Sir Samuel Laughlin, prelate; Sir J. A. Miller, S. W.; Sir Richard Savage, J. W.; Sir F. A. Britt, S. B.; Sir G. Griffin, sword bearer; Sir R. H. List, warden; Sir W. S. Rhodes, 1st guard; Sir Wm. R. Isham, 2nd guard; Sir J. H. McCracken, 3d guard; Sir T. W. Bliss, sentinel.

Wheeling Commandery, No. 1.—Stated Conclaves fourth Monday in every month. Em. Sir W. H. Travis, Em. com.; Sir F. C. Winship, generalissimo; Sir W. W. Glass, captain general; Sir Charles H. Collier, prelate; Sir J. H. Brown, senior warden; Sir S. Waterhouse, jr., J. W.; Sir Hugh Sterling, treasurer; Sir G. F. Irvine, recorder; Sir J. McMorris, S. B.; Sir F. Huseman, sword bearer; Sir R. P. Armstrong, warden; Sir T. W. Bliss, sentinel.

ROYAL ARCH MASONS.

Wheeling Union Chapter, No. 1.—Meets in Masonic Temple second Monday in each month. M. A. Chandler, high priest; J. A. Miller, king; W. H. Travis, scribe; S. P. Hildreth, treasurer; G. F. Irvine, secretary; J. H. Bown, captain of the host; J. Hall, principal sojourner; W. S. Rhodes, R. A. C.; W. H. Warden, M. of 3d vail; W. H. Grabe, M. of 2d vail; J. G. McFadden, M. of 1st vail; T. W. Bliss, tyler.

INDEPENDENT ORDER OF ODD FELLOWS.

Next in importance to Freemasonry this order is probably the most extensive and important in the city. Lodges and encampments it has thirteen, as follows: Lodges—Concord, Centennial, Excelsior, Eureka, Franklin, Panola, Virginius, Wheeling, and Wm. Tell. Encampments—Abrams, Tolivar, Wheeling, and Wm. Tell, while the Odd Fellow's Mutual Aid Society is an important organization working much good. Odd Fellowship may be said to fittingly compare with good wine, in one respect—it improves with age. The order, at present writing, is flourishing in our midst as the fruitful vine, and a noble tribute to its provident attributes is the magnificent building bearing its name and standing near, or on the corner of Chapline and Twelfth streets. Nor should we omit to mention that our colored citizens have also rallied under the old standard inscribed with "friendship, love and truth," and have opened a capital lodge of their own on Main street.

THE KNIGHTS OF PYTHIAS

is also another strong order in Wheeling, and no less important than successful in its mission of usefulness. It is an order that commands no fewer than five capital lodges in Wheeling, viz: Baltimore, Germania, Humboldt, Columbia and Black Prince. It numbers its members by the hundred and is rapidly growing in public estimation.

OTHER ORDERS IN THE CITY.

The Improved Order of Red Men is represented by two tribes—"Grey Eagle" and "Logan," which meet, respectively, on Tuesdays and Fridays—each being in a flourishing condition. This order has also its own burial ground.

The A. O. Hibernians have two divisions in Wheeling. The A. O. U. W. have an English and a German lodge, while the O. U. A. M. are represented by a Washington Council, No. 1., having a complement of sixty members.

The Ancient Order of the Mystic Chain meets weekly at Nolte's Hall, and the *Orangemen* have "Washington" and "Maiden City" lodges in the city.

The United Order of Ancient Druids command "Schiller," "Wheeling" and "Washington" Groves, with an excellent average attendance, and the society is said to be increasing in public estimation.

PROTECTION AND INSURANCE SOCIETIES.

Independent Order of Foresters.—This is an organization conducted on the life insurance plan. Court "Fort Henry" was established in 1878, has from forty to fifty members, and holds meetings each Thursday evening in McLain's Hall, Market street. Geo. Arkle is chief ranger; Wm. M. Bottsford, vice chief ranger; A. H. Forgey, corresponding secretary, and C. L. Davis, financial secretary.

Ohio Valley Protective Union provides security and death benefits to the families of its members, equal to that of any old-line life insurance company and at far less cost. Its home office is in Wheeling, and its board of managers and officers are as follows: President, Hon. Robert White, Wheeling; vice president, General I. H. Duval, Wellsburg, W. Va.; secretary, Hon. R. H. Cochran, Wheeling; treasurer, Wm. C. Handlan, Wheeling; general agent, Warren Hollister, Bridgeport, O.; medical examiner, Thos. B. Campbell, M. D., Wheeling; superintendent of agencies, Chas. G. Dillon, Zanesville, Ohio; executive committee, George R. Tingle, Wheeling; Robert White, Wheeling; Jas. R. McCortney, Wheeling.

KNIGHTS OF HONOR.

This united benefit and insurance corporation was first introduced in Wheeling, January 8, 1877, by Mr. T. L. Teeple, of Mansfield, Ohio, and was organized with twenty-six charter members, the present membership being one hundred and twenty. The officers are S. D. Tippet, director; John C. Morrison, vice director; assistant, John C. Roseborough; reporter, W. H. Chapman; financial recorder, Jerry Clemens. This is a very promising organization and likely to attain extensive proportions.

SINGING SOCIETIES.

There are quite a number of singing societies in Wheeling—the oldest still in existence, and most popular, being as follows:

The Beethoven—Established 1869, conducted by Prof. L. Vaas; President, Richard Henrich; Vice President, Frederick Oscar.

The Concordia—Meeting weekly at 3715 Chapline street; A. Nolte, president; C. Detrich, secretary.

The Fidelio—(German Mardi Gras), F. Reister, president; H. Hammer, secretary.

Germania Singing Society—C. Schnepf, president; John Strevel, secretary.

Harmonie Singing Society—G. Scwartzbach, president; John Salade, secretary.

Liederkranz Singing Society—C. Koch, president; Chas. Schrobe, secretary.

Mannerchor Singing Society—G. Guttenberg, president; F. Schwertfeger, secretary.

Weisel Musical Institute—Meets in Weisel Hall, Dr. T. H. Logan, president; Mr. Frank Bassett, Musical director.

BRASS AND STRING BANDS.

F. J. Kramer, who has been catering music here for over nine years, keeps constantly prepared with either brass or string bands, and enjoys a wide-spread popularity.

The Wheeling City Band also supplies brass or string combinations, and has shared quite a protracted reputation in this section for supplying the finest of music.

Christian Viewig is also popular for supplying admirable string, or quadrille bands—with much satisfaction.

T. T. Cockayne, however, has for over twenty years, proved himself a particular favorite for providing quadrille bands, his name being as familiar in the city as household words.

W. Myers, more familiarly known as "Billy Myers," is another caterer of string music in Wheeling, whose reputation for the past six or eight years has been unexcelled.

The Sumner Band (colored), consisting of brass instruments, has been in existence some time and still renders good service.

An Old-time Band—We are informed that down to 1850 no regularly organized brass band had been formed in the city, but on the 4th of July, 1851, Louis Gaus, at present a member of the Kramer band, brought out his first regular musical combination under the name of "Gaus' Band"—it consisting of the following: Wm. Kryter, John Bayha, Gotlieb Bayha, Louis Snyder, P. Pfeifer, W. Yost, ——— Schwobthlar, W. Hedtzel and Louis Gaus. They were received and looked upon by the inhabitants with much favor, and gave unlimited satisfaction. It was subsequently known as the Union Band. Louie Gaus has resided in the city twenty-nine years—was instrumental also in the founding of the Harmonie Singing Society, and is still very proficient on the flute and piccalo, which he plays in Kramer's excellent orchestra.

MISCELLANEOUS SOCIETIES.

Crystal Fountain Lodge, No. 31, *I. O. G. T.*—Meets every Monday evening, at Handlan's Hall, corner Jacob and Thirty-sixth streets.

Enterprise Lodge, No. 22, *I. O. G. T.*—Meets every Tuesday evening, at Patterson's Hall.

Wheeling Lodge No. 2, *Imp. O. F. S. of I.*—M. Blum, president; I. Blum, jr., secretary; B. Rosenstein, treasurer. Meets at McLain's Hall.

St. Patrick's Society.—Wm. Myles, president; Pat. Daily, secretary; Pat. Weir, treasurer. Meets first Sunday in every month, in basement of St. Joseph's Cathedral.

St. Alphonsus Society, (beneficial).—Gregory Warner, president. Meets the first of every month, at St. Alphonsus Hall, north-east corner of Market street and alley Eighteen,

Zion's Society.—John Arbenz, president. Meets the first Tuesday of every month, in basement of Zion German English Lutheran Church.

German Christian Aid Society of M. E. Church.—Charles Eschstruth, president. Meets the second Monday of every month, corner alley Eighteen and Chapline street.

Wheeling and Ohio Bible Society.—John Bailie, depositor. Office 1200 Market street.

Young Men's Christian Association.—Alex. Bone, sr., president. Meets in basement of First Presbyterian Church.

Youag Men's Catholic Benevolent Association.—Meets at St. Alphonsus Church.

Waverly Literary Society.—Frank Stanton, president; B. S. Allison, secretary; H. T. Black, treasurer. Meets every Wednesday evening, at Weisel Hall.

The H. N. Mertz Literary Society recently elected the following officers of their society for the ensuing six months: James D. Bodley, president; Joseph Ziegenfelder, vice-president; Homer Stout, secretary; James Mix, treasurer; Frank Chapman, librarian; Henry Kundle, sergeant-at-arms; Frank Hennig and William Jones, critics; committee on ways and means, Messrs. Schockey, Chapman and Edele.

Whelan Literary Society.—Geoorge W. Matthison, president; Charles Bosley, secretary. Meets every Tuesday at 7 o'clock, at 1309 Eoff street.

Ladies' Temperance Union.—Meets at 1138 Main street, third story.

Q. A. T. Social Amusement Club.—Organized April 14th, 1877. Al. Glass, president; Harry Coen, secretary. Room No. 3, McLain's Block; entrance 45 Twelfth street.

WHEELING MEDICAL SOCIETY.

This important organization, for the mutual improvement of our local faculty, was established October 17th, 1868, with Dr. A. S. Todd as its first president. It has continued ever since, and proved productive of much good. The present officers are: Dr. John Frissell, president; Dr. S. L. Jepson, vice-president; Dr. D. B. Ward, secretary; and Dr. J. C. Hupp, treasurer. Meetings are convened twice a month.

TEMPERANCE.

Mr. Joseph L. Wilde, in his "Historical Notes on Wheeling of 1837–8," says: "About 1843, the temperance movement broke out like an irresistible wave all over the country, and Wheeling was quite moved with it. It is quite safe to say that there was as much enthusiasm on the subject for a year or two, as there has been during the present favorable progress of the cause. They called themselves, and were known by the name of Washingtonians. Their meetings were crowded to excess. Speakers, regular hired speakers, and celebrated and effective ones, too, were on hand; they canvassed the whole country,

and gained converts by the hundreds of thousands in the aggregate. It became popular—almost a religion with many. Large numbers were added to the fold in Wheeling. Sometimes twenty, thirty, forty, and even fifty recruits would join at one meeting. We had among other speakers the famous John B. Gough, Esq., Thomas M. Gally, Esq., a very talented citizen, and son-in-law of the late Thomas List, Esq., also a Mr. Williams, an old Englishman, who was quite an old war-horse in the cause. He often complained, however, about the audience being backward in coming forward. His earnestness made him a valuable missionary in the work. It was generally admitted that he was one of the most amusing and useful speakers engaged in this commendable work; his drollery and eccentricity commanded a large audience, no matter where he went. These meetings, many of them, were held in the old Fourth Street (now Chapline) M. E. Church. It is to be feared, however, that at least a few of those now living, if interrogated to show their *old* ticket of membership, obtained at that time, would be much puzzled to find it."

THE WHEELING SHAKESPEARE CLUB.

The Proceedings of the Wheeling Shakespeare Club, a publication of the society issued to members in 1875, gives the following account of its organization:

"The Wheeling Shakespeare Club may be said to have had its origin in the meeting of a few gentlemen, assembled by invitation on the 17th of October, 1874, in Dr. Hullihen's chambers, on Market street. A very pleasant evening, as it seemed to all present, was spent in reading aloud portions of the play of "Julius Cæsar," and, by common consent, it was agreed to meet weekly thereafter and invite other lovers of Shakespeare's immortal dramas to participate in the pleasure of their perusal. Two objects ware had in view. First, the cultivation of a more intimate acquaintance with the works of Shakespeare, and secondly, by the exercise of reading aloud, the promotion of elocutionary skill. The latter of these aims, however desirable good reading may be regarded as an accomplishment, has always been held secondary to the former. The enjoyment to be derived from an appreciation of the beauties of Shakespeare's verse, has furnished the chief bond of union in the club, and proved the highest incentive to the weekly meeting. The matter, and not the manner of the reading, drew the members together. The wondrous wealth and felicity of Shakespeare's words were the theme of weekly comment and admiration, and each took pleasure in observing to how great an extent the common and current language of the day is indebted to him for its ornamentation.

"After several informal meetings, at each of which the number of participants was increased by invitation of appreciative readers, a formal organization of the club was had, and a code of rules adopted for its government. Mr. William Leighton, jr., was elected president, and Mr. W. A. List, treasurer and secretary. A hall was rented for the regular meetings of the club, and it was resolved that the number of members be limited to twenty-five, new members, up to this number, to be proposed at one meeting and unanimously elected at the next. Provision was also made for the appointment of committees who should have in charge each evening's entertainment, selecting the play to be read and assigning to each member the part he was expected to present."

The following is the first complete list of names of members: J..G. Armstrong, M. A. Chandler, J. D. Culbertson, R. C. Dalzell, Benjamin Davenport, O. C. Dewey, J. D. Dubois, S. P. Hildreth, F. L. Hoge, W. P. Hubbard, M. F. Hullihen, W. Leighton, jr., W. A. List, O. S. Long, C. Y. Lucas, S. McClellan, A. C. McKee, W. F. Peterson, H. M. Russell, R. Savage, R. F. Turner, J. F. Updegraff, W. G. Waller, J. L. Wilde, J. E. Wilson.

By death, removal from town, and other causes, the list of members has been considerably changed since the first days of the club. Three members have died, Messrs. J. E. Wilson, S. McClellan, and J. F. Updegraff; and, the limit of membership to twenty-five having been removed, the following names have been added to the club: C. P. Brown, A. W. Campbell, A. J, Clarke, O. D. Cooke, R. M. Delaplain, R. S. Harvey, R. W. Hazlett, F. J. Hearne, E. Hoge, A. A. Howell, D. L. Hubbard, I. F. Jones, R. G. Jordan, T. H. Logan, H. M. Mathews, R. A. McCabe, J. S. Miller, T. Melvin, C. P. T. Moore, T. H. Norton, E. W. Oglebay, M. L. Ott, H. O. Ott, G. H. Parks, A. P. Tallman, G. R. Tingle.

On the 5th of March, 1878, the Wheeling Shakespeare Club became an incorporated association under the laws of West Virginia. This was for the purpose of simplifying matters of business connected with the organization, and in order that they might legally hold the property which they found it necessary to acquire. After occupying Weisel Hall, on Chapline street, for more than four years, the society removed in 1879 to a hall on Market street, since known as the new Weisel Music Hall, where its meetings are now held. On the 23d of April of every year this club celebrates the birth of the great poet, whose name it bears by a banquet and appropriate literary exercises. The addresses of the president at three of these annual celebrations have recently been collected into a book and published under the title of *a Sketch of Shakespeare.*

The meetings of the society have continued with constant regularity since the first organization, and have always proved interesting. After the summer vacation, which is usually from the first of June until the latter part of September. The members assemble on Saturday evenings in their hall with renewed ardor to study and discuss the greatest of poets and grandest literature of our language, and through the autumn, winter and spring, the meetings are never intermitted.

Besides reading, the society discusses the text, characters and æsthetic construction of the plays. There are often differences of opinion which give cause of animated debate. This is frequently pursued with much earnestness, and sometimes falls into a vein of humor, but never into acrimony. The benefits derived from literary clubs are too obvious to require explanation or proof.

In the Wheeling Shakespeare Club, the members are gentlemen of various occupations, most of whom can find little time to devote to the pleasures or study of literature, hence they seek by this association to foster and cultivate a love of the noblest works of our literature, and keep alive a spirit of interest in poetry, which is often in danger of being crowded out of mind and heart by the rush and occupation of business life.

BUILDING ASSOCIATIONS.

There exists but few evidences, equally complimentary to the frugality of any community, comparable with the number of building societies it supports. In this direction the working classes of the "Nail City" long ago turned their attention. The Germans were first to start an association, November 22, 1866, which they named the Teutonia, with Anton Reymann, president. Then followed the Peoples Mutual, pilotted by Lot Joy, next an association in Ritchietown, name unobtainable; followed by the Franklin, the Central No. 1, American, on the Island; the Central No. 2, United States, Nail City, La Belle, Riverside, Central No. 3, La Belle Perpetual, and so on. Of course, most of the foregoing have run out, though it may be said that all met with flattering success, and the following are among those still in existence:

La Belle.—Established 1875, expires in 1882; capital $600,000, of which two-thirds has been taken. President, W. C. Handlan, secretary, H. C. Ulrich.

Riverside.—Established June, 1877, with a capital of 4,000 shares of $130 each. It is, at presenting running full, with Thos. O'Brien, president; George G. Hannan, secretary.

Central No. 3.—Established 1878, with a capital of $520,000. W. C. Handlan, president; J. F. Miller, secretary.

La Belle Perpetual.—Established January, 1879, with a capital of $520,000, is running about two-thirds full, with W. C. Handlan, for president, and H. C. Ulrich, secretary.

The Columbia was established in April, 1879, taking the place of the Island Association, with an authorized cash capital of $200,000. Directors: Thomas Prince, A. F. Criswell, Joseph Lawson, J. B. Lukens, A. M. Stevenson, T. H. Ferguson, C. H. Watkins. President, Theo. Prince; secretary, H. C. Morgan; treasurer, J. F. Snowden. It is at present running on $100,000 capital, but increasing.

United States Building, Land and Loan Association.—Charles H. Berry, president; Charles W. Conner, secretary.

Nail City Building Association.—John W. Boring, president; Chas. H. Deiters, secretary. Meets every Monday evening.

Working Men's Building Association, No. 2.—Wm. Reitz, president; John Fitzsimons, secretary.

A BRIEF HISTORY OF WHEELING'S BOAT CLUBS.

Rowing, as pastime and physical exercise, was first practiced in this country at Yale and Harvard colleges about 1843. But it did not receive much attention until, probably, 1860, when "young Americans" realized its many advantages and promptly sought, through that agency to develop their muscular organization. Since then, in almost every section of the United States where water facilities are accessible, boat clubs have

sprang up and flourished, winning for our continent a prestige little short of that achieved by her famous marksmen. So far back as 18—, Wheeling fell in with the growing popular taste, being only by a very brief period preceded by Martin's Ferry, where the Dardine Club had been successfully established. The Wheeling project was called the Clarkson Club, afterwards the Heyner's, when this special aquatic indulgence, like an epidemic, became infectious, and in rapid succession a number of other clubs dawned with varied success. The following may be taken as a fair synopsis of existing organizations:

THE NAIL CITY BOAT CLUB

Was established October 1, 1872, and in the following spring they built a floating boat house, which they suitably furnished, at a total expense of $1,128, which they laid out in cash. During the summer of 1873 they bought two single shells and one four-oared shell, placing them in capital shape for accommodating oarsmen. The club then continued to prosper, adding to its facilities until commanding five single shells, two four-oared shells, one double shell, one working boat and two out-rigged racing skiffs. In July 20, 1876, however, some malicious persons entered the boat house and destroyed three single shells. At this time the value of the club property was about $1,500. In the spring of 1877 they sold their club house to the H. J. Leasure Boat Club, of this city, and during the summer of the same year built a new handsome two-story house for themselves, at a cost of $2,000, and in addition refurnished it; purchasing two new shells, and increasing their resources to $3,000 in value. The structure stands on the river bank, near the foot of Twenty-third street, in the Fifth ward, and is sixty feet long by twenty-five feet wide. It is a very attractive looking building, commodious, and stands on a neavy masonry basement, or boat room, the walls of which are two and a half feet thick, except at the north end, where they are five feet through, to resist anticipated ice drifts, during high water. The second story is divided into three apartments, with a hall way. The main portion, twenty-five feet by forty feet, is used as a reception room, attached to which is a library and sitting room, beside a ladies' sitting room in case of giving entertainments. From the hall-way, five feet wide, a stair-way leads down to the boat room, and the finish of the entire building internally, is excellent. The sitting room, libraryand dressing rooms are neatly carpeted and furnished, displaying quite a number of chromos, engravings, &c., presented to the club by its many friends. A handsome book-case, presented by Mr. George R. Tingle, sheriff of Ohio county, stands in the library, and contains a handsome contribution of books from the Hon. Benjamin Wilson, present congressman from this district—and others. In 1877 the club was also presented with a fine cedar single shell by the Nail City Brewing Company, and named after Mr. Frank Walter, then the president of that successful corporation.

THE C. P. BROWN CLUB.

This club is named after a prominent and respected citizen, who has ever been found ready to second any worthy enterprise in recreation's cause. It was organized in 1874 and re-organized in 1875. Their boat house is located at the foot of Fourteenth street, and is 120 by 22 feet. They have ten single shells, one four-oared shell, a six-oared barge, an Indian cannoe, two working boats and one sail boat. The club boasts, at present, of twenty-eight active and several honorary members. It has been characterised for having capital success and boasting crack oarsmen—out of ten matches, during 1878, losing only three. The value of their present stock is about $2,800. The president being Charles Quinn; vice-president, George Snyder; secretary, W. Gregg. They have a gymnasium connected with their boat house and everything arranged to conduce to the pleasure and recreation of members.

THE A. ROLF CLUB

is another successful boating organization in Wheeling, being named after Mr. A. Rolf, a warm supporter and its president. Henry Bieberson is treasurer and George W. Lutz is secretary. Among its members are some promising oarsmen, and the club is a source of much enjoyment each recurring season.

THE SCHULTZ BOAT CLUB

derives its name from a compliment paid to 'Squire J. W. Schultz, of South Wheeling, who is an extensively popular and worthy old resident in that part of the city. It has a floating boat house and a large number of active members. President, Frank Reinhart; vice president, Jeff. Miller; recording secretary, James Radcliff; financial secretary, H. C. Woods; treasurer, W. L. Rose; captain, Ed. Blattner; lieutenant, John Butts; directors, Ed. Blattner, James T. McCready, Theodore Orum, James Radcliff and George Corngable.

THE LEASURE BOAT CLUB

has also a floating boat house, and the club is in capital standing. Its present officers are Laurence Ray and Andy Ray, of La Belle Mills.

OTHER CLUBS.

As numerous other clubs have run only a brief season, several recently having become defunct institutions, it would be speculative were we to give more, as they might not "come to time" next season. The Hegner, Standard, and F. A. Britt clubs were of recent date and may continue on the course, while it is more than probable that the Woodruffe and another club, now in formation at the Top Mill, will shine forth during the season of 1880.

Felsing and Weisgerber are at present Wheeling's champion oarsmen—the former of the Nail City and the latter of the Brown Club.

MISCELLANEOUS CORPORATIONS.

St. Joseph's Convent—Northeast corner of Eoff and Fourteenth street.

Wheeling Library Association—A. J. Clarke, president; Dr. M. F. Hullihen, secretary; Mrs. Sarah Patterson, librarian; rooms in basement of Capitol building.

Wheeling and Belmont Bridge Company—Robert Crangle, president; Joseph Lawson, superintendent; office west end of Tenth street.

Wheeling Butchers Association—George Bowers, Sr., president; Frank Bowers, secretary; southwest corner of Wetzel and Seventeenth streets.

Virginia Electropathic Institute—In charge of Dr. W. S. Yates, 1116 Market street.

McKim Manufacturing Company—N. E. Whitaker, president; Ed. C. Ewing, secretary; east end of Twentieth street.

Wheeling Gas Company—Board of Trustees: Wm. Ellingham, Dr. George Baird, and Geo. K. Wheat; superintendent, J. M. Dillon; secretary, Harry C. Caldwell; collector, S. F. Faris.

Citizen's Street Railway Company—Andrew Wilson, president; V. B. Hall, secretary; office 1210 Market street.

Wheeling and Elm Grove Railway Company—J. D. DuBois, president; R. Savage, secretary; office 1315 Market street.

The Children's Home of the City of Wheeling—Benj. Davenport, president; John L. Hobbs, and Daniel C. List, vice-presidents; Louis C. Stifel, secretary; Miss Gertrude Lamb, treasurer. Rev. S. B. Barnitz, president board of directors. Mrs. W. F. Butler, president board of lady managers. Mrs. O. P. Miller, secretary. Mrs. Josephine Northrop, matron in charge, Miss Lena Hartstein, assistant; northwest corner of Jacob and Thirteenth streets.

Wheeling Hospital and Orphan Asylum—Former incorporated March 12, 1850, and the latter February 1, 1856; both in charge of the Sisters of St. Joseph; board of trustees, Rt. Rev. John J. Kain and Messrs. M. Reilly and Henry Moore; 109 Main street.

WHEELING STOCK YARDS.

This enterprise is conducted by an incorporated company, chartered in 1877, its present officers being D. List, president. C. Leoffler, treasurer, and W. Bayha, secretary, with Mr. P. Dillon, a most competent judge of stock, as salesman. The yards are located on the side of the Hempfield railroad track; of the Baltimore and Ohio railroad system, and on the east side of McCulloch street, occupying some six or seven acres of ground, whereon are erected a series of twenty-four excellent pens for stock, well watered and admirably fitted and arranged, capable of holding at least two hundred head of cattle. In addition there is a very fine barn for the storage of feed, and a capital Fairbank's weigh bridge. Stock is here received from all parts and sold on commission, the business being by far the most active in the fall. Mr. Dillon is a cattle dealer of wide experience, is locally well acquainted, and being also an accredited good salesman, fills his position with unlimited satisfaction to patrons of this yard.

CHAPTER XLI.

WHEELING'S IRON AND MINING INTERESTS.

EARLY HISTORY OF THE IRON AND NAIL BUSINESS—THE PREDECESSOR OF THE PRESENT TOP MILL—ACCOUNT OF THE TOP MILL—VIRGINIA MILL AND ITS SUCCESSOR, THE BENWOOD IRON WORKS—BELMONT MILLS—LA BELLE NAIL WORKS—THE RIVERSIDE MILLS—WHEELING'S FURNACES—CRESCENT IRON WORKS—WHEELING HINGE COMPANY—FOUNDRIES AND MACHINE SHOPS, &C., &C.

THE tremendous energies of the West and the illimitable supplies of the raw material with which she abounds, together with the cheapness of that very important element, fuel, fully counterbalance the long experience, the closer economy and the cheaper labor of the East. In short, the manufacturers of the East realize that the empire of trade tends to the setting sun. There can be nothing more interesting, therefore, than a resume of the history of the great nail trade of Wheeling. Of the nail business as it now stands here, we may say that, perhaps, in no other city can be found the aggregate product of so many different establishments bearing such uniformity of quality as characterizes the Wheeling nails. No one factory sets up claims to excel its fellow, and so far as quality is concerned, it does not seem to be a matter of inquiry among dealers as to which they will trade at. Every improvement that stands the test of merit is adopted by all our manufacturers, and thus is the uniformity of standard maintained.

PREDECESSOR OF THE PRESENT TOP MILL.

Wheeling's first iron mill was erected in 1834, by the late Peter Shoenberger and David Agnew. It was located on a portion of the site now occupied by the Top Mill, and was designed for the general manufacture of bar, sheet iron and nails, in accordance with the usual custom of that day.

For several years the mill was thus operated successfully. Mr. Shoenberger's connection with it was merely for the verification of a pre-conceived idea of his that Wheeling had decided advantages as a manufacturing point. Being already extensively engaged in the iron business of Pittsburgh, and having satisfied himself as to the correctness of his views, in regard to Wheeling, he retired from the co-partnership, yet still retaining the ownership of the property. Mr. Agnew succeeding to the business of the late firm, prospered so signally, as to become, in a short time, one of the wealthiest men in the city. The unexampled success of that iron mill suddenly awakened the people of Wheeling, as from a Rip Van Winkle slumber, and many were the wild schemes for the aggrandizement of the city that were inaugurated. In all, or many of them, Mr. Agnew, participated. For several years he was the honorable president of the Merchants' and Mechanics' bank. A multitude of ill-advised enterprises engaged his attention, and absorbed his capital; among others his connection with a blast furnace in the Hanging Rock region proved a disastrous investment. One of those crises incident to that day of variable tariff policy and uncertain currency, which were the bane of our manufacturing interests, found him entirely unprepared, and resulted in his total failure in 1840. Mr. Agnew was subsequently post master in the Harrison-Tyler administration. It is but just to say of him that he was one of the few men, who, through a series of financial disasters, ever maintained a spotless reputation. After the failure of Mr. Agnew the mill was operated by Greisemer and Tallant, the former had been Mr. Agnew's mill manager, and the latter his principal book keeper. (Mr. Tallant became subsequently an eminent banker in San Francisco). They continued the business during the adverse times between 1840 and 1845, but made no money. About this time, the general business interests of the country beginning to revive, E. W. Stevens, having just withdrawn from a Pittsburgh iron firm, came to Wheeling, bringing with him a cash capital of seventy-five thousand dollars. He rented the mill property of Mr. Shoenberger, and during the two or three years in which he devoted himself strictly to the iron business, he, to use a common expression, "fairly coined money." He enlarged the nail department of the mill, and brought the Norton family to Wheeling. The brothers, E. M. and George W., were practical nailers, and to them Mr. Stevens gave control of the nail department. From this date began Wheeling's reputation for nails—a reputation which has known no retrograde. Mr. Stevens was on the high road to immense wealth, and had he profited by the experience of his predecessor would undoubtedly have attained it. In an evil hour, however, he listened to the wonderful talk of an eastern speculator, concerning the fabulous riches to be found in the mineral veins of New Jersey, and Mr. Stevens invested largely in one of her copper mines. In a short time he had lost over one hundred thousand dollars which, with some other unfortunate investments, so curtailed his means, that in order to carry on his legitimate business, he associated with himself Edward F. Shoenberger, A. D. Stockton, Edward Collier and others. From some cause fortune began to manifest her fickleness, and the establishment was run with varying success, the title of the company changing from time to time, until it became Johnson, Sweeney and Company, and that again was merged in the firm of J. M. Todd and Company, of which the late Hugh Nichols was a member. One by one, during the changes we have noted, the men who had made Wheeling's first iron enterprise such a wonderful success for that day, had dropped from the roll of its managers, and under the financial crisis of 1857, the last named firm "went to the wall." During the war these works were rented to Norton, Acheson and Company, for manufacturing gun boat plates.—See article on Top Mill. The pioneer mill referred to was a great institution in its palmy days, yet it never had more than fourteen nail machines, making six to seven hundred kegs of nails per week. It was once destroyed by fire. From the beginning of its career, it had remained the property of the Shoenberger family.

THE PRESENT TOP MILL.

We left the old mill, partially revived, in the hands of the Belmont company, forging out the massive gunboat armor plate, the iron strength of which was proof against shot and shell. The lease of the property, which had not expired when the Belmont mill was sold, was continued by Acheson & Bell. These gentlemen, with Thomas C. Acheson as a partner, under the title of Acheson, Bell & Co., purchased the material left by the Belmont company, and continued the manufacture of gunboat plates, and, giving the business more than ordinary attention, received a large increase of orders which they filled promptly and satisfactorily to the government contractors. In 1864, Acheson, Bell & Co. purchased the works from the Shoenberger heirs, paying therefor $44,000. The purchase embraced, besides the mill, fifty acres of land adjoining the city. The buildings occupied but a small portion of the site covered by the present extensive works. The mill, from long disuse, required a considerable amount of repairs before the company were enabled to add to the manufacture of gunboat plates, that of bar iron. The firm also began the preparations for building a nail factory, by excavating from the hill a site for the necessary additional buildings. This was a herculean task, and was only accomplished by a large amount of labor and expense. In the spring of 1865 one of the boilers exploded, doing considerable damage to the works and necessitating an entire new battery of boilers, and the re-erection of a portion of the mill.

During the year 1865, Moses B. Cox and Wilbur C. and Charles W. Brockunier were taken into the partnership, and in the spring of 1866, with a view of enlarging the capital, a joint stock company was formed, and under the title of the Wheeling Iron and Nail Works Company, commenced the erection of a nail factory, which was completed during that year, and forty machines put in operation. The concern is generally known by the more euphonious title of the "Top Mill," from its location at the upper part of the city.

As yet the nail business had suffered but little depreciation from the prices which ruled at the close of the war, and there was an increasing demand. The Top Mill, therefore, found but little difficulty in building up an immense trade.

In 1869, the present company was organized and purchased the property from the old company, with John P. Gilchrist as president, Hon. C. D. Hubbard as secretary, and Adams Dodson as vice president, its capital largely increased, and its productive capacity more than doubled by the addition of fifty-six machines.

In September, 1871, the company, by a disastrous fire, suffered the entire destruction of their mill; but while the fire was yet smouldering, active preparations were made for rebuilding the works, and all the latest improvements, either in machinery or the arrangement of it, were adopted. By mid-summer, 1872, the mill was again in full operation, with its capacity increased to one hundred and five machines. As showing the

possible productiveness of the works, for the week ending February 14, 1874, they turned out 6,867 kegs, the largest number made in the same time, with the same number of machines, by any factory in the United States. The works have twenty-six boiling and four heating furnaces. In the fall of 1873, the capital stock was increased, and a fine blast furnace erected in June, 1874. The buildings include the furnace, covering a linear space of more than a quarter of a mile, and without the thirty dwelling houses owned by the company, extend over an area of six acres. Their coal fields have been enlarged, and their water and gas supplies are furnished by their own works. The furnace was put in blast October 2, 1878, and is now making an average of 500 tons of pig metal per week. Plentiful railroad tracks have been laid around the furnace and the mill, which give abundant facilities for handling the ore, coke and nails as may be desired, which, with the river inclines and wharves, leaves nothing to be desired in the matter of handling material or product in any direction desired. The works have now a capacity of 2,000 tons of pig metal per month and 5,500 kegs of nails per week, while the average pay roll is $12,500 per week. This mill has also adopted the Coyne automatic picker, by which the dust and slivers incidental to the cutting of nails are sifted through, and the nails packed free from such incumbrances. The works are largely built of brick, roofed with slate and iron, and are a fitting monument to the prosperous iron industry initiated on that spot so many years ago.

VIRGINIA MILLS, AND ITS SUCCESSOR, THE BENWOOD IRON WORKS.

Stimulated by the immense popularity achieved by the famous Stevens nail, E. M. Norton conceived the idea of manufacturing that particular make so far back as 1847, when he organized a company consisting of E. M. Norton, E. W. Stevens, John Hunter, William Fleming and the late Mr. Robert Morrison, under the title of Hunter, Morrison & Co. The mill was built on "The Point"—where the present Baltimore and Ohio Railroad depot stands—and was the first mill erected in the west for the exclusive manufacture of nails. Forty machines were put in position, and for sometime success attended the enterprise. But after about two years, E. M. Norton, with some of the best workmen withdrew from the Virginia, and with others from abroad, organized a company, which built the Belmont works. Then the Virginia was reorganized as Fleming, Hunter & Co., subsequently becoming Gill, Fleming & Co., when a new site was prospected for. The late J. M. Bushfield next joined them, and having sold their present site to the Baltimore and Ohio Railroad company for a depot, they secured twelve acres of land from the McMechen farm, four miles south of Wheeling, beside the coal underlying one hundred acres. Here, in 1851, they erected a works, and a number of tenant houses, thus constituting the nucleus to the present town of Benwood. The company then passed through a succession of titles, as Gill, Kelley & Co., Kelley, Holloway & Co., &c., until 1857, when the enterprise became the property of A. Wilson Kelley. Down to 1864 great success was achieved, but a difference arising out of the claims of the former owners, brought the mill to the hammer. Pending the sale, E. M. Norton, who had formerly withdrawn, again came forward, organized a prospective company, raised stock, and through an agent, June, 1864 bought in the works, land and all privileges pertaining thereto, Then was organized

THE BENWOOD IRON WORKS,

With E. M. Norton, as president. Just after the purchase of the mill property, they accepted the proposition of Cyrus Mendenhall, to take stock in the corporation to the amount of $60,000, by putting in, as an equivalent, his blast furnace, located in Martin's Ferry, Ohio. In this property was included an ore farm of fifty acres, several lots in the town, and the site on the bank of the river, together with the partly erected building, which constitutes the present furnace. The factory property in Benwood was thoroughly overhauled, the machinery re-set, and much of the building re-constructed. Under the new regime the mill started out with a fresh lease of active, energetic life. A large number of new houses were built for the accommodation of workmen and their families; ten acres were added to its domain, about half of which were laid off in town lots and sold to those desiring to erect dwellings, the other half was retained for the contemplated extension of the works.

They also secured, on very reasonable terms, an additional coal field of ten hundred acres and thus they laid deep and strong the foundation upon which to build up an extensive and prosperous business. At the close of the year 1866, Mr. Norton's official connection with the affairs of the company, terminated, and he has since been identified with nail works at Ironton, Ohio, and elsewhere.

His successors were C. Oglebay, A. W. Campbell and Alexander Laughlin. Maj. Loring has been the secretary, and W. W. Irwin, principal book keeper for the company ever since its first organization.

The company has carefully and steadily pursued an expansive policy. Large additions have been made, comprising a new nail factory, extensive shops for the manufacture of kegs, a new ware house and a rejuvenation of the furnace.

At the close of 1866, the productive capacity had been increased from forty to sixty-five machines, and the boiling and heating furnaces from eighteen, at the beginning of its operation in 1864, to twenty-six.

From the annual report of the National Association of Nail Manufacturers, we find her total production for the years 1871–2–3, to have been as follows: 1871, 176,406 kegs; 1872, 162,450 kegs; and for 1873, 160,231 kegs, or a total of 499,087, being a yearly average of 166,352 kegs, or a weekly average of 3,199¾ kegs. After allowance for strikes and lay-offs, the real weekly average is 2,000 kegs.

The various interests of the Benwood company give employment to about four hundred persons. She has been mainly instrumental in building up a growing and thriving town which is extending rapidly toward our city limits, and which though in another county, will in a few years join with Wheeling, thus forming a continuous city.

In April, 1876, however, the works were totally destroyed by fire; but no time was lost in restoring them. This time they were enlarged, and consist only of brick and iron, being the most completely fire-proof works in the country. The present building is 300x120 feet, runs 124 nail machines and has an average capacity of 7,000 kegs per week. Finer and better facilities no similar institution need desire, while they employ to-day an average of some five hundred hands.

THE BELMONT MILL.*

We have already noted the withdrawal of E. M. Norton and others from the Virginia Mill organization early in the year 1849. The success attending the operations of that mill during the time of their connection with it, had more fully developed the natural advantages of Wheeling as a manufacturing point, and had attracted the attention of practical men elsewhere who were desirous of securing for themselves more immediate and higher results from their small capital and skilled labor than seemed possible under the shadow of the wealth which controlled the iron interests of the country.

Mr. Norton and his associates therefore had no difficulty in drawing a number of the best class of workmen from other cities to the support of their new enterprise. A company was soon formed, consisting of William Baily, S. H. Woodward, Henry Wallace, C. B. Doty, Holston Harden, F. D. Norton, William Hay, Hugh McGiven, John Wright and E. M. Norton.

These gentlemen constituted a corps of experienced, practical iron workers. From the late Joseph Caldwell they purchased two acres of land lying on the bank of the river, in what is now known as Centre Wheeling, but which at that time, although embraced in the city limits, was only a cornfield, for which they paid sixteen hundred dollars. On this ground they selected their site and erected the Belmont Mill, and put into it eighteen nail machines, which, with six puddling and two heating furnaces, gave employment to one hundred and fifty men. The daily product was two hundred kegs of nails.

Just after the works were completed, Henry Moore, of this city, was admitted to the partnership, and the company represented a capital of forty thousand dollars. Active operations were commenced in October, 1849, with E. M. Norton as president, and William Bailey as manager of the mill, under the title of Norton, Bailey & Company.

Just about this time a radical change was effected in the method of manipulating the iron in the bloom, as it is called, by the introduction of the Burden squeezer. Previous to the invention of this machine, the preparation of the bloom for the rolls was made by means of a tilt hammer, under which the bloom was brought to such a shape as admitted its passage through the rolls, and after this, it was reheated, and drawn into nail plate.

*Wheeling *Intelligencer*, "Old Employee" article.

The introduction of the steam hammer, which was used in the Virginia mill, was considered a long stride in advance towards perfection and economy of manipulation. In the preparation of the bloom for the hammer, the raw pig metal was not brought up to that intense heat which now characterizes the operation of boiling or puddling, consequently the true condition of the iron when brought to the hammer, could not be so accurately determined, and there was an unavoidable irregularity in the quality of the plate manufactured from it.

As we have said, radical changes and manifest advantages followed the introduction of the squeezer; the thorough boiling of the iron by which a much larger per cent of impurities were driven off, the more perfect elimination of cinder by the squeezing process, and the introduction of muck bar, by the cutting, cross piling, and reheating of which have been secured that uniformity in quality of iron which had hitherto been impossible, but which was so desirable a quality in nail plate.

A very marked improvement was also made in the method of rolling nail plate, by the introduction of what are called bull-head rolls. Formerly the plate had been drawn out on sheet rolls, just as sheet iron is still made. The plate was then cut into strips with but, ordinarily, a very little regard to the grain of the iron. While this plan may have made no very perceptible difference in the appearance of the nails, it made a very material difference in the quality.

Under the improved rolls, the iron came out in long, narrow strips, but of a uniform width of ten or twelve inches, and thus when sheared up secured absolute uniformity in the grain of the nails. These great improvements were quickly adopted by the Belmont company, and their first use in this city was in their mill.

The Virginia mill having fallen into unskilled management, the Belmont immediately took a precedence, entered upon that career of success which has attended their operations ever since. It continued under its first supervisors until November, 1851, at which time, in the parlance of the mills, there was a swarm, and Messrs. Bailey, Woodward and others retired from the company, Henry Moore becoming the purchaser of the retiring interest.

The late J. C. Acheson then became a member of the company, and the firm became Norton, Acheson & Co. In 1853, Joseph Bell became a stockholder and was added to the active membership. From year to year, the business continued to increase with uninterrupted prosperity, so that in the year 1860 its productive capacity had been brought up to eighty machines, or more than four times its original number.

After the commencement of the civil war, when trade had become stimulated in the highest degree, and all manufactured products had reached fabulous prices, the Belmont company, in order to supply the muck bar necessary for its suddenly expanded business, rented from the Shoenberger family the Top mill property, which since the failure of the late firm of J. M. Todd & Co., had remained idle. They had barely got the property renovated for their purposes, when the government—then in the height of its preparations for crushing the great rebellion—made overtures to the company for the manufacture of plate for gunboat armor, and they accepted large contracts for that class of products. In the fulfillment of these orders, the company rendered complete satisfaction, and in addition to making it a profitable enterprise, also added materially to Wheeling's reputation for manufacturing iron goods.

In the year 1863, the partnership arrangements of the company having expired by limitation, the mill property was sold at public auction for one hundred and twenty-seven thousand dollars, Henry McCullough, of Pittsburgh, becoming the purchaser. The company was reorganized under the name of McCullough, Acheson & Company. M. B. Cox also at this time became a member of the company. After a brief existence the title was again changed, and became Robert Lehr & Company, and this again merged into the Belmont Iron Works, with Henry Moore, as president.

In the fall of 1865, the name again changed to the Belmont Nail Works Company, under which operations have continued to the present time. During these changes J. C. Acheson, Joseph Bell and others retired from the company. Since its organization as the Belmont Nail Works Company, it has largely added to its productive capacity, having increased the number of its machines to one hundred and eleven, its puddling furnaces to twenty-five, and heating furnaces to four, and employing five hundred and fifty men and boys, with a productive capacity of one thousand kegs per day, and having a pay-roll of one thousand dollars per day.

It has been since its last organization, under the efficient management of the vice-president of the company, Joseph D. DuBois. The officers are, president, Henry Moore, of Baltimore; vice-president, secretary and treasurer, J. D. DuBois; book keeper, John Fitzsimons; directors, Henry Moore, Robert Lehr, J. D. DuBois, Michael Reilly, W. C. Handlan, Henry Russell, and John Fitzsimons; forge manager, N. Riester; nail manager, William Chew. The capital stock is $500,000 with privilege to increase to $1,000,000.

The territorial domain of the company now comprises about four acres, and its buildings occupy in length ten full squares. Extensive additions have been made to its coal privileges, although there is yet of its original coal field, enough left to last several years. Under its auspices a large portion of what is now the Sixth Ward of the city, has grown up and been peopled with an industrious and intelligent class of citizens.

LA BELLE NAIL WORKS.

In the fall of 1851 a party of twenty-two gentlemen formed a company, consisting of S. H. Woodward, David Spaulding, C. B. Doty, Henry Wallace, William E. Bailey, William Linch, Isaac Freeze, W. R. E. Elliott, James Burke, Dennis McCoy, Richard Savery, R. S. Irwin, Holsten Harden, John McClinton, Andrew Glass, Wm Dean, Wm. Bailey, Jos. Hersey, Noah Remick, Robt. Caswell, John Wright, and Wm. Hay, and duly organized under the title of Bailey, Woodward & Co., with S. H. Woodward as business manager, and purchased of the late Jos. Caldwell, four acres of land, then lying outside of the city limits, and about half a mile south, for which they paid $1,000 per acre. Two acres were reserved for mill purposes, and the other two acres were laid off in lots on either side of an avenue. The mill was put in operation in the fall of 1852, with twenty-five nail machines, eight boiling furnaces and ten heating furnaces, at a cost of $60,000. William Bailey was the manager of the factory, and to the present, prosperity has never deserted them. They have rapidly built up an extensive trade, and constantly kept apace with it by increasing their productive capacity. They have also added largely to their original territory, and covered it with extensive buildings. All the gas they consume is manufactured at the works, and their coal privileges have been extended until they now cover four hundred acres, affording also the key to an almost inexhaustible field beyond. They have increased their number of nail machines to eighty-nine, boiling furnaces to twenty-one and an additional heating furnace. The company affords employment to over four hundred persons, and during 1878 they turned out as many as 180,000 kegs of nails.

THE RIVERSIDE MILL.

Although the Riverside is the youngest of the great nail institutions within the city limits, its initiatory point dates as far back as the year 1852, and we must trace its history, step by step, from that date. In 1852, E. C. Dewey, of Cadiz, Ohio, came to Wheeling, and at the head of what is now Twenty-sixth street, built the Eagle wire mill—a small concern, having five boiling and two heating furnaces.

The works were operated with indifferent success until the summer of 855, when they suspended and remained idle till spring of 1858, at which time the mill again commenced operations under a lease to J. H. Pendleton & Co. These gentlemen engaged in the manufacture of bar iron of the lighter gauges, also railroad spikes, making a very successful run until 1859, when the works were burned. They were rebuilt, however, in the same year.

Early in the year 1860, by lease from Chauncey Dewey, they became the property of O. C. Dewey, also of Cadiz, Ohio, who associated with himself J. N. Vance and W. H. Russell, of Wheeling. These gentlemen, with a capital of fifteen thousand dollars, commenced operations under the firm name of Dewey, Vance & Co., and the factory was known as the Wheeling Iron and Spike Works, which title was afterwards changed to that of the Juniata Iron Works.

In 1866 the project of building a nail mill was agitated and finally determined upon. In furtherance of the enterprise, the partnership was largely extended, embracing N. Wilkinson, John D. Culbertson, and a number of experienced employees. Chauncey Dewey, the owner of the works, also became a member of the firm, and the works were absorbed into the capital stock.

The company purchased the Eoff property, lying immediately north of the Belmont mill, for which they paid $12,000. It embraced a whole square, and extends from Main street to

the river. On the corner of Main and Twenty-fourth streets, they erected the nail factory, and adjoining that another large building for their heating furnaces, plate rolls, shears and other machinery. The construction of the works progressed leisurely through the year 1867.

During the summer of that year, William L. Hearne, a retired capitalist from New York city, became a member of the company. In December, the mill was completed with forty-eight machines in position, and represented a capital of $250,000. The boiling furnaces in the mill at the head of Twenty-sixth street had been increased to twenty-two, and these running double turns increased the original capacity of the works nine times.

In 1870 forty-two machines were added, bringing the number up to ninety—making the full complement contemplated in the erection of the mill. The Riverside is one of the best appointed nail establishments in the country. The Norton's, and Bailey, Woodward & Co. (the latter, perhaps, the most eminently practical men engaged in the business), had literally revolutionized the trade and gained for Wheeling a high reputation as a nail producing center

The use of fifteen inch plate, a grade which gives a very large percentage of increase to the productive capacity of the mill without any increase in the number of machines, was first introduced into the Wheeling mills by the Riverside company.

They have also made an improvement in the arrangement for catching, and also for shoving under nail plate, the machinery of which is the invention of one of the firm, and was patented in 1872.

In 1870, the Riverside began to investigate the question of building a blast furnace.

A site was purchased near the town of Benwood. The erection of the furnace commenced in 1871, and it was put in blast on the 9th day of February, 1872. During a run which lasted until the 21st of March, 1873, when she was blown out, she yielded 19,785 tons of metal (2,268 pounds to the ton.) The largest yield in one day was drawn off on the 21st of December, 1872, being 81¼ tons, and the yield for the month of December, 1872, was 2,008 tons, making a daily average for the month of sixty-four and four-fifths tons.

The furnace property of the company includes thirty acres of land, and a coal privilege of one hundred and twenty acres; also immense ledges of limestone. Large additions in railway facilities for handling stock has been made, and the company have a locomotive engine of their own. In January, 1875, the company became incorporated as the Riverside Iron Works, with a capital of one million dollars. J. N. Vance, president; Col. N. Wilkinson, secretary; J. D. Culbertson, treasurer; Frank J. Hearne, general manager. The nail machines were increased in number to one hundred and twenty-six, and the manufacture of all kinds of bar iron was added. In 1876 one of their nail mills was destroyed by fire, but a new and enlarged building, of iron and brick, was soon erected. Present capacity of the works, 300,000 kegs of nails per year, while they are manufacturing considerable quantities of T rails for narrow-gauge railroads. It is worthy of remark that they have run one blast furnace, without intermission, for thirty-six months, producing 50,000 tons of good pig iron, without its being relined. In all departments, an average of eight hundred employés are here kept at work.

THE WHEELING FURNACES.*

The manufacture of pig iron in Wheeling is simply the legitimate outgrowth of her great nail business and her increasing foundry interest, which have made the city one of the great consumers of this comparatively raw material.

Several elements that enter into its successful manufacture exist in unlimited abundance, and the manufacturers long since recognized that to make their own pig iron would one day become a fundamental necessity. The success of the Benwood Furnace, the pioneer of this growing interest, together with the still more marked success of the Steubenville furnaces, led to the erection of the Riverside, one of the largest and best appointed, as well as one of the most successful in the country (see article on the Riverside Mill).

The unprecedented advance in the price of pig iron still further stimulated the enterprise of our nail manufacturers, and the Riverside was followed by the Bellaire Furnace on the Ohio side of the river, which, with the accustomed vigor of the Bellaire company, was rapidly completed and put in blast. The Top Mill and the Belmont company had commenced to build large furnaces in the fall of 1872, merely laying the foundations, so as to allow them to become firmly settled by the spring of 1873.

The Top Mill Furnace was commenced on the 1st of October, 1872, and was located on the grounds immediately adjoining the nail works of the company. Being on the bank of the river, and at the foot of a very high and precipitous hill, its site was literally dug out of the hill. The buildings are all of brick and covered with iron roof. The furnace stack is sixty-five feet high, has an eighteen-foot bosh, and is designed of a capacity equal to the production of from sixty to seventy tons of pig metal per day. The casting house is one hundred and fifty feet long by fifty feet wide. The hoisting house is eighty-seven feet in height, and is furnished with an Ottis hoisting apparatus. The stock house is built of brick, and is two hundred feet long and sixty feet wide.

The engine house is thirty-six feet long by thirty-six feet wide, and the smoke stack has its foundation laid twenty feet below the surface of the ground, and is one hundred feet high. A battery of six boilers, each sixty feet in length by forty inches in diameter, will furnish the steam for two upright engines of thirty-six inches bore and four feet stroke. The fly wheels are four in number, weighing ten tons each. There are three hot blasts—Tait's patent—weighing two hundred and ten tons.

The blowing engines are eighty-four inches in diameter and four feet stroke. The steam engine was built by Totten & Co., Pittsburgh. The hot blasts were cast in the foundry of Dixon, Marsh & Co., of the same city. The boilers were made by Moorhead & Son, of Wheeling, and are equal to the fine reputation which that firm enjoys wherever their work is known. The furnace plates and some piping were cast in the foundry of Cecil & Co., also of Wheeling.

THE BELMONT FURNACE,

was commenced in November, 1872, and all the foundations built. Work was suspended until the spring of 1873. The furnace was on the same plan as the Top mill and was erected by the same party. It is located on Main street, between the Belmont and Riverside nail works. The furnace stack is sixty-three feet high and has a sixteen foot bosh. The casting house is one hundred and forty feet long and fifty feet wide, and the stock house is one hundred and seventy feet long and seventy feet wide. The hoisting house is eighty-five feet high, and supplied with the Ottis hoist.

The engine house is thirty-six feet by forty feet. The boilers and engines are of the same dimensions as those of the Top mill, with smoke stack one hundred and three feet high. There are two hot blasts of Tait's patent, with space for a third. The castings weigh one hundred and forty tons.

All the iron work of the furnace is of home manufacture. The boilers are the work of Moorhead & Son. The engines were built by L. Spence, of Martin's Ferry, and all the castings were made under contract with Culbertson, Wiley & Co., of the same place, and nearly all cast in their foundry. The Belmont was put in blast in September, 1875.

At the time Mr. DuBois was congratulated as to his judgment in relation to the ability of the home foundries to compete successfully with those of other cities, in such heavy machinery, and time has only sustained the favorable opinions first formed.

THE CRESCENT IRON WORKS.

In 1852, Gill, Hardman & Stephens commenced the manufacture of sheet and boiler plate iron at the above works. In a few years a railroad mill was added, and the making of rails became an important adjunct to the works. One hundred and fifty miles of rails were furnished for the Union Pacific railroad. Subsequently, the present Whitaker Company became proprietors, as a joint stock company, and the manufacture of rails was abandoned in 1873—the product of to-day being exclusively sheet iron. Three hundred men were at first employed, but at present only half that number are found at work. The pig iron used is made from ore brought from the Lake Superior and Missouri districts. The gross products for 1877 was five thousand tons of sheet iron, the proceeds being $250,000. The officers of the company are George P. Whittaker, of Cecil county, Maryland, an active and experienced iron manufacturer, and Mr. Nelson E. Whittaker is secretary and general manager.

*Wheeling *Intelligencer*. "Old Employee" article.

WHEELING HINGE COMPANY.

We are unable to divine whence to give credit for the introduction of the original machinery (most of which is still in use) for the manufacture of wrought iron hinges. Suffice it to know that it was invented previous to the manufacture of any iron, in this country, of requisite toughness and malleability necessary to make the machinery available. The patent expired ere the inventor had succeeded in bringing it to favorable notice. In 1824, the Roys, of Troy, New York, got possession of the original machinery, or built some like it, and commenced the manufacture of wrought "strap," "T" and "butt" hinges. The next to follow in the same line was the Stanley Works, of New Britton, Conn., also, Gilmore & Co., of North Easton, Mass., and for several years these factories made all of what was called patent hinges produced in the United States. A few years later, Miles Greenwood, of Cincinnati, further engaged in the manufacture of like hinges, but having other business also on hand, did not push his new enterprise. The question of establishing a hinge factory in Wheeling was mooted in the winter of 1865, and some attempts were made to obtain a knowledge of the kind of machinery required with a knowledge of the process of manufacture. The first attempt did not meet with flattering success, still, enough insight was gained to warrant the organization of the company on the first of May, 1865. The incorporators were Messrs. Jos. A. Metcalf, Sam'l Laughlin, Jno. F. McDermot, David Wagener, Alex. G. Robinson, Augustus Campbell, A. W. Campbell and D. E. Donel. By special diplomacy the company succeeded in securing the services of a competent Troy machinist, arranged for the casting of the machinery, and purchased the location which they now occupy on the corner of Jacob and Nineteenth streets, erecting buildings thereon—the main factory being three hundred and thirty-five feet long by sixty-six feet wide—the iron house, grinding rooms and smiths' shops all being detached buildings, and the whole occupying one half of an entire lot. In April, 1866, the company, with Joseph A. Metcalf as president, I. H. Williams as secretary, Hugh Clary as working superintendent, and James A. Dunning as his assistant, commenced operations in the "strap" and "T" departments. It was, however, not until March, 1867, that they got under way manufacturing a full line of "butt" hinges. In December of that year, after a period of twenty-one months, an account of stock was taken, and revealed that $9,000 of the original capital had been sunk, thus reducing it from $50,000 to 41,000. On this discovery the officers set about the most rigid curtailment of expenses, and a radical re-construction of its running management. Decided success was the result, and it adds a higher testimony to Wheeling's pluck and energy when we state that during this company's prosperity three other similar enterprises ceased to exist, and only one of them, after passing into new hands, has revived. In 1869, Mr. Dunning succeeded to the working management, in 1871 Mr. A. G. Robinson succeeded to the presidency, which he still retains. In 1872, Mr. L. E. Hanson was elected vice-president and superintendent, and to his labors much of the latter prosperity may be ascribed at this date (January, 1879) the company has now succeeded in taking the front rank in regard to quantity of "strap" and "T" hinges manufactured and sold in the United States.

WHEELING'S FOUNDRIES AND MACHINE SHOPS, STOVE AND BOILER WORKS, &C.

From its earliest cultivation of manufacture, Wheeling has evidenced a strong partiality for iron working, and her prosperous past, added to her far more flattering present, in that line of enterprise, speaks volumes in compliment to her judicious choice. Though since the earliest settlement of pioneers in this section, the ringing melody of the anvil has ever been heard, and the activity of the smith's muscular arm has incessantly kept up a shower of sparks flying

"Like chaff on a threshing floor."

Yet the first existence of anything like an extensive iron works was the establishment of Cooper's foundry on the side of Wheeling Hill, at a very early day. It was soon observed that the project was a good one, and L. Pollock, father of the present Mortimer Pollock, associated with Messrs. Scott and Fairchild, having one Stephens for master mechanic, followed with more extensive works of a like kind. Mr. A. M. Phillips, of Steubenville, came in about 1831–2, and opened a general machine shop in conjunction with an extensive business in building marine engines—in which line of business he may be styled one of the first pioneers in this nation. The Wheeling Manufacturing Company and Cuthbert's (now Sweeney's) foundry, Helen & Richardson's, and others in rapid succession, till

"Here and there, and everywhere
Industry flourished in full share,"

And in this respect, the old maxim—"from small acorns giant oaks grow,"—could not be more applicably quoted. Speaking of like facilities in these days, we still have

SWEENEY & SON'S FOUNDRY AND MACHINE SHOPS,

Located in North Wheeling, at their old stand, and still flourishing nobly. Marine engines are also manufactured and repaired extensively at these shops, while they have a special department for the manufacture and repair of agricultural implements. In short, the name of Sweeney, to-day—like Phillips in 1832–5—is the popular pass-word to the obtaining of anything and everything in the way of the finest machinery the country will afford. Their works are extensive, replete in every department and produce the widest variety of iron work of almost any similar manufactory in this or the adjoining states.

THE CENTRE FOUNDRY COMPANY

also conduct a most popular and reliable business in Centre Wheeling, though at present they are somewhat restricted in their operations in consequence of a recent fire depriving them of a large portion of their premises. S. P. Hildreth is president, E. Hobbs, jr., secretary, and E. Hobbs, sr., manager. They make a specialty of cast iron house fronts, in the manufacture of which they are pre-eminently successful, as also in the production of ornamental fencing, window lintels and sills, rolling mill and heavy machinery, &c. The firm is thoroughly established and worthy the utmost confidence in their line of business.

REDMAN & CO.'S MACHINE SHOP.

This firm, consisting of Henry W. Redman, Geo. G. McKown and Wm. J. Hamilton, conducts a capital machine shop at 1730 Chapline street, where they not only command capital premises, but an excellent complement of facilities for any and all kinds of work in their craft. They make a specialty of repairs, and are universally popular for turning out the best of work.

WHEELING BOILER WORKS.

Among our many iron industries, few are in a more flourisbing condition than the popular boiler works run under the firm style of Thos. Moorhead & Son, though, really, the senior member died early in the present year—1879. The works occupy about an acre of ground, and are located on the corner of Market and Eighteenth streets, having a capacity, when in full work, of running thirty to forty hands. The business is controlled by Mr. John Moorhead, a most competent tradesman and experienced manager. Their manufactures are shipped through West Virginia, Ohio and Pennsylvania, where the name of the firm is looked up to with the utmost confidence. We might refer to specimens of their workmanship, but so uniform is its excellence and extensively scattered around, it would be difficult to discriminate special features.

There are also three other firms in the city conducting boiler making, as follows: Messrs. Daniel Cady & Son, Water street; W. H. Cox, Sixteenth street, and Messrs. Hobbs, Taylor & Co., 2000 Water street.

JOSEPH BELL & CO.'S EXTENSIVE STOVE FOUNDRY.

Another very important enterprise in Wheeling is that conducted under the above style by Joseph and David Bell and Chas. H. Senseney (known as the Arlington Stove Works), at 341 Main street. These gentlemen do an immense trade in a variety and quality of stoves unsurpassed in the country, and employ a large number of hands the year round. As a manufacturing establishment the Arlington Stove Works has a flattering and wide-spread reputation, while it constitutes an important acquisition to the manufacturing prestige of the Nail City.

THE STAR FOUNDRY.

The establishment took place forty years ago, and in 1868, under the firm name of Culbertson and Fisher, it was organized upon its present basis at the place on Market street it now occupies. Culbertson had been the owner for twenty years previous, and it was the oldest stove house in the city, but by

the connection of Benjamin Fisher, Esq., the present proprietor, it received a new impetus which placed it among the first rank of manufacturing establishments of this kind in the country. The firm of Culbertson and Fisher successfully carried on the business for about three years, when Mr. Fisher bought Culbertson's interest and became sole proprietor. Mr. Fisher had been an experienced man in the iron business in nearly all its various departments. Speaking of his connection with the establishment, the *United States Trade Journal* has well said: "This proprietorship brought with it an increased impetus of intelligent enterprise and its corresponding practical results; so that now we can point, without hesitancy, to the Star Foundry as being in fact as well as in name a brightly illustrated and representative house, unsurpassed, if indeed equalled, in its specialities, throughout the entire region of West Virginia. The Star Foundry occupies fully an acre of ground, and comprises a large two story brick building having the dimensions of two hundred and sixty-five by one hundred feet. It is located at Nos. 1614, 1616, 1618, 1620 and 1622 Market street, Wheeling, West Virginia. The facilities, including a forty horse power steam engine, are of the best and most favorable kind, which in the hands of a large number of workmen, usually numbering forty, contribute to the general result. The building itself was erected, and for a time used, by the Baltimore and Ohio railroad company, for a freight depot.

MINING AND GEOLOGICAL DEPOSITS IN AND AROUND WHEELING.

THE DISCOVERY OF COAL—THE SUPPLY INEXHAUSTIBLE—WORKS IN OPERATION—LIMESTONE IS PLENTIFUL—ALSO CEMENT ROCK AND FIRST-CLASS SANDSTONE—CLAY ABUNDANT AND BRICK-MAKING A DECIDED SUCCESS—A FLOW OF GAS.

Nothing could be more advantageous to the manufacturing interest of Wheeling than the valuable geological strata of the towering hills that almost surround and admirably protect the city from heavy storms. Without entering into mystifying scientific technicalities, we will simply confine our remarks to what has already been explored and has proved, beyond doubt, profitable to operate.

THE DISCOVERY OF COAL.

Down to 1810, all the coal used in Wheeling was brought by "pirogues" from Pipe creek, and that was very little, comparatively speaking, as its price precluded its adoption to any other use than that of blacksmithing purposes. About that time, however, an experienced miner, named Conrad Cotts, came here from Pittsburgh, and very carefully prospecting the surrounding hills, happily struck a vein of "black diamonds" nearly opposite where at present stands Sweeney's foundry. This vein was worked very successfully for some five years, during which time black curling smoke freely ascended from the chimneys of hundreds of dwellings. But at the expiration of this period the workings caved in and a coal dearth was soon experienced, though happily it was not of protracted duration, as ere the close of 1816 several other veins had been discovered, and the fact established that Wheeling was abundantly blessed with a coal supply to meet her every emergency for many long years to come—in fact, that

AN INEXHAUSTABLE SUPPLY

Only awaited the trouble of cutting out of the hills. There are three seams or deposits already known of, though only one worked, at present, and that, in itself, is so extensive it would be a matter of the wildest speculation to prophecy its probable exhaustion. The strata now being operated by drifts—for there are no shaft workings in the city—located in the hill about one hundred and twenty feet above the average water level of the creek. This seam is from four to five feet thick, and consists of an excellent quality of bituminous coal. Seventy-five feet above this seam is another vein of about two feet in thickness—good coal—but it is not worked while the more profitable strata in operation holds out. Again, it has been satisfactorily proved that about one hundred feet below the water level of the creek there is yet a third seam that may be shafted to, which is actually seven to seven and a half feet thick, hence we may safely infer that a "give out" of supply need not be anticipated in this, or even the next generation, if we base the future on anything like the present average consumption.

COAL WORKS IN OPERATION.

The manufacturing institutions commanding their own coal banks are the Top Mill, Belmont, Riverside and LaBelle nail works, and Hobbs, Brockunier and Company's glass works, as also the Central glass works, while in addition, there are a number of merchant coal banks in operation, prominent among them being McGinley and McCormack's works, P. L. Kimberly's, and Joseph Werner's—all located at Manchester—Kaisley, Brooks and Company's, Crescent street; who have also a bank in Ritchietown, beside Captain Schockey and Cowan and Company, also in the south end. These gentlemen exclusively deliver through the city—"clean coal," "mixed," "nut," and "pea coal"—direct from the mouths of their shafts. Having occasion to visit McGinleys and McCormack's works, we found them, the two "Mcs," exceedingly agreeable and well informed on the subject of mining, their drift originally belonging to the Steenrod family. They are popular merchants, supplying the state capitol, public schools and the convent, besides an extensive list of private consumers. Nor is Mr. Kimberly less popular as a producer, while it may be said of the whole of Wheeling's coal merchants, they are fair, square traders, and merit abundant support. In Wheeling there are a few coke ovens operated, but it is an acknowledged fact that good as the coal is for general purposes, it is not adapted to the satisfactory production of coke.

LIMESTONE—HYDRAULIC, OR CEMENT ROCK.

There is also found in our hills, a band, some nine feet thick, of excellent hydraulic cement, which is susceptible of being converted into a cement to suit all the requirements of trade, though probably not of comparative superiority with the A 1 imported samples of the same material. Mr. A. J. Long quarries and manufactures this cement with much success, and has done so for years. This cement is used considerably in and around Wheeling, though the bulk of it is shipped away with abundant success, and we believe it is destined to even a much wider patronage in the near future. A recent correspondent, presumedly on autherity, recently thus wrote to the local press: "A little north of Barnesville an apparently homogeneous strata of cement rock is found at a short distance above what is called the "Cumberland vein" of coal; and in height would be a short distance above the stripping at A. Long's upper stone quarry, in the "Reilly" hill, or about one hundred and sixty feet higher than the old Jefferson (Ninth) street coal entry in Wheeling hill.

"With us, this deposit is nearly ten feet deep, of three different tints, or colors; and the strata are in some places separated by thin crystalline layers of an inch or more in thickness. About one hundred and seventy-five feet above our main coal occurs a stratum of cement rock of two feet in thickness, overlaid by sandstone; and about sixteen feet higher is another bed of about five feet six inches in thickness.

"Now, such beds as the above described, and such wealth as they might be made, lie within rifle range of the Second ward market house; and good beds belonging to the city, are almost within a stone's throw of the "City Work House."

AND LIME STONE IS PLENTIFUL.

At least such is the unanimous verdict of our iron interest, but for building purposes, we must confess it does not produce so perfect a white lime as we find imported. Nevertheless, its better properties are not lacking in any other respect, hence it is unsparingly used, when burnt, both by contractors, and farmers for agricultural purposes. Mr. John Lantz, of South Wheeling, may be said, however, to be the only one in our corporation carrying on lime burning extensively, though across the river, from the Belmont, (in what is called West Wheeling, though in the State of Ohio) several parties are making quite a business of it—keeping kilns constantly burning to a good advantage.

FIRST-CLASS SAND STONE.

All along the Wheeling Creek, in the neighborhood of the Peninsula, sand stone of the finest and most desirable character for building purposes, abounds in an unlimited quantity. The vein, or deposit, averages forty feet in thickness, and, as a whole, it is not difficult to procure. The principal firms operating quarries extensively within the city corporation, are Scheehle & Lutz, A. J. Long, and P. Guenther. Most of the substantial buildings in the city are constructed of this excellent stone, which cannot be excelled.

BRICK CLAY AND BRICK MAKING,

Yet another very important advantage to Wheeling, are extensive beds of excellent clay, which has given rise to a number of brick yards, and the manufacture of that desirable material has become quite a prominent feature within the city. The clay is of an excellent quality, and mainly abounds in the vicinity of the Creek—there happily being an almost endless supply of it. At present there are some eight or ten brick yards in operation, including those presided over by Wilson Bros., G. Crumbacker, R. Y. Britt, A. Britt, G. K. Wheat, Armstrong & McGinley, James Bodley, G. W. Rumble, S. Waterhouse, and E. Westwood, the two latter being in the Eighth ward.

IRON ORE DEPOSIT.

There is some little iron ore abounding here, but it is not of a sufficiently profitable character to mine, hence its advantage can barely be regarded.

A FLOW OF GAS.

Recently, while engaged sinking for water, at Mr. A. Reymann's brewery, a sudden flow of gas was emitted, that when ignited gave a clear, bright light, and was immediately utilized by the proprietor, who lit up his brewery with it. The flow continues unabated with every prospect of having set in permanently. It is commonly supposed to be generated in the bowels of the earth, from the deep vein of coal already referred to—and which has not yet been operated.

CHAPTER XLI.

WHEELING'S GLASS MANUFACTURING INTERESTS.

EARLY HISTORY OF GLASS MAKING IN WEST VIRGINIA, WITH A GLANCE AT WHEELING'S FIRST ENTERPRISE—THE EXTENSIVE MANUFACTORIES OF TO-DAY, INCLUDING THOSE OF HOBBS, BROCKUNIER & CO., THE CENTRAL GLASS WORKS AND NORTH WHEELING GLASS WORKS.

NEXT to the iron and nail interests in Wheeling, comes its glass manufacture, which may he said to have assumed immense proportions. The first manufacture of window glass in this state was undertaken in Wheeling about 1820. The commencement of this branch of business, and the subsequent change to the manufacture of *flint glass* are described in the following extracts from a letter written by Col. Redick McKee. He says: "Up to 1817 or 1818, Wellsburg, then called Charlestown, was the principal town in the Pan-Handle, but the approaching completion of the 'National Road' caused business men from other places to move into Wheeling, and changed the relative position of the two places. However, the immigrants brought, as a general thing, but little active capital, and the former inhabitants, though many of them were wealthy, had their money mainly locked up in lands, town lots, &c. Hence, new enterprises, such as the building of factories, steam mills, &c., were left to new-comers. About 1820 or 1821, Mr. George Carothers, of Brownsville, Pa., came to Wheeling and proposed the building of a window glass factory. Aided by Wheeling capital, he erected the necessary buildings for an eight-pot furnace, annealing ovens, &c. Owing to accidents, the first attempt at glass making in this furnace failed, and the works were finally bought by Knox & McKee, who employed Carothers as superintendent, and in the latter part of 1821, or early in 1822, commenced successfully the manufacture of *cylinder glass*, packing mainly in half boxes (50 feet), with the brand, 'Virginia Works, Knox & McKee, Wheeling,'" "We," says Colonel KcKee, "continued the business satisfactorily for several years, turning out, I think, annually, some 3,000 or 4,000 boxes of all sizes, from 6x8 to 14x20, together with large quantities of green hollow ware; gallon and half gallon, and quart bottles; oil and porter bottles, and pint bottles innumerable. Our 6x8 and 7x9 glass was sent to Boston; for other sizes the West and South furnished a market. Our No. 1 glass was in high repute, and bore transportation to distant points, even going to the trading posts in New Mexico. As factories, multiplied, and blowers became more numerous and skillful, prices declined, and finally ceased to pay. We followed them down from $12 to $3 50, and then changed the concern into a white flint hollow-ware factory, under the firm of Wheat, Price & Co."

The glass works spoken of above by Col. McKee, occupied the square on which now stands the Fourth Ward school house.

"In 1829 a flint glass house was erected in Wheeling by John and Craig Ritchie, located on the side of the hill, east of the Second Ward market house. This establishment was operated for several years with great activity and success, and had a wide spread reputation for the manufacture of fine cut glass-ware. This success, and the unrivalled advantages for procuring cheap fuel at Wheeling, encouraged other firms to embark in the business, and in 1835 the Messrs. Sweeney put a large 'Flint Glass Works' into operation in the northern part of the town, which was followed in the course of the next few years, by the erection of another large establishment at the extreme south end, built by Plunkett & Miller. The establishment built by the Messrs. Sweeney, was operated actively for more than 35 years, in Wheeling, until, in the changes of business, its proprietors found it to their advantage to move it across the river, where it is now known as the 'Excelsior Glass Works.'"

These works, though on the Ohio side, are operated by Wheeling capital, and have the company incorporated under the laws of West Virginia. Hence, as it is in fact a Wheeling enterprise, it should be mentioned here. Mr. J. Bell, the president of the company, has kindly furnished us with the following statistics:

"The goods manufactured are known as crystal glassware, made up into table, lamp and bar goods, such as goblets, tumblers, pitchers, bowls, dishes, beer glasses, lamps, lamp chimneys, &c. About one hundred and fifty persons are employed, of whom ten to fifteen are females. The annual product is about $115,000."

Returning to the establishments within the limits of the city of Wheeling, we quote still further from Mr. Bell's description of them: "The works built at the south end of the city by Plunkett & Miller are now owned and operated by Hobbs, Brockunier & Co., to whose success we refer fully in a subsequent article.

"Another extensive and noted establishment located in the city of Wheeling is known as the Central Glass Works, making flint glassware, also referred to fully hereafter.

"The increase in the number of establishments does not fully represent the growth of glass production in Wheeling, for it is safe to say that any one of the works now operating makes ten times the quantity produced by any one running in Wheeling forty years ago. The improvement in quality and the cheapening of the cost of production have been equally marked. Articles of great beauty of design, excellence of finish, and unsurpassed in purity of metal, are of every day manufacture, and are sold at prices so low as to excite surprise. It is safe to say that nowhere is glassware of equal quality made more cheaply than in Wheeling."

THE SOUTH WHEELING GLASS WORKS—J. H. HOBBS, BROCKUNIER & CO., PROPRIETORS.

The South Wheeling Glass Works, now operated and owned by J. H. Hobbs, Brockunier & Co., are located on square Forty-one and adjoining coal lots.

The present complete establishment being traced back to the beginning, we find a small glass house containing a ten-pot furnace, constructed in 1836 or 1838, and owned and operated by Plunkett & Miller. These parties for some reason were unsuccessful; and failing were sold out, the property passing into the hands of the banks and other creditors.

In April, 1845, James B. Barnes and John L. Hobbs, came to Wheeling from East Cambridge, Massachusetts, and leased the idle works. Both men had been identified with the New England Glass Company, the former as superintendent of the crucible or pot room, and the latter as principal salesman, with which he combined the duties of superintendent of the cutting department. James F. Barnes, a son of James B. Barnes, and himself an accomplished workman, and John H. Hobbs, a young

man and son of J. H. Hobbs, either came with their fathers, or joined them soon thereafter. The principals were in the prime of life, ripe in experience, skilled in their vocation, industrious and determined men, but having a small amount of capital.

Mr. Barnes died in 1849, just four years after his arrival in Wheeling. Mr. J. L. Hobbs survives him, and still resides in Wheeling, and is one of its most respected and influential citizens.

When Messrs. Hobbs and Barnes commenced to bend their energies to reviving the works they had more than the ordinary discouragements which generally fall in the pathway of a new business, to contend with; the defeat of Henry Clay, the high protective candidate for President of the United States, having a very depressing influence on manufacturing enterprises. The outlook, in fact, was so discouraging that a few capitalists who had agreed to join them in the event of Clay's election, declined to lend their aid when it was known that the Whig candidate was defeated.

Wheeling, as yet, had done little toward developing her manufacturing interests, and utilizing the advantages she possessed over other communities in that line. The starting of this idle glass house was to mark an era in the history of the city, which should make her famous throughout the length and breadth of America, and renowned in the markets of the Old World, for the quality and extent of glass manufactured. The only great towns of the West and South at that time were Cincinnati, St. Louis and New Orleans. Not a mile of railroad west of the Allegheny mountains was built, the present track of the great highways of civilization being forest paths, and the only echo wakening the quiet of the peaceful Ohio Valley was the hallooing of the teamsters of the heavy merchandise wagons. River transportation was the sole means of receiving most of their materials, and forwarding their products, except to inland towns, which had to be reached by the slow and expensive means of the old-fashioned road wagons with teams of four, six and eight horses, which traversed the National pike, the appian way of those times of fragrant memory to many. Goods of all kinds were sold almost entirely on long credits with frequent renewals. These and many other discouragements had to be faced and overcome in relighting the fires of the furnaces and rehabilitating the works to push them forward to successful results; obstacles that would dishearten and obstruct the most sanguine and energetic business of this day of progress and improvement.

The works consisted of two furnaces containing fourteen pots of the then customary small size. The coal bank, situated conveniently within a few rods of the furnace, had just been opened. The coal used at the works cost one and a quarter cents per bushel, or thirty-five cents per ton; wood, which cost one dollar and fifty cents per cord, was used in the lears. The glass manufactured was that usually known as "flint," "lead," or "full crystal." It was composed of pearl ash, which cost (1845) four and one-eighth cents per pound; lead, three cents per pound; saltpetre, five and three-eighths per pound, and sand $11 per ton. As a matter of interest in connection with this subject, we quote the prices of some other articles in that year: Bar iron was worth from three to five cents, sheet iron sold at ten cents, nails brought four dollars per keg and letter postage was twenty-five cents. The prices paid skilled labor ranged from seventy-five cents to one dollar per move. We notice on the first pay rolls: Charles Butler, seventy-five cents per move; Henry Leasure and William Elson, fifteen and one-half cents per turn, and Andrew Baggs, twenty-five cents per move; Peter Cassell, eighteen and three-quarter cents per move; William Kryter, mould maker, thirty dollars per month. The articles manufactured in the first year were solar chimneys, jars, vials, tumblers, pungents, tinctures, lamps for lard oil, salts and cologne bottles.

In 1849, James B. Barnes died, when the firm became Hobbs, Barnes & Co., being composed of John L. Hobbs, James F. Barnes and John H. Hobbs. The West and South increasing rapidly in wealth and population was opening up a great market for the wares of this firm, enabled them to not only keep more constantly at work, but compelled them to increase their capacity. In 1854 they built a new and very large furnace and otherwise added to the capacity of the works.

In 1856 the firm again changed to Barnes, Hobbs & Co., composed of John L. Hobbs, James F. Barnes, J. H. Hobbs and J. K. Dunham, and continued to do business under that style until 1858, when it changed to Hobbs & Barnes. In 1858 the discovery of the illuminating property of petroleum, and the distillation of illuminating oils from coal in Kentucky and elsewhere added a branch to their business, namely: the manufacture of lamps and chimnies. The demand was so great for this class of goods that it was impossible to produce enough to supply it.

In 1861, when the civil war burst upon the country, and everything was so uncertain, the fires in the furnaces were out for six months. Many of the employees enlisted in the Union army, some continuing in the service until the close of the conflict. Boys and the younger men were rapidly promoted to the places made vacant, and some superanuated workmen being picked up the best was made of the situation. It was very difficult to obtain skilled laborers to meet the demands for the manufactured articles, as the large bounties and the excitement of the camp and field were allurements that the impulsive young men could not very well resist.

In February, 1863, the present firm of J. H. Hobbs, Brockunier & Company, was formed, consisting of J. L. Hobbs, John H. Hobbs and Charles W. Brockunier. This firm was not only destined to become famous for the variety, quality and beauty of its pressed ware, and the richness of its cut, engraved and blown ware; but also for almost completely revolutionizing the character of glass and the method and appliances of finishing it. About this time John L. Hobbs became convinced that the glass of the future would be a glass in the manufacture of which one of the principal ingredients to be used would be lime, and that lead would be discontinued. He caused material to be purchased, and, in spite of several unsuccessful experiments he was not discouraged in eventually attaining success, as it seemed that it must finally succeed. The efforts of Mr. Hobbs were warmly approved and aided by the other members of the firm.

In the fall of 1863, William Leighton, sr., was admitted into the firm, and took charge of the manufacturing department. He entered readily into the prospect of finding a glass pure in color and durable without lead being a component part of its composition. After numerous experiments, sand, (from Berkshire county, Massachusetts) Spanish whiting or chalk, bi-carbonate of soda, with the other usual ingredients, were found to make a brilliant and durable glass. Every glass works at this time, East and West, of any importance, was making lead glass, and to-day the same works are making the soda-lime glass, except two, which do not now manufacture large quantities. They introduced two other improvements in the manufacture of glass, namely: the use of benzine in the "glory hole," or furnaces for polishing ware, and the application of wind to the moulds. The latter was the invention of another party, but was immediately adopted and extensively applied at their works. The demand for the articles manufactured by this firm rapidly extended all over the United States and Canada.

In 1868, William Leighton, sr., retired and his son, William Leighton, jr., was admitted as a member of the firm. Every furnace at the works within a few years has been rebuilt and greatly enlarged, until now it has the largest productive capacity of any similar establishment in the West. It now has three furnaces—one nine-pot, one ten-pot and one thirteen-pot. The last was completed in September, 1879, and is the first of the kind in the city or vicinity. It contains thirteen pots of the largest dimensions, and is the largest and most complete in this country, if not in the world. The gas generators at the bottom, under the pot chamber, are fed with slack from the sides, and are kept at a low heat. The gas, smoke and inflammable matter passes up to an opening at the bottom of the furnace, where it is mixed with air, carried in through separate flues. This mixture burns fiercely, the flame being white and intensely hot.

The works cover an area of several acres. It has an extensive cutting department, engraving room, mould making department and all the conveniences and appurtenances of a complete and well arranged works. It gives employment to three hundred and fifty persons, disbursing annually a large amount for labor, and is one of the establishments which contributes largely to the material prosperity of the city, and its goods have aided in no small way in making known the city abroad. Its production now consists of all articles of glass for table use, engraved, cut and etched; bar goods, lamps, chandeliers and epergnes. Its wares are sold in every state in the Union, and Cuba, South America, Australia and Europe.

CENTRAL GLASS HOUSE—A BRIEF SKETCH OF ONE OF WEST VIRGINIA'S MOST EXTENSIVE AND PROSPEROUS MANUFACTORIES WITH A NATIONAL REPUTATION.

The business of the Central Glass Company was started on the co-operative plan in the spring of 1863, with a capital of

$5,000. After the expiration of three years, the company bought the ground and buildings of the East Wheeling distillery and pork packing house, for the purpose of converting it into a glass manufacturing establishment that in point of magnitude and completeness should stand on a par with anything of the kind in the United States. And successful, indeed, have they been, as is demonstrated by their present extensive works, which the public, and even the trade generally, will admit is an honor and a compliment to American enterprise. In 1867, they obtained a charter to conduct the business on the joint stock plan, under the firm name of the Central Glass Company, with a capital of $80,000, which also represented the original capital of $5,000. The new company, however, reserved the right of buying in and cancelling all the shares which might be offered for sale by its individual members, and the result has been that the original four hundred and thirty-four shares have thus been reduced to less than one-half of the original number.

The capital of the company for several years past, has been $260,000—the average sales per month $25,000, and they employ 330 hands, (including boys,) whose united weekly earnings average $3,300. They operate their own coal field, comprising fifty acres, in the vicinity of the works. Their manufactures, which are of the finest in the market, find a ready sale throughout the United States, and are extensively shipped to the Canadas, West Indies, South America, and Europe. With Europe, especially, they have done a large business for the last four years, which, however, will be somewhat reduced by the effects of the new tariff of the German Empire that goes into effect January 1st, 1880. The productions of these works are confined to table ware, bar and lamp goods, the variety, quality and beauty of which cannot be excelled. Up to the year 1872, they operated only two furnaces, but during that year was added a third, with the necessary out-buildings. They also erected on the south side of McCulloch street, their new two story warehouse, with excellent offices and selecting and packing rooms attached. The main packing room is 65x84 feet, and the warehouse 287x70 feet. Both are acknowledged to be the most extensive as well as the most practically arranged buildings in this country. Both buildings are connected with the manufactory by means of an elevated bridge with narrow gauge track. A steam elevator hoists the glass in open hand boxes from the factory floor to the floor of the bridge, which is on a level with the selecting and packing rooms. Nor should we fail to mention there are added to the main factory, on the east side of the street, the following departments: The mould and mechanic's shop, cutting shop, pot-making rooms, blacksmith's shop, engine houses, carpenter's shop, coke ovens, mixing room and two buildings with six annealing ovens therein.

Mr. John Oesterling, the present manager, who is a gentleman of wide practical experience and shrewd executive ability, has been at the head of the enterprise from its inception, in 1863, to which is mainly attributable the great success it has achieved, and which, from present gratifying indications, is more than likely will be unmeasurably excelled in the future.

NORTH WHEELING GLASS WORKS.

These works, located on Main street, in the North end, are not very extensive, but were established many years ago for the manufacture of window glass, and run as such for a long while, Mr. Robinson, of Main street, for a considerable period being largely interested in their operations. A private company, however, chiefly practical glass manufacturers, succeeded to the premises as the "North Wheeling Glass Company," a short time ago, and seem to be conducting quite an extensive business in the production of bottles and small phials, which they are shipping to all parts.

CHAPTER XLII.

MISCELLANEOUS MANUFACTORIES, WORKS, &C.

WHEELING'S FAMOUS STOGIES, TIPS AND CIGARS—FURNITURE FACTORIES—ITS TANNING INTERESTS—BEER AND ALE BREWERIES—WOOLEN FACTORIES—COTTON MILLS—PAPER MILLS—FLOURING MILLS—BOOK BINDERIES—BALTIMORE & OHIO RAILROAD SHOPS—TACK WORKS—CENTRIPETAL COMPANY—THE FIRST AND AT PRESENT ONLY EXCLUSIVE SAW MILL—MARBLE WORKS—PLANING MILLS—WIRE WORKS—SILK MANUFACTURE—GALVANIZED IRON CORNICE WORKS—CARRIAGE MANUFACTORIES—WAGON BUILDERS—WHEELING BENT WORKS—PORK PACKING—VINTNERS, ETC., ETC.

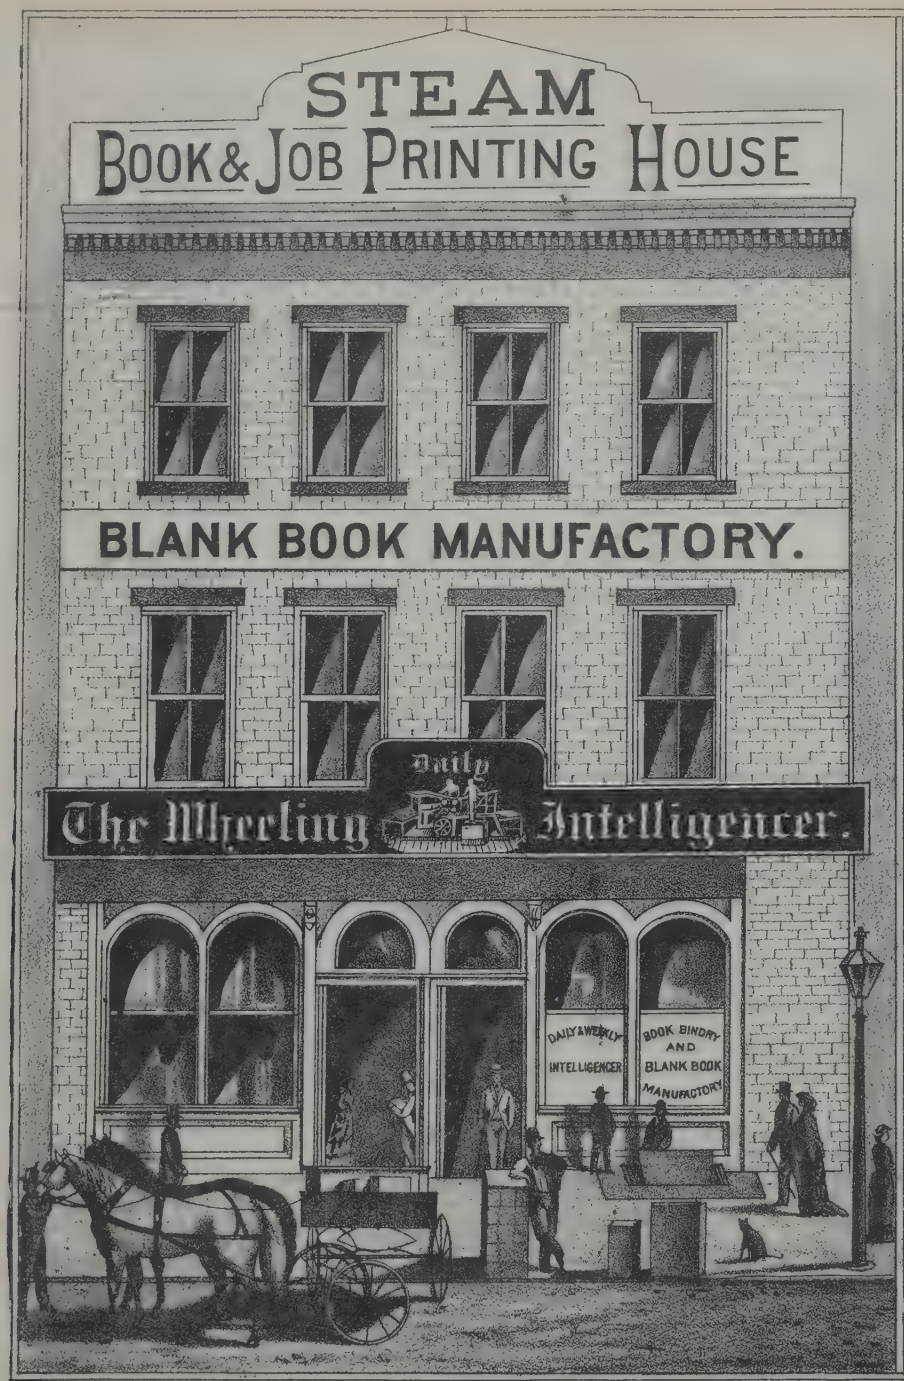
HAVING referred at length to the most extensive industries in Wheeling, we now include, in one chapter, such other popular enterprises as call for special mention, inserting them promiscuously, as it would be next to impossible to classify them fairly by any set rule. Some few, we know, will be found defunct institutions, such for instance, as the woolen and cotton mills and silk manufacture, to which we might have added innumerable others, but deemed those named as specially worthy of a place. Not that we have failed to discover that in Wheeling there has been a steel works, bridge building, card board manufacture, watch making, and other businesses no longer in existence, but to expatiate upon every bygone speculation would be a task about as unenviable to undertake as the reading of it would prove uninteresting to the general public when completed.

In addition to the businesses about to be reviewed, there is yet a boat building yard in the North end, we have coppersmiths, brass founders, a scale manufactory, four roofers, quite a number of cooperages, two mantel and grate manufactories, etc., etc., but space will only permit of our giving the following place.

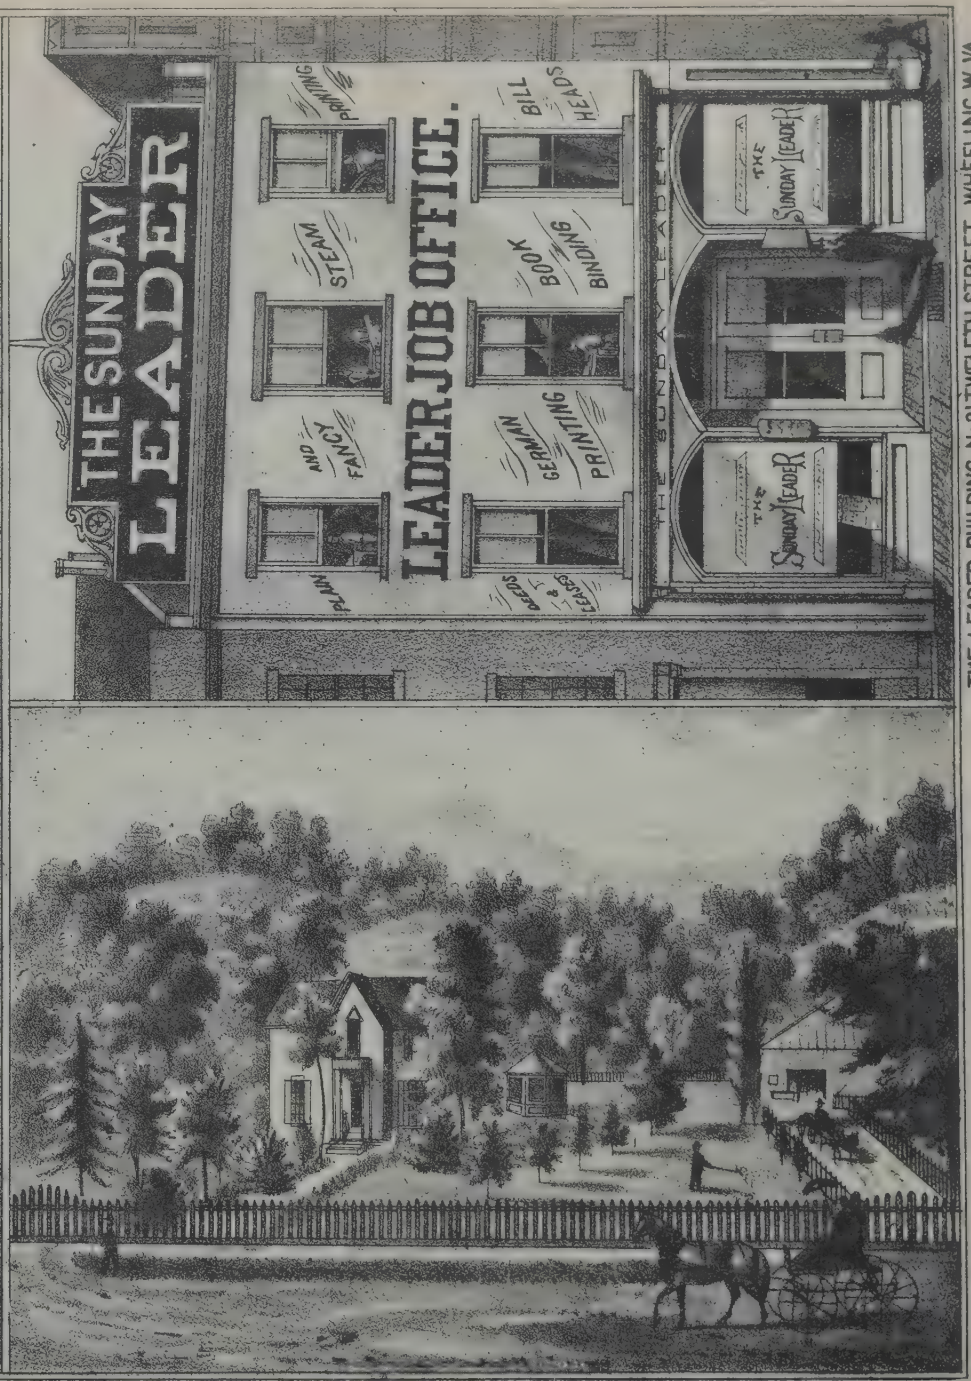
WHEELING'S FAMOUS STOGIES, TIPS AND CIGARS.

Had not Wheeling arranged to go down to history as the Nail City, she certainly ought to be known to posterity as Stogietown. For to-day it is safe to assume that Wheeling stogies are puffed in nearly every state in the Union. Careful investigation goes to show that so early as 1820–5 one Joseph Kirk took the initiative here in the production of these consoling luxuries, which were then popular under the more expressive and correct title of cheap cigars. For a while he monopolised the field, until a growing demand inspired a competitor to "arise in all his might" (?) named McGuiness, followed by one Beard, who was assisted by his daughters. These pioneer stogyites, it must be remembered, only operated on a very limited scale, but in or about 1830, Thomas Connard came to the front as a manufacturer on a larger scale—subsequently taking in as partner Robert Gibson, about when, we also find, other competitors enter the arena of stogie making to a lively tune, including Messrs. Marsh, Myers, &c., until their names became, as they are to-day, legion. Having thus fathomed the local parentage of these famous smokes, next let us endeavor to fathom the reason for the birth of stogies in this immediate locality.

Well, originally the "popular," that is to say, the cheaper, cigars were imported to this country from Germany, being known to the trade as the Pfalzer cigar—from the title of the German district from whence they came. It was a cigar, only by name, but bore a very unseemly comparison with the stogie of to-day. They cost from $4 00 to $5 50 per one thousand in those palmy days of no tax. In Wheeling, at that time, as at present, the working classes formed a major proportion of the population, and then, as now, the working man passed his evenings about the tobacco and cigar stores. Limited means and a desire to economise, gave rise to a demand for cheaper smokes and an anxiety on the part of tobacconists to supply the coveted article. It was this demand brought forth the original stogie, that to the number of probably 150,000 per day issues from Wheeling's factories to cheer the millions who find solace and comfort in cremating them. The term "stogie," in Yankeedom, applies to the cheaper makes of boots, and in cigars has been adopted as the title of the popular cheaper make of smokes. To the trade they are known and billed as "stogas," and in the vernacular "stogie" is the accepted title. In Pittsburgh, however, the "stogie" is known as a "toby." As



THE WHEELING DAILY INTELLIGENCER, Nos. 25 & 27. FOURTEENTH. ST. WHEELING, W.VA.



RESIDENCE OF HENRY TIEMANN, PLEASENT VALLEY, OHIO CO. W. VA.

to "tips," the term is more popular with consumers than manufacturers, inasmuch as tipped cigars implies suspicion of fraud and imposition. It is tipped toward the outer end with a higher priced tobacco, and the last stage of that cigar is altogether worse than the first. Now, when the stogie business made itself felt in Wheeling, Mr. William Lindsey, of Louisville, forseeing the possibilities of the new born cigar, gave his attention to the selection and supplying of the best tobacco for the making of stogies. When the stogie of 1848 made its appearance, the cheapest American cigar was the Boston cheroot, at $3 50 to $4 00 per thousand. They were made of shorts or scraps, and not of long stock, as the stogie, and poor affairs, indeed, were the Boston cheroots. The newly arrived stogie was not much of an improvement, but then its price, $1 87 to $2 00 per thousand, made it spring into favor, and the days of Pfalzer's and Boston cheroots were gone forever. The stogie business grew with Wheeling's growth, and cigar factories, drawing their supplies from the rich plantations of Kentucky and Ohio, multiplied rapidly, until the Nail City to-day makes 26,925,000 cigars per year, and gives happiness (at four for five cents) to countless thousands.

Pittsburgh takes the largest quantity of stogies, and then follow the cities of Chicago, Cincinnati, St. Louis, New Orleans, Philadelphia, etc. As a general thing the East takes stogies, gingerly. They are composed of tobacco too strong for the Eastern smoker. But from the Alleghany to the Rocky mountains the cry is still for stogies. As time rolled on and popular taste grew more critical, even in the matter of cheap cigars, stogies underwent a reformation. The stogie of to-day contains much better stock than the lower priced cigars of Pennsylvania and other states. Within the past eight years better stock has been demanded in stogies. I found that out by personal canvass of the western markets. During the past eight years the general quality of the stogie advanced, and the men in my employ, in a like manner, have gradually learned to make a cigar fully up to the present rigid requirements of the trade.

STOGIE-GROWING DISTRICTS.

The big green leaves, destined to soothe the stogie smoker, first see the sunshine in Mason county, Kentucky, whence the best tobacco for the purpose grows. No Virginia tobacco is used for stogies, and the Kentucky weed is almost universally used for export and domestic use. The former is quite an item when it comes to Ohio tobacco. The Buckeye counties of Belmont, Monroe, Noble, Washington, Guernsey and Harrison furnish the flimsy Ohio leaf article. Every year the French government (which controls that trade) places orders for Ohio tobacco, for from 6,000 to 8,000 hogsheads—some 6,000,000 pounds. The same government takes from 3,000 to 5,000 hogsheads of Maryland tobacco. The tobacco for finer cigars for home consumption comes from the Miami Valley fields of Ohio. The stogies made from Ohio seed leaf bring from $11.50 to $14 per 1,000, the United States tax being $6 on every thousand. Stogies from Kentucky leaf are worth in Wheeling from $10.50 to $11. Makers who value their standing in the trade use only the seed leaf, *i. e.*, tobacco from seed that has not been produced in succession on the same plantations, and thus deteriorated—seed that is imported fresh and pure each season. Old tobacco, kept in hogsheads for two years or more, makes the best cigars. A slow, mild process of fermentation goes on, which eliminates the bitter, acrid qualities of the plant, and greatly adds to the enjoyment of the smoker. Uncle Sam's eye is wide open and alert as to stogies, and no mistake. The Custom House at Wheeling seems to be presided over by men who have won the cigar makers' confidence and esteem to an unusual degree. Here $900 per day flows into the national coffers in exchange for stamps. The sales of stamps also show that cigars were made in Wheeling in the following amount during the year 1877, namely, a total of 26,925,000 cigars. Nearly all these are stogies, tips or tobies, the aggregate representing a value of $161,550 worth of stamps for cigars made in this city alone. To the above sum must be added $22,000 per annum as received for tax on scraps, or sweepings, from Wheeling cigar factories, and which are used for smoking also. In Wheeling city there are sixty-three cigar factories, and in the suburbs are thirty or more, the total being just about one hundred stogie mills, running steady.

FURNITURE MANUFACTURERS.

G. MENDEL & CO'S FURNITURE FACTORY.

One of our most popular pioneer houses is that still flourishing under the firm style above given. The original business was established between 1835 and 1840, by the late Mr. George Mendel, a practical mechanic of considerable ability, and though several changes have taken place in the copartnership of the firm, yet the ever reliable name of its founder has ever been associated therewith. The commodious factory is a fine three-story brick, thoroughly appointed with unlimited modern machinery, and employing only the most skilled mechanics, is located on Eoff street, and is ably conducted under the supervision of Mr. B. Arnold, who as a designer and practical genius, nas had a life's experience in the trade, and whether it is the most elegant house furniture, office, study or store fixtures that may be required, he produces it with a never failing satisfaction. This firm manufactures fully two-thirds of the goods they sell, and as regards samples of their outside work we need only refer to specimens afforded by the counters and desks in the Peabody Insurance office, or in the National Bank of West Virginia; the mirrors in Beuter's or Rolf's restaurants, cases sent to the Centennial by the Wheeling Hinge Company and Messrs. Hobbs, Brockunier & Co. Nor should we fail to pass a fitting compliment to the extensive and elegant show rooms of G. Mendel & Co., at 1124 Main street—verily worthy the designation of a state furniture emporium. The various rooms are connected with excellent elevators and the entire internal fittings of the house are massive and beautiful.

Mr. G. E. Mendel takes chief control, who, with other gentlemen assisting, is unremitting in attentions to visitors. They ship wholesale through Eastern Ohio, West Virginia, portions of Pennsylvania, and even to Maryland, and they seldom fail to indulge the pleasure of a second, and even third shipment when once patronized. They employ no drummers, but rely exclusively on the merits of their goods, and their favorable terms, to retain for them their high prestige—a policy that has prospered them to an indefinite extent in the past and will assuredly continue to reward them in the future.

RIVERSIDE FURNITURE FACTORY.

These works, probably among the oldest standing in our city, and located on the river bank—20 and 22 Water street—between Twenty-second and Twenty-third streets, were succeeded to in the fall of 1878, by Metzner, Schellhase & Co., for the manufacture of all kinds of furniture but chairs. The premises cover four city lots, are amply fitted with machinery, and appear to be prospering very satisfactorily. They ship nearly all their manufacture through West Virginia, Pennsylvania and Ohio, employing at present about forty hands.

WHEELING FURNITURE COMPANY.

The works run by this organization are located on Twentieth street, near the Crescent Iron Works, and were originally used by a Mr. Cushing as an oilcloth and paper factory, but were succeeded in 1864 by John Arbenz & Co., and run as a furniture manufactory. In 1872, however, a company was incorporated to run the enterprise, with James Furguson as its first president. Subsequently a Mr. Metzner became principal, Mr. John Arbenz, who has been in the city from 1853, succeeding in July, 1878. The premises are five stories 40x150 feet, and therein is manufactured all kinds of furniture except parlor goods. In busy times they run from thirty to forty hands, ship goods chiefly through this state, Ohio and Pennsylvania, doing an average trade of from $60,000 to $80,000 per annum.

OUR TANNING INTEREST.

Among the many articles of commerce which engage the attention and employ the capital of our business men, grain, iron and cotton are the only items, among indispensibles, that rank higher in importance than leather. Both its production and consumption is as wide-spread as civilization, and there is not a city or town in the world in which it does not play a prominent part in its business transactions. In the various transformations, from the raw material to the manufactured, a vast amount of capital is used and employment given to a vast army of laborers. The hides and skins being produced in small

quantities, over widely-scattered districts, furnish employment to a large number of small traders to collect and ship them to the larger towns, from which they are again in turn shipped to the warehouse to be assorted and classified for sale to the exporters. The reverse rule holds equally true in regard to leather and the articles manufactured from it. Each tanner produces but one quality and kind of leather and makes his sales through commission men and jobbers in the leading markets, and they in turn to smaller dealers and consumers. It may seem from this that however much our granger friends preach against "middle men," they must in this instance, at least, admit that they are indispensably useful.

Almost from Wheeling's earliest days, the tanning business has been associated with its manufacturing interests, and to-day holds a prominence of considerable import. The first tannery we have been able to locate within the present corporate limits was run on the upper portion of Market street, but a reliable data as to its exact origin, capacity or discontinuance, we have been unable to glean.* At present there are four in active operation within the city, and two at Fulton. The oldest of these is being operated by J. G. Hoffmann & Son, the second is still conducted by Wheat & Son, the third by F. Lobenstein & Son, and the fourth by J. Voeckler. Their chief grade of manufacture being harness leather, though, of course, other kinds are produced in lesser quantities.

J. G. Hoffmann and J. Berger first associated in business on the Island, in 1849, but removed to the corner of Water and Twenty-fourth streets in 1857. Their enterprise flourished, but in 1876, Mr. Berger retired, and the business is now under the style of J. G. Hoffmann & Son. Their present extensive tannery is the largest in the city, a three story brick, 122 feet by 99 feet, admirably appointed, even to fire extinguishing apparati, and employs an average of fifty hands. They turn out as many as four hundred hides per week, and ship largely all over the United States.

WHEAT & SON'S TANNERY.

This is a South Wheeling institution and will be found referred to—in its early history—under the head of "South Wheeling." It is an old representative firm and claims extensive premises on the corner of Chapline and Thirty-first streets, where they have facilities for an almost unlimited business. The firm are thoroughly experienced and popular men—their goods command a ready market all over the country and the works continue steady at work the year round.

J. VOECKLER'S TANNERY

Is situated on the corner of Water and Twenty-first streets, with a store or sales department on Main street. The business was established in 1863, and has flourished ever since. The manufactory is fifty-six by seventy-five feet, two stories, and stands on a lot one hundred and twenty feet by sixty-six feet, employing quite a number of hands in busy seasons. They turn out an average of six thousand to six thousand five hundred skins a year and ship most of their manufactured goods to considerable distances, harness leather forming the chief feature in their productions.

FREDERICK LOBENSTEIN'S TANNERY.

Another prominent feature in the line of manufacture in South Wheeling is the prosperous and old established tannery owned by Mr. Lobenstein, whose energy and proficiency in his business retains for him a most desirable complement of patronage. He came to this section so early as 1845, and for the last thirty years has carried on business in the same part of the city—his present address being 2929 Chapline street. But Mr. Bernard Lobenstein having of late years also succeeded to an interest in the business, the firm style is now Fred. Lobenstein & Son, whose superior manufacture commands a ready sale, and is much sought after by the trade. They have capital premises, which are being kept appointed with every modern appliance in the business, essential to its efficient conduct.

*Hides and bark are obtained in the vicinity. The following data are given by one knowing the facts: Two large steam tanneries and four small ones, employ one hundred workmen, use yearly 4,700 cords of bark, 25,000 hides, and make 725,000 pounds of harness, sole and upper leather; the principal part being harness leather, of a quality second to none in the country, which is sold to all parts of the Union, from Main to Wisconsin, Kansas and Texas. These tanneries also dress 8,000 calf skins, and 60,000 to 70,000 sheep skins a year. Large numbers of saddles harness, collars, etc., are made in the city. Two glue factories make 75,000 pounds of glue yearly.—*Resources of West Virginia.*

THE BREWING INTEREST IN WHEELING.

To historically review the dawn or subsequent development of man's appreciation for ale and beer, would be no sinecure achievement, suffice it to say that since the arrival of the earliest pioneers in this section, brewing, in some shape, has ever held its own. But the nutritious and palatable blending of malt and hops found little difficulty in fascinating the popular taste, and even our grand-fathers were free to extol the merits of "John Barleycorn." We cannot, with any degree of certainty, venture an opinion as to who brewed the first ale in this section, but believe we are not far out of the way in saying that Mr. P. P. Beck, founder of Reymann's brewery, was the first beer brewer here, and Mr. Louis Keller, (still living,) was the pioneer saloonist who dispensed it at retail, in a humble premises, located at the southern end of the creek bridge. Upon the introduction, hereabouts, of the famous lager, the Germans took no small degree of pleasure in renewing their old acquaintance with it, but it took the American born some little time to school the appetite, which, however, we may be pardoned for suggesting, is to-day tutored to a degree of average perfection. The faculty and invalids, alike, now proclaim, in many instances, that ale stands unrivalled as a tonic, while he who sips more as a matter of enjoyment, considers beer to be amply "headifying" for him. We therefore draw the inference that a brief sketch of our local brewing interests will be acceptable and duly appreciated all round.

REYMANN'S BREWERY,

located on the banks of Wheeling creek, in the east end of the city, was first put into operation in 1849, but was only succeeded to by its present proprietor in 1865, since when neither pains nor expense have been spared in perfecting its productions and its facilities; hence, in magnitude, this still stands the lion institution of its kind in West Virginia. The front view of the building is an imposing specimen of architecture, in brick and stone, extending three hundred and sixty feet along the front, being three and four stories high to meet the requirements of the several departments. The premises stand at the base of a huge hill, and are favored with the advantages of an ample supply of the purest spring water, coal workings almost adjacent, and only a short distance from river and railroad facilities to all parts. The interior of the brewery is a model of system, and is appointed with every desirable modern facility yet discovered in the art of brewing. The magnificent cellar accommodation is also a special feature. The cool, dark cells extend into the hill hundreds of feet, are perfect vaults in solid, dry and impervious rock, being lofty, well ventilated and throughout fitted regardless of expense, with cold air pipes running from a mammoth freezer, constructed at an immense cost, and by which an evenness of temperature is maintained, or if desired, in the very height of summer, from 38 to 40 degrees can be kept with ease. The united capacity of the cellars we could hardly estimate, but the firm usually keep from 7,000 to 8,000 barrels on hand through the summer, while their annual product may be estimated at 13,000 barrels. A fine brick-built bottling works is also conducted near by, and through the summer Reymann's famous beer is put up in glass to an enormous extent, for family consumption as well as restaurant purposes. The extensive business conducted at this brewery is a high compliment to its enterprising and popular proprietor, while forming an important item in Wheeling's manufacturing resources.

THE NAIL CITY BREWERY—ITS HISTORY AND CAPACITY—BUTTERFIELD'S MALT HOUSE—SIEBKE'S BOTTLING WORKS.

Some eighteen years ago, one Frank Zeigler first inaugurated the brewery in question, which he ran probably a dozen years, when a stock company was organized and took the property out of his hands, the first directors being Messrs. S. Butterfield, C. Siebke, C. P. Brown, the late R. S. Brown, N. Reister, F. Walters, G. Warner, H. Michael and P. Bonenberger. Though to the stranger, on approaching the Nail City Brewery, it does not afford a very presentable external appearance, yet on entering he quickly becomes surprised at its extent and excellent facilities. The master brewer, Ernst Irion, was formerly at the Gambrinus Stock Company's Brewery, Cincinnati, for many years, and is one of the most competent brewers outside of Germany. His facilities in the way of mash tubs, boiler and a champion cooler are unexcelled—the latter being one of the finest in America, eighteen by nineteen feet,—pur-

chased at the Centennial at a cost of $1,000—and over two inch pipes it is possible to cool sixty barrels per hour. The supply of pure crystal water gushing from the rock, has no limit, while there is at present some four hundred feet of the finest cellarage that ever was associated with any brewery, running into the solid rock and being thoroughly ventilated. And more, the company are just engaged in constructing an additional fermenting cellar sixty by thirty feet, with a fine ice house over it running thirty-five feet high. As an evidence of this brewery's present prosperity, they sold from seven thousand to eight thousand barrels last year, shipping considerably by both rail and water, though enjoying a very extensive proportion of the city's entire supply—engaging no fewer than four delivery teams. Adjacent to the brewery—on the corner of Thirty-third and Wetzel streets—stands their private office, where the directors meet periodically. The whole of their malt is supplied from

BUTTERFIELD'S MALT HOUSE,

located on the corner of Twenty-third and Water streets, 66x122 feet, three stories, with a capacity of 55,000 bushels annually. Mr. Butterfield is a practical maltster, with a life's experience, secures most of his barley from Washington county, Pennsylvania, and Kentucky, while dealing in only the choicest western New York hops. Hence the ingredients in the Nail City beer cannot be excelled for quality and purity. The present officers of the company are P. Welty, president; J. Butterfield, vice-president; secretary, C. Bingell, who is also traveling agent, and Mr. G. Hesse, officiates as clerk.

SIEBKE'S BOTTLING DEPARTMENT.

Mr. Chris. Siebke, who has ever been one of the most active members of the directory since the formation of the present stock company, was the first in West Virginia to embark in the bottling business. Knowing the merits of Nail City beer, he, in 1875 adopted it under his own name, as "Siebke's Popular Beer," establishing at his own expense, bottling works at 1331 Market street, attaching thereto a private office, fronting on Fourteenth street. Here he provided the most modern appliances for the run of the business, and only a very few months proved to him most conclusively, that the Nail City beer was destined to an immense popularity. From month to month, saloons and private families alike, grew more and more enquiring after it, and in proof of its growing popularity, Mr. Seibke had shipped so many as 3,000 dozen bottles in one month, and is to this day bottling from twenty to thirty half barrels daily, while his famous bottled goods are shipped throughout this State, Ohio, Maryland and Pennsylvania—even to New York, Boston and Washington, being represented in Philadelphia during the exposition.

THE EAGLE ALE BREWERY.

This popular and successful enterprise is the only exclusive ale brewery in the state, and at once an important acquisition to Wheeling's commercial prosperity. The brewery and malt house form a very fine block, near the Baltimore & Ohio Railroad depot, and was built in 1863 by John Reid & Co., who carried on business in it to 1868, when Kinghorn & Co., succeeded thereto. Mr. Killian Kress being included in the co-partnership, availed himself of an opportunity in 1877, and succeeded to the entire business, which he still runs single handed. The qualities here produced are Burton pale ale, pale, bitter, XXX, stout and porter, though at present the use of ale is limited, yet they do a capital trade. The malt house has a capacity of 30,000 bushels. The brewery can produce seventy-five barrels per day, while the united cellars at command will accommodate seven thousand barrels. Not only in this state has a growing demand sprung up for the famous Eagle brews, but they are shipped extensively through Ohio, Maryland and Pennsylvania, and the more they find their way into domestic circles, for family consumption, the more increasingly popular do they become.

SMITH'S ALE BREWERY.

It is some forty years ago, now, that the name of Smith was first associated with the brewing interests in Wheeling, and be it said that in like relation it has ever carried with it a high reputation for a genuine article. The original brewery so long and so successfully run by Mr. Smith was located on Chapline street, corner of Seventeenth, but the premises have for three years been vacated, Mr. Smith having removed to the north end of Market street, where he is at present conducting the ale brewing in the old Brockhardt property. Mr. Smith's famous ale is too popular to require our recommend, and though he is not engaged as extensively as of yore, yet his business is of a most successful and satisfactory character.

WOOLEN FACTORIES.

Many years ago, prominent among Wheeling's manufactures was that of wool carding and pulling, which was inaugurated by L. & J. Prescott, in part of what is now known as Hubbard's saw mills. This was in 1825, after which came a mill conducted on the premises now occupied by the Riverside Furniture Company, on Water street. The third was run by horse power, at the north end of the Second ward market house, by a man named Tiekle, while the fourth was run by the Bradley Bros., in East Wheeling, in a factory near the hinge works, and closed in 1849–50. But none of them, or yet any new enterprise in the same line, is at present in operation here.

COTTON MILLS.

Nor has Wheeling been slow to give this line of manufacture a fair trial. So early as 1826, Samuel Wescott and others erected the present Norway Tack Factory to run a cotton mill, which was followed by another on the Point, originated by Marcus Wilson, while a third was started on the creek bank, between Eoff and Jacob streets, and also flourished a little while. But none of them proved the success anticipated, and, like a flower, bloomed only for a season.

PAPER MILLS.

For fully half a century has Wheeling been characterized for its manufacture of paper. We learn that in 1829, William Lambdin suggested such an enterprise, and met with the willing recognition of Mr. William Chapline, then a well-to-do citizen, who freely donated four lots of ground, extending from Water to Main streets, on the corner of Twenty-third. Here a mill was soon erected on the corner of an oat-field, and flourished down to 1836, when it was unhappily burned down. About the time this mill became a sacrifice to the devouring element, Marcus Wilson and Henry Echols were transforming the woollen mill, which had failed to succeed, and stood within a block and a half of the same site, into a paper mill. This building they sold out, soon after, to Messrs. Lambdin & Son, who continued the business till 1857 or 1858, when they turned it over to Daniel Cushing, and he flourished therein until two or three years ago. The third, or Point paper mills, were run by Messrs. A. & R. Fisher, on the point above Wheeling creek, about 1837–8, and did a flourishing business for several years, but finally gave out. It is true that the Fulton Paper mills were in full blast at the same time, under the proprietary of A. Armstrong & Co., and were established before those run by the Fishers, but were located outside the city. Nor is this all. We find that about 1858–9, Messrs. Cushing & Osborn succeeded to the oil cloth factory of Ayres & Cushing, established 1855, on the south side of Wheeling creek, on Twentieth street, (now occupied by the Wheeling Furniture company) where they conducted, for a brief period, the manufacture of straw paper and straw board for bonnet boxes. There are no paper mills now operating within the corporation limits, though two are running contiguous thereto—the old Fulton mills, by Hanna & Clemmans, in Center Fulton, and Wagener & Co.'s mill, just across the river in West Wheeling, which latter has also a wholesale warehouse on Main street, in this city. These mills are in active operation and turn out an immense amount of paper annually.

THE FIRST AND PRESENT STEAM FLOURING MILL.

The first steam flouring mill in this city—or even in the Pan-Handle—was erected in 1822, by George White, and a portion of the old premises still stands, forming part of the present well known saw mill of H. & J. Hubbard, South street. Since that time the changes in this line of manufacture have been varied, and the only mills now in the corporation are M. & J. Pollock's exceedingly fine mill on the corner of Market and Fourteenth, the Wheeling City Mills, on Main street, and J. R. Johnson, 154 Twenty-ninth street.

BOOK BINDING.

In this particular no city of the magnitude of Wheeling can boast of better facilities. The extensive premises and complete complement of machinery at the command of Messrs. Mills, Frew & Co., admit of an endless variety and unlimited quantum of binding being produced in the most accomplished style within compass of the trade. The *Register* bindery is also fitted and appointed most repletely, turning out the very finest work and an abundance of it, while Ewing's bindery, on Twelfth street, near Main, is a time-honored institution that admits of no compeers in point of quality and workmanship. These are the leading houses in their line, and alike worthy of unlimited confidence.

BALTIMORE AND OHIO RAILROAD SHOPS.

These shops were established in 1854, for the conduct of repairs and rebuilding on the company's rolling stock employed between here and Grafton, a section of one hundred miles, in addition to the Hempfield branch. They are located on on Water street, in the south end of the city, at the foot of Main street, and, together with the yards connected therewith, cover an area of about ten acres. They control from forty to forty-five locomotives, which they keep in repair, a dozen or thirteen of which are specially adapted to the running of passenger trains, while scores, if not hundreds of cars, are here annually overhauled. Over one hundred hands are employed, among them being a number of exceptionally good mechanics, while the facilities and appliances around the shops are of the most modern and improved character. Mr. Charles Hirsch is foreman, Mr. A. M. Dray is chief clerk, and Mr. Samuel Jepson is storekeeper. A look over the works affords a highly interesting treat, as one gazes on the iron horses, as it were, quietly occupying their respective stalls while undergoing the accustomed wiping down and careful examination, to which they are daily subjected before making a trip.

NORWAY TACK FACTORY.

Wheeling is singularly blessed in the variety of her manufactories, and more particularly so while privileged to boast the possession of the only tack works in West Virginia. This is a private company, established in 1869, for the purpose of running a branch here to the famous and extensive Sandwich Tack Company of Massachusetts. They succeeded to the premises and machinery of the old Norway Iron Manufacturing Company, on the corners of Market, Eighteenth and Chapline streets, where they occupy four entire city lots, upon which stands a fine brick factory four stories high, with basement, besides other outbuildings, including a private office. They manufacture some five hundred lengths, sizes and varieties of tacks and nails, though none of them exceeding two inches or being cut nails such as are produced at our other local nail works. They use up from two hundred to three hundred tons of iron, steel and tin per year—about half to two-thirds of the iron being from Sweden or Norway, the balance American plate—and they not unfrequently produce as many as a million tacks per day. An average of from twenty to thirty persons are here employed, and the goods manufactured are chiefly shipped west, though of late some trade has also sprung up south. The principals of the firm are Mr. I. T. Jones, who takes general supervision of the business, both in Massachusetts and here; Mr. H. H. Heald, who has charge of the manufacture, and Mr. T. W. Phinney, who travels and assists in the office, while Mr. George G. Hannan takes general active supervision of these works, and to whom we are indebted for courtesies extended.

WHEELING CENTRIPETAL POWER COMPANY

Purchased the foundry and machine shops from H. W. Phillips, November, 1873. That company repaired the premises and added certain new machinery, but the directors and stockholders being under charter, to borrow $25,000, mortgaged the works. In about twelve months the works were brought to a final stoppage and their affairs are still in litigation, and it is just possible that these works, most eligibly located for river and railroad communication, will shortly come to the hammer.

THE FIRST AND, TO-DAY, ONLY EXCLUSIVE STEAM SAW MILL.

The first steam saw mill put into operation in this or adjoining counties is to-day the only exclusive mill of the kind in the city of Wheeling, and it is none other than the old familiar "demolisher of timber" run under the firm name of H. & J. Hubbard, lumber merchants, of South street. This mill was first put into operation by the late Dana Hubbard, in 1827, and which has retained the family name, as its proprietary, to the present. And the engine running therein is also a venerable mechanical pioneer, being one of the earliest constructed after the application of steam for motive power in this state. Colonel H. B. Hubbard is one of Wheeling's old stand-bys, a gentleman of excellent society, and, as we have found, not only a most interesting, but also an accurate recounter of those quaint old days of yore, which he descants upon with an apparent zest it is truly refreshing to witness.

WHEELING'S MARBLE WORKS.

There are three or four firms in this city making this business a specialty—notably, Carroll & Bro., Sixteenth street, who have constantly on hand the finest collection of manufactured work to be found outside of the largest cities. Mr. M. R. Hobbs, 1900 Market street, has also long catered in this line of business. A single glance over Wheeling's home manufacture in our local cemeteries will more than substantiate the prestige of our home manufactories.

PLANING MILLS.

The first institution of this kind, as far as we can trace, was conducted on the corner of North and Main streets, at a very early day, by George Vennum, who was burnt out, and the firm of J. L. Brown & Co. afterwards introduced Woodworth's planer, an entirely new machine, in those days, of which they secured a patent right. An early writer speaking of it said: "It rips boards into breadths of from three to eight inches—after which, running them through the planing machine, one side is planed, one edge is tongued and the other is grooved, all at the same time, and the board is reduced to one uniform thickness where any inequality existed before. The machine can thus prepare 2,000 superficial feet per day, and yields an annual clear profit of $2,000." Subsequently another mill was started where the Eagle Brewery now stands, but as soon as the restrictions of the patent laws ceased to protect the running of planing machines, mills of that kind became general. There are now five extensive enterprises of this character in our city, viz: The Keystone mill, managed by Alexander Coen; a second by Beltz & Flading; a third by Hanes & Wilson; a fourth by Fisher; J. A. Holliday's mill, and Klevis, Kraft & Co's mill, besides which there are several lumber yards.

WIRE WORKS.

About 1849, a Mr. Dewey erected a building for the manufacture of wire, on Water street north of the present Riverside Furniture Co.'s works, and run the business until 1852. He then constructed a works on the site of the present upper Riverside works, at the foot of Eoff street, for the production of wire, small merchant iron, etc. Soon after, he burned out, and his brother, Mr. O. C. Dewey, then became interested in the property, and associating with him Messrs. Vance and Russell the firm now known as Dewey, Vance & Co., sprung into existence.

At present writing, the only wire workers making a specialty of the business in Wheeling, is Gerrard & Tuttle, of 1918 Main street.

SILK MANUFACTURE.

Mr. John W. Gill, born and brought up at Mount Pleasant, Ohio, conducted the manufacture of silk at that place in an early day. The state imposing stringent laws on the production of that material, and he being then very wealthy, came to Wheeling in 1845–6, and purchased the residence of a Mr. H. Moore, at the south end of St. Alphonso Seminary. Once located among us, he opened a silk factory in a frame building originally occupied by Joseph Graham and Henry Helm, on Main street, near the stone bridge. He was favored with the services of a Scotchman, named John Fox, who was a skilled workman, and produced some of the finest material that ever graced the market. Mr. Gill was a great silk connoiseur and enthusiast, invested heavily and made every possible human effort to make his enterprise win, but, at a great sacrifice, failed to do so. He was also a great speculator in building, and our town owes much to his enterprise in that respect. He died about two years ago at Springfield, Illinois. Speaking of the foregoing enterprise, Mr. Oliver I. Taylor wrote, in 1851: "This establishment is now the largest of the kind in the United States.

It employs a capital of $20,000 and consumes, annually, cocoons and reeled silk to the value of $15,300. Its numerous looms turn out almost every variety of staple silk to the value of $27,000 annually. Notwithstanding the accumulated testimony from all parts of the country, presented at the national convention of silk growers and manufacturers, held under the auspices of the American Institute, in New York, in 1843, fully corroborating the declaration of Dr. Franklin, that the American climate and soil were eminently adapted to the growth of the silk worm, and notwithstanding the triumphant vindication of the capacities of Amercan manufacturers to produce fabrics equal to those of foreign production, there is still an absurb preference indulged for the foreign articles. So extensive, and yet so frivolous is this preference; that a large portion of the silk fabrics of American growth and manufacture, are actually sold with a foreign stamp, and under forged and fictitious foreign names! This fact carries with it a comment which should dye with shame the cheek of every one who boasts an American origin." The same writer further adds: "When we consider, with all our facilities for the growth of the silk worm, our soil and climate, in this respect, rivaling India and China, we yet import, annually, $18.000,000 worth of silk goods while England manufactures $75,000,000 worth annually, and yet cannot raise a single pound of the raw material, we have reason to encourage, in the strongest terms, the culture and manufacture of silk in this country."

GALVANIZED IRON CORNICE WORKS.

The name and fame of Mr. B. F. Caldwell, of 1507 South and and 1509 Main streets, is equally popular beyond the limits of this state as within it for the manufacture of galvanized iron cornices, in which line of business it is his good fortune to conduct a most extensive trade. Nor is he less popular for presiding over one of the most repletely stocked and attractive stores in the state, wherein he displays almost an endless assortment of cooking and heating stoves, house furnishing goods, marble, iron and slate mantels, &c. Mr. C. is a most skilled tradesman and is characterised for his frankness, liberality and promptitude, which have succeeded in establishing for him an important business, at once a compliment to the city's commercial industries.

CARRIAGE MANUFACTORIES.

For many years has Wheeling excelled in this line of manufacture, but never to an extent parallel with her prestige of the present. Donaldson, Lewis & Co., of 1500 and 1506 Market street and Hook & Schrader produce some of the finest, most durable and yet cheapest work found in the state. When we say CHEAPEST, we use the word advisedly. Not that they aspire to undersell the miserable slop, birdcage manufacture constantly in circulation on the market, but genuine homemade, serviceable and well finished work that is honestly worth its marketable value as a gold dollar is worth one hundred cents. In this line of business we should also mention Wherry & Beltz, of 809 Market, and D. Kull, of 2004 Market street.

WAGON BUILDERS.

It is something surprising, and to many almost totally unknown, the extent to which the manufacture of wagons is carried in this city. Nor is it a new feature in the local business prestige of Wheeling. The present works of

JOHN BODLEY BROTHERS,

located at 1724 Chapline street, employ an average of twenty hands and does a magnificent trade. The orginal firm was established some thirty-five or forty years ago as Bodley & Richards, and it has attained exceptional popularity for its matchless manufacture. They build all kinds of heavy wagons, carts and drays, for the western lumber trade, and southern cotton and sugar producing interests. Their wagons vary from five to ten feet wheels, and in strength are unexcelled. They ship about the whole of their manufacture, and consequently bring in quite a revenue to the aggergate earnings of the city's industries. In a small, but still successful way, the following firms also conduct wagon manufacture in Wheeling, B. & J. N. Charnock, Twenty-Second street; Donaldson, Lewis & Co., Market street; Jacob Ridemiller, National Road; S. J. Ellifritz, corner Market and Twenty-fourth streets; J. F. Klopman, corner Main and Twenty-third streets; David Kull, Main street; J. Merschrod, corner Jacob and Fortieth streets; Wm. McNabb. Twentieth street; L. Neuberger, Twenty-third street; M. Stein, north side National road, Fulton; A. G. Stoker, Chapline street. In short, Wheeling may fairly be claimed as unexcelled in this branch of business—most of the firms engaged therein being practical tradesmen of accredited skill.

WHEELING BENT WORKS.

This is another highly successful enterprise in our midst, having been in operation some six or seven years. Their works are on the north side of Eighteenth street, between Chapline and Eoff streets, immediately over Bodley Brothers wagon works. The firm style is Dobbs & Kissenger, who have also fine warerooms in Pittsburgh, whence much of their manufacture is shipped. They bend all kinds of wagon work—employ quite a number of hands, and are certainly doing an excellent business.

PAPER BOX MANUFACTURE.

In so active a commercial centre as Wheeling, is it any wonder we find a paper box factory flourishing in the production of all kinds of plain and fancy boxes to meet the requirements of every trade. So refined has become the tastes of the general public that almost everything sold over the counter is enhanced in value by being neatly put up—hence the necessary demand for fancy boxes, which Mr. C. Steinmetz, at 1211–13 Main street, is annually producing in almost countless numbers.

PORK PACKING.

Wheeling has long been characterized as a great pork packing centre, which it virtually is, though it might be more aptly expressed a pork market. The fact is that quite a number of extensive pork packers have their headquarters in the city, though the most of them have their slaughter and packing houses outside the corporation limits. The principal ones in this line of business are D. C. List, Schenck & Zoeckler, W. C. Handlan, L. Orth and Michael Reilly, who put up tens of thousands of hogs annually, and besides supplying a large home demand, ship largely by car loads to all parts.

VINTNERS.

Though grape growers and wine producers are not to say numerous in Wheeling, yet a considerable revenue annually flows into the city from that source. The extensive vineyards of Mrs. Wilhelm and the Rev. P. Kreusch, in the eastern part of the city, demonstrate this abundantly, though there are quite a number of lesser grape growers who conduct a small business in the same line.

ICE DEALERS.

In this line of business—so essential during the summer months—our city is well provided for, and it is seldom that the demand exceeds the supply. The ice procured in this section is exceedingly clear and pure. There are four ice merchants in the corporation who keep wagons constantly delivering during heated terms—Messrs. Robert Luke, Conrad Seibert, R. Steubenrauch and Martin Linden.

CHAPTER XLIII.

PIONEER ECHOES.

A CHAPTER OF ANCIENT ODDS AND ENDS, HISTORICAL, QUAINT AND INTERESTING—RECOLLECTIONS OF WHEELING CREEK AND ITS SURROUNDINGS.

[Kindly Contributed by Colonel H. R. Hubbard.]

STARTING our sketch at the mouth of the creek, we first notice the change in the contour of its shores. Then they were terraced by a low bench on either side, from fifty to one hundred feet or more in width, at an elevation of sixteen to eighteen feet above low water. The terrace on the north side extended to the bridge at Seventeenth street, while on the south side it terminated a few yards short of what is marked on our maps as Coal Stone run, but which was then known as

Cold run, from the temperature of its water. On these benches and fringing their edges, there grew many noble hickories of species now extinct in this section of the country, whose nuts furnished winter stores in wonderful abundance for the boys.

On the north side of the creek was a ravine, which entered the creek where the Market street sewer now enters it. This ravine was from eighty to one hundred feet wide at the top, with its bottom, for much of its course, but little above that of the creek. From its mouth it had a general trend to the northeast, and terminated at the intersection of John and Sixth streets (now Jacob and Sixteenth streets) in a number of branches which soon ran out. This ravine was the outlet for a water-bearing stratum, which furnished quite a number of constant springs, most of which had been protected from the sun by leaving uncut the native trees that shaded them. Two of the springs were immediately west of the Fourth ward school-house. Each of these was shaded by a large gum tree. At the westward of one of these, and they were not fifty yards apart, occurred one of those laughable scenes which are so easily turned into tragedies when they take a wrong twist.

HOW BRUEN WOULD NOT SCARE WORTH A CENT.

On the bank above the spring and at a short distance from the tree that shaded it, was being held a bearbait, which by the way, was a common recreation of the times, the bear being fastened by a chain to a swivel in the end of a stake which was firmly driven into the ground. Somehow during the fight the chain was broken, and the bear finding itself at liberty, took refuge in the tree from the dogs and there it stayed so long, notwithstanding the many tempting tidbits that were offered as an inducement for it to come down, that a man by the name of Mills said he would climb the tree, which leaned toward the ravine and over the swamp formed by the water from the spring, and drive the bear down. Suiting the action to the word, he was soon on his way up the tree, and when within eight or ten feet of the bear the latter apparently willing to meet him, part way, at least, commenced descending, as they always do, tail foremost. Mills finding his object likely to be accomplished sooner than he desired, commenced descending also, but finding the bear gaining on him while he was getting down hand under hand, he took to sliding, but the bear still lessening the distance between them. Mills let go all holds and dropped into the swamp, sinking into it almost to his arm pits. The bear seeing he was rid of what he considered an intruder, deliberately re-ascended to the fork of the tree, from which it was finally coaxed by the smell of some burnt honey-comb.

MILLS, HOWEVER, MAKES A SUCCESS OF BURSTING A CANNON.

"On the edge of this ravine this same man, Mills, played another conspicious part in what might readily have proved a tragedy of the first water. He, with others, was celebrating the Fourth of July by firing an old swivel and drinking whisky. After firing the swivel quite a number of times, and taking just so many drinks, the devil or the whisky put it into their heads to burst the gun, and that right in the midst of the crowd that had assembled to witness the firing. To do this, after putting in a charge of powder and ramming home on it a wad of clay, well pounded in, and fired off the piece without injuring it. They again reloaded it, but in place of clay for a wad, they next put in a ball of beeswax, pounding the rammer with a sledge, then put in the clay, still using the sledge on the rammer, and finally capped all with another ball of beeswax. Mills fired the piece by touching the powder on the vent with the burning ends of a hoop which he held in his hands. This effort proved a perfect success, as not a part of the gun could be found after the discharge. Fortunately the only damoge done was the tearing of a corner strip of a frame house occupied by Esquire Welb, which stood perhaps fifty yards from the firing point, and slightly scratching the arm of the fool who fired the discharge.

A PLEASANT BATHING RESORT.

"From where the line of Eoff street crosses the creek, to where the office of the Whittaker Iron Company now is, the south shore of the creek was liberally paved with great masses of sandstone rock, some of them as large as a small house. Many of these were quarried up and used in the construction of the stone bridge on Main street. On the north side between, old Sixth and Seventh streets, and running parallel with these was another ravine, which, though much shorter than the one mentioned, having its head on Eighteenth street, yet was both broader and deeper, owing to the ground being higher through which it had cut its way.

"On the other side of the creek, but a little further up, came in Cold run, a short distance up which was a beautiful falls, on as romantic a spot as any lover of nature could wish, but greed or necessity has wiped them out for the limestone which formed them. The upper fall was about twelve feet, the lower one from sixteen to eighteen feet, and were much resorted to for bathing, though it took strong nerves to stand the power of the water at the low temperature it always carried, even in the warmest season of the year. Cold as it was, many a hearty girl has been known to stand it, in no other bathing suit than the buff one usually worn by boys on similar occasions.

BUT WICKED BOYS RESORT TO IMPROFITABLE PRACTICAL JOKING.

"Nor were these suits restricted to use at the falls, but were frequently used by the girls when bathing in the creek. Nor will this be wondered at when the almost perfect seclusion of their bathing place is considered, for then both sides of the creek were covered with a forest of such density that the eye could penetrate it but a few yards in any direction, and when the danger was so little of observation by one of the opposite sex, owing to the sparcity of population, that immunity from danger of that character was absolute, as a rule. But like every other general rule this had its exceptions, and one of these was when a bevy of these ducks was discovered in a very secluded place enjoying themselves as only such ducks can, a couple of truant boys, who at once conceived the idea of securing the girls' clothes and placing them where it would take some little trouble to regain them. To do this without discovery was impossible, as the clothes were under an overhanging bank that was six to eight feet high, and the girls not more than thirty yards away; therefore, the only chance to obtain possession of the clothes was by a *coup de main*, and this was at once decided on. To make this, it was necessary to cross the creek, and take advantage of the cover of the hillside. The crossing of the creek was effected below a sharp bend in the creek a couple of hundred yards from where the bathing was going on.

The boys were soon in position for the rush, but when one of them discovered that two of his sisters were in the party, and this reminded him that the old gentleman at home kept a nice raw hide which was likely to be brought in to settle, not only for the taking of the clothes, but also for the absence from school, and refused to have anything more to do with the project. The other boy, who had no sisters, and whose father kept no raw hide, decided to make the venture alone, and jumping over the bank, almost on top of one of the nicely arranged little piles, gathered it up in his arms and started down the creek to a shallow ford, where he crossed, making the best time possible.

UNCONSCIOUS OF WHAT WAS IN STORE.

But one of the girls, more brave, or perhaps less modest than the rest, was in hot pursuit, and gained on him so fast that he was hardly across the water in the creek before he was glad to drop his spoils, under the impression that the girl, having recovered these, would give up the pursuit. But in this he was mistaken, for the girl, on reaching the clothes paid no attention to them, but pressed the chase the harder. The boy, now lightened of his load, which had been more troublesome than heavy, and being naturally quick-footed, and better able to hold his own, took the bank in splendid style, reaching the top a good rod ahead, though the greater strength of the girl had lessened the gap between them no little during the ascent. Once on the level sward, the race was more equal, and was kept up for more than a hundred yards, the girl gradually closing on him, so that the boy, coming to where a great sycamore, projecting at a sufficiently low angle over the creek for him to run up it some distance before he would have to climb, and feeling that capture was certain unless he could escape in that way, took to the tree. At some thirteen to fifteen feet out on the leaning tree, from the bed of the creek, grew a great limb, which was a tree in itself, being upright, and more than two feet in diameter, which took up so much of the standing room on the parent trunk as to make it dangerous to pass it, but a glance which the boy threw into the girl's eyes as he hesitated an instant before making the attempt to pass, convinced him there was more danger behind than in going forward, and he at once swung himself around the limb, but even this afforded him no security, for the girl's arm was already encircling the limb to pass it.

THE BOY MADE A DESPERATE LEAP TO THE GROUND BELOW,

and here fortune favored him, as the bottom proved to be a bed of leaves. Had it been rocks he would have taken them rather than to have fallen into the exasperated girl's hands. Here the girl's admiration for a daring feat came into play, and stopped the chase. But the boy, not knowing anything of this change of feeling, took to the water, which was here of good swimming depth, and struck out for the other shore, on reaching which he gallantly lifted his hat and bade her good bye.

These falls were much under cut by the wasting of the cement rock between the upper and lower strata and of the shales between the lower, leaving ample dressing room even immediately behind the falling waters. Above the mouth of the run, but on the other side of the creek, is another ravine, the mouth of which is between Eighteenth and Nineteenth streets, but enough of this is left to mark its course, and give an idea of its size, and it therefore needs no description.

RECOLLECTIONS OF THE GRIST FAMILY.

Copy of a Letter From an Old Lady in Her 79th Year, One of the Descendants of Rachel Grist, who was Scalped near Triadelphia, in 1777.

MATAMORAS, Ohio, May 9th, 1874.

Editor of the Wheeling Intelligencer:

I can furnish you some information in regard to the Grist family, of which you lately published an account, which will perhaps be interesting to some of your readers. I am acquainted with all the particulars concerning the assault upon the youngest daughter, Rachel Grist, who had her skull fractured by a stroke with a war club. She was also scalped and left for dead by the Indians. She was shortly afterwards discovered by a company of pack-horsemen under a tree, where it is probable she was trying to conceal herself from the Indians. The men put her on one of the pack horses and carried her to Fort Henry, in Wheeling, where she received medical aid, recovered and afterwards married Captain Henry Jolly, became the mother of five children, four sons and one daughter, died at the age of forty from the effects of the wounds received at the hands of the Indians, and was buried in a cemetery on the farm of Nicholas Wells, near the Ohio river, in Tyler county, West Virginia. Captain Henry Jolly was a citizen of Grandview township, Washington county, Ohio, and owned and resided on the farm now in possession of Zachariah Cochran, near Grandview, Ohio. He was elected and served as justice of the peace, for several years, and was judge of the Common Pleas Court of Washington county, Ohio, for several terms, and also represented Washington county in the Legislature. Prior to his removal to Washington county he made a hazardous trip to Kentucky and brought John Grist to Wheeling in a canoe. He finally removed with his daughter to Licking county, Ohio, and died at an advanced age.

John Grist died at Wegee, Belmont county, Ohio, and some of his heirs are still living in that vicinity.

There are two of Henry Jolly's grandsons living in Phillipsburg, Beaver county, Pennsylvania.

This is my own recollection. I am in my seventy-ninth year and am a daughter-in-law of Captain Henry Jolly. Residence, New Matamoras, Washington county, Ohio.

ELIZABETH JOLLY,

I can certify that the above facts are true as far as memory serves me. Captain Henry Jolly was a very highly esteemed citizen, as many others can testify.

ELIZABETH RIGGS.

THE FLOOD OF 1852.

"This was an extraordinary one; the highest that had occurred since the never to be forgotten one of 1832. Nothing like such a body of water has swollen the Ohio river since. To give such readers as were not then residents of the city an idea of its extent, it may be said it was an unusually destructive calamity to the city, worse by far than persons not resident might imagine. It was about three feet deep at the intersection of Main and the present Twelfth streets. Thence, small boats and improvised rafts would go to the apex,* or middle of the Stone creek bridge, *price 5 cents.* Here was a dry spot succeeded by more water until you reached a point near the corner of the late store of Mr. Joseph W. Ferrell. Thence all was water, covering more than half of the present Fifth and Sixth wards. That vast tract of territory now known as the Eighth ward was almost entirely submerged, and was capable of floating large steamers, seven of which made trips on errands of mercy for the relief of the sufferers. One notable instance of which was the Arrow-line, Captain James H. Roberts, who took his boat to as many localities in the Eighth ward as demanded his assistance. The reader may readily infer there was quite a depth of water in that locality, when he is informed that the aforesaid steamboat found no difficulty in going pretty much where she pleased, between the line of the river bank, even as far back as the mill at the eastern extremity of the ward. The depth of the water at the point where Twenty-second intersects Main street was about seven feet. At the intersection of Fourteenth and Main it was about four feet, and extended up Main to a point as far north as the present store of A. W. Paull, Esq. Much damage was done to property by this flood, and those now living who suffered by it will not be likely to forget it as long as they live."—*J. L. Wilde's Sketches.*

*This assertion, however, is a very modest one, as the water flowed to a height of over three feet above the coping, or protection wall, of the stone bridge, whereon stands a lamp post, which the reader will this day find marked, as we state, to indicate the height of the water on that occasion.

PROBABLY THE FIRST SHOW IN THE CITY.

Mrs. Harris, of Morristown, Belmont county, Ohio, a daughter of John McCulloch, has given us some early recollections of Wheeling. She was born in 1791, and was taken by her father to a show in Wheeling about the year 1801. Her father took the whole family, except his wife and two small children, and they stopped at Ebenezer Zane's, who was related to them. Mrs. Harris thinks it was the first show that was exhibited in Wheeling, and it only consisted of an elephant and a camel. The show ground was nearly opposite to where the suspension bridge now is, and Main street was then nothing but a common.

THE FIRST EXECUTIONS.

The first instances of the extreme penalty of the law being carried out in Wheeling were in 1836, when two young men, respectively named Boon Long, of Wheeling, and Thos. Wintringer, of Steubenville, were hung near the creek, East Wheeling, for the murder of one Whalen, a peddler. William Webb was high sheriff at the time, and though the young men confessed their guilt—mainly through the exertions of the father of one of them—a conspiracy was gotten up to rescue the culprits. The attempt, however, was duly thwarted by the mustering of a powerful guard, and the sentence was successfully carried out.

VISIT OF GENERAL LAFAYETTE TO WHEELING IN 1824.

There are yet many living in the Nail City who have a recollection of the above famous French general traveling, in the year named, from New Orleans via Wheeling, to the east. He arrived by steamer, and on landing here was received by Captain Henry Helm and the Wheeling Light Infantry, who escorted him with military honors to the Graham Hotel, then standing near the site of the late Grant House, and from thence saw him off by the stage coach.

OLD TIME PRICES.

In 1817, whiskey was worth from 55 cents to 65 cents per gallon; a yoke of oxen varied from $80 to $130; forty-four pounds of flour fetched $1.32; pickled pork was worth 12½ cents per pound, and log chains were worth 25 cents per pound, as compared with 8 cents in the present day.—*Extract from an old cash book.*

AN INDIAN INTERVIEW.

Very considerable alarms have lately pervaded the country with respect to the Indians, a great number of whom collected some time since in the neighborhood of Greenville. We feel pleasure in assuring our readers that no danger is to be apprehended from them. General Washington and Col. McArthur have visited them, by the direction of the acting Governor of Ohio, and have received assurances of their peaceable intentions. Their prophet declared that the speech published in the newspapers against the Americans, and attributed to him, was a fabrication. The speech was read to him and interpreted, in the presence of General Washington and Col. McArthur, and he appeared to resent it as a great slander. These Indians declared their determination to remain neutral

in case of a war with England. Chiefs from the following nations were present, viz.; Shawnees, Wyandots, Potowatomies, Tawas, Chippewas, Winnepans, Malominese, Malockese, Secawgoes, and one man from north of the Chippewas.—*Wheeling Repository*, 1807.

THESPIAN SOCIETY,

was the title given to the very first mutual improvement society gotten up by the young men of Wheeling, so early as 1818—its object being to cultivate a love of mental culture, oratory, debating, reciting, &c. It proved so thoroughly successful that eventually the study of dramas was also added, and many were the enjoyable evenings' entertainments placed before the public under its auspices.

THE FIRST THEATRICAL ENTERTAINMENT

ever given in Wheeling, was presented by the Thespian club about 1819 or 1820, in the Lancasterian Institute, now the Lindsley Institute building, then located on the same site where at present stands the residence of William Paxton, Esq., on Chapline street. The play consisted of a drama entitled "Speed the Plow," and it is needless to say that the house was packed. Two prominent characters—those of "Farmer Ashfield" and "Dame Ashfield"—were sustained by Dr. John Eoff and Mr. John Armstrong, son of the Rev. Armstrong, in which the "Dame" created, incessantly, provoked laughter by the repetition of "I wonder what Mrs. Grundy will say"—referring to a very intimate neighbor. Indeed, so monotonous had that interrogation become, to the ears of the venerable farmer, that he frequently dreaded to converse with his "better half" for fear of its repetition. During the play, however, the "Dame" returns from market, where she has disposed of her produce, when the farmer inquires of her—"well, and what's the latest news in London?" "O, nothing, replies the Dame, "except that Mrs. Grundy sold her butter for a penny a pound more than I got." "Zounds!" exclaimed the farmer, "I verily believe if thee goes to heaven, the first will words be—'is Mrs. Grundy here?"' and from this play was it that the popular street saying took its origin—"What will Mrs. Grundy say?"

WHAT A PIONEER PREACHER EXPERIENCED.

The first place of worship in Wheeling was erected in or about 1819, by the Methodists, on the same ground where stands the present Fourth Street M. E. Church, and was supplied for some time by very eminent divines, such as the Rev. John Waterman, Bascom, Asa Shinn, Lorenzo Dow, John N. Maffitt, and others. When the latter gentleman came, so immense was the crowd within and without the church that he had to be passed into the church, to his seat through the window, over the heads of the gathering. One informant, an eye-witness, adds that he remained a week, by which time there was very perceptible evidences from the decline in the attendance, that conversion was not the *unanimous* motive of the first grand rally though Mr. Maffitt had few equals as an exponent of true religion.

A WINDFALL FEAST.

From about 1832–42, Dr. John Eoff was about the most popular man in the city among juveniles. He was by no means a vegetarian but evidently a strong believer in fruit, as he had an extensive orchard where at present the Belmont and Riverside mills stand, and for over ten years he permitted a free invasion of the grounds, by children, to pick up and eat the windfall fruit. One who freely indulged the treat assures us that the kindly permit established the most extensive (juvenile) cider mills ever met with in America. The famous rambo apple, of which there were probably more than any other, would seem to have had the weakest stems to resist the wind, or mayhap they had the greatest preference for the children (or vice versa), as that kind of tree usually became stripped first, Such a treat can now only be looked back upon as one of those interesting features marking the "good old days of yore."

TWO NOTABLE WOMEN.

We take the following from the Pittsburgh *Christian Advocate*, being an extract from a paper contributed by Rev. A. C. George, D. D., of Wheeling, to that publication:

Two notable Methodist women, of heroic mould, of eminent devotion and of signal usefulness, have recently, in the city of Wheeling, passed from earth's activities to heaven's felicities.

Mrs. Ann List, widow of John List, a man whose memory is a precious inheritance to Wheeling Methodism, followed her late husband into the eternal world, December 12, 1877. She leaves behind her children and grandchildren who are a valuable heritage to the church and a blessing to society. "Mother List" had a somewhat remarkable career, and was most decidedly a remarkable character. She was born in Rothwell, Yorkshire, England, in 1797. She was converted in her eighteenth year, and despite fierce opposition joined the Methodist "Society," and from that time forward was thoroughly identified with the denomination. In the summer of 1823, she came with her husband Wm. Pallister, to Wheeling, on their way to a more western location. At this point, however, he was smitten and died, leaving his widow with a sick child, and unable to return to her native land. Subsequently, she became the wife of John List, and with him consecrated her best powers to the work of building up Methodism in this city. Her life was one of practical beneficence and earnest spirituality, and, although the grim messenger came suddenly, he found her ready. She fearlessly met and valorously conquered her last foe. Her memory is that of the just, which "smells sweet and blossoms in the dust."

AMEN CORNER.

During the early days of the first church, which stood upon the present site of the Fourth street Methodist Episcopal church, there sat in the north-east corner of the building William Wilson, an old Marylander, with a most stentorious voice; the McCullochs, of Short creek; John List, father of the present List family, and Dana Hubbard—all of whom were very sincere in their devotions, and the frequent "amens" that arose from them, added to the extraordinary audible emphasis invariably applied to the word, earned for that particular location in the sacred edifice the name of "amen corner."

OLD FASHIONED WALKING.

We have it upon unquestionable authority that "Old Joe Greer," a sketch of whose life is given elsewhere, used to go down the river in flat boats, and on two occasions, with a number of other men, has walked the entire distance back from New Orleans to Wheeling—through Mississippi, Tennessee, Kentucky and Ohio—a distance of about two thousand three hundred miles.

A QUAINT ORDINANCE.

In a number of the West Virginia *Times*—originally the Virginia *Statesman*, published in Wheeling during the year 1830, there appeared a special ordinance, passed by the City Council, in which the following clause appears. "Whenever there is a fire in the city, all the bells shall ring and keep on ringing as hard as they can while the fire is burning and till the fire is put out."

REPRESENTATIVE IRWIN ESCAPES BEING BURNT TO DEATH.

In 1811, while Captain William Irwin was representing this district at Richmond, there was a serious conflagration at a theatre by which one hundred and fifty lives were sacrificed, including that of the governor of state. Fortunately the Captain had arrived late, when seats were unobtainable, and he was not far from the door, which enabled him to escape. Soon after the disaster, a memorial church was erected on the site and is to this day worshipped in by the Episcopalians.

WHEELING RACES FIFTY YEARS AGO.

While most of our oldest living settlers will remember the subjoined facts only too well, there are doubtless many unaware of the fact that even Wheeling was at one time a great centre of attraction for its horse races. From what we have been enabled to glean, the first track was opened prior to 1827—probably 1825—at Beech Bottom, some twelve miles up the river from Wheeling, on land now farmed and owned by Mr. Robert Miller. It was a one-mile track, and among those most interested in it might be mentioned Major Good, Mr. Mitchell, Jerry Sheppard, &c.

The second track was opened about 1834, on the farm at present owned by Mr. Samuel Spriggs. The track was owned by Henry Eccles and John Wires, and upon it there took place one of the greatest races ever placed upon record. It was between Grey Roman, from New York; Daniel O'Connel, owned

by Mr. Tom Moore; Aunt Rachel, owned by Major Good; Sparrow Hawk, owned by Ebenezer Zane, and Bald Hornet, the property of Mr. A. Mitchell. Sparrow Hawk was ruled out, and heats were run all day, but whether Aunt Rachel or Bald Hornet won, our informant was not quite certain; still it was one of them. Mr. Samuel Spriggs, at the conclusion of the race, purchased Grey Roman on the ground.

The third track was opened on the farm of General Moses Chapman, north of Boggs' run, but one John Harvey retained the exclusive right and care of the track. Up to this time, gambling had become so intolerable at the meetings that the state had to adopt the strongest measures to suppress it, and in 1836 there was a great raid made upon the race course by the state officers. Shooting was freely indulged, one officer was seriously wounded, one gambler ran into the river, five or six were apprehended and their entire set of gambling tables and unique paraphernalia was confiscated. This, of course, put an end to that track. But yet another sprang into existence, about 1838–9, on property owned by Major Good, on the pike. Still the usual rowdyism had to be indulged, and on his return home Capt. H. Mason was set upon and brutally assaulted. From this on, all races were suspended.

WHEELING ONCE THE SEAT FOR PUBLISHING OUR NATIONAL SPELLING BOOKS—AN AUTOGRAPH LETTER FROM NOAH WEBSTER

is in the possession of Mr. James M. Ewing. It is dated from New Haven, February 15th, 1836, and addressed to Messrs. J. Fisher & Son, Wheeling, authorizing a revision in the orthography of certain words. Messrs. Fisher & Son, in those days, controlled the printing of the entire edition of Webster's spelling books, west of the Alleghenies, and of which they turned out an average of 300,000 annually, for several years, beside printing numerous other educational works. Mr. James M. Ewing served his apprenticeship with that firm. The letter reads thus: "The elementary spelling book has now an extensive sale, and it is desirable that every material objection to it should be removed. A friend of mine has lately examined it with care, and we have agreed to recommend the following corrections and alterations, which the printer can make with a small chissel or penknife: Cancel the points over *a* in 'staves'—cancel *b* in 'gimblet'—cancel *e* in 'whiskey'—cancel the second *r* in 'ferrule'—cancel the second *l* in 'ventillate'—cancel the *h* in 'cholic'—cancel the accent in 'va lees.' On the foregoing folio you will see that some corrections are to be made in the plates. Please to send the pages specified, to Messrs. J. A. James & Co.'s, stereotype foundry, Cincinnati, as soon as the navigation of the river opens. They have my directions for the purpose, and this will be at my expense.

I am, gentlemen, your obedient servant,

N. Webster."

ANCIENT HORSEBACK RIDING.

Not only was it the custom of the late Wm. Irwin to ride his favorite old horse "Major," each session, to the Legislature in Richmond, but Henry Clay, from Kentucky; General Jackson, from Tennessee, and other leading statesmen from remote points, used to regularly pass through Wheeling on horseback to the assembling of Congress at Washington.

"AUNT RACHEL."

There was in Colonel Ebenezer Zane's family a colored slave who was very highly esteemed for her faithful and gentle disposition, being known as "Aunt Rachel," who lived to become a centenarian. She was present at the storming of Fort Henry, and was a special favorite with all. Years subsequently, she received her freedom, and was given, by Colonel Zane, a piece of land located near the corner of what is now Main and Eighth streets, but she soon after sold it and crossed the Ohio, taking up her abode on the river bank between the Ætna mill and Bridgeport, where she put herself up a comfortable two story frame house. It was a most interesting spot, always surrounded with a profusion of flowers, in their season, and here the old lady ended her days in about 1836-7. She claimed to be 103 years of age, and was blind several years before her death, but the general impression was that she exceeded the age named.

BORING FOR SALT WATER.

Sometime in the neighborhood of 1818–20 a man named Phelps undertook to bore in the neighborhood of the present Wheeling, Pittsburgh and Baltimore railroad tunnel, running under the Peninsula, thereby hoping to establish a salt well. He met with a limited quantity of salt water and erected kettles for boiling it, but found the quantity obtainable inadequate to justify an establishment of his enterprise. In 1826, a second effort was made in the same direction, this time near the Top Mill, when a depth of nine hundred feet was attained, by one John Dulty, but the project was hopelessly abandoned in 1827.

AN OLD VOTING TICKET.

Senator J. J. Woods is said to retain in his possession an interesting relic of the good old times in the shape of the election ticket voted by his grandfather, Archibald Woods, Esq., at the election which resulted in the choice of John Quincy Adams for President of the United States. It is a quaint old affair, and quite different from the style of tickets now in vogue. The signature of the person voting was then required to be endorsed on the back of the ticket. At the top is the legend: "The American System," and just beneath the figure of an eagle. The next line contains the platform of the party tersely stated: "Internal Improvements and Domestic Manufactures." Further down are the names of Adams, and of Richard Rush, candidate for vice-president. The ticket also contains the names of the electors for Virginia. The only three counties represented, which are now a part of West Virginia, were Greenbrier, represented by Richard Smith, Monongalia, by Alpheus P. Wilson, and Kanawha, by Judge Lewis Summers, uncle of Dr. A. F. Summers, the present State Senator. The paper is discolored and rotten, but the printing holds its own.

THE "GREAT PUMPKIN FLOOD."

In the fall of 1811, the inhabitants located on and near the banks of the Ohio, were subjected to a terrible scare on account of an unprecedented storm and flood-tide, which cleared the land of all the corn shocks, corn cribs, hay stacks and fences,—the stream being covered also with pumpkins, which, in those days, were grown extensively, hence it was called the "Great Pumpkin Flood." Since then, however, a flood-tide in 1832, flowed ten feet on the Island, and a third, in 1852, showed nine feet on the Island, both of the latter being probably heavier than the former.

THE FIRST BRICK HOUSE.

The rude log structures and more modern scantling shanties of "ye pioneer" days, were first superceded by a substantial brick structure in 1803–4, when one Jacob Gooding erected himself a brick house where the St. James' Hotel, on Water street, now stands. It was a commodious structure, and subsequently fell into the hands of the Sprigg family, who ran it as a hotel for many years, but finally it was sacrificed for the splendid structure at present occupying the same site. The second brick house was put up by William McConnell, about 1805–6, on the corner of Main and Eighth street, and still stands a complimentary memento to the enterprise of our early settlers.

FRATERNIZING INDIANS.

It must not be supposed that though the Indians were comparatively uncivilized, they were unwilling to fraternize with the early white settlers so far back as 1809 and 1810, for we are assured by those then living in Wheeling that the Delawares frequently came over from the Ohio shore to conduct purchases and exchanges. Being acknowledged experts with the bow and arrow, they were encouraged by the whites to go into friendly competition, firing at "fippenny bits," as they were then called (six and a quarter cent pieces), which became their own if they hit them. It is needless to add that they seldom missed their aim, while still less frequently did they convey their winnings home, so long as there was a supply of liquor obtainable.

A FOWL RUMOR.

One who came from Vermont to Wheeling, about 1818, assures us that so painted were the stories circulated then in the Green Mountain State as to the bounty of Ohio, that they were assured the wild turkeys ran around nicely roasted, with a knife and fork stuck in their backs, squealing "Eat me, eat me;" but unfortunately, if such there existed, he never heard of one of them being captured.

THE FIRST REPRESENTATIVE

from here was the late Captain William Irwin, from 1800 to 1819, and he is said to have ridden to and from Richmond, then the capital, on a favorite old horse called "Major."

AN OLD SCHEME TO REMOVE THE COURT HOUSE FROM WHEELING.

In 1808, an effort was made to remove the seat of justice of Ohio county from Wheeling to Grave Creek, now Moundsville, Mr. Tomlinson of the latter place visited Richmond with a petition liberally signed by citizens of the lower part of the county, and by diligently working personally with the members of the house of delegates succeeded in getting his project passed by a majority of fifteen, notwithstanding the opposition of the two members from this county, Messrs. Irwin and Morgan. The measure was called in Wheeling, Mr. Tomlinson's "wheel-barrow project" and it was jokingly said that he proposed to move the court house from Wheeling, to Grave Creek on a wheel-barrow. Being ably opposed in the senate by Mr. Doddridge, then representing this district, the scheme was defeated. It appears that Mr. Doddridge was late that year in his attendance at Richmond, and Mr. Tomlinson afterwards remarked that if the Senator had stayed away six days longer he would have gotten his bill through the senate and accomplished his purpose.

THE FIRST BRIDGE,

A wooden structure over the Wheeling creek, connecting Main street, was erected in 1817, but an ice gorge subsequently carrying it away, the present stone bridge was built in 1832–3, by Messrs. Kemmell & Gommell, contractors, at a cost of some $22,000.

A COMPLIMENT TO WHEELING'S ORIGINAL COURT HOUSE.

The first building of this character erected in Wheeling, was a small stone structure with a diminutive cupola on the top, much resembling a full sized chimney, and the said legal institution was located on Main street, at its junction with Tenth street. A Kentuckian once riding through the town looked upon it amazed, exclaiming—"well, the people of Wheeling must be mighty fond of bacon—I never saw such a large smoke house before in my life.

WHEELING WHIPPING POST.

Many are doubtless unaware of the fact, while others may have forgotten it, that so late as 1826–8, there stood a whipping post in the vicinity of the old court house, on Main street, and attached to the goal, where culprits were not unfrequently humiliated. The last penitent on record was a mulatto man, by trade a barber, who for insulting a poor white woman, gaining her livelihood by washing, received thirty lashes from the sinewy arm of Moses Thompson, at that time the constable, who carried out the sentence in the presence of Robert Morrow, gaoler.

"HUSBANDS, LOVE YOUR WIVES."

On the evening of Thursday, the 24th of September, a man who was strongly suspected to be grossly inattentive to this apostolic injunction, was siezed by a number of youngsters, in this place, tarred and feathered, mounted on a rail, and carried up and down the street for about two hours. "The gentleman" as his carriers and followers very complaisantly styled him, was occasionally saluted with keen reproaches, which together with cries of "Here goes the man that beats his wife," &c., rendered the procession a very noisy one. The crowd of spectators was great, and the proceeding, outrageous as it was, met with very general approbation.—*Wheeling Repository, October*, 1807.

HOW TO TREAT CHOLERA AND SMALL POX.

In conversation with old Joseph Greer, who is characterized for having rendered invaluable and unceasing service during the cholera epidemic of 1833, as also while the small-pox was here, the old gentleman was exceedingly anxious we should make known the following facts on his authority as infallible. He remarked to us that "during the great cholera epidemic in 1833, there was a very clever English doctor here, who had practiced all over England, Ireland and Scotland, as well as this country, named Grey, and as I was round about nursing all over the town I found his treatment never fail to cure. It was simple, and I'll tell it to you—he had the patient placed warm in bed, directly the cramps come on. He got dew-berry root, (a brier grown anywhere in the fields,) and the bark of oak. He boiled them together and gave the patient a tablespoonful now and then, with a teaspoonful of brandy, mixed; injected the same liquid freely without the spirits, poulticed the stomach with the herbs, and bathed the feet. If vomiting came on he ordered the liver and gizzard of a chicken to be boiled into a broth or soup, and gave a tablespoonful or two occasionally. I have never known this treatment fail out of hundreds of cases where he adopted it. If cramps ensue give freely of soup, and also use the injection more freely. And now for small-pox. I have nursed scores with this complaint, yes—and slept with them, but never took it myself, because I first got sulphur of brimstone, burnt it in a room, exposed my clothes to the fumes and inhaled it into my lungs—beside which I took a little spirits occasionally. It is the surest disinfectant ever found out, and I have proved it for years. Also burn two or three teaspoonfuls in the house, and let the children inhale it."

THE FIRST SUBSTANTIAL WHARF LANDING

Was made at the upper end of the present grade, from the beach, opposite the "Pewky" depot, running probably one hundred to one hundred and fifty yards, on an ascent, in a northerly direction, and leading out upon Main street, near Market alley. The grade was solidified with huge logs. But subsequently slides in the bank gradually brought the improvement to a total wreck, and something still more substantial had to be resorted to.

A DARING LEAP FOR LIBERTY.

About 1836, after a successful raid had been made upon a gang of gamblers who had attended the Wheeling races, a man named John Pharo, who had ridden the famous racer, Red Fox, put spurs to his noted steed and bid the sheriff, or deputy sheriff, (Isaac Mitchell) a lively chase. Arriving at the point of the river bank a little north of the present Pewky depot, where the first landing had slided, leaving a wall and logs protruding, with the shore of the river at least eight feet below, he made a bound, alighted safe, and escaped on his noble horse along the shore. His pursuer being less venturesome, had to return, ascend upon Main street, and gallop round to the foot of Jefferson street to again descend on to the beach, by which time he had been hopelessly distanced.

SOMETHING SINGULAR.

During the removal of the decomposed, and partially decomposed, bodies from the old cemetery that stood many years ago on the present site of the state capital, one was found to be in an adipocerous condition, and afforded quite a matter of public interest from its peculiarity and rarity.

ANCIENT RELICS.

There is, in the possession of Col. H. B. Hubbard, of Wheeling, a quaint looking silver pottinger with the initials I. A. R. engraved on the handle, and a scroll. It is said to have been handed down direct in the family from John Rogers, of England, who was made a martyr at the stake in 1555—his great granddaughter being Margaret Rogers, who married into the Hubbard family. The Col. has also, one of the few large medals cast in commemoration of Perry's victory, and considered exceedingly rare in this day. We are also informed that there is yet some of the timber taken from Fort Henry in service as a mantle-piece in the house at present occupied by the family of the late Jacob Berger, on the Island, while Mr. R. H. Sweeney has in his possession several small cannon balls dug up from the site of the late Fort Henry.

THE CHOLERA OF 1832–3.

The first cases of this desperate epidemic made their appearance in the fall of 1832, when Alexander Hall, a laborer, was taken down with it upon his arrival here from New Orleans, and immediately thereafter, a fellow associate of his, who came with him, also sickened and the two died, but the next summer, 1833, the dreadful scourge set fully in, and deaths were known to occur hourly—even to such an extent that we are assured of no fewer than twenty-three funerals having been witnessed in one day.

CHAPTER XLIV.

WHEELING'S FACULTY OF OLD AND MEDICAL ORGANIZATIONS.

HOW THE PIONEERS GOT ALONG WITHOUT PHYSICIANS, WITH INSTANCES OF REMARKABLE SUPERSTITIOUSNESS—OLD FASHIONED REMEDIES—BRIEF BIOGRAPHIES OF WHEELING'S EARLIEST PHYSICIANS NO LONGER LIVING, AND SHORT SKETCHES OF INVALUABLE MEDICAL INSTITUTIONS WORTHY OF THE NAIL CITY.

HAVING met with the existence of deep curiosity, almost universally, to know how our pioneers got along without a fair sprinkling of physicians—particularly in view of them being so plentiful in these days—we instituted many inquiries on the subject with a view to informing our readers, and to be frank in the matter, and at the same time explicit and correct, we have resolved that we cannot do better justice to the subject than quote from a highly interesting and ably penned paper, by Dr. E. A. Hildreth, contributed in the Centennial year to the State Medical Society's annual report, in which he says:

During the period from the fall of 1769, the time of the first occupancy of the site of this city by the Zane brothers, until they laid it out in 1793, there is no record, or tradition, of any physician having practiced here. The early settlers being in a wild, uncultivated country, far removed from any other, upon a frontier exposed to daily attacks from their savage neighbors, surrounded by dangers and privations, created a community of interest and benevolence, exhibited by mutual nursing and attendance in sickness or injury; from experiences of this kind, tradition and history have handed down to this centennial period, the names and practice of a number of men and women noted for their success. I give the following specimen of surgery which was treated at Fort Henry: "In 1784, Thomas Mills, a noted pioneer, was wounded in fourteen places by rifle shots from the Indians, one arm and one leg were broken, besides the flesh wounds; his comrades escaped being hurt, bringing him with them to Fort Henry (now Wheeling), where, having no surgeons or doctors, he fell under the care of Mrs. Zane and Williams. Had he been in the regular service, with plenty of surgeons, he probably would have lost both limbs by amputation; but this being out of the question here, these women with their fomentations and applications of slippery elm bark, not only cured his wounds, at the time deemed impossible, and restored him to health, but also saved both his limbs." We remember him well as a hale, hearty old man, fifty years after the treatment of his wounds in the Fort. He stated that the pain of his wounds was greatly relieved by poultices of "Jimson Weed" (strammonium). As a specimen of the domestic practice of the time, we beg to give the following cases, the details of which were given by parties who are well known in this community.

Benjamin McMechen states that his son William, now living six miles below this city, when about twelve years old, was attacked with inflammation and swelling of the right knee joint, which had continued about four months, with but little amelioration. The limb was semi-flexed and could not be extended. His general health had suffered and he was considerably emaciated. He took him to Esquire Zane for advice and treatment. The Esquire examined the boy's limb and told his father he thought that he could cure it; this occurred in the morning. The inflamed parts were covered with a hot herb poultice, which in the afternoon was removed. He then commenced a series of manipulations and frictions with his hands, making gentle attempts to extend the limb, which was finally accomplished and the boy instructed to stand up on both feet. The next day he could walk, and in a short time recovered the use of his limb, and has continued well to this day. Another patient of the same practitioner was Mr. Joseph Godfrey, who states that he had a swelled thumb, "one inch larger around than his wrist, and so exceedingly painful and tender as to entirely prevent sleep or rest for four days and nights." He consulted Esquire Zane, who manipulated the inflamed thumb and advised him to go to bed early, without his supper. He states that he then slept soundly, from 4 o'clock P. M. until he was aroused at 6 o'clock the next morning, the pain in his thumb having entirely ceased. After a repetition of this process for two days longer, the tenderness and swelling were entirely removed. Mr. Godfrey thinks it was a felon. He is still living in this city, and may be consulted as to the particulars of this case. I have given the facts, being entirely unable to account for the results. We may infer that the early settlers were not free from superstition. Such incidents abound in the History of Old Medicine.

OLD FASHIONED REMEDIES.

Many of the early settlers were familiar with the properties and uses of the medicinal plants, barks, and roots indigenous to this country, and made a regular practice of gathering them, in their appropriate season, which after proper curing, were stored away for use. The following were the prevailing diseases and therapeutics of that time: Intermittent fever was successfully treated with barks of dog-wood, cherry and poplar, digested in whisky, or decoction of boneset (Eup. P.) Remittent or bilious fever was their regular summer and fall disease. On its incursion, the patient was generally vomited freely with lobelia, after which he was purged with infusion of white walnut bark, and sweated with copious draughts of warm elder-blossom tea (Sambucus N.). We have no means of ascertaining the mortality, but from old residents learn the disease was seldom fatal. Dysentery was one of the most dreaded diseases, often baffling their limited and uncertain therapeutics; and was treated with the internal use of "oak-ooze," May-apple root and walnut bark, slippery elm bark tea (Ulmus), bitter elm bark, (the latter regarded as a specific), with hot fomentations over the abdomen. Acute intestinal inflammation, with a high grade of fever, marked its course and added greatly to its fatality. In inflammations of the chest, patients were steamed with the vapor of whisky, or hot water, used comfrey, and spikenard, with sassafras pith, and slippery elm as demulcent drinks, and in case of pain or great difficulty in breathing, the local application of horseradish leaves or mustard, as rubefacients. Inf. Virginia snake-root (Serpentaria) was generally relied upon as an effectual remedy for coughs of all kinds, regardless of their pathology. Dried Indian turnip (Arum. T.) scraped down with honey was frequently given for the same purpose. Rheumatism was treated with cohosh (Cimicifuga R.), blood-root (sanguinaria C.) and bark of leather-wood. This treatment was sometimes interpolated with a "regular Indian sweat;" this was performed thus: A stone of considerable size was made red hot, the patient crouched over it, closely wrapped in a blanket; portions of water were poured over the hot stone to generate the steam, which being kept up for a certain time, the patient was lifted into bed with the blanket still around him, and then sponged off with cold water. An old resident, who had been a great sufferer from rheumatism, after having undergone the "Indian sweat," declared to me that he experienced the most complete and glorious relief of his torturing pains and slept soundly that night, the first for many weeks. It was not a bad imitation of the celebrated "Turkish bath" of modern days. Ophthalmia was treated with Stramonium and Inf Hydrasis Can'd.

WHEELING'S EARLIEST PHYSICIANS NO LONGER LIVING.

The first physician who permanently settled in Wheeling was Gideon Comstock Forsythe, in 1803. It is not certainly known where he emigrated from, but probably Chester county, Pennsylvania. He was alone in the practice until 1806, when Doctors H. Potter, Thomas Toner and James Ralff, studied medicine under him. The first named student became Dr. Forsythe's partner, which continued but a short time, when Dr. Potter left. Returning to Wheeling in October, 1808, he opened an office for himself, practicing here for several years. Dr. Forsythe continued to practice here until after the close of the war of 1812, when he emigrated to the "English Turn," below New Orleans and embarked in the manufacturing of rum from molasses. Dr. Thomas Toner, after practicing four or five years, gave it up, and became associated with his brother-in-law in editing and publishing the *Northwestern Virginia Gazette.* Dr. James Ralff, who came from Bedford, Pennsylvania, having finished his studies with Dr. Forsythe, was appointed a surgeon of one of the Virginia regiments, which, being ordered to Richmond, Virginia, in 1814, he accompanied his regiment and never returned.

DR. MARTIN LUTHER TODD,

who was one of the successors of Dr. Forsythe, was the son of a respectable farmer of Washington county, state of New York, where he was born April 29th, 1782. Having completed his literary studies, he commenced the study of medicine with his

brother, Dr. John Todd, and finished his medical course in 1808, or about that time. The two brothers went into business in Waynesburg, Pa., but becoming dissatisfied with Waynesburg, dissolved partnership in 1814, Dr. John moving to "Ten Mile," in Washington county, Pa., and Dr. M. L. Todd locating in Wheeling, then a village, numbering only a few hundred inhabitants. Not long after his arrival in Wheeling, he found extensively prevailing, a low grade of malarious fever, of which more died than recovered, called by some "Cold Plague," supposed to be contagious, but probably a malignant form of typhus fever, in the treatment of which he was eminently successful, using largely tonics, stimulants and antiseptics. He also used, with happy effect, brewers' yeast. The Dr. was honored by having conferred upon him by Colonel Moses Shepherd, the office of surgeon of the 140th regiment of State troops, then being raised in the Panhandle counties of the State. He retained his commission until the close of the war. After peace was restored, he resumed his medical practice, and in a few years became one of the leading physicians of the town, being quite popular, affable and sociable in his manners, secured to him a large and lucrative practice, which he enjoyed for many years. He married a daughter of Mr. Andrew Woods, one of the early settlers of the place. By this union they had but one child, a daughter, who married M. W. Junkins, M. D., of Bellaire, Ohio. He spent the latter part of his life with his son-in-law, Dr. M. W. Junkins, and died on the 8th of March, 1866, in the 84th year of his age.

JOSHUA MORTON, M. D.,

Was born in Massachusetts, studied medicine and graduated at Harvard University. He opened an office in Wheeling in 1816, and continued in active practice until his death in the early part of 1839. Soon after settling in Wheeling, he formed a partnership with Dr. William Scott, which at the end of one year was dissolved, Dr. S. leaving the place.

JAMES W. CLEMENS, M. D.,

Was born in Washington county, Pennsylvania, May 26th, 1795. His grandfather emigrated to Loudon county, Virginia, in 1764, and afterwards to Washington county, Pennsylvania, then considered a part of Virginia. Dr. C. graduated at Washington College, Pennsylvania, in 1816, after which he removed to Wheeling, where he commenced the study of medicine and at the same time taught school. He began practice in 1819. In 1822 he formed a partnership with J. W. Ray, a druggist, which proved a pecuniary success, but by the great fire of 1827 both lost everything, and had to begin the world anew. He attended medical lectures at the University of Pennsylvania, and graduated in the winter of 1823–4. He was associated in partnership, successively, with Drs. William Isett, Baltzell, Thomas Townsend, John Frissell and R. H. Cummins, but died the 21st of November, 1846, in his fifty-second year.

DR. JOHN EOFF

Was born in Jefferson county, Virginia, in 1788. Having practiced medicine in Charleston, Kanawha county, he moved to Wheeling about the year 1817. He had married Miss Helen L. Quarrier of Richmond, Virginia, by whom he had four sons and six daughters. His oldest son, John Q. Eoff, studied medicine and practiced several years. Dr. Eoff and family being wealthy, he after nine or ten years retired from practice. He died January 28, 1859, in his 71st year.

DR. JOB WILSON

Was educated at Princeton, New Jersey, and studied medicine under Dr. Rush, of Philadelphia. Began practice in 1812 which was continued until his death in 1829. His place of residence was six miles above Wheeling. He had a great reputation as a surgeon, and was a bold and successful operator, being sent for far and near. One leg being shorter than the other and partly flexed, he devised a saddle and an upright horn to enable him to ride on horseback.

DR. WM. WATERMAN

Practiced medicine here in 1819. We have no further account of his history. After about one year he went to Ohio,

DR. THOMAS TOWNSEND

was born near Uniontown, Fayette county, Pa., about the year 1787. His early advantages for an education were very limited. He moved here from Mt. Pleasant, Ohio, and commenced the practice of medicine in 1828. We do not think he ever attended medical lectures, and from such facts in his history as we can learn, he undertook the study of medicine when about thirty-five or thirty-six years of age, and was essentially a self-made man. He was fond of natural science, and a hard student in everything he studied. He gathered a complete herbarium of the botany of this region, and having been frequently seen climbing around our hills and putting his specimens into his hat for preservation, originated a report of his being of unsound mind; for, said they, "we saw him wandering over the hills, pulling up weeds and putting them into his hat." He subsequently studied the geology and mineralogy of our hills, and collected a very clever cabinet. This latter service, according to the ideas of his old enemies, corroborated their opinion of his insanity; for they saw him "picking up old stones and bringing them home." The literary taste of this place was not then of the highest order. He died of pneumonia on the 29th of March, 1851, being about sixty-four years of age. At a meeting of the medical profession, in April, 1873, Dr. J. C. Hupp having stated that Dr. T.'s place of burial in Mt. Wood Cemetery was unmarked, and almost unknown, a subscription was made to defray the expense of a memorial stone, which has been purchased and placed in position by Dr. Hupp.

In the period from 1820 to 1828, Drs. Emery, John Thompson, Hunter, Downey and I. H. Irwin practiced here for short periods, whose history we are unable to learn.

JAMES TANNER, M. D.,

was of Irish parentage, and born in Baltimore, Maryland, in 1796. He studied medicine under Dr. Buckler, of Baltimore, and graduated in the Baltimore Medical College, in 1819 (?). He settled in Wheeling in 1820 (?). Soon after which he married Miss Deborah Graham, by whom he had a son and daughter; the son died when about 14 years old, and the daughter is now the accomplished wife of Hon. A. I. Boreman, of Parkersburg, W. Va., who was the first governor of this state. Dr. T. was thoroughly read in medicine, and actively alive to its progress and improvement. He participated largely in the affairs of the city government, being at the time of his death, December 26, 1858, mayor of the city, and then 62 years old.

DR. D. B. DORSEY

came here in 1834. He was a minister in the M. E. Church, and also practiced medicine. He was the first we saw use a *cylinder of wood as a stethoscope*, in 1835, in sounding the chest in a case of asthma, and was probably the first to use this means in physical diagnosis in this city. He went to Steubenville, and of his further history we can give no account.

DR. JONATHAN ZANE

was born in Wheeling, August 25, 1802. He studied medicine under Dr. Rhodes, of Zanesville, Ohio. Began to practice in Wheeling in the fall of 1826. His health becoming impaired, he emigrated to Natchitoches, La., where he died in 1836.

S. P. HULLIHEN, M. D.

The following sketch, is condensed from a short biography of Dr. Hullihen, by E. B. Gardette, M. D., president of the board of trustees of the Jefferson Medical College, Philadelphia, which appeared January 7th, 1858, in the *North American Medico-Chirurgical Review*, a journal conducted under the auspices of Professor S. D. Gross:

Simon P. Hullihen was born in Northumberland county, Pa., on the 10th December, 1810, and died in Wheeling, March 27, 1857, of typhoid pneumonia, aged 46 years, 3 months and 17 days. He was of Irish extraction; his father and ancestry were plain Pennsylvania farmers. In his ninth year, young Hullihen met with a serious accident by which both feet were so severely burned that he was to some extent crippled for life. His early educational advantages were only such as were afforded by the district school. At an early age he manifested a love for medicine and surgery, and his vigorous pursuit of these studies was shown by his success in after life. He received the degree of Doctor of Medicine from the Washington Medical College, Baltimore, Maryland, and in 1832, commenced practice, combining dentistry with general surgery, at Canton, Starke county, Ohio. In 1835, he married and removed to Wheeling. He

never practiced general medicine; his great success in usefulness appeared in surgical operations. Patients of all classes, confiding in his skill and frank character, came in great numbers from the surrounding country, so that the value of his services, as well as the influnce of his reputation, were considered the common property of Wheeling. In 1845, he established a private Infirmary, and several years later he succeeded in establishing the Wheeling Hospital, which is now an ornament and unpretending charity, located in the northern part of this city. This was a favorite project of Dr. Hullihen. Having concerted measures with Bishop Whelan, and secured the aid of the Sisters of the Catholic Church, a house was purchased by the Bishop, and a charter obtained March 12, 1850, under the name of The Wheeling Hospital. Although Dr. Hullihen was the life and soul of the enterprise, it has been largely improved and extended to its present capacity by the contributions of benevolent persons, liberal expenditures of Bishop Whelan, and gentle charity of the good Sisters. Dr. Hullihen was a man of true genius, and especially gifted in reference to original conceptions whereby to overcome difficulties; he possessed the discriminating mind, the rapid eye, and the cunning hand, that act in harmony and combine to produce spontaneous and correct decisions.

He had a warm and most generous heart—one so full of the best impulses toward his fellow men that he never found room there for himself, or time to consider his own interests; and yet such was the untiring industry of his active professional life, and the many strong personal attachments he inspired, that grateful and unexpected compensations continually came to his ungrasping hand, to be again scattered by unselfish liberality.

Without pretending to offer full statistics of the operations performed by Dr. Hullihen, it may convey a correct idea, both of the range and extent of his surgery, to state that during the last ten or twelve years of his life he operated in numerous cases for cataract, hare-lip, cleft-palate, cancer, antrum cases, strabismus, making new noses, new lips and under jaws, besides very numerous cases of general surgery; add to these the busy practice of a successful dentist, and we exhibit an extraordinary amount of labor, of energy, and usefulness. Dr. H. also published many valuable papers on medical subjects.

He was the inventor of many new forms of instruments of great value to the dentist and surgeon; but he never took credit to himself for these improvements, allowing the cutlers the free use of what he originated.

His death caused profound sorrow throughout the city. Appropriate resolutions were adopted by the Medical Faculty of the city; by the Wheeling Hospital Association; by the City Council, and by a public meeting of citizens at the court house.

DR. J. H. KIEFFER

Was born in Western Pennsylvania. In his early manhood he was a Lutheran preacher, having read somewhat of medicine before emigrating to Wheeling; in 1836, he turned his attention to practice here, chiefly among his German friends. In 1845 he entered into partnership with Dr. Victor L. Auler, which, however, after a few months, was dissolved, Dr. A. leaving the city. Dr. Kieffer died in 1848. He was highly esteemed among his countrymen, being regarded as a positive, rough and ready practitioner.

DR. ROBERT WILSON

Was a student with Dr. A. S. Todd for several years; after practicing here a short period, went to Pittsburgh, Pennsylvania, where he got up a *purgative pill*, and obtained for it flattering recommendations, signed by nearly all the members of the Methodist Conference, then in session in that city. He subsequently visited Washington city, and procured the names of many Congressmen, including Henry Clay, Calhoun and Webster, giving testimony to the virtues of his pills. The time and place of his death are to us unknown.

SAM'L WASHINGTON M'ELHENNY, M. D.,

Was born in Lewisburg, Greenbrier county, Virginia, December 25th, 1815. He was the son of Rev. John McE.; graduated at Athens College, Ohio, in 1834; attended medical lectures at the University of Pennsylvania, Philadelphia, and obtained his degree in 1838. He began practice at Covington, Alleghany county, Virginia, which being chiefly a country practice, the exposure and fatigue proved too great for his failing health. He removed to Canton, Miss., in 1842, hoping in this Southern climate to recover his failing health, but being disappointed in this, he removed to Wheeling in the fall of 1843. Here he married the only daughter of the Hon. Z. Jacob. He continued his practice until his death, April 9th, 1853, being in his 38th year. He was a man highly esteemed by all, a christian gentleman of affable, engaging manners, and professional honor.

DR. JOSEPH THOBURN

was the son of Matthew and Jane Thoburn, whose ancestors settled in the Province of Ulster, Ireland, in the seventeenth century. Dr. T. was born early in the year 1825, at Mallusk, county Antrim, Ireland. In the fall of the same year his father emigrated to Canada, and settled the next year on a farm in Belmont county, near St. Clairsville, Ohio. Joseph's advantages for an education were here very limited. After teaching school several years, he entered the office of Dr. Ephriam Gaston, of Morristown, Ohio, as a medical student, and subsequently attended medical lectures, at Starling Medical College, Columbus, Ohio. In 1849 he located at Brownsville, Pa., where he formed a partnership, which was dissolved by his appointment, in 1850, as an assistant to Dr. Aul, of the Ohio Lunatic Asylum; being displaced by political influence in 1853, he then moved to Wheeling, and continued his practice until May, 1861, when he was commissioned as surgeon of the First Virginia Regiment, under Col. B. F. Kelley in the three months service. He accompanied his regiment and was in the battle of Phillipi, West Virginia, attending Col. Kelley, who was wounded in that engagement. In August, 1861, under a reorganization of the First Virginia Regiment, he was commissioned Colonel, and led his regiment in the numerous battles fought in the valley of Virginia, until he was killed in the battle of Cedar creek, October 19, 1864; being in his fortieth year. Dr. Thoburn was greatly beloved by his brother officers and men, as a man, full of kindness and benevolence, and of undoubted bravery and patriotism. As a physician, he possessed very clever attainments, with a high sense of professional honor. His body was brought to this city, and followed to Mt. Wood Cemetery by a public procession, composed of our city officers, council, medical faculty, military escort, and a large concourse of citizens.

DR. ERNST AUGUST WILHELM WEHRMAN,

was born in Hanover, Germany, and educated at the University of Gottingen; emigrated to Wheeling in 1838. He was a great favorite among the German population, devoting his chief attention to the practice of obstetrics. His health rapidly failing, he left the city, and settled near Captina, Ohio, in the spring of 1845, hoping to recover his health, but about one year afterwards he died.

DR. D. J. M'GINNIS

came here from Fairmont, W. Va., and opened an office as a physician in 1868. He was also a minister of the Methodist Episcopal Church. He was a member of the Wheeling and Ohio County Medical Society. In the fall of 1870 his health failed rapidly, and he died December 22, 1870.

DR. JOSEPH S. ELDER

was born in Strattonville, Clarion county, Pa., June 5, 1843, came here in 1868, and was employed as a prescriptionist in several apothecary shops. He attended lectures at Miami Medical College, Cincinnati, Ohio, where he graduated in 1871. After practicing in this city about two years, he went to Mason, Texas, in February, 1874, where he died January 5, 1875, aged thirty-two years.

ROBERT HAZLETT CUMMINS, M. D.,

was born in Washington, Pa., February 17, 1817. He was the oldest child of James and Mary Cummins, who for many years have resided upon a farm in Belmont county, Ohio.

Dr. Cummins was educated in Washington College, Washington, Pa., and read medicine under the preceptorship of Dr. F. J. Le Moyne, of the latter place. He graduated in the medical department of the University of Pennsylvania, at Philadelphia, in 1841.

Soon after leaving the University, he located in Wheeling, and entered into partnership with the late Dr. Jas. W. Clemens, with whom he continued to practice until the death of his

partner, in 1846. Since 1850 his youngest brother, Dr, James Cummins, was associated with him. He was engaged in active practice until the 4th of April, 1875, when he died.

HENRY JOSEPH WEISEL, M. D.,

the son of Prof. Michael and Mary E. Weisel, was born in the city of Baltimore on the 22d of April, 1840. Soon after Henry's birth his parents removed to Cumberland, Md. At an early age he exhibited quite a talent for music, composing a waltz at eleven years of age, which was deemed worthy of publication. At twelve years he composed a series called "The Stages of Matrimony." Among his last compositions were several "Masses," still used in the Catholic churches of Cumberland. His musical compositions amount to one hundred and fifty. From 1858, to 1861 he was Professor of Music in St. Mary's College, Cincinnati, Ohio. In the latter year he began the study of medicine at Cumberland, under Drs. Thomas A. Healey and Samuel P. Smith, completing studies at Bellevue Medical College, New York city, graduating in 1862. Dr. W. immediately entered the United States service, and was stationed at Clarysville Hospital, where he continued until the end of the war. Soon afterwards he located in Wheeling, where he practiced until his death on the 4th of November, 1873. Dr. W. married, September 25, 1872, Miss Mary G., daughter of John G. Breslin, Esq., of Charleston, West Virginia. During his residence in Wheeling, he was Health Officer of the city, and also was Secretary of the Wheeling and Ohio County Medical Society, and one of the vice-presidents of the Medical Society of the State of West Virginia. He contributed a paper to the latter society describing a "New Stethoscope" of his own invention, also "a report of five cases of Trichinosis," which were published in its Transactions. Dr. W. died of acute rheumatism, with pericarditis. He was much beloved for his charity and christian virtues, and was popular with all classes.

DR. BENJAMIN VALENTINE

was born in the city of Metz, France, in 1808; educated at Maintz, Germany, and at the University of Leipsig. Emigrated to New York in 1833, remaining about one year. He then removed to Metagorda, Texas, where he practiced three years, after which he located at Newport, O., practicing there thirty years. In 1864 he came to Wheeling, practicing until his death in 1869, of heart disease, in the sixty-second year of his age.

DR. LOUIS KELLS

was born in Steubenville, Ohio, in November, 1828; graduated at Jefferson Medical College, Philadelphia, in 1849. Soon afterwards he settled in Wheeling. After practicing about three years, he removed to Steubenville, Ohio, where he died in 1873. He was a young physician of promise, and much esteemed by those who knew him.

GENERAL HISTORY OF WHEELING'S VALUABLE MEDICAL ORGANIZATIONS.

The first Medical Society organized in this town was in 1835. How long it continued we have no correct mode of learning; the only mark of its former existence is the first regular fee bill, established by it, at a meeting held in the Lancasterian Academy, October 17th, 1835. It is signed by Doctors J. Morton, John Eoff, J. Q. Eoff, Thomas Townsend, M. H. Houston, George Buchanan, T. Brues, James Tanner and D. B. Dorsey. Doctors Houston and Brues, are the only ones living at this writing. Some items in the fee bill, are, "For first visit, one to two dollars; every subsequent visit, half to one dollar. Obstetrical cases, (common,) five to eight dollars; charging half dollar for each visit after the third day. For bleeding or tooth-drawing, fifty cents. Small powders, twelve and a half cents. Anodyne powders, twenty-five cents." Medicine being always a separate charge. It discourages taking families by the year, and mercenary competition, both of which are stigmatized as derogatory to the dignity and character of the profession.

THE CITY DISPENSARY AND VACCINE INSTITUTION

was organized November, 1845, by Doctors Todd, Bates, Frissell and Hildreth. The design of the Institution, was to systematize the attendance on the poor; the city council paying annually, the cost of medicines and rent of building. One or more members of the board of physicians attended at certain hours every day to prescribe for, and dispense medicines, gratis, to such as applied for relief; and vaccinate whenever required. The physicians also visited such sick poor as were unable to attend, including cases of small pox. A supervisory board of trustees were also appointed. During its existence, (about four years,) there were prescribed for, and attended about 1,300 patients, and over 900 persons were vaccinated. This was the first voluntary medical charity instituted in this city. It was located on Chapline street, near Twelfth.

THE OHIO COUNTY MEDICAL SOCIETY

was organized in the spring of 1847. Fraternal feeling among the faculty for several years anterior to its formation had not been altogether lovely. On the contrary, professional jealousies had largely interfered with every day intercourse between a number of our practitioners. One of our leading physicians (M. H. Houston) who had just returned from attendance on a meeting of the National Medical Association, invited the faculty to an entertainment at his residence, having prepared a speech for the occasion quite conciliatory in its tone, which he read. Ample justice having been done to the viands of his table, followed by some of the best of wines, the company became amiable and charitable, proving the truth of the Latin proverb, "*in vino veritas*," for the old grudges and jealousies being freely talked over and mutually explained, were succeeded by the bright sunshine of cordial feeling and good-will. Living members will remember with pleasure and profit our meetings, as it is certain that the standing and interests of the medical faculty were elevated and improved by the association.

DR. HULLIHEN'S PRIVATE INFIRMARY,

located at first on Market street, and afterwards removed to John street, was established in 1845, and controlled by Drs. Hullihen and M. H. Houston. The old one-story building that used to stand near the present site of the old First Zion Evangelical Lutheran Church, foot of Market street, near the creek, was purchased from James H. Forsythe, Esq., by Drs. Hullihen and Houston, and converted into an infirmary. Soon proving insufficient, for want of room, it was removed to John street, to a house owned by the late Lewis Steenrod. Mrs. Barnes was appointed manageress, which position she continued to fill until the establishment of the Wheeling Hospital. It continued until

THE WHEELING HOSPITAL

was opened. This institution was chartered March 12, 1850, and some time afterwards was put into operation. Drs. Hullihen, Frissell and Houston were its first attending physicians. It is beautifully situated on the east bank of the Ohio river, in North Wheeling, and is a large and commodious building, with all the appointments of a first-class hospital, capable of accommodating from one hundred and fifty to two hundred patients, and is under the excellent management of the Sisters of St. Joseph. Regular medical and surgical attendance by John Frissell, M. D. Patients are, however, at liberty to select from the regular profession any physicians of their choice. All forms of medical, and especially surgical cases, are skillfully treated and carefully nursed. United States marine patients are kept and attended here, in accordance with a contract with the Surgeon General of the United States Army. The terms vary from $4.50 to $10 per week, owing to the character of accommodation and services required, medical services and medicines being separate charges. The hospital is an ornament to the city and an asylum for the invalid.

THE MEDICAL SOCIETY OF THE CITY OF WHEELING AND COUNTY OF OHIO

was instituted October 17, 1868, and continues to meet bimonthly at the residences of its members, agreeably to notice by the secretary. It adopted a fee bill on January 8, 1869, which is the present standard. It has about twenty members at present. Dr. Richard Blum is president, and Dr. S. L. Jepson, secretary.

PIEDMONT HOSPITAL,

built by the city several years since, is located on the creek bank east of the city. It is designed exclusively for small-pox patients, who are attended, and the house is under the control of the health officer of the city.

In reviewing the history of the medical profession here, it is evident that the organization and maintenance of medical societies have done more to regulate the practice, generate fraternal feeling, advance and elevate the profession, than all other means or projects; hence they are to be highly commended.

CHAPTER XLV.

BIOGRAPHICAL SKETCHES.

JAMES W. PAXTON

Is son of William Paxton, was born at Wheeling, August 6th, 1821. He was sent to Jefferson College, at Cannonsburgh, Pennsylvania, and afterwards to Bacon College at Georgetown, Kentucky, to study civil engineering, which was made a specialty at that institution. He qualified himself as a civil engineer, but never practiced the calling, and shortly after leaving college, was in the year 1839, (at the early age of eighteen,) taken into partnership with his father in the wholesale grocery business, the firm being Wm. Paxton & Son, After a few years his father retired and J. W. Paxton associated his cousin, E. W. Paxton, with himself, and continued the business successfully as J. W. Paxton & Company, until 1854, when at the age of thirty-three he retired from active business. He devoted himself for the succeeding two or three years to settling up the large iron estate of his father-in-law, Archibald Paull, then deceased, in Greenup county, Kentucky. During this time he became a director in the Northwestern Bank of Virginia, and a member of the city council, and was one of the commissioners who compromised the railroad debt of the city at that time.

He spent the summer of 1857 traveling in Europe. Was elected president of the North Western Bank of Virginia in 1860, and organized its conversion (in 1863) into the present National Bank of West Virginia, under the national banking law, and was elected president of it also. He continued to hold that position until in the spring of 1867, when impaired health decided him to seek a change of residence, and he resigned to move with his family to Philadelphia. Though a native Virginian and a slaveholder, he was an ardent Union man, and actively opposed the secession of Virginia in 1861. When his state seceded, he aided in organizing the Union element of western Virginia to uphold the authority of the United States, and resist the seceded authorities of Virginia. Was one of the Committee of Safety appointed by the mass meeting of the Union men of north-west Virginia, which assembled in Wheeling in May, 1861. Was a member of the convention which afterward re-organized the state government of Virginia, and one of the Council of Five appointed to aid and advise Governor Pierpoint then just elected Governor of Virginia under the re-organized government. Was an ardent new state and a *free* state man, and took an active part in setting up and separating the new state of West Virginia from the old state. He was a member of the constitutional convention which framed the first constitution for West Virginia, and was chairman of the Committee on Finance and Taxation in that body, and was one of the commissioners appointed by the convention to go to Washington city and present the constitution to Congress for its approval, and urge the admission of the new state of West Virginia into the Union—which was accomplished. He returned from Philadelphia to take up his residence in Wheeling in 1872, where he now remains. In a communication to the city councils of Wheeling on the 10th of September, 1878, he presented the city with the fountain located on Capitol square, and known as the Paxton Fountain; which was formally unveiled and accepted by the city, with imposing ceremonies, November the 9th, following. Mr. Paxton has been twice married—first in 1845 to Catharine Mason Paull, third daughter of Archibald Paull, then living in Wheeling, but formerly of Greenup county, Kentucky, by whom he had seven children, all now dead. His present wife, to whom he was married in 1872, at Philadelphia, her then residence, is Frances Joan, second daughter of Samuel Logan, deceased, of Washington county, Pennsylvania. They have three children, two sons and a daughter.

GENEALOGY AND REMINISCENCES OF THE M'MECHEN FAMILY, WHEELING, WEST VIRGINIA.

William McMechen, sr., one of the earliest pioneers who settled in the Pan-Handle, was descended from an ancestor, his grandfather, who migrated from the Highlands of Scotland to Wales, and there married a Welsh lady. His father came over from Wales to America, in colonial times, and settled at Wilmington, Delaware. William McMechen himself, just before the breaking out of the revolutionary war, removed his family, and a number of negroes, to the left bank of the Ohio river, and settled nearly opposite the mouth of McMechen's creek—improperly called McMahon's creek—as it derived its name from Mr. McMechen himself. He built his cabin on the bluff immediately south of McMechen's run and near its mouth, about a mile below the present town of Benwood, and six miles below Wheeling. About that locality, he acquired, by tomahawk right, a large body of land, consisting partly of river bottom and partly of the neighboring hill land, for which he subsequently obtained a patent from the State of Virginia.

A few incidents connected with the settlement of this early pioneer, which have not hitherto been obtruded upon the public, will not be without interest.

His cabins and out-buildings were twice burned by the Indians. On the day before the second burning he was warned by a party from Tomlinson's fort, near the mouth of Grave creek, that the Indians were about, and told that he and his family must go to the fort. At first he refused to go, but consented that his family should do so. Towards evening, realizing the loneliness of his situation, and the probable dangers that surrounded him, he also left for the fort. Next morning returning to his home, he observed a quantity of corn scattered along the road, and on his arrival, found his cabins and outbuildings burnt to the ground.

Some time after this, the Indians becoming very troublesome, he deemed it prudent to remove his family from the theatre of strife which waged fiercely along the line of the settlements on the Ohio river, the Indians having allied themselves to the British cause, and under their direction continuing the conflict until after the close of the Revolutionary war. Mr. McMechen removed his family to Red Stone Old Fort, Brownsville, Pa., where they remained for two years.

It was probably in the spring or summer of 1782, after his family had returned to their home on the Ohio river, that Mr. McMechen had several valuable horses stolen by the Indians. Following their trail, he pursued them to the Upper Sandusky, then the headquarters of the principal Indian tribes. He experienced no difficulty in finding his animals, but was unable to gain possession of them. During his stay among them, a friendly Indian chief came to him and told him of the murder of Logan, which had happened in his absence, that the Indians were very much incensed, and that they were determined to wage a general war against the white settlers on the Ohio river, advising him at the same time to leave the Indian quarters and go home. But Mr. McMechen was not inclined to go without his property, and so delayed his departure until the next day, when the same Indian came to him and said: "Me tell you go away once, me not tell you again." Mr. McMechen thought it would be prudent for him to take his leave, and did so. He had not proceeded more than a mile towards his home, when he saw in advance of him a great cloud of dust, which he correctly supposed to be caused by hostile Indians coming in his direction. Hiding his horse in the woods, he turned into an Indian cabin and requested an Indian squaw to conceal him. She did so by directing him to the loft and covering him with deer skins, and different kinds of rubbish. Presently the Indians arrived and commenced searching the cabin for white men. They almost walked over him, but making no discovery passed on to their towns. On his leaving the squaw gave him a quart of cornmeal, on which, mixed with water, he subsisted for the remainder of his journey. He had not progressed more than half a mile from the cabin before he came to the body of a white man who had been killed and scalped by the Indians who had just passed. He then hastened on his journey toward Wheeling, and arrived in safety in about three days.

Mr. McMechen had several sons and daughters, having been thrice married. David McMechen, the eldest son, never came to the west, but became a lawyer of distinction in the city of Baltimore, where he lived and died without marrying. James McMechen, the second son, settled on the left side of the Ohio river, about twenty-eight miles below Wheeling, became the owner of a large body of land, in what is now called Wetzel

county, and the head of a numerous family. William McMechen the third son, at an early age, went to the city of Baltimore, and studied law with his brother David; he also became a distinguished lawyer and was subsequently made judge of the Municipal Court of the city. Most of his family died early, but a number of his descendants are now living in the neighborhood of Wheeling. Benjamin McMechen, the fourth son of the pioneer, and for whom the town of Benwood was named, became the principal heir of his father's estate, of whom more will be said hereafter. There were several daughters, viz: Sidney, Nancy, Sally and Jane.

William McMechen, Sr., died in the year ——. His widow subsequently married Colonel Strickler, of Baltimore, his farm joining the McMechen farm on the north. One monument marks the spot where the three were buried. It stands on the left side of the Baltimore and Ohio railroad, immediately south of McMechen's run.

Dr. McMechen, a brother of William, the pioneer, came to the west, probably about the same time the latter did. He was the first clerk of the Ohio county Court. He was present when the Court was organized at West Liberty, that being then the county seat. The county seat was afterwards removed to Wheeling.

An interesting incident is related of Dr. McMechen. On one occasion he and three other men went out from Fort Henry (Wheeling) to look for cows belonging to the people in the fort. Having gone for some distance up Wheeling creek, the Indians fired on them, and his three companions were immediately killed and scalped. Dr. McMechen having his leg broken, rolled over the bank among the high weeds and was not discovered by the Indians. He remained there until the next morning, when some men were sent out from the fort to search for the lost party. The Doctor heard them talking, but did not discover himself, supposing them to be Indians. The men finding his companions dead and scalped, and concluding that the Doctor had been taken prisoner, returned to the fort. The people in the fort and neighborhood becoming very much alarmed, retreated to Fort Catfish (Little Washington)' about thirty-two miles northeast of Wheeling. The Doctor, as soon as he thought it safe, made his way back to the fort, but found it deserted. Nothing remained for him then but almost certain death, or to try and make his way as best he could to Fort Catfish, which he did successfully, applying herbs to his wounds, and overcoming as may well be supposed, almost insuperable difficulties.

It is stated by De Hass, that Dr. McMechen was at Fort Henry on the morning of Simon Girty's attack, that he had become dissatisfied with the country and had determined to leave on that morning for the east, that a white man and a negro had been sent out to look for his horse, and that the white man being shot by the Indians, the negro made his escape to the fort; shortly after which the attack commenced, first on a reconnoitering party with fearful havoc, and then on the fort itself. The presumption is, therefore, that Mr. McMechen was in the fort during the seige. Shortly after that he returned to the east, settled in the state of Maryland, and became the ancestor of a numerous family. Samuel McMechen, a respected lawyer of Moorefield, Hardy county, West Virginia, was his son, and Samuel A. McMechen, a prosperous merchant, now of Moorefield, his grandson.

This record will be continued in the name of Benjamin McMechen, the fourth son, and principal heir to the lands of William McMechen, the original settler. But before doing so, it will be proper to give some account of the Bogg's family, with whom the McMechen's, including Benjamin, were much intermarried.

WILLIAM BOGGS, SR.

William Boggs, Sr., was also an original pioneer, and one of the earliest in the Panhandle. He was of Irish descent, and took up, by tomahawk right, the body of land immediately north of Boggs' run, (from whom the run derives its name,) afterwards obtaining a patent therefor. His house was located at the foot of a ravine, about half a mile north of the run. Having been himself married twice, and marrying a widow Barr, the second wife, who had children of her own, he became the head of a large family, consisting of three sets of children. One of these, by the first wife, was Lydia, who became the wife of Colonel Moses Shepherd, and afterwards of Colonel Daniel Cruger. Lydia proved to be a most remarkable woman, whose name has become historic, and whose reputation is almost national. Another daughter, who was by the second wife, was Nancy. She became the wife of Benjamin McMechen, and the mother of fourteen children, all of whom grew up to maturity. She died several years before her husband.

Capt. Wm. Boggs shared in all the perils of the times. At the time of Girty's attack on Fort Henry, he was keeper of the public stores in the fort, being temporarily absent, however, hunting up recruits. His daughter, Lydia, was also in the fort at the same time, being then seventeen years of age, and claims, justly as it is thought, to have taken an active part in the powder exploit.

During the border war on the Ohio, William Boggs, jr., a son of Captain Boggs, was taken prisoner by the Indians and remained with them for four years, being at the end of that time restored to his family by treaty; but having become accustomed to the Indian mode of life, he longed to return to them, or perhaps did so. But if so, he could not have remained with them for a long time, as he subsequently married and raised a large family in the western states, one of his descendants being the late William McPherson, a wealthy lawyer of St. Louis, Missouri.

After peace with the Indians had been restored, Captain Boggs, desirous of obtaining a larger quantity of land, sold his property on the Ohio river, and moved to the Scioto river, acquiring a large tract of land, a mile or two south of Pickaway plains. Numerous representatives of the Boggs family may be found on the Scioto river, between Chillicothe and Columbus, one of whom, John Boggs, a grandson of the Captain, and son of John Boggs, sr., is immensely wealthy. Other representatives of the same stock may be found in most of the western states.

It was after the removal of Captain Boggs to the Scioto that Benjamin McMechen married his daughter Nancy—who was an own and only full sister of Elizabeth Boggs, and subsequently Elizabeth Crouse, wife of David Crouse, of the Scioto valley—and half sister of Lydia Boggs, afterwards Mrs. Shepherd and Mrs. Cruger.

BENJAMIN M'MECHEN

Was born at Brownsville, Pa., in the year 1777, the temporary retreat of his father's family before referred to. After the return of the family to the Ohio river, below Wheeling, he continued on the paternal estate until his death, in 1855, dying at the advanced age of seventy-eight years. He became a successful and prosperous farmer, having acquired by inheritance and purchase a very large tract of land amounting at one time to 1,600 acres, in one body, 700 of which were river bottom. He became the father of a large family consisting of fourteen children, six sons and eight daughters, all of whom, as before said, lived to mature age, and twelve of whom married respectably, and became the heads of families. Their names were, Sidney, William, Hiram, David, James, Hanson, Mary, Elizabeth and Jane (twins), Benson, Lydia, Ellen, Sheppard and Sallie.

Sidney married Thos. H. List, a merchant, who became a man of property and influence, and was for many years president of the Commercial Bank of Wheeling. William married Mary Blake, of Marshall county, a lady of Scotch descent. Hiram married Hannah Armstrong, daughter of Rev. William Armstrong, first rector of St. Matthew's Protestant Episcopal Church, Wheeling, and sister of Rev. William Armstrong, jr., his son and successor. David married Mary J. Cummins, of Ohio, and sister of the Drs. Cummins, successful practitioners of medicine, in the city of Wheeling. James Hanson married Elizabeth A. Sehon, daughter of Major John L. Sehon, of Clarksburg, Virginia (now West Virginia), and sister of Rev. E. W. Sehon, D. D., late of the Methodist Episcopal Church South. Mary married Joseph M. Bushfield, of Pittsburgh, Pa., afterwards an active business man of Wheeling. She was twice married, her second husband being Jesse Lazeaur, a gentleman of wealth and respectability, residing near Baltimore, Md. Elizabeth married John R. Morrow, a successful merchant of Wheeling, who has for many years lived in retirement on a part of the paternal estate, near the old homestead. Jane married Benoni S. Good, son of Major John Good, of Ohio county, and brother of Moses C. Good, a lawyer of high standing in the city of Wheeling. Lydia never married, but died a few years after the death of her father. Benson, a young man of promising abilities, was blown up on the steamer Louisiana (of which he was clerk and part owner), at the city of New Orleans, in the year 1849. Ellen married E. Halstead Caldwell, son of Judge Caldwell, of the United States Court, and who became himself judge of the Circuit Court of his own vicinity.

Susan married E. A. Hildreth, a medical practitioner of the city of Wheeling, of considerable distinction. Sheppard married Alcinda C. Cockayne, daughter of Vincent L. Cockayne, a wealthy and prosperous farmer of Marshall county. His father having by deed and will, before and at the time of his death, made a pretty liberal provision for the rest of his children, left to his youngest son (Sheppard) the greater portion of his remaining estate, consisting of all his personal property and about four hundred acres of land, including the old homestead. Sheppard died in 1874, leaving to his widow and two children the most valuable part of his estate, and the remainder to different members of his father's family, the principal part of which was given to James H. McMechen and his children. But, although his intentions were just and benevolent, he unfortunately entailed upon them an unpleasant and vexatious law suit, which is still pending in the courts, his widow having thought proper to contest the will. Sallie, the youngest daughter, married Aaron Kelly, a thrifty farmer, owning a choice body of land in the Short creek settlement, and in the upper end of Ohio county.

Benjamin McMechen, like the children of most of the early settlers, received but a very limited education. He was a man of sound judgment and sterling integrity.

Mr. McMechen was a justice of the peace for Ohio county, under the old *regime*, and continued to act in that capacity after the county of Marshall was struck off from the former county. Under the old constitution (before 1852), the county court was a self-perpetuating body, composed generally of men of wealth and influence. The sheriffalty of the county fell to each magistrate by rotation, according to seniority in office. In this way it came to Mr. Mechen twice. He farmed it, as was usual, to a man who proved dishonest and a defaulter, running away with the funds of the county. This gave him and his securities a great deal of trouble, and involved the bondsmen of the defaulting deputy in heavy losses. When the office fell to him a second time, he declined accepting it, and allowed it to pass on to the next in rotation, thinking that he had seen enough of the sheriffalty for one short life time.

Mr. McMechen, at an early period in his history, united himself to the Methodist Episcopal Church, that being the pioneer church and almost the only one of the day. He lived and died a consistent member of that body. He built a chapel on his place, and, in his will secured it and the adjoining grave yard to the church of his choice. His contributions to the support of the ministry, and other charitable objects, were always liberal, but unostentatious.

REV. JAMES H. M'MECHEN.

It is proposed to continue the record of the McMechen family, in the name of Rev. James H. McMechen, inasmuch as his life was one of a more public character, and therefore, more eventful, and full of incident, than that of any other member of his father's family.

He was born, January 18th, 1813, at the old homestead, and is now (1879) in the sixty-seventh year of his age. He has resided in the city of Wheeling for the last thirty years, and his knowledge of events, connected with the history of his own locality, and of his native state, is very accurate, and extensive. He spent his earlier years on the paternal farm, acquiring a rude mental knowledge of agricultural pursuits, and such a scholastic education as could be had from the Irish schoolmasters of that day. In the summer of 1825 he was sent to school in Wheeling, and in the summer of 1826 attended a select school, taught by Rev. C. Wheeler, a worthy Baptist minister, near the town of Washington, Pennsylvania. In the following summer, of 1827, he went to school to Wm. S. Morgan, at Elizabethtown (now Moundsville, West Virginia), and in the intervening fall and winter seasons of those years, he attended the county schools on his father's place. In September, 1828, he went to Madison college, then a new institution, under Methodist patronage, located at Uniontown, Pennsylvania, Henry B. Bascom being president and Charles Elliott, John H. Fielding and others, professors. This institution did not continue in active operation more than five years, at the end of which time Mr. McMechen took his degree of A. B., receiving at the same time, the first honor in a class of six, all of whom, except himself, are now dead. Hon. Waitman T. Willey, now of Morgantown, graduated at the same institution, the year previous. At the end of its fifth year, owing to jealousies in the M. E. Church against the "Radicals"—so called—or Protestant Methodists, the president and professors being suspected of leaning toward that party, the organization went down and the building passed into other hands.

Immediately after graduating, in 1832, Mr. McMechen entered the ministry of the M. E. Church, and joined the Pittsburgh Conference. He was then in the twentieth year of his age, and was very successful. At the end of the fourth year of his ministry, Mr. McMechen was married to Miss Elizabeth A. Sehon, of Clarksburg, Virginia, he being then stationed at that place. But Mrs. McMechen, feeling unequal to the hardships incident to the life of an itinerant Methodist minister, for the sake of her happiness and his own, he deemed it best that he should resume a more settled relation to the Christian work. Knowing that the Church of England held a kind of maternal relation to the Methodist Church, he concluded to enter the ministry of the Protestant Episcopal Church, in the United States, that church having derived its origin from the Church of England.

The first year of his ministry, in his new relation, was spent in Parkersburg, Virginia, at the end of which he returned to Clarksburg, Virginia.

The residue of his life was devoted chiefly to secular pursuits, but particularly to the cause of education, as being most congenial to his ministerial profession. He resided in Clarksburg until 1847. In 1840, being engaged in conducting a female seminary, he also took an active part in endeavoring to secure to the State of Virginia a system of free popular education; with what success will be seen in another part of this work. In 1847, he removed to the city of Wheeling. Here, also, his life was chiefly secular, but mostly devoted to educational work. Twenty years of his life were spent in the cause of popular education in Wheeling.

While engaged otherwise than in educational pursuits, in the year 1852, under the new constitution of Virginia, Mr. McMechen served for three years as presiding justice of Ohio county; during his term of office, the license question was very much agitated, and Mr. McMechen took part with the public against the saloonists. Although elected for four years, at the end of the third year, he resigned the office of presiding justice for the purpse of resuming the business of education.

In the year 1871, Mr. McMechen was elected by the Board of Regents of the University of West Virginia, to take charge of the preparatory department of that institution, and to the professorship of English literature, in the same. But finding the labor too oppressive for him, at his advanced age, and his family disinclined to leave Wheeling, at the end of the fall term, he resigned and returned to his native place. During an interval of sixteen months afterwards, his time was given chiefly to ministerial work in the Episcopal parishes, and general missionary labors, but at the end of this period, he resumed his position as principal of the Fifth ward (centre) school. Owing to advanced years, declining health, and the pressure of secular duties, he was compelled in 1876, to cease entirely from scholastic duties.

During the time that Mr. McMechen was connected with the public schools, he, with Mr. F. S. Williams, and others, organized the Teachers' Association of the city of Wheeling. The beginning was small; but the association grew, in time, to be a strong and influential agency in the school work, numbering, at the present, about eighty or ninety teachers, that being the entire number employed by the Board of Education. He also assisted in the organization of the State Teachers' Association. He delivered a lecture in connection therewith, on the "Social Position of Teachers," and on "Our Mother Tongue." He was nominated by the meeting at Fairmont, for the State Superintendency, but declined. He also lectured before the Washington County (Pa.) Teachers' Association, on the Bible as a Power in our Public Schools. He also lectured frequently before the Wheeling association. Nor was Mr. McMechen less popular and successful as a contributor, on various subjects, to our local newspaper press.

After separating himself from scholastic work, Mr. McMechen was induced to publish four small works, for the benefit of his youngest son, who had become a mute at four years of age, from an attack of scarlet fever, viz.: "Three Hundred Choice maxims, or Apples of Gold in Pictures of Silver;" "Two Hundred and Fifty Common Sense Proverbs, or Arrows from the Quiver of Truth"—these two works, containing five hundred and fifty maxims, or proverbs, in all, are valuable for the regulation of conduct, both of youth and adults; "Ripe Thoughts on Worthy Subjects" containing the author's mature views of theology and practical religion—the best thoughts of his life; and "Legions of the Ohio Valley, or Thrilling Incidents of Indian Warfare."

Mr. McMechen is the father of twelve children, the youngest of whom is now twenty-five years of age. Two are dead, and ten are still living, six of whom are married. Their names are: Fannie (Campbell), Lee, Mary, Washington (dead), Meade, Sallie (Doddridge), Susan, Louisa (Dyer), Edmund (dead), Benson, Siddie (McLain), Hanson (mute).

THE HUBBARDS.

The founder of the family in America was William Hubbard, who settled in Plymouth, Mass., in 1621. His son, subsequently the Rev. William Hubbard, was nine years of age at that time. The latter was educated at Harvard College and received the degree of A. B. at the age of twenty-one. He became an assistant minister at New Ipswich, and was the author of several historical works. In 1688, he was appointed by Sir Edward Andros, the president of Harvard College and served honorably in that capacity for several years. He died in 1704, at the age of eighty-three. His wife was Margaret Rogers, a daughter of Rev. Nathaniel Rogers, and a great grand daughter of Rev. John Rogers, the martyr. His son John Hubbard was father of Rev. John Hubbard, who graduated at Harvard in 1695. The latter was the father of Dr. John Hubbard, who was also a Colonel and subsequently a General in the militia. He was a well known poet and literateur, and ranked among the celebrities in the literary world. He was the father of Dana Hubbard, who located in Wheeling in 1819. His wife was Asenath Dorman, of whom we enclose an article from the Pittsburgh *Christian Advocate*, written by Rev. Dr. A. C. George, of Wheeling, on the 18th of May, 1878.

Another notable woman was Mrs. Asenath Hubbard, mother of Hon. C. D. Hubbard, Col. H. B. Hubbard and John R. Hubbard, Esq., who departed this life, in the city of Wheeling, April 23d, 1878. "Mother Hubbard" was a rare character, and had an eventful history. Her maiden name was Dorman. She was born in Hamden, Conn., December 9, 1789. She was converted at a quarterly meeting in Cheshire, in 1810. She was married to Dana Hubbard, October 16, 1811, at Hamden. Husband and wife joined the M. E. Church, in New Haven, December 25, 1814.

In March 1815, Mr. Hubbard left Hamden for Pittsburgh, and in May of the same year, Mrs. Hubbard followed him. The journey was a trying and perilous one. She was seven days and nights in passing, by stage, from Philadelphia to Pittsburgh, carrying her boy, Chester, then a babe of six months, on her lap. The whole journey required fifteen days, the distance from New Haven to Philadelphia being made in a sloop. This jaunt by a sailing vessel and by stage across mountains, into the wilderness, was more than a trip across the continent at the present time.

In Pittsburgh, Mr. and Mrs. Hubbard joined the Smithfield Street Church. The family moved to Wheeling in April, 1819, and joined the Fourth Street M. E. Church, the same year.

How marvelous is the record of such a life! It includes three generations and touches a fourth. What changes were witnessed by this venerable woman, in society, in the condition of the country, in the growth of this city, and especially in the increase and power of Methodism. What memories has she carried into eternity! She has entered into rest, and her works do follow her.

In all these years, this devoted woman was a faithful member of the church, and a pillar of strength for Methodism. For the last few months of her life she was quite feeble, and was anxious to obtain her release from the sorrows of earth; but she was patient, sweetly resigned to the divine will, and manifestly perfected in the graces of the Christian character. "She sweetly fell asleep in Jesus."

Dana Hubbard's steam saw mill was the first in the Panhandle. It was situated on the site of the present Hubbard mill. It was erected in 1827, and was attached to a flouring mill erected by George White, about 1817. The latter was destroyed by fire in 1828. The saw mill was removed and the present structure erected in 1837. He died in Wheeling in 1852, at the age of sixty-three. Their family consisted as follows: Chester Dorman Hubbard was born in New Haven county, Connecticut, in 1814. He graduated at the Wesleyan University, Middletown, Connecticut, in 1840. He married Sarah Pallister, in 1842. He has served in the House of Delegates (see list), in the City Council (see table), and as a Member of Congress. Henry B. Hubbard was born in Allegheny county, Pennsylvania, in 1816. He was educated at Wheeling and was a student for near a year at the Wesleyan University. He was married in 1841 to Emma Lewis. He was Lieutenant-Colonel of the First West Virginia Infantry for fourteen months, was wounded at Port Republic, in 1862, and resigned on account of disability. John Rodgers Hubbard was born in Wheeling, in 1825, and was married in 1855, in Indiana, to Lucy Ann Clark. He has served in the City Council and other places of trust. He was the Republican candidate for Congress in 1878, and though carrying Wheeling, and Ohio county by a large majority, was defeated. William Dana Hubbard was born in 1818, died in 1834. Martha Rebecca Hubbard, born in 1829; died in 1832.

THE CALDWELLS

were among the early families in the Pan-Handle. John, the oldest of fourteen children born to James Caldwell, came, while a young man, to this section of Virginia, in 1775. He lived near Wheeling creek, and not far from the Ohio river. He was in Fort Henry at the time of the massacre and fortunately escaped to Brownsville. James Caldwell, the father, removed to the Pan-Handle in 1777, when his youngest child, Joseph, was only six weeks old. He died in 1800 at the age of sixty. We have been enabled to gather only the following names of his children, viz. John, Samuel, James, Aleck and Joseph. The latter served in the war of 1812. He was for many years the president of the Exchange Bank. He married Miss Mary Yarnall, of Winchester, Virginia. She died on the 19th of February, 1819, at the age of thirty-eight. Ten children were born to them, viz: Ann McGill, (died in 1865) who married William Moyston, Alexander H. (died in infancy). William James (died in infancy,) Caroline M., who married Col. John Wilson, (deceased), Mary Yarnall, who married Ebenezer Merriett, M. D. (died in 1864, sixty-nine years of age,) A. B., who married Matilda Newman, James Y., (died in 1863, forty-eight years of age), who married Mary Newman; Phebe Yarnall (died in 1846, twenty-nine years of age), who married Thomas Pierce, (deceased;) Elizabeth, (died in infancy), Henry (died in infancy). He married in 1820, Miss Catharine Thompson, daughter of Judge Thompson, of Pittsburgh. She died in 1855, at the age of fifty-three. The issue of this union was George, (died in infancy;) Francis, (died in infancy;) Elizabeth, (died in infancy;) George E. who marrid Kate Bushfield; Joseph, died in 1864, (thirty-seven years of age;) Henry C., who married Alice Hughes; Alexander J., who married Mrs. Mary Stephens; Pierce, (died in infancy) and Sobieski Brady. Mr. Caldwell died in 1864, nearly eighty-seven years of age.

L. G. HUGHES

was born at the mouth of Short creek in 1805. His parents were Daniel and Nancy (Litten) Hughes. The former settled in the Pan-Handle about the close of the last century. He died when our subject was only a small child. All that is known of him is that his memory is cherished to-day as that of a brave and energetic pioneer. Our subject was a cabinet-maker by trade, and labored at that avocation for several years. He subsequently started a sash factory in a cotton mill which was situated on the site of the Baltimore and Ohio railroad depot. Not having sufficient power, he removed his factory to Joseph Graham's machine shops. After remaining there a short time, he removed the establishment to Dana Hubbard's saw-mill. He formed a partnership with Mr. Hubbard, and subsequently disposed of his interest to Mr. Hubbard. He purchased the Cargill lumber yard and was extensively engaged in that trade. In 1837 and 1838, in company with Jacob Bier, he erected a saw mill in what is now the Eighth ward. The mill is now owned by Captain Andrew Wilson. He was a justice of the peace for several years under the old law. He has been a notary public for twenty-six years, and for many years also a successful real estate agent. Mr. Hughes was married to Susannah Barbery, second daughter of the second wife of Major Philip Bier, a resident of Wheeling, by whom he has had a family of five children—two sons and three daughters—the second of the latter being now deceased, while the remaining two are Mrs. T. H. Smyth and Mrs. Henry C. Caldwell, with the latter of whom, the subject of our sketch, at present resides at 2340 Chapline street.

J. L. HOLLIDAY.

A son of J. A. Holliday, was born in Monroe county, Ohio, in 1845. The family removed to Wheeling in the same year. The latter was in the lumber business for several years. He had a planing mill and lumber yard destroyed by fire in 1861.

The present Holliday planing mill was erected by J. A., and J. L. Holliday, in 1870. Twenty men were employed in 1870, and forty to seventy are employed in 1878. Four wagons are used, and an extensive business in all branches of the trade is managed. Mr. J. L. Holliday became widely known on account of the India rubber marble hearth stones which he exhibited in various parts of the country.

JOHN H. PIPES, M. D.

He was born in Greene county, Pennsylvania, in 1839. His parents were Washington and Cynthia Ann Pipes, *nee* Clark. The former was of Irish and the other of French extraction. The great grandfather of our subject located in Greene county, about the close of the revolution. Washington Pipes was a blacksmith and farmer. He died in 1878 at the age of sixty-four. His wife died in 1874, about sixty years of age. Dr. Pipes was educated at an academy at Carmichael, Pennsylvania, and the Waynesburg college, Pennsylsylvania. He read medicine at Cameron, Virginia, having come there in 1860 for that purpose. He graduated in themedical department of the the University of Wooster, in 1866, and from Bellevue Medical College, New York City, in 1873. He practiced at Cameron, West Virginia, from 1865 to 1873. In the latter year he removed to Wheeling, and has from that date been in the active work of the profession. While a resident of Cameron he was the examining surgeon of pensions. He was married in 1861 to Miss Jane McNay, daughter of John and Jane McNay *nee* Reed, of Greene county, Pennsylvania.

SAMUEL A. MUHLEMAN, M. D.,

(No. 2605 Chapline street,) was born near Hannibal, Monroe county, Ohio, in 1847. His father, Albert Muhleman, a native of the Canton of Berne, Switzerland, emigrated to Ohio, in 1836. Our subject read medicine with Dr. L. C. Carrier, a homœopathic physician of St Louis, Missouri. He attended two terms of the Cleveland Homœopathic Medical College, one at the Missouri Homœopathic College of St. Louis, and graduated in March, 1875, from the Homœopathic Medical College of the city of New York. After a vacation of four months at Clarington, Ohio, he removed to Wheeling. He is the examining physician of the Independent Order of Workingmen.

HON. ANDREW WILSON.

His grandfather, Alexander Wilson, migrated to Brooke county, Virginia, a short time before the revolution. He died in 1813, at the age of ninety-two. Of four children, Samuel was the youngest; he died in 1839, at the age of seventy-five. His wife was Mary Patterson, a daughter of James Patterson. Their children were, viz: Samuel, John, Jane, Andrew, Eliza, and Narcissa; only three are yet living. Andrew Wilson was born in the old Wilson homestead, near Waugh's mill, three miles from Wellsburgh, in 1810. His advantages for obtaining an education were extremely limited. He remained at home till of age and assisted in supporting the family. He served an apprenticeship as a mill-wright, but never labored at the trade. The river had charms for him and from that time till 1837 he was engaged in flatboating and steamboating. He then removed to Jackson county, Virginia, and for some years was associated with the lumber and flouring mill business. We next find him in Wheeling engaged in the manufacture of lumber and the building of steamboats. He continued in this avocation till the close of the late war. He was in the convention which organized the State of West Virginia. He has served several terms in the State Senate and House of Delegates, and has been elected (October, 1878,) for another term to the latter body. He is the president of the Citizens' Railway company, president of an insurance company, and is intimately connected with the commercial and manufacturing interests of this section. He was married in 1838 to Mary Patterson, a daughter of Robert Patterson. She died in 1843. Their only child, Robert Patterson Wilson, was born in 1839. He died in 1877. He was a major in the regular army, and in command of Fort Richardson, Texas, at the time of his decease. His death was occasioned by the bursting of a gun. Our subject was again married in 1854 to Elizabeth Updegraff, daughter of Israel and Mary Ann Updegraff. Of their six children, four are living.

STEPHEN CLARK

is a son of John and Hannah Clark, was born in Yorkshire, England, in 1814. In 1830, the parents and our subject migrated to America and located in Wheeling. For the seasons of thirteen years he had charge of the pork houses of Echols and other parties. He was a stone-cutter by trade, and for many years had almost the entire section of the city for his exclusive territory. While the stone work was being prepared for the suspension bridge, he labored at his trade, and subsequently had charge of from seventy-five to one hundred workmen, who quarried the stone and prepared it for the abutments and piers. Since 1871, he has been managing a grocery store in South Wheeling. He was married in 1833 to Narcissa Evans, daughter of William and Dorcas Evans, of this city. Their children are four living and four deceased. Stephen, jr., died near Lynchburg, Virginia, in 1863, while a member of company D, Collins' battery.

WILLIAM PAXTON

is the senior member of an influential and popular pioneer family in West Virginia, a native of county Down, Ireland, coming to America with his parents in 1801, when he was only seven years of age. The good ship bearing him over was the "Stafford," which in those days depending solely upon sails, took ten weeks to accomplish the trip, during which the whole family, father, mother and three children, were very sick, the former of whom passing out of life ere the shore was reached. They made for Little Washington, Pennsylvania, where the subject of our sketch had an uncle residing—the Rev. Thomas Ledlie Birch, of the Presbyterian Church—with whom most of them resided, on and off, for several years. William first espoused the dry goods business, engaging with Mr. Alexander Reed, of Washington, whom he served faithfully for eight or ten years, a brief portion of the time sharing an interest in a a branch store at Waynesburg, Pa. He subsequently visited the "Iron City," filling a clerkship in the Bank of Pittsburgh for two years, during the war of 1812, and left there in 1814 to link his future with the city of Wheeling. Arriving here he joined in opening a small dry goods store on Main street, under the firm style of Paxton & Woods, and after a few years took a recess to recuperate his declining health. He next returned to his old quarters, and established the first wholesale dry goods house in the city, at the southwest corner of Main and Tenth streets. Here he continued successfully for three or four years and again found it imperative, for his health's sake, to retire. But in November, 1839, anxious to establish his son in business, bought out Moore & Carr, and opened up a wholesale grocery house, taking in his son James as a partner, this time locating on Twelfth, between Main and Market. The business prospering several years, he withdrew in favor of his son, who took in Mr. E. W. Paxton, his cousin, now a resident of Brooke county. These gentlemen, however, like the subject of our sketch, also subsequently retired, and still lives in private life. Mr. W. Paxton has ever been a warm promoter of Wheeling's prosperity—served many years, at an early period of his residence, in the council, and as a director in what is now known as the First National Bank of West Virginia. As one of the earliest merchants in the Nail City, he is probably the oldest still living amongst us, and though upwards of eighty-five years of age, may be met with almost daily on our streets, comparatively actively moving around. He was married in 1817, to Hannah, oldest daughter of the late Mr. Elisha Whitehead, of New Jersey, but who for some time resided in Wheeling. By her he had a family of seven children, of whom, however, only two sons and one daughter still live, while Mrs. Paxton succumbed to death in 1828. The subject of our sketch was married a second time, about 1831, to Eliza, daughter of Mr. C. Ivers, of New York, and niece to Mr. Burgh, of New York, a gentleman universally popular and esteemed for the lively interest he has manifested in that noble institution organized for the prevention of cruelty to animals. Mr. Paxton's only daughter is married to Capt. Heiskell, who served in the late war, and is at present also a resident in Wheeling, on Chapline street.

THE TODD FAMILY.

Few names have become more popular through this and adjoining states than that of Todd, particularly in the profession of the faculty. The original members of the family to which we are about to refer were decidedly Scotch-Irish. Our earliest information is of Andrew Todd, born in the old country, 1718,

who was married when he arrived with his wife in America, probably in the neighborhood of 1740. Of his family we have no reliable details beyond the succession from his son John Todd, born April 18th, 1756, in Washington county, New Jersey, where he was a prominent farmer, and married one Jane Caldwell, born July 19th, 1761, in the same county. In their advanced years they removed to Beaver county, Pennsylvania, where he died in 1829, at the age of seventy-four years, and his wife passed out of this life, September 7th, 1831. They had issues, three daughters and seven sons, as follows: Martha, born February 27th, 1780, who married a Professor Clark, of Irish birth, and a man of educational eminence, residing in Washington county, New York, but the precise date of her death is not known. Martin Luther Todd was next, born Sept. 29th, 1782, who became an M. D., and married Margaret, a daughter of Andrew Wood. He died in 1876, aged eighty-four years, his wife departing this life November 14th, 1864. Stephen Todd was the second son, born July 31st, 1784, after which we have no reliable record of him, though it is known that he was married. Betsy Todd was born March 25th, 1787, and was married first to a Mr. Quackenbush, a merchant of Albany, New York, and secondly to Mr. P. C. Dodd, a popular lawyer, but we have not the date of her death. John Todd was born September 28th, 1789, and also became a member of the faculty, married a Miss Kerr, of Washington county, Pennsylvania, and died September, 1816. Samuel P. Todd was born in February, 1792, became a physician, married Susan, a daughter of Mr. Aaron Kerr, and they resided at Monongahela City, but we have no particulars as to his death. James C. Todd, also a physician, was born August 25th, 1795, married a lady by the name of Johns, of Preston county, West Virginia, and is still living in Carroll county, Indiana. Archibald S. Todd was born April 10th, 1798, also became a member of the faculty, and February 19th, 1828, first married Mary Ann, youngest daughter of Andrew Wood, a prominent pioneer, but she died October 24th, 1829, leaving no family. Her mother's first husband was Samuel McCulloch, the hero of "McCulloch's leap." The Doctor got married a second time in June, 1831, to Mary Ellen, youngest daughter of the late W. N. Jarrett, of Morgantown, West Virginia, by whom he had quite a family; as we shall give an extended notice of hereafter—both are still living. Hiram Todd, was born January 28th, 1800, but died at the age of seventeen years. Jane Todd, born December 26th, 1803, died in infancy.

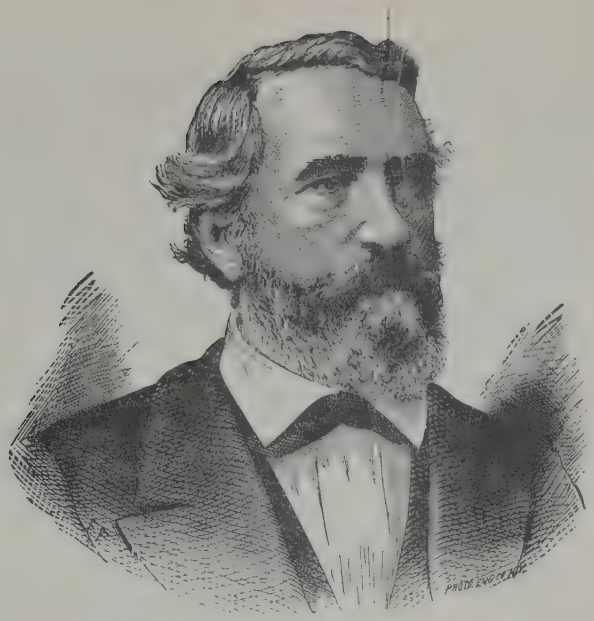
We now propose to review the family of Dr. Archibald S. Todd, at present writing one of the oldest residents in Wheeling, who has almost immortalized the family name by the discovery of that famous household medicine so popular as Todd's Liver Pills, probabably the finest family carthartic ever submitted to the public. The Doctor took his early education in private schools in Washington county, New York, and early applied himself to the study of medicine, being considerably read when he came to Wheeling in 1819, to sojourn with his brother Dr. Martin L. Todd, who had then been in practice here some twelve years, and remained so, altogether, over thirty years. Dr. A. S. Todd, the chief subject of our sketch, continued reading and assisting in the practice of medicine with his brother, in Wheeling, for five years, when he visited Transylvania University, Lexington, Kentucky, to complete his studies, and there secured a membership in 1826. He afterwards returned to Wheeling, continued with his brother in the practice of medicine, and subsequently marrying his brother's wife's sister. Dr. Martin L. Todd resigned the entire practice to him, which he continued thereafter so long as his strength permitted. His famous carthartic pills established themselves a reputation nearly half a century ago. The Doctor has always been a popular citizen, served in several local public offices, and ever exhibited a warm interest in our city's prosperity. As we have already stated, by his second marriage he had quite a family. His first child was Caroline Louisa, born April 12th, 1832, who was married March 1st, 1853, to Dr. J. C. Hupp, of this city—see biography elsewhere. The second child was Leonidas P., born May 27th, 1834, and died in infancy. Amanda Virginia, born July 23rd, 1835, died in 1855. Martin Luther Todd, born January 9th, 1840, became a divine in the Presbyterian church, and married a daughter of Dr. Shepherd, of Lexington, Kentucky, but died August 14th, 1870. Mary Ellen was born August 15th, 1844, and October 17th, 1867, married Dr. Thomas Lunsford, of Wheeling, whose biography appears elsewhere, and Ann Augusta, born July 12th, 1848, died December 1868, aged twenty years.

GOVERNOR HENRY MASON MATHEWS

is a native of Greenbrier county, West Virginia, being a descendent from, and associated with, a family distinguished by military prestige. Though we are not in possession of a complete family record, yet we have the following facts from most complete data: So early as 1681 we find Thomas Mathews, a native of Wales, a naval officer in the British service, who so highly distinguished himself at Cape Passaro, under Admiral Byng, in 1718, and in other campaigns, that he obtained the rank of admiral of the blue, but died in 1751. His son or brother (it is not exactly clear), Captain John Mathews, emigrated to America in 1730, where he settled in Augusta county, and with an issue of eight sons founded the family in this country. One of the latter, born in 1739, became Captain George Mathews, and in that rank also distinguished himself in command of a company of United States regulars at the battle of Point Pleasant, that resulted in the defeat of the Indians, during the revolutionary war. At the expiration of his service he was elected, two terms—in 1780 and 1794—to the governorship of Georgia, but died in 1812. His nephew, Joseph Mathews, grandfather to our subject, was also of Greenbriar county (originally comprised in Augusta county), and was a gentleman highly esteemed in that community, wherein he held important local offices of trust for many years. From him descended Mason Mathews, father of the present governor of West Virginia, who, in addition to being elected to numerous minor township and county offices, also represented the latter for many years in the legislature; his many superior talents and acknowledged sterling worth, in social as well as in public life, retaining for him universal respect and esteem down to his death, one year ago, at the advanced age of seventy-four years. Nor was the name of the family of our subject's mother, as retained by her to her nuptials, without a military distinction. Her maiden name was Eliza S., eldest daughter of Thomas B. Reynolds, a prominent and influential merchant and farmer of Greenbriar county. Her brother, who was a graduate of West Point, became General A. W. Reynolds, of the United States army, prior to the late war, but upon its declaration he resigned his commission to join the southern army, with which he saw three years of active service. At the close of hostilities in America, he was offered a command in the service of the Khedive of Egypt, which he accepted, holding a high rank in that army when he was recently called by death from this transitory sphere of worldliness. Governor Henry Mason Mathews, our present subject, was born in 1834 and prepared for college at the Lewisburg Academy, chiefly under the charge of the Rev. P. M. Custer, a relative of the late General Custer, and a Presbyterian minister of considerable eminence. From there he entered the University of Virginia, where he perfected in the various studies entitling him to the degrees of "B. A." and "M. A." He also studied law there, and perfected in the famous law school of the Hon. John W. Brockenbrough, at Lexington, Virginia, subsequently commencing the practice of law in his native county in the fall of 1857. Soon afterwards, he was tendered a Professorship in Allegheny college, which he accepted under the expressed condition of also being permitted to conduct his legal practice in the courts—the deparment assigned to his charge comprising instruction in history, modern languages and literature. During the late war he held a commission as Major of Artillery for three years in the Confederate service, and at the close of the war was elected to the Senate by a very large vote, but was unable to take his seat in consequence of his inability to take the test oath. In 1871 he was elected a member of the constitutional convention that framed the present constitution of the state. In 1872 he was elected attorney general, and held his office one term. In 1876 he was nominated by the Democratic party for Governor of West Virginia, and elected to that (his present) office by a majority of 15,000 votes—unquestionably the largest majority ever hitherto given in the state. The Governor was married in November of 1857, to Lucy, daughter of judge Joseph L. Fry, of Wheeling, (one of the most able, learned and popular judges associated with the circuit), and by her he has issue, one son and one daughter. We may add, of Mrs. Mathews' family, that Joshua Fry was professor of William and Mary college, and further colonel of the 1st infantry regiment that served in Braddock's war, of which General Washington was Lieutenant Colonel, and he was also commissioned to treat with the Indians.

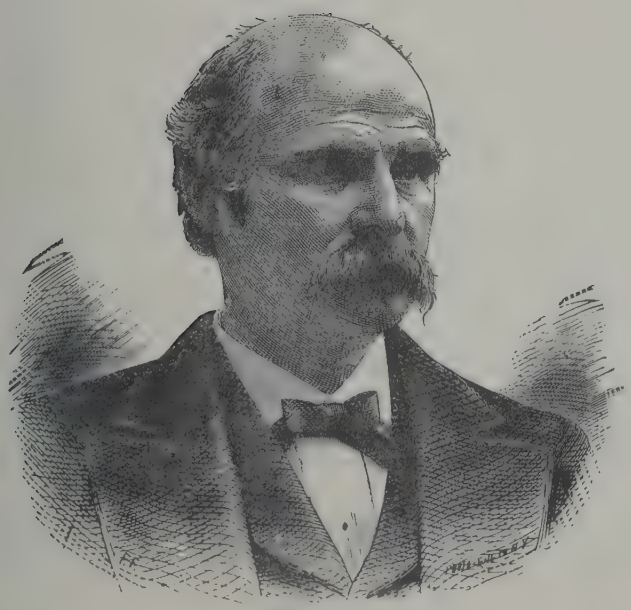
HON. HENRY M. MATHEWS,

Governor of West Virginia.



HON. S. BRADY,

Secretary of State.



HON. ROBERT WHITE,

Attorney General

HON. JOSEPH S. MILLER,

Auditor of State.

SOBIESKI BRADY,

the present Secretary of State for West Virginia, is a native of Pennsylvania, and was born in 1816. He is a son of the late Rev. Joseph Brady, at one time a popular and distinguished divine in the Presbyterian Church. The surname of our subject, however, happening to be included in a category—once designated by an eminent English author as being "distinguished as manifold and venerable as popular"—it would be superfluous to enter into a tedious geneology in view to establish the family record other than alike associated in public and private life with members of sterling worth. At a very early age it was Mr. Brady's misfortune to be deprived of paternal care and guidance; hence his course of life and subsequent success may be wholly ascribed to his own superior talents and better discretion, or, in other words, the worthy type of a self-made and influential member of society. With only the advantage of a plain education, so early as 1832 he received the appointment of teller in the Carlisle Bank, Pennsylvania, and in 1835 became corresponding clerk in the Farmers' and Mechanics' Bank, Philadelphia. In these capacities he thus early showed considerable ability as a financier, and by the time he arrived at his majority—to-wit, in 1837—we find him officiating as cashier in the old Merchants' & Mechanics' Bank at Wheeling, in which eastern capitalists were then very largely interested, and his appointment by them was very cordially promoted with the highest compliments of the late Chief Justice Gibson, Judge Reed, Judge Watts, and many other influential gentlemen. That position he filled successfully for many years, and has remained in Wheeling ever since. Upon the latter relinquishing business and being succeeded by the Merchants' National Bank, at Wheeling, Mr. Brady resigned his position, and for a time indulged the quiet of a retired life to the close of 1875. On the 31st of January, in the succeeding year, however, he received the appointment, at the hands of Governor Jacob, of successor to the Hon. John S. Burdett, then state treasurer, which he retained efficiently till his appointment, at the hands of Governor Mathews, to his present important office, in March, 1877.

Nor should we overlook the active interest Mr. Brady has ever taken, and the valuable services freely accorded, for Wheeling's local prosperity. For nearly a quarter of a century has he served the city as councilman or mayor, during which term, in proof of the high regard in which he was held by those best capable of measuring his services, the following resolution passed by the city council, 31st January, 1850, will best evidence: "Resolved that a committee of five be appointed by council, to present to S. Brady, Esq., a silver pitcher, with suitable inscriptions, as a testimonial of the consideration which the council place upon eleven years consecutive and gratuitous service as councilman and mayor of the city." The souvenir was, indeed, a massive and handsome one, which we need hardly add is still treasured highly in the secretary's family.

The secretary is exceedingly close in his application to the important duties of his office, of retiring disposition, yet withal, most courteous and gentlemanly to approach, backed with a rare complement of executive intelligence. He was married in August, 1838, to Mary E. S., daughter of the Hon. Alexander Caldwell, (Judge of the District Court of the United States,) and sister to the late Hon. E. H Caldwell, predecessor of Judge Melvin, at present on the bench. They have a family of nine children living, and have lost six. And in this relation we may passingly refer to the exceptional fact, their present residence being the family abode of the Hon. A. Caldwell for many years. Mrs. Brady and her family alike date their nativity from beneath the same roof, beneath which also clusters innumerable other associations entitling it to the burthen of that popular and famous ballad—"Dear Old Home."

ROBERT WHITE,

the present attorney general for the state of West Virginia, is a native of Romney, Hampshire county, in this state. His great-grandfather, Robert White, was a surgeon in the British navy for a number of years, but adopting America as his home, in a very early day settled in Virginia. In his family were two sons, Robert (grandfather of our subject) and Alexander. The former of them became judge of the general court of Virginia, and retained a judgeship in this state for some forty years anterior to his death, while his brother, Alexander, was returned member from Winchester district, Va., to the first American Congress. John Baker White, son to Judge Robert White, and father to the present attorney general, was clerk of the county and circuit courts of Hampshire for over fifty years, and died in 1862. His mother's maiden name was Streit, daughter of the Rev. Christian Streit, a native of Pennsylvania, a very able and prominent minister in the Lutheran Church, but she died in 1868. Having received a plain education, our subject first studied at the famous law school of Judge John W. Brockenbrough, of Lexington, and in the spring of 1854 commenced practice at Romney. In 1861 he entered the Confederate service as a captain, and served through the war in various capacities, retiring with the rank of colonel. He returned to Romney and entered into a law partnership with ex-Governor Jacob, remaining therein until the latter was elected to office, in 1870–71. Our subject then continued the practice of law down to 1876, when he was elected to his present important and responsible office of state attorney general, and in 1877 he took up his abode in Wheeling. Mr. White has also received the degree of grand master in Masonry. He was married in 1859, to Ellen E., daughter of James C. Vaas, an influential bank officer in the city of Richmond, Va. Mrs. White's mother's family are connected with that of old Chief Justice Marshall, so long and eminently popular in his association with the bench, and also distantly related to the family of the late General Lee. Her grandfather, on her father's side, was also a wealthy merchant in Fredericksburg, Va. Our subject is the father of an interesting family of three children—one son and two daughters—and his residence in the city is No. 7, Thirteenth street, with official apartments in the State Capitol and private law offices on Chapline street.

JOSEPH SAMUEL MILLER,

State Auditor of West Virginia, is a native of Cabell county, in this state, and was born in 1848. His family originally hailed from Germany, his grandfather making a permanent settlement in the valley of Virginia, in the latter part of the last century. His mother, whose maiden name was Gardner, was a native of Boston, the daughter of Joseph Gardner, an experienced sea captain in the merchant service, while his father's grandfather, on his mother's side, was Colonel Clendenin, who held the command of a fort at Charleston about 1795. Our subject, Auditor J. S. Miller, having taken a plain education, entered Beach Grove Academy, Ashland, Kentucky, where he perfected his studies. His first position in public life was to fill the clerkship of the Circuit Court, in Cabell county, in 1869, which office he retained until January, 1873. In the fall of 1872 he was further elected clerk of the County Court, and succeeded to the duties the following year. That office he continued to hold until 1875, also being a councilman for the town of Barboursville, Cabell county, from 1873 to 1874. He was further elected to the clerkship of the Senate in 1872, serving that august body down to 1876. His executive ability and uniform adaptability to the office being now fully established, he was next nominated and elected to his present important office, which he is characterized for filling with marked ability and very general satisfaction. Mr. Miller was married in 1875, to Florence I., daughter of Hy. K. Tice, Esq., merchant and manufacturer, of Hagerstown, Maryland, by whom he has an interesting family of two children; his residence in the city being on Fifteenth street.

THOMAS WEST,

West Virginia's state treasurer, is a native of Monongalia county, West Virginia, and was born in 1830. He is a son of Nathaniel West, also of this state, though the earliest members of the family, who came from England, first settled in Maryland. His mother was the daughter of Captain S. Everly, who performed distinguished service in Clark's campaign against the Indians. Thomas West took a plain academic course of education at Smithfield, Pennsylvania, and his earlier associations in the way of business comprised merchandising and agricultural pursuits. He was, however, subsequently appointed under Buchanan's administration as rail road mail agent, which position he filled with success for some time. In 1870, however, he was elected to the Legislature, from Harrison county, that constituency also re-electing him for two terms subsequently. In 1871 he became a candidate for state treasurer and was elected by a flattering majority. Mr. West was married in 1869, to Carrie West, daughter of A. B. West, Esq., of Harrison county and still retains the old farmstead succeeded to by his father, in Harrison county, in 1840. He has also a city residence on the island and retains official apartments at the state capitol, where his important duties share his presence almost permanently.

THE HON. ANDREW JAMES SWEENEY,

the present mayor of Wheeling, is the oldest son of Thomas Sweeney, once of Pittsburgh, but now resident on the Island, and was born in 1827. The old gentleman was a native of Ireland, and was born in 1806, coming to America in his infancy, with his parents. He learned the business of a moulder, in Pittsburgh, and came to Wheeling in 1830, where he bought out the Wheeling manufacturing company's business, between Main street and the river, in the north end. Mr. Thos. Sweeney was then very extensively engaged in iron works, also being interested in works at Pittsburgh. His son Andrew, our present subject, also joined with his father and others in the Wheeling enterprise, so early as 1848, and upon his father's retirement from business, in 1875, he shouldered the enterprise, subsequently taking in his son, John Sweeney, as a partner—hence the firm of A. J. Sweeney & Son. The main business is the manufacture rolling mill, steamboat and general machinery, as also the far-famed Superior mower and reaper. They have employed as many as 300 hands, but latterly not near so many. The father of our subject, Thomas Sweeney, was first married in 1826, to Rosanna Matthews, of Pittsburgh, who died in 1844—leaving three sons and a daughter. He was married a second time in 1845 to Jane B. McFerran, of this city, daughter of John McFerran, a popular attorney, but she died in 1871–2, leaving two sons and one daughter. The first three sons were Andrew, the present Capt. T. C. Sweeney, of the "Corona," and Robert H. Sweeney of No. 32 Eleventh street—one daughter became Mrs. N. F. McNaughton. By his second wife, Thomas, died in 1873–4; John F. is still living in Washington, Pa.; and a daughter became Mrs. Thomas Fleming, of Fairmont, West Virginia. Our subject first married Mary R. Moore, daughter of Mr. John Moore, of this city, but she died in 1860, leaving two sons and two daughters, both of whom are still living. His second wife, Maria E. Hanna, of Washington, Pa., was a daughter of the Rev. Thomas Hanna, and by her he had four sons and two daughters. One of the sons, John M., is his partner, at present, in the business above referred to, and a mechanic of exceptional skill, the other son holds the office of clerk on the steamer "Corona." The Hon. Andrew J. Sweeney is probably one of the most popular men the city of Wheeling has ever been possessed of, if we may judge from the popular votes bestowed upon him in public life. He was chosen the member from this state in the Centennial commission—was a commissioner in a like body to Vienna in 1873, and selected as one of twenty United States commissioners to the Paris Exhibition. He first held the position of mayor to fill the unexpired term of the late James Paull, in 1855, and afterwards elected in 1861–2–5–6 and '67—also in 1875–7 and '79—in all, nine times filling the chief city office.

LEWIS S. JORDAN,

Prosecuting Attorney for Ohio county, born in 1839, is the youngest son of William Jordan, a native of the state of Ohio, and a grandson of a Revolutionary war veteran, by the same family name. His mother's maiden name was Baguely, a sister of the late Dr. David Baguely, of Wheeling; who also once, while this state was simply named Virginia, held the colonelcy in the regular infantry. Our subject, Lewis S. Jordan, perfected in his educational studies at the classical academy of Prof. H. M. Harding, then of this city, and read law with the Hon. Nathaniel Richardson, son of Prof. R. Richardson, of Bethany College, at the time practicing at the bar in this city. Our subject was admitted to practice here, but went to St. Louis, and remained to the spring of 1866, when he returned and entered into practice here. In 1875 he was elected to the Legislature, and served one term, when he was next elected prosecuting attorney. He married in 1865, Emma J., daughter of Jacob Arndt, manufacturer, and by her had a family of three children—two of whom are living.

CHARLES H. DEITERS,

the present clerk to the commissioners of Ohio county, is a native of West Virginia, and was born in 1835. He is of French descent, and a brief sketch of his family will be found, probably as interesting as any chapter in our work. His father, Anthony Deiters, a subject of Alsaise and Loraine, at that time under the French, and by profession an attorney, came to America as early as 1827. Anterior to that, however, his brother had arrived here with General Lafayette, under whom he held a commission as captain, and sacrificed his life while in the command of his company on Braddock field. Anthony, however, our subject's father, also early espoused military life under the famous Napoleon Bonaparte, whom he served gallantly for seven years. He was a member of the "Old Guard" under Marshal Ney, crossed the Alps and the Pyrennés, was all through Napoleon's protracted campaign, engaged at Moscow, Leipsic, Borodino, Australitz, &c., closing at the ever memorable battle of Waterloo. He was wounded nine times—three times at Leipsic, twice at Australitz and four times at Waterloo—some of the casualties being of a very serious character, while the hardships and privations of the campaign were almost equally unendurable. Yet his life was spared and he still lives at the round old age of ninety-two years, a remarkably fine-built man of one hundred and seventy-four pounds weight, in the best of health, though naturally somewhat shook in limbs from past hardships and injuries. His father lived to the age of ninety-nine years, his grandmother to one hundred and one years, and his grandfather was accidentally killed in his one hundred and tenth year. He is to-day the oldest living Free Mason in the United States—was made a member when that order was so suspiciously looked upon that its lodges were held in secret under ground—and has ever retained the deepest interest in it. In fact, he can, and has, established unqualified proofs of a lineal family descent in that order during the past four hundred and fifty years. The old gentleman carries an ancient calendar watch that has been handed down in the family to each succeeding grandson for the past three hundred and eighty years, and still retains his old military uniform, gun and sword, as carried by him through his eventful military life.

Our subject's mother, Mrs. A. Deiters, also lives to comfort the worthy old gentleman in his declining years, though she is now in her 76th year and also a member of a family remarkable for its longevity. She is a Dane, by birth, removed into France while yet very young, and there became wife to our subject's father. Her father received the appointment of clerk to the king—a life-long position—which he still holds at 98 years of age, with his estimable and venerable better half, at the age of 96, still spared to him. Our subject's parents, who have raised a family of six sons and six daughters, are at present residing on the Island, happy and comfortable, being cared for in the most worthy and liberal manner by our subject, whom we need hardly add, is—as he needs be—exceedingly proud of so rare and distinguished an ancestry. After the arrival of Mr. Anthony Deiters at Wheeling, his scholarly attainments best fitted him to espouse the calling of a clerk, and in such capacity he engaged at the old Cunningham chair factory, afterwards going to Mr. G. Mendel's, and remained in the service of the Mendels alone for upwards of thirty-five years, only retiring from active life some two years ago. Mr. Charles Deiters, our subject, was educated at, and graduated from, the Lindsley Institute, for a civil engineer, but subsequently preferred the calling of a book-keeper, in which he soon established himself an expert. His first engagement was in J. B. Marsh's dry goods store, and he subsequently filled many other positions of trust in commercial houses down to 1872, when he entered in a public office. He was first appointed to fill the vacancy of Chas. B. Cecil, deceased, and each two years, to the present, has been re-elected to his present important office of trust. He represented the Third Ward of the city in Council, in 1877–8, and was re-elected in 1879, still serving in that capacity. He is a leading Odd Fellow in this community and has taken thirteen degrees in Free Masonry, being at present junior warden of Wheeling Lodge, No. 5, A. F. & A. M. Also was the grand representative to the grand lodge of the I. O. O. F., in 1876, and fills the capacity of grand secretary to the grand lodge of the Knights of Honor; and he further fills the secretaryship of the Nail City Building Association, the Nail City Building and Loan Association and the Elm Grove Town Hall Association. He was married in 1859 to Indiana, daughter of Henry Fulton, a native of the North of Ireland, who first located in Johnstown, Pa., in 1809. They have a family of two sons and three daughters, and reside near Elm Grove, in one of the neatest country residences in the county.

JOHN W. SCHULTZE,

Is a native of Belmont county, Ohio, and was born on the 27th of January, 1836. His father was the late August Carl Frederick Schultze, of Hanover; born 1788 and died in Wheeling, 1870—having come to America in 1833. At the age of ten years, John W. Schultze commenced to learn the manufacture of vinegar and cider with his father, who in 1839 opened such

a factory in Ritchietown. He continued in this business till 1856, when he was appointed deputy sergeant for Ritchietown, under his brother Henry. He continued in that office till 1861, when he was elected sergeant. But being brim full of patriotism, in the latter year he volunteered in the First Virginia infantry on three months service. Returning home he was again elected sergeant in 1862, and from 1863 to 1867 he was constable for the district. During the rebellion he also acted as enrolling officer for the Tenth sub-district. In 1867 he was elected alderman for the town of South Wheeling, and the following October elected justice of the peace. He held his aldermanship till Ritchietown was annexed to Wheeling in 1870, but his office of Justice does not expire till January 1st, 1881. He was a county commissioner from 1872 to 1876, and re-elected last October (1878) for two years more. He was further elected, last November (1878) grand chancellor of the grand lodge of Knights of Pythias of West Virginia—has been a notary public for many years, and a prominent supporter of the J. W. Schultze Boat Club, which has been named, out of compliment, after him. He was married February 28th, 1864, to Ann M., oldest daughter of Frank Kappler, of Pittsburgh, by whom he has a family of six boys and two girls. For over a score of years has 'Squire Schultze been one of the most popular men and indispensable public officers in Wheeling.

MRS. J. P. TROLL,

milliner and dealer in notions, 2226 Market street, is the eldest daughter of Edward Plankey, a veteran in the Mexican war and captain of the Second Virginia Infantry during the late war. She was born in 1851, at Wheeling, and was married last year (1878) to J. P. Troll, clerk to J. L. Rice, merchant tailor and dealer in gents' furnishing goods, on Twelfth street. She took her early experience in the business with Miss Attie Shankland, at Barnesville, Ohio, subsequently engaging with T. T. Sorgler, F. C. Myers, and Speyer Bros., on Main street, and opened her present neat store in 1877. She is an accomplished lady in her business and enjoys a most desirable city trade beside a fair share of support from country patrons.

SAMUEL B. M'COLLOCH.

Clerk of the Circuit Court, Ohio county, is second son of John McColloch, a native of Logan county, Ohio, who was for thirty-two years clerk of the County Court of Ohio county, but who died on the 29th of May, 1862. He was also a relative of the famous Major McColloch, so prominently referred to in history for the daring horseback leap he accomplished near Wheeling, while being pursued by the Indians. Our subject's earliest experience in business was to fill a clerkship under his father, until 1860. He then went to St. Louis and filled the capacity of deputy clerk in the United States District Court under Thomas C. Reynolds, for some six or eight months. After returning home he found it necessary to proceed to New York, about which time the war broke out when he entered as a private in company F, New York Infantry, for eleven months service. Upon receiving his discharge he accepted promotion to First-Lieutenant of Fourth Virginia Infantry, after which he became Adjutant to the Fifth Virginia Infantry, and held that commission down to February, 1863, when he was ordered to report to General, now President Hayes, for staff duty, remaining in such until October of the same year. He was then ordered to report to General B. F. Kelly, commanding the department of West Virginia, at Clarksburg. From him he proceeded to Harper's Ferry under General Sullivan, and was discharged in 1865. He then followed steamboating and the insurance business, being elected clerk of the Circuit Court of Ohio county, in the fall of 1870, which office he still fills during a third term, with much ability and general satisfaction. He was married in September, 1863, to Sarah Jane, daughter of Thomas G. Culbertson, an old resident of Wheeling, but now of Martin's Ferry, and has a family of two daughters.

DR. A. F. GASMIRE,

Surgeon dentist, of 1313 Market street, is a son of the late Frederick Gasmire, a native of Asnabruck, Germany, born in 1801, and who came to this country in 1835, where he died at Wheeling in 1866. Our subject's mother, also a native of Germany, was the daughter of a prominent merchant and popular government official—her maiden name being Lenora Gaitz. Our subject, August F., was born in 1856, and first went to the dental profession with Dr. C. A. Wingerter, of this city, and remained with him and Dr. William G. Yates, the eminent English dentist of Pittsburgh, till he entered into business on his own account, in 1876. The doctor's present elegant rooms are located as above, and are admirably appointed for the conduct of his profession. A notable feature in Dr. A. F. Gasmire's practice is the fact of his being the first dentist to have conceived the charming idea of filling decayed frontal teeth with real diamonds. He has been singularly successful in thus setting several magnificent diamonds as firmly in their ivory bed as though a solid gold filling had been applied, and the increased attractiveness thereby imparted to the features will be more readily imagined than described. He is a most skilled gentleman in the profession, and shares a very complimentary practice.

SAMUEL LAUGHLIN,

Senior partner in the firm of Laughlin, Bros. & Co., 1208 Main street, is third son of the late John Laughlin, a native of West Virginia, who was born in 1789. Samuel was born in Wheeling in 1834, and first entered the drug business with Dr. Geo. W. Blockson, at Zanesville, Ohio, with whom he remained five years. He then came to Wheeling and bought out the old business of Pryor, Paull & Co., having in partnership with him his brother, Alexander Laughlin, and the late Mr. S. B. Bushfield. They ran it together ten years, but at a dissolution in 1864, the firm style was changed to Laughlin Bros., & Co., who five years later moved their business from Market street to its present address, where they still conduct it. This was the pioneer drug house in West Virginia, and to-day is among the most important wholesale houses in the state, carrying a stock probably worth $60,000. Nor should we fail to remark, as an evidence of their enterprise, that they invested in the right of Dr. Todd's famous pills for a cash consideration of $25,000. Mr. S. Laughlin has served faithfully in our City Council, several terms—filled the capacity of treasurer to the Soldier's Aid Society during the late war, and is, and has been, for many years, vice-president of the Exchange Bank of Wheeling. He was married to Sydney P., second daughter of the late Samuel Ott, by whom he has a family of three children. Mr. Ott was the pioneer hardware merchant in Wheeling, founder of the present firm of Ott, Hall & Co.

GLOUD W. KENNEDY

was born in the Fifth Ward, Wheeling, in 1832. His parents were David and Susanna Kennedy, *nee* Percell. His first business was as a weaver, but he soon engaged as a plasterer, in which business he continued for over twenty years. For six years he was a deputy sheriff and jailer of Ohio county. Since January, 1878, he has been engaged in the grocery and provision business on Fifteenth street. He was married in 1857 to Eliza Smith, daughter of William and Margaret J. Smith, *nee* Johnson. She died in 1875. Their children are three sons and three daughters, living, and three children deceased. He was again married in 1877, his consort, Margaret J., being a sister of his former wife.

DR. GEO. W. KELLY,

residing on Main street, this city, is a native of Washington, Washington county, Pennsylvania, where he educated for the faculty and subsequently became a full graduate in his profession. He married Miss Ellen Way, and settled in Wheeling several years ago, where he enjoys the advantage of a large and influential practice.

WILLIAM R. HOLLIDAY

came to Wheeling in 1833. He was born near Carlisle, Cumberland county, Pa., in 1800. His parents were Robert and Rebecca H., who settled in Jefferson county, Ohio, in 1808. The former died in Belmont county, Ohio, in his ninety-fourth year; the latter died in 1826, at the age of sixty-two. Our subject, prior to his arrival at Wheeling, was a farmer, but since that time has been associated with the manufacturing and government interests. He was connected with Ritchie and Wilson and Sweeney's establishments for over fourteen years. He acted as United States inspector of tobacco and cigars for four years. For eight years he served as surveyor of customs. He is now the deputy surveyor of the port, retiring from the former position on account of age. He was married in 1822, to Lydia, daughter of Samuel and Sarah Wilson, of Harrison county, Ohio.

LEANDER MIX

is a lineal descendant of the Thomas Mix who was one of the original grantees of the city and county of New Haven, Conn. He married Rebecca Turner. He was lost in the ill-fated Phantom ship, in 1646. Their son, David, married Elizabeth Atwater. Of their children, Ebenezer, who married Jemima Debow, was the father of our subject. The latter was born at Batavia, N. Y., in 1815. His father was in the Holland Land Company's office for twenty-two years. He was also the second surrogate west of the Genesee river in that state. He served twenty years in that position.

Our subject was with his father in the office for ten years. For three years he was a civil engineer on the Genesee canal. He was an assistant city surveyor of Rochester, N. Y., for a year. He removed to Wheeling in 1866. For six years he traveled as a representative of several commercial establishments. In 1876 he was elected a justice of the peace for Ritchie district, Ohio county, a position he is now occupying. He was married in 1841, to Mary W., daughter of A. A. Bennett, a noted lawyer of Avon, Livingston county, N. Y.

STEPHEN WATERHOUSE

came to Wheeling in the spring of 1839. He was born in 1811, near Hartlington, Skipton, Yorkshire county, England. His parents were John and Margaret Waterhouse. For several years our subject was in the lime and coal trade. For twelve years he has had an extensive brick-yard, and employs during the season a large number of men. He was married in 1841, to Charlotte Simpson, of Wakefield, Yorkshire, England, by whom he has had two sons and four daughters.

EDWIN H. PICKETT

was born in New York city in 1804. His grandfather was an officer in the English army. The latter's son, Albert, the father of Edwin, was principal of the Manhattan School in New York city. The family removed to Wheeling in 1819. Prof. Pickett taught a private school for a year and did much to advance the educational interests of the place. He removed to Cincinnati and became connected with the city schools for several years. He died in Delaware county, Ohio, at the age of eighty-four. His wife was Esther Hull, a niece of Gen. Hull. Our subject left Wheeling in 1832. He removed to Marshall county in 1856, where he farmed till 1875, when he returned to the city. He was married in 1829, to Clementine, daughter of Dr. Jonas Crumbacker, a druggist of Wheeling, and celebrated his golden wedding on the 15th of January, 1879. They had a family of ten children, eight of whom are still living, and the old couple now reside with their sons, John C. and Wilbert G. Pickett, grocers, No. 3320–2 Jacob street.

JOHN M. BIRCH,

Principal of the Lindsley Institute, is a native of Claysville, Washington county, Pennsylvania, and was born July 7th, 1851. He received a thorough education in Lafayette and Washington and Jefferson colleges—graduating at the latter, in the class of 1872. The following year he taught in the Classical Institute, Columbia, Lancaster county, Penna, and in September, 1875 was chosen principal of the Lindsley Institute, which position he still retains with much enterprise and success.

DR. ABRAHAM L. MAYER.

Is Rabbi of the Jewish Synagogue, in this city, is a native of Soest, Westphalia, Prussia, and was born in 1811. His father was married in Westphalia under the reign of Frederick the Great, when it was required of an Israelite who got married, that in order to secure himself a citizenship, he should purchase out of the Royal porcelaine fabrique $300 worth of chinaware. He raised fifteen children, of which Abraham is the youngest, and during his life nobly fought his country's battles, being taken prisoner both by the Austrians and the French. At ten years of age, Abraham, the subject of our sketch, was placed in college, and at fifteen had sufficiently progressed to enter upon a much higher grade of scholarship in Munster College, wherewith was connected the Rabbinnial studies, and here he graduated in 1830. He then received the recognition of the Prussian government, as a chaplain and visited the Rhine provinces down to 1837. He further qualified in Darmstadt in 1841, and again in 1853 for the southern states, all the certificates for which examinations the doctor still holds in his possession. He also filled a call to ministerial duties in Alzei, where he was succeeded by the eminent Dr. S. Adler, of New York, after which he proceeded to Mayence, where he still pursued theological studies up to 1861, receiving a certificate from the district Rabbi. So early as 1841 the doctor took up the author's pen and has the honor of having compiled several important geological, theological and other practical works that will long perpetuate his name. In 1861 he arrived in New York, officiated as a Rabbi in Syracuse, and thence went to Richmond where he also filled the professorship of an extensive college over six years. He came to Wheeling in 1872 and assumed his present charge, where he has ever since, and still officiates. He was married in 1842, to Louisa, third daughter of Zacharias Bamberger, of influential descent, who, during the French revolution belonged to the "Jacobins," and was condemned with many others to Fortress Konigtsein, and died in 1852. Mrs. Mayer died on the 17th of February, 1878, while on a visit to her son—aged seventy-four years. They had only one son, a resident and classical teacher in Baltimore, at whose residence Mrs. Mayer expired.

GEORGE EDWARD MENDEL

Is a native of Wheeling, and was born in 1849, being second son of the late George Mendel, who was a native of Wellsburg, Brooke county, and born in 1813. George learned the cabinet business at his father's factory on Eoff street, established so far back as 1836. After serving nearly three years, he came into the store as clerk, when the firm style was J. & G. Mendel & Co.—consisting of his father and uncle as leading proprietors. He remained as clerk to 1872, when he succeeded to an interest, and Mr. Crawford Booth being in the co-partnership, the house now became G. Mendel, Booth & Co. Next, in 1875, Mr. G. Mendel, sr., died, and in July of 1878, Mr. Booth retired from the business, since when, and at the present, the business is styled G. Mendel & Co.—consisting of G. Ed. Mendel and estate of G. Mendel, sr. The factory is still conducted on Eoff street, and the magnificent store and show rooms at 1122 and 1124, Main street are far ahead of anything of the kind in the state. The show rooms are 126 feet by 24 feet, and 126 feet by 46 feet, respectively. The premises are three stories and the floors are connected with a neatly fitted elavator. The entire house is kept abundantly stocked with the finest variety of goods and commands an immense trade through this and adjoining states. G. Ed. Mendel was married in 1872, to Elizabeth, oldest daughter of Mr. John Handlan, formerly president of the street railroad. She, however, died in 1874, leaving one child behind. Mr. George Mendel, sr., was a very popular citizen, and for many years president of the Franklin Fire Insurance Company, of Wheeling.

LORENZO D. WAIT,

justice of the peace in Webster district, was born in 1818, at Utica, N. Y., and is son of the late Reuben Wait, of Massachusetts, who served in the war of 1812, and moved with his family into Wheeling about 1823, but died in 1845, aged 86 years. Lorenzo first engaged with W. Armstrong, grocer, on Water street, with whom he remained five years, and then engaged in steamboating. But this he also relinquished in seven years, and became a partner with his brother in the grocery business, on Main street. In 1858 he sought a rural life, taking a farm of over one hundred acres, in Marshall county, down to 1871 and then sold out, next engaging in a spice and coffee mill, in the Fifth Ward. Subsequently, to-wit, in 1876, he was appointed justice of the peace to fill the vacancy created by the death, that year, of Mr. George Forbes, in Webster district, to which office he was further elected, for a term of two years, in 1878. Mr. Wait has always been a popular citizen, having done good service in the school boards, besides serving faithfully as councilman and in other public offices. He was married in 1843 to Mary J., third daughter of the late John Donnähour, of Philadelphia, by whom he has six children living—three sons and three daughters.

DANIEL PECK,

attorney at law, Chapline street, may be fairly classed among Wheeling's early and most zealous residents. He is a native of Woodstock, Vermont, not far distant from the birthplace of Stephen A. Douglas, who is credited with having made the remark that "Vermont was a very good state to be born in, but he would advise every native to leave just as soon as ever he

could get away." Mr. Peck's father, Samuel Peck, was from Connecticut, and with his family arrived at Washington, Pa., when the subject of our sketch was but some sixteen or eighteen years of age. They had only been here a short time when the old gentleman took paralysis and died, about 1814. During the spring of 1818, Daniel walked to Wheeling in search of employment, he having learned the business of painting and glazing while in Washington. He obtained work, and subsequently removed his widowed mother and the rest of the family to this place. Then he conceived the idea of studying law, bought out a lot of old law books, the property of William McConnell, and employed his leisure hours studying over them, and also improving his limited income by giving music lessons. He made capital headway with his books, and in 1826 was admitted to the bar in Virginia and in 1827 in Ohio. During a very active early life, he was one of the prime movers to establish the first Sunday-school, was a charter member of the Thespian Improvement Club, and being quite a musician, rendered valuable assistance both as a vocalist and organist in the inauguration of a regular Episcopal church service in Wheeling. About 1826, however, he removed to St. Clairsville, and there proved himself an equally popular citizen, both professionally and socially, down to 1863, when he returned to Wheeling, and was that year elected to the Senate from the First district for two years, since when to the present day he has enjoyed a capital legal practice in our midst. In 1849, we should further state, he was elected a member of the constitutional convention in Ohio, which sat that year and in the early part of 1850, for the purpose of forming the constitution that at present governs that state. He was married in 1843, to Olivia, eldest daughter of Mr. Wilmot Jones, a boot and shoe manufacturer of St. Clairsville, Ohio, but they have no issue.

EDWARD L. WOOD,

the present State Librarian, and acting Adjutant General, was born in 1846, in Kanawha county, Virginia, and is the third son of Mr. A. W. Wood, at one time sheriff of the aforesaid county, but at present residing, retired, in the southern part of Ohio. Edward L. only took a plain education, but early evidencing an anxiety to cultivate his mental faculties he secured a clerkship in a prominent law office in his native county, and there remained for six years. In 1875 he was elected to fill the vacancy caused by the resignation of Mr. John L. Cole, state librarian, and in 1877 was re-elected. By acts of 1877 the duties adjutant general were also conferred upon the state librarian, hence the double duties required from that officer. Mr. E. L. Wood is single.

DR. JOHN C. HUPP

is a grandson of John Hupp, a pioneer who was killed while defending Miller's block-house, on Buffalo creek, from the Indians, was born in Donegal township, Washington county, Pennsylvania, November 24th, 1819. He was educated at West Alexander Academy, and at Washington College, from which he graduated in 1844; subsequently, in 1848, taking the degree of A. M. Studied medicine under Dr. F. Julius LeMoyne, and at the Jefferson Medical College, whence he graduated M. D. in 1847, settling in Wheeling in general practice. He was one of the founders of the Medical Society of the State of West Virginia, having introduced into the convention called to form that society the resolution "to establish and organize" it; brought chloral hydrate to the notice of the profession of Wheeling, February 21st, 1870; made in 1873 a successful effort before the board of education to extend to the colored children of Wheeling a free-school education, and a like effort before the same body in 1875, to make German a regular branch of study in the public schools of Wheeling; was appointed in 1875 a delegate to the American Medical Association to the European Medical association; was also a member of the executive committee of the Centennial Medical Commission to the International Medical Congress, which convened at Philadelphia, September 4, 1876; and witnessed the cremation of Baron de Palm, at Washington, Pa., December 6th, 1876. His notable cases include the case of a ruptured uterus, reported in the Transactions of the State Medical Society for 1874.

He is a member of the American Medical Association, in which he was secretary of the section on the practice of medicine and obstetrics in 1869, and of the committee on nominations in 1875, 1876 and 1878; of the Medical Society of the State of West Virginia, of which he is treasurer, having been elected at its formation in 1867 and re-elected annually; of the Medical Society of the City of Wheeling and County of Ohio, of which also he is treasurer, having been in like manner elected at its formation in 1868, and annually re-elected; and of the Historical Society of West Virginia; a corresponding member of the Gynæcological Society of Boston, and a life member and vice president for West Virginia of the Alumni Association of Jefferson Medical College. Among other contributions to medical literature, he is the author of papers on "Placenta Prævia," 1863; "Salivary Calculus," 1863; "Vaccination and its Protective Powers," 1870; "Chloral in Puerperal Insanity," 1870, copied into medical journals from the Transactions of the State Medical Society; "Congenital Phymosis and Stone in the Urethra," 1870; "Opium Poisoning Treated by Belladonna," 1872; "Ruptured Uterus," 1874, copied into medical journals from the Transactions of the State Medical Society; and "Encephaloid Abdominal Tumor," 1875; of a "Biographical Sketch of Joseph Thoburn, M. D.," prepared by request of the medical profession of Wheeling, 1865; of a memorial to the legislature of West Virginia on the appointment of a state geologist, 1870; and of a memorial to the same body on the establishment of a state board of health, 1877; and cases of "Phymosis and Adherent Prepuce," 1877, copied into medical journals from the Transactions of the State Medical Society; "Diagnostic Importance of Symptoms," 1878, copied into medical journals from the Transactions of the State Medical Society. In 1850 he was physician to the Ohio county almshouse and Ohio county jail; has been physician ordinary to the prisoners of the United States district court from 1863 to the present time; was physician and secretary of the city board of health in 1864; has been physician to the Children's Home of Wheeling since 1873; was commissioned by Governor Pierpoint state vaccine agent, January 1, 1863, and successively reappointed by Governors Boreman, Stevenson and Jacob, making a service of nearly fifteen years; was president of the board of supervisors of the county of Ohio from 1863 to 1866, inclusive; is a member of the board of education of the independent school district of Wheeling, as he has been since 1873, and president of the United States board of examining surgeons for pensions. At the formation, in 1863, of the state of West Virginia, including the establishment of its county organizations, he was elected a member of the board of supervisors of the county of Ohio, serving for three consecutive terms, during all of which he was president of the board; but when he was urged, subsequently, to stand for the city council, and also for the State Senate, he declined, the period of civil war and governmental transition, which impelled him to accept public office as a duty, having passed away. In March, 1853, he married Caroline Louisa, daughter of Dr. A. S. Todd, of Wheeling.

WILLIAM PHILIPS,

justice of the peace, for Clay district, is a native of Paisley, Scotland, and was born in 1841. He came to America, with his parents, in 1843, his father (Peter Philips) thus early becoming one of the proprietors in the Iowa Foundry, Pittsburgh, where, unhappily, in 1845, he was burned out, and came to Wheeling. The old gentleman first engaged here as a pattern and cabinet maker, which business he followed down to 1852, when he took the initiative as a box and trunk manufacturer in this section, subsequently becoming interested in the bedstead trade, which he followed to 1865, and then retired. William Philips, referred to in the above caption, at thirteen years of age commenced in the cabinet trade, with his father, but three years later, engaged at the La Belle mills as a nail feeder, so remaining down to 1860. Then he went on board the steamer "Frolic," proceeded to New Orleans, and arriving at Memphis, on his return, he found the war had broken out. He proceeded to St. Louis, where he spent six months in a rolling mill, and then made for Wheeling. On his arrival, he joined battery D. First Virginia artillery, Capt. John Carlin; under whom he served from August, 1862, to July, 1865. He was only once very slightly wounded, at the battle of Winchester, but was taken prisoner twice, the latter time serving seven months in Andersonville prison, Georgia, from which institution he escaped on the 12th of December, 1864; made for Savannah, Georgia, and got on a Union steamer that landed him at New York. Having received his discharge, he first went into the bedstead business for some twelve months; next put in seven months at the grocery trade, on the corner of Chapline and Twelfth streets, subsequently taking to the road, as traveler for F. C. Winship & Co., until they closed out in 1868. Then he traveled for Hobbs, Son & Co., of this city, Sackett & Co., of Pittsburgh, Samuel Prather, of this city; Henry Schmulbach

& Co., and Laughlin Bros., of East Liverpool, Ohio. At this time, in 1876, he was elected justice of the peace, for four years, and succeeded to his present office, which he fills with much care, attention and satisfaction. He was married in 1865, to Annie, youngest daughter of Thomas Dunning, of Yorkshire, England, who came over in 1832, and at the time was residing in Wheeling, but who died in 1875, aged eighty-four years. They have one child—a promising son.

FREDERICK LOBENSTEIN

Is a native of Saxony, Germany, where he was born in 1817. His parents were Andrew and Elizabeth Lobenstein *nee* Fridler. The former was a tanner and our subject was taught the trade of his father. The latter came to Steubenville in 1845, and worked in a soap and candle factory for about a year. Subsequently we find him a tanner at Pittsburgh, and later a druggist in Wheeling. For over thirty years he has been a tanner in Wheeling, and his establishment, which has been located on Chapline and Market streets, for that term is one of the oldest in Wheeling. He employs four men and produces a quantity of leather that finds a ready market. He was married in 1847, to Antonia Ulrich, daughter of Dr. Ulrich, of Saxony.

BENJAMIN S. ALLISON,

Of the law firm of Erskine & Allison, was born in 1854, at Bellefontaine, Ohio, and is the only son of the late C. W. B. Allison, a native of Dauphin county, Pennsylvania, who became an eminent attorney, and was for several years partner in the popular law firm of Stanton & Allison, in Wheeling. The grandfather of our subject, was Major William Allison, a native of Ireland, and served in the war of 1812. Charles W. B. Allison was first married in 1844, to Miss Saphrona Lee, of Marysville, Ohio, who, however, died in 1849. On the 21st of May, 1851 he was married a second time to Miss Mary Stanton, daughter of the Hon. Benjamin Stanton, of Bellefontaine, Ohio, who was mother to the subject of our sketch. His father, C. W. B. Allison, was a self-made man—"one of God's noblemen." He evidenced rare abilities, became a prominent member of the bar, and during the late war, was commissioned by Governor Todd, of the state of Ohio, to the colonelcy of the Eighty-fifth Regiment of O. V. I. In 1862 he was appointed Colonel of Camp Dennison, where he remained in command till his term of three years service was closed in 1863. He subsequently became a member to the Legislature, was chairman of the committee on military affairs, and member of the committee on the judiciary—two of the most important committees of the House. He first came to Wheeling in 1866, and practiced law in the firm of Stanton & Allison, but succumbed to death in 1876, aged fifty-six years. Benjamin S. Allison, the subject of our sketch, graduated at the University of Wooster, in 1876, and passed through Albany Law School in 1878, being admitted to practice the same year. He subsequently became partner with Mr. W. Erskine, of Wheeling, hence the present law firm of Erskine & Allison, of 1318 Market street. Mr. Allison is single.

DR. THOMAS H. LOGAN,

Was born in Washington county, Pa., on the 14th of February, 1828, and is of English ancestry. His father, John Logan, descended from a family which in early times settled in Lancaster county, Pa., and his mother, *nee* Elizabeth Blackmore, descended from an English family, which in colonial times settled in Maryland, a branch of which afterward located in Allegheny county, Pa. Our subject graduated at Washington College, Pa., in the year 1846. He afterward attended the medical department of the University of Pennsylvania, at Philadelphia, and graduated in 1850. In the year 1851 he located in Wheeling and began the practice of medicine. Some years later he engaged in the wholesale drug business, in which he is at present interested as member of the firm of Logan, List & Co., and became one of the city's most prominent business men. Dr. Logan was a member of the convention which organized the restored government of Virginia in 1861, and was elected to the succeeding legislature of the same from Ohio county. He was chosen as one of the delegates to the legislature of West Virginia in the 1878. Governor Boreman appointed him one of the first Regents of the University of West Virginia, in which capacity he served for some years as president of the board, and Governor Mathews conferred upon him the appointment as one of the Regents of the State Normal School and its branches. For several years Dr. Logan served the people of Wheeling as a member of the city council, and for two terms he was president of the second branch of the same. In 1852, the year following his location in this city, he married Miss Eliza N. List, a daughter of John List, deceased, well known as cashier of the old Northwestern Bank of Wheeling.

CHARLES J. RAWLING

Is a native of Washington, D. C., and was born November 26th, 1831. He is the only son of the late John S. Rawlings, of Cambridge, England, born the 5th December 1797, and who came to this country in 1826. The old gentleman was a linen broker in England, but on arriving in America sojourned several years at Georgetown, D. C., coming to Wheeling with his family in 1835. He subsequently died at Moundsville, on the 22d of August, 1877, aged 80 years. Charles J., the subject of our sketch, in 1848 first went with Sweeney, Bell & Co., on Twelfth street, remaining two years, when he engaged with the late F. A. Bentlinger, druggist, also on Twelfth street, subsequently serving other drug houses, down to 1865, when he went into business for himself, in partnership with Dr. Logan. Subsequently he bought out the doctor's interest, but in 1867, being appointed post master, Mr. Rawling sold out the business to Messrs. Silvey & List, assuming his government office April 16th of that year. He received his appointment under Andrew Johnson's administration, and ably performed the duties down to February 1879, when he was succeeded by Mr. Sterling. During his conduct of the office, to wit, in August, 1874, the letter carrier system was adopted, and the following year, to facilitate the increasing business, which was more than doubled during his incumbency, Mr. Rawling had every department under his control remodeled. Nor should we fail to state, during the late war, he was a volunteer in 1861, and served in the Frst Virginia Light Infantry under Captain Trimble two years. He was wounded at the battle of Winchester, and afterwards transferred to the chief clerkship in the quarter master's department for West Virginia. He was married in 1866 to Maria, eldest daughter of a Mr. Donnelly, of Maryland, and has one son.

J. M. FRASHER,

Principal of Wheeling Business College, is a native of Fayette county, Pa., and was born on the 14th January, 1835. He was educated at Madison College, Ohio, and subsequently taught in the public schools for a number of years. Proving an expert with the quill, he next engaged in the commercial college business as a professor of penmanship, filling positions at Springfield, Mass.; Columbus, Ohio, and Troy, N. Y. He also held an interest in an important business college in Zanesville, Ohio, with Professor Chandler, for a short time. He came to Wheeling in 1873, and in partnership with W. W. Martin, conducted the present college on the corner of Market and Twelfth streets. At the end of two years he bought his partner out, and to the present has run the institution. The college has now been removed to the People's Bank building, corner of Main and Twelfth streets, for two years past, and never was in so flourishing a condition before, the average attendance being from seventy-five to one hundred young ladies and gentlemen, though there is actually accommodation for probably one hundred and fifty pupils. The college is conducted on admirable principles, and is yearly turning out valuable acquisitions to our commercial ranks. Mr. Frasher was married on the 19th May, 1859, to Grace E., only daughter of Dr. M. K. Johnston, of Port Washington, Ohio. They have a family of three children.

DR. JOHN FRISSELL

Was born in Peru, Berkshire county, Massachusetts, March 8th, 1810. He was the son of Amasa Frissell, a thrifty farmer of Scotch descent. His mother was of English parentage, named Wilcox. They secured good educations to their six children, four sons and two daughters. The eldest of the sons was a farmer, and the other three received collegiate educations, and represented the professions of divinity, medicine and law. The subject of this sketch, in his youth worked on the farm with his father, attending the common school in winter, from which he was advanced to the academy in Old Hadley. He entered Williams College in 1827, and graduated A. B. in 1831. He commenced the study of medicine with Dr. Ebenezer Emmons, of Williamson, whose assistant he had been in the Chemical Laboratory of Williams College for two years. In 1832 he attended lectures at the Berkshire Medical College, in Pittsfield. At the invitation of Prof. Willard Parker, he accompanied him

to Woodstock, in the spring of 1833, where he became demonstrator of anatomy. He filled the same position for Professor Parker in the Berkshire Medical School. At that period it was the duty of the demonstrator to prepare the dissections for the Professor, and afterwards to recapitulate closely to the class the Professor's lecture, and to carefully superintend and instruct all those making dissections. Having continued demonstrator through the year 1834, and attending lectures, he graduated M. D. from the Berkshire College, at the close of that term. In the fall of this year he received the degree of A. M. from Williams College. He remained in Pittsfield during the spring and summer, and in the fall and winter of 1835, he demonstrated his fourth and last course of lectures.

Dr. Frissell now removed to Wheeling, West Virginia. where he arrived on the 3rd of June, 1836. In passing through New York City, he purchased a set of surgical and obstetrical instruments. At first practice came to him slowly, but he occupied his spare time profitably in the study of botany, and in giving lectures on that subject in the schools of Wheeling. He also indulged his tastes for the geological and mineralogical sciences, by studying the rocks and minerals to be found in the vicinity of Wheeling, with Drs. A. S. Todd, Townsend, and others interested in these subjects. But in a few years his time was all required to perform the labor of his increasing professional engagements.

Dr. Frissell was early called upon to take a prominent part in such operations, which his exact knowledge of anatomy enabled him to perform with skill and success.

In 1838, he performed his first operation for hare-lip with deformed upper jaw, and in 1839, shortly after the first operations by George McClellan, of Philadelphia, for club-foot, by the division of tendens, Dr. Frissell operated for the relief of this deformity by the same method in Wheeling.

In 1841, he commenced operating with success for strabismus; in May, 1846, he performed his first operation for stone in the bladder; in November, 1853, he introduced in Wheeling the use of chloroform in capital operations, and in 1856 he performed his first successful operation for vesico-vaginalis fistula. He has operated with success for staphyloraphy, and frequently for phimosis and paraphimosis with adherent prepuce. He has performed various minor operations in plastic surgery, and, in 1871, performed one of the most extensive and successful operations of that class (in this the chin and sternum were held nearly in contact) on record. He has often enucleated or removed the eye from the orbit, and has performed nearly all the different operations known to the art of surgery upon or about that organ; and has, ever since he settled in Wheeling, operated upon such cases as presented (with few exceptions) in all the different departments of surgery.

The Doctor has never aspired to be known as a medical author, but is universally recognized as an industrious worker and a most skillful and judicious practitioner and successful surgeon. The testimony to his surgical practice recorded in the Transactions of the West Virginia State Medical Society, prepared from his notes of every-day business, will surprise most surgeons, of even large cities, who enjoy favorable opportunities for such practice.

But Dr. Frissell has not been as extensively engaged in general practice as in surgery. He was the first surgeon in western Virginia to avail himself of chloroform in critical operations, and although using it in thousands of cases, no untoward accident has ever occurred in his practice.

Dr. Frissell was connected with the Wheeling Infirmary during its continuance, and has been connected with the hospital which has succeeded it from the time it was established. For more than twenty years he has held the appointment of chief physician and surgeon to these institutions, which as hospitals have fully supplied an urgent want in West Virginia and also to western Pennsylvania and southeastern Ohio.

Soon after breaking out of the war Dr. Frissell was appointed by Governor Pierpoint, medical superintendent of the military prisoners and soldiers stationed at Wheeling. He was subsequently continued as acting assistant surgeon at the same post by the Surgeon General of the United States army, to the close of the war. Most of the time he had full charge of the medical department of the post. At the Sprigg House General Hospital, Dr. E. A. Hildreth during the same time served as one of the medical staff.

Dr. Frissell was also a member of the state board of examiners for surgeons entering the army during the war. The position of surgeon for the marine patients at Wheeling has been filled by him for more than twenty-five years. He is also physician of the Convent of the Sisters of the Visitation, and the school for young ladies at Mount de Chantal, and to Saint Vincent's College. He was the first president of the Medical Society of the State of West Virginia, instituted May 10, 1867. He is a member of the American Medical Association, and of the Medical Society of Ohio County, and an honorary member of the Medical Society of the State of California, and was member of the Centennial International Medical Congress of 1876.

Dr. John Frissell was married to Elizabeth Ann, daughter of Col. John Thompson, of Moundsville, West Virginia.

DR. E. A. HILDRETH,

of Wheeling, W. Va., was born in that city, September 13, 1821. He is the son of Ezekiel Hildreth, who was a graduate of Harvard College in 1814. His mother was the daughter of Jonathan Zane, who with his brother first settled Wheeling, which they laid out in city lots in 1793. This family is quite noted in American history for literary, professional and scientific attainments. The subject of this sketch received his preparatory education from his father, and completed his academic studies at Kenyon College, Ohio. In 1840 he commenced the study of medicine with Dr. Thomas Townsend, of Wheeling. In 1842 he attended lectures at the Medical College of Ohio, at Cincinnati; continued his medical studies under the preceptorship of Dr. John T. Shotwell, and attended his second course of lectures the following winter, graduating M. D. in 1844. The same year he passed a competitive examination for the position of resident physician of the Commercial Hospital and Lunatic Asylum of Ohio, to which he was appointed and served one year. He then opened an office in his native place, where he has been uninterruptedly engaged in full practice up to the present time. The doctor, as has been stated, is descended from a stock of educated, vigorous thinkers, authors and professional men. He has himself a well-trained mind, and is quite familiar with the natural and physical sciences. In 1850 the doctor contributed an article to the *Western Lancet* on "The Introduction of Ice into the Uterus in Obstetric Hæmorrhage," with a number of cases, having first practiced this mode in 1846. He was a member of the state board of examiners for surgeons seeking for appointments in the army. He made a report on "Climatology and Epidemic Diseases of Western Virginia" to the American Medical Association in 1868, and a second report on the same subject in 1872. He also made a report on "The Topography, Meteorology, Climatology and Epidemic Diseases of Ohio County, West Virginia," to the State Medical Society, 1869, and a second report on same subject. (Transactions of West Virginia Medical Society.) His contributions to the State Medical Society are too numerous to be referred to even by title; but his address as president, and his report on "The Medical History and Biography of the Profession of Wheeling for the past Hundred Years," are valuable. He is a member of the Wheeling and the Ohio County Medical Societies, of which he was president in 1875; has been a member of the American Medical Association since 1850; of the West Virginia State Medical Society since its organization, and is an honorary member of the California State Medical Society. As one of the directors, he organized the West Virginia Hospital for the Insane in 1864–65. He is president of the Wheeling board of education, and was a director of the West Virginia Penitentiary from 1868 to 1872.

Dr. H. has a turn for invention, and has devised a number of mechanical appliances of use in his profession. While resident physician in the Cincinnati Hospital he made a copy or working model of Prof. John Locke's "table galvanic battery," for use in the hospital. His instrument even excelled the Professor's, as it required water alone in the cells instead of acids, and was sufficiently powerful for all practical purposes. This instrument was purchased by the trustees for use at the hospital. He has always made the splints and surgical appliances required in his practice, and he has devised a speculum with parallel bars that presents some new features, and may prove on trial to have advantages over those in use. In 1851 he was united in marriage to Susan Lambdin McMechen. They have five children.

JOHN W. KENNEDY,

attorney at law, whose office is located in Odd Fellow's block, corner of Chapline and Twelfth streets, is the oldest son of the late Andrew Kennedy, of Baltimore, born in 1799. The old gentleman was a brother of John Kennedy, secretary of the navy under President Fillmore, who was also a famous novelist. John Willoughby, the subject of our sketch, was born in

Jefferson county, Virginia, and after taking a plain education, read up in law under his father, who was a prominent and successful lawyer. Subsequently he attended Hoffman's law school, Philadelphia, and was admitted to the bar in 1847. He first practiced in Jefferson county, until 1873, when he removed to Wheeling, where he has successfully practiced ever since; on the 1st of January, 1879, taking into partnership with him, Mr. Roseborough—hence the present firm style of Kennedy & Roseborough. Mr. Kennedy was elected to a judgeship in the Tenth judiciary circuit, West Virginia, in 1863, being the only democratic judge elected, that term, in the state, and he was also re-elected in 1865. Mr. K. was married in 1857, to Sarah M., daughter of Thomas Rotherford, of Jefferson county, Virginia, by whom he has had a family of ten children, two sons and four daughters, six of whom are still living.

REV. WM. E. RIPPEY,

pastor of the Wesley M. E. Church, South Wheeling, is a native of Ontario county, New York, and is a son of Wm. Rippey, a farmer of the same section, born in 1793. The Rev. Wm. E., whose family is of Scotch Irish descent, was born in 1837, and after receiving a plain education, entered the University at Parkersburg, where he graduated in 1870. He has since officiated at Middlebourne, Tyler county; Bellville, Wood county, and Knottsville, Taylor county, coming to Wheeling in March, 1877, where he has held his present charge ever since. He was married in 1860, to Elizabeth, second daughter of Gaius Truesdell, farmer, Yates county, New York, and by her has one daughter. Mrs. Rippey's father was of German descent, and her grandfather was one of the first travelers, by foot, to Kentucky and back, from New York state, during pioneer days.

DR. EDMUND JAMES WUNDERLICH,

of 35 Twentieth street, is a native of Canal Dover, and was born on the 5th of April, 1854. He is the oldest son of the Rev. E. F. Wunderlich, a native of Saxony, born 1829, and who came to America in 1853. The old gentleman received his education at Leipsic, and graduated for the Lutheran Church, but upon his arrival in this country, at Cincinnati, he joined the Methodist Episcopal ministry, and has remained attached thereto ever since, being at present stationed at Portsmouth. Dr. Edmund James Wunderlich took his early education at Baldwin University and German Wallace College, Berea, O., and at the age of eighteen years commenced the study of medicine under Dr. N. W. Wabber, physician of Detroit, with whom he remained two years. He then spent two years in the United States Hospital, Detroit, and received his diploma in 1875, when he came to Wheeling, and has remained here since. He was married in 1876, to Louisa K., eldest daughter of George Faubel, gardener, on the Island and livery proprietor in this city, by whom he has one son.

GEORGE R. TINGLE,

Sheriff of Ohio county, is a native of Muskingum county, Ohio, and is the oldest son of Joseph D. Tingle, born October 30, 1807 at Morgantown, Virginia, while his grandfather was George R. Tingle, of Martinsburg, Virginia, who, September 6, 1775, married one Sarah McFarland, of the Forks of Cheat river. The latter venerable couple first settled in Morgantown, and then removed to Cambridge, Ohio, in 1806, where they built the fourth house in the place, and subsequently kept a hotel—becoming a very popular resident. Our subject's father, Joseph D. Tingle, practiced law in Guernsey county, Ohio, and was appointed by Gov. Tom Corwin to a judgeship in the common pleas court. He married Catharine, oldest daughter of Richard Thomas, a merchant in Cambridge, who was a Baltimorean by birth. They had five sons and four daughters, as follows:—Margaret, who is now Mrs. Wilson Scott, of Cambridge, Ohio; Mary was married to Mr. J. H. Ash, Kentland, Ind.; and Kitty became Mrs. J. A. McEwen, but died in June 1876. George R., the oldest son, and subject of our sketch, was born March 6th, 1836, and only received a plain education at Cambridge Academy, coming to Wheeling March 1st, 1852. He first clerked in a boot and shoe store, next engaged with several wholesale houses as book keeper down to 1858, when he assisted to establish the wholesale grocery of Maxwell, Campbell & Tingle, on Main street. Mr. Campbell, however, retired in 1866, to become Sheriff, and to 1871 the house remained Maxwell & Tingle. That year a Mr. Isham joined them, and the house was run as Maxwell, Tingle & Co., to 1872. Maxwell then retired and Tingle and Isham continued the business to 1876, when Mr. Tingle withdrew his interest to fill the expiring term of office for the late R. S. Brown, as sheriff. The following fall he was re-elected for four years and still fills the office. Mr. Tingle has also served several years in the city council, and officiated as a member of the board of commissioners for this county. He was always a prominent democrat, from the organization of the party in the state, and rendered invaluable services as secretary of the state executive committee. As chairman of the capital removal committee in 1875, Mr. Tingle was not only most indefatigable and successful in his mission, but earned for himself a special popularity for the influence and ability he brought to bear in the interests of this city—the result being that to this day Wheeling is the capital of the state. He was married in September 1862, to Lila, second daughter of E. W. Stephens, of this city, but she died January 20th, 1870, leaving three children. Mr. Tingle was married a second time in 1876 to Mary Frances, daughter of a Mr. Robertson, of New Orleans, though at the time a resident in Wheeling. Mr. Tingle's family, to the present, in all, consists of two sons and two daughters.

CHARLES A. WINGERTER,

One of Wheeling's successful professional men, was born in the Rhine province of Bavaria, Germany, on the 29th of July, 1838, and came to America with his father's family, in 1849. His father's name was Ferdinand Wingerter, and was for a time engaged as a barber, and subsequently in a grocery store. Our subject received his education in the schools of the city of Wheeling, and entered the profession of surgeon dentist in the year 1860. He first became a student with Drs. Robertson & Orr, then of this city, and remained with them for a period of two years. Being anxious to commence business for himself, he went to Zanesville, Ohio, and opened an office, but only remained there one year, when he returned to Wheeling and started the practice of his profession here. He at once met with success, but being ambitious to attain the highest degree of excellence in his vocation, in the year 1872, he entered the Dental College at St. Louis, Missouri, one of the finest institutions in the country, and there graduated. He then returned to Wheeling, resumed his practice, and the same year purchased the property in which he is now located. He was married in the year 1863, to Elizabeth White, daughter of Michael White, of this city. Dr. Wingerter is a director of the Peabody Fire Insurance Company of Wheeling, and also in the Ohio Valley Iron Works, at Moundsville, in both of which he owns an interest.

DR. THOMAS LUNSFORD,

Operating and mechanical dentist, of 1217 Market street, is a native of Ohio County, West Virginia, and is second son of Lewis Lunsford, born 1802, and who has very many years been popular as a contractor and superintendent of railroads and other public works. Dr. Thomas Lunsford was born in——— and graduated at Washington College, Pennsylvania. He commenced his studies in dentistry, in 1860, with Dr. W. Fundenberg, a highly popular dentist in Pittsburgh, and subsequently selecting Wheeling for his future home, he opened up in business here, remaining in the same to this day. He was married in 1867, to Mary E., daughter of Dr. A. S. Todd, one of Wheeling's most valuable pioneers, and by her he has an interesting family of two sons.

J. DALLAS EWING,

attorney at law, whose office is located next door to the Exchange Bank, Main street, is a native of Marshall county, West Virginia, was born in 1832, and is the oldest son of William Ewing, of the same county. So far as we can trace back, we learn of Henry Ewing, the great grandfather of our subject, and Elizabeth Ewing, *nee* Glenn, his great grand-mother, both natives of Ireland—the former of whom was born on Lord Abercorn's estate, Tyrone county. They had a son James, born 1771, who came to America between 1795–7, and settled on the eastern shore of Maryland, became a lieutenant in the army during the war of 1812–14, and subsequently a captain of militia. He removed, in a very early day, on to a farm in Marshall county, known as "Fairhill," which he established as a family homestead, and afterwards secured the society of his aged parents thereon, to end their days, and the last resting place of the ancient couple is still preserved with a fence on the land, and marked by a weather beaten and time worn head stone. Now, Captain James, as he was subsequently known by, married one

Elizabeth Wilson, in Maryland, ere he took the old homestead, bringing her with him, and by her had a family of four sons and three daughters. The boys were named Henry, James, William and John, while the girls were Maria, who became Mrs. John Vance, of Triadelphia, but is now dead; Jane, who died single, and Elizabeth, afterwards Mrs. John Dickie, of West Alexander, also deceased. Of the sons, we may state that our information only extends to two of their decendents. In another biography, under the head of "James M. Ewing," we give John's descendants, while we now propose to proceed with those from William, who succeeded to the old homestead, where he was born in 1810 and died in 1861. James Dallas, the subject of our sketch, was the eldest son, born December 19, 1832—married Miss Emma Anderson, of Wetzel county, Virginia, on the first of May, 1860, and has a family of three boys and five girls living. Mary was born in the spring of 1834, married Alfred McKlusky, farmer of Marshall county, in 1859, and is still living. Elizabeth, born in 1835, married Daniel Hartley, and is living on part of the old farm yet. Susan, born in 1836, married the late Robert Taylor, farmer, of Marshall county and still lives, with a family of three children. Martin, born about 1840, married a Miss Moore, is a stone-mason, and resides at Triadelphia, having one child living. William W. married a Miss Riley, of Marshall county, has several children living, and still resides on a part of the old farm; John Alexander, born in 1846, married Miss Blake, of Moundsville, is a successful lawyer, and at present a member of the House of Delegates from Marshall county—he has also several children. Samuel, born in 1847, remains single, and is a store keeper at the mouth of Turkey creek, Marshall county; Robert Albert married a Miss Burleigh, of Marshall county, and is there residing in business as a carpenter, and the youngest son, is Isaac Newton, who is single, and by trade a saddle and harness maker, also in Marshall county.

J. Dallas Ewing, the original subject of this sketch, received only a plain education, but in 1855–6–7 read up in law, under Wylie H. Oldham, Esq., of Moundsville, and was admitted to the bar in 1858. He first settled in Witzel county, and there practiced seven years, when he changed his sphere of operations to Kentucky for a couple of years, returning to Marshall county, where he remained till 1878, and then came to Wheeling. He is regarded as a very successful lawyer and particularly noted for carrying cases through the appeal court, in which he has had considerable experience. He is a gentleman widely respected, and was elected this year, by a flattering majority, from the Seventh ward to the Second Branch of the City Council.

JAMES M. EWING

is the third son of the late John Ewing, of Scotch Irish descent, a native of the North of Ireland, born 1782. The old gentleman, James' father, was a cooper by trade, arrived in America in 1794, and for twelve years located in Maryland, working at his trade and conducting a farm, after which he came on to Wheeling. November, 1808, he here took out his naturalization papers, while Moses Chapline was clerk of the circuit court. In 1812 he joined the state militia and went to the Maumee river under General Harrison. He remained there several months, and showing the finest qualities of a soldier, received through Governor Barber, of Virginia, upon the recommendation of the court of Ohio county, a commission promoting him to ensign in the Fourth regiment, which commission he retained several years. The old gentleman had also a brother in the same war, Capt. James Ewing, who also distinguished himself—the former died in 1836. James M. Ewing, the subject of our sketch, was born in Wheeling, the 30th of December, 1814, and first went to the book binding and job printing under Messrs. J. Fisher & Son, then extensive school book publishers, in Wheeling. He remained with them some twelve or thirteen years, and next entered the service of his brother William, also a master printer, for several years, but in 1863, established a business of his own, which has prospered ever since and is still conducted at 14 Twelfth street. James M., had three brothers—Henry, the oldest, died in Illinois, about 1870; William, the second, was in business here, very many years, as a master printer, and who was a tradesman of exceptional ability, died in 1876, while John, the youngest, a book binder by trade, was toll-keeper at the suspension bridge many years, during which time he met with a very serious fracture of his leg, from the effects of which he subsequently died. Mr. James M., the only surviving brother, was married in May, 1842, to Mary, second daughter of Abraham Lukens, of Philadelphia, a veritable descendant from the illustrious Penn fraternity, by whom he has three sons and one daughter. The eldest son, John H., is in the state treasurer's office; the second, William L., is in an important wholesale house in New York, and the third, Edwin C., is engaged with the Whittaker iron company, of Wheeling. We may add that we are indebted to Mr. James M. Ewing for a perusal of sundry time-honored documents, among them being his father's naturalization papers, as also his commission granted from the pen of the late Governor Barber, together with newspaper files from 1807—the first publication produced in Wheeling. Nor should we omit mention of the fact that Mr. James M. Ewing has served several terms in the city council and as a member of the board of education and a county commissioner.

GEORGE P. LINCH,

Attorney at law, 1205 Chapline street, is the third son of Wm. Linch, a native of Carlisle, Pennsylvania, who was born in 1815. The old gentleman was of Irish and Scotch descent; located in Pittsburgh in 1835, where he engaged at Schoenberger's forge, and removed to this city in 1852. Here he became one of the original stockholders of the La Belle Iron Works, filled the position of a heater till 1867, and then retired, but in 1870 became manager, and remains so still. George P. Linch, the subject of our sketch, was born in Pittsburgh, June 4th, 1850—came here with his parents, and graduated at the University of West Virginia, in 1873. Early experiencing a longing to be associated with the bar, he read law with Davenport & Dovener, and was admitted to practice in 1874. He at once opened his present office and has remained there to the present. In 1875 he was elected a director of the Mingo Iron Company, and filled a like position in the La Belle Iron Works, in 1878. Mr. Linch is at present solicitor to the La Belle Perpetual Building Association, also the La Belle and Central, No. 3 Associations. He is unmarried.

THOMAS P. PHILLIPS,

Is the fourth son of John Phillips, a native of Maryland, but removed to Cadiz, Ohio, where he was one of the early settlers, and an influential farmer and merchant. His mother's maiden name was Eliza Gilmore, cousin to the late James Buchanan, President of the United States, and she was also distantly related to Bishop Simpson, of the Methodist Episcopal Church. Thomas P. Phillips was born in Cadiz, Ohio, in 1846, and about 1865 first entered the service of George & Bros., of that place, with whom he remained one year, and went to Chicago. Here he entered the service of B. W. Phillips & Co., his cousins, who were in the iusurance business. After six months with them he went with the Republic Fire Insurance Company, in the same city, remaining there until 1867. He next went with the North American Company, of Philadelphia, as their special agent in Illinois, conducting also a local agency at Bloomington, where he remained to 1874. From this he was appointed general agent in the Western States for the Franklin of Wheeling, removing at that time, back to Chicago, where he remained till 1875. Being that year elected to the secretaryship of the same company, he immediately came to Wheeling, and still fills the same important office. He was married in 1869, to Frances E., second daughter of W. F. Flagg, a large manufacturer and very large real estate owner, of Bloomington, Illinois. They have two children.

JOHN DODDRIDGE,

insurance agent, of 28 Twelfth street, is a native of this state. He is a son of J. M. Doddridge, and grandson of Phillip Doddridge, of Brooke county. Was educated at Hampden, Sydney College, and graduated in 1857. He read law in Charleston, and was admitted to the bar in Ohio county in 1873, but only practiced about one year. He succeeded to his present insurance business in 1874, it having been founded by a Mr. B. C. Dick, in 1872, especially for fire and marine insurance. Among the most important companies represented by Mr. Doddridge are the Liverpool, London and Globe, the London Assurance Corporation, the Queen of London, the Hartford of Hartford, the Underwriters' Agency, the Franklin of Philadelphia, the Manufacturers' of Boston, &c. Mr. Doddridge was married in 1871, to Sallie J. McMechen, daughter of the Rev. Jas. H. McMechen, by whom he has one son.

ARTHUR C. M'KEE,

The present cashier of the People's Bank in this city, is a native of Steubenville, Ohio, born in 1836, and only son of Cap-

tain Adam McKee, for many years in the river trade, born in 1808, and originally a resident in both Pittsburgh and Steubenville. Arthur first learned to be a practical nailer, became a book-keeper, next a salesman, and subsequently secured an interest in the old firm of Dewey, Vance & Co., now the River Side Iron Works. He also became vice president of the Crescent Iron Rail Works, after which, book-keeper in the old Merchants' and Mechanics' Bank. Afterwards he was elected treasurer of the Wheeling Savings Institution, but resigned in 1865. He retained an interest in the iron business to 1876, when he was elected to his present position. Mr. McKee is unmarried.

WM. LEIGHTON,

Of the firm of J. H. Hobbs, Brockunier & Co., is a native of Cambridge, Massachusetts, and was born in 1833. He is the oldest son of William Leighton, a glass manufacturer, and a native of Belfast, Ireland, born 1808, who was a son of Thomas and Ann Leighton, *nee* Turnbull, of Newcastle, England. The grandfather of our subject was born in 1786, and died in 1850, coming to this country in 1826. The old gentleman came to this country to manage the New England Glass Factory at Cambridge and remained there to his death. The father to our subject was engaged, originally under his own father, at whose death he succeeded to the position of superintendent till 1858, and then went into farming in Concord, Massachusetts. In 1863 he came to Wheeling and was for six years a partner and practical manager in the house of J. H. Hobbs, Brocknuier & Co., when he was succeeded by his son, the present subject of our sketch. The latter first gained an insight to the practical working of the glass business under his father at the New England works, and then went to Harvard College where he graduated in the scientific department, about 1856. He then took his father's place in the New England Glass factory, remaining in the chemical department some eight or nine years. He came here in 1868 and again succeeding his father took an interest in the firm. He was married in 1850, to Mary Jane, only daughter of Joel Reed, then residing at Cambridge, by whom he has an interesting family of one son and daughter. Mr. Leighton, we should add, is a gentleman of superior literary and poetical attainments—alike excelling as an author and elocutionist. He retains the presidency of a very interesting and successful Shakesperian club held in our city (referred to at length elsewhere), and is the author of "The Sons of Godwin," and "At the Court of King Edwin," as also "Change; or the Whisper of the Sphinx." Still further has he contributed quite a number of excellent poems to the local press as also to metropolitan publications of accredited eminence.

ISAAC IRWIN

Was born in Wheeling, May 21, 1805. His parents came from Pennsylvania to Wheeling in 1796. His father was a blacksmith, and one of the first in this section. He was a member of the legislature from this district for some ten or twelve years, and mayor of the city of Wheeling as early as 1816. Isaac, the subject of our sketch, was first initiated into the dry goods business in the store of Thomas Johnson, of Main street, but in 1827 he went into business for himself, on what is yet known as the old Irwin estate, on upper Main street, but only remained there a short time. He married A. S. Wylie, daughter of the late Rev. Wm. Wylie, Presbyterian minister, in November, 1826, by whom he has had seven children, though only three of them are living. Mr. Irwin has engaged himself in various pursuits, and was one of Wheeling's earliest merchants, which he remained for some time. He was sole controller of Wheeling's flour market for several years, during which our flour was viewed as superior to any other produced in the Ohio Valley, He was also connected with the first iron rail manufactory established in this city by Drakely, Sweeney & Co., and known as the Washington Rail Mills. This establishment had only run three years when it was suspended, an erroneous idea having been entertained that iron rails would wear forever, which had induced capitalists to invest in railroad bonds and stocks, freely. But upon the discovery that iron rails would only last seven years, then came what is known as the railroad crisis. Mr. Irwin was secretary of the company at the time of its failure, their liabilities being some $85,000, which was considered a very large sum in those days. For several years after this Mr. Irwin was not engaged in any particular business until 1864, when he opened up as a real estate agent at 24 Twelfth street, where his office is still located and he continues a reliable business.

BENJAMIN F. CALDWELL

Is a native of Marshall county, and was born in 1828, being the oldest son of the late Van Caldwell, a popular farmer and millwright, also of same county. Benjamin first inclined to a river life, about 1840, engaging as a cabin boy on the steamer Arcade, under Capt. Bennett. But it only took four years to satisfy him that a better fortune awaited him on *terra firma*. In 1844 he engaged with G. W. Johnson, of Main street, and learned the copper, tin and sheet iron business. He remained there five years as an apprentice and four years as a journeyman, when he decided to go into business for himself. He thereupon associated himself with W. & J. Stewart, at what is now known as Bell's foundry, in the north end. In that enterprise he remained from 1853 to 1857, when he withdrew, and opened a store on his own account near the corner of Main and South streets. Here he continued till 1862, when he succeeded to his present address, where he has a fine premises 66 by 80 feet. In addition to tin, zink, sheet iron and copper working, he has a large variety of stoves, grates, grate fronts, house furnishing goods, hardware, galvanized cornices, tin ware, &c., and is conducting quite an extensive business. He was married in 1853, to Dorcas, second daughter of the late Richard Dolbey, of this city, by whom he has a family of two daughters and two sons.

GEORGE BIRCH,

Better known as 'Squire Birch, residing in Richietown, is a native of Wigan, Lancashire, England, and was born in 1805, coming to America in 1818. First engaged with Jackson & Baggot, serving seven years and nearly six months, to learn the art, trade and mystery of cutting glass. He next went into business for himself for about two years, and then took charge of the cutting department in J. & R. Fisher's glass house in Bloomingdale, N. Y. After filling several other similar positions in that state, he visited St. Louis, and thence proceeded to Illinois, where he remained eight years, conducting a farm and taking contracts for plastering. From there he came to Wheeling, in 1845, and engaged with Hobbs & Barnes, now Hobbs, Brockunier & Co., with whom he stayed twenty-five years, then joined a stock company who had opened up a glass works at Bellaire, where he remained six years and then returned to Wheeling, where he still resides at the corner of Twenty-third and Chapline streets, retired. He was elected county magistrate, under the old system, in the Tenth district, two terms, was an alderman for three or four years and clerk of the town of South Wheeling prior to its annexation to the city of Wheeling, besides being elected to many other important offices. He was married in 1835 at New York, to Jane, daughter of the late Robert Jackson, of New York state, a prominent farmer. She died in October, 1835, leaving a family of four sons and one daughter.

JOSEPH H. CONNELLY,

Though not absolutely a business proprietor, is nevertheless among our most competent mechanics, and one whose biography affords striking evidence of a life closely affiliated to the growth and prosperity of Wheeling's trade. He was born in this city in 1842, and in 1859 took his first experience as a carriage trimmer, with E. Hayes & Co., carriage builders, then occupying the identical shop Connelly still plys his daily avocation in, under Donaldson, Lewis & Co., two doors above the post office, Market street, Wheeling. Though the premises, like his services, have witnessed many and varied experiences in the change of proprietary, yet he has stuck to his ship and its "rigging" department, with unflagging energy. Excepting, however, an interval of some three years, which a commendable patriotic disposition induced him to devote in his country's behalf during the late war—to wit, from 1862 to 1865. He was among the early volunteers constituting Battery D, First Virginia Light Aartillery, under Capt. Carlin, and though escaping with "a whole skin," through the active service and trying positions endured by that gallant company, yet he was less fortunate in returning with a perfect constitution. He has been married twice since his return home, first to Jennie, eldest daughter of Stephen Tracey, of Wheeling, by whom he has issue, two children, and secondly to Rebecca, second daughter of James Elliott, of this county, his present family being increased to four children.

JOSEPH GREER,

At present writing, popular among our oldest living pioneers, is a native of Washington county, Pa., and was born in 1793, first coming to Wheeling in April or May, 1814. His father, Joshua Greer, was a native of Ireland and as a remnant of the English army, in the revolutionary war, so far back as 1780 took up his abode on American soil, yielding to death's mandate in 1844. Joseph's mother's name was Rosa Bradey, also a native of Ireland and came to America about 1780, under the following circumstances: The great cry, at that time, in Ireland, being in favor of emigration to "America the land of the free!" speculators were not slow to avail themselves of the epportunity, and secure a number of passages, which they traded off to the sons and daughters of "Old Erin" in consideration of a signed contract to give three, four or five years service on landing. Poor people were not slow to take this bait—Rosa among them—and she arrived in Washington, Pa., where she served her time out to the Rev. Peter McMullen, a preacher, in that town. Then she got married to Joshua, by whom she had two daughters and six sons. Of this number, Joseph—the subject of our sketch—was married in 1839, to Catharine, third daughter of the late Isaac Johnson, a prominent farmer in Maryland. They had issue, two sons and one daughter, of whom, only the youngest son, John M. Greer, survives, and resides at home. Though always filling a humble sphere in life from his early initiation in farming on Wheeling creek, Joseph Greer has ever been a hard worker, and a popular citizen—particularly by his evidences of warm-heartedness during the cholera and small pox scourges, when he was the most active and efficient nurse to be found by the faculty in the city. At his present advanced age he discusses things of the past with much interest and accuracy, may daily be found busy around our streets and is as ready and willing yet to perform a day's work in a reasonable way as to crack a joke, which is a special treat to him.

JOHN H. DIEHL & CO.

Are successful grocers, doing business on the corner of Main and Tenth streets, the firm consisting of J. H. Diehl and G. W. Cotts. Mr. Diehl is a native of Covington, Kentucky, and was born in 1842. He first buckled to business in Georgetown, Pa., from whence he made for Pittsburgh. Here he engaged on a steamboat, as cabin boy, gained a clerkship, and subsequently became a stockholder. He quit the water in 1865, and espoused the grocery trade, in Allegheny, at which he remained eighteen months, when he undertook to travel in the cutlery business for a house on Wood street, Pittsburgh. He came here, however, in April, 1870, and opened a grocery in the Grant House building on Tenth street, where seven years afterwards he was burnt out with a loss of $3,000. But next morning he opened again at his present address, when he took in his present partner. Their premises are three stories, 60x20 feet, and contain a very replete line of fine groceries, provisions, fresh meats, &c., in which they do a capital business, including some wholesale trade. Mr. Diehl was married in 1875, to Ada E., only daughter of L. B. McLain, of this city, by whom he has two children. Mr. G. W. Cotts is a native of Wheeling, was born in 1845, graduated at Princeton College, N. J., in 1866, and not since following any occupation, has devoted himself exclusively to the grocery trade, a portion of time as traveling salesman. He is unmarried.

GEO. K. M'MECHEN

Is the second son of the late Wm. A. McMechen, farmer, of Baltimore, Maryland, in born 1802, who came here in 1836, located on a farm near Benwood, and died December, 1876, seventy-four years of age. George K. McMechen was born in 1827, at Baltimore, came here with his parents, and graduated at Shotwell's Academy, West Liberty. In business, he first went with John R. Morrow, 212 Market street, serving five years to the grocery trade, when he bought out the stock, and run the business at that address down to 1858. He then removed to 174 Market street, was there ten years, and next entered the drug business with Bushfield, Wallace & Co., on Main street. It only took eighteen months, however, to wean George's affections from this line of commercial enterprise, and we next find him interested in the coal business and mining enterprise, having assumed a partnership in the firm of Capehart & McMechen, of Bridgeport, Belmont county. After four years in this trade he retired for a short time, and in 1877 again opened up at 1061 Market street, in the grocery business, removing to 1064, on the same street, January, 1879. He at present presides over a well stocked and neatly kept store, admirably adapted to his steady family trade. He was married in 1856, to Ella B., oldest daughter of the late S. B. Bushfield, wholesale druggist on Main street, and has an interesting family of two boys and one girl.

JAMES M'CONNELL

is about the second oldest native of this city, still living. He was born in 1801, his father being William McConnell, who came here about 1796 or 1797, from Washington county, Pa., and succeeded to a Mr. Pettitt's tannery, on Market street, about the head of Eighth street. His mother's maiden name was Barbara Wolf, also of Washington county. The old gentleman died in 1826, aged sixty-two years, and the venerable old lady in 1861, aged seventy-eight years. James McConnell was born within sight of the ruins of old Fort Henry, in an anciently constructed log hut, on Market street. He took his education in the old-fashioned style, from private teachers, one of whom was popular as Billy Zane, though no relation to the present Zane family. When fourteen years of age, he went to Washington, Pa., into the store of Hugh Wilson, a dry goods merchant, with whom he remained two years. He next returned to Wheeling, and for eighteen months attended one of the best schools thereat. Then he engaged with E. B. Sweringen, dry goods merchant; also with Mr. Wm. Paxton. At the age of twenty, he and his brother, Alexander, who died during the cholera scourge of 1833, opened a tannery on Union street, which they continued to 1828. This year, however, the subject of our sketch withdrew from the tannery business and went into merchandising, on Main street, for some five years, when his brother died, and James returned to the tannery to wind up the estate. Subsequently he filled the seat of Alderman to the city, and *ex-officio* performed the duties of a justice of the peace, from which duties he permanently retired some fifteen years ago. He is at present, apparently, hail and hearty, and resides with his son-in-law, Mr. B. Bloomfield. He married, in 1825, Asinith, only daughter of a Mr. Jones, of Brownsville, by whom he had four daughters, of whom only one is now living, having been married to Mr. Benjamin Bloomfield, of this city, and they have two sons and one daughter.

CHRISTOPHER ANDERSON,

grocer and provision merchant, corner of Twenty-third and Market streets, is a native of Ireland, was born in 1845, and came to America in 1870. Being an experienced grocer and druggist, he first ennaged with Brownlow & Raymond, wholesale druggists, at Ogdensburg, N. Y. He remained there one year, next clerked in several prominent houses in New York city, and then proceeded to Pittsburgh, where he remained two yours with the firm of Black & Shaw, wholesale grocers. From there he came to Wheeling in 1873, and first kept a store on Market street, opposite the City Hall. Subsequently he built his present commodious store, 25x40 feet, one story, on the corner of Twenty-third and Market streets, where he conducts quite a live business, both wholesale and retail, in fine groceries and fresh country provisions. He was married in 1872, to Phœbe, second daughter of the late Robert McMahon, a native of Ireland, and possesses a family of three children.

HENRY STOLLEY,

is a native of Denmark, and was born in 1843, arriving in this country in 1868, having previously received a college education at Schleswig, Germany, and possessing exceptional advantages as a linguist. Landing at New York, he took quite a tour, first to Philadelphia, thence to Columbus, O., Chicago, &c., and proceeded through the southern states, halting at Memphis, returning to Chicago, and from thence came to Wheeling. Here he engaged with Joseph Speidel, wholesale grocer, Main street, with whom he remained one year. Then he went to Philadelphia and remained two years, first as overseer in the large calico print works of W. Simpson & Co., and then in the produce business, while he ran a restaurant in the Centennial grounds. But still having a weak spot for Wheeling, this year, 1876, he returned, and engaged with H. F. Behrens, on Market street. He next went into the wholesale produce and shipping trade at 2207 Market street, but finding such an enterprise insufficiently lucrative, in the fall of 1877, he removed to his present address, corner Twenty-third and Market streets, where he has a

neatly fitted two story store, 17x48 and 17x40 respectively, in an L shape, in which he conducts a prosperous wholesale and retail grocery store, chiefly handling fine imported goods. He was married in 1877, to Mary, eldest daughter of August Schultz, of this city, by whom he has one child.

HAMPDEN Z. SHRIVER,

Proprietor of West Virginia Printer's Supply and Paper Warehouse, 1211 Main street, is the oldest son of Wm. W. Shriver, of Maryland, born in 1809. The old gentleman came to Wheeling about 1819 or 1820, and conducted an insurance business, besides being a steamboat owner. He, it was, also, who upon the opening of the Baltimore & Ohio Railroad, introduced the fish of the Ohio river to the Potomac, where they are now more prolific than here. Hampden Z. Shriver, the subject of our sketch, was born at Wheeling in 1834, and graduated at Brockenbrough, Lexington Law School, Virginia. He was for several years assistant secretary to the Citizens Insurance Company, in this city, and opened his present business in the fall of 1878. The premises are spacious, admirably stocked and present a special advantage to "the art preservative," in consequence of being the only house of the kind in the state. Mr. Shriver was married in 1870 to Azelia, eldest daughter of Mr. R. J. Bullard, of this city, and has a family of two children, a son and a daughter.

WILLIAM IRWIN,

living retired at 723 Main street, may be said to be about the oldest living native of Wheeling at present writing. His nativity dates from 1799. He is son of the late William Irwin, a blacksmith of this city, and in his early days also espoused the worthy craft of "Tubal Cain," in the service of his father. But desiring to forsake the forge, he found ready employment, for one so anxious to work, in several stores; after which he betook himself to the bosom of "Father Neptune," becoming clerk on the Loftus, Morgan Nelson, and other steamers during a period or twenty or thirty years. He subsequently became clerk in the supervisor's court, and deputy sheriff, after which he retired into private life, residing with his brother Robert, on the Island. That gentleman, however, died in 1872, and Mr. Irwin took up his abode with his brother-in-law, Mr. James E. Matthews, at the address already given on Market street, and where he still resides. He was never married. His mother's maiden name was Elizabeth, daughter of one Samuel Snodgrass, a farmer from the east. Mr. Irwin had five sisters and six brothers; one of the former, Mary, died in infancy, while Sarah became Mrs. John Moore; Amanda, Mrs. James E. Matthews; Elizabeth, Mrs. Mathew McLure, and Julia, Mrs. Robert Sweeney. Of the three sons, only William, (the subject of our sketch), Isaac, who is still in business in Wheeling, and David, in Old Virginia, are found still surviving.

JAMES E. MATTHEWS.

This gentleman, living retired at 723 Main street, is brother-in-law to the late William Irwin's family. His father, Charles Matthews, was a regimental captain in the war of 1812, and a native of Pittsburgh, but died in 1815, aged forty years. His mother's maiden name was Rebecca Clelland, also of Pittsburgh, and died in 1825, forty-seven years of age. James E. Matthews was born in Allegheny county, in 1811, received only a plain education, and learned the trade of a moulder, with Kingsland & Lightner, after which he arrived here, from the Iron city, a practical mechanic, in 1830. After engaging himself at his trade, for a short time, as a journyman, he became a partner in the firm of Sweeney, Matthews & Grey, who conducted the first foundry of any pretensions in this city, on Main street, though there was a second one of far humbler pretensions, had an earlier existence over the creek, being run by one Thomas Pollock. Mr. Matthews continued to hold his interest from 1836 to 1848 when he sold out, and simply filled the capacity of manager at that and other foundries, down to within a year ago, when he retired from active life. He was married in 1836 to Amanda, third daughter of the late William Irwin, by whom he has had a family of five sons and two daughters—three of whom, however, are deceased.

WM. W. M'FARLAND,

district agent, at present in Wheeling, for the world famed Singer Sewing Machine, is the third son of the late Mr. Wm. D. McFarland, of Cincinnati, an eminent naval engineer, who bought and fit out for the government the Upper Mississippi squadron, during the late war, and was assistant chief engineer of the same for some time, he died in 1877. W. W. McFarland was born in 1852, at New Richmond, Southern Ohio, and educated under Professor J. K. Parker, at Clermont Academy, until he was seventeen years of age. He then visited Dacota and Iowa, and in 1872 returned to Pittsburgh, going into the sewing machine business with the firm of Wheeler & Wilson. He only remained with them one year, when he transferred his services to the Singer Sewing Machine Company, at Pittsburgh, where he served three years, one of which as manager of the "Iron City." Then he was transferred to the charge of the Steubenville agency, which he also yielded last fall to come to Wheeling. He is a gentleman admirably adapted to his position, is fortunate in his representation of a machine that can boast of a sale last year exceeding that of all other machines put together. Mr. McFarland was married in——, to Annetha, second daughter of James Clark, an extensive farmer and contractor of Clermont county, Ohio. They have issue, one son.

ALEXANDER ROGERS

Was born in Ulster, Ireland, September 29, 1802. His ancestors were of Scotch origin, and located in the north of Ireland during the sixteenth century. His father was a manufacturer of linen goods, and sent our subject, while only seventeen years of age, to England, with goods to sell. He remained in that country five years, being very successful. In 1826 he came to America alone, on the brig "Earl of Aberdeen," was sixty-three days on the voyage, and landed in Baltimore. He first directed his steps to Huntingdon county, Pa., and settled on the Juniata river, where he engaged in a general mercantile business. He was there appointed postmaster, in 1829. Ultimately he left there, and arrived in Wheeling in 1830, where he opened a dry goods store on Main street. In 1836 he was married to Elizabeth, third daughter of Thomas Johnston, Esq., a prominent merchant, and for many years a justice of the peace, also president of the Northwestern Bank. In 1852. the well known firm of Hamilton & Rogers started in the foundry business, but Mr. Rogers continued in the dry goods business until 1856. He afterwards withdrew from the firm of Hamilton & Rogers, and engaged in the produce business, which he continued during the war. In 1870 he erected the two buildings adjoining his store, and enlarged that building. In 1872 he changed the business to hardware, taking in Mr. James McCullough and Mr. James Moore. But Mr. McCullough withdrew in 1876, and Mr Moore died the same year, hence the whole business came into the hands of Mr. Rogers. The store is now kept at 1403 Main street, is 130 feet deep, facing both on Main and South streets, and is one of the principal wholesale and retail hardware establishments in the city. Mr. Rogers was for twelve years a justice of the peace, and in 1875 made an extended tour of England, Ireland and Scotland. Although he has lived beyond the scriptural age of three score years and ten, Mr. Rogers still possesses much vigor of mind and body, managing his large business with all that ability that has characterised his long and active career. His family consists of one son and one daughter, the latter of whom, Margaret, is married to Frederick Lange, of the wholesale drug firm of Lange, Grabe & Baird, Main street.

JACOB SNYDER

is a native of Germany, was born July 19th, 1827, and came to America with his parents in 1829. He is the third son of the late Joseph Snyder, by trade a glass-blower, and also of Germany. The old gentleman, Joseph, served in the army under Napoleon Bonaparte—crossed the Alps, and was in Waterloo with him when he was wounded. On his arrival in America he first sojourned in Baltimore, next came to Wheeling and then took up his abode at Pittsburgh, where he died in 1868, aged seventy-seven years. Jacob, when only nine years of age, espoused the calling of a glass-worker, also, but after four years experience, drifted into a rolling mill, where he learned to be a puddler, with Schoenbergers' of Pittsburgh. Leaving them in 1848, he went to Kittanning, assisted in building the iron works there, and returned to Birmingham and Pittsburgh in 1850, which city he forsook to make his future home in Wheeling, in 1853. Arriving here, he engaged at the Belmont mill as a boiler, remained several years, purchased stock therein, and became assistant manager, under Fred. Norton, upon whose retirement the subject of our sketch became general manager. In 1866, however, he also sold out his interest to the Belmont Nail

1507 & 1509 Main St., near B. & O. Depot, Wheeling, W. Va.

Works Company and engaged with the Benwood Iron Company, whom he remained with for three years, and is now interested in the Belfont Nail Works, Ironton, Ohio. He further ran the business of pig metal broker for several years, and with Mr. M. Reilly and J. H. Hobbs, purchased the St. James Hotel while it was yet known as the Sprigg House, still holding his interest therein. In 1868 he opened his present extensive store and warehouse at 1405 Main street, which has a frontage of 22 feet, running back 134 feet, while being three stories high. Here he still trades as a wholesale dealer in all kinds of iron, steel, nails, springs and axles, hardware and trimmings, lime, cement, &c., while he is also interested in several other local enterprises. He was married in 1847 to Mary Jane, second daughter of the late John Hughes, of Carlisle, Pa., by whom he has a family of ten children living—three of the daughters married, being Mrs. J. White, Mrs. Eberhardt and Mrs. Hammon.

ALEXANDER DURST,

Of the firm of Bachmann & Durst, provision and commission merchants, 1125 Market street, was born in Wheeling in 1849, and is son of G. Durst, a native of Germany, who came to America about 1850 or '52, locating in Wheeling, where he died in 1870. Alexander is a graduate of Wheeling Business College, and first went into the fruit and confectionery business at 1111 Market street, on his own account, in 1869. He, however, sold out in 1873, and went into the hotel business, on Water street, but it took only twelve months to convince him that such an enterprise savored too sparingly of profit. He next visited Bellaire for some six months, and on his return went into business with J. McCluskey, continuing the same for about eighteen months. Then he entered into partnership with Peter Bachman, his present associate in business, with whom he has been for six years. He was married in 1870, to Susan, third daughter of Anthony Deiters, a competent and confidential clerk with G. Mendel & Co., for thirty-three years. They have issue, two boys. Mr. Peter Bachmann is a native of Germany, was born in 1837 and came to America in 1843. He married Augustine, second daughter of the late Dr. Valentine, of Wheeling, by whom he has seven sons.

THOBURN BROS.

David H. and William M. Thoburn are sons of the late John Thoburn, of this city, who arrived in this country, from Ireland, about 1844 or 1845. William M. was born in Marion county, and first went to the grocery business, when fourteen years old, with R. J. Smyth, remaining in his service some six or seven years, and then opened out business, in company with M. C. Crawford—as Crawford & Thoburn—at their present address, corner of Market and Eleventh streets. But in January, 1877, David H. Thoburn bought out Mr. Crawford's interest, and the two brothers assumed the firm style of Thoburn Bros. David, who was born in Wheeling 1852, had also been with Mr. Smyth about six years, engaged in the spice and coffee roasting business with another firm, and gained a knowledge of the feed business. The boys have a well stocked store and command alike an excellent city and country trade. Both of them are single.

HENRY J. SCHULTZ,

in the boot and shoe business at 26 Eleventh street, is a native of Prussia, and had learned his business as a worthy son of St. Crispin ere he left his native land. He arrived in America in 1866, first working at his trade in Savannah, Ga., for about ten months; then proceeded to Baltimore for a brief sojourn, and arrived in Wheeling in 1866. Here he continued as a journeyman till 1868, when he opened a workshop of his own on Market street, where he succeeded three years, and next opened a store at 1064 Main street. After twelve months at this location, he removed to No. 30 Eleventh street, but in April, 1876, took possession of his present excellent and inviting store at No. 26. He was married to Gertrude, youngest daughter of John Niesz, of Miltonsburg, Ohio, by whom he has two children.

WOODFIELD & KLEINHAUS

conduct a prosperous and flourishing upholstering business at 1058 Main street. Martin Kleinhaus was born in Germany in 1846, and landed at New York in 1865. Having learned his trade as an upholsterer, he first engaged in New York, with Anthony Bros.; next with Alexander Roux, Herter Bros., and several other prominent houses, but in 1874 left there for Pittsburgh, where he went with E. Edmundson & Sons, whom he served two years, and then came to Wheeling. Here he was employed by George Mendel & Co. for a year and a half, when he started in the upholstering business for himself, at his present address, which he continued to January, 1879. He then took into partnership Mr. J. L. Woodfield; hence the firm style of Woodfield & Kleinhaus, who added furniture to the original upholstering branch, and now preside over quite an inviting store, also conducting considerable manufacture. Mr. Kleinhaus was married in 1875, to Mary, eldest daughter of Vender Miller, of Holland, but at that time a resident of Pittsburgh, and by her he has a family of two children, girls.

J. L. WOODFIELD,

is the only son of W. M. Woodfield, born in 1837, and subsequently a popular farmer in Washington county, Pa., where J. L., the subject of our remarks, was born in 1858. On his arrival in Wheeling, John clerked in a drug store up to 1877, and also put in twelve months as a clerk in the First National Bank, Bridgeport, subsequently, as before stated, taking an interest in the above business, in which we opine his energy and business capacity will largely conduce to ultimate success. He is single.

ADDISON M. DRAY,

is a native of Warren, Trumbull county, Ohio, and was born in 1848, being the only son of Eli W. Dray, a practicing attorney, and county commissioner for several years. From what we can gather, the name Dray is simply a perversion of Drake, as the earlier ancestors of this family bear that name, are claimed to be descendants of the late famous Sir Rodney Drake, of England. The mother of our subject bore the maiden name of Ann Luce, and was a daughter of General Luce, conspicuously mentioned in the early American wars. Another singular fact is, that the grand-fathers and grand-mothers of our subject's father and mother, formed four out of the first five families that located in the township of Bazetta, Trumbull county, Ohio. Addison graduated at the Commercial College, Cleveland, and also attended Hudson College. He took his first situation in 1860, as deputy county clerk, Warren, Ohio, and held a similar position for one year in Cuyahoga county. He was subsequently engaged on the Atlantic and Great Western railroad; in the office of the superintendent of motive power and machinery, at Meadville, Pennsylvania; next entering the employ of Charles Vernon Colver, banker, and subsequently came here in 1874, taking chief clerkship at the Baltimore and Ohio railroad shops, where he still remains in office. He was married in the spring of 1874, to Elizabeth, daughter of John Kiger, of Rappahannock county, Virginia, a descendant of the famous old General Kiger.

HENRY STAMM,

proprietor of the Stamm House, is a native of Germany, though having resided in this country many years, where he has been successful in establishing an excellent business. His present excellent hotel is located on Water street, overlooking the river Ohio, and contains from fifty to sixty rooms in addition to fine dining, sample and reception rooms, office and other accessories essential to such an institution. Mr. Stamm is a competent and attentive host—receives excellent support, and certainly conducts one of the most popular two dollar per day houses in the state.

LUCIEN B. MARTIN,

Confidential clerk and cashier at Hobbs, Brockunier & Co.'s glass works, South Wheeling, is youngest son of Ebenezer Martin, born 1792, late landed proprietor of Martin's Ferry, after whom that place derived its name; he, however, died January 17th, 1876. Mrs. Martin, Ebenezer's wife, and mother to the subject of our sketch, bore the maiden name of Minerva Zane, daughter of Isaac Zane, and a descendant of the late Jonathan Zane. Lucien, our subject, was born in 1853, received a plain education, and first entered the service of his present popular employers in 1871, having remained with them ever since. He was married in 1876, to Mary Emma, youngest daughter of the late Thomas E. Lewis, of this city at the time, though of English descent. They have one son. In relation to the Martin family, we should state that it was Ebenezer who

first laid out Martin's Ferry, early in the present century, and the remainder of his family, two brothers and two sisters, still occupy the old homestead.

JAMES FERREL

was born in Monroe county, Ohio, in 1822, and in 1829 was brought by his parents to Ohio county, W. Va. He has been employed in farming and teaming until the last few years, has been connected with the fire department of Wheeling for seven years, and now has charge of the Vigilant engine house. Mr. Ferrel married for his first wife Jane Anderson, who had eight children—Sarah E., William H., Joseph B., James C., Franklin, David F., Mary and Martha; for his second wife Elizabeth Myers—two children, both deceased; third wife, Jane Gosney—no children; fourth wife, Margaret Wilson—one child, Charles Henry.

JAMES M'ADAMS

is the oldest son of the late John McAdams, a native of Ireland, and by trade, a linen weaver. The old gentleman was born in 1802, came to this country in 1852 and seven years later died while residing here with his son. His wife and mother to the subject of our sketch, who also came out in 1852, died here in 1857. James McAdams only received a plain education and formerly found employment amid agricultural pursuits, but in 1849 struck out from "Old Erin's" shore to link his future with the fortunes of the land that prospers under the stars and stripes." He came directly to Wheeling, engaged in various pursuits for two years, when he espoused the trade of painter, glazier and paper hanger, which he has followed ever since. He had only been in America three years when he brought out his father, mother and the balance of the family, numbering nine children, who were further accompanied by a fair one, Miss Alice Downey, of Belfast, destined to become also a member of the family. Soon after their arrival here the subject of our sketch and the young lady in question, were married, and have since became the parents to a family of fourteen children, four girls and one son, of whom are still living. Mr. McAdams has proved himself equally popular as a citizen, as competent in his business, which he still conducts at 1613 Market street. For four terms has he been elected to the city council from the Fourth ward and by his attention, candor and impartiality, unquestionably reciprocated the confidence reposed in him.

GEORGE HILL.

is a name of decidedly English descent, the subject of our present sketch being a native of Yorkshire, where he was born in 1816, and came to America when he was only seven years of age, in company with his father (Thomas Hill), mother and twelve others of a family. They all came direct to Wheeling, where the old gentleman employed himself in various ways down to 1867, when he died, aged seventy-six years. The old lady yielding to death in 1833, aged forty-three years. George received only a common school education, and first went to glass blowing, but finding he could not follow that business, he went to Springfield, where he engaged under his brother to learn the plastering business. Subsequently he returned, formed a partnership with one John Clator, and they prospered as master plasterers for some eighteen years. Dissolving partnership, George carried on a little while single handed, but six years ago located at his present grocery, 159 Sixteenth street, which business alone he still continues. He was married in 1844, to Margaret Ann, second daughter of Matthew West, a native of Pennsylvania, by whom he has had five sons and five daughters. Of the latter, Elizabeth Ann married Daniel A. Wood, of Wheeling; Sarah Oella became Mrs. Wm. Mullanigan, of Dennison, Ohio; Alvirda Virginia was married to Thomas Douglas, of Wheeling. Wm. Henry married Polina Holmes, third daughter of the late Mr. Holmes, of Wheeling.

JOHN ADAMS,

a native of Brooke county, was born in 1841, and is the youngest son of Richard Adams, carpenter, of the same place. He received his finishing education at Bethany College, Brooke county, and the first business he espoused was a clerkship in the dry goods store of J. E. Curtis, Bethany. After two years, and while yet quite a youth, he took a position in the post office and book store under Alexander Campbell, and was there three years. He next left Bethany, came to Wheeling, and engaged on the *Intelligencer*, where he remained two years, resigning that position for another in the post office, Wheeling, as register clerk, under A. W. Campbell, then post master. After eighteen months, he accepted a situation in the quartermaster's department, at Cumberland, Maryland, under Captain G. W. Harrison. At the close of the war, he returned to his old home in Brooke county, again applying his best energies in the dry goods business, but it was only about two years after that he received the appointment as post master, and filled that office five years, when he again returned to Wheeling. He then accepted a route agency in the postal department on the Baltimore and Ohio Railroad, between Wheeling and Cumberland, but eighteen months found him transferred to the river mail service, between here and Parkersburg, in which he remained six years, and in February, 1879, he received his present appointment as money order clerk in the post office at Wheeling. He was married in 1866, to Emma A., oldest daughter of John W. McNell, queensware merchant, and has a family of one son.

JOHN A. STARKE,

boot and shoe maker, in business with his father at 51 Eleventh street, is a native of Charlottesville, Albemarle county, Va., and was born in 1852. From information we have gleaned, the family is of Scotch origin, and settled in Virginia, as above, at a very early day. The original member, of whom we can learn anything, was James Starke, born in 1786 at Charlottesville, and who died in 1862. He left a family of three sons—John, Feeling and James. Of these, James had one son and three daughters, that only son being also named John, grandfather to the subject of our sketch. He (John) served in the war of 1812–14, leaving Wm. H. Starke, his oldest son, father to John A. Starke. Wm. H., like the predecessors in his family for two generations, was also born in Charlottesville, in 1831, learned the trade of a shoemaker, and in the war was a Confederate captain of the Nineteenth Virginia infantry, being taken prisoner on the 5th of July, 1864, at the battle of Piedmont. He was brought to Wheeling, where he was paroled two weeks after, and sending for his family, settled down here. He first became foreman to the late firm of Gibson & Co., Centre Wheeling, and afterwards took an interest in the house of Starke & Kepner, down to 1871. He is still in business for himself at 51 Eleventh street, where our subject (John A.) is engaged, having served his apprenticeship with his father. He married Precilla, oldest daughter of the late Mr. Gillespe, for many years pavior to the city of Wheeling, and by her has one son.

FREDERIC GOODFELLOW

is a native of Warwickshire, England, born in 1822, and, with his wife and family, arrived in America in 1849. His ancestors were all characterized for practical experience in the glass and pottery counties of England, his great grandmother, who resided in Staffordshire, sharing the honor of having printed the first sample of the famous "willow" pattern ware made in the old country. Frederic being a competent glass cutter, first located at Brooklyn, New York, where he remained some eighteen months. He next went to Cambridge, Mass., and remained down to 1873, when he came to Wheeling, in the service of Messrs. Hobbs, Brockunier & Co., and to this day has charge of their cutting department. Mr. Goodfellow's name would seem equally appropriate to his ability in his craft, his past labors in benevolent causes, and his popularity with the people, as we find he was a worker in Odd Fellowship, temperance and kindred organizations in Massachusetts—a Templar of Honor, Knight of Pythias, &c. He was elected to the second branch of Wheeling's city council, from the Sixth ward, in 1877 and re-elected in 1879, while he made a splendid run for the House of Delegates in October, 1878. He was married in 1842, to Ann, daughter of Joseph Stevens, Worcestershire, England, but who died in 1873, leaving one son and three daughters. One of the latter has become Mrs. Frank Carr, of Cambridge, Mass., and a second, Mrs. F. L. Bender, of Wheeling.

E. R. AYARS,

was born in Bridgeton, New Jersey, in 1843, and in 1872 came to Wheeling, where he engaged in the manufacture of cigars. He married Annie J. Davis, daughter of Isaac Davis, of Bridgeton, New Jersey, in September, 1862. They have one child, Mary Louisa. In 1862, September 1st, Mr. Ayars enlisted in company H., 24th New Jersey volunteers, (nine months men), and mustered out of service July 1st, 1863.

VOLTINE HERBERT,

was born in November, 1849, in Frankfort-on-the-Main. He served his apprenticeship as nail maker, at Bridgeton, New Jersey, came to Wheeling, in 1872, where he has since been engaged at his trade.

ANDREW THALMANN,

was born in Germany, September 11th, 1821, and came to Baltimore, in 1848. From thence, he came to Wheeling, in May of the same year, obtaining a situation in the Top Mill as a laborer, and commenced digging coal in 1854. He managed the Top Mill coal bank for twenty years, and now owns and is working the Slack Town and Fulton mines. He is also engaged in the grocery business on Main street, Wheeling. Mr. Thalmann was married to Mary N. Coates, in 1850. They have three children, Frank S., Catharine and Mary A.

IANTHUS G. DILLON,

of the important firm of Turner & Dillon, watchmakers and jewelers, of 1223 Market street, is the eldest son of Abner Dillon a native of Belmont county, still in business at that place, as a harness and trunk manufacturer. The old gentleman is among Belmont's oldest and most prominent tradesmen, his wife being, Eliza J., youngest daughter of the late A. Grove, one of Belmont's first dry goods merchants. Ianthus G. Dillon was born in 1850, at Belmont, and first went to the watchmaking and jewelry business on the 23d of May, 1868, as an apprentice to Mr. C. P. Brown, of Wheeling, with whom he not only served his time faithfully, but ultimately became a partner for a term of about three years. Then, to wit, in 1875, he became a partner with Mr. Wm. A. Turner, who was previously a journeyman with one of the earliest jewelry houses in the Nail City, and who may be regarded to-day, the oldest experienced jeweler retaining association with the trade in Wheeling. Their store is among the most influential and intrisically valuable houses in the state, commands a superior class of trade, and is unquestionably a high compliment to Wheeling. Mr. Dillon was married in 1878, to Ellen, eldest daughter of Mr. R. J. Smyth, a popular wholesale and retail grocer in this city, and their private residence is located on the corner of Byron and Thirteenth streets.

CHARLES H. QUIMBY,

stationer and news agent, 1414 Market street, came to Wheeling in 1864. He is a native of Boston, Mass., and is the second son of Thomas W. Quimby, of the same state. Charles was born in 1838, received a plain education, and at twelve years of age went to the tanning business, to which he served his time. On his arrival here he first worked at his trade on his own account, but after a year's application thereat, opened a stationery, book and news depot on Market street, which business he has continued successfully to the present. He was married first in 1868, to Caroline A., daughter of Mr. George Mender, then in the dry goods business in Boston, but she died in the early part of 1875, without issue. At the close of the same year Mr. Quimby was married a second time, to Sarah, youngest daughter of Mr. James Baker, farmer, of Washington county, Ohio, by whom he has now two sons and one daughter. Speaking of the Baker family, Mrs. Quimby is a descendent from our oldest pioneers. Her father and Col. Samuel Baker, of Ohio, were brothers, and their father was taken prisoner, at one time, by the Indians, who kept him a prisoner among them for three years, subsequently exchanging him to the British forces, when he received his freedom.

JAMES RINE,

proprietor of the Rine House, is second son of Joshua Rine, of Frederick county, Maryland, born 1796, a well-to-do farmer. James was born in 1823, and brought up on his father's farm in Jefferson county. In 1851, while still on the farm, he married Mary, only daughter of John Wesley Appleby, of Harrison county, W. Va., by whom he has had five children. James left his father's home in 1852, and took an adjoining farm of 110 acres, which he cultivated successfully until 1861. He then removed to Short Creek, Ohio county, W. Va., on to another farm of 250 acres. He was there sixteen years, and left in October, 1877, coming to Wheeling, where he succeeded Edward Christman in the conduct of the present Rine House, 1044 and 1046 Market street, formerly known as the Christman House. He has there about thirty-two rooms at disposal, keeps a few boarders and runs a very comfortable $1 per day house, which receives considerable transient custom. In connection with these is a capital stock yard for cattle and horses, it being the only one in that end of town. There is a standard scale to weigh stock, and stable accommodation for some seventy horses. Mr. Rine is an excellent host, and most indefatigable in his attentions to his guests.

CALEB E. WAGNER

is the third son of William Wagner, of Cumberland county, Pennsylvania, born 1821, and cashier of the National Bank of Morgantown, West Virginia, for the past forty-four years. Caleb E. was born at Morgantown, in 1847. His earliest engagement in life was in the dry goods store of T. Pickenpaugh, Morgantown, in 1870, where he remained four years. Then he went to Mount Pleasant, Iowa, in the clothing business with G. H. Spahr. But in two years he came to Wheeling, and in company with Lewis Woodmansee, went into the livery business, at the old Grant House. He, however, sold out his interest to his partner in 1876, and went into the wholesale liquor business at 1047 Market street. It only took nine months to irrecoverably dampen his "spirits" in this line, and next he bought out Bailey & Travis, who were running a livery at 1500, 1502 and 1504 Main street, where he still conducts a most important business. His stables are 120 feet by 66 feet, wherein there is accommodation for forty horses, though his average stock on hand runs from twenty to twenty-five. He has also a splendid assortment of hacks, carriages, buggies, sleighs, etc., besides a fine adult's hearse and a very attractive infant's hearse. Mr. Wagner was married in 1874 to Mary Louisa, second daughter of Isaac Cotts, of this city, and has one child.

CHRISTIAN SCHNEPF

was born in Wurtemburg, Germany, in 1848, and is the eldest son of Frederick Schnepf, who came to this country, with his family, in 1852. Ten years later Christian espoused the drug business, entering the service of Brentlinger & Derry, on Market street, with whom he remained four years. He then entered the service of Logan & List, with whom he remained eight years, and on the death of Mr. John List, he succeeded to his business, 1335 Market street, on the corner of Fourteenth. Here Mr. S. still holds forth in one of the neatest and most replete drug stores in the city. He was married in 1874, to Johanna, daughter of Frederick Bromer, of Caldwell's Run, by whom he has three children, all sons. Residence 2233 Chapline street.

CONRAD SCHAMBRA,

a native of Germany, was born in 1835, and came to America first in 1853, when he went with Bayha Bros. to learn the tinning trade. He remained with them seven years, and afterwards worked at several places as a journeyman till 1864, when he opened for himself at 1033 and 1035 Market square, opposite the market house. Two years later he bought the property, and three years still later erected thereon a commodious three-story brick store with a workshop in the rear, and still continues in business therein. He is an accredited mechanic of exceptional ability in his craft, and keeps a capital stock constantly on hand. He was married in 1861, to Ernestina, oldest daughter of John Weast, of this city.

JOHN F. SIMPSON,

livery, sale and feed stable proprietor, at No. 44 Fourteenth street, was born February 5, 1827, in Louden county, Virginia. His father was a native of Bedford, Pa., and his mother, of Louden county—the latter being a daughter of James Schwartz, a wealthy farmer. They removed to Belmont county, Ohio, in 1834, where the old gentleman built a grist and saw mill, and John, the subject of our sketch, ultimately succeeded to it, conducting the same until he was twenty-two years of age. For five years subsequently he filled various occupations, taking unto himself a wife at twenty-six years old. He married Betty Maria, oldest daughter of Jas. Gandy, of Belmont county, Ohio, by whom he had five children, but she died in August, 1865. One of his children named Rosa, was married about 1874, to John Troll, one of the most prominent merchants and heaviest wool buyers in St. Clairsville, Ohio. In January, 1867, Mr. Simpson was again married—this time to Sarah, second daughter of William Hogue, storekeeper, of Belmont

county, and who was a member from that part to the legislature. By her he has had one son. In about 1858 Mr. J. F. Simpson went into the livery business, first in Morristown, Belmont county, and was for five years proprietor of the "National Hotel," St. Clairsville, Ohio, coming to Wheeling in 1875. At the time of the burning of the Grant House, he owned the livery stable connected therewith, losing about one thousand dollars by the conflagration. He then located at his present address, erecting a stable 50x60 feet. He trades a great deal in horse flesh, and usually keeps from twelve to sixteen head on hand for his business. He has the finest landau in the city, one omnibus, several barouches and carriages, besides buggies, sleighs, and a very fine hearse—all of which are A I, and possess the latest improvements. His stock and stables are of a character to do credit to any city.

JOHN ROBRECHT,

was born in 1826, in Prussia, and came to this country in 1847. On his arrival in Wheeling, he first undertook contracts for plastering, and was very successful, doing as much as $10,000 worth of work in a season. After following that occupation for three years, he opened a grocery, which he ran for nearly three years, when he succeeded to a farm and seven hundred acres of land on Short creek, from which he reports raising in one season 2700 bushels of barley, 1600 bushels of wheat, 800 bushels of rye, 1500 bushels of oats—put up 300 tons of hay, and cribbed 6000 bushels of corn, while he dealt extensively in horses, cattle, hogs, wool, etc. He was there seventeen years, and then bought his present property, the Central Hotel, on the corner Water and Fourteenth streets. It is a fine three story brick building, having forty-eight rooms and every necessary appointment for such an institution. It is a $1.50 per day house, is well managed and though entertaining a few boarders, its chief trade is transient. Mr. Robrecht was married in 1850, to Mary, only daughter of John Wilkie, a prominent farmer in the old country, by whom he has four sons and five daughters, though she died some five years ago.

FIDELIUS RIESTER,

is a native of Wurtemburg, Germany, and was born in 1848, coming first to America in 1867. Having filled the capacity of book-keeper and salesman in a dry goods house at Zanesville, some four years, he came to Wheeling and engaged with C. Welty & Bro., wholesale liquor merchants on Main street. Here he remained until 1874, when he received the appointment of secretary to the German Fire Insurance Company, at their office, 29 Fourteenth street, which position he still fills, as also manager of the Wheeling Opera House, in which latter occupation he has become specially popular for his urbanity and attention. The German Fire Insurance Company is among the most reliable corporations in our city, was established in 1867, and carries a cash capital of $100,000.

JOHN THONER,

wholesale and retail liquor merchant, 2240 Market street, is a native of Germany, and came to America in 1854. He was a weaver by trade, but on his arrival in this country, he adopted various callings, including that of gardner, waiter, beer bottler, &c., until 1868, when he opened out in his present business, on the corner of Market and Twenty-third streets. Here he prospered up to a little over a year ago, when he removed to his present address, a fine brick premises of three stories, with a twenty-two feet frontage, abundantly stocked with a very superior stock of goods. He was first married in 1861, to Ann, third daughter of —— Brady, of Ireland, by whom he had one son. She, however, died in February, 1869. He was married a second time, the following year, to Frances E., fourth daughter of Margaret Hohmann, by whom his family has been increased to the extent of two daughters and one son.

JAMES ELWOOD HUGHES,

of the firm of Thomas Hughes & Co., merchant tailors, 1211 Market street, is the second son of James C. Hughes, a native of Juniatta county, Pa., and was born in 1845, in Fulton county, Pa. He first came to Wheeling in 1867, and engaged as a collector with the old established house to which he yet belongs. After two years faithful service he became traveler and salesman till 1873, when he was admitted as a partner. From this his interest has continued to increase, until he is now manager of the business. The premises of the old firm, which was established as far back as 1840, were located on the corner Twelfth and Water streets, but in August, 1878, they removed to their present address, where they have, by far, the most imposing store of the kind in the city, and command a very influential and extensive share of patronage. The building is three stories, having work-rooms on the upper floors, while the store proper, 22x80 feet, is admirably appointed and never lacking in the most fashionable goods each season. James E. Hughes was first married in June, 1873, to Mary R., oldest daughter of John Bishop, formerly in the government service and a prominent Republican politician. She was an estimable young lady, and by her he had one child, but she died in 1874. Mr. Hughes was married a second time in 1876, to Anna B., youngest daughter of Mr. Samuel Williams, of Rainsburg, Pa., but has no further family.

JOHN W. BERRY,

of 1312 and 1314 Water street, rope, twine, leather and gum belting warehouse, was born in 1837, and is the second son of William Berry, of Devonshire, England, who came to America in 1833. John served his time at rope-making, part of the time in Wheeling and part in Belmont county, Ohio. When twenty-one years of age, he contracted to guide six two-horse teams to Iowa, which he did successfully, and there occupying himself in various ways, did not return till April, 1864. He then went into partnership with his father and oldest brother, R. J. Berry, now deceased, in his present business with factory in connection, in Belmont county. At the death of his brother, he continued in business with his father, who only went out in April, 1877, leaving John W., as he is now, sole proprietor. The premises are extensive, being 40x42 feet, and two stories, wherein a stock of some $8,000 to $10,000 is usually carried. He was married in 1871, to Josephine, third daughter of the late Townsend Frazier, an old Virginian who lived in Belmont county from 1825 to his death, in 1874. They have a family of four children.

JOSEPH GREEN,

oldest son of August Green, a native of Germany, came here about 1847, and first engaged himself upon his father's farm. When only nineteen years of age, being of a speculative turn of mind, he took an interest in the oil business at Cow Run, Washington county, Ohio. Here he carried on successfully for six years, selling out in 1873, when he came to Wheeling. First assisting C. Burdats and Joseph Kramer, restaurteurs, in 1876 he opened his present Centennial saloon, 1147 Market street. He married, in 1877, Frederika, the oldest daughter of John F. Franz, of this city, and by her has two children.

HARVEY BROCKETT,

a native of North Haven, Conn., was born in 1807, being the son of Joel and Elizabeth Brockett, *nee* Moultrepp. He removed to Wheeling in 1828, and has been engaged as an engineer for manufactories for about forty-five years, remaining at the Belmont Rolling mill, alone, for nearly sixteen years. He has been married twice—first to Angeline Aaron, who died at the age of twenty-five, and secondly, 1853, to Miss Vilette Stone, *nee* Sallyards, who died in 1878, nearly sixty-three years of age, leaving one child by her former husband, though Mr. Brockett's family by a previous wife, numbers five—three daughters and two sons.

HENRY M. BABCOCK,

superintendent in the nail department, Riverside Iron Works, was born in Taunton, Mass., in 1834. His parents were Milton and Lydia B. Babcock, *nee* Bowen. He was trained a nailer in Wareham, Mass., where he remained seven years; he was connected with the Providence Iron Co., (nail department) for twelve years. In 1867 he removed west, and after a year's engagement at Pomeroy, Meigs county, Ohio, he came to Wheeling where he has since been identified with the nail interests of the Riverside Iron Works, and has, at present two hundred men under his supervision. He was married in 1857, to Marietta, third daughter of Mr. Joseph King, machinist, with the Providence Steam Engine Company.

ALEXANDER T. YOUNG,

is the only son of John Young, a pattern maker, of England, who came to America in his youth. The latter is still living, and engaged with the Centre Foundry Company, Alexander

T. Young was born in Wheeling, in 1853, and educated at the University of Michigan. In 1869 he entered Mr. Bocking's drug store, on the corner of Twelfth and Chapline streets, where he remained two years, and then served several years with Logan, List & Co., subsequently graduating in the pharmaceutical department in the University of Michigan. He returned home in 1875, and immediately succeeded Mr. August Yarhling, on the corner of Jacob and Sixteenth streets, where he still presides over a first-class drug store. He has acquired a considerable knowledge of analytic chemistry, and by virtue of his care and experience, has built up quite an extensive prescription business, while he is special agent for a select line of imported perfumes.

HUGH STERLING,

the present incumbent of the Wheeling post office, is the oldest son of James Sterling, and was born in 1842, at Steubenville, Ohio. He served his apprenticeship at the *Herald* office, in that city, proceeding to Pittsburgh in 1860, where he engaged on the *Dispatch*, remaining there until April 18, 1861, when he enlisted in the Twelfth regiment, known as Captain Tanner's Zouaves. He first completed the three months' service, and then re-enlisted, when he was placed in the Twenty-third Pennsylvia regiment. He then remained in the service down to September 6, 1864; was engaged in sixteen battles of the many fought by the Sixth Army Corps, yet escaped either being wounded or taken prisoner during his service. He returned to Wheeling at the close of this service, and in 1864 received the appointment of chief clerk of the inspection department of the provost marshal general's office, holding that position till the office in question was abolished, probably two years. Next he was engaged in the city health office, after which he entered the service of the Street Railroad Company. He next received an appointment in the delivery department of the post office, but only to resign in a very short space of time to become book-keeper for the Wheeler & Wilson Sewing Machine company, with whom he remained fifteen months and then returned to the post office, where he would have filled the position of clerk in the money order department for ten years, had he so remained to April, 1879. On the 29th of January, in that year, however, he was promoted to the position of postmaster, taking possession of the office on the 10th of February. He was married June 22, 1865, to Matilda H., only daughter of Mr. George W. Sights, then a resident of this city, and by her has one son. Nor should we fail to state that Mr. Sterling still retains the commission of lieutenant colonel in the First regiment of West Virginia infantry.

PETER PHILLIPS,

of 2920 Chapline street, is a native of Paisley, Scotland, and was born in 1812. His parents were Robert and Mary Phillips *nee* Clark, the former of whom was a dry goods merchant. Peter became a carpenter and cabinet maker, serving three years and a half to each branch of his trades. In 1843 he sought the hospitable shores of America, and first located at Pittsburgh, where he became first proprietor in the "Iowa" Foundry, but was burnt out in 1845, when he came on to Wheeling. He first engaged here at his original trade, which he followed down to 1852, when he opened the first box and trunk manufactory in this section of the country, Subsequently, to wit, in 1864, he further started a bedstead factory, on Eoff street, which he continued for some twelve years. Being a new feature in the line of manufacture here, it was looked upon as a special novelty for some time. The old gentleman afterwards returned to "his old love," and still remains in the pattern and furniture manufacture at the address given. He was married in 1836, to Jane, daughter of Charles Sinclair, of the town of Ayr, Scotland, and they have had a family of eleven children, nine of whom are still living.

GOTFRIED C. WINZENRIED,

is the eldest son of Frederick Winzenried, a native of Germany, who came to this country forty or fifty years ago, settling in Weeling about 1844, where he conducted business as a watchmaker and jeweler. Gotfried is a native of Monroe county, Ohio, and was born in 1841. In 1857 he went to the jewelry business with his father and continued to 1861, when he volunteered into the Frst Weeling Cavalry, under Capt. Carman, and left Weeling in August. He served three years and three months in the late war, only receiving a slight wound, though falling into the hands of the enemy, as a prisoner in 1863, spending a month in "durance vile." On his return home he resumed business with his father, but that gentleman retiring last October, after their old business was destroyed by fire, Gotfried resumed on Market street, and still conducts a very attractive store at No. 1060. He was married in 1865, to Sophia, youngest daughter of Hermon Esmyer, a native of Germany, but a farmer residing near here at the time. They have three sons.

ALLEN E. GRAHAM

is a native of Brooklyn, N. Y., and was born in 1844. He is the oldest son of the late Alexander Graham, a worthy son of "Bonny Scotland," born in 1807, a dyer by trade, and who came to America in 1842. The old gentleman having located several years in Brooklyn, came to Wheeling in 1849, where he conducted the first dye house, on the Second ward market square. Ten years later he went to Petersburg, Va., and Richmond, returning home in 1871 completely paralyzed and speechless, succumbing to death in 1874. His widow (mother to the subject of our sketch) is a native of Cardiff, South Wales, and was born in 1817. To her energy and business capacity is ascribed the credit of successfully conducting the business through her husband's absence and affliction, while though advanced in years, she still lends valued council and assistance in running the old established business. It is still found at 1038 Main street, under the name of her son, Allen E. Graham, who was born in Brooklyn, in 1844. He is a thoroughly experienced tradesman, having followed his present calling from boyhood, taking his early experience under his father. In addition to conducting a reliable dying business, they have, at the address given, an inviting stock of confections, toys, &c. Allen E. Graham is single, but has two brothers and two sisters, the latter of whom have become Mrs. H. Delcher, of Baltimore, and Mrs. W. F. Blake, of New York.

WILLIAM S. MEEK,

at present foreman in the Wheeling *Daily Intelligencer* office composing room, is the oldest son of the late James Meek, of Carroll county, Ohio. The father, who was born in 1821, was a practical printer of wide experience, and came to Wheeling, with his family 1850. During 1857–8 he published in this city the *Evening Traveler*, conducting an office on Main street, between Ninth and Tenth streets, but in 1859 he removed to Bellaire, where he published the *Tri-weekly Press* for some two years, subsequently dying at Bridgeport of pleurisy, in 1865, aged forty-seven years. William S. Meek, the subject of our sketch, was born in 1846, at Barnesville, and in 1854, on the Wheeling *Argus*, with Mr. Dunham, resolved to learn the printing business. Having become successful in this respect, and the war breaking out in 1861, he was among the first to volunteer in the service of his country, and that year joined the 43d Ohio Infantry, company A., under Capt. Spangler, and from his leaving Bellaire, October 1st, 1861, until the 14th day of July, 1865, when he received his discharge, he performed four years active service through almost every battle characterising the western campaign—was with Sherman on his famous "march to the sea"—and yet came out without a wound, actually privileged with the distinction of being a veteran soldier ere he had arrived at his majority. On his return to Wheeling he filled the position of foreman in the *Daily Register* composing room for three years, during which time he married Sallie, second daughter of Squire William Robertson, a very popular citizen, who died in 1863, and has now, by her, an interesting family of four sons. Soon after forsaking a benedict life, he proceeded to Pittsburgh, became associated with the mechanical departments of most of the principal newspapers in that city, during a period of ten years, and returned to Wheeling in November 1878, where he received the appointment of foreman in the *Daily Intelligencer* office, which responsible position he still retains with efficiency. Nor should we fail to add that in 1872 he was honored with the presidency of the Pittsburgh Typographical union—was elected a delegate from the Iron city, 1873, to the International Labor Congress, at Cleveland, Ohio—while he is a member of the National Encampment of the Grand Army of the Republic and a member of the Grand Lodge of the Ancient Order of United Workmen.

BENJAMIN FISHER.

The business career of this gentleman is an illustration of the triumphs and success that are the reward of energy, close application and intelligent enterprise. He was born in Delaware county, Pa., on the 21st of May, 1829. His father died when

he was a youth, and although receiving an education in the common schools, his practical experience has doubtless been the great secret of his universal success in business. His father died when he was a youth, and at the early age of twelve years he began in the world to make a living for himself. When but eleven years old he commenced as a nail feeder in the city of Pittsburgh. While still a boy he went to Newcastle, from whence he returned to Pittsburgh, then made a trip to the east, and again returned to the Iron City, still following his vocation as a nail feeder.

In the spring of 1845 he came to Wheeling, and engaged in this city as a nailor, although only sixteen years of age. He was the youngest in the city at that time having charge of a nail machine, and of all the nailors then in the works at this place, Mr. Fisher is the only one now living in Wheeling.

About the year 1836 he became superintendent and manager of the Benwood Mills, was interested in the Belmont Mills and also what is now the Wheeling Iron and Nail Works. He became a partner with Mr. Culbertson in the Star Foundry in 1868, and in 1871 the sole owner of that establishment. He is now one of the owners of the Belfont Nail Factory and Blast Furnace at Ironton, Ohio.

In 1871 he was elected to the Board of County Commissioners, and in 1878 was chosen member of the House of Delegates for Ohio county, against a party majority of several hundred.

He stands in the front rank among the enterprising business men of Wheeling, and enjoys the confidence, respect and esteem of all with whom he has been associated.

CHRISTIAN HESS,

senior member of the firm of C. Hess & Sons, merchant tailors, 1323–25 Main street, is second son of the late Jacob Hess, a practical tailor, who was born in Germany in 1799, coming to America in 1852, where he took the cholera, soon after his arrival, and died in 1852. Christian Hess, the subject of our sketch, was also born in Germany, November 18, 1825, where he early applied himself to the same trade as his father, setting sail for America in 1845. Arriving in Cincinnati, he hired himself, to finish his apprenticeship, with a Mr. Lawrence Warner, for the sum of eighty dollars for a year's service. At the request of friends, he then came to Wheeling and engaged with Daniel Schambra for the sum of ten dollars per month—in those days that sum being very creditable wages. He remained there for about one year, and in 1848 linked his fortune with Chris. Hausenhaur, the two opening up a business on their own account, which they ran so successfully that Mr. Hess bought his partner out in two years, for the sum of $750, though their original capital was only $200, all of which Mr. Hess put into the business. During the succeeding eight years, the latter gentleman purchased a lot on the corner of Main and Quincy (now Fourteenth) streets, where the store is still conducted, and erected thereon the fine three-story premises, 45x60 feet, the whole costing him, in those times, $12,200. Here he has remained ever since, and though locating in the Nail City when it had only four other merchant tailors and one ready-made clothier—David Stine—within its municipal limits, today he may be credited with presiding over one of the most reliable and desirable businesses of the kind in the state. Nor has this formed the limit of Mr. Hess' enterprise, for, fifteen or sixteen years ago he bought out a farm of one hundred acres, more or less, from Elijah Woods, of Martin's Ferry, at a cost of $10,000, and there laid out a vineyard of twenty-five acres, besides building a capital wine cellar at a cost of some $4,000 to $5,000. A comfortable farm house is attached, as also a prolific orchard, admirably appointed with grass plat, music stand, seats, swings, &c., suitable to the indulgence of picnic parties. Here Mr. Hess has produced as high as 9,000 gallons of wine in a season, while at the present writing he has probably not less than 10,000 gallons on hand. His present family residence, however, built in 1876, is located on Main street, a splendid brick structure with a thirty-three feet frontage, commanding a view of the river, and in point of architecture and attractive surroundings, second to few in this section. For fifteen or sixteen years he was a director of the People's Bank; has been a member of the German Insurance Company, and vice president of the German Benevolent Society, established in 1847. During the war he duly served in the West Virginia militia, under Captain Vance, and has ever enjoyed exceptional confidence and support as a merchant and citizen. He was married in 1848, to Agnes, daughter of the late Jacob Blum, farmer, of Germany. She emigrated to this country about 1846, and has had a family of ten children, though only six are still living—four sons and two daughters. Adam and Clements are in business with their father; Joseph G. is conducting a wholesale and retail confectionery business on Market street, and Henry is passing through St. Joseph's Catholic College. They are all single.

GEORGE A. FLACCUS,

senior partner in the firm of Flaccus Bros., wholesale family grocers, and extensive dealers in pickles, vinegar, foreign and domestic fruits, etc., is the oldest son of George C. Flaccus, a native of the Rhine, Germany, who was born in 1822. He came to America in 1848, first took an interest in a glue factory in Pittsburgh, for several years, and then moved to Marietta, where he farmed for eight years, coming to Wheeling some fifteen years ago. George A. Flaccus, the subject of our sketch, was born in Marietta in 1858. He took his early education in St. Vincent College and Lindsley Institute, Wheeling, completing his studies in Wheeling Business College. In 1876, he and his father opened a grocery at their present stand, corner of Market and Twenty-third streets, but the latter retiring in twelve months. Mr. George A. Flaccus took in his two brothers, Mr. C. and E. C. Flaccus, since when the firm style has been Flaccus Brothers. Their premises are well located and commodious, being 22 feet by 125 feet, with a store room semi-detached for heavy goods. When the three brothers harnessed in business together, they applied their sole energies to building up a jobbing trade, making fancy groceries, vinegar, and pickles their leading specialties—they being special agents for F. &. J. Hinds' matchless "Key Stone" pickles, prepared in Pittsburgh. The boys have pushed trade with a hearty good will; are uncompromising workers, and have established an excellent wholesale trade throughout this city, and in fact state, including a capital trade in South-eastern Ohio. Their ware rooms are well stocked—admirably kept, and a treat to inspect, Nor should we overlook the important fact, alike complimentary to their energy and enterprise, that for the Christmas of 1878 they manufactured over 20,000 pounds of mince meat, and have established a fruit preserving factory, at which, during the season of 1879, they purpose extensively preserving fruits and preparing jellies and fruit butters for the wholesale trade, an entirely new, but highly promising feature, in Wheeling's manufacturing interests. The three boys are single.

JAMES PETERS

is a nailer at the Belmont mills, and son of the late James Peters, of Ireland, who came to America with his family in 1846. The old gentleman first landed in Philadelphia, and being a practical soap manufacturer, he commenced there in his trade. Succeeding in his business for three years, he next made for Wheeling, where he arrived in 1849. Here he took contracts for roads and buildings up to the time of his death, in July, 1852. James, Jr., the subject of our sketch, was born in Ireland, in 1842, and first went to work at the Belmont mills in 1854. Here he remained till September, 1861, when he volunteered into the first Virginia infantry, under Captain W. Morgan, serving three years, three months and seventeen days. He fortunately escaped without serious injury, though once being taken prisoner and spending three months in Libby prison, Belle Island. On his return home, he became a baggage master on the Baltimore and Ohio railroad, from March, 1864, to September, 1867. He then went back to the Belmont mill as a feeder, but subsequently became a nailer, which position he still occupies. He is, and has been since its organization in 1872, president of the Nail city boat club, with the exception of one year, and was elected this year, a member of the City council. He was married in 1877, to Hannah J., eldest daughter of Rual Wray, a prominent farmer of Beaver county, Pennsylvania, by whom he has one child, a daughter.

LOTT H. JOY

is a native of Yorkshire, England, was born in 1825. He is second son of Matthew Joy, a lead miner, of the same place, who, with his wife and family, came to America in 1832, on board the sailing ship Jefferson. They first located at Baltimore and Richmond, where the father followed mining pursuits down to 1847, when he died, aged 56 years, his wife also succumbing to death in 1852, aged 64 years. Lott H. Joy, to whom we propose mainly to refer, in 1837 went to learn iron working at an extensive works in Richmond, Virginia, where he remained ten years. He then engaged at the Vulcan Iron

Works, Troy, as a roller, next at Jersey City, and then at Norristown, Pa., staying at the latter place four years. Having also made a brief sojourn at Pittsburgh, he proceeded to Wheeling, arriving here in 1852. At that time the old Washington mill was running, and he there found ready employment under Superintendent John Hartman. After a few weeks he was next employed by E. W. Stephens to assist in building the present Crescent mill, and was there about eight years. From there he proceeded to the Portage Iron Works, Blair county, Pa., where he remained superintendent four years, subsequently returning to Wheeling, when he again engaged at the Crescent mill remaining thereat down to 1875. Since that date he has acted in the capacity of superintendent of the Ohio Valley Works, Moundsville. He was married in 1846, to Charlotte, daughter of David Griffiths, of South Wales, England, who came to this country with her parents in 1837. They have had a family of twelve children, eight of whom are still living—two daughters, married, having become Mrs. G. H. Stull, of Erie, Pa., and Mrs. Wm. Crommer, of Wheeling.

G. WILL TIEMANN,

cigar merchant and tobacconist, at 1003, Main street, was born in 1854, at Wheeling, and first went to learn cigar manufacture in 1871, with Bernard Reiman, on Tenth street. After ten months service, he went to Bethany College, Brooke county, to complete his education. Some six months later he went with G. H. Kurtz, boot and shoe dealer, remaining with him till he closed out business—probably two years. He then went with Henry J. Schultz, in the same line of business, but only remained a few months when he took a much livelier interest in rural life, taking a three year's sojourn on his father's farm, Pleasant Valley, National road, West Virginia. He next sought a city life, locating at his present address, where he established one of the neatest cigar stores in the city, and was probably the first to establish a cozy smoking room for the entertainment of his patrons. He was married in 1878 to Mary A., eldest daughter of Anton Stauver, of this city.

FRANK STANTON,

of the firm of Stanton & Davenport, booksellers and stationers, 44 Twelfth street, is the youngest son of the late Benjamin Stanton, formerly Lieutenant Governor of Ohio and representative from his district to Congress for four terms—he was also a native of Point Pleasant, and a prominent attorney for over forty years—came to Wheeling in 1866, followed his profession, and died in 1873. His son Frank, the subject of our sketch, was born in 1852, at Belfontaine, Ohio, and came here with his parents. After receiving a plain education his first business engagement was with John Roemer, dry goods merchant, with whom he remained eighteen months, and from there proceeded to Bethany College, Brooke county, where he remained up to the death of his father. He then returned, and clerked for his brother, J. D. Stanton, who at that time was conducting a book store on the corner of Market and Twelfth streets. It was only one year, however, ere he went into partnership, and in 1875 his brother retired in favor of Mr. John R. Davenport—hence the firm style of Stanton & Davenport. They that year moved into their present store, one of the finest of the kind, and most attractively stocked in the state—at which they alike do a wholesale and retail business. Mr. Stanton was married in 1877 to Lida, eldest daughter of W. K. Day, of this city, and whose grandfather has for thirty years past been city treasurer, still filling that office with ability and attention though having arrived at the age of four score years.

PROFESSOR CHARLES E. DWIGHT

is the only son of Henry L. Dwight, and a descendent of the late Rev. Timothy Dwight, a famous divine, author, and at one time president of Yale College, Massachusetts. Charles was born in 1849, in Somers, Tolland county, Connecticut, and first entered the drug business in 1867, at Greensville, Pa., where he remained three years and then came to Wheeling. He first clerked at Mr. Bocking's drug store, on the corner of Chapline and Twenty-fourth, but after being two years in his employ he bought out the business, which in 1877 he removed to the opposite corner of the street. In 1872 he commenced close study to become competent as an analytic chemist, sharing the advantage of a correspondence with Yale and Harvard colleges, as well as several eminent professors in chemistry. In 1874 and 75 he gained popularity by making analyses of ores for the state of West Virginia. In 1876 he was appointed by the U. S. Centennial Commissioners to make analyses of all ores and minerals sent from this state to the "world's fair" at Philadelphia. He was also probably the first, this side the Allegheny mountains, to construct a telephone according to principles of the reputed inventor—Professor Dolbar—whose intimate acquaintance he was privileged with. Again, in 1871, he became popular as a marksman with the rifle—making twenty-eight bulls-eyes out of thirty shots, at 800 yards. During the spring of that year he won all the matches shot here, at 800, 900 and 1000 yards, when he was applied to by the national rifle association to compete for a place in the national team. During his competition for the honor, he made a united score, with the Maynard rifle, at 800, 900 and 1000 yards, of 437 points out of a possible 450, including 80 bulls-eyes out of 90 shots—a feat never before accomplished by any marksman with a rifle. He of course secured his place among the team, which he fills at the present writing—their mission being to contribute a squad each year to compete against all nations in shooting for an international trophy, valued at $3,000, and given to the riflemen of the world by the centennial commission—the honor of winning which, against all comers, for three years past has fallen to the American team. Mr. Dwight was married on the 28th of January, 1875, to Lizzie, fourth daughter of the late Thomas Neill, originally partner in the firm of Neill & Ellingham, wholesale grocers, Main street, and their family consists of two sons.

THOMAS W. WEITZEL

is a native of Prussia, and was born, in 1843, coming to this country with his parents when only six years of age. His first occupation was at the Belmont mills for a year, next he became an assistant gardener, and then espoused the confectionery business, in the service of Bosley & McNash, Market street, with whom, and their successors, he remained thirteen years. After that, he went with C. R. Behler, confectioner, on Market street, where he remained three years, and then entered the grocery business on his own account at his present stand, on the corner of Market and Twenty-fourth, where he has now held forth in a capital store for seven years past. He was married on the 19th May, 1868, to Rosa G., youngest daughter of Thomas Lynch, a native of Ireland, though at that time, a resident in Wheeling. They have a family of three children.

WM. ZINK,

of the present firm of Zink & Son, was born in 1822, at Columbus, Ohio, and was second son of Wm. Zink, sr., of Pennsylvania, who died in 1839. William, jr., learned the cabinet business with Resa Crown, of Steubenville, and left his employ in 1838. He then went to Wellsburg, and remained at his trade until 1846, when he came to Wheeling and worked for George Mendel till the fall of 1858. He then established a business for himself on Main street, where he carried on ten years. But purchasing the site of his present store, corner of Twenty-second and Market streets, in 1864, he built a fine brick two-story premises, 32x62 feet, thereon in 1868, to which he removed and therein still carries on a very excellent furniture and carpet store, besides conducting an undertaking business, having a very fine hearse and completely furnishing funerals. He took his son Albert into partnership in 1877, hence the present firm style of Wm. Zink & Son. Mr. Zink was first married in 1840, to Lucinda, eldest daughter of Thomas Beatty, of Wellsburg, but who died in the spring of 1865, leaving him four children. He was married a second time in 1867, to Rebecca Ann, second daughter of John Zink, of Brooke county, by whom he has had four more childen, two of whom only are living.

JOHN J. COOPER

is the oldest son of William Cooper, a native of Ireland, though originally of English descent. The old gentleman came to America in 1848, with his family, and located at Wheeling, engaging himself as a contractor, during which time he cut nearly all the streets south of the stone bridge in Centre Wheeling. Subsequently he ran a limestone quarry and coal bank. John J., the subject of our sketch, was born in Ireland, September, 1846, and was consequently only two years old on arriving in America. He espoused the calling of coppersmith, learning his trade with U. J. Duffield, on Main street hill, and worked at his trade in Wheeling, Cincinnati, and various places in Massachusetts, returning home in ill health in 1870. He then clerked for the Baltimore and Ohio Railroad Company, at Benwood, which was then a transfer station. Remaining there

about a year, he next entered the police force, in the city of Wheeling, under Captain Henry Conant, remaining therein for some two years. He was then elected constable for Webster district, serving nearly two years, when he returned to his original trade. But it only took him a few months to find out that his health insisted on his relinquishing such a calling, and he again became a candidate for constable and was once more elected for four years, in 1876. He is a popular citizen, and an efficient and active officer in the discharge of his onerous duties.

CHARLES MOENKEMOELLER,

of the Central drug store, corner of Main and Twenty-second streets, is the oldest son of Henry Moenkemoeller, and was born in Wheeling, April 16, 1856. His father is a native of Bielefeld, Pruisich Minden, and was born in 1832, being a carver and turner by trade. The old gentleman came to Wheeling in 1853, having previously for a brief period engaged himself in the shipping business at New Orleans. From there he took a trip down the Mississippi, where he was induced to come to Wheeling. Here he became "shear boss" at the Belmont nail mill and has since retained his position with accredited skill. His father, Charley's grandfather, and Charley's uncle, were both killed in the late Franco Prussian war. The subject of our sketch, Mr. Charles Moenkemoeller, first engaged at Bocking & Carrol's drug store, corner Twenty-fourth and Chapline streets, where he left after one and a half year's service. He then engaged with Edmund Bocking, druggist, under Odd Fellow's Hall, corner of Twelfth and Chapline streets, where he remained four years. In the fall of 1874 he went to Philadelphia, and engaged with Dr. Vernon, at his drug store, corner of Forty-third street and Lancaster avenue. At this time he was also reading through Philadelphia College of Pharmacy, graduating in the spring of 1876. Being desirous of seeing the Centennial exhibition, he took charge of a West Philadelphia drug store, remaining there eight months, when he returned home and clerked for Mr. Schnepf for one year and a half. Next he succeeded to the drug store of Hugh I. Roberts, at his present address, where he at present most efficiently presides over one of the neatest, most attractive and well stocked retail drug houses in the city, popular as the Central drug store, and largely patronized by residents in the South end. Mr. M., is unmarried.

J. B. SHEPPARD,

saddle and harness dealer, of Main street, was born in New Jersey, February 7th, 1821. His parents moved to Philadelphia, when he was but seven years of age, and at sixteen he engaged to learn his business with W. S. Hansell & Sons, in the same city, serving a five year apprenticeship. He afterwards worked as journeyman till 1848, when he came to Wheeling, and started in business on his own account in the old Forsythe warehouse on Main street, where he continued for five years, and then removed to his present address, No. 1073 Main street, corner of Eleventh. Here he still manufactures saddles, harness, valises, trunks, etc., of which he constantly carries a full line for both a wholesale and a retail trade. At times he employs quite a number of hands, running from eight to twelve men on an average. He is brother to the former district attorney named Furman Sheppard, and is also similarly related to the contractor here, who built the State Capitol. He was married in 1852, to Elizabeth, eldest daughter of Joshua Lukens, of Reading, Pa., by whom he has four children.

NICHOLAS STEGER

is a native of Germany, and was born in 1827. On his arrival to America, about 1851, he came direct to Wheeling, and being a practical tailor, he engaged at once with Thomas Hughes & Co., merchant tailors. He was only with them, however, a few years, when he opened up business on his own account, on Main, near Tenth. Subsequently, he removed near to Market alley on the same street, and in 1863 bought a lot on his present site and built thereon a three story brick 90 feet by 23 feet, where he still conducts his business, 1034 Main street. He was married in Wheeling, to Barbara, second daughter of Michael Cook, who came into this section of country among the earliest pioneers. By her he has had nine children, all still living, and consisting of five boys and four girls. Edward, his oldest son, was born in Wheeling in 1860, has passed through St. Vincent's College, and having served two years in the drug business with Mr. Schnepf, of Market street, was compelled, in consequence of his father's imperfect health, to return home and assist in the conduct of their old established merchant tailoring business. Mr. Steger's present store and business is noted for submitting both merchant tailoring goods and a select line of ready made clothing second to none in the city, while the house in question is extensively recognized for its reliability and square treatment of patrons.

JOHN A. WHITE,

was born in Wheeling, in 1843, his father, who was a native of Ireland, coming here in 1832, holding a position at the city water works for many years. John first engaged himself with his father, when from fifteen to eighteen years of age, in a grocery store located in Centre Wheeling. He next went with Mr. Larkins, dry goods merchant, in the Market square, with whom he remained a year and a half. He next took a scholarship in Duff's commercial college, Pittsburgh, and returning home, clerked for six years with M. Reilly, wholesale grocer, Main street. From here he engaged with Berger & Hoffmann, tanners and leather dealers, also on Main street. There he remained till they dissolved partnership in 1876, when he became a partner with Jacob Berger, in the shoe and finding business, as Berger & White. In twelve months, however, they dissolved, and two years ago, or thereabouts, he opened on his own account in the same business at 1121 Market street, where he still presides over a capital store. He was married in 1869, to Margaret, oldest daughter of Jacob Snyder, wholesale iron merchant, Main street, by whom he has an interesting family of three children. Mr. John White, Sr., died November 30th, 1875, aged 67 years.

WILLIAM H. SHEIB

is the eldest son of Daniel Sheib, and was born in Allegheny City, Pa., in 1842. He was educated for an architect and civil engineer, in the Polytechnic College, Philadelphia. From 1858 to 1861 he followed his profession in Pittsburgh, and in 1861 volunteered in the one hundred and second Pennsylvania infantry, under Captain Large, and served three years and three months. He was wounded twice and taken prisoner once, receiving his discharge in September, 1864, while in the quartermaster's department. He returned to Pittsburgh and went into partnership with Mr. C. C. Mellor, his brother-in-law, who was conducting the music business on Wood street. After two years he came to Wheeling and succeeded to the business of Jesse B. Mellor, at the music store 139 Main street. In April, 1878, he removed the business to its present location under Washington Hall, where his magnificent store, 20x60 feet, is amply stocked with every kind of musical instrument, book and sheet music, with an immense variety of musicians' sundries. He was married in 1861 to Annie M., third daughter of John H. Mellor, of Pittsburgh, prominent in that city as the founder of the oldest music store there, to-wit, 1832. The lady in question was educated in music at home, and subsequently became a graduate of Leipsic Conservatory of Music, Germany. Mr. William Sheib is organist of the Second Presbyterian Church, Wheeling.

SAMUEL J. ELLIFRITZ,

wagon manufacturer, on the corner of Twenty-fourth aud Market streets, was born in 1824, in Maryland; came to Wheeling in 1842. He learned his trade as a smith, with Richards & Bodley, wagon makers, then on the corner of Clay and Fourth streets, but now known as Chapline and Eighteenth. He was with them three years and then worked as a journeyman at his trade down to 1858, when he commenced business for himself at his present address, where he runs a fine two story brick shop 22 feet by 75 feet, and manufactures wagons, carts, platform and elliptic spring wagons, floats, drays, wheelbarrows, timber wheels, etc. He was married in 1847, to Eliza, third daughter of William Groves, farmer, residing near Winchester, Virginia, by whom he has one son and one daughter living.

JAMES CUMMINS

was born in 1852, and is second son of Robert Hazlett Cummins, M. D., of Washington county, Pa., but who came to Wheeling in 1840 or 1845, practiced medicine here thirty years, and died in 1874. James is a native of Wheeling, and took his education at Washington and Jefferson College, Washington, Pa. On coming home he first engaged with Hobbs, Brockunier & Co., at their glass factory, where he remained two years. He then visited Europe, and on returning, joined in partnership

with George W. Woods, succeeding A. W. Paull & Bro., queensware and glass merchants, at 1142 Main street, where they still hold forth in one of the neatest stores in the city, under the firm style of Cummins & Woods. Mr. Woods is third son of John Woods, farmer, near the city; was born in 1854, and educated at Washington and Jefferson College. Both gentlemen are single.

JOHN W. WAIT

is second son of Lorenzo D. Wait, justice of the peace for Webster district, and was born in Wheeling, November 16, 1844. First engaged on his father's farm, in Marshall county, when he was only twelve years of age. In 1866 he engaged in Handlan & Ratcliffe's general store, on Jacob street, where he remained a little over two years and a half. He next became shipping clerk for the La Belle Iron Works, after which he managed their store, Thirty-first and Chapline streets, and next started a grocery on his own account, which he still conducts on the corner of Jacob and Thirty-third streets, where he has been six years. He was elected school commissioner in 1876, and in 1877 was elected to council. Was married in 1872, to Sarah, second daughter of Richard Smith, carpenter, of West Brownsville, Pa., by whom he has issue, one daughter.

ZENAS FISH,

of Boston, Massachusetts, was born in 1826, and is son of the late Zenas Fish, who died last fall, aged 94 years. He received an academic education in Boston, and when sixteen years of age commenced to learn the trade of a glass cutter, serving his time in Sandwich, Mass. He next worked in Boston, and removed to Pittsburgh in 1852. At the breaking out of the war he joined the Thirteenth Pennsylvania infantry, under Capt. Rowley, and after three months service, re-enlisted, serving through the war to September, 1865, when he received his discharge. His career was a particularly active one, during which he received several wounds, but had the satisfaction of being promoted from private to a colonel. On retiring from the service he came to Wheeling and resumed his trade as a glass cutter. He was first married in 1840, to Elizabeth Brusley, of Barnstable, Mass., by whom he had four children, but she died in 1864. He was married again on the 21st of April, 1872, to Sophia Deffibaugh, of this city.

J. C. PARISH

is a native of Marion county, in this state, and was born in 1838, being son of Edward Parish, born in the same county, though of English descent. J. C. Parish received a plain education at Farmington, Marion county, and was raised on a farm, subsequently learning to be a carpenter. In 1872 he went to the sewing machine business with Mr. C. Y. Lucas, then agent in Wheeling for the Wheeler & Wilson Sewing Machine Co. He remained there three years, and then entered the music business with Messrs. J. M. Hale, of Pittsburgh, with whom he remained until the 1st of February, 1879, when he returned to Wheeling and took charge of the Wheeler & Wilson Sewing Machine Company's agency, which position he still fills. He was married in 1859, to Matilda, daughter of the late Spencer Martin, farmer, of Marion county, who was also for many years a justice of the peace. They have one daughter.

JOSEPH H. SAGE,

agent in Wheeling for the world famed Domestic Sewing Machine, as also the White and New Home, is a native of Illinois, and was born in 1839, in Chippeway, at the mouth of the Missouri river. He is the only son of the late Joel Sage, of Ohio, born in 1813, but who died 1844. The subject of our sketch came to Wheeling with his mother in 1849, and took a plain education, after which he served his time as a mechanic at Phillip's machine shop, in the North end. In 1872 he took the agency he at present presides over at 1313 Market street, and conducts quite an extensive business. He was married in 1865, to Mary, daughter of the late John Vardy, of Pittsburgh, though of English descent, who died in 1858. They have an interesting family of two sons and two daughters.

CHARLES HIRSCH,

the present competent foreman at the Baltimore & Ohio Railroad shops, is a native of Germany, was born in 1844, and came to this country with his parents in 1848. His father is the Rev. Daniel Hirsch, of the Lutheran church, who first located in Buffalo, N. Y., then Erie, Pa., and Marietta, Ohio. Charles took his earliest experience as a mechanic in 1861, when he entered the employment of A. J. Sweeney & Co., whom he served two years. He next visited Cincinnati and other important business centers down to 1866, when he entered the Baltimore & Ohio shops, of which he took charge as foreman in November, 1877, still holding that responsible position. He was married on the 5th of May, 1868, to Hannah, second daughter of Henry Vaas, of Wheeling, by whom he has a family of three daughters and one son.

HANS W. PHILLIPS,

Justice of the peace for Washington district, is a native of Steubenville, Ohio, was born in 1820, and is third son of the late Arthur M. Phillips, of Caroline, Pennsylvania. The latter was a smith and merchant from 1808 for many years, in Steubenville, and moved to Wheeling in 1827 to take charge of the Wheeling Manufacturing Company's work's, where Sweeney's foundry now stands, but returned in the fall of 1828, running a foundry of his own at that place down to 1832. He again came to this city and erected a foundry in North Wheeling, where he continued to his death—February, 1869—aged eighty-five years. Hans W. Phillips took a plain education in Wheeling Academy, and from seventeen to eighteen years of age clerked for his father down to 1840. That year his father retired from business in favor of his brother, James W. Phillips, who formed a partnership with a Mr. Daniel Dunbar, and Hans remained with them for some time. The business was sold in 1843, when Hans W., James W. and Arthur M. Phillips (three brothers) became the purchasers, continuing together down to 1852. That year Hans bought out his brothers and continued the works till 1873, when the Wheeling Centripetal Company became successors to the enterprise. In 1872, Mr. Hans. W. Phillips was elected justice of the peace for Washington district and remains in office at the present time—having also been elected, last fall, member of the board of commissioners, from Ohio county. He was married July 1839 to Ann Elizabeth Zane, born in 1832, daughter of the late Daniel Zane, and grand daughter of the late Ebenezer and Daniel Zane. She took the name of Ann from Mrs. Ann Burgett and Elizabeth after Elizabeth Zane, so popular for having performed the powder exploit during the siege of Fort Henry. Mr. Phillips has been father to a family of eleven children, though only four of them are still living—two sons and two daughters—two of whom are married, as follows:—Ella Bell to W. O. McClusky, and Robert H. Phillips (at present deputy sheriff) to Miss Amanda Robinson, of this city.

FRED VIEWIG,

is leader of the famous Viewig's Orchestra, and boards at 3408 Jacob street, corner of Forty-fourth. This musical organization is among the finest in the state, and provides music for balls, concerts, private parties, picnics, etc., promptly and on reasonable terms. Fred is a talented musician and a competent caterer of the latest and most popular selections of music—sharing the confidence and support of a large constituency of friends.

GREER & LAING,

of 1214 and 1216 Main street, hardware merchants, are among our most important business firms. The founders of this house were Anderson & Laing, who opened up in trade about 1850. Alexander Laing is a native of Scotland, and came to this country in 1846, where he became a clerk in a hardware store for four years. During that period he formed the acquaintance of his first partner, Mr. James L. Anderson, and the two came in 1850 to Wheeling, where they started in business on their own account, in a small way. They infused steady perseverance and enterprise into their new undertaking and gratifying success was the result. In June, 1856, however, Jacob R. Greer purchased out Mr. Anderson's interest, and the firm became Greer & Laing. Mr. G., is a native of Carlisle, Pa., and came to Wheeling in 1834. His first situation here was as clerk for Joseph Pollock, hardware dealer, with whom he subsequently became a partner in business for several years. The firm of Greer & Laing have been at their present location since the establishment of their original business, and the extent of their commercial relations to-day is a high compliment to their energy and industry. In 1865 W. Cruickshank and D. B. McIlwain also became associate members in the firm, but the name of the firm was not changed.

LOUIS COLMAR,

present editor and proprietor the *Deutsche Zeitung* of West Virginia is a native of Bavaria, and the oldest living son of Louis Colmar, sr., a native of the same country. The family came to America in 1868, the father first locating in New Jersey for a month and then proceeding to Wheeling, where he engaged with Vocke & Bickmeier, as a carpenter, and subsequently followed his trade with various other firms. Louis, his son—and the chief subject of our sketch, received a plain education, and took his earliest experience in the printing business with Charles Neuhausen, of this city, from 1870 to 1875, in the *Arbeiter Freund* office. He also worked, subsequently, on the Wheeling *Register*, the *Evening Standard* and *Sunday Leader*, besides spending three years in Pittsburgh on the *Volksblat*. In August, 1876, he and Gustave Guttenburg started the *Zeiting*, in this city, remaining in partnership down to December 1st, 1878, when Mr. Colmar shouldered the entire enterprise, and still conducts it. The paper is independent in politics, eight pages in size and extensively patronized. In addition to the newspaper, this office conducts quite a business in job printing—both in the German and English language.

ANTON REYMANN,

brewer, conducting business in the largest and handsomest brewery in the State, located on the east side of Wheeling creek, in what was originally known as Manchester, is a native of Germany, was born in 1837, and came to America, with his parents, in the winter of 1853. He is the youngest son of George Reymann, who was an educational instructor in Germany. They all arrived at New Orleans, and almost immediately made for Wheeling, where the old gentleman's brother-in-law, P. P. Beck, was in business as a brewer, conducting the Franklin brewery, then in North Wheeling. On their settling down here, the old gentleman, George Reymann, and Mr. Beck, constructed a tavern and storage cellar where the brewery now stands, and by which the county road ran, in those days, though now known at Wetzel street. This tavern, George kept until 1862, when he sold out, visited Europe for a year, and since his return lives in private. Anton (the subject of our sketch) only received a plain education, learned the brewing business under his uncle, (P. P. Beck), and then traveled four years perfecting himself in the business. His uncle being sick, he returned home in 1861, managed the brewery, and on his uncle's death, took an interest in the business with the widow, subsequently buying her out. He continued at the old stand, Fifteenth between Market and Main, down to 1877, when he put up the present handsome and extensive brewery, to which we refer at length elsewhere. Here he holds forth, running a first-class business, at once an honor to his enterprise and perseverance. He was married in 1862, just before his uncle's death, to Thusnelda, oldest daughter of the late P. P. Beck, by whom he has had a family of nine children, though only two sons and two daughters survive.

HENRY M. HARPER,

whose family name is standard in Western Virginia for first-class hats and caps, is a native of Wheeling, and was born in 1834. His father, the late S. D. Harper, was born in East Virginia, in 1792, and upon coming to Wheeling he opened up the present hat and cap business, so far back as 1825, which he first conducted most successfully on the corner of Eleventh and Main streets, where Mr. J. B. Sheppard is now located. At the age of about sixteen, Henry espoused the same business, as did also his brother Samuel. In 1853 the sons became partners in the house, which was then styled S. D. Harper & Sons. About this time the business was transferred to the opposite corner of the street, where the retail trade is still carried on. In 1858 the old gentleman died, when the firm name became Harper & Bro., who, in 1862, having largely extended their wholesale trade—of which the father was the pioneer in the state—further established a special jobbing house at 1221 Main street. They still conduct a flourishing business at both respective addresses given, employing a capital of some $60,000 to $75,000 to run them. Mr. Henry M. Harper was married in 1873, to Marion, second daughter of Professor F. S. Williams, who long enjoyed an exceptional popularity in this section for his educational accomplishments. They have issue, two children.

CHARLES Y. LUCAS,

at present conducting the extensive music store at 1227 Market street, is a native of Toronto, Canada, and was born in 1842. His first association with business was in 1863, when he entered the service of the Wheeler & Wilson Sewing Machine Company, at Cincinnati. Three years subsequently he was forwarded to Wheeling to take charge of a general agency, over which he presided to 1873. That year he and Mr. A. M. Adams formed a partnership and bought out the music establishment of Mr. V. Harding, at the address already given. They remained together some five years, when Mr. Lucas succeeded to the entire interest of the business, which he still conducts single-handed. The store in question is 85x22 feet, lofty, and kept constantly stocked to repletion with as fine a variety of musical instruments, from grand pianos to Jews-harps, sheet and book music, with a general assortment of musicians' sundries, as can be found in the State. Mr. Lucas is extensively popular as a tradesman, and a gentleman whose vocal abilities hold him in high estimation among vocal lovers of harmony. He was married in 1869 to Catharine, second daughter of Mr. Wm. Walker, of Tennessee, and is privileged with an interesting family of five children.

FRED HUSEMAN

is a name about as familiar in Wheeling as that of the market house. He is a native of the city from 1848. So early as 1859, then only eleven years of age, he engaged on Booth, Battelle & Co.'s wharf boat, where he showed an aptitude that soon won for him promotion to third clerk on the steamboat Eagle, and three months later took him another step upwards, to second clerk. In 1862 we find him transferred to the position of passenger agent for the Parkersburg Packet Company, gracing their offices on Water street. Opposition to that line of steamers relinquishing, the same company, who also run a ship supply store, took Fred into their store as confidential clerk. But, after the death of Mr. Battelle, probably ten years ago, yet another steamboat opposition sprang up, on the Matamoras run, when Fred returned to "his old love," that of clerk, and part of the time captain, on the Science steamer, which position he held eleven months. This rivalry, also terminating, the subject of our sketch shared the office of the first clerk on the steamboat Express, but only held the position four months when he conceded the idea of relinquishing "a home on the rolling deep," and at once—in 1871—embarked in an extensive livery business at 1500 and 1504 Main street, where he commanded a splendid stud of horses, (thirty-five in number) averaging in value about $200 each. But the fates decreed against him, and becoming a wiser, but a poorer man to the tune of some $17,000, he closed out. In the spring of 1877, however, he again nerved to the same business. His father-in-law, Captain Booth, provided him with the present well appointed livery, No. 1, Eleventh street, a substantial structure soon went up, having a sixty-four feet front, running back sixty feet, and containing twenty-one stalls, with additional accommodation for twenty-five to thirty vehicles. Here he has ever since held forth, and to-day may be said to command one of the leading livery establishments in this section. In 1873 he was married to Elizabeth, only daughter of Captain C. H. Booth, of this city, a promising young lady, who, however, unfortunately died the following year, though leaving him the consolation of an interesting little son.

BENJAMIN M. LIST

is a son of the late Thomas H. List, who was born under the shadow of St. Paul's Cathedral, London, England, in 1800, and came to America in 1807, his mother being a daughter of the late Benjamin McMechen, of Marshall county. Benjamin was born in 1834, at Moundsville, this state, and first entered into business life in 1853, as a clerk for A. Franzell, hardware merchant, Center Wheeling, with whom he remained three years. He next associated with C. B. & A. J. Cecil, in the boot and shoe business, at the store room now occupied by Carnahan & Co., Main street. But in 1857 he resolved to go west, and after a six year's absence, returned, going into partnership with the late C. B. Cecil, whom he found, had, during his absence, wound up the business he had conducted with his brother and opened a grocery. Their partnership, however, only existed eighteen months, when Mr. List built himself a store on the south side of market square, and assumed a new *role*—that of hardware merchant. But finding this "hard tack" notion scarcely meeting his anticipations, two years later he wended his way to Ravenswood, this state, and joined the general merchandise firm of Adams & Green—giving to them the new style of Adams, List & Green. Declining health next interposing, six months found Mr. List back into Wheeling, where he accepted

the position of book keeper with Trimble & Hornbrook—in whose employ he remained five years, down to 1876. Then taking a six month's trip to the west again, he duly returned and last September, entered into partnership with Mr. J. M. Todd, jr., hence the present firm style of List & Todd, hat and cap merchants, of 1222 Market street, whose admirably appointed and spacious store would adorn a leading thoroughfare in a metropolitan city. Mr. List was married in 1870 to Elizabeth, youngest daughter of the late John McCracken, of Wheeling, by whom he has issue three children. The name of the List family may fairly be classed among the most popular and prominent families in Wheeling.

CHRISTIAN VIEWIG,

born in 1824, is a native of Germany, where he received his education, coming to America in 1842. Landing at Baltimore, he came direct to Wheeling, where he found employment at coal digging. Soon afterwards he purchased a team and dray, occupied himself with the same for some years, and then purchased the property where he now follows the hotel business. He has been keeping the La Grange Hotel, 4408 Jacob street, Wheeling, for the last twenty years. He married Doritha Schaffer, of Germany, in 1849, but who died on the 18th of January, 1878, leaving four children—Christian, Frederick, Doritha and Amelia.

JAMES A. COCHRAN,

is a native of Chambersburg, Pa., and was born in 1807. He was educated and learned the saddle and harness manufacturing business in his native town, coming to Pittsburgh in 1828, where he still worked at his trade. The following year he arrived in Wheeling, where he also adhered to his trade five years, afterwards going to St. Louis and Helena, Kansas. He traveled through the South a number of years, and proceeded to California in 1868, where he pursued mining, hotel keeping and merchandising until 1858. He enlisted at Los Angelos, in Company K, first regiment of cavalry volunteers, as a private, in 1861. He served with his regiment till 1863. He re-enlisted in the Veteran corps, January, 1863, and served until September, 1866, when he was mustered out of the service at Los Vegas, New Mexico. From there he went to Fort Union, and remained two years, thence to Monument City, Colorado, Fort Levensworth, St. Louis, and thence home. Mr. Cochran is now in charge of the toll gate on Wheeling and Fairmont pike, and engaged in the saddle and harness manufactory. He married Maria, daughter of Mr. James Baird, of Marshall county, West Virginia, in 1850, but has no family.

JOHN L. DICKEY,

associate with John M. Birch, in charge of the Lindsley Institute, was born in Wheeling, January 23d, 1855. He was educated at Washington and Jefferson College, and graduated in the spring of 1876. The succeeding fall he assumed his present position, as already referred to.

JAMES W. M'COY, M. D.,

was born in 1838, in Jefferson county, Ohio. His ancestors first came to America with Wm. Penn, and settled in Pennsylvania, from which state his grandfather immigrated about the year 1818. Our subject received a collegiate education at Mount Union College, Ohio, after which he spent some three years in teaching in the "Buckeye" state, Illinois, and Indiana. He read medicine with Dr. Foster, of New Market, Illinois, and subsequently entered into co-partnership with that gentleman while yet an under graduate. He removed to this city in 1862, and since that date, has practiced successfully as a physician. He took his degree as M. D., at the Ohio Medical College, Cincinnati, in 1874.

CHARLES H. TIEMANN

of the firm of Worthen & Tiemann, wholesale and retail grocers, corner of Market and Eleventh streets, is a son of Henry Tiemann, a native of Germany, who arrived in America in 1841, and in Wheeling in 1843. Charles H. was born in 1850. He first entered Zimmer's cracker bakery on Market street, but after two years, went with Orr, Paull & Co., in the stationery business, at which he remained one year. Next he eschewed the calling of a grocer, engaging with Hess & Egerter, then on the corner of Eleventh and Market streets. Having been there some eighteen months, he moved into the country on to a farm, but ultimately returned to the city and resumed the grocery business in company with Mr. Worthen, at 1010 Main street, where their excellent mode of conducting business, soon secured them a highly prosperous trade, and last year they removed to their present address, the old stand of A. M. Walters, where they now have the privilege of presiding over one of the finest groceries in the city of Wheeling—Mr. Worthen also being a gentleman of indomitable enterprise and capital business proclivities. Mr. Tiemann was married in 1878, to Annie, second daughter of Mr. John Clarke, of Louisville, Ky., a skilled master mechanic, as millwright and bridge-builder.

CHARLES KNOTT,

manager of the *Register* book binding establishment, is the eldest son of Charles Knott, of Baltimore. Our subject was born in 1844, received a plain education, and next acquired a competent knowledge in the craft of a book binder and machine ruler with Wm. R. Lindsey, serving him until twenty-one years of age, when he succeeded to the foremanship of the house for four years. He subsequently went into business for himself two years, and next repaired to Philadelphia, and managed one of the largest steam binderies in that city for J. B. Smith & Co., for two years. Then he proceeded to Bellefonte, Pa., remained two and a half years, and from there came to Wheeling in 1876, and still retains charge of the excellent and extensive enterprise already referred to. He was married in 1864, to Rosa, fourth daughter of the late Mr. P. McQuilliams, farmer, of Londonderry, Ireland, by whom he has an interesting family of two daughters and one son.

THOMAS MEYER

was born in Wurtemburg, Germany, in 1820, and came to America in 1848, settling in Washington county, Pa., from whence he came to Wheeling in 1858, where he engaged in mining and selling coal. Now he is working the Greggsville coal bank, three miles east of Wheeling, on the Bethany pike. He married Mary Frietz, of Wurtemberg, Germany, in 1848, by whom he had a family of four children—Gotfried, William, Carl and Emma.

PETER DILLON

is a native of Monroe county, Ohio, and was born in 1818. He was originally initiated in farming, and has had some twenty-five years experience in stock dealing, alike in the eastern and western markets. He is at present commission salesman for the Wheeling Stock Yard Company, and has filled that capacity with much satisfaction ever since the formation of the said company. At the breaking out of the war he was a ready volunteer, becoming attached to the 116th Ohio regiment, which he entered as First Lieutenant, in 1861, and having served three years, retired as a captain. He was principally in the Shenandoah Valley, and was in the famous battle of Richmond under Sheridan's command, but escaped serious injury. He was married first in 1838, to Jane, daughter of Mr. John Moore, of Pennsylvania, by whom he had seven children—five of whom are living, but their estimable mother died in 1854. Mr. Dillon was married a second time in 1856, to Julia Ann May, daughter of Mr. Wm. May, merchant and hotel proprietor of Sunfish, Monroe county, by whom he has had an addition of seven other children to his family, though one of them is now deceased.

REV. JAMES D. MOFFAT,

pastor of the Second Presbyterian Church, is the eldest son and successor of the late Rev. John Moffat, many years the zealous and much esteemed pastor of the same church, who died December 27th, 1875, and of whom a biography appears elsewhere. The subject of our sketch was born at New Lisbon, Ohio, in 1846, and graduated at the Washington and Jefferson College, Washington, Pa., 1869. He subsequently entered Princeton Theological Seminary, N. J., and first commenced preaching in 1871. He was duly ordained and received a call from Wheeling in 1873, where he became associate pastor with his father, who was unable to officiate from declining health, and at the death of the latter succeeded to the living. He was married in 1876 to Elizabeth, eldest daughter of the late Mr. Henry Crangle, of this city, and they have a family of two daughters.

WM. A. TURNER,

the subject of this sketch was born December 25, 1816, in the province of Canada. The ancestor of the Turner family emigrated from England as early as 1630 and landed at Plymouth.

The father of our subject married in Canada, but only had a temporary residence there, and returned to the United States when his son was still an infant and resided several years in the state of New York. Our subject acquired a liberal academic education, and at the age of sixteen began to learn the business of a watch-maker. He came to Wheeling in August, 1847, and commenced business in November, 1849. He continued the business until the year 1875, when he took in Mr. I. G. Dillon as a partner. He is therefore the oldest jeweler in the city of Wheeling. He was married December 24th, 1850, to Miss Amelia S. Shalmerdine, of this city. Mr. Turner has been a close business man during all his experince, and the firm of Turner & Dillon has a record in the foremost rank in the business circles of the city.

DR. JOHN F. GASMIRE

operating and mechanical dentist, of 2310 Chapline street, is a brother to Dr. A. F. Gasmire, also a prominent dentist of Wheeling, in whose biography elsewhere, allusion is made to their parentage. Dr. John F., was born in 1854, and having received a plain education, early entered upon reading up in medicine, under Dr. M. F. Hullihen, but subsequently gave special study to dentistry, in which he at present largely excels, and is conducting a very satisfactory practice. He was married this year (1879) to Sophia Bauer, daughter of William Bauer of this city, and resides at the address already given of his dental rooms, 2310 Chapline street.

CHARLES H. BOOTH

was born in Wheeling, October 3d, 1816. His parents removed to Sunfish, twenty-eight miles down the Ohio river, when he was but nine years of age. His father had a small farm, kept a country store, and was the first postmaster in that place. Charles followed various vocations. In 1832 he clerked in a shoe store at Wheeling, but his father sustaining heavy losses from the flood, he was obliged to return home. In 1863 he came back to Wheeling and has remained here ever since. He has been interested in boating ever since 1852, which year he and his brother John purchased a small boat called the Viroqua and have continued steamboating between Sunfish and Wheeling. Subsequently they obtained an interest in other vessels, and to them has been entrusted, down to the present, the mail transfer between Wheeling and Parkersburg. Charles H. Booth owns one-third interest in the boat line between here and Parkersburg—also a small interest in the line between here and Cincinnati. He was married in 1839, to Hannah Jane, second daughter of Wm. Crawford, a native of Wheeling, by whom he has four sons living. The eldest, Crawford H., served in the late war, and was acting as pilot on his father's vessel at the time of his enlistment. Charles H. Booth and his son Frank conduct the boat-store on the corner of Twelfth and Water streets, where they constantly keep a supply of fine groceries and everything to be looked for in such an establishment.

EDWARD L. ROSE,

is second son of Edward W. Rose, a native of Susquehanna county, Pa., and was born in 1850, his uncle being Major R. H. Rose, who served in the Federal army during the late war. Edward first engaged with the Grover & Baker Sewing Machine Company, in Montrose, Pa., in 1867, which house he served in six years, when he was transferred to their branch agency at Syracuse, New York, where he remained two years. From there he came to Wheeling, in 1876, and took the management of the Howe Sewing Machine agency, now located in the Washington Hall block, on Twelfth street. He is a competent and energetic gentleman, and controls the sale of his machines through half of West Virginia and eight counties in Ohio, having the supervision of three branch offices and twenty-four agencies. The chief depot comprises a commodious room 24 feet by 70 feet, handsomely furnished and well stocked with machines for family or manufacturing purposes, all kinds of attachments, threads, silks, needles, etc., including a highly attractive line of specimens in needle work executed by the famous Howe machine. Mr. Rose is unmarried.

NESBITT BROTHERS,

hardware and house-furnishing goods merchants, and wholesale dealers in tinners' stock, 1312 Market street, first entered into business in Centre Wheeling, and being practical tinners, found no difficulty in establishing a capital tin and stove store. In about five years, however, they removed to Monroe street, now known as Twelfth street, where they continued ten years, and next located at 1210 Main street. There they remained to the 1st of January, 1878, when having just completed the erection of two very fine stores on Market street, at the address already given, they removed into one of them. The premises are 20x85 feet, handsomely finished and admirably appointed. The store on the base, is tastefully arranged, kept stocked to repletion, and presents a model appearance for an extensive jobbing house, while the upper stories are devoted to manufacture and storage. Mr. Robert Nesbitt, was married in 1862, to Martha, eldest daughter of the late David Campbell, of this city. Thomas W. Nesbitt, was married in 1865, to Rebecca, third daughter of the late Robert Waterson, of Wheeling, and has a family of three children.

A. M. WALTERS

was born in Germany, near Bremen, September, 1851; came to America in 1870, and located at Wheeling. Possessing the advantage of a commercial college education, acquired in the old country, he first secured a clerkship in the employ of J. W. Boyd & Co.. for four years, and subsequently filled a like capacity in the service of A. Reymann, till the spring of 1878. Between those engagements, however, he and his brother were associated, for two years, in the conduct of a grocery business, which they ultimately closed out, and upon Anton leaving Mr. Reymann's employ, he opened out, in April, 1878, a capital grocery store on his own account, at the corner of Market and Eleventh streets, where it was his privilege to secure alike a first-class city and country trade, aggregating from $21,000 to $30,000 annually. In January, however, he sold out and returned to Mr. Reymann's brewery. He was married in 1874, to Maria, eldest daughter of Frank Hagemeister, of Green Bay, Wisconsin, and is the happy possessor of two children.

THOS. H. HIGGINS,

photographic artist, was born in this city in 1838. His father was Bernard Higgins, also a native of this county. In 1856, Thomas went with Mr. A. C. Partridge to learn the photograpic business, and remained with him for three and a half years. Then he took a trip south, and on his return, continued in his profession, though unsettled until 1862, when he opened a gallery at 36 Monroe street, now Twelfth street. Here he continued down to 1867, when he formed a partnership with Mr. John Brown, and opened a gallery on Main street. Having prospered there for four or five years, and a new building having been erected at their old address, Twelfth street, they returned to it. Mr. Brown retired from the partnership in 1874, since when Mr. Higgins has conducted the prosperous enterprise single handed. He has a capital operating room, 22x33 feet, a very attractive reception room, and makes a specialty of those carbon photographs and transparent pictures, so universally admired, and the privilege of making which, in this county, is exclusively vested in him. Mr. Higgins was married to Mary, third daughter of William R. Holliday, formerly surveyor of customs at this port, and he has an interesting family of three children.

CHARLES H. BERRY,

conducting the pioneer business, first as manufacturer and latterly as wholesale merchant, in ropes, twines and general cordage, at present located at 1315 Main street, was born in Boston, Mass., March 4th, 1824. His father, now deceased, was a native of England, and while but young emigrated to Boston, where he married. In 1825 the old gentleman removed to Cincinnati, and four years later to Wheeling, where he manufactured the first manilla rope west of the Allegheny mountains. The rope walk occupied an orchard in North Wheeling, near the present foundry now run by Jos. Bell & Co., and business proving successful, in 1836, he erected a dwelling and walk on the National Road, near Fulton. But the panic coming on, in 1837, and continuing to 1844, the business was turned over to one Redick McKee, from whom, in 1845, it was still further succeeded to by Mr. Charles H. Berry, the son. He finding the facilities inadequate, next secured an eligible tract of land below Benwood, and opened a new walk. Here he continued till 1869, when finding it impossible to compete in manufacture, he sold that property in 1870. Then he located his business, as a jobbing house exclusively, in other property he had also succeeded to in 1854, on Water street. But in 1871 he was burnt out, with a loss of $12,500—insurance $8,000. He then rented on Main street, and in the course of ten days had laid in

a capital stock. In the course of two weeks this warehouse was also discovered to be on fire, but was fortunately saved with a trifling loss. April, 1871, Mr. C. H. Berry removed back to Water street, a new warehouse having been erected, and he remained there five years, at the expiration of which he succeeded to the fine premises he at present conducts, at 1315 Main street. He was married in October, 1857, to Grace, eldest daughter of W. McMechen, of Marshall county, who, however, died the succeeding June. In the fall of 1859, he next married Agnes, second daughter of Mr. McMechen's family, by whom he has four children—three boys and one girl.

P. D. CARROLL,

proprietor of the Wheeling Marble and Granite Works, 6, 8 and 10 Sixteenth street, is a son of the late Wm. Carroll, and was born in Ireland, February 20th, 1841, coming to this country in 1859. He first engaged with his brother, James, who originally conducted the above business, subsequently became a partner, and at the death of the latter, in 1873, he took entire control of the enterprise, which is unquestionably the most extensive of its kind, in the state. In 1876 the trade conducted amounted to $36,000, while the business of 1878 afforded a like footing—a large proportion of cemeteries in West Virginia, Pennsylvania, Maryland and Ohio, affording evidences of his extensively patronized and much approved manufacture. Mr. Carroll was married in 1872, to Cammilla, youngest daughter of James Campbell, late of Wheeling, but now of Well's Bottom, on the Ohio river. They have issue, three children.

AUGUST SCHWERTFEGER

was born in Hanover, Germany, in 1823, and came to America in 1849. He learned his trade in the old country and worked at it there as a journeyman. After his arrival in Wheeling he employed himself in various ways till June, 1850, when he got work at his own trade with William Nicoll, on Main street. With him he remained till 1856, when he started in business for himself at 1146 Main street, manufacturing saddles, harness, trunks, &c. He was very successful in business during the war, and in 1863 bought the lot he still occupies, erecting his present store thereon the following year. The base is 32x123 feet, including a workshop in the rear, and the present stock he presides over is not only extensive, but exceedingly well assorted. He is represented on the road by his son William, and ships goods all over this and adjoining states. Mr. Schwertfeger was first married in 1849, to Louise, second daughter of the late Mr. L. Brand, of Germany, by whom he had two children. She died in 1864. He was married again in 1868, to Iversena, oldest daughter of Jacob Boger, of Powhatan, Ohio, by whom his family has been increased with two more children.

CHARLES W. SEABRIGHT

is a native of Brunswick, Germany, and was born in 1836, son of August Seabright, of the same place. He came to this country in 1849, and first engaged in the service of Mr. Thomas Hughes, merchant tailor, with whom he remained twenty-one years and five months. In February, 1871, he commenced in business for himself, in partnership with Chas. Pfaffenbach, on Main street, Centre Wheeling. But in October he bought Mr. P. out and took in A. C. Schmulbach, in company with whom he ran till February, 1872, when he bought out Mr. Schmulbach and continued the business alone. In 1877 he bought his present handsome, semi-detached, three-story building on Main street, where the upper story is devoted to manufacture, and the store proper is 80x22 feet. Mr. Seabright is among Wheeling's most popular and enterprising tradesmen, carries one of the finest stocks of goods, as a merchant tailor, in the state, and is doing a business of from $40,000 to $50,000 per year. He was married in 1861, to Isabel, second daughter of Nicholas O'Callahan, of Sistersville, but who died in August, 1878, leaving four children.

HENRY SEAMON

is a native of Germany, born in 1838, and came to America in 1845 with his parents, first located in Pittsburgh. At about twelve years of age, he went with the late Daniel Day, of Wood street, Pittsburgh, to learn cigar making, afterwards working elsewhere in the Iron city, and came to Wheeling in 1862. Here he engaged first with William Hauser, then in the cigar business on Main street, and subsequently with others, but in 1860 he opened up in business for himself on Centre street, in a small store. Soon after, he moved to Fourteenth street, and there cultivated a capital trade in stogies and what were then called "half spanish," or tips. In 1861, however, he went out, among the earliest volunteers, to the war, enlisting in Battery D., First West Virginia Light Artillery, serving the country for two years and nine months; a synopsis of his career during which period, will be found appended hereafter. In the fall of 1865 he again resumed business at 51 Water street, removing to his present address—1150 Water street—in 1870. Here he now conducts quite a cigar factory, his stogies and tips being in extensive demand from all parts, while he never lacks in a full complement of fine cigars, pipes and smoker's sundries. He was married in ——, to Mary, youngest daughter of the late William McNash, of Wheeling, by whom he has four boys and two girls, one of his sons being now a graduate in West Virginia University.

From Mr. Seamons' private notes on his war experience we quote the following brief extracts:—"Enlisted 16th August, 1862, in battery D., First West Virginia Light Artillery, under Captain John Carlin's command. Went first to Parkersburg for instructions; skirmished around and made several trips over the mountains; went to Beverly, New Creek, and thence to Winchester; here had our first engagement to hold the city, lasting from Friday to Saturday night, our commander being General Milroy. Seventy of our men were captured. I, with nineteen others and our captain escaped. Came back to Wheeling and two weeks after went to Hancock and re-organized till the balance of our men were exchanged. Got back to New Creek in fall of 1863. In 1864 we marched to Martinsburg, West Virginia, and up the Shenandoah valley, under General Seigel, till we got to New Market, where we were met by Generals Imboden and Breckenridge, and engaged them two hours, but were repulsed with a loss of four killed and seven wounded. Fell back on Cedar Creek, and re-organizing under General Hunter, we started again up the valley, and fought nearly all day at Piedmont, having three men wounded and losing fifteen horses, but we routed the enemy. Next day we took Staunton, there making a junction with Generals Crook and Averill, who had five thousand men—our complement being six thousand. We all marched to Lexington, Greenville, Buchanan, Liberty and Lynchburg. Here on the 18th of June, 1864, we were engaged all day against Jubal Early's forces, and fell back on Salem. We lost quite a number, and next day ambushed, on our retreat, at Beaufort's Gap. On the 21st day of June, I, with sixteen others, was taken prisoner, marched into Buchanan, and taken to General Early's headquarters for rations. He gave us his compliments and said that was all he had—rather hard to take in, but mighty easy to digest. We were then sent to Lynchburg, thence to Danville and then to Andersonville prison —getting there on the 11th of July The privations and misery we here endured no pen could depict, often going from two to four days without food. November 2nd we were taken to the new bull pen, Milan, Georgia. While here, the whole of the prisoners, probably 4,000, took a vote for the presidency, and Lincoln got 2,600 votes, McClellan 1,900, for which little escapade, and voting a majority on the wrong side, we were stopped a day's rations. We left Milan on the 21st for Savannah, Georgia, and on the last of the month proceeded to Florence, South Carolina. Here we remained to February, 1865, when we were taken to Wilmington and paroled; the government transporting us home with happy hearts though presenting sorry spectacles after our adventures."

THOMAS C. MOFFAT,

of No. 27 Twelfth street, is second son of the late Rev. John Moffat, and was born in 1848, at St. Clairsville, Ohio. He first came to Wheeling about 1863, and in 1864 engaged in the produce store of John F. Hopkins, on Main street, where he remained for two years. He next became assistant secretary to the Fire and Marine Insurance Company of Wheeling, on Main street, holding that office four years. From here he engaged as clerk in the merchant tailoring house of J. H. Stallman, at 27 Twelfth street, in which it took but eight months' experience to find him interested to the extent of a partnership. Everything went along cheerfully until July, 1878, when Mr. Stallman died and Mr. Moffat succeeded to the entire business, which he still conducts most successfully. The building is a fine three story brick, the upper floors of which are devoted to work rooms, while the first forms a specious store, 66x24 feet, characterized for the extent and variety of its goods, in fine cloths, cassimeres, meltons, worsteds, and a matchless line of gents' fine furnishing goods. Mr. Moffat was married October, 1873, to Blanche, third daughter of William A. Quarrier, of this city, and has two children.

WILLIAM R. DONALDSON

is decidedly a name of Scotch descent, though the father to the subject of our sketch—Ebenezer Donaldson—was born in Westmoreland county, Pa, as far back as 1794, the generation still preceding him having been among the earliest settlers who lived and fought to establish this great continent. William R. Donaldson was born in Lawrence county, Pa., in 1837, and until eighteen years of age followed husbandry pursuits on his father's farm. But preferring rather the life of a mechanic, in 1858 he perfected a trade with S. P. & C. Hayes, carriage builders, of Washington county, Pa. Altogether he was with this firm three years and a half, but came to Wheeling in 1865. He first worked for Bodley & Frobe, then on the corner of Clay and Fourth streets, now known as Chapline and Eighteenth, but in the fall of 1867 he connected himself with the Wheeling Wagon and Carriage Company. That corporation, however, closed up in 1875, and W. R. Donaldson, W. Lewis, C. Ahl and W. H. Little, having formed an acquaintance while all engaged in the latter company, associated under the style of Donaldson, Lewis & Co., succeeding to the venerable old premises on Market street, two doors above the post office, and here they still hold forth, having facilities to employ so many as fifty hands at a time. Their specialties are fine carriages, buggies, road and truck wagons, with any other kind of light work, and they certainly enjoy a wide-spread reputation for the superiority of their manufacture—a variety of which aggregating in value from $2,000 to $6,000—they usually carry on hand. Mr. W. R. Donaldson was married in 1860, to M. Ellen, third daughter of Mr. W. Wiley, of Little Washington, Pa., by whom he has issue, a family of eight children.

PETER ERB,

in business at 1407 and 1409 Market street, as a livery proprietor, was born in Hessen, Germany, March 23, 1840. He spent his early life on a farm, and came to Wheeling July 3, 1860, where he engaged in various kinds of work at the iron mills for some two years. He next followed teaming till 1870, after which he succeeded to a saloon on the National pike for two years. Subsequently he engaged in the livery business, which he has followed ever since. The stable he now owns, at the above address, is 33x120 feet, in which he usually keeps from fifteen to twenty capital horses, besides a full complement of hacks, buggies, and even a very fine hearse. His stock is valued at about $7,000. He was married to Rosa, youngest daughter of Fontain Heil, of Wheeling, in 1864, and has an interesting family of five children.

THOMAS MURRIN,

was born in Butler county, Pa., in 1839, and lost his father when only six years old, since that time he has been thrown entirely on his own resources. He came to Wheeling in early life and has been engaged in iron work for some thirty years, in which business he has attained an exceptionable skill. For the last seven years he has filled the responsible position of manager to the upper Riverside Mills. In 1862 he married Margaret Youngman, by whom he has had a family of seven children—Lydia A., William C., Jessie L., James P., Thomas H., Delbert C., and John E.

REV. CHARLES RUMPF,

was born and educated in Deitschueiler, Germany, receiving a graduate training in a theological seminary for ministers and teachers, at Kaiserslanton. He graduated in 1870, and became a teacher in Rome, Italy and other places, arriving in America in 1873. He took charge of the German Protestant Church, in Westfield, Chautauqua county, New York, and came to Wheeling in December 1878. Here he has charge of St. Paul's German Church on Wood street. He married Carrie, daughter of Mr. Jacob Kirk, of Buffalo, New York, in 1875, by whom he has two daughters—Clara A., and Emma Louisa.

CHRISTIAN VIEWIG, JR.,

conducts a reliable business in the manufacture of cigars, tips, and stogies, and is also a dealer in fine cigars and chewing tobaccos, at 4410 Jacob street. He is among Wheeling's most enterprising and enerjetic tradesmen, and his brands of goods are in very popular demand, not alone in the city, but also through the district adjacent,

JOHN WRIGHT

is native of the Iron city, and was born in 1824, commencing work with his father, at the iron works of Shoenberger & Co., when twelve years of age. His father had charge of the engines thereat, the subject of our sketch being engaged with him thereat some thirteen years. He came to Wheeling in 1849, and engaged in the Belmont Iron works as engineer and remained there three years. In the fall of 1852 he connected himself with the La Belle Iron Works, and has been with that company, as chief engineer ever since. Mr. Wright is also a stockholder in the same works, and owns and lives in a fine property, part of the "Sunny-side" vineyard, owned by Mr. Caldwell, on the north side of Caldwell's run, near Wheeling. He married Ellen, daughter of Mrs. Ellen Madden, of Wheeling, in 1852, and they have a family of seven children—Anna, Virginia, Elizabeth, Ellen, Gertrude, William, Thomas, John Elsworth, Margaret and Carrie May.

A. C. FISHER

was born in Germany in 1847, and came to America with his parents, who located at Wheeling, where he worked at cigar making for seven years. He then engaged with his father in the building and contracting business, which he still carries on in addition to a planing mill, sash, door and blind factory, corner of Forty-fourth and Wood streets. He married Dora, daughter of William Pfaffenbach, of Wheeling, in 1869, and has three children, Ida, Delia and Dorotha.

JOHN MILLS

is a son of Robert Mills, a native of county Down, Ireland, who came to America in 1831 and settled in Pittsburgh, where our subject was born, January 27th, 1832. At the age of thirteen he went to the trade of book binder and machine ruler, in the service of Abner L. Frazier, then of Steubenville, but now of Cincinnati. Having served his time he went with Sanford & Hayward, of Cleveland, with whom he remained five years. He then returned to Steubenville and went into business with P. B. Conn, but after five years they sold out to W. R. Allison. Our subject next went to Pittsburgh, was there a short time, as also Dayton, and came to Wheeling in 1863. Here he entered into business with Mr. John Frew, afterwards connecting with them Messrs. Campbell & McDermot, the said parties still conducting the extensive and important bindery connected with the Wheeling *Intelligencer*, which in point of facilities is unsurpassed. Mr. Mills has charge of the same as practical overseer. He was married in 1857, to Maria, daughter of Mr. Peter Hoxworth, of Steubenville, at one time county treasurer, and by her has a family of one son and two daughters.

MICHAEL E. TRACEY

is second son of the late Thomas Tracey, a native of Ireland, who came here in 1850. Michael E., was born in Wheeling in 1856, and at present is clerk and collector for the prosperous coal company of Messrs. McGinley and McCormick, whose mines are located in Manchester, at the east end of Seventeenth street bridge. He resides at 2519 Market street. His oldest brother, John A., is at present pastor of St. Patrick's Catholic church, Weston, Lewis county, West Virginia.

JOHN S. ANDERSON

is a native of Marshall county, West Virginia, and was born in 1839, being second son of Abraham Anderson, a cooper, born in 1805 and still living, but at present a resident of Belmont county. John S. Anderson having received a plain education, early evidenced a faculty for mechanics, and about 1860–1, he received the appointment of engineer at the Wheeling water works, where he still officiates.

JOHN H. ZEVELY,

proprietor of the West Virginia Stencil and Seal Works, 1731 Market street, Wheeling, is the oldest son of E. S. Zevely, a native of North Carolina, who was born in 1818, and still lives, conducting a printing and publishing business. John H. was born near Staunton, Va., in 1846, and having learned his business in Cumberland, Md., he came to this city in 1870, and first located on Eighteenth street, but removed to his present address four years ago. He was married in 1870, to Margaret, eldest daughter of Mr. J. Connihan, of Ireland, by whom he

has a family of three daughters and one son. Mr. J. H. Zevely's grandfather was in the war of 1812; his uncle was A. M. Zevely, third assistant postmaster general from 1859 to 1869, and his father it was who instituted the manufacture of boxwood marking and dating stamps for the postal department, about 1850, which are still in general use, Mr. J. H. Zevely's manufactory, as referred to above, doing an immense trade therein, shipping to all parts of the Union.

MRS. MARY A. TEMPLETON

is a daughter of Alexander Templeton, and was born in Washington county, Pa., in 1821. She resided at home until married to Hugo McAnall, of Ohio county, West Virginia, in 1846. She moved with her husband to the place where she now lives, and has a family of two children—Mary M. and Agnes V. She resides about two miles out of the city, in Ritchie township; has a nice farm of one hundred and forty-eight acres, with an excellent fruit-bearing orchard.

JAMES FARREL,

for some time hostler in the fire department, "Vigilant" house, Main street, was born in Monroe county, Ohio, in 1822, and is the second son of the late Joseph Farrel, of West Alexander. James farmed with his father until he was twenty-five years of age, when he married Jane Ann, third daughter of Joseph Anderson, of Marshall county, by whom he has had eleven children, nine of whom (six sons and three daughters) are still living. Two of the daughters are married—Sarah has become Mrs. John Fay, of Triadelphia. and Mary E. is now Mrs William Humphrey, of Wheeling, The subject of our sketch took a farm himself in 1850, in Ohio county, which he cultivated for one year, and returned to his father's farm, upon which he remained until some time after the latter's death. He next moved to Moundsville, kept the Washington House hotel for two years, and removed to Wheeling, in 1868. Here he has since filled various occupations, though chiefly in the care of horses, which have ever been his hobby. There are few better horsemen in this section, and good animals have always been his pride, in proof of which it is duly recorded in the books at the Crescent Iron Works, that in 1870 his team of four horses transferred from the wharf, where the Baltimore & Ohio depot stands, to the mills in question, as much as 15,740 pounds of pig iaon at one load. He is at present proprietor of one of the finest feed, board and sale stables in the state, located on the corner of Main and Sixteenth streets, where he is receiving, as he deserves, excellent patronage.

JAMES JEPSON

was born in 1849, at Darwen, Lancashire, England, and is a son of John and Margaret Jepson, of that place—his father being born in the same country in 1813. James emigrated to America in the spring of 1870, and would seem to have readily adapted himself to the land of his adoption. His first outset in life, when at home, consisted of an engagement at Walsh & Leach's cotton mills, Darwen, where he remained twelve months, next engaging with C. E. & J. G. Potter, Belgrave Paper Staining mills, Lancashire, holding that position till he came of age. Then he crossed the broad Atlantic, and from New York made a bee line for Wheeling. Here he first engaged as clerk to Butterfield & Co., maltsters, corner of Twenty-third and Water streets, where he remained three years, next becoming confidential book-keeper and cashier for Michael Reilly & Son, wholesale grocers, Main street, where he still continues. In the spring of 1874, however, true to his first love, he took a trip home, and returned with one of England's fair daughters for a bride, in the person of Elizabeth, second daughter of Roger Nuttall, mechanical engineer, at Hollins' paper works, Darwin, Lancashire, by whom he has issue two interesting children—a boy and a girl.

JOHN COWAN.

Mr. Cowan was born in Scotland in 1800. In 1827 he emigrated to Pennsylvania and resided for about five years at Pottsville, where he was connected with the coal interests. In 1832 he removed to Frostburg, Maryland, and until 1851 was associated with the management of the Echkart mines. The succeeding two years he was connected with some mines on George's creek, in the same state. He then removed to Wheeling, where, in 1854, he opened up the Boggs Run coal field. The Boggs Run Mining Company was formed, of which the following were the members, viz: John Cowan, L. M. Cole, John Handlan, Joshua Burley and J. B. Ford. Mr. Cowan was the business manager, and to his indefatigable labors much of the success of the company may be attributed. He died in 1876. His wife was a Miss Clementine Shearer, who died in 1841 at the age of thirty-seven. Of their six children, two sons and four daughters, only the former, Charlie T. and Robert, yet survive. The latter is the superintendent of the mines at this time as well as engaged in merchandising; the former is also a merchant at the south end of Jacob street.

The Boggs Run mines coal strata is about six feet in thickness, and the quality is such that the coal is used by the Baltimore and Ohio railroad. Since 1854 about an acre a year or 50,000 tons (after allowing twenty per cent for loss) of coal have been mined. In 1854 twenty-five men were employed, and this season and for several previous years their number have increased to forty. The changes in the ownership have been the Exchange Bank in place of Mr. Ford, and the Cowan heirs for their deceased father.

JOHN MORREY

was born in Wakefield, Yorkshire, England, in 1826, where he was educated, serving his apprenticeship to the carpentering trade. He came to the United States in the spring of 1849, and commenced business as contractor and builder, at which he has been actively engaged for the last twenty years. He built the St. Matthews Episcopal church, and many other fine structures. Mr. Morrey married for his first wife, Mary Fitton, of Wheeling, in 1854. They had six children, George, Jane, Mary, Willie, (deceased), James, (deceased), and John. He married for his second wife, Mary Charnock, of Wheeling—two children, William and Elizabeth.

MRS. MAGDALENE PUMPHREY.

She was the daughter of Martin and Catharine Snider, *nee* Omea, and was born near Gettysburg, Pennsylvania, in 1791. In 1802, Mr. Snider, who was then seventy-five years old, started for Chillicothe, Ohio. His family which accompanied him consisted of only fifteen children. On account of the sickness then prevailing in the vicinity of Chillicothe, he directed his steps to the vicinity of what is now the site of Cadiz, and purchased six hundred and forty-nine acres of land in about five miles of the latter point, on what is now termed the Steubenville road. It required two days to go from Wellsburg to their land, and for ten miles the road was literally hewn through the wilderness. Mr. Snider died at the age of eighty-four, his wife survived her husband nine years, passing away in her seventy-fifth year. Our subject was married to Zachariah Pumphrey, in 1812. He was a soldier in the war of 1812, and served under his uncle, Colonel Joseph Holmes. In 1822, they removed to Wheeling where he was engaged as a butcher for several years. The Pumphrey brick house on Sixteenth, between Jacob and Wood streets was the first brick house erected in East Wheeling. He died in 1874, at the age of eighty-four. Their children numbered eleven of whom five are living. Mrs. Pumphrey enjoys a healthy and happy old age, never having known a sick spell. She is a fine specimen of the pioneer woman who was a helpmate in every sense of the term.

CHAPTER XLVI.

RITCHIE AND WASHINGTON DISTRICTS.

RITCHIE DISTRICT.

IN point of general early history, this section of Ohio county furnishes little of interest beyond the ordinary features characteristic of pioneer life, referred to under the head of Triadelphia and Liberty districts. Except it be that there exists on the Frazier farm, above the Nail City brewery, an exceptional fine spring of pure water, known as the Indian spring, which has flowed from time immemorial—originally very copiously, but latterly with abated force—while on the farm of John S. Garvin, there was recently discovered a crack or fissure in the rock, down which, if a stone is thrown, it is said that its alighting cannot be heard, suggesting the probability, (our in-

formant remarks), that here existed, or mayhap still exists, the lead mine so frequently referred to as having yielded the Indians that metal in an almost perfect state. The district of Ritchie is bounded on the north by Triadelphia, Webster and Union districts; on the south and east by Marshall, and on the west, by the Ohio river. It contains the Eighth ward of Wheeling city, now familiarly recognized as Ritchietown, and elsewhere referred to under the head of South Wheeling. Beyond that prescribed territory, the district is exclusively devoted to farming, the land, though very hilly, being proverbial for its singular adaptability to agricultural pursuits. In the absence of very recent census statistics, it is upon the most credible authority we estimate the present population of the district at from 3,700 to 4,000 inhabitants, upon an area of some six to eight square miles.

Among the earlist settlers in this district may be mentioned John Ritchie, Samuel Sprigg, James Wheat, Milton Miller, Samuel Ott, Frederick Schultze, Robert Barlow, Joseph and Lewis Pearce, Isiah Reese, John Berry, John Fallour, William Kryter, James Barnes, Hiram Martin, John G. Smith, Edmond Cole, John Garvin and Joseph Handlan (who lived to the age of ninety-nine years), all of whom are now deceased; and among those still living are George Birch, sen.; Samuel Humes, Lewis Zimmer, Wm. B. Martin, John Handlan, Wm. Combs, George Geohman, B. Leveday, C. M. Ellworth, John L. Hobbs, &c., &c. The street car track penetrates the district, and terminates at the junction of Forty-third and Jacob streets, where a few steps bring passengers to the landing from which the Benson's Ferry boat crosses to the Ohio shore, effecting a convenient and continuous route from Wheeling to Bellaire. The past growth of Ritchie district has been of the steadiest character, and it is still improving, the present township officers being:

Commissioner—J. W. Schultze.
Overseer—J. W. Schultze.
Constables—Henry Schultze and W. H. Combs.
School Commissioners—Jesse M. Wheat, W. Wait and Henry Otto.
Justices—J. W. Schultze and Leander Mix.

The exceptionally brief history, under the above caption, will be found more fully and completely continued under the style of "South Wheeling," in a future chapter, as the interests of the district and city subsequently became identical.

WASHINGTON DISTRICT.

The limits of this district extend from Ninth street in the city to the northern extremity of the corporation line, in the neighborhood of the Top Mills, to the river on the west, and the stock yard on the east, crossing the National pike about 200 or 250 yards on Fulton side of the old Steenrod property, which is in Triadelphia district. As a matter of course, this district abounds in both ancient and modern history, but as the greater part of it is in the city of Wheeling, our readers must look to our history of the latter place to glean all deficiencies under this district head. Fulton, however, being a distinct town within the aforesaid limits, and out of the Nail City corporation, we give it a special notice. H. W. Philiips, Esq., justice of the peace, of Main street, Wheeling, is commissioner at the present time, for Washington. "McCulloch's leap," Mount Wood Cemetery, and other points of interest, including several very important manufacturing institutions, all referred to elsewhere, come within this district, while the most of its population reside in Wheeling borough, hence all biographies from this section are also merged into the somewhat extended list following our city history, notes and comments.

THE INCORPORATED VILLAGE OF FULTON

probably does not cover more than fifteen to twenty acres, being one mile from Wheeling, and claims a population of from six to eight hundred inhabitants. Anterior to 1836, there only stood upon its site one isolated log hut, but that year Daniel Steenrod made a liberal concession of several lots to Alexander Armstrong, then of Wheeling, who was thus induced to immediately start up a paper mill, which he named the "Fulton" mill, after the famous inventor of steamboats. Mr. Steenrod then further laid out a number of lots for residences, which form the present plat of the village. Subsequently, additions were made to the east and west ends of said plat, and property rapidly increased in value. In 1847 Lewis Bayha opened the first slaughtering and pork packing house here, the business of which he had formerly conducted at "Jonathan's Gut," where the First ward (Wheeling) school house now stands. He continued the business down to his death, in 1864, when his son John succeeded him. He continued it, packing several years on commission, and in 1870 disposed of his interest to Mr. D. C. List, jr., who still carries it on upon an extensive scale, Mr. Bayha remaining manager for him. They pack some five to six thousand hogs annually and have a wholesale ware house on Fourteenth street, Wheeling, with which they hold communication by telephone.

Mr. G. H. Parks also here controls a slaughter house and pork packing establishment, with warehouses in the city. Schenk & Zoeckler further do business on the creek in the way of pork packing, having a fine ice house which enables them to continue business through the summer. In addition to pork they pack other meats. Geo. P. Folmar and Lewis Roth have prosperous and old established tanneries, while Lewis Orth, in addition to butchering, runs a fine fertilizer manufactory, for the production of bone dust, which he ships extensivly to Baltimore and other points. Andrew Thalman here runs a prolific old coal bank, originally worked by Walter Marshall, and a Mr. Simpson is engaged in drifting a second from the National pike, near the district line, and at the head of Berry street. The Steenrod M. E. Church is a neat little building erected on ground generously donated by the Hon. Judge Thompson, and at which the Rev. Trippett officiates. The previous ministers here were the Revs. W. G. Riheldaffer, —— Griffith and G. E. Hite, now of Zane Street Church, Wheeling. There is quite a flourishing Sabbath-school connected therewith, and the good people of Fulton have no room for complaint that they lack a means for securing spiritual consolation. There is a capital newly erected school house in the parish, in charge of Mr. Pogue and Miss Louisa Muth, both much respected and excellent teachers. In the village there is also one blacksmth's shop, one wagon maker, two cigar makers, four groceries, four saloons, one shoe maker, one paint shop, and a tinners store. The fine iron bridge spanning the creek, as we enter the village from Wheeling by street car, was erected at a cost of about $15,000, and was constructed by the county some four years ago. The growth of Fulton has been by no means rapid, but of the most desirable character, and lately has come into possession of its own fire department.

FULTON PAPER MILL AND "LEATHEROID" MANUFACTORY.

As already stated, this institution, as a paper mill, has flourished since 1836, but succeeded to, only some seven or eight years ago, by Messrs. Hanna & Clemmans. In August, 1878, however, a corporation known as the Leatheroid Manufacturing Company, negotiated with the gentlemen named, and the two firms amalgamated for the operation of the united business in the same building, with Mr. D. W. Hanna as president, Mr. Charles E. Dwight, vice-president, Mr. Thompson Hanna, secretary and treasurer, and Mr. Thomas Hanna, superintendent. The works and surrounding premises occupy probably an acre and a half of land; the main building and paper mill being 100 feet square, two stories, while a detached structure, 30x50 feet, also two stories, is devoted to the manufacture of the new discovery known as Leatheroid. The original, and at present, chief line of manufacture, is that of a very excellent line of white newspaper and a superior grade of strong tea paper, which they ship, mainly through this and adjoining states. The foregoing facts will afford some idea of their original business, but to their enterprise and ingenuity is the world indebted for the further introduction of a new and invaluable material just being placed upon the market to be

KNOWN AS LEATHEROID.

And indeed it is well named, for to the inexperienced, at first glance, it certainly leaves a perfect resemblance to leather, though in handling, the delusion is immediately dispelled by its extreme lightness, solidity and imperviousness. By way of a brief history as to its discovery, we may say that the Messrs. Hanna, having made the manufacture of paper a life's study, some years ago conceived the idea that notwithstanding the thousand and one purposes to which paper is applied in its original manufactured state, there were yet other valuable methods of utilizing it, and probably not the least advantageous would be to discover a method of solidifying it, in various thicknesses, adapted to the several requirements of manufacture. That its lightness, toughness yet flexibility, might be combined with cheapness, and a greatly improved material made to supercede, with great advantage in many instances, wood, tin, iron, bone, and even hard rubber goods. To this subject they strictly employed their utmost energies, and the result of

RESIDENCE OF LEWIS BAKER, NEAR ELM GROVE, WEST VA.,— EDITOR WHEELING REGISTER.

endless experiments has been that they have accomplished the object in view, and already received the protection of three patents. But the manufacture of leatheroid did not assume any extent till the incorporation already referred to was effected, and the old Fulton mills brought into service to perfect a discovery that will, undoubtedly, yet perpetuate its name. And this brings us to

A DESCRIPTION OF LEATHEROID,

exclusively composed of vegetable fiber, manipulated under chemical action, until twice as strong and durable as leather, in fact, as hard, and ten times tougher than the hardest board. It is susceptive of the highest polish and most even surface, can be modeled into any shape, is exceedingly light and can be produced absolutely impervious. It is particularly adapted to the construction of carriages, railroad cars, for plumbers' use, chair seats, small wheels and cogs used in mills, friction pulleys, carpet sweepers, the manufacture of trunks, cotton cases and cotton baskets for mills, combs, packing cases, and, in short, a thousand other things. Leatheroid, in appearance, is very similar to the Vulcanized fiber produced by the Vulcanized Fiber Company, of Wilmington, Delaware, though it is claimed to be—with an admirable showing—far superior in every respect, while being much cheaper.

BIOGRAPHICAL SKETCHES.

JOHN ZOECKLER was born in Germany in 1806, immigrated to Baltimore, United States, in September, 1832 and came to Wheeling the following month. He engaged in butchering, which was his business, together with packing, until 1866, at which time he retired. He was one of the pioneers in his business. Mr. Zoeckler built the first house in Fulton, and has long been identified with the business interests and prosperity of Wheeling and Fulton. He has held the office of justice of the peace several years and been a county commissioner two years. He was the originator and first lieutenant of the Washington Guards, one of the first and best military corps in Wheeling, in 1839. Our subject was delegate to the conventions that nominated Pierce and Polk. He married, for his first wife Mary Eockel, who had eleven children, Eliza, George, (deceased) Henrietta, John L., Louisa P., George W., Benjamin Franklin, Mary, Amelia, and Henry (dead). His second wife was Mrs. Louisa Martin. They have two children, Bruno and Otto.

GEORGE ZOECKLER was born in Germany in 1833, and received his education there. He came to Wheeling in 1850, and has been engaged in the butchering business ever since. He has been a school commissioner three years and has always taken an active interest in schools and school works. In 1857 he married Catharine Grimmel. They are the parents of three children, George, Lena and Minnie.

HENRY K. HESS, a native of Ohio county, was born October 12th, 1855, He served his apprenticeship at painting and graining in Indianapolis, Indiana, and commenced business for himself in 1874. He has now two places of business, at 1211 Main street, Wheeling and at Fulton, enjoying a prosperous trade, in which he excels, especially in graining.

LEWIS ORTH was born in Germany in 1825, resorting to this country in 1847. He was first in the city of Baltimore for three years, and then came to Wheeling. He engaged in the packing and butchering business in 1851, and at present conducts a capital establishment in Fulton. He was the first president of the Butchers' Association, and one of the principal organizers of the same, being generally much respected as a fellow tradesman and merchant. He was married first to Henrietta Kern, of Baltimore, by whom he had a family of five children—Louis, Jacob, Cecelia, William and Henry. She, however, subsequently died, when he married a second time, taking to himself Alice Roth, also of Baltimore, by whom he has five other children—Frances, Alfred, Emma, Hermann and Gertrude.

LOUIS H. ORTH, jr., was born in Fulton, Ohio county, West Virginia, in 1851. His education, a part of which was received at Wheeling and part at St. Vincent's College, was finished in Europe, at Frankfort-on-the-Main. He was engaged with Solomon & Benaldo, Davenport, Iowa. Since 1872 he has been employed in butchering in Fulton, near Wheeling. Mr. Orth married Emma Hoffmann, daughter of Christian and Caroline Hoffmann, December 2, 1874, and is the father of two interesting children, Caroline and Edward.

A. C. WAGENER, who was born in Hanover, Germany, April 17, 1852, immigrated to America in 1865, and settled in Steubenville, Ohio. He commenced business as cigar manufacturer in Fulton in 1876. He married Phoebe Baier, of Bavaria, Germany, in 1874. They are the parents of two children—Mary and Albert.

GEORGE BAKER was born in Hessian, Germany, in 1833, immigrated to America in 1854, and settled in Wheeling. He commenced the shoe manufacture in 1867, which business he carried on for five years, but is now keeping a saloon in Fulton. He married Helena Weitzell, of Wheeling, and is the father of seven children, William and Joseph (deceased), Edward (deceased), Emma, Mary, Anna, and John (deceased).

CHAPTER XLVII.

TRIADELPHIA DISTRICT.

A BEAUTIFUL AND THRIVING SECTION OF COUNTRY ABOUNDING IN HISTORICAL INTEREST—ITS EARLIEST SETTLEMENT TO THE PRESENT.

THIS district may fairly be classed as one of the most prolific in the Pan-Handle, alike in agriculture and historical research. The National Pike running through it from the boundary of Washington district, just above the village of Fulton, to the line of Liberty district beyond Roney's Point, we may, perhaps, best accomplish an exploration of the territory by following that main artery for commerce. Leaving Fulton behind us we first espy the old Steenrod property,* a venerable and extensive residence and country summer resort, at present occupied by the Hon. Judge G. W. Thompson, whose lady is the daughter of the original Steenrod family so popular in pioneer days, and extensive property owners—to whose liberality may largely be ascribed the founding of Fulton village. Few houses of call on the pike, during coaching days, were more patronized, and esteemed for hospitality than the Steenrod House, while even since that important thoroughfare has been eclipsed by railroads (as a summer resort for private families) no house in West Virginia has excelled the old Steenrod for a healthful and recluse location and charming rural surroundings. A few rods, and we diverge from the pike a very little way to the right, to take in

THE INCORPORATED VILLAGE OF LEATHERWOOD.

Upon one of the prettiest bends in Wheeling creek, and in full view of Mount De Chantal College, the eye is met with a number of beautiful villa residences; many of them, as it were, nestled in perfect bowers, and the whole surrounded with lovely lawns and pasture lands, from whence pours forth the almost deafening melody of feathered songsters, while the pure soft breezes incessantly waft sweet odors from the innumerable patches of "rare chaliced gems," both cultivated and growing wild. Among those favored with residences in this desirable neighborhood, are Messrs. Joseph D. DuBois, Joseph Bell, Jacob Greer, John P. Gilchrist, Lewis Lunsford, Robert A. McCabe, Thomas O'Brien, S. O. Taylor, &c. It is an incorporated village, under act of Legislature, passed February 7th, 1868, which legal instrument bears the names of the following incorporators: J. P. Gilchrist, Chester D. Knox, L. Lunsford and S. D. Woodrow. Officers in 1878, L. Lunsford, mayor; J. P. Gilchrist, recorder.

Resuming our course along the pike, we cross a double stone arch spanning a branch of Wheeling creek, known as Wood's run, pass the toll bar, and immediately come in full view of

MOUNT BELLEVIEW HOUSE,

the property of Messrs. Frank Walters and Thomas P. Shallcross. It is a magnificent family hotel, facing on the national pike. The building, which was only opened the past summer,

*See biography of Hon. Judge G. W. Thompson, given hereafter.

stands upon the side of a lofty hill, with the advantage of forty acres of land surrounding it. The architecture is very attractive: the structure substantial, and the internal arrangement of the house perfect, while the rooms are furnished in excellent style. There are forty apartments for the entertainment of guests by the day, month, week, or year round. In addition to extensive lawns, flower plats, &c., there is a prolific vineyard attached to the house, and ample facilities for holding pic-nics, while the Wheeling creek winds gracefully at the base of the hill, affording ample recreations for "ye disciples of Isaac Walton." Mr. John K. Mallonee is at present writing, manager. At the foot of the hill, and also on the side of the pike, directly opposite the Belleview House, is the old Two Mile House, run for many years by Mr. Frank Walter, which still enjoys a wide-spread popularity as "a house of call" for travelers, and the thousands of pleasure seekers, who every summer drive or promenade along the pike through this fascinating rural district. The Bethany pike here also diverges from the national road, and likewise runs through as luxuriant a range of country as eye could desire to gaze upon. Continuing our course, we ascend a rise in the road, and leaving the extensive farm owned by Mr. Woods on our left, as also the attractive residence occupied by Mrs. Dunlap, we notice the hills in the back ground, though still lofty and picturesque, yet more disconnected. Mr. George H. Park's lands, here, are known as "Echo Point," from the fact that any excessive audible sound produced thereon, may be heard to reverberate from the surrounding hills. We next enter what has been most appropriately named

PLEASANT VALLEY,

for to gaze upon the diversified rural scene, in mid summer, there is positively nothing in the works of nature to suggest a fitting comparison with what our imagination could picture Paradise. Nor is beauty its only attraction. The rich nutritious nature of the soil, consequent upon protracted and skillful cultivation, and the proficiency attained by the local agriculturalists annually affords a production of crops in this valley second to no district in the state. Dotted here and there, and everywhere around us, are beautifully designed residences and farm houses, while the old Bedillion Flour Mill, that has stood for over eighty years, still contributes its services to provide the "staff of life." Among the lovely rural homes referred to may be mentioned notably those of Messrs. C. Seibert, John Arbenz, W. Porter and John Pfarr, —— Tieman, Mrs. J. List, Mr. G. Steenrod, Mrs. Zane, Mr. W. P. Hubbard, &c. But while peacefully strolling in profound admiration of the lovely perfection in nature's works, as so sweetly pictured in this delightful valley, we suddenly approach, to our right, a large entrance gate from the pike, supported by two neat structures, which immediately disclose to us

GREENWOOD CEMETERY.

This solemn, yet attractive spot, for the reception of "dear departed ones," has few equals in any respect. It is located three miles from the city, and is the property of a private company, chartered March 3, 1866, occupying thirty-seven acres of desirable land. The charter members were Messrs. J. S. Rhodes, E. A. Hildreth, Edmund Bocking, S. P. Hildreth, R. G. Jordan, Wm. M. List, Chas. H. Berry, James Reed, A. W. Campbell, George Adams, John G. Muth and P. C. Hildreth. The first actual interment was the remains of Mrs. Caroline Morgan, widow of the late John Morgan, July 22, 1866, since when, to April, 1879, no fewer than nine hundred and sixty persons have there been consigned to peaceful graves. The remains of ex-Governor Stanton, of Ohio, are here interred, and the spot fittingly marked by a massive and imposing monument, while a spacious vault has been constructed to the use of the late Dr. R. H. Cummins' family. The grounds are admirably kept, and contain a rare collection of exceedingly fine specimens of sculptor work, including monuments to the memory of deceased members in the families of Messrs. Oglebay, Paxton, Crangle, Sweeney, Mendel, McClellan, Reed, &c. In one of the small structures, at the gate, resides Mr. Andrew Rehm, the superintendent of the grounds, near to whose house may also be observed a very fine green-house, 70x15 feet, for the propagation of plants and cultivation of flowers, shrubs, &c., for the convenience of lot owners, who, through the summer, profusely decorate the graves in this "death's broad acre." The present president of the company is Mr. A. J. Sweeney, and Mr. R. C. Bonham is their secretary. The grounds are beautifully laid out, and kept in excellent order by the superintendent, whose zealous efforts have conduced largely to the popularizing of Greenwood, and are without an equal in the state as an attractive burial ground. Leaving Greenwood, a very short distance brings us to *Mount Calvary Cemetery, on the opposite side of the pike, a Catholic burial ground equally attractive with Greenwood, and also containing a magnificent stone memorial chapel to the memory of the late Bishop Whelan. A few yards still further, and to our right, we find the waiting room, stables, &c., located at the terminus of

THE WHEELING AND ELM GROVE STREET RAILROAD TRACK.

This enterprise was first organized in 1873, and received its charter of incorporation in 1874, bearing thereon the names of Right Rev. R. V. Whelan, J. D. DuBois, John Reed, sr., M. Reilly, S. Laughlin, Thomas Hornbrook, R. A. McCabe, J. R. McCourtney, John K. Botsford, Wm, Stamm, Hugh Clark, and George H. Parks. Power was conferred upon them to adopt either animal or steam power, but through the intervention of certain residents along the route, farmers and others, who feared the adoption of steam, that power was taken from them in 1877, but only to be re-permitted in 1878, and they can now adopt a steam dummy so soon as suits them. The road, though intended to connect Elm Grove village with Wheeling city, has not, however, to the present, been out further than this point, to which we have arrived on the National pike, known as the "Stamm." Here the company have an excellent stable, with a second one in town, near the Capitol, where their chief office and waiting room are also located. On their three-and-a-half or four mile run between Eleventh street, city, and "Stamm's," they have other stations, while the general order of their track, though in some cases passing through fields, is kept intact. They have six excellent cars and some thirty head of horses, which make trips daily from six in the morning until half-past nine in the evening. The cost and equipment of their road, to date, may be quoted at $30,000, and the present are the officers: President, J. D. DuBois, Esq.; secretary, Andrew Wilson, Esq. Managing Committee: Col. O'Brien, George H. Parks, and the president, ex-officio. The whole of the lovely scenery named thus far under the head of Triadelphia District, and even far more, may be taken in during a ride out on these cars from town, therefore it is a matter of little surprise to see them, each summer, run to their fullest capacity.

THE STAMM HOUSE,

so named after its proprietor is universally recognized as being the present end of the Wheeling and Elm Grove Street Railroad. It was originally built for, and run as a tavern, by one Samuel Carter, in 1818, and has always afforded the hospitalities of a comfortable rural home to travelers along the pike. The present proprietor, Mr. William Stamm, succeeded to it in 1851, having previously resided in the city of Wheeling for seventeen years, where he enjoyed quite extensive popularity as host of the Exchange Office House on Eleventh street. Two years ago, he enlarged the house and effected other improvements, having at present fifteen rooms at the disposal of guests, while he further farms probably fifty acres of land. Many families are in the habit of leaving their city homes during the summer months, and here find, temporarily, a quiet, healthful, clean and charming mid-summer abode. In matters of management, bounty, geniality and the happy gift of making every one happy, Mr. Stamm lacks nothing, and it is pleasing to find him share his full complement of patronage and support. And this brings us to a brief account of the matchless grounds of Thomas Hornbrook, Esq., known throughout the entire country as

HORNBROOK'S PARK.

Fatigued with a lengthy walk, we turned into this model Eden to indulge a rest, where the graveled pathways are lined with shade trees, shrubs, etc., in matchless polished beauty. The park contains about fifty acres, and extends along the National pike about seventy rods, running back from the pike towards the mountains in the back-ground a distance of at least three quarters of a mile. There are two entrances to this spot of "rural elegance and repose," as it has been so aptly termed, the first of which is an avenue or drive of about forty feet in width, on the west side of the large mound in the centre of the grounds; and the second, an avenue of about the same width, on the east side of the mound, and courses its way around the mound and leads to the entrance first mentioned. The avenues

*See article elsewhere on "The History of Catholicism in the Pan-Handle."

are lined on either side by rows of rare and costly trees, such as hemlocks, pines, weeping willows, magnolias and evergreens, and are shaded throughout the day, with the exception perhaps at high noon, from the hot rays of the sun, by the branches of the trees on both sides intertwining with each other. Entering the grounds by the east avenue, the pleasant sensation which thrills one to the core as the drive of perhaps one and a half miles in length is traversed, is indescribable, and the avenues are arranged with special convenience for visitors to view the grounds. Passing along the avenue to the rear or north end of the mound, the visitor is brought suddenly and unconsciously immediately in front of the unpretentious residence of Mr. Hornbrook, which is so completely hidden from view by the thick foliage of the trees and shrubbery surrounding it, that it is impossible to see the building until at the very door. Standing in front of the residence, on every hand are traces of refinement and culture; rare exotic plants of many species artistically arranged in flower pots and beds of different sizes and shapes, and looking to the north, the roofs of the outbuildings, consisting of stabling, carriage houses and other necessary edifices for the convenience of a country gentleman, loom up through the green-clad tree-tops. Passing on from the house and traversing the drive around the mound to the west side, the scenes of the east side are repeated as the visitor follows the circling course of the avenue, until the ice cream pavilions of Mr. A. Neuhausen are reached. This gentleman has undertaken the establishment of a summer garden as a public place of resort in the southwest corner of the grounds of Mr. Hornbrook, which will be kept in a first-class and acceptable manner. Alighting from the vehicle at this point, the visitor entertains the inner man with ice cream, cake, lemonade and other delicacies before pursuing further investigations. Reappearing from the pavillion, you face a drive, branching off from the main avenue, lined with rare and costly varieties of fruit and ornamental trees and shrubbery, and winding its way to the top of the mound, and you are ushered into a large open plateau, bordered in a like manner as the avenues, reaching to it, where you for a time lose your identity and become oblivious to all else save the perfectly grand and charming view presented. On this plateau is a large well seventy feet in depth, and containing thirty feet of water, and at different points are placed posts for hitching horses while the visitor rambles through the grounds and enjoys the aroma from the trees, shrubs and flowers which impregnate the air with a perfume simply unimaginable. Standing on the apex of the mound, on all sides, stretched out in undescribable splendor, with fields and primitive forests garbed in nature's loveliest hue, the scene entrances the beholder; and gently raising the eye, the tops of the hills surrounding the spot, loom far up heavenward, in delightful contrast with the fertile bottom lands in the valley below, through which winds its serpentine course that loveliest of streams, Wheeling creek, and that most delightful of drives, the National pike. Then one cannot suppress the exclamation of delight which follows. Looking to the east from this point the view is strictly one of nature, and the eye traverses a section of country up the valley a distance of perhaps several miles. But on directing the sight to the westward, the scene is more artificial, and the handiwork of man is witnessed side by side with that of the Creator of the universe.

In full view are three cities of the dead, the Catholic, cemetery, Greenwood cemetery and Mt. Wood cemetery, the white tomb-stones placed over the remains of the loved ones there buried, grandly contrasting with the green fields and pastures surrounding, and also at the same time recalling the many sad and pleasant recollections which at all times vibrate alternately through the soul of man; recollections of the time when they who now inhabit the city of the dead were of the flesh, and stood at the summit of the mound and gazed as the living now gaze, far out on nature's sea of loveliness with wonder and awe depicted in every feature, and thanked God that man's habitation in this world could at times be made so pleasant as to cause a thrill of desire to permeate his being that he might live forever in such a paradise.

Mt. de Chantal is on the south side of Wheeling creek which courses through the valley beneath, and shows out in bold relief to the surroundings, and along the base of the mountains hard by winds in gently rounded curves the track of the iron horse, the shrill whistle of which seems like sacrilege in so lovely a dale. But this is not all; on every side the magnificent residences of country gentlemen can be seen, with beautifully adorned grounds, composed of lovely groves, portraying nature in her loveliest, simplest and purest raiment. The scene from this place is indeed worthy the pen of an artist, and none but a master of art could approach anything near doing justice to the picture presented. But now that we have in a manner portrayed the surroundings, let us look at that which tends to make this spot an earthly paradise. There are here and there no legendary castles, the recital of the history of which turns the romantic ideas of youth from their proper channels; no relics of the past ages; no artificial grottoes or lakes of extensive proportions, or marble or bronze statuary, the work of art. Art is ignored and nature holds supreme control. Mr. Hornbrook has thousands of trees of different varieties, fruit and ornamental, among which may be mentioned apples, pears, peaches, cherries, quinces, maples, birch, ash, English and American elm, tulips, European and American linden, willows, chestnuts, the maiden-hair tree, African oak, evergreens of perhaps thirty different varieties, many species of "weeping" trees and magnolias, shrubs of hundreds of kinds, and of nearly every description. Over 50,000 bulbs of tube roses, 2,000, dahlias and 5,000 bulbs of gladiolas, with large quantities of other bulbs, having been planted the present season, all of which go to make up a park unequalled by any similar place of the kind in America. But as too much cannot be said in praise of the Hornbrook park, and as the subject cannot possibly be exhausted in a short newspaper article, a departure from the park and a glimpse at the life and eccentric character of the philanthropist who has contributed so much for the edification of mankind is in order. Mr. Hornbrook is now 63 years old, and is what might be truthfully termed a self-made man. Fifty years ago, at the age of thirteen, he commenced life for himself in this city with a basket of merchandise on his arm and $4.62 in money. By frugality and honest industry he added to his store of wealth, and as time advanced he increased his speculations, which fortunately invariably proved successful, until at last he became what he now is, one of our wealthiest and foremost citizens. He has been identified with all the temperance movements that have taken place in this city for years, and has contributed hundreds of dollars to this cause and thousands of dollars to different churches, schools, and benevolent institutions.

Continuing our journey from the Stamm House, to the right is a splendid large country residence, sheltered by lofty and healthy shade trees, the property of Mr. L. Hoge, of Wheeling, and near thereto stands the Belvedere Hotel, a country summer garden for the entertainment of pic-nic and other parties, as well as season boarders. Here are beautiful gardens, green houses, kitchen garden and lawns, while the entire surroundings are charming to a degree. It was originally kept by a Mr. Neuhausen, but at present writing without a tenant. From here we still proceed in the direction of Triadelphia, passing Pryor's Hill, and the extensive and excellent farms and residences of a Mr. A. Cecil, Mrs. Effie Russell, Mrs. Woods, Mr. S. Laughlin, Mrs. O. Pryor, Mr. Wm. Askew, &c.—a pleasant walk of one mile landing us in

ELM GROVE,

a delightful little village that for healthfulness and rustic beauty has no equals in the state. In the days of our earliest pioneers, David Shepherd, William Shepherd, William and John Fay, William Huss, ——— Saunders, and E. Thornburg were its first settlers. It was here in the vicinity of the old Shepherd or Cruger property, still standing, that David Shepherd erected the old Shepherd fort, and a block house in close proximity, to resist the Indians. Col. Moses Shepherd, a son of David, married a Miss Lydia Boggs, who, subsequent to the death of the former, married the Hon. —— Cruger, of New York, as related in biography elsewhere. It was Col. Shepherd, however, who first erected a residence on the site so popular in our day as the old Cruger property. The said property was recently sold by the heirs of the late Mrs. Cruger, and purchased in, at a considerable price, by Mr. Alonzo Loring, of Wheeling. The site of the ancient structure as obtained from the pike, strongly impresses one with "the light of other days." On the bank of Wheeling creek, and commanding probably the most desirable rural aspect in the village of Elm Grove, stands three venerable stone structures, though the larger of which presents by far the greater share of traits characteristic of modern architecture. In front is a spacious lawn, with fine shade trees, rustic seats and occasional flower beds, while near the entrance gate from the road, up the carriage drive, stands the outline of what was once a very imposing monument, but now so obliterated as to be almost unintelligible. It was erected about 1825 by the late Moses and Lydia Shepherd in honor of the late Henry Clay, and is the handiwork of an English artist

and mechanic named John Erie. It still presents quite an interesting appearance, but most of the designs and lettering have fallen a prey to the influences of age and exposure, until the only inscription that remains, reads as follows: "Time will bring every amelioration and refinement most gratifying to rational man, and the humblest flower freely plucked under the shelter of the *tree of liberty* is more to be desired than all the trappings of *Royalty*. Anno Domini 1820." Nor is Elm Grove behind in designs of modern architecture, as evidenced by the noble mansions owned by Mr. Lewis Baker* and Mr. Jacob Hornbrook, the former affording a happy contrast with the lofty position of Mr. Hornbrook's grounds, evidently laid out regardless of trouble and expense. Originally this village was known as Shepherd's Monument, but in consequence of numerous exceptionally fine elm trees growing in that locality, the taste for modern refinement suggested the more aristocratic title of Elm Grove," which was subsequently freely adopted. There are but few venerable pioneers still living there that have a lively recollection of ye good old days, but the following will show that we were successful in securing at least one interview with a worthy old resident:

ELM GROVE IN 1817.

In conversation with one who is at present writing among the oldest living inhabitants in Elm Grove, Mr. Moses Mills, whose father, Capt. John Mills, took up his abode in this section about 1793, we gleaned the following sketch of that village in "ye olden times." "While the pike was under construction there was only one blacksmith's shop, a humble grocery kept by an uncle to our informant, (named Moses Shepherd) and a few isolated log huts—not to exceed six or eight. The old grocery was conducted on the same site as that occupied at present by the grocery controlled by Thornburg & Russell, while the smith's shop was adjoining. Bears, wild turkeys and even wolves were not yet totally annihalated from that section and mid-night four footed prowlers were free to indulge a "fowl feast" without leave or license. The stage coach might be heard rolling over the pike, late and early, between Cumberland and Wheeling. Christmas, Easter, Whit Monday and the Fourth of July were made occasions of special observance in the matter of mirthful indulgence. Running, jumping, wrestling, ball playing and shooting were the leading features among the boys, in whose eyes and mouths "Black Betty"† found favor—and should a couple of roosters happen to cross each other's path, as the boys would see that they frequently did, why a "feather fledging circus" would afford a welcome relief to the monotony of rural life. Partridge, quail and squirrels were plentiful, but rabbits were scarce and an easy prey to the unerring eyes of pioneer sportsmen, who hurried their game to Wheeling, the nearest market town, where they invariably found a ready sale for them." Capt. John Mills was an officer in the revolutionary wars, and his wife was a sister to the late Moses Shepherd. The present Roeteger Hotel originated in the Gooding House and was built in 1820. Mrs. Gooding, at the death of her husband, ran it for many years, after which a Mrs. French succeeded to it, and for a time it was known as the French House—Mr. Roeteger has held possession for the past eleven years. The opening of the Hempfield Railroad was an important event in the rise and prosperity of Elm Grove, and has opened up a tract of country, within easy distance of town, that for rural attractiveness and eligibility to the location of secluded and healthful residences is not to be surpassed in America. There are now three or four stores, a smiths' and wagon shop, capital grist mill, (erected between 1830 and 1840) and an almost inexhaustible coal mine, run by W. T. Chambers & Co., while the shipment of walnut lumber also forms a line of enterprise of growing importance.

Mr. J. S. Woods is post master, and Mr. E. E. Post, storekeeper, is railroad ticket agent, and also keeps the Baltimore & Ohio Railroad express office. Quite a cheerful aspect is also afforded to Elm Grove by the comparative recent construction of a neat iron bridge spanning the creek as an approach to the County Infirmary. It was put up by the county commissioners, at a cost of about $8,000—chiefly as an improved approach to the new County House,‡ standing just outside this district boundery, and which was erected in 1870. Continuing our route we again pass many very interesting residences, including those of Dr. W. A. Cracraft, Mr. A. Kimmons, H. Forbes, Esq., W. T, Chambers, Esq., as also the Old Stone Church, of which we shall have more to say anon. Loking in upon Mr. John Thornburg, whom we passingly heard was probably the oldest living inhabitant, we were rewarded with the following information: He is a son of the late Ezekiah Thornburg, who came to this section among the very earliest white settlers, and owes his nativity to Ohio county so far back as 1796. About 1774–5 Ezekiah first secured the old farmstead, which was succeeded to by his son David, in 1826, where we were favored with our present interview. Two other sons besides David, still live—John in the same township, near Triadelphia, and Ephraim, in Iowa. David has also three sons living, Daniel, John, and Martin, the two former assisting him on his farm, while Martin is in commercial partnership with Mr. James Russell, in Elm Grove village, where they continue the old grocery established by Moses Shepherd, about the close of the last century. David's venerable "better half," whose maiden name was Sarah Martin, born 1802, in Pennsylvania, is also living to comfort the old gentleman in his advanced years. He has a distinct recollection of Fort Shepherd and the old block house, while he can recall many scenes of hunting and rural pastimes that gave zest to his boyhood days, when Elm Grove was little short of a wilderness. Leaving the old gentleman's prosperous farm, we pass the attractive residence of the Rev. L. Greer, pastor of the Old Stone Church, as also that belonging to Mr. Joseph Fay, a descendent of the original Fay family that located here in 1770–5. Nor should we fail to refer to the homesteads of Andrew Halsted, Peter Rinkess, Henry Hervey, George Hauser, Scott Miller and John Thornburg, all of whom, on the National pike share most profitable and highly cultivated farms. We next enter the old-timed

INCORPORATED VILLAGE OF TRIADELPHIA.

The original charter of this town was granted in 1840, though subsequently it was deprived of the same for some eight or ten years, consequent upon an inability to comply with the requirements of clauses therein. It, however, was re-enacted on the forming of the new constitution, and still remains in force. This town was formerly very popular as the first stage out of the Nail City on the Wheeling and Cumberland pike, and long before railroads, boasted a regular market of considerable importance. It was common, in those days, to see as many as twenty and thirty wagons and coaches on the road at once, and a live business was rather the rule than the exception. The main street is probably three-quarters of a mile long, though the corporation limits are somewhat contracted. In the upper end of the town a large number of Germans having located, has gained for that section the style of Germantown, though it may be said that the number of inhabitants generally remains now about stationary, so far as the arrival of strangers is concerned. The town is some mile and a half from Elm Grove, and two and a half miles from Roney's Point, and the population is in the neighborhood of three hundred and fifty. Most of the buildings wear an aged appearance, though there are some of more modern and attractive appearance. The present mayor is G. A. Kyle; D. C. Gray is recorder, and A. I. Wells, town sergeant. There is no manufacture conducted here, not even so much as a good flouring mill, though there are several coal banks (chiefly small) in the neighborhood, while Messrs. Kyle & McCoy deal extensively in the shipment of walnut lumber for foreign shipment. There is one drug store, three groceries, two dry goods stores, three cigar manufactories, two smith shops and one wagon maker. There is no public hall, the council chamber consisting of a rented room at one of the hotels, of which there are two, possessing all the comforts of a country home. The old Lawson house was specially popular in coaching days, as the then proprietor—the late Mr. Francis Lawson—was one of the most popular stage agents on the road. As a building, it is a fine old type of bygone days, and is still ably conducted by *Mrs. Lawson, assisted by her sons. The rear portion of the building was erected in the latter portion of last century, the front being added probably half a century ago, and the premises are admirably shaded with quite a prolific flower and vegetable garden surrounding it.

The Triadelphia house, also a very old and interesting house of call, efficiently conducted and very inviting to the weary traveler, is presided over by †Mr. H. T. Heier, and lacks nothing of rural attractions. The railroad stopping point is marked by a platform only. Mr. D. Henderson is express and ticket

*A more delightful country seat the state cannot produce—the effectiveness of the architecture being equalled only by the attractiveness of its surroundings.

†"Black Betty" was understood as meaning a black bottle of whisky.

‡The County House is a very fine building standing on between one and two hundred acres of land. Its surroundings are kept in excellent order and the institution is governed most efficiently by Mr. Bernard Shanley.

*See biography, elsewhere. †See Biography elsewhere.

agent, but there is no telegraph office. There are two places of religious worship—a Methodist and a Lutheran church. The founder of the latter in this section, was the Rev. Julius Fundenburg, of Wheeling, who, in 1871, bought the old Methodist Episcopal church, and opened it in the cause of Lutheranism, in the German tongue. The first call was the Rev. S. Thomas in 1871, and the second, the Rev. Meuller in 1873. Prior to 1877, the congregation was without a regular minister for nearly two years, being supplied from Wheeling, but that year, the Rev. Rudolph Lusher came, and still retains the pastorate. The church is in good order, supports a very satisfactory Sabbath school, and has a female missionary society connected therewith. The Methodist church is a handsome brick structure facing on the Main street, adjacent to which is the neat parsonage of the minister, the Rev. *D. H. K. Dix.

Leaving the town of Triadelphia, proceeding along the National pike, the scenery is exceedingly fine as we approach the neat residence of Miss Rachael Thornburg, daughter of Mr. Thomas Thornburg. After which we come to the excellent and productive farm of Mr, John E. Sisson, whereon is a remarkably fine family mansion and suitable farm out-buildings. This farm, or the lands thereon, have considerable of a history, dating back to the time of the Indians, &c., referred to in several places in this work, which the Sisson family have a pioneer record of, worthy the most prominent of our early successful settlers, as shown by biographers elsewhere. Jacob Fisher has also a very fine farm, and conducts market gardening. The foregoing are on the north side of the road, while along the south side will be observed the farms of J. C. Hervey, J. McDonald, B. Spriggs, John Wallace, the Stuart Brothers, and the Erskines, all in a high state of cultivation. Coming to

RONEY'S POINT,

also now on the Hempfield railroad, we find quite an ancient village. There is here a very good hotel, named the Heimberger House, originally erected in 1820, on the right of Roney's old tannery, an early settler, after whom the place was named. This village stands on little Wheeling creek, and is much better supplied, than Triadelphia, with water, as that place has no stream running immediately through it. The property around Roney's Point, was nearly all, originally owned by a Mr. Frazier, now deceased, at whose death, the heirs disposed of much of it. About three years ago, one George Heyman, opened a coal bank in this neighborhood, but manufacture is unknown here, nearer than the famous Gaston's flouring mills. There are only a few houses scattered around, but no church in the village. There is one store, and a blacksmith and wagon shop, with post office. A short distance hence, Mr. A. Higgs, Mr. Louis P. Sisson, and Mr. B. Crow, own the last farms in this district, and coming to little Wheeling creek, we are confronted with Liberty district.

REMINISCENCES OF OHIO COUNTY CHURCHES.

The first settlers of Ohio county mostly emigrated from adjacent portions of Pennsylvania, Maryland and Virginia, of which Martinsburg, Hagerstown and Gettysburg were perhaps leading points. They were mainly of the Scotch-Irish race, and Presbyterian in religion so far as they were anything.

The first churches organized in Ohio county were the Elm Grove and West Liberty Presbyterian churches. These congregations appear to have been established so near the same time that neither of them can have any claim to priority over the other worth speaking of.

Rev. James Hughes was installed first pastor at the West Liberty congregation April 21, 1790, and the Rev, John Birch was installed at Elm Grove the following day, April 22, 1790, each to preach half the time at these places. These were both young men who had been students together in Washington county, Pa., having obtained their education, literary and theological, mostly under the private instruction of Dr. John McMillan, the noted border preacher. They were both useful men and each remained at these places a considerable length of time. These installations occurred about four years before the close of the Indian troubles. On this accouut these preaching stations were located near forts. They preached for years in the woods, the preacher only occupying a wooden structure called a tent. The men often carried their guns with them to church for defense against possible attacks from the Indians. The location of the Elm Grove Church upon a point was probably made for military reasons.

*See Biography elsewhere.

Preaching at these two places half the time was thought to be all that was needed then in the county. But about this time there was discord and division in the Presbyterian Church on account of its adoption of Watt's psalms and hymns, instead of "the psalms of David in metre" previously in use in all the Scottish Churches. It is extended to this then extreme border and led to the organization of the Tent Congregation in connection with the Associate Reformed Church. About 1795, Rev. Alexander McCay became its pastor, and continued to preach there part of the time for about twenty-five years. He preached to larger congregations than ever gathered statedly to hear any other country minister in this region. They come from all parts of the county, and from beyond its limits to hear him, notwithstanding his sermons were very lengthy.—*Wheeling Intelligencer.*

EARLY DAYS IN OHIO COUNTY.

The general settlement of Ohio county was begun in 1773. The settlers and Indians lived in peace till the spring of the following year, when a war broke out between them and lasted for twenty years, excepting a short truce which followed the treaty of peace negotiated by Lord Dunmore. The construction of places of refuge and defence for the protection of the settlement were among the first things attended to in the panic which followed. There were two of these places east of Shepherd's Fort—Frazier's and Hosack's block houses; Frazier's block house appears to have been built in 1774 by Samuel Frazier, who must have settled there the year before and was located on the farm now owned by R. S. Williamson, one mile north of Roney's Point, in the edge of Liberty district. Hosack's block house was erected by David Hosack, who settled there in 1773, but the block house seems not to have been built so early as the the other. It was on the Hosack farm, in Triadelphia district, one mile south of Valley Grove, where Mrs. David Hosack, daughter-in-law of the original settler, still resides. There was another block house built towards the close of the war on what is now known as the Stoolfire farm and there may have been another one or two in the eastern part of the county, but the first two were the principal ones and were important places in that part of the county in those early days, yet no mention has ever been made of them in any record written hitherto.

THE DARKEST YEAR IN ALL OUR BORDER HISTORY WAS 1777.

All that summer the woods were filled with roving bands of hostile savages. The settlers became discouraged, and most if not all of them east of Wheeling abandoned their homes for a time. Some of them did not return for years, and a few of them did not return at all.

There was another year of great hardship, that was known by them ever afterwards as "the famine year." The principal crop they succeeded in raising was wheat, and it was "sick" and could not be eaten, and they were unable to procure a sufficiency of wholesome food. We have not been able to get the exact year, but it was somewhere between 1780 and 1790.

The most remarkable fact in regard to the early settlement of the eastern part of the county is that no murder or depredation of any kind was ever committed there by the Indians. A man by the name of Henthorn, originally occupying the present farm of Mr. Sisson, sen., was shot from his horse where Triadelphia now stands, and John Grist was taken prisoner by them at another time, not many rods from the same place. Then we heard of no more mischief done by them till we cross the Pennsylvania line near West Alexander, where a Mrs. Ross was murdered by them. They never did any mischief south of these two points in the county or north of them, though the Indians were known to pass often through these settlements.—*Wheeling Intelligencer.*

REMINISCENCES IN THE HOSACK FAMILY.

On one occasion when Mr. Hosack was absent from home over night, and his wife and children slept in their cabin unprotected, save by a dog, and apprehensive of no danger, in the morning they found Indian tracks in the snow around their cabin but nothing was disturbed.

These settlements were composed almost exclusively of Presbyterians of the Scotch-Irish stock, who came there to procure homes for themselves and their children, and the majority of the families still have representatives in the neighborhood. With a high sense of justice which has ever been characteris-

tic of their race, they refused to aid or countenance any agressive acts against the Indians. There were no scouts or warriors among them and none of the lawless class. They acted strictly on the defensive. From the light that has since been thrown on the character of Simon Girty, it would appear highly probable that they were indebted to a considerable extent to this strange erratic character for their singularly good fortune, notwithstanding they always supposed him to be their worst enemy. Girty was well acquainted with the character of the settlements. If it was an accident, it was a very singular one, that hostile Indians continued to pass on their raids through a settlement for twenty years without ever striking it a single blow, whilst they committed murders all round it. It is a further confirmation of the theory that if the Indians had been dealt with justly, it would have saved the writing of many a bloody page of border history.

There was just one exception, so far as known to the writer, to the above statement and that was John *Neiswanger, who was one of the earliest pioneers and a daring scout. He "took up" land owned now by the Stewarts and others, and forted under a rock in a sort of a cave one mile and a half above Triadelphia, and a quarter of a mile north of the pike. He was killed by the Indians at the mouth of Little Grave creek, where he had put in with his canoe for the night, when on a hunting expedition in 1783.

PETER'S RUN.

Mr. W. C. Stewart writes: Of all the Indians who roamed over the Pan-Handle, this is the only one whose name has been fastened on anything within its limits: From the *Pittsburgh Leader*—"Indian Peter"—"In West Brownsville is the remains of an Indian graveyard, where lies the body of the famous chieftain, Indian Peter, who for many years led his warriors in battle with the white settlers, but afterwards relented and distinguished himself as the peace advocate among the Indians at the conference held in 1767 at California, seven miles down the river." West Brownsville is a village on the west side of the Monongahela, opposite Brownsville, Washington county, Pa.

REMINISCENCES IN THE LIFE OF †NEISWANGER.

We gleaned the following from a recent newspaper correspondence, the substance of which, upon investigation, we found to be substantially correct and faithfully recorded:

Among the very few white men who had made permanent homes in Ohio county a hundred years ago, was one John Neiswanger. He was a hunter and Indian scout rather than a farmer, yet he took up a tract of land, on which he camped, and during his occupancy of it made some little improvement on it. It was some miles from a fort, and Indian raids were frequent. To obviate the inconvenience of fleeing to a fort at every alarm, he fitted up a cave under a projecting rock of a waterfall in a deep, narrow ravine. In times of supposed danger he would seclude himself in this lonely cavern. Occasionally he would venture out, dressed in Indian costume, to cautiously engage in his favorite occupation of hunting for game or scouting for Indians. This cave is on lands now belonging to Mr. J. E. Sisson.

On a beech tree some half mile from this, the date 1776 was quite legible; also most of their camp implements were plainly carved, and the initials "P. N." These are the initials of his brother, Peter Neiswanger, who was also an Indian spy of some note, and was one of the defenders of Fort Henry when it was besieged in 1782. It is probable Peter had amused himself doing this carving while on a visit to his brother's camp. There were indications that this place had been used as a camping ground for some length of time. The owner, not appreciating its historical value, had the tree cut down a short time ago.

Here "in the midst of alarms" and away from "society, friendship and love," this adventurous hunter led a life for the most part quite as solitary as did Alexander Selkirk on his desolate island. The constant exposure of his life to dangers which he loved and courted, terminated as it usually does sooner or later. Dr. DeHass' history gives this account of his tragical death:

"In the summer of this year (1783) John Neiswanger and Joseph Heffler, two very efficient spies, started on a hunting expedition down the Ohio. They were dressed in Indian fashion, as was often the custom on such occasions, so as the better to elude detection. They descended the river in a canoe and on the evening of the day they left put into Little Grave creek. A party of Indians had watched their movements, and during the night attacked them with fury. Neiswanger was killed, but his companion succeeded in getting off with the loss of two fingers. While in pursuit of Heffler the canoe floated off and thus the savages lost the chance of scalping the unfortunate Neiswanger. Some months after the canoe was found lodged at the head of Captina island with the remains of the hunter and his gun still in it."

He was, of course, unmarried. His relatives entered suit for his land about the close of the last century, which had fallen into other hands, but he had neglected to secure a legal title for it, and they lost it.

These early border heroes, though not of the highest order of men, are yet as worthy to be remembered as many of the Scottish chiefs who have been immortalized in song and story.

W. C. S.

*Correctly pronounced Ne-songer. †Commonly pronounced Ne-songer.

HON. JUDGE GEORGE W. THOMPSON,

residing on the old Steenrod property, on the National pike, a little beyond Fulton, having for so many years rendered valuable public service, merits more than a mere passing biographical synopsis of his earlier days. The Judge was a son of John Thompson, a native of Ireland, born in 1764, who, when he was nineteen or twenty years of age, came to this country with a young wife, whose maiden name was Sarah Talbot, reported to be a first or second cousin to the late Andrew Jackson, from the fact that James Jackson, her uncle, residing at Coote Hill, Ireland, claimed to be General Jackson's uncle. The old couple (parents of the Judge) settled on Wheeling creek so early as 1783, and had a family of six sons and four daughters, of which our subject and the following are still living: John Thompson, now aged eighty-three years, and residing on a capital farm in Ohio, opposite Moundsville. Thomas, aged eighty, living with his family at St. Clairsville. Robert, who also resides at the latter place, in retired life, is aged seventy-five years, and Eliza, now the widow of Edward Steenrod. The Steenrods were among the earliest settlers in Dutchess county, New York. Judge George W. Thompson was born in St. Clairsville, May 14th, 1806, and took his early education at the Jefferson College, now the Washington and Jefferson College, Pennsylvania, where he graduated during the presidency of Dr. Matthew Brown, in the fall of 1824. He then studied law under the late William B. Hubbard, at the time a prominent and successful lawyer at St. Clairsville, but who subsequently became an eminent banker in Columbus, Ohio. He was admitted to the bar in the fall of 1826, when he went to Richmond to improve his studies, returning to St. Clairsville in 1828, where he practiced down to 1837, during the same period carrying on a large and respectable practice in Belmont county. Politically, he became a prominent and very active Democrat, warmly enunciated his party's principles, and took an active part in sustaining General Jackson's proclamation against the nullification of South Carolina, in 1833. He came to Wheeling in 1837, and entered upon the practice of law, succeeding therin until his election to Congress in 1851. We should remark, however, that in 1838 the Judge was honored with the first appointment of a distributing post master at Wheeling, under President Van Buren's administration, and upon the recommendation of Mr. Amos Kendall, post master general, one of the most distinguished government officers ever controlling that important department. Then it was that the consolidation of the distributing agencies at Washington, Pennsylvania, and Zanesville, Ohio, took place here, which rendered Wheeling the most important postal town in the west, at that time. In 1842, when the controversy between the Baltimore and Ohio railroad and Wheeling was in full force, as to making the latter place the terminus, Judge Moses C. Good and the subject of our sketch were appointed a commission to visit Richmond and watch the movement of the company. Our subject differed from certain views taken by his colleague as to the policy to be pursued, and made an open attack upon the company before a full committee of the Legislature, resulting in the defeat of their application for a right of way which would have taken them from Wheeling altogether. The controversy, however, was carried through the succeeding session and the railroad company again defeated.

Our subject was further appointed in a joint commission with Mr. Wm. Green and Mr. Wm. C. Reeves on the part of Virginia, and Messrs. Thomas Ewing, John Brough and James Collins for Ohio, to settle the jurisdiction of the Ohio river between the two states named. He was appointed United States district attorney by President James K. Polk, between 1844 and 1848. As we have said, in 1851 he held a seat in congress, from

whence, the following year, he was elected to a judgeship in the Twentieth judicial circuit, and ably officiated in circuit and district courts. During his term in congress, the judge introduced a bill and secured its passage in opposition to a previous decree by the Supreme Court of the United States for the abatement and removal of the Wheeling bridge. This was a most important achievement, and probably one of the finest constitutional distinctions ever made between legislative and judicial power, as it set aside the effect of a judicial decree of that court by an act of congress, and secured the foundation for all future legislation on crossing navigable streams in the United States. In 1860, our subject was re-elected to the judgeship in the circuit and district courts of Virginia by a majority of two to one over his opponent, Mr. Berkshire. He held the office till July —, 1861, when his removal was effected in consequence of a refusal to take the oath of office to support what he conscientiously believed to be the unconstitutional actions of those who undertook to set up the present state of West Virginia. He then retired into private life, and has since found agreeable occupation for his active and deeply penetrating mind in wielding the author's pen, at which he would seem to be doubly securing the perpetuity of an energetic life as compared with his active public career as a scholar and statesman. In 1866 he published a work entitled "The Living Forces," to identify the forces of nature as representative of the spiritual and mental forces by which all things were made. In 1870, he followed with another volume bearing on the same views, entitled "Deus Semper," and has now on hand "The Administration of Good and Evil," or what may virtually be termed a summary of his previous works, in defense of Protestantism against Atheism and Catholicism, embodying an immense field of ideas in a condensed form. Nor do these evidences near represent his past exertions, for he has endless manuscript forms and prose compilations it is to be hoped may yet find their way to the press. The judge was married in 1832, to Elizabeth, second daughter of the late Daniel Steenrod, sr., of Dutchess county, New York, by whom he has had a family of six children, five of whom are still living, as follows: Annie, now wife of the Hon. J. N. Camden, of Parkersburg; Colonel W. P. Thompson, of Parkersburg, married to Miss Lina Moffat, of Pocahontas county, Virginia; Geo. W. Thompson, Parkersburg, married to Miss Belle, daughter of General John J. Jackson; Sallie T., now married to Dr. S. B. Bushfield, of New York, and Colonel D. S. Thompson, at present an extensive farmer in Marshall county, who married Miss Ella Thorn, daughter of Mr. J. W. Thorn, of Parkersburg. The old Steenrod House was originally built in about 1819, and for many years afforded a hospitable shelter for thousands of weary travelers along the National pike, which being, for a considerable period before the invention of steamboats and locomotives, the exclusive route form east to west was an incessant scene of activity night and day, frequently so many as 4,000 heads of stock being driven along it, past this point, in one night. A fire destroyed the east wing in 1850, but it has been restored, and though the "old home aint what it used to be," yet it is a fine type of the good old days, contains twenty-three rooms, is most conveniently and genteelly furnished, while there are so many fascinating reminiscences to the pioneer still clinging to its walls that there are yet thousands in whose minds its name alone is sufficient to awaken endless and varied recollections of "The light of other days."

THOMAS HORNBROOK

is the respected name of a local benefactor, whose name and life-time associations will live in history when his familiar voice has become hushed in the grave. He was born in Tarestock, Devonshire, England, in May, 1814, the descendent of a Huguenot family that settled in England after the "Edict of Nantes," and from such an ancestor it is not at all improbable he inherits the positive qualities of head and heart making him as persistent in any cause he undertakes or espouses. He was brought to this country in 1819, landed at Baltimore, and came almost direct to Wheeling, the same year. His early recollections of himself describe a barefooted boy, rendered forlorn, indeed, by the fact that the paternal head of the family was a victim to the intemperate use of alcoholic drinks—hence "home's sunshine" was alone gathered through the affectionate efforts of a good mother; whose memory grey headed sons still fondly remember and bless for her very many inestimable qualities. Becoming a merchant, Mr. Hornbrook's extraordinary ability, enterprise and non-surrender spirit, soon placed him on the road to prosperity. As a citizen and neighbor he was ever frank, liberal and uncompromising in his attachments. His invaluable services, in public as in private life, ever retained for him the highest regard universally, while heart-felt sympathy and powerful influence for the cause of temperance have resulted in a local good eminating from that righteous cause that should alone emblazon his name on the scroll of fame. He still continues in business as a real estate dealer, with office at 1138 Main street, while his noble free park, (as described elsewhere) is a delightful evidence of his liberal disposition and refined taste for the cultivation of God's vineyard.

Lewis Lunsford was born at Elm Grove, Ohio county, West Virginia, in 1802, and educated in a log school house with greased paper for windows. He engaged first in business as a sculptor, in Cumberland, Maryland, in 1823, and from that time till 1854, followed stone cutting and the marble business. He it was, who pioneered marble working into Wheeling. In 1854, he commenced superintending on the Washington and Hempfield railroad, and the Pittsburgh, Wheeling and Kentucky railroad came under his superintendence, while he became connected with various other public works. At the death of General McCoy, in 1849, he was placed in charge of the Cumberland or National pike, and afterwards became a very extensive contractor, and has spent an extraordinary active life in that line, besides which, he has ever manifested a lively interest in all local improvements and extensive private enterprises as they have come along. He married Ann Mc. Reeves, of West Middletown, Washington county, Pennsylvania, in 1825, and has been blest with a family of eight children.

ELM GROVE BIOGRAPHIES.

Andrew Halsted was born in what is now Brooke county, West Virginia, October, 1800. He served an apprenticeship in a boot and shoe factory at Steubenville, started business in Wheeling in 1822, purchased the lot on which the court house now stands, from Noah Zane, for $500, and after holding it for about six years, sold it for $5,000 to the commissioners appointed by the legislature of Virginia to purchase a site for a court house for Ohio county. He now lives near Elm Grove, and owns one hundred and sixty acres of land. Mr. Halsted married Ann Smith, daughter of Thomas Smith, of Wheeling, in 1823. They reared a family of ten children—John, Elbert, Eliza Jane (deceased), Andrew J., Alexander, Thomas, Eliza Ann, Susan, Joseph S. and Jerusha J. John was killed by Indians in Washington territory in 1872, and Joseph S. lost his life at the battle of Piedmont during the late war.

W. T. Chambers was born in Marshall county, West Virginia, February 2, 1837; lived on a farm until he was seventeen years old, when he engaged in the mercantile trade in Philadelphia and Wheeling, which business he carried on until the last five years. He is now in the coal business in Elm Grove. Mr. Chambers married Rachel Roberts, daughter of Paul Roberts, of Guernsey county, Ohio, October 28, 1866. They are the parents of four children—Harry, Willie, Samuel and Mary.

John Hohmann, at present in Elm Grove, was born in Allegheny City, Pa., in 1853, and received his education in the city school at that place. He subsequently engaged with a Mr. Hook, florist and gardener, when eighteen years of age, remaining in his employ some years. He next sought a location in Elm Grove, and has there remained since the fall of 1878. He purchased six acres of land and built a green-house thereon, where he is establishing a nursery to supply the Wheeling market with plants, while he also carries on market gardening.

A. H. Patterson was born in Belmont county, Ohio, in 1848, and came to Wheeling, West Virginia, in 1853. He received his education in the schools of Wheeling; spent two years at St. Vincent's College, Wheeling. He was engaged in the iron business three years, purchased one hundred and forty-seven acres of land on Big Wheeling creek, near Elm Grove, and is now engaged in farming and stock raising and dealing. Mr. Patterson married Dora P., daughter of Prof. J. C. Hervey, in 1872. They are the parents of three children, Mary L., Dora H., and Bessie H.

W. H. Waddle was born in Ohio county, West Virginia, February 18, 1850. He received a common school education, was engaged in general merchant business until the last few years, when he embarked in the coal business. He was county Commissioner four years. Mr. Waddle married Annie Sweeney, of Wheeling, West Virginia, in June, 1878.

B. SHANLEY was born in Erie county, New York, February 25, 1837, came to Ohio county, West Virginia, with his parents about 1840, and settled in Wheeling. He received a common school education, was a member of the second branch of the city council six years and has been agent of the Ohio County Infirmary for the last nine years. He married Annie Shearer, (who was born in Scotland) in Wheeling, July 2, 1867. They are the parents of two children, William W., and Annie Eliza.

JOHN S. HALSTED was born in Brooke county, West Virginia, in 1852. He served an apprenticeship as boot and shoe manufacturer in Wheeling, and was engaged in business there three years, but is now engaged in business in Elm Grove.

CLEMENT COLGAN was born in Salem, New Jersey, April 22d, 1845. He served an apprenticeship at saddle and harness making at that place; came to Wheeling West Virginia, in 1875, and is now engaged in the manufacture of saddles and harness at Elm Grove, West Virginia. Our subject married Hannah B. Padgett, of Wheeling, April 9th, 1875.

JAMES M. RUSSELL, son of William H. Russell, was born in Wheeling, West Virginia, July 24, 1858. He was educated at Fredericksburg, Virginia, and commenced the dry goods and grocery business as one of the firm of Thornburg & Russell, at Elm Grove, in April, 1878.

ROBERT M. DOUGHERTY was born in Marshall county, West Virginia, and served on a farm. Since the war, he has been engaged on the Wheeling and Pittsburgh railroad, but is now engineer at the Elm Grove coal works. He married Elizabeth Eckhart, (maiden name Clemens), of Washington county, Pennsylvania, in 1871. They are the parents of two children, John and Oliver.

ABNER KEY was born in Baltimore, Maryland, January 6th, 1807, he received such an education as the schools of that early day afforded, and became a member of the city first branch of council, Baltimore. He was employed in merchandising. In 1855, Mr. Key came to Wheeling and engaged with Thomas Hughes & Co., clothiers. He married Elizabeth Murphy, of Lancaster, Ohio, December 18th, 1850. They are the parents of two children—Mary and Elizabeth.

HENRY M. HERVEY was born in Wheeling, West Virginia, in 1836. He received his education in his native county, and Martinsburg Academy, Knox county, Ohio. His present business is farming. He served as township treasurer three years, and has been school trustee.

James Hervey, father of our subject, was born in a fort at Wellsburg, Brooke county, West Virginia, in 1782. He received a collegiate education at Cannonsburg, where he studied theology with Dr. McMillan, he was licensed in 1813, and commenced preaching in the Stone Church at the forks of Wheeling creek. Miss Jane McKinley, afterwards wife of Rev. James Hervey, while attending school in Pittsburgh, in 1813, saw the first steamboat launched that run on the Ohio river.

JACOB KELLER was born in Marshall county, West Virginia, in 1840. He was reared on a farm, and follows farming as his occupation He married Miss Nickerson, daughter of David Nickerson, of Ohio county, West Virginia, in 1863. They are the parents of six children.

J. H. PETTICORD was born in 1832, in Ohio county, West Virginia. He was reared on a farm and has all his life been engaged in farming and stock dealing. He owns one hundred and sixty acres of land one-half mile from Unionville, Putnam county, Missouri. Mr. Petticord married a Miss McFarland, of Ohio county, in June, 1857. They are the parents of four children—Lucy, Harry, Alonzo and William.

SYLVESTER M. KING was born in Jefferson county, Ohio, in 1855, and was reared on a farm. He is a carpenter and farmer.

DANIEL B. MAGRUDER was born in Alleghany county, Maryland, in 1826. He came to Ohio county, West Virginia, in 1839, worked in an iron mill five years, and then engaged in the stone and lime business. He afterwards kept a saloon in Wheeling two years, then removed to Indiana, where he followed the occupation of a farmer, but now resides at Elm Grove, West Virginia, and is engaged in mining. Our subject married May C. Dyer, of New Jersey, in 1854. They are the parents of three children—William H., Ellaretta and Charles W.

W. A. CRACRAFT, M. D., was born in Washington county, Pennsylvania, February 23d 1844. He received his education at the West Alexander Academy; afterwards read medicine with his father at Triadelphia, and finally completed his course at the Jefferson University of Virginia, in 1866–7. He commenced practice in Triadelphia in 1867, but is now located at Elm Grove. On the 28th of January, 1875, he was married to Mary Key, of Ohio county, West Virginia, by whom he has two children—George K., and William Allen.

J. L. KIMMINS was born in Marshall county, West Virginia, January 9th, 1852, and received his education at the Waynesburg College. He married Louisa Castle, of Ohio county, West Virginia, in 1873. They are the parents of four children—Harry, Wilfred, Louisa Olive (dead), and Sally M. Mr. Kimmins carries on farming, and carriage and wagon manufacturing, and is also an auctioneer and undertaker.

J. S. WOODS, was born in Wheeling, West Virginia, September 25th, 1851, studied engineering at Morgantown, West Virginia, and was connected with the engineering corps of the Chesapeake & Ohio Railroad five years, but is now engaged as general merchant and postmaster at Elm Grove. Mr. Woods married Mary A. Updegraff, of Wheeling, West Virginia, November 18th, 1875. She died in May, 1876.

I. J. LINTON, born in Brooke county, West Virginia, in 1838. He received a common school education, was a stock dealer for seven years, and is now engaged in farming and gardening. He owns ten acres of bottom land (which is in a high state of cultivation) near Elm Grove. He is the father of eight children, viz.: Mary E., William L., Scott, Isabella, Margaret E. (deceased), Jessie, Rosie, and Effie.

MRS. JUDITH ROETEGER was born in Germany in 1826, came to America with her parents in 1835, and settled in New Philadelphia, Ohio. She married August Roeteger in Wheeling, West Virginia, and has owned and kept the Elm Grove Hotel for ten years. She has two children, Mary and Catharine.

TRIADELPHIA BOROUGH BIOGRAPHIES.

MRS. CECELIA LAWSON,

whose husband, the late Francis Lawson, died April 21, 1878, is at present hostess of the Lawson House, in Triadelphia village. Her maiden name was Loomis, and the following brief sketch may prove somewhat interesting: Josiah Thompson, grandfather to our subject, was a very early settler in Triadelphia and is said to have built the first substantial residence in the place, that structure still forming the rear of the "Lawson House." He contracted on the construction of the Wheeling and Cumberland pike, and surveyed and laid out the present site of Triadelphia. Was a native of the eastern shore, coming here from Georgetown, District of Columbia. He had a family of three sons and two daughters. All of the sons went to St. Louis and died there, but the daughters located in New York. One of them, Mary, died there, but the other, Cecelia, married Erastus Loomis, of Connecticut, and returned to Triadelphia, where they subsequently resided from 1818. Erastus died July 16, 1833, and his "better half," May 3, 1844. Out of a family of seven children, with which they were blessed, only two girls lived—our subject (then Miss Cecelia Loomis) and her sister, now Mrs. Matthews, still also living in Triadelphia. Subsequently the former (Cecelia) married Francis Lawson, a much respected and efficient stage coach contractor, who continued mine host of the Lawson House to his death, April 21, 1878, since when, Mrs. Lawson, assisted by her two sons, has conducted the old home with that accustomed care and efficiency that rendered it so highly popular in ye olden times. Her only daughter (also Cecelia) has become a Mrs. Shields, and resides in Illinois. As a relic of the past, we noticed in the garden to the old house a time-worn reminiscence of the establishment of the National pike, in the shape of a rustic monument —or the remnants thereof—looked upon, in those days as a worthy compliment to so noble an achievement.

H. C. & C. W. HUNTER, brick manufacturers and contractors, yards at Triadelphia, have always a large stock on hands. They built the Infirmary in Washington county, Penn-

sylvania, eight years ago. On their yard last summer they exhumed four Indian skeletons. C. W. Hunter was born on Wheeling Island, in 1841, and H. C. Hunter was born July 9th, 1844. The latter is mayor of Triadelphia. He married Lou Loy (daughter of John and Sarah Loy, of Wheeling), December 21, 1869. They are the parents of two children, Walker and Beulah.

JOHN H. STORER was born in Allegheny county, Pennsylvania, in April, 1830. He attended school at Monongahela Academy for a while and graduated at Washington and Jefferson College, Pennsylvania, in 1847. He then read medicine with Dr. Connelly of Monongahela City four years, and graduated at Jefferson Medical College, Philadelphia, Pennsylvania, in 1854, after which he immediately began practice in Triadelphia. Dr. Storer was president of the board of education a number of years. He married Susan Waddle, daughter of Elijah Waddle, of Ohio county, in 1866, and is the father of two children.

TAYLOR FOREMAN was born in West Liberty, Ohio county, W. Va., in 1848. He has been engaged in general mercantile business for ten years. In 1877, he married Kate, daughter of Henry and Francis Garrison, of Triadelphia.

H. F. HEIER was born in the state of Brunswick, Germany, in 1835, where he received his education. He emigrated to the United States in 1852, settled in Wheeling, and began farming. In 1859, he moved to Triadelphia, where he engaged in the hotel business, and in 1866 commenced the manufacture of cigars in connection with his hotel business. Mr. Heier married Eliza Shepherd, of Prussia, in 1860. They have no children.

A. VANCE was born in Ohio county, W. Va., in 1837, is a carpenter and contractor, and has been connected with the school board of Triadelphia for six or seven years. Mr. Vance married Isabella Clemens, daughter of Nicholas Clemens, of Washington county, Pennsylvania, in June, 1862. They are the parents of seven children, viz: Mary M., Virginia J., Catharine, James A., John, Emma and William M.

C. H. FOREMAN was born in West Liberty, West Virginia, in 1849. He follows the carpenter trade as his vocation. He married Lillie Belle, daughter of S. L. Meredith, of Bloomeville, Cooper county, Missouri, in 1874. They have one child, Emma Eudora.

E. G. CRAFT was born in Ohio county, West Virginia, in 1839. He learned the cooper's trade in Wheeling, and commenced business in Triadelphia in 1857. He manufactures half barrels, kegs, &c., for the wholesale trade in Wheeling. Mr. Craft married Mary V. Branstroop, of Triadelphia, in 1856. They are the parents of seven children—Edward F.; John H., Narcissa G., Albert G., Anna M., Elizabeth and Minetta.

JOHN I. CARTER, M. D., was born in Ohio county, West Virginia, in 1850. He graduated at Princeton College, New Jersey, in 1871; read medicine with Dr. Storer, of Triadelphia, and graduated at the Ohio Medical College, Cincinnati, in 1874. He was resident physician of the Good Samaritan Hospital one year, and visiting physician of St. Joseph's Foundling Asylum, Cincinnati. In 1875 he went to Boston, Massachusetts, as assistant physician in the Boston Lunatic Hospital. Dr. Carter is now connected with Dr. Storer, in Triadelphia, and is a member of the Massachusetts Medical Society, the oldest society in the United States.

JACOB FISHER was born in Bavaria, Germany, in 1826, and emigrated to the United States in 1854. He worked for Daniel Steenrod for two years, then engaged in produce business, which he has followed for twenty-two years. He keeps a stand in Centre Wheeling Market, No. 14, and deals in produce, (butter, eggs, poultry, &c.) Mr. Fisher married Theresa Nicelow, of Bavaria, Germany, in 1854. They are the parents of five children.

JOHN BLAYNEY was born in Washington county, Pennsylvania, in 1833, and was educated in the common schools of West Virginia. He was raised a farmer, and followed farming as his vocation until thirty-three years of age. He owns, in Triadelphia township, 166 acres of land which is well watered, with plenty of good fruit, and in a high state of cultivation. In 1866, Mr. Blayney rented his farm, and embarked in general mercantile trade in West Alexander, where he remained three years, then went to Roney's Point in 1870, where he is now engaged in business. He is railroad and express agent, and postmaster. Our subject was married in 1861, to Mary Robertson, daughter of Wesley Robertson, of Ohio county, West Virginia, They are the parents of three children, one son and two daughters. Mr. Blayney also owns his business place at Roney's Point, and four acres of land.

MRS. MARY BEAGLE, daughter of John Defibaugh, of Bedford county, Pennsylvania, was born April 10th, 1794. At such an early date her opportunities for an education were necessarily limited. She lived at home until twenty-eight years of age, when, in 1822, she married her first husband, John Rhodes from near Philadelphia, Pennsylvania, with whom she immediately crossed the mountains (not in a palace car but on horseback) and came to Wheeling, where they lived one year, then moved to Valley Grove, in the immediate neighborhood of where she now lives, and engaged in keeping hotel. Her husband died in the fall of 1826, leaving her a widow with three children. In the spring of 1827 she moved to the place where she now resides, and carried on the same business. In December 1835 she married Abram Beagle, of Chester county, Pennsylvania, an extensive contractor on public works. It will be seen by these facts that Mrs. Beagle was one among those early pioneers of this section who left the pleasant surroundings and associations of the east and came to this part of the country when it was in its infancy, and during a long and busy life was closely identified with, and deeply interested in, all the public and private enterprises of the early history of Ohio county. The hotel which she managed so many years with such marked success was well and favorably known throughout the country as a place where the dusty, weary, foot-sore traveler could always find a hearty welcome, and the comforts of a home. Mrs. Beagle is still living in the old place, where she has passed so many busy, useful years, and at eighty-five years of age, is enjoying good health amid the comforts and luxuries of life. Mr. Beagle died in 1861.

REV. D. H. K. DIX, the subject of this sketch, was born in 1828, in what was then Lewis county, Va. His father, Isaac Dix, was a farmer. His grandfather, Stephen A. Dix, was born near Philadelphia, and he has heard the guns in the battle of Brandywine, and he lived to be one hundred years old. Isaac Dix had nine children, of whom Mr. D. H. K. Dix is the youngest living. He walked three miles to school when young; finished his education at the Virginia Academy at Clarksburg. He left the academy in 1850 and entered the ministry. Married Miss America Young, of Kanawha county, Va., December 13th, 1853. He has been blessed with five children, one deceased. His labors have been from Pennsylvania to Kentucky; that is his different churches. Was first presiding elder in 1864, for one year; was engaged in merchandising in the town of Winfield, Putnam county, intending to return to the ministry as soon as health would permit. While there he was notified that they thought of nominating him for the state senate. He was nominated and elected and served for four years. He helped to pass the 14th and 15th amendments. He was chairman of the senatorial committee on education for four years. In 1870 he resumed regular work in the ministry and was appointed to the Guyandotte district and remained four years. This district was then in a state of formation. At the conference of 1874 he was sent to the Marshall circuit in the Wheeling district and remained there three years and is now and has been at this place (Triadelphia) one and a half years. In May, 1876, he was elected a member of the general conference, which met at Baltimore, and by the general conference was elected a member of the general missionary committee of the Methodist Episcopal Church.

JOHN WEISS was born ——— in 1830, was brought up on a farm, and attended the public school. In 1852, he came to the United States and to Wheeling, where he married Mary Wietzel in 1858. He has been blessed with seven children, three sons and four daughters. In 1860 he removed to Triadelphia and followed huckstering. Mr. Weiss was in the Revolution of Baden, and there learned military tactics. He was captain of state militia and was several times called out.

LOUIS SISSON, one of the early pioneers who settled near Roney's Point in 1812, was born at Fairfax Court House, Va., in 1779, and united in wedlock with a Miss Frances Powell, by whom he had eight children—four sons and four daughters. John E. Sisson, the youngest son, was born in 1813, near Ro-

ney's Point, and received a plain education, having to travel a distance of two and a half to three miles to secure the same. He also worked upon the farm, and in 1834 took unto himself, in holy matrimony, Miss Sarah A. Milligan, by whom he had three children, but she unhappily departed this life in 1840. He, however, subsequently married again, to a Miss A. M. Woodward, and they have had issues, a family of six children. Uncle Edward Powell, after whom Mr. J. E. Sisson was named, and his brother John, served in the war of 1812, and Mr. J. E Sisson, with his sons, tendered their services to intercept and prevent the revolutionary General Morgan and his followers entering Wheeling. One of Mr. Sisson's sons was also at New Orleans when the yellow fever broke out, and just the day before quarantine was established, luckily left for home. He, the said son, now owns and successfully cultivates a farm his father purchased of David Pearson and Thomas Pollock, originally known as the Polk farm, the present fruitful land on which was once a wilderness, prowled over by the lawless redskins. In common with many others still living, Mr. Sisson well remembers witnessing slaves chained together being driven south on the pike, which to-day, however, is a common highway for white and black.

JOSEPH CRACRAFT,

migrated from Lincolnshire, England, to the vicinity of Frederick city, Maryland, in the spring of 1720. A number of his sons removed to the west; one to Uniontown, Fayette county, Pennsylvania; another to Washington county, Pennsylvania; another to northern Ohio; another to Mound city, (then Elizabeth city); another to Mason county, Kentucky. Bishop Cracraft, of Terre Haute, Indiana, is of the northern Ohio stock. In the winter of 1840–41, a relative of the Cracraft family in Pennsylvania, from Lincolnshire, England, visited the Cracrafts in Pennsylvania, and returning, took passage on the steam ship President, which was lost. Dr. Charles Cracraft, one of the sons of Joseph Cracraft, located on Ten Mile creek, Washington county Pensylvania, at an early date before the Revolution. He married Miss Ellen Atkinson, daughter of George Atkinson, who then lived in what was called Atkinson's fort or blockhouse, on Ten mile creek, two miles south of Dickinson's fort or blockhouse. The Atkinson's, Cracraft's, Dickinson's, Sheridan's, Lucas', and a few other families, constituted a little colony about equi-distant between the two forts, where Sheridan was killed and scalped by the Indians, who were pursued to the forks of the creek, now called Elm Grove, Ohio county, West Virginia, where the trail was lost. Colonel Stokely, whose son Samuel (now deceased) was Congressman from Steubenville, and Colonel Laughridge, were going to reinforce St. Clair on the Miami. Laughridge encamped, waiting for Stokely and his troops were surprised by the Indians, and he, with many of his men were massacred. The next day, Colonel Stokely arrived, and not knowing of Laughridge's defeat, was surprised and defeated also. He and Dr. Charles Cracraft were taken prisoners and carried to Detroit, thence to Montreal and Quebec and given over to the British. After an absence of twenty-two months, they returned home to their families in Washington county, Pennsylvania where they lived, and died about the same time in 1824, within six miles of each other. Dr. Charles Cracraft had three sons, Joseph, Charles and William, (all deceased now). Joseph Cracraft migrated to Richland county, Ohio, in 1812–16, where he reared a family of five children. Charles Cracraft married a Miss Mary Whitham, and located on Buffalo creek, Washington county. He owned Dun's fort, where he died about fifteen years ago, leaving six daughters. William Cracraft (born in 1793) lived on, and owned the farm of his father, consisting of four hundred acres, and now owned by William's son. He married a Miss Likes (whose father and mother emigrated from Holland), by whom he had eight children five boys and three girls. The oldest son, Elbridge, was educated at West Point. He studied law, and died in 1849, while state Senator from Washington county, Pennsylvania, being thirty-three years of age. He was uncle of Elbridge G. Cracraft, a lawyer of Wheeling. Dr. George Atkinson Cracraft, studied medicine and moved to Triadelphia in 1848, and began the practice of his profession. After practicing five years, he was appointed post master at Wheeling, by President Pierce. He filled that office four and a half years, and then returned to Triadelphia, and resumed the practice of medicine. During the late war, he was imprisoned and then banished for his supposed disloyalty. He then became a surgeon in the Southern Army, and remained till the close of the war, since which time he has been practicing in Triadelphia. He has nine children, two lawyers, two doctors, two farmers and three daughters.

WILLIAM PORTER was born in Washington county, Pa., in 1828, was raised on a farm, and was educated in the common schools. He came to Short creek in 1848, carried on the diarying business eight years on the Edgington farm, on the National road, a number of years on the farm where he now lives, and owns one hundred and twenty-five acres of land, with good fruit, well watered, and in a high state of cultivation. From seventy-five to eighty acres of high land on Mr. Porter's farm is underlaid with a five foot vein of coal. The mouth of the bank is about three hundred yards north of the National pike. Mr. Porter married Mary Ellen, daughter of Wyatt Greene, of Culpeper county, Virginia, in 1845. There were born to them seven children, Isabella, Virginia, May, Sallie, Josephine, William, and Lillie May. Mrs. Porter died in 1870. Our subject married for his second wife Mrs. Margaret Petticord.

MRS. BETSY D. ATKINSON was born in Haverhill, New Hampshire, May 25,1804, where she lived until her marriage, October 8, 1827, when she came to what is now Ohio county, West Virginia. Her husband, Nathaniel P. Atkinson, who was one of the pioneers of West Virginia, came to Ohio county fourteen years before he was married, at which time there was only one hotel and one store in Wheeling. He brought the first merino sheep to this county, from across the mountains, and was an extensive sheep grower. Mr. Atkinson always manifested a deep interest in the schools of the county, labored hard to get the free school system inaugurated, and lived to see the grand effects of his labor. He was often nominated for sheriff, circuit judge, &c., but, owing to strong anti-slavery principles failed to be elected. The homestead contains two hundred and fifty acres and is called Mount Leon. Mrs. Atkinson is the mother of eight children, Charles P., Hale J., (deceased), Julia A., Augusta K., (deceased), Samuel B., (deceased), Edward M., Helen M., and Sarah J., who died in Denver, Col., August 17, 1878.

THOMAS M. CURREN was born on the Atlantic ocean, three miles from quarantine, in 1827. He came to Wheeling with his parents about 1841, commenced as a laborer on public works, and step by step rose to a prominent contractor. He has been a contractor in the following works: The Bellaire and Wegee creek, the Roney's Point and West Union, the Long run and Short creek, the Clinton and Potomac, the Wheeling and Short creek and the Valley Grove and Middle Wheeling creek turnpikes. Also, a four mile section contract on the Pittsburgh, Wheeling and Kentucky railroad, and built the arch bridge on section two of the Pittsburgh Wheeling and Kentucky railroad, one of the best bridges (so adjudged by Chief Engineer Becker) on the whole line of the road. At the time the keystone was laid a large multitude of citizens was in attendance, a number of tokens were placed in a bottle, and the stone laid by Mrs. Curren. Mr. Curren's next contract was on the Bellaire and Southwestern railroad, and another on the Pittsburgh Southern. Mr. Curren has accomplished more than any other man in Ohio county towards opening up the county by good main roads, &c. In 1857 our subject married Fannie Lile, daughter of Jacob Lile, of near Roney's Point, Ohio county, West Virginia. They are the parents of six children, Michael T., William H., Mary J., James H., Edward J. and Joseph M.

JAMES CREIGHTON was born in Ohio county, West Virginia, in 1843. He was reared on a farm, and received his education in the common schools of the county. He carried on farming as his occupation until 1876, when he was appointed deputy sheriff, by Sheriff Tingle, which position he still holds. Mr. Creighton married Mary Muldoon, daughter of Felix Muldoon, of Washington county, Pennsylvania, in 1868. They have no children.

WILLIAM DENNISON was born in Ohio county, West Virginia, in May, 1816, and worked on a farm during his early life. He learned the carpenter trade with Mr. Toner, of Ohio county, and in 1846 engaged in business for himself, since which time he has carried it on in his native county. For a number of years the firm was known as Dennison & Son, contractors and builders. Mr. Dennison worked the first Crane patent cast plow used in Ohio county. Our subject married Lucinda Holmes, daughter of Lewis Holmes, of Ohio county, in 1842, and is the father of nine children, five of whom are still living. Mr. Dennison owns ten acres of land on the National pike, eleven miles east of Wheeling.

Theodore Klages was born in Wheeling, West Virginia, in 1842. He carries on farming as his occupation, and owns two hundred and forty-four acres of highly cultivated land, mostly in Sand Hill district, Marshall county, West Virginia. Mr. Klages married Manie Burns, who was born in Germany, in 1845. They are the parents of six children—Matilda, Manie, Emma, Caroline, William and Edward.

James Gray was born in Ohio county, West Virginia, July 5th, 1841. He received a common school education, was reared on a farm, and now owns one hundred acres of land, which is in a good state of cultivation. In 1868 he married Nancy, daughter of Francis Muldoon, of Washington county, Pennsylvania. They are the parents of seven children—Huldah, Lizzie, Millie, George F., Robert H., William Elwood and John A.

James Todd was born in Washington county, Pa., February 14th, 1810, and now resides on the place which was settled by his father in 1809. He was educated in the log school house of the early days; has always been active in assisting to build churches, school houses, &c., and has been an elder in the church. He owns 256 acres of land. Married Mary Byers, of Washington county, Pa., October 11, 1836, and has reared a family of thirteen children, viz: William N., Thomas N., Mary E. (deceased), John S., Mary C., James H., Joseph S., Margaret B., Alexander R., Hetty J., Laura V., Frank L. and Emma B. William Todd, father of James Todd, was born in Ireland, immigrated to this country when young and settled in Ohio county, W. Va., about the year 1809. He was a contractor and bridge builder on the National pike during the years 1814–15 and 16, and lost a great deal of money by the rascality of one of the principal contractors.

Lewis P. Sisson was born April 18th, 1845, on the farm where he now resides. He received his education at the common schools. Mr. Sisson is engaged in farming, one mile from Roney's Point, and owns 180 acres of land which is in a high state of cultivation. He married Jennie Ewing, of Washington county, Pa., October 7th, 1868; has two children, Albert M. and James Ewing.

Wiley Oldham was born in Ohio county, January 13, 1848, received a common school education, and is by trade a blacksmith. In 1869, December 22, he married Catharine Rhoades, who was born in Washington county, Pennsylvania. They are the parents of two sons, Eddie L. and George W.; Benjamin Oldham, father of Wiley Oldham, was born in Ohio county.

George W. Rhoades was born in Washington county, Pennsylvania, July 16, 1841. He graduated at West Alexander Academy in 1861, and read medicine with Dr. Joseph H. Little, of West Alexander. Mr. Rhoades became principal of the Fulton public schools for nine years, and superintendent of the public schools of Ohio county, West Virginia, two years. He moved to West Union, Dallas post office, in 1874, October 1st, and commenced business as one of the firm of Rhoades & Trussell. He married Mary Jane Carroll, December 21st, 1867, and is the father of one child, Martha L.

F. M. Henderson was born in Washington county, Pa., September 25, 1835. His grandfather emigrated from Scotland to Washington county at a very early date. John Henderson, his father, was born about the year 1790, raised a family of ten children—seven sons and three daughters—served in the war of 1812, and died at the age of sixty-two years. Our subject received a common school education and was reared on a farm. In 1860, March 15, he married Mary J. Jameson, who died December 22, 1871, leaving four children. He was again married July 3, 1874, to Jane McCoy. Mr. Henderson moved to Marshall county, West Virginia, in 1860, where he resided six years; thence to the farm known as the old Steward farm, where he now lives and owns two hundred and ninety-two acres of land.

John Kimmins was born in Washington county, Pennsylvania, January 19, 1818, and was educated in the log school house of the early days. He enlisted in August, 1862, in company K., Twelfth West Virginia regiment, served three years, and was mustered out at the close of the war. His occupation is farming, and he owns seventy-five acres of land. On the 3d of March, 1842, he was married to Eleanor A. Ferrel. They have six children—Samuel W., Joseph F., Sarah J., John N., Esther A. and Thomas W.

Henry Seabright was born in 1815, in Germany, where he received his education. He immigrated to the United States in 1842, worked in Washington, Pennsylvania, a short time, and in March, 1843, came to Roney's Point. He worked for C. Hildebrandt two years, then moved to Wheeling, and remained there four years, returning to Roney's Point, where he engaged in a general blacksmithing business, which occupation he still continues. In 1848, in Wheeling, Mr. Seabright married Miss Heiser (of Germany). They are the parents of four children, Clarence, Herman, Raymon, and Albert. He has also forty acres and may be mentioned among the present oldest citizens.

William A. Heimberger was born at Roney's Point, Ohio county, West Virginia, in 1850. He received his education in Wheeling and at Washington and Jefferson College. In 1867, he moved with his parents to Lloydsville, Ohio, and engaged with his father in general merchandising until 1868, when he came to Wheeling. He next went to Pittsburgh and connected himself with Carr, McCandless & Co.'s wholesale dry goods house, as chief entry clerk, which position he filled four years; he then engaged in the hat, cap and fur trade—the firm name being Heimberger & Logan. He remained in this business two years, until his father's death, since which time he has lived at home with his mother near Roney's Point.

Samuel Oldham was born in Ohio county, West Virginia, near where he now resides, in 1826. He received his education principally in the common schools, although he attended West Alexander Academy. He was a member of the board of education for six years, and has always taken a deep interest in schools, churches, &c. He married Sarah A. Wirt in June, 1861. They are the parents of eight children, viz: Gertrude E., Samuel, Alfred L., Howard Wiley, Charles Wirt, Anna Laura, Sarah Leona and Barrazilla. Mr. Oldham owns 160 acres of land, and followed farming as his vocation.

E. L. Kimmmins was born in Dallas, Marshall county, West Virginia, May 9, 1846. He was educated in the common schools of the county, and has lived on the old homestead, which is called Farmer's Home, in Triadelphia township for nineteen years. His father, A. H. Kimmins, was born in Washington county, Pennsylvania, in September 1815, came to Ohio county, West Virginia, in early life and engaged in farming, milling, stock dealing, contracting, &c. He owned and run the first double thresher and cleaner in the county. Among his many contracts he had a heavy one on the Baltimore and Ohio and Hempfield railroads. In 1839, he married his first wife, Sophia Cool, who died leaving no child. Mary Chambers became his second wife. There were born to them four children. The house on the old homestead, which was built in 1804, was among the first houses built in Ohio county. C. L. Kimmins married Louisa Alexander, who died February 2, 1874, leaving two children. He married for his second wife Sarah Cowden.

William C. Smith was born in Marshall county, W. Va., in 1833. He received part of his education in the common schools and studied three years under a private teacher. He has been engaged in teaching for twenty years. In 1855 he married Anna, daughter of George Keller. They have reared a family of five children—William Lester, George Wilson, Florence V., Annie E. (deceased), Estelle E. and Oliver P. H.

Ferdinand Wetzel was born in 1833, in Germany, where he received his education. He immigrated to the United States in 1850 and learned the moulder's trade in Mr. Stewart's foundry in Wheeling, where he worked at it for ten years. He bought the farm he now owns, consisting of fifty-eight acres in a good state of cultivation; good fruit, well watered, &c., in 1869, since which time he has been engaged in farming. Mr. Wetzel married Catharine Wiesbick, of Wheeling, in 1858. They are the parents of eight children.

John S. Bedillion was born in Washington county, Pa., March 23d, 1833, but was reared in Ohio county, W. Va. He attended Washington College two years, and was school commissioner four years. He carries on farming as his vocation. Our subject married Eliza Halsted, daughter of A. Halsted, in 1860. They are the parents of four children.

John C. Faris, son of John Faris, was born in Liberty township, Ohio county, West Virginia, in May, 1843. He was educated at the West Liberty Academy, and graduated at Duff's

Mercantile College, Pittsburgh, in 1865. He was engaged in farming a number of years, taught school six years, and was superintendent of the schools of the county five years, his term having expired in September, 1877. He has since been actively engaged in promoting the interests of the Patrons of Husbandry in Ohio county, and is now in charge of their exchange or business affairs at Point Mills, Ohio county.

DAVID JONES was born in Brooke county, West Virginia, January 10, 1813. He married Martha Coole, of Richland, Ohio. They are the parents of three children, one son and two daughters. Charles Jones, father of David Jones, was born in Essex county, New Jersey, in 1790, and came to Brooke county, West Virginia, when he was a mere youth. He married Kesiah Cole, of Washington county, Pa., and was the father of nine children—six sons and three daughters. George and Ellis Jones, brothers of Charles', served in the war of 1812.

WILLIE J. ECKLES, son of William H. and Kesiah J. Eckles, and grandson of David and Kesiah Jones, was born July 5, 1867.

SAMUEL ELLIOTT was born in Chester county, Pennsylvania, in 1808, and moved to what is now Ohio county, West Virginia, with his parents in 1814. He owns two hundred and ten acres of highly cultivated land on the Waynesburg and Wheeling pike, two and one-half miles east of Elm Grove. In 1836 he married Mary, daughter of Thomas and Margaret Orr. They have a family of six children—James, Joseph, Margaret A., Thomas R., William S. and Mary E.

DANIEL GARRISON son of David Garrison, was born in Greene county, Pennsylvania, in 1825. He came to Wheeling when eleven years of age, learned the business of engineering, and worked at it in Wheeling for seventeen years. In 1871 he located at Pleasant Valley, and engaged in the occupation of a huckster, and in 1877 moved from Pleasant Valley to Roney's Point, where he now lives, engaged in the same business. He married Mary A. Tanner, daughter of John A. Tanner, of Ohio county West Virginia, in 1852. There were born to them four children—John Henry, William (both deceased), James N. and Virginia.

WALTER MARSHALL was born in Fulton, Ohio county, West Virginia. Formerly his business was that of a contractor and coal dealer, and he owned and worked the Fulton and Slacktown coal banks, but at present he is engaged in farming about two miles east from Wheeling. Mr. Marshall married Catharine Bowerstock, of Noble county, Ohio, January 1, 1840. His family consists of five children, Robert, Mary A., Lydia J., John William and Catharine C.

J. R. SHRODES was born in 1828, in Jefferson county, Va. He acquired such an education as the common schools of that day afforded. He was clerk in the forwarding house of Samuel Cameron, at Cameron Station, on the Winchester and Potomac railroad four years; commenced service on the Baltimore and Ohio railroad in 1848, and was in the employ of that company nineteen years, after which he engaged in mercantile pursuits for six years. November 6, 1876, our subject was appointed general superintendent of the Wheeling and Elm Grove railroad. At the time Mr. Shrodes took charge of the above railroad, the affairs of the company were in a precarious condition, on account of the failure of one of the contractors; but through the energy and management of Mr. Shrodes, the road was finished and in running order in April, 1877. It is still in successful operation. The Wheeling and Elm Grove railroad runs from Eleventh street, Wheeling, along the National pike, east as far as Stamm's hotel, five and a half miles.

CHAPTER XLVIII.

WEST LIBERTY DISTRICT.

THIS fertile and once all important district, is situated twelve miles north east of Wheeling, and five miles from the Ohio river, Short creek running below it. As already stated, so far back as 1777, the first court in the then newly formed county of Ohio, was held at or near Liberty, which latter place remained the county seat for twenty years, as it was not until 1797, when Brooke county was formed, that Wheeling came in possession of that honor. The original trustees, who laid out the town, were Moses Chapline, Zachariah Sprigg, George McCulloch, Charles Wills, Van Swearingen, James Mitchell and Benjamin Biggs, in addition to whom, among the earliest settlers were William Huston and his brother Henry, who came from the state of Maryland about the year 1778 and made a settlement on the farm now owned by B. T. Yates. William cleared a small patch of ground, and built a cabin thereon, but on the 12th day of September 1781, he was shot and killed by Indians, while at work in his corn patch, near his cabin. James Curtis came in about 1780 from eastern Virginia and located on the land afterwards purchased by the Morgans. He remained here only two years, when he was driven out by the Indians. He returned to his old home in the east, and there remained until 1786, when he came back with Edward Morgan. This time he brought his family with him, and in 1787 he located on the land now owned by his son, John Curtis. William Faris came from eastern Virginia in 1787, with his wife and one child. He entered the land where John Faris now lives. The Dements were very early settlers.

John Wayt's name also figures among the first names in Liberty. According to James Wayt, who is now living at an advanced age in the western part of the district, they came in about 1776. Benjamin Rogers came from the state of New Jersey and settled on Long Run, according to John Rogers' statement, in 1770. This, however, is *very early*. Thomas Yates came from Eastern Virginia in 1794 and settled in Liberty. Robert Giffin was among the first white men to make a permanent settlement in Ohio county, but the precise year we could not learn. Richard Carson came from near Harrisburg, Pa., in the year 1800. He made his settlement where his son Joseph now lives, and was a soldier in the war of 1812. He died on his way home from Sandusky, Ohio. The Atkinsons, Morrisons, Dixons, Maxwells, Bradys, Blayneys, McCammons, and the Becks, were also among the early ones in Liberty. It is almost impossible to obtain the actual date of all the settlers as many of them have no representatives left to tell the tale. A great many of the first settlers moved further west as the country became settled up and the little cabin of the first settlers disappeared and the little field and truck patch, which gave a scanty supply of coarse bread and vegetables, had been swallowed up by the extended meadow, orchard or grain field Large farms with splendid mansions and well filled barns are now the rule, and skillful, thrifty and prosperous farmers everywhere abound.

West Liberty was incorporated November 29, 1786. It was quite "a metropolis," says Mr. Jacobs in his civil history, and "was the scene of many a hard fought battle with forensic as well as physical weapons. The court house was a log building, situated nearly opposite the tavern stand now known as "Bill Irvin's." In its precincts, Doddridge, Sprigg, Fitzhugh, McKennan, and many another whose name has since become classic, thundered their eloquence, and plead for justice and their clients. It was a great place for horse racing, and the present generation of its citizens came honestly by their critical love for this noblest of animals. Nor were militia musters the mere scoff of boys and ridicule of men, but something substantial. The fuss and feathers of military parade sat much more appropriately upon men who had drawn sword in the revolution, and tracked the wild Indian, with rifle cocked, ready to tree and fire, at the rustling of a leaf, than upon the holiday soldiers of to-day. The pioneers were given to their grog, but not such vile compounds, strychnine, tobacco, and alcohol, as their descendants too much affect; it was pure old rye, honestly distilled, by men who were as honest as their grain, and too unsophisticated to be guilty of rascally adulteration, even had they had the villainous components. Still, they drank too much,—albeit, their whisky was good. It has been observed that although men drank freely in those days, and were frequently drunk; yet, when they became sober, no evil effects followed the potation—the toper recovering at once, his wits, and his vigor of body and mind, instead of being shattered and besotted in nerve and intellect. It is certain that the pioneers enjoyed, many of them, rugged and uninterrupted good health, to the end of very long lives.

"We have listened to the recitals of the deeds of the notables of that day, until we seemed translated back to the good old days, when jollity and good neighborhood, and generous deeds, tempered the rudeness of our fathers, and men seem actually to have lived more for sociability, and for one another, than for themselves and money. In the sterling qualities of a

manly character, they certainly excelled their descendants. It is true, that they had their vices in those days, but they were the vices peculiar to a new country, and to an unorganized state of society. The turbulence and lawlessness that sometimes prevailed at their gatherings, is not surprising, when we recollect that it was no unusual thing for two thousand men to assemble about the court house at West Liberty, on occasions of a general muster; and in such a mass of semi-wild characters gathered from the woods, hills and hollows, for many miles around, it would be singular if no outlaws were found. For them, however, justice was both short and quick. If we are to believe tradition, forty fights a day were no unusual thing on such occasions; the performances occasionally varied with a free fight, in which the crowd participated *ad libitum*. Their fighting seems to have been more an innocent way they had of working off their surplus pugnacity, than an exhibition of the ugly element of malice that generally gives point to such exercises in our day. The point of honor was settled by a passage at arms after the most approved style of backwoods etiquette, and when once decently decided, the parties shook hands, took a rousing drink all round, and from that time forward were considered as good friends as though nothing had occurred between them. In short, the state of society generally, in this section, was very similar to that which now prevails upon the outskirts of our newly settled states; with perhaps containing a larger infusion of the fighting element than in these latter, owing to the almost continual conflicts of the settlers with the French and Indians, then with the Indians and finally with the British, during the war of the revolution."

The whole of the ground occupied by the town was originally owned by Reuben Foreman and William Mounce; west of Main street, belonging to the former, and the eastern portion to the latter. After the county seat was removed to Wheeling, the old court house was purchased by Zacharias Biggs, and used for many years as a mill, run by horse power. In addition to West Liberty corporation, in Liberty district, there are the flourishing little country towns and post office centres, known as Potomac and Valley Grove, each containing quite a little community, and being exclusively supported by agriculture. The main water course through this district is Castleman's run, that has innumerable lesser streams to feed it, hence the entire country around, except that portion at the greatest altitude, is well watered. In the matter of ancient history bearing on the depredations of the red skins, the following instances are worthy of recapitulation. In 1787, a Scotch woman by the name of Frazier, was killed by Indians on the farm now owned by the Blayneys. They also killed a man by the name of Ayes or Ayrs, who was going to Rice's fort for safety. He was shot from his horse on the 12th of September, 1781. William Huston, while out in his little corn patch, close to his cabin, was attacked and killed by the red skins, who had concealed themselves near by. He had been advised by his brother, only a short time before, to go to the block house, which was almost in sight, as alarms had been given that the Indians were in the vicinity, but he took no heed. His body was buried on the spot where he was killed. This was on the farm at present owned by Mr. B. T. Yates, who kept the grave fenced in for several years. One Cochran was also killed by the Indians, on the farm now owned by Mr. James Dixon, and interred on the spot, but his grave cannot be found. Several other instances might be cited, but our information on them is too meagre to warrant their record.

As regards educational facilities, West Liberty possesses a capital normal school, which is under an able professor and largely attended. There are two places of worship—a Presbyterian Church and a Christian Church, in reference to the latter of which we have been favored with a somewhat extended notice, to be given hereafter. As will be seen by subsequent remarks, the Episcopal Church that once flourished here no longer holds its own.

There is a very comfortable and home-like hotel, or hospitable quarters, presided over by Mr. Irwin; wagon and smith shops, a few stores, and not far distant—the town being on a high hill—at the nearest point on the creek, a capital flouring mill.

In short, West Liberty is not what it used to be, but a steady-going, peaceable country town in a most prolific agricultural district, and just such a place as those would enjoy who desire to be separated from the bustle and turmoil of commercial life.

THE EPISCOPAL CHURCH OF WEST LIBERTY.

We learn that in the summer of 1792, Dr. Doddridge collected a congregation at West Liberty, and held services in the court house. This parish was much weakened by the removal of many of its members to Wheeling when the county seat was removed to that place. In 1800, the membership consisted of the following members:

Moses Chapline, Benjamin Biggs, Nathan Harding, Charles Libergein, Isaac Taylor, Thomas Beck, Ticy Cooper, James Wilson Jacob Zoll, John Abrahams, John Kirk, Andrew Fauts, Silas Hedges, John Wilson, Walter Skinner, Abraham Roland, Thomas Dickerson, Thomas Wayman, Stephen G. Francis, William Dement, Zacchius Bigg, Benijah Dement, John Cully, Nicholas Rogers, Samuel Beck, Ebzy Swearingen, William Griffith, Christian Foster, Lyman Fauts, William Cully, George Dement, John Willins, sr., William Willins.

Amount subscribed $98.

West Liberty, like many other places in this country, at an early day presented a fine opening for Episcopal missionary labor, in the absence of which the field has been successfully cultivated by others and at present there are but few Episcopalians there.

THE DISCIPLES OF CHRIST, OR THE CHRISTIAN CHURCH,

is in a good condition financially, being clear of debt, with money at interest. There are about seventy communicants, living at peace among themselves, and meeting regularly on the first day of the week for worship and for instruction of their children in the Sunday school. In the year 1829, a number of persons living on Long run, having been baptized at Bethany by A. Campbell and others, began to meet for worship on the Lord's day at private houses; generally at Andrew Martin's residence or at Mrs. Catharine Young's, afterwards Mrs. Hervey. A. Martin was the leader in these meetings. Some of the original members were, A. Martin and wife, John Curtis, Burgess Lowe, Catharine and George Young, and soon after this others were added. In the summer of 1830, A. Campbell and Walter Scott held a meeting of some days on the Ohio river near the mouth of Short creek at which there were over forty converts to Christ, and a very deep interest on the subject of religion evidenced in the whole community. That fall, those disciples living near Short creek began to meet regularly for worship at the Cherry Hill school house. The following are the names of some of them: John Mooney and wife, James Hough and wife, Colbert Foot and wife, Daniel Donevan and wife, the Neff family, Lazarus Timmins and Mrs. Catharine Anderson. Mooney, Hough and Foot were the most active leaders in the meetings. In 1831 they changed their place of meeting from the Cherry Hill school house to a school house on Robert's run, in the edge of Brooke county. Here they met until in 1833, when they and the disciples on Long run united, and erected, at West Liberty, a small brick church house, and coming together constituted the church at West Liberty. While those on Short creek were meeting on Robert's run, G. D. Bonar and wife, Thomas Anderson, some of the Pinkertons, and many others under the labors of Dr. R. Richardson, Dr. Grafton, Joseph Bryant, and the Campbells were added. Dr. L. L. Pinkerton, who afterwards became quite noted in Kentucky as a preacher, editor and a Professor in Kentucky University, was one of the converts near the mouth of Short creek, in the meeting before referred to, and several others of this family became ministers of the word.

After the congregation was settled at West Liberty, James Hough and G. V. Bond acted as elders, although there were none at this date formally selected and ordained to that office. For many years, Maxwell McCausland, George Young and others acted as elders, and the church was often visited by evangelists, who would protract their meetings at times for weeks. Among these were John Whitaker, J. P. Robison, Sutton and Wm. Hayden, Geo. Lucy, Marcus Bosworth, Matthew Clapp, Harison Jones, A. B. Greek, and probably others from Ohio, and the Campbell's and others from Virginia. After Bethany College was founded in 1841, the church was supplied chiefly, (for a number of years,) by the students of the institution, and even up to the present it is often ministered to by these young preachers. Such men as Moses E. Laird, Robert Graham, C. L. Loos, and many others labored here in word and doctrine. At present it has the services of Professor Hagerman. In 1852, A. E. Myers settled in the community, having married Miss Charity A. Cox, daughter of Isaac and Susan Cox, and having graduated at Bethany College the same year, and been ordained to the ministry, he has generally acted as pastor up to this date. In 1870 the congregation having increased considerably, and feeling the need of better accommodations, they decided to sell the old house and erect a larger one, upon a more

eligible site. The present house 54x36 feet, with a baptistry and dressing rooms, was erected. Of the original members on Long Run, John Curtis, now in his ninety-second year, still lives where he did at that time in the community. And of those who met on Short creek, Mrs. Catharine Anderson, having passed her three score and ten, resides now in Bethany. Each of these venerable disciples is enjoying good health, and still quite active on foot, with minds but little impaired, The latter has a remarkable recollection of dates and events connected with the founding of this church, and to her are we much indebted for this historic sketch. Quite a number of those who entered the church in 1832–3 still reside in the community.

WEST LIBERTY LOCAL BIOGRAPHICAL SKETCHES.

JOHN CURTIS, the subject of this sketch, first saw the light of day May 27th, 1787, near the residence of Edward Morgan, on the waters of Short creek, in Ohio county. His father, James Curtis, came on the farm now owned by John, in the winter of 1787, when John was only six months old and has remained there up to the present. At this date, March 12th, 1879, he is still living a hale, hearty old man, with the apparent promise of many more years of life. His freedom from the infirmities of age is not the least remarkable characteristic of his history, for he has led a sort of charmed life and still survives, a monument of God's mercy and enduring power of human constitution. He informed us that the amount of his school education simply consisted of reading, writing and cyphering, in a very humble way. In 1824 he married Miss Jane Martin, and they had a family of nine children. Mr. and Mrs. Curtis were among the first to unite with the Christian Church at West Liberty. He is naturally a man of good sound sense, very observant and disposed to turn his observation to practical account. He is now the oldest living native born citizen in Ohio county.

EDWARD RAY was born in Ohio county, in 1820, he is a son of George Ray, who came here from Lancaster county Pennsylvania, in 1819–20. His parents were from Ireland, but came to America when young. Edward received a common school education, and on entering into manhood he went to farming for himself. He married Miss Curtis, daughter of John Curtis, and they have a fine improved farm. He devotes his main attention to wool growing, in which he has been very successful.

WILLIAM RAY was born in Ohio, in 1842; he is a farmer and stock raiser. He married Miss Sarah Giffin, of Ohio county, and they have three children—all sons. His post office address is Roney's Point, West Virginia.

PERRY WHITHAM was born in Ohio county, January 8th, 1808, his father, Joseph Whitham, coming from the state of Maryland, in 1797, when he settled in Liberty district, Ohio county. He married Miss Dement, daughter of George Dement, who came to this country among the first settlers. Perry, like many other old settlers of that day, received but a limited education. When he grew up to manhood he started out for himself as a farmer, and has become one of the most prominent of his calling in Liberty—devoting his entire time to wool growing and grain raising. He is a member of the Presbyterian Church, at West Alexander, Pennsylvania, and a devoted christian. He was a strong Union man during the late trouble between the North and South; in fact he was one of the old school Abolistionists, and seems proud of his past political record.

B. T. YATES was born in Ohio, May 4th, 1825. He was son of Andrew and Annie Yates. His grandfather, Thomas Yates, was an early settler in Liberty district. He received a plain education, and when he grew up selected the occupation of a farmer, in which he has been very successful. In 1848 he married Miss Margaret C. Percell. In 1872 he was elected justice of the peace, and served four years.

REV. DR. A. D. MYERS was born on the waters of Long creek, in Jefferson county, Tennessee, about forty miles east of Knoxville, on the 6th day of January, 1822. His father's name was John and his mother's maiden name was Mary Snoddy, eldest daughter of Thomas Snoddy, Esq. Both were members of the Presbyterian Church, and when the Cumberland Presbytery broke off, and formed the Cumberland Presbyterian Church, John Myers went with that Presbytery, and became a minister of fair note among them, but late in life he identified himself with the "Disciples of Christ," and labored among them until he was eighty-four years of age, when he succumbed to death. After he was of age he prepared for a college course of study, and in his twenty-third year he entered East Tennessee University, at Knoxville, where he remained for two years. He then taught in Tennessee and Mississippi, for about three years, In the fall of 1850 he left for Bethany College, where he entered, and in 1852 graduated. He then married Miss Charity A. Cox, and settled where they now reside. By this marriage they had two sons and two daughters, but one of the latter died in infancy, the other three children having grown up. Immediately after graduating, A. E. Myers entered the evangelical ministry in which he has labored for more than a quarter of a century. He is a trustee of the Bethany College, one of the executive committee of the State Normal School at West Liberty, corresponding secretary to the State Board of Missions and Evangelists at large, for the state, and attends the conventions of the Disciples of Christ.

GEORGE G. MORRISON was born in Ohio county, West Virginia, in 1829. He was a son of Archibald Morrison and grandson of William Morrison, one of the pioneers of Ohio county. His father was of Irish parentage and immigrated from Ireland in 1784. George Morrison was married in 1853, to Miss Sarah Dickey, of Washington county, Pa. Mr. Morrison is a member of the United Presbyterian Church of West Alexander, and the fortunate possessor of a farm of one hundred and thirty acres.

JOHN ATKINSON, a retired farmer, was born in Ohio county, West Virginia, January 3, 1800. His father, James Atkinson, and his grandfather, John Atkinson, were among the first white settlers in Ohio county. Their settlement was made in 1783, in what is now Brooke county. Mr. Atkinson was educated at the public schools, and when grown up he chose the occupation of a farmer, being very successful. Mr. Atkinson married Miss Margaret Trumble, in 1819 or 1820. They have had thirteen children, six boys and seven girls. Mr. Atkinson is a devoted member of the Presbyterian Church, and is universally esteemed. He now lives in West Alexander, Washington county, Pennsylvania.

S. B. CHAMBERS, farmer, was born in Ohio, in 1824, and is a son of James Chambers, an old soldier in the war of 1812. S. B. Chambers was educated at a common school. In 1848 he married Miss Nancy Davis, and they had issue four children. Mrs. Chambers died December 10, 1878.

"The love where death has set his seal
No age can chill nor rival steal,
Nor falsehood disavow."

J. W. MCCONN, farmer, was born in Ohio county in 1825. His father was one of the earliest settlers in this section. Mr. McConn is one of Ohio's most enterprising farmers, and owns a fine farm with good improvements thereon.

JAMES DIXON, farmer and fine stock raiser was born in Ohio county. He is a descendant of the Dixons who came here among the first settlers. Mr. Dixon gives his entire attention to stock raising and is characterized for owning fine Durham and Devonshire breeds of cattle, as also fine sheep.

MORROW GIBSON was born in 1829, and is a son of William and Sarah Gibson pioneers of Ohio county. William Gibson was born in the same county in 1795, and died in 1872, at the age of seventy-seven. His wife, Sarah Morrow, was born in Westmoreland county, Pennsylvania, in 1794, and died January 20, 1879. Morrow Gibson, the subject of this sketch, has spent his life on the farm where he now resides, it being the old homestead. He is a very successful farmer and stock raiser. He married Miss Griffin in 1852, and they have been blessed with nine children. He has a fine farm with all the improvements of modern times. Post office address, Roney's Point, West Virginia.

THEO. L. HARVEY was born in Ohio county in 1797, on the farm now owned by his son, Joseph Harvey. He was a farmer and very successful, leaving a good farm for his son. He married Miss E. Finley, upon whose death he took unto himself Miss Julia A. Martin. He was a man respected by all who knew him, as a christian man, and always charitable to the poor.

JAMES V. CHAMBERS, farmer and fruit grower, was born in Ohio county in 1830. He was son of James Chambers, an old settler at Sand Hill, Marshall county, West Virginia, but at the time they first came here it was all Ohio county. In 1858 he married Miss E. Harvey, daughter of L. Harvey, of Ohio county. Mr. Chambers not only farms, but is extensively engaged in coal mining at Elm Grove.

W. M. DUNLAP, attorney at law, was born in Ohio county in 1847. Upon completing his education he entered the study of law, was admitted to the bar in Wheeling, where he practiced up to a short time ago, when he moved to his farm in the country on account of ill health, and there still resides.

LEMUEL BECK, farmer, was born in Brooke county, March 4, 1807. The Becks are a farming family. Lemuel was schooled at such schools as they had in his youthful days, and in 1832 married Miss Trumble. She died in 1835, and in 1848 he was married again to Miss Sarah J. Jerome, who died also in 1863. In 1866 he married Miss Catharine Jerome.

JOSEPH CARSON was born in Ohio county, August 21st, 1801. He was a son of Richard Carson, who came to this county about 1799, was a soldier in the war of 1812, and died while returning from Sandusky, Erie county, Ohio, leaving a wife and seven children. Joseph, the subject of this sketch, was his second son, and as his father was a man of limited means, he had to work hard to support the family. Joseph attended school when an opportunity offered, and being a close student, studied very hard. At the age of twenty he went to teaching school, at which he was engaged three years. After that time he followed farming. In 1829 he married Miss Annie Brown, of his native county. In 1867 he was elected justice of the peace, and served four years. Mr. Carson has been a member of the Presbyterian Church for more than twenty-five years, and is universally liked by all who know him.

CHAPTER XLIX.

RICHLAND TOWNSHIP.

INCLUDING ITS CHARACTERISTIC FERTILITY—LOCATION—STREAMS —ROADS—EARLY HISTORY—PROSPERITY AND PRESENT RESOURCES, WITH BRIEF BIOGRAPHICAL SKETCHES OF ITS LEADING RESIDENTS.

THIS section of the county is exclusively devoted to farming, and from the success it has achieved, past and present, consequent mainly upon the fertility of its soil, the township has been most appropriately named. It is bounded on the north by Brooke county, on the west by the Ohio river, with Triadelphia on the south and Liberty on the east. Its early history, in the matter of survey, settlement and districting, compares almost precisely with its neighboring townships, as given elsewhere. It is underlaid with stratas of lime stone and coal deposits; the latter being distinctly visible in many parts where the streams have washed away the sub-soil. Short creek borders on the township line, hence Richland is often called Short creek township. There are several winding tributary streams through the county that empty into Short creek, while a second principal stream known as Peter's run, heads in the upper section of the township, and empties into Wheeling creek within the limits of Triadelphia. The Bethany pike runs through Richland, and intersects the National pike near Walter's Two Mile House, beyond Fulton. A small village known as Clinton, consisting of a post office, smith's shop, grocery store, and probably some half dozen houses is the only pretension to a commercial centre in the township. Historically, Richland is not behind its neighboring townships in features of interest. The discovery of innumerable mounds, on the present farms, has afforded unmistakable evidence that the ancient mound builders here located anterior to the red skins. A large number of stone, bone, and other relics have been recovered from these mounds and are still preserved, while on the present farm of a Mr. Waddle, there yet remains the largest mound; one eight feet high and forty feet in circumference, unexplored.

A son of Mrs. R. L. McCulloch, a few years ago, while engaged on their farm, accidentally found a cluster of two hundred and twenty-two Indian flint darts, as usually applied to arrows, and ranging from one and a half to nine inches in length. The latter evidencing the fact that there must have existed, in those days, a race whose muscular development to handle such weapons dextrously, was far in excess of the present generation. Another remarkable feature is that the shape of the darts here found widely differ from any others elsewhere recovered, suggesting that a different and distinct race, tribe or clan must have originally squatted in this particular section. Its surface is dotted everywhere with mounds noting the final resting place of savages long departed to the "happy hunting grounds" from whence none return—as also embankments reared by the white man for his protection from the tomahawk and scalping knife of the merciless aborigines. Here was located the well known Van Meter Fort, in which was held the first civil court of north western Virginia, and perhaps the first in the valley of the Mississippi. Near to this is the place so noted in border history as Girty's point. This district also formed the scene of many of the daring adventures of the farfamed borderer, Lewis Wetzel. Here was the home of Majors Samuel and John McCulloch, who led the pioneers in defending themselves against the incursions of the reds. Nor is this all. On the late John McCulloch's farm, now owned by a Mr. Busby, there stood, until very recently, the trunk of an old sycamore tree, upon which it is asserted and generally accepted as true, that the intestines of the late gallant Major Samuel McCulloch were hung, on that memorable occasion of his murder, speaking upon which subject Doddridge's notes further informs us.

"The Indians, influenced no doubt, by that species of hero-worship, inherent in their nature, causing an unbounded admiration of personal valor, abstracted the heart of their victim, (which it was afterwards learned, from one belonging to the party), had been eaten by them—a practice in which they occasionally indulged. Parkman, who was well acquainted with their habits, says—'the Indians, though not habitual cannibals, sometimes eat portions of the bodies of their enemies, superstitiously believing that their own courage and hardihood would be increased thereby.'"

A building standing on the farm of A. R. Jacobs is supposed to have been used as a private fort by families settled in that district. It was the oldest building standing in 1874, at which date it was torn down. Its dimensions were 26x36 feet in length and width and 12 feet high. Its architecture was similar to the story and a half houses of to-day, having very high gables. The walls were two and a half feet thick and the half story was lined with inch plank. At the time of its tearing down there were found papers and letters dating back as far as 1786, between the ceiling of the lower story and the floor above. These papers when exposed to the air crumbled to dust and consequently none of their reading matter can be reached. Among them, however, was a letter of introduction given by a young lady from the east to her father. Its purport was to introduce the father to a gentleman friend in Virginia, whom she esteemed highly and whom she wished her father to meet in order that she might receive his impressions respecting the young man. Her friend seems to have been holding some office in the revolutionary war. On this farm, also, have been found several ancient burying grounds. These are mounds situated upon high points of the farm. In these mounds have been found Indian skeletons perfectly preserved. They have been dug out by Mr. Jacobs after discovering them by passing over them with the plow. The ground for some distance around was composed of wood-ashes, and as far down as they have succeeded in digging, they have found numerous muscle-shells and pieces of pottery, such as pipes and jugs. These things evidence the presence of an ancient pottery, the ashes having been produced in burning the clay. But turning one's mind's eye suddenly from this scene of desolation and barbarity of those days, and gazing upon the fruitful broad acres that now contribute inestimable blessings for mankind, well may we enquire

"Say, civilization, who gave to thee birth?
Who sent thee to reign, with thy blessings, on earth?
Whence came to thee power—to us freely given?
And reason responds, "'Tis sent thee from heav'n!'"

In few districts are the past worthy labors of the care-worn pioneer displayed to greater advagtage than in Richland. Extensive and ably conducted farms, in the highest state of cultivation, are everywhere visible, and the lowing herds, with the waving fields of grain, bespeak the highest compliment and

reward to modern intelligence blended with experience, frugality and perseverance.

Dr. Campbell's farm, once owned by lawyer Sprigg, and consisting of four hundred acres, is probably one of the finest to meet the eye. The old log hut has passed away like a shadow, and there has arisen a magnificent farm homestead worthy the highest veneration from succeeding generations.

George W. Nicholls, residing on the hill overlooking Fulton, has also the privilege of owning as valuable a farm as any in the Pan-Handle, admirably appointed, abundantly stocked and conducted under the highest state of cultivation, with a home thereon of ease and beauty. It was inherited from his worthy father, a zealous pioneer, and so early as 1818, a successful merchant in the present city of Wheeling.

John Nicholls, son of George W. Nicholls, also conducts a splendid farm in close proximity, originally held by his father, and a worthy compliment to the family's industry.

The McCullochs, James and Wm. J., bear not only a time-honored name in this section, but represent homesteads nobly won by their illustrious ancestors. The name of the McCullochs will never die in history, while the beautiful residences, the prosperous farms and respect in which the descendants of the family is held, will lend additional influence to perpetuate the family's prestige.

Among other prominent families in this township, as prosperous and extensive agriculturalists, we should also mention the names of the Sawtells, Hills, Ridgelys, Caldwells, Wilsons, Kellys, Norths, and others, whose association with Richland has lent immeasurable assistance in establishing its present advancement. There are two flouring mills here, one propelled by steam, the other by water, the latter element being plentiful the year round. Though the present resources of Richland bear such a flattering comparison to its early history, yet who shall divine its future—which, in all human probability, may yet prove equally radiant with its prosperous past.

SHORT CREEK M. E. CHURCH.

This church was organized so early in the history of the country that its members were obliged to carry their arms and means of defense with them to their plcae of worship, and to stack them near to protect them from a sudden onset of the savages who yet prowled over the country. Its history dates back to the beginning of Methodism in this country. Its charter members were the pioneers of the Pan-Handle, among whom are those familiar and prominent names in the early records: John Spahr, Joseph Morgan, Abram McCulloch and Mr. Boone. Their house of worship, at first, was an old elm tree on the farm then owned by John Spahr, now owned by Robert Bonar. Under this elm tree the first bishop of the Methodist Church waked the echoes of the dense and extended forest with his discourses concerning the God of the wilderness, and many of the leading ministers of the church, from time to time, filled its rude pulpit, which remains hallowed in the minds of the people by its sacred associations.

Under this natural covering they continued to worship for years, but the colds and frosts of winter prevented their meeting under the venerable tree, when they were obliged to resort to the school houses and private dwellings of sufficient capacity. These many changes were annoying to the members, and, therefore, it was resolved that efforts should be put forth to build a church that Methodism might not only have a name in this locality, but a local habitation. Accordingly a lot was purchased on the north branch of Short creek, and by individual contributions—not of money, (because it was not plenty among the early members of the community,) but of the different elements entering into its composition by those possessing such elements most abundantly. Some contributed stone, others timber, and still others shingles; while many who were not able to furnish material lent a helping hand by way of manual labor. The lot having been procured and the materials arranged for, the society commenced in the year 1808 to erect a stone church consistent in its architecture with all church buildings of those early days. It was two stories in height and finished with cherry. The building was completed and dedicated to the worship of God the following year. Bishop McHenry preached the dedicatory sermon. From this point the congregation increased rapidly. It was not long until the native eloquence of the back-woods preachers and the zeal of its membership attracted large congregations, and the church was crowded with the hosts from all parts of the country, that collected there to hear the Word of Life. Its history is marked by many and fruitful revivals. Many were the joyous shouts that echoed from its venerable walls, and many the seasons of refreshing enjoyed by God's people during the years of its existence. Many and great were the changes through which the country had passed since its construction.

The solitary places had become thickly settled. The wilderness had been changed into the fruitful field and made to bud and blossom as the rose. The dwellings of the people had been transformed from the rude hut into edifices comparatively palatial. Three score and more years had passed since the laying of the corner stone of this church. Two generations of people had met, Sabbath after Sabbath, about its sacred altar, and had gone to meet with the congregation around the Great White Throne. But the building, though constructed of stone, was not exempt from the decaying influences of time. Its walls crumbled, its timbers decayed, and its appearance became defaced. The people were unwilling that the House of God should be inferior to their own dwellings; and, therefore, moves were made toward the construction of a new church, which was effected in the year 1872. The Old Stone Church was supplanted by a very beautiful and commodious structure. It is a two-story building. The upper room is used as an audience chamber, and the basement employed as a Sabbath school and lecture room. This new church was dedicated by Rev. I. C. Pershing in the year after its construction.

BIOGRAPHY OF PIONEERS AND REPRESENTATIVE MEN.

THE MCCOLLOCH FAMILY.—The origin and early history of the McColloch family will be found elsewhere in this volume.

ABRAM MCCOLLOCH, oldest living son of Abram McColloch, who was one of the McColloch brothers of early pioneer fame, was born November 18th, 1797. He received such education as the limited advantages of his early days afforded—was married in 1845, to Susan Burns. He is the father of six children, four sons and two daughters, to all of whom he has given a fair education. Mr. McColloch assisted in laying out by survey, several of the western states. Farming and stock dealing has been his permanent employment. By his industry and frugality, he has acquired considerable property.

SAMUEL MCCOLLOCH, brother of Abram and next in descent, was born in 1802. Followed farming as an occupation, and has lived an exemplary christian life, being a member of the Short creek M. E. Church. He has held the office of Magistrate in his district for ten years. He was married January 27th, 1842, and reared a family of eleven children.

JAMES MCCOLLOCH was born May 23, 1807. Was married in 1843 to Tabitha McGee. Has no children.

WILLIAM J. MCCOLLOCH was born August 3, 1809. He is a farmer and wool-grower by occupation. On the 21st of December, 1848, he married Rebecca J. McGee. Has no family.

JOHN W. MCCOLLOCH, the father of John McColloch, the subject of this sketch, resided near where his son now lives. Mr. John McColloch was born May 24, 1828. He has followed farming as an occupation. Was married February 6, 1856 to Emily Wilson, and has reared a family of four children, three sons and one daughter. The mother of Mr. McColloch was Sarah Wilson.

A. J. MCCOLLOCH, the second son of Abram, was born in November, 1851, and was married in June, 1873, to Miss R. J. North. His business is farming.

GEORGE SAWTELL was born in England November 28, 1804, and emigrated with his father, John Sawtell, to America and settled in October, 1820, in Richland district, Ohio county, West Virginia, on a farm purchased from Benjamin Mills for $13.75 per acre. Mr. John Sawtell died July 15, 1821. Mr. George Sawtell is a member of a family of three sons and two daughters. He occupies the homestead farm. Was educated in England. Married August 25, 1820, to Eliza Goss, by whom he has reared a family of eleven children, nine of whom are still living. Mr. Sawtell became in early life a member of the Short Creek Methodist Episcopal Church; he was infirmary director for nine years, and four years township magistrate. Mr. John Sawtell was a member of the Methodist Episcopal Church of Short Creek and local pastor.

Martin L. Hill was born September 25, 1837. Received considerable education, having passed through the Freshman and Sophomore years at Fairfield College, Indiana. He was married in 1858 to Clara C. Wells, and is now settled on the farm of her father. He is the father of seven children—three sons and four daughters. United in 1857 with the Short Creek Methodist Episcopal Church. Mr. Hill was called to the office of deputy sheriff at the opening of the year 1862, and served four years; immediately after which he was made assistant assessor of internal revenue, in which office he served five years, when he retired to his home farm. Mr. Hill manifested good sense and true manliness by departing from the usual custom of the office-holder and resuming, immediately after his retiring, his original occupation, instead of remaining, like a parasite, around the county offices. His sound judgment and intellectual worth are attested, also, by the fact that he has been called to numerous township and district offices.

W. A. Ridgely, the son of Absolom Ridgley, was born March 16, 1838. Received a very fine education. Was married October 21, 1866, to Mary E. Lowther, step-daughter of General Stokely, of Steubenville, by whom he has reared four children. He is very pleasantly situted on the south branch of Short creek. His occupation is farming.

John Caldwell was born in 1787, at Chambersburg, Pennsylvania. At an early age he came to West Virginia and settled in Richland district, Ohio county, where he labored with the pioneers in clearing away the forests and preparing the country for cultivation. In March, 1817, he was married to Rebecca Hedges, by whom he has raised a family of eight children. He became at an early period of his life a member of the United Presbyterian Church of Short creek. Died in 1871.

Joseph Caldwell, a son of John, was born July 23, 1820; married October 17, 1844, to a Miss Ridgely, and has reared a family of four children.

Wm. H. Caldwell, also a son of John, was born August 16, 1846; received a liberal common school education; was married March 14, 1866, to Clarinda Hupp, of Brooke county, West Virginia; he is the father of four children. Mr. Caldwell was elected township clerk in 1868; filled the office of county commissioner from 1874 to 1876, and was called to the county assessorship in 1876, which term of office will expire in 1880.

Isaac Kelly came from East Virginia near the close of the Revolutionary war, and settled on the farm owned by A. J. Kelly, and was married to Rebecca Wood, by whom he was educated after marriage. He reared a family of nine children, five sons and four daughters. Followed farming. Became a member of church and elder therein. Was called to the office of sheriff. Died March, 1825.

John Kelly, son of Isaac, was born in 1784, and married Elizabeth Wilson, October 26, 1809. Followed the produce business in New Orleans in the early part of life for eight years, and farming the remaining part. Died in 1824, and was buried in the cemetery of the Stone Church near Elm Grove.

Aaron Kelly, son of John, was born the 29th of October, 1816. Was married on the 26th of October, 1854, to Sarah B. McMechen by whom he has had three children, two of whom are living. Mr. Kelly followed farming in early life, and from 1840 to 1846, was deputy sheriff of Ohio county, after which he followed pork packing in the west for two years; then the produce business in New Orleans, and after this returned to pork packing, which he pursued in Alton, Illinois, and Burlington Iowa, when he was made general manager of the Benwood Rolling Mills, which office he held for twelve years. He then returned to his farm in Richland district, and has made farming and stock dealing his permanent employment. Mr. Kelly is a man of firmness, activity and decision of character, and therefore possesses great executive ability.

The Morgan Family.—The first of this family of whom we could get any record or tradition is one Edward Morgan, who came from Berkeley county and settled in Ohio county, Richland district, at an early period of history.

Joseph Morgan, next in descent, was a member of Short Creek Methodist Episcopal Church; married Rebecca Spaler and reared eight children.

Josiah Morgan, son of Joseph, was born May 3d, 1796; was married, October 17th, 1822, to Susan S. Foreman. Mr. Morgan, in the early part of his life, followed school teaching and was the first instructor in the Cherry Hill school district. He resided for some time in West Liberty, teaching school and keeping hotel. He returned to the country and settled on Kyle's ridge. He became a member of the Short Creek Methodist Episcopal Church in very early life, and before his twentieth year was licensed to exhort. He continued a consistent member, ever exerting a healthy moral influence. He died October 1st, 1860.

Rebecca L. McColloch, daughter of Josiah Morgan, was born March 5th, 1825. Received an academic education. Was given in marriage November 3d, 1842, to Joseph McColloch, a farmer. She is the mother of four children. Her husband died June 23d, 1863.

Elisha Connelly emigrated to West Virginia from Washington county, Pa., formerly of Maryland, and settled here in 1832. He worked out his own education; was born November 12, 1826, and was married December 22, 1834, to Larenni Edmunds, and reared a family of six children.

William Connelly, son of Elisha, was born January 22, 1836, and married March 16, 1865, to Miss E. M. Cox; followed farming as an occupation; is the father of five children, two daughters and three sons. Mr. Connelly has been called to several offices, as justice of the peace, surveyor of district roads, and school director.

Gilbert G. Sawtell, son of George, was born August 15, 1839, in Ohio county, West Virginia; was married May 27, 1862, to Rebecca M. Bonar. Mr. Sawtell commenced the mercantile business in the city of Wheeling in 1859 and pursued it until 1874, when he retired to the country and has since followed farming.

John Wilson, the first of the Wilson family in West Virginia; emigrated from Amboy, New Jersey, in 1773; was born December 22, 1845; married Rebecca Abrams and settled on the farm known as the Wilson estate; he purchased the same by the tomahawk right. He with his family sought refuge frequently from the red man in the old Van Meter fort. They were there during the night after the death of Major Samuel McColloch.

Joseph Wilson, the son of John, was born October 25, 1873, and married Rebecca McColloch October 26, 1826. He reared a family of seven children, five of whom were boys and two girls.

A. J. Wilson was born April 21, 1829. Married, March 28, 1854 to Margaret Bane Mr. Wilson has served two terms as township commissioner and has been called frequently to direct the educational affairs of the district.

Patrick McNulty emigrated originally from Ireland, and settled at Baltimore, Maryland, where he followed road contracting for some years; after which he moved to Wheeling, West Virginia, and lived a retired life until his death, in 1828, at the age of forty years. Mr. McNulty married Miss Nancy McGuire and left at death four children.

Sarah Warden, the daughter of Patrick McNulty, was born March 1, 1817, and was married in 1841 to Samuel Warden. She is the mother of seven children, three of whom are now living. Her daughters were given an academic education at Washington, Pennsylvania. On the 28th of January, 1872, Mrs. Warden was bereaved of her husband, and since then has been directing the affairs of the estate herself, with the assistance of her son. She became a member of the Triadelphia M. E. Church in the year 1855, and since then has lived a consistent christian life.

John Wayt emigrated to Ohio county, West Virginia, near the year 1780, at the age of twenty-five. He was accompanied by two brothers and two sisters. Mr. Wayt was educated for a priest in the Catholic Church of England, and upon his rejection of their creed, in order to escape persecution, was compelled to flee. He became, here, a member of the Presbyterian Church, and eventually an elder. Was married soon after his arrival to Mary Peyatt. He became a leading man among the early

settlers. He died in 1822, and his remains were interred in the cemetery of the Stone Church near Elm Grove.

ANDREW WAYT, a brother of John Wayt, settled in Pennsylvania. Was married to Sarah Wayt, in England, near the year 1804. He reared a family of six sons and four daughters. He died in his seventy-seventh year,

JAMES WAYT, son of Nathaniel Wayt, who was a son of Andrew Wayt, was born on the 27th day of November, 1812. Was married March 31st, 1836, to Margaret Bell, and reared a family of four sons and three daughters. Mr. Wayt is a man of considerable influence in his community, on account of his extensive reading and general information. He is an active member of the West Liberty Presbyterian Church.

CHAPTER L.

HISTORY OF BROOKE COUNTY.

GENERAL DESCRIPTION—STREAMS AND STATISTICS.

THIS county was organized in 1797, and called Brooke in honor of Robert Brooke, who was governor of Virginia from 1794 to 1796. Its length is about eighteen miles, and average width about nine miles.

The surface of the county is a high rolling land, cut in every direction by deep ravines, along which flow rivulets and brooks, formed by the springs that issue from the bases of the hills, at short intervals, on either side. These small streams uniting their waters, as they swiftly glide along their rapid courses, from their great number, soon form creeks of considerable size, all of which flow westwardly and empty into the Ohio river. Although these hills are often too steep to cultivate along the lower portions of their sides, yet as we approach their summit, which are several hundred feet above the valleys below, they spread out in broad rolling swells that are level enough to farm with reasonable convenience. While these elevated plateaus generally have about a common level, a hill occasionally lifts itself above, as though to afford to lovers of beautiful landscapes, most delightful views of a country covered for many miles with rich pastures, with grazing herds of flocks, fruitful grain fields, orchards, gardens, and farm houses; while upon the steeper sides of the valleys below, still remain portions of the ancient forests of oak, hickory and walnut. Frequently, as the traveler passes along the roads upon the uplands, he sees, suddenly, from some dividing ridge, charming valleys stretching away for miles with their green meadows, rich fields of corn and sparkling streamlets. At other times, as he advances, he admires with delight, in the distance, the ever varying line of the horizon, which, on all sides, is formed by the summits of remote ridges and elevations, sometimes conical in form, but mostly defined by various arcs of circles, as regularly drawn as if a pair of compasses had traced the lines upon the skies.

These elevated lands have a strong limestone soil that is very fertile, producing abundant crops of all the grains and grasses. They also afford rich pasturage for all kinds of stock, especially sheep, which are raised in considerable numbers. The original forests are mostly cleared away, and nearly the entire surface of the country is devoted to pasturage and tillage. The whole county is underlaid with a strata of coal, which is now used almost exclusively as fuel for all purposes. From the census reports of 1870, we learn that Brooke county contained 54,856 acres of improved land, and but 36,000 acres of wood land, with 604 acres of other unimproved land. By the same report we also learn that it raised 45,945 bushels of wheat, 1,445 bushels of rye 185,576 bushels of corn, 81,135 bushels of oats, 35 bushels of buckwheat, 45,850 bushels of Irish potatoes, 335 bushels of sweet potatoes, 1,060 pounds of maple sugar, 475 gallons maple molasses, 3,795 gallons sorghum molasses and 6,762 pounds of honey.

EARLY SETTLERS.

It is difficult to find who were the first settlers of this county, or where they settled. The earliest dates at which they came seems to have been about 1772. From that time there was probably here and there a settler, until 1787, several patents were located in this county by Moses Decker, Peter Cox, Benjamin Wells, John Van Metre, and Benjamin Johnson, jr., who was a surveyor, and located seven thousand acres of land in 1785; William McMahon, who appropriated the hills lying back of Wellsburg, in 1786; Hezekiah Hyatt, Lawrence Van Buskirk, John Buck and Greathouse. These appear to have constituted the advanced guard of pioneers, for after their arrival, there was a cessation of entries until 1795, when it again commenced with great vigor. Among this latter irruption, we find prominently the names of Thomas Cook, Nathaniel Fleming, James Darrah, William McClane, Benjamin Reed and others. Among those who settled near Wellsburg, were Judge Alexander Caldwell, subsequently of Wheeling, West Virginia, Oliver Brown, a distinguished officer of the Revolution, and a member of the Boston tea-party; Rev. Joseph Doddridge and his brother, Philip Doddridge, Esq.; Alexander Wells, the father and patron of Methodism in Wellsburg, and his son Bazaleel then a young lawyer from Maryland; Charles Hammond, Esq., late of Cincinnati; Colonel Thorpe; Nicholas P. Tillinghast; Zaccheus Biggs, and many others equally respectable and influential. In the vicinity of the place, lived Captain McMahon, who lost his life while serving in the army of General Wayne; the Cox's the Swearingen's the Brady's and others, whose names are intimately associated with border history.

The principal streams or creeks that pass through this county have their source in Pennsylvania, but are rapidly increased in size by the many springs that feed them along their way as they pass through Brooke county.

The first of these is Harmon's creek, so called from Harmon Greathouse, who settled on its waters about the year 1771, near where the woolen factory was afterward built. It passes through Holliday's Cove and empties into the Ohio, nearly opposite Steubenville. The next is Cross creek, which empties into the river some three miles above Wellsburg. It derived its name from the fact that another similar creek empties into the river from the other side, right opposite. This is called Ohio Cross creek. Then comes Buffalo, which falls into the river just at the lower end of Wellsburg. It is said to have received its name from the buffalo that are believed to have rambled along its banks to a "lick" or "licks" that these animals frequented, somewhere towards its head waters. This is a beautiful stream, and upon its banks stood the residence of Alexander Campbell, where he lived and died, and together with most of his family, lies buried upon a hill that overlooks its clear waters, as they forever flow along their way, and seem to chant a solemn requiem to the sleeping dead above them as they rippling pass the place. Here also, upon the now classic banks of this stream, stands Bethany and its college, a place the name of which will go down through coming ages as the Mecca from which a new religious faith originated, that is perhaps destined to have an important influence on the opinions of the Christian work.

The tributaries of this creek, in Brooke county are Henderson's run, Glenn run, Lick Hill run, Castleman's run, Logan run, Stott's run, Leazear's run, Hukill run, Ghost run, Jordan run, Grog run, Tit's run, Green's run, and Panther run.

There are three grist mills and one woolen factory on it. Lastly comes Short creek, which rises in Ohio county, and only forms the line between Brooke and Ohio, for a few miles above its mouth. The definition of the word probably indicates the origin of its name.

In the earlier days of this county, when its trade and commerce were by the river and carried on flat boats, and its markets were New Orleans and intermediate points, an active business was carried on at Wellsburg; manufactories and business enterprises sprung up, and these creeks were dotted with flouring mills at every available spot, from their mouths, as far up, as there was water enough to turn a wheel. But the time was approaching, when the enterprise of man, guided by scientific knowledge, was about to develop and open up new and more expeditious and efficient channels of trade, that would revolutionize the commerce and travel of the country. These people for lack of sagacity, or want of enterprise did not realize or appreciate the great changes about to take place, and let the golden opportunity slip. Other people and communities of more progressive ideas and public spirit, were not slow in taking advantage of the situation, and their energy, guided by intelligence, has diverted the commerce and business of the country into new channels, by building long lines of railroad from one end of the country to the other, which have developed its wealth and resources and caused cities to spring up and farms

to be opened out and wealth accumulate in untold millions, on lands that were a desert wilderness, when Wellsburg and neighborhood, were in the height of their prosperity.

While other sections of our country fully imbued with the progressive ideas of the age have advanced in prosperity and wealth, with unexampled rapidity, this community content to trudge along in the old ruts and retaining only the ideas of a past age, has retrograded. Many of the manufactories that once flourished, have ceased to exist, and most of the mills that once dotted every creek within the county, have disappeared, and it now only remains as a memento of an age that is past. It may be useful to the historian, however, as a standard of measure, by which to compare modern ideas and progress, with the times of past ages.

ROADS.

There are but two turnpike roads in the county. The best one runs from Wellsburg to Bethany, a distance of seven miles. It passes through two tunnels, as it winds its way along the banks of the "Buffalo" creek, and is nearly all level, there being but one hill of any consequence along its entire length. The other extends from Wellsburg to Independence, Pennsylvania, and is also seven miles in length. It is known as the Washington pike. It passes over long ranges of hills.

The country is well enough supplied with common country roads, but in times of wet weather, especially in the spring season of the year they are almost impassible, from the miry condition of the clay soil.

RAILROADS.

There are two railroads that touch the soil of this county. The first is the Pittsburgh, Wheeling & Kentucky Railroad, and is known as the Pewicky road. It runs from Wheeling to Steubenville, a distance of twenty-two miles, and is a mere appendage or feeder of the great Pan-Handle road. It follows the east bank of the Ohio river and passes Wellsburg. Then the Pan-Handle runs up Harmon's creek, in Holliday's cove, nearly follows the line, being sometimes in Brooke county and sometimes in Hancock.

DISTRICTS—OR TOWNSHIPS.

It is divided into three districts—or townships: Wellsburg, Buffalo and Cross creek, each of which has two justices of the peace. These districts are sub-divided into voting precincts, or election districts, in which the elections are held. There are nine of these voting places in the county, as follows: Wellsburg one, Buffalo four, and Cross creek four.

TOWNS AND VILLAGES.

There are three towns in Brooke county, Wellsburg, Bethany and Collier.

BETHANY.

This place will be forever memorable as being the home of Alexander Campbell, the place where he evolved the principles that culminated in the establishment of a new religious denomination, that has made a progress in the christian world that is without parallel—that now has adherents in every land. It was here in this secluded and romantic spot, where the bright clear waters of the Buffalo wind their way among the hills, that he established his little printing office from which he sent forth his ideas, spread out upon the pages of countless thousands of books and periodicals, that found their way to every quarter of the globe. It was here that he started the Buffalo Academy, an institution designed to educate and prepare laborers for the work he had undertaken, that as the field of labor widened out the idea of an institution on a grander, larger scale was conceived, which resulted in the founding of Bethany College, which prepared the way for building up a town, a thing not intended, or devised, in originating the plan of the college, but which grew up from the necessity of the situation.

It was here the great work of his life was done, and where his remains now repose in their peaceful slumber, in an enclosure of about an acre of land, used as a family cemetery, where his own family and some near friends lie buried. In his life time he deeded this lot to the trustees of Bethany College, to be used as his family cemetery. It is enclosed by a substantial stone wall.

This village is seven miles east, or south east of Wellsburg, on Buffalo creek, near the old homestead of Campbell. The town was laid off in 1847, by Mr. Campbell, and called Bethany, probably from the place of that name in Judea. It appears to have been the original idea of Bishop Campbell, when he established the college, to have no town there. He selected that secluded place, on account of its remoteness from the busy marts of trade, believing moral principles could be more easily implanted in the hearts of the young, if kept from contact with the business world, and its corrupting vices and influences; that the students would not have the temptations to spend their money unnecessarily. But after a few years experience, it seemed to be necessary, or at least, very convenient, that there should be stores and other business houses where the college faculty, as well as students, could supply themselves with the ever recurring wants of every day life. A town was therefore laid off and places of business established, which furnished the necessary wants of the community. The village at this time (1879) contains about three hundred inhabitants, has two dry goods stores, one grocery store, two hotels, three blacksmith shops, one wagon shop, one harness and saddler's shop, and two churches.

BETHANY POST OFFICE.

Previous to 1827, the neighborhood had received its mail from West Liberty, some four miles distant, but Alexander Campbell, who lived near where Bethany now stands, with the large correspondence his ministerial duties required, as well as his publishing business, found it inconvenient to go so far to receive or mail his letters and publications. He therefore petitioned the Department for a new post office at his residence, offering to carry the mail between the two places, twice a week on horseback, free of charge.

Post masters at that time had the franking privilege and could send or receive letters free. With his extensive correspondence and postage from six to twenty-five cents each on letters, would make some amends for carrying the mail free that distance. Accordingly, a post office was established, and he was appointed post master June 2d, 1827. The office would probably have been called Buffalo, but there was already an office of that name in Mason county, so it was named Bethany. Mr. Campbell remained post master till 1865—thirty-eight years—when he resigned, and James A. Campbell was appointed to succeed him. James A. Campbell resigned in 1867, and was succeeded by John Adams, October 21st, 1867, who resigned in 1872, and J. B. Lockhart was appointed his successor February 5th, 1872, who still retains the office at this time, 1879.

HISTORY OF BETHANY COLLEGE.

Bethany College was founded in the year 1841, by Alexander Campbell, a distinguished scholar and devoted christian. There was no protracted delay in its completion, for its founder was a man of untiring energy, one with whom to conceive, to plan, to execute, followed each other in rapid succession. No sooner therefore, had the generous conception to found an institution fitted to the development of man's noblest powers ripened in his thoughtful mind, than he set about to accomplish it. He did not wait to call upon his friends for assistance, but with his own private means furnished suitable grounds, erected buildings, procured a charter from the state of Virginia, and under the management of a board of trustees to whom he made legal transfer, by his sole effort set to work an institution that has since stood a fair contribution to his lasting fame.

The college, because of the popularity of its founder and the public confidence in his wisdom as an educator, was filled at its very opening to its utmost capacity.

Mr. Campbell believed, that other things being equal, the man who had made the Bible a part of his study would always be the most highly developed man, and the best fitted for the labors and obligations of life. Hence while the curriculum of the college was intended to embrace whatever was good in the courses of other colleges, it was made to take a step in advance of them all, admit the Bible as a text book, and make it an essential factor in the graduation of its students.

The college virtually belongs to the Christian Church, yet in its conduct the peculiar views of this body are neither insisted upon nor taught. No pleas for favorite tenets are offered, but themes broadly catholic, and sublime, indisputable truths, such as Christ and the great salvation; God's hand overruling, guiding and developing what is best in nations; the consequent dignity of man, his true honor and greatest happiness, are selected from this exhaustless text book for the consideration of its students. It is the effort of the college to impress upon its students the fact that the Bible is worthy of their

deepest thought, not for the sake of forming and supporting especial theories, but as the oldest and most reliable of all histories, as the most beautiful and perfect body of literature, as the soundest and best code of laws that could be written, as the foundation and perfection of all true civilization, as the true interpreter of life's puzzling riddle, and as man's only sure guide to honor and happiness.

Bethany College has now been in progress for thirty-nine years, and has sent out more than five hundred and fifty graduates. Its alumni are found in every state in the Union and in most foreign countries. In the halls of congress, filling the most influential pulpits, foremost among educators, raising the most commanding voice in the courts, at the head of the most influential business circles, and everywhere characterized by such immovable uprightness, such earnestness of true purpose, such ability to cope with the day's great living questions, such effectiveness in the most important labors, as form the highest commendation of the college that fitted and sent them forth to the work.

In the year 1858, the first college building was burned. The building, libraries and museum were all destroyed. The friends of the institution now came forward and gave an enthusiastic and liberal evidence of their appreciation of what the college was doing. They set to work with the determination to replace the building with such a structure as would be in keeping with the character of its distinguished founder and its own great work. As the result of their labors, there is the magnificent building presented in the picture, costing over one hundred and forty thousand dollars. This building is four hundred and twenty feet in length, and is a model of beauty and convenience. Its libraries, lecture rooms, laboratories and society halls are all finished in the best style. The college is situated among the lovely hills of the Pan-Handle of West Virginia, away from the disturbing bustle, the attractive sights and the deluding vices that lead astray the students and in a degree paralyze the work of city colleges. Its location is remarkably healthy, being upon high ground, with air pure and bracing, and free from visitation of all sorts of malaria.

The college is supported, partly by endowment and partly by tuition fees. During the first thirty-seven years of its progress the college only admitted males, but since that time it has been open also to females. Dr. W. K. Pendleton has long been and is now its president. He is one of the few worthy to have received it from the hands of Mr. Campbell, the scholar, the gifted man, the christian gentleman. The names of Campbell, Pendleton and Loos, the last, one of its oldest and most faithful professors, will be remembered with reverence and love as long as a friend of Bethany College remains or the influence of its work is felt; for they have made it the pride of their hearts and given to it the strength of their days.

The college, as individuals and as nations, has had its days of clouds as well as its days of brightness. The civil war took away students from her halls as it took away sons from the firesides of homes. Bankruptcies of friends made great inroads upon its endowment funds. But when the war was over students flocked back again and new friends have been constantly coming forward to take the place of old ones who failed, so that the institution still moves steadily on in its important work, and we confidently trust it will continue to increase in efficiency and power for good as long as man needs to be educated.

THE LONE GRAVE.

Some years ago, a man named Isaac Murphy came to Bethany, to educate his children. His sons were sent to the college and his daughter Nancy Frances, to Pleasant Hill Seminary, where her health failed—consumption followed and she died. This young lady had a mild, kind disposition, was of a serious, pensive turn of mind, and while her declining health permitted, used often to stroll out to a wood on a high hill, some half a mile south of Bethany, to wander through the quiet, silent forest.

She would frequently sit at the foot of a large oak tree to muse over life's fading shadows. When, from failing strength, she was no longer able to make her accustomed visits to the pleasant forest shades, and death approached, she requested that she might be buried in the secluded place she loved so well in life. Accordingly her remains were deposited at the foot of the tree where she used to rest her weary body and meditate.

The curious stranger desires to visit the place to see this solitary grave, where in the lonely woods peacefully repose the remains of this young being who was cut down in the morning of her life.

An humble tombstone marks her grave, which bears this inscription:

"In memory of Nancy Frances, daughter of Isaac and Nancy Murphy, born December 3, 1831. Died January 26, 1850."

"She lived a Christian, and died rejoicing in the Christian hope."

It is known as the "Lone Grave," and the citizens keep an enclosure around it.

STATE OF THE WILDERNESS.

To a person who has witnessed all the changes that have taken place in the western country, since its first settlement, its former appearance is like a dream or romance. He will find it difficult to realize the features of that wilderness, which was the abode of his infant years. The little cabin of his father no longer exists; the little field and truck patch, which gave him a scanty supply of coarse bread and vegetables, have been swallowed up by the extended meadow, orchard or grain field. The rude fort in which his people resided so many painful summers, has vanished, and "like the baseless fabric of a vision, left not a wreck behind." Large farms, with splendid mansion-houses and well filled barns, hamlets, villages, and even cities, now occupy the scenes of his youthful sports, hunting or military exploits. In the place of forest trees or hawthorn bushes, he sees the awful forum of justice, or the sacred temple with its glittering spire pointing to the heavens; and instead of the war-whoop of savages, or the howling of wolves, he hears the swelling anthem, or pealing organ.

One prominent feature of the wilderness is its solitude. Those who plunged into the bosom of the forest, left behind them, not only the busy hum of men, but domesticated animal life generally. The parting rays of the setting sun did not receive the requiem of the feathered songsters of the grove, nor was the blushing aurora ushered in by the shrill clarion of the domestic fowls. The solitude of the night was interrupted only by the howl of the wolf, the melancholy moan of the ill-boding owl, or the shriek of the frightful panther. Even the faithful dog, the only steadfast companion of man among the brute creation, partook of the silence of the desert; the discipline of his master forbid him to bark, or move, but in obedience to his command, and his native sagacity soon taught him the propriety of obedience to this severe government. The day was, if possible, more solitary than the night. The noise of the wild turkey, the croaking of the raven, or "the woodpecker tapping the hollow beech tree," did not much enliven the dreary scene.

The various tribes of singing birds are not inhabitants of the desert; they are not carnivorous and therefore must be fed from the labors of man. At any rate they did not exist in this country at its first settlement.

Let the imagination of the reader pursue the track of the adventurer into this solitary wilderness. Bending his course towards the setting sun, over undulating hills, under the shade of large forest trees, and wading through the rank weeds and grass which then covered the earth. Now viewing from the top of a hill the winding course of the creek whose stream he wishes to explore, doubtful of its course, and of his own, he ascertains the cardinal points of north and south by the thickness of the moss and bark on the north side of the ancient trees. Now descending into a valley and presaging his approach to a river, by seeing large ash, bass-wood and sugar trees, beautifully festooned with wild grape vines. Watchful as Argus, his restless eye catches everything around him. In an unknown region, and surrounded with dangers, he is the sentinel of his own safety, and relies on himself alone for protection. The toilsome march of the day being ended, at the fall of night he seeks for safety some narrow, sequestered hollow, and by the side of a large log builds a fire, and after eating his coarse and scanty meal wraps himself up in his blanket and lays him down on his bed of leaves, with his feet to the little fire, for repose, hoping for favorable dreams ominous of future good luck, while his faithful gun and dog repose by his side.

But let not the reader suppose that the pilgrims of the wilderness could feast his imagination with the romantic beauties of nature, without any drawback from conflicting passions. His situation did not afford him much time for contemplation. He was an exile from the warm clothing and comfortable mansions of society. His homely woodsman's dress soon became old and ragged; the cravings of hunger compelled him from day to day to sustain the fatigues of the chase. Often had he to eat his venison, bear meat and wild turkey, without bread or salt. Nor was this all, at every step the strong passions of hope and fear

were in full exercise. Eager in pursuit of his game his too much excited imagination sometimes presented him with the phantom of the object of his chase, in a bush, a log, or mossy bank, and occasioned him to waste a load of ammunition, more precious than gold, on a creature of his own brain, and he repaid himself the expense by making a joke of his mistake. His situation was not without its dangers. He did not know at what tread his foot might be stung by a serpent, and what moment he might meet with the formidable bear, or if in the evening, he knew not on what limb of a tree, over his head, the murderous panther might be perched, in a squatting attitude, to drop down upon, and tear him to pieces in a moment. When watching a deer lick from his blind at night, the formidable panther was often his rival in the same business, and if, by his growl, or otherwise, the man discovered the presence of his rival, the lord of the world always retired as speedily and secretly as possible, leaving him the undisturbed possession of the chance of game for the night.

BEASTS AND BIRDS,

"We shall not give a list of all the beasts and birds that were tenants of the wilderness at the time of its first settlement, only noticing a few of those classes which have altogether or partially disappeared from the country, together with those which have emigrated here with our population. This enumeration as far as it goes, will serve to show the natural historian a distinction between those beasts andbirds which are naturally tenants of the wilderness and refuse the society of man, and those which follow his footsteps fromone region to another, and although partially wild yet subsist in part upon his labors.

"The buffalo and the elk have entirely disappeared from this section of the country. Of the bear and deer but very few remain. The wolves, formerly so numerous, and so destructive to the cattle, are now seldom heard of in our older settlements. It may seem strange that this ferocious and cunning animal, so long the scourge of the mountainous districts of Europe, should have so suddenly disappeared from our infant country. The sagacity of the wolves bids defiance to the most consummate craft of the hunters, many of whom, throughout life, never obtained a single chance to shoot at one of them. Sometimes, indeed, they outwitted them by pit-falls and steel traps; but no great number were killed by either of these means; nor had the price set upon their scalps by the state legislatures any great effect in diminishing their number and depredations. By what means then did their destruction happen? On this subject I will hazard the opinion that a greater number of them were destroyed by hydrophobia than by all other means put together.

"The terrible panther, as well as the wild cat, have also taken their leave of us.

"Thus, in far less time than it cost the Jews to rid themselves of the serpents and beasts of prey which infested the 'hill country of Judea,' we have freed ourselves from those which belonged to our country. Our flocks and herds are safe from their annoyance, and our children are not torn to pieces by 'a she bear out of the wood.'

"In return for the beasts and birds which have left us, we have gained an equal number from the Atlantic side of the mountains, and which were unknown at the first settlement of the country.

"Our mornings and evenings are now enlivened with the matins and vespers of a great variety of singing birds, which have slowly followed the emigration from the other side of the mountain.

"The honey bees are not natives of this country; but they always keep a little in advance of the white population. We formerly had some professed bee hunters; but the amount of honey obtained from the woods was never considerable, owing to the want of a sufficient quantity of flowers to furnish it.

"Crows and black birds have of late become very plenty. They were not natives of the wilderness.

"Rats, which were not known here for several years after the settlement of the country, took possession of it, in its whole extent, in one winter season. Children of twelve years old, and under, having never heard their name, were much surprised at finding a new kind of mice, as they called them, with smooth tails.

"Opossums were late comers into the country. Fox-squirrels have but a very few years ago made their appearance on this side of the mountains."—*Doddridge.*

RECORDS OF THE FIRST COURTS IN BROOKE COUNTY AND COPIES OF OFFICIAL DOCUMENTS.

In making copies of these official papers, we have generally given them verbatim, without any change in the orthography, or punctuation, that they might more truly represent the business habits of these early years.

The first Court in Brooke county, was held at the house of William Thorpe, in Charlestown—now Wellsburg. It commenced its session on Tuesday, May 23, 1797. The following members were present, to-wit: John Beck, William Griffith, John Henderson, Alexander Stephenson, John Connell, Richard Elson, Francis McGuire, Isaac Meek, George Hammond, Josiah Gamble, Robert Colwell, and James Griffith, gentlemen. William Griffith, the senior Judge, having taken the several oaths prescribed by law, administered the necessary oaths of office to each of the other members, John Beck came into Court and produced his commission of sheriff for the county of Brooke, and having taken the oath prescribed by law, entered into the following bonds, one in the sum of thirty thousand dollars, payable to James Wood Esq or his successor, for faithfully collecting of taxes and paying the same into the Treasury, also one other bond for the sum of six thousand dollars for his duly collecting and paying all office fees. Also one other bond for the sum of six thousand dollars for his duly collecting levies, fines &c—All of which bonds were duly acknowledged in court.

The court then proceeded to ballot for clerk, and upon examining the tickets, John Connell had a majority, upon which, it was ordered that John Connell be appointed clerk, who accordingly came into court and having taken the oath of office provided by law, entered into bond for the faithful execution thereof.

On motion of John Relfe and Phillip Doddridge, Esq., for leave to practice law in the county of Brooke, ordered, that the aforesaid John Relfe and Phillip Doddridge, have leave, who accordingly came into court and took the oath prescribed by law.

Ordered, that the court be adjourned till to-morrow morning.

WILLIAM GRIFFITH.

Court met pursuant to adjourned, Present, William Griffith, John Henderson, Alexander Stephenson, Richard Elson, Francis McGuire, George Hammond, Joseph Gamble, Robert Colwell, and James Griffith, Gentlemen.

Present in addition to the members above mentioned—Isaac Meek.

The court proceeded to appoint a place for holding courts, when a majority appeared in favor of Charlestown for the seat of Justice. The court ordered accordingly.

Ordered, that John Relfe, Esq., be appointed attorney for the commonwealth, for the county of Brooke.

Ordered, that Samuel Litton, be appointed Constable for this county, also Rodger Hill, William Baxter, Elijah Rittenhouse, Jacob Walker, James Perry, Samuel Dunlap, Hugh Brown and Adam Sullivan,

These gentlemen, appeared in court, and "took the oath as Constables of Brooke county, and also to support the Federal Constitution."

The court being now organized proceeded to business. The first act was to acknowledge a deed from Charles Prather to John Agnew—for twelve lots in Charlestown, and order it recorded. It next acknowledged, and ordered recorded, a deed from Charles Prather to Henry Gassoway for eight lots in Charlestown—and also a deed from Charles Prather to Samuel Brown—for four lots in Charlestown, and a deed from Charles Naylor and Margaret Naylor his wife of Mason county Kentucky, to James Ferguson, for seventy-seven acres of land—consideration one hundred pounds current money—deed dated January 20, 1797. The court then acknowledged, and ordered to be recorded, deed from Charles Prather to the following person—all being lots in the town of Charlestown—to Nicholas Gass—eight lots—Daniel Cameron, eight lots, Jesse Spry two lots, Alexander Ewing eight lots, John Bly eight lots, William Congleton eight lots, Moses Scott two lots, Christian Calendine eight lots, William Davis two lots, Joseph Doddridge, fourteen lots,

Ordered, that Baldwin Parsons, Alexander Crawford, John Crawford and Daniel Calendine, or any three of them, after first being sworn according to law, do view the nearest, and best way for a road to lead from the plantation of Alexander Crawford to James Marshall's Mills, on Buffalo creek, and make report thereon.

The will of Robert Murchland was Probated.

Ordered, that Jonathan Palmer, have leave to keep an ordinary [Hotel] in this county, by complying with the law, who accordingly came into court and entered into bond with George Edgington his security.

Ordered, that John Goodwin Young, Francis McGuire, Isaac Meek, John Beck, Esq., and Richard Brown, jr., be and are hereby appointed commissioners with full authority to contract and purchase in Charlestown, two lots, or as much ground as they make think necessary, to erect the public buildings thereon, any three of whom are empowered to act and make return to the next court.

Ordered, that the sheriff be authorized to contract for, and procure a jail and stocks for public use.

Ordered, that the court be adjourned till to-morrow morning at eight o'clock.

This ended the second day's session.

"Court met pursuant to adjournment.

Present, Alexander Stephenson, Richard Elson, Francis McGuire, Joseph Gamble, and Robert Colwell, Gentlemen.

Certificate from John Kersby, a magistrate of Berkley county, in this commonwealth, to John H. Jones, for five Negroes, brought into this state, is produced to this court, and ordered to be recorded.

Present, in addition to the above named members, James Griffith, Gentleman.

Ordered, that John Hamilton, John Greathouse, Daniel McCoy, and William Ryan, or any three of them, first being sworn according to law, do view the nighest, and best way for a road to lead from John Hamilton's, up the Ohio river, to the mouth of mill creek, and, make report thereon to next court.

Present in addition to the other members mentioned, William Griffith, Gentleman.

Ordered, that John Francis, be appointed commissioner of this county, he complying with the law, who accordingly came into court, and took the oath of fidelity, also to support the Federal constitution, and the oath of office as commissioner.

Ordered, that Hezekiah Griffith, and William Griffith, be recommended to his excellency, the Governor, and council, as Coroners for the county of Brooke.

Ordered. That the following rates, be observed by the ordinary keepers, in this county, to-wit

Breakfast or Supper,	$ .20
Dinner,	.25
Lodging,	5
Hay, per night,	.17
Oats or corn per quart,	2
Pasturage per night,	6
Whisky per half pint,	9
Common rum per ditto,	.18
Spirits per ditto (or French brandy)	.30
Maderia Wine per quart,	1.75
Sherry " "	1.20
Port or Lisbon " "	1.20
Cider,	9
Beer,	9

License was granted Robert Potts, to keep an ordinary in Charlestown.

It was ordered that the Court shall continue to meet at the house of William Thorp, till the necessary public buildings are erected, or it orders some other place, to meet at.

John Beck Sheriff, came into Court, and entered his protest against the sufficiency of the jail,

It was ordered, that the Commissioners appointed to buy ground for the public buildings be notified to meet on the third of June, for complying with the contents of said order.

The next term of court commenced on Tuesday June 27, 1797.

The first business done, James Magruder gave bail to keep an ordinary at his house in Charlestown, also leave granted James Davidson to keep an ordinary at his house in Charlestown by complying with the law.

Eight deeds were then acknowledged and ordered, to be recorded, and two wills probated. Reports of surveys for four roads were received and surveyors for other roads were appointed.

This day was rendered, the first judgment in the Brooke County Court—It was the case of

CALEB WELLS,
against
ALEXANDER WELLS, Jun.

Judgment was rendered by default for the sum of $9.93—debt —and costs.

The next case was

JOHN HAYS
against
JOSEPH JOHNSTON.

Judgment by confession for the sum of nine shillings, and nine pence, and costs.

The third case was

CALDWELL, assignee
of NATHAN
against
ELIJAH PIXLEY.

Judgment in this case was rendered by default, for the sum of "three pounds, thirteen shillings and one penny" with interest and cost of suit.

Three other judgments for debt are rendered this day. An indenture for a negro girl, and eight deeds are acknowledged and ordered to be recorded.

The committee to purchase lands for the erection of public buildings report,

"That they have purchased two lots of ground of Charles Prather, adjoining Water, Liberty, and Charles street, containing on Water street two hundred and thirty-one and three-fourths feet, and on Liberty street two hundred and thirty-one feet, Whereupon the same is ordered to be recorded.

Court met according to adjournment, and rendered three judgments for debt, and received five road survey reports, granted license to Isaac Wood to keep an ordinary in Brooke county and also to Nicholas Gassoway for the same purpose. Acknowledged three deeds and ordered them to be recorded, and then adjourned to meet July 27, 1797.

Court met July 25 1797—

The first day rendered five judgements in civil suits, acknowledged three deeds and ordered them recorded, appointed commissioners to survey two roads, and upon the report of an Inquisition for that purpose, condemned one acre of land for the use of a grist and saw mill—approved the bond of Walter Cain to Nathan Griffith and ordered it recorded.

Ordered that John Connell keeps the subscription papers [for building a court house in Charlestown in his possession, till otherwise ordered by this Court.

Ordered, that James Marshall, Joseph Doddridge, and Robert Caldwell, be appointed commissioners to draft a plan for a Court House, and jail, for said County, and make an estimate of the expense of such buildings, as near as possible, admitting them to be built of brick or stone, the plan of the court house not to exceed thirty six feet square, and the jail not to exceed twenty by fourteen feet square, and make report to the next court.

Adjourned until court in course.

A session of one day.

AUGUST TERM, COMMENCED TUESDAY, August 22, 1797.

The court met and acknowledged two deeds and one mortgage, and ordered them recorded; also ordered that Richard Jamison be exempted in future from working on the roads in Brooke county.

At this term the first grand jury of the county was impanneled and sworn. Joseph Doddridge was foreman.

Adam Silman took the oath as Constable of this county. James Griffith, Gentleman, produced his commission from his excellency the Governor, as Surveyor for this county, and took the oath of office as prescribed by law. Verbal will of Alexander Leakey, decd. was probated.

Nicholas Pumphrey appointed guardian for Samuel Strong, William Strong and Benjamin Strong, one judgement entered, license granted Daniel Peterson lo keep an ordinary at his dwelling in this county, and then court adjourned till tomorrow.

WEDNESDAY, August 23, 1797.

Court met pursuant to adjournment.

James McMillen, having failed to attend as a grand Juror, was ordered to be fined eight dollars, unless he can show good cause at the next term for his absence. Ordered, That the county be divided into four districts for appointing overseers of the poor. Ordered, That William Connell be recommended to his Excellency the Governor and council for appointment as Captain of the Rifle Company in the first battalion of the fourth regiment, and tenth brigade of militia in this commonwealth, in place of William Wells resigned, and William Hudson Lieutenant in place of Solomon Hedges removed, and Joshua Meek ensign, in place of William Connell, promoted. Three

deeds were acknowledged and ordered recorded, and the grand jury reported bills of indictment against the following persons.

James Brandon
Richard Speer
Hezekiah Hyatt
Ezekiel Hyatt
Peter Cox
William Haberfield
Anthony Seels Jr
Robert Campbell
Joseph Cox
James Brandon—for profane swearing
Robert Campbell " "
John Graham " "
Alexander Wells " "
Elisha Willison " "
John Lee, Merchant " "

James Davidson, for retailing Whisky at 10 cents half pint and Asa Teal, Geo. Adkinson, Rezin Pumphrey, and Samuel Robinson—for neglect of duty as surveyors of roads.

Alexander Wells and Elisha Willison, were fined each 83 cents and Richard Speer 8 cents, and costs for profane swearing. James Brandon and Robert Campbell each pleaded not guilty of the indictments for assault and battery, and their cases were continued to next term.

Ordered, that the plan reported by Joseph Doddridge and Robert Caldwell, Commissioners to procure a place for the public buildings of this county be adopted, and the said commissioners, be authorized to proceed to erect a court house and jail, according to said plan. The court house of brick, and the jail of stone, and they be authorized to contract on the best terms possible, that in their judgement, they can procure, on the faith of the county, and the subscriptions made for that purpose, on the faith aforesaid, that they procure some temporary place again to be used as a court house and also some place to be used as a jail till permanent buildings can be made.

Sept 26 1797

The court met and adjourned, till, 2 o'clock P. M to meet at the ware house of Alexander Wells, as a temporary court house, agreeably to the report of the commissioners appointed at the last court for that purpose, and after a session of two days adjourned to meet in October.

At the next, Oct term the court made a levy for county taxes as follows:

Imprimis. To John Rolfe, as states attorney for past services and one year to come	$75
Item: To John Beck—for past services	12.50
" William Cornell per acct	70.
" Moses Congleton " "	4
" William Ramage. his wife and eldest son, poor purposes	45
" Rebecca McIntire, and two eldest children, poor purposes	35
" John Connell per acct	51.57
" James Griffith " "	5.80
" " " for running the county line,	10.
To be applied to building court house and jail	910.78
" the sheriff for collecting	77.85
	$1297.50

Ordered. That the sheriff collect of each tithable in this county, the sum of one dollar and fifty cents, as a county levy for the year 1797.

While these early courts seem to have been reasonably vigilant in protecting the people against impositions upon their rights by avoricious and unscrupulous hotel keepers, by fixing a scale of prices beyond which they should not go under the pains and penalties of the law, and had just indicted and prosecuted a man for selling a half pint of whisky for one cent more than their rule permitted, he charging ten cents instead nine; yet this very court at this term, increased the price of whisky from nine to eleven cents per half pint, and common rum from ten to eighteen cents for same quantity.

After a session of three days, the court adjourned.

At the November term, the Grand Jury found six indictments; only two of them for profane swearing, and the court ordered: That Robert H. Johnson have leave to practice innoculation from December 1st next, till April 20, 1798.

At the December term, on the petition of sundry inhabitants of Charlestown and its vicinity, against the innoculation of the small pox being practiced in and near Charlestown, the court reconsidered its order of last term, granting leave to Robert H. Johnson to innoculate in this county, and upon mature deliberation, ordered that the said order of last court granting leave for innoculation, be set aside—ordered that Robert H. Johnson be fined seven dollars, for each day he neglects to give notice of the small pox, agreeable to law.

Three indictments were found—two for assault and battery, and one for profane swearing.

At the April Term, 1798, we find the following record:

"On motion of Esther, a negro woman, complaining that she is unjustly detained in the custody of Eleanor Swearingen, and that she is too poor to prosecute a suit for such unjust detainer, or other wrongs; wherefore and for good reasons appearing to this court, it is ordered that Philip Doddridge, attorney at law, do prosecute an action of false imprisonment, against said Eleanor, for such detention, and that for such prosecution, the said Philip Doddridge, do bestow his services without fee or reward, under pain of imprisonment, as for contempt of this court, and that under like pain, the clerk and sheriff, shall do the duties of their respective offices, without fee."

Although the court gave way a little, under the whisky pressure, it is still disposed to stand firm for the peoples rights in protecting them against the impecunious disposition of lawyers and county officials, holding over their heads the pains and penalties of imprisonment and fines—if they disregard its orders.

MARRIAGES.

There seems to be no regular book kept in this county, showing the *issuing* of license to marry. The only record is a book in which the *returns*, or *certificates*, of ministers, or other persons, authorized by law to solemnize marriages, are recorded. In earlier years these certificates do not appear to have been returned with any degree of promptness or regularity, and many of them are imperfect, lacking dates, and sometimes one part of the name, of one or both, of the parties, themselves; it is quite probable that some of these certificates, have never been returned, and no authentic record of the marriage can ever be found.

The first marriage certificate returned, and recorded, in Brooke county, is dated and certified as follows:

No. 1. I do hereby certify, that on the twenty third day of June, one thousand seven hundred and ninety seven, Bezeleel Wells, of Washington, and state of Pennsylvania, and Sarah Griffith, of Charlestown, and state of Virginia, were married pursuant to a license from the clerk of Brooke county, bearing date June 23d, 1797, by me,

Joseph Doddridge,
Minister of the Gospel in Brooke county.

This is however the second marriage in the county as the next return on the record precedes in in dates. It is as follows:

I hereby certify, that on the eighteenth day of June, one thousand seven hundred and ninety seven, Robert Withers and Nabby Brown, both of Charlestown Brooke county Virginia, married, pursuant to a license from the Clerk of said county, bearing date June 17, 1798, my me,

Joseph Doddridge,
Minister of the Gospel in said county.

The third license was issued October 31, 1797, for Joshua Meek and Elizabeth Hedges, both of Brooke county, and solemnized November 2, 1797, by the Rev Joseph Doddridge.

The fourth license was issued Novembir 15, 1797, for Robert Colwell and Sally Brown, both of Brooke county, and solemnized the same day by the Rev. Joseph Doddridge.

The fifth was issued November 10, 1797, for Benjamin Gossage and Nancy McGuire, and was solemnized November 16, 1797 by the Rev Joseph Doddridge.

December 14, 1797, Rev. Joseph Doddridge certifies two marriages, to wit: James McGuire and Margaret Smith, John Smith and Sally Harper, all of Brooke county.

December 4, 1797, Rev. James Hughes, V. D. M., whatever that may mean, certifies the marriage of John Brown and Ann Glass. Rev. Joseph Doddridge, certifies without date the marriage of Edward Warrell and Ann McMahan, on license issued October 15, 1797.

The records show but two marriages in 1798: Joseph Nilson and Ann Coleman, September 18, and Hugh Rogers and Catharine Beaty, November 1, as certified by Rev. James Hughes, V. D. M.

In 1799, there are three marriages certified, towit, James Ackinson and Nancy Brown, January 2; John Glendennin and

Anna Sharon, April 15; James Wilson and Elizabeth Henderson, July 4.

In 1800 five marriages were certified, as follows: April 8, Jno. Barnes and Rebeca Welch. August 12, Josiah Dunlap and Sarah Cox. November 13, Enoch Shepherd and Margaret Giss, December 2, Enoch Rush and Martha Kirk; December 18, Hugh Ford and Nancy Kirk.

The records show no marriages for 1801.

In 1802 there were six certificates of marriages filed all by the Rev. James Hughs, V. D. M., as follows: April 14, Samuel McKuhan and Elizabeth Blair; April 29, William Watt and Estie Andrews, by publication; June 1. James Brown and Sarah Henderson; July 7, David Wilson and Elizabeth Maxwell, by publication.

August 15. William Hedges and Sarah Dunlap.

September. James Sellers and Elizabeth Robinson.

In 1803, there were four marriage returns—by Elisha McCurdy, as follows. February 1. Samuel Brown and Betsy Dolty. May 12. Matthew Lyons and Nancy Colgrave. June 27. William Bell and Jean Wilson. August 16. Andrew Elliot and Lurea Stevenson. All after publication.

In 1804, there are five marriages reported, as follows. April 24 Moses Gilston and Nancy Stevenson, August 24. Hugh Lee and Hannah Orr. After publication; July 1. Samuel Gist and Ann Baxtor, September 6. David Davis and Patty Freeman. The last two are certified by John Pritchard B. T. M. The next one is August 16, between Benjamin Brown and Margaret Hyatt, certified by William Willson [L. S.]

In 1805, there were five marriages certified, three of them, Joseph Tipton, of Belmont county, Ohio, and Elizabeth Pritchard, of Brooke county, Va. Edward Holly and Mary Wartenbee, Abednego Gooding and Hannah Tipton, are certified by John Pritchard B. T. M. The other two, Asher Wycoff and Annie Snidaker, John Pumphrey and Nelly Boon, by William Willson [SEAL]

In 1806, there were fifteen marriages certified, in 1807 eighteen were certified, and William Willson under seal, certifies that on February 5, 1807, he performed the marriage rite between Cornelia Crouch and James Beeke. This bride probably believed in womans rights.

In 1808 there are seven cirtificates of marriages returned, and in 1809, five certificates are returned, and in *addition* a list of *fifty-two* certificates is returned by Rev. Joseph Doddridge, ranging in dates from 1799 to 1809. The careless and loose manner in which these records are kept, is shown in the fact that many of them have no dates, and many times, but one of the names, as in this list of fifty-two marriages, certified to by the Rev. gentleman, we find September 4, 1800, Jesse Wells and ——Davis——[Blank date]—Bell and Suky Hammond, Henry Hammond and ——Bell, —— 1809, John Hulford and——Caxton, ——1809 ——Fowler and ———Atkinson, ———Samuel Galloway and Nancy—— ——Lazier and ——Gorsuch. So it is difficult to tell from the records, exactly *who* were married, or when. From the date of these last certificates, down to January 1, 1879, the records show by certificates returned, one thousand five hundred and forty-three—making a grand total of marriages in the county from its organization in 1797 to January 1, 1879, of one thousand six hundred and seventy-three.

COPIES OF DOCUMENTS FROM THE COUNTY RECORDS.

The first will on the records in Brooke county, was made by Robert Murchland, March 12, 1797 and probated, at the May term of court, in May of the same year, and reads thus.

In the name of God Amen. I Robert Murchland of Ohio county state of West Virginia, being Very weak in body, but of perfect mind and memory, doe make this my last will and Testament, in the words and manner following, that is to say my Brother William Murchland, is to have my land plantation, during his natural life, and then at his dicese, to be equally Devided betwixt his two sons James and Robert Murchland, and when the said premices fauls into the said James and Roberts hands, in one year after, to pay unto William Murchland and John Their Brothers, the sum of Twenty pounds to each of them penns. Currency, and also to pay to their Sisters Each of them Twenty pounds of like money, that is to say to mary and Susana and Elizebeth, and further whereas James Lowthers, is settled on my premices is not to be disturbed till his seven years is expired, and at my Death the said James Lowthers is to have my mare saddle and Bridle, Two achors of Ry that I sowed myself, and to the said James' oldest Daughter I leave a pide heifer. and to Robert Steen I leave my young bay mare and further the said steen is to pay unto Robert Lowthers ten pounds out of the said mare, and the said mare, and the said Robert Lowthers is to have my cart and the Tacklings thereunto belonging, and my cow I leave to my sister Cristen Lowthers. and further to Robert Lowthers I leave my silver shoe buckles and nee buckles and two stock buckles and a pair of sleeve buttons all of which is silver and further I Reserve one quarter of an acre, where the buring yard is, to bee a buring yard, and my sheep and hogs to be sold and the money arising therefrom to be be applied to the pailing in the graves or more, further I leave to my brother William my wareing Cloathing, both linning and wolling and further the hool of my household furniture and farming utencils to be apraised and equally Divided betwixt Alexander Lowther's children and James Steen's Children, Excepting Robert Steen, further all my money and debts due me, and I Leave to Alexander Lowther and James Steen to be equally divided betwixt them, they paying all Lawful Causts and further the said Alexander Lowthers and James Steen is to pay unto Easton Muckleroy three pounds each of them, Pens. money in six months after my Death, and further I leave to william Muckleroy's son James a brindle heifer with a white face and further, I do hereby constitute my Trusty friends John M Combs and Richard wells my hole—and sole

Exetors of this my last will and Testament, in witness whereof I have hereunto set my hand this twelth day of March in the year of our lord one thousand seven hundred and ninety seven—1797

Signed in presents of ROBERT MURCHLAND.
THOMAS WIGGINS }
JAMES FERGUSON }

BROOKE COUNTY VIRGINIA

May Term 1797

I do hereby certify that the foregoing is a true copy of the last will and Testament of Robert Murchland Deceased, which will was produced in court, and proven by the oaths of Thomas Wiggins and James Ferguson, and ordered to be recorded.

Teste,

JOHN CONNELL, *Cl'k, B. C.*

A SHORT WILL.

I hereby give to my beloved wife one hundred dollars and a cow.

I do give my son William one hundred and my mare and tools.

I do give my son John one hundred dollars and the colts.

I do give my daughter Sarah fifty dollars.

I do give my daughter Rachel fifty dollars.

My sons David and Joseph have had their part in my life time, and if they do get the three hundred acres of land and one hundred pounds out of Shepperd's hands, that is to be divided amongst them all equal.

I do appoint Henry Pettinger sen, and James Bruce to see it settled among my children.

his
JOSEPH ⋈ SNOWDEN sen.
mark.

August 3. 1799.

Joseph Doddridge and William Walker came into court and deposed that they were present at the house of the said Joseph Doddridge on the evening of the 23d day of this present month, just before the death of one James Frizzle Taylor, during his last illness, who called these deponents then present to take notice, that his last will was that he owned two hundred and fifty acres of land on Wolf creek in the State of Pennsylvania, he willed the same to one Andrew Jamison Taylor in Pittsburgh in fee simple. That as he had two notes at one Andersons in Pittsburgh, one on one Littleford and the other on one Ritchie, he willed that the said Jamison should collect them and apply them to the payment of his debts in Pittsburgh and that James Griffith, Esq. of Charlestown should take his books and collect what appeared to be due to him and apply the same to the payment of his boarding, which books he said were in a trunk in his shop, and further they do swear, that at the time of making such noncupative will the said James deceased appeared to be of sound and disposing mind and memory and that he died in a few hours afterwards and further these deponents say not

It is therefore ordered that the said noncupative will be established as the last will and testament of the said James Frizzle

ELIZABETH WHEELER.

HENRY OWINGS, [SEAL.].

AN ACCOUNT GAINST ROBERT TEELIN'S ESTATE.

FEBRUARY 6, 1809.

Eleanor Teelin, and William Lee, Dr.,
To the estate of Robert Teelin, dec'd, as will appear on the record $57 59
Credit 22 75

Balance $34 84

Credit,

Samuel Ralston for coffin	$2 00
Doctor Vincent for att. on dec'd	1 06
Andrew Logan for sheet to wrap dec'd in	3 00
William Kelly for whisky,	2 50
Widow White for whisky at vendue,	0 60
Geo. Atkinson due by note	4 50
Clerk of the court	5 29
Samuel Ralston for sugar	0 80
William Lee for seven days	3 00
	$ 22 75

Agreeable to an order of court dated January, 1809, to us directed, after revising the debt and credit we find the above balance to be in the hands of the Administrators, towit: William Lee and Eleanor Teelin.

A true copy, WILLIAM WALLACE.
Attest, WILLIAM STEARNS.

A CORONER'S INQUEST.

Brooke County, to-wit:

Inquisition indented, taken near a Branch of Holbert's run, in the County aforesaid, the 9th day of July, in the thirtieth year of the commonwealth, before me John Edie, one of the coroners of the commonwealth, for the county aforesaid, upon the view of the body of Sarah Maxwell, late of the county aforesaid, then and there lying dead, and upon the oaths of John G. Young, John McMillen, John Wylie, Alexander Morrow, William Morrow, Cornelius Aten, James Andrews, James Cameron, Nathan Baker, Daniel McLead, Thomas P. Peterson

and James Morrow, good and lawful men of the county aforesaid who being duly sworn and charged to enquire on the part of the commonwealth, when, where and how and after what manner, the said Sarah Maxwell came to her death do say upon their oath, that she the said Sarah Maxwell not having the fear of God before her eyes, but being seanced and moved by the instigation of the Devil, at the county aforesaid, in a certain wood near a branch of Holbert's run aforesaid, standing, and being, the said Sarah Maxwell, being then and there alone, with a certain flaxen rope of the value of six cents, which she there and then held in her hands, and one end thereof then and there put about her neck, and the other end thereof tied about a bough of a certain Birch tree, herself then and there with the rope aforesaid, voluntarily, feloniously, and of her own malice aforethought, hanged and suffocated, and so the jurors aforesaid upon their oath aforesaid, say that the said Sarah Maxwell, then and there in manner and form aforesaid, as a felon of herself, feloniously and voluntarily and of her malice aforethought, herself killed, strangled, and murdered against the peace, and dignity, of the commonwealth.

In witness whereof, as well the Coroner, as the jurors aforesaid, have to this Inquisition, put their seals and the day and year aforesaid and at the place aforesaid.

ATTACHMENT OF SLAVES FOR DEBT.

To the Sheriff of the County of Brooke,
Brooke County towit:

Whereas Richard Wells hath this day made oath before me James Clark a Justice of the Peace for the County aforesaid, that John Weylen and Amos Rylie his tenants have agreed to pay him for the rent of a plantation, the said John Weylen and Amos Rylie now occupy, the sum of two hundred and sixty six dollars and sixty five cents, to be paid in the manner following towit, forty three dollars and thirty three cents, on the fifteenth day of December next, forty three dollars and thirty three cents on the first day of April, in the year one thousand eight hundred and two, forty three dollars and thirty three cents on the first day of September next following, fifty dollars on the first day of October, then next following forty three dollars and thirty three cents on the fifteenth day of December next following, and forty three dollars and thirty three cents on the first day of April in the year 1803, of which he has received no part, and that the deponent has sufficient to suspect, and verily believes, the said John Weylen and Amos Rylie, will remove their effects out of the county, before the said rents aforesaid, will become due. Therefore in the name of the commonwealth, I require you to attach so much of the estates of said John Weylen and Amos Rylie, as will be sufficient to satisfy the said Richard Wells, the rent aforesaid and costs, and if thereupon, the said John Weylen and Amos Rylie shall not enter into recognizance with one or more sufficient securities for the payment of the said rent on the days before mentioned and the costs, then that you secure the estates so attached in your hands, or so provide the same may be liable to further proceedings herein at the next court to be held in this county, when you are to make return of this warrant, with an account of what you have done thereupon. Given under my hand and seal this 4th day of November, 1801.

JAMES CLARK, [SEAL.]

According to the within attachment to me directed I have attached, Dorcas, a negro woman, Charity, a negro girl, Susan, a negro girl, Johnny, a negro boy, and Mariam, a negro girl.

This 4th day of November, 1801.

RICHARD ELSON, *Sheriff.*

BILL OF SALE OF A NEGRO WOMAN.

Know all men by these presents that I Samuel Wheeler of Brooke county in the commonwealth of Virginia for and in consideration of the sum of two hundred and sixty five dollars and seventy six cents to me in hand paid by Richard Wells of the county and commonwealth aforesaid, before the sealing and delivering of the receipt of which is hereby acknowledged, have granted bargained and sold, and by these presents do grant bargain and sell unto the said Richard Wells his heirs and assigns a certain Negro woman named Dinah, the said Negro woman being about nineteen years of age,

To have and to hold the said Negro woman and her offspring, to the said Richard Wells, his heirs and assigns, to the only proper use and behoof of him the said Richard Wells, his heirs and assigns forever

And the said Samuel Wheeler, doth hereby covenant and agree to and with the said Richard Wells, his heirs, executors, administrators or assigns, that he the said Samuel Wheeler, his heirs, executors, administrators and assigns the said negro woman named Dinah, shall and will warrant to be a slave for life, and warrant and defend the said negro woman, to the said Richard Wells, his heirs and against the claim of him the said Samuel Wheeler and all other person and persons whatsoever by these presents.

In witness whereof the said Samuel Wheeler hath hereunto set his hand and seal, this third day of May in the year of our Lord one thousand eight hundred.

Sealed and delivered in the presence of
JAMES WALLACE
JOSIAS REEVES.

SAMUEL WHEELER [SEAL]

Be it remembered that on the third day of May in the year of our Lord one thousand eight hundred in the presence of us ——— of services was given of the within named negro woman to the said Richard Wells, by the said Samuel Wheeler, giving to the said Richard Wells, the actual possession of the within named negro woman.

INCIDENTS OF INDIAN WARFARE AND BORDER LIFE.

A CASE OF HYDROPHOBIA—A MAN BITTEN BY A WOLF.

It appears from Doddridge's Notes, that hydrophobia was a prevalent disease among the wolves in the forests, and he thinks more of them were destroyed by that agency, than all the other means employed for their destruction, put together. He says:

"An animal so ferocious as the wolf, and under the influence of madness, bites everything he can reach; of course the companions of his own den and thicket are the first victims of his rage. Hence, a single wolf would be the means of destroying the whole number of his fellows, in his immediate neighborhood, at least. In the advanced state of the disease, they lose their native wildness, leave their dens and thickets and seek the flocks and herds about the farm houses, and in some instances have attempted to enter the houses themselves for the purpose of doing mischief."

In his "Notes," he relates the following sad occurrences of a man bitten by one of these rabid beasts not far from Wellsburg:

"Mr. John M'Camant, who lived but a few miles from this place on the road to Washington, hearing an uproar among his beasts not far from the house, went to see what was the matter. He had not gone far before the wolf sprang at him, and bit him severely in the left breast. Being a very strong, resolute man, he caught the wolf by the jaws, and held them apart, calling on an apprentice boy to bring an axe to knock the wolf on the head. He came with all speed, but finding he had no chance of striking the wolf, without risking an injury to his master, he dropped the ax, ran back to the house and got a butcher knife, with which he cut the wolf's throat. It was between seven and eight weeks before the virus took effect, so as to produce the symptoms of the terrible disease which followed.

From the time I first heard of his being bitten by the wolf, I anticipated the consequence with horror, and the more so, because he applied to a physician who had the reputation of curing the bite of a mad animal with a single pill. Placing confidence in this nostrum, he neglected all other medical aid. In

this pill I had no confidence, having previously seen and examined one of them, and found it made of ingredients possessed of scarcely any medicinal efficacy whatever. On the Thursday preceding his death, he became slightly indisposed. On Friday and Saturday he had the appearance of a person taking an intermittent fever. On Sunday the hydrophobia came on. It was then I first saw him. Having never seen the disease before, I was struck with consternation at his appearance. Every sense appeared to have acquired an hundred fold excitability. The slightest impression upon any of them, gave him a thrill of the deepest horror. Noise, the sight of colored clothing, the sudden passage of any person between him and the light of the window or candle, affected him beyond description.

On Sunday night his convulsive fits came on. He was then fastened by his hands and feet to the bed posts, to prevent him from doing mischief. At three o'clock on Monday evening he became delirious, his fits ceased, and at two o'clock in the morning death put a period to his sufferings.

It is impossible for language to describe this terrible dise ase The horror of mind which he continually suffered, was equal to that which would be felt by the most timid lady, on being compelled to go alone at midnight into a grave yard, with an entire certainty of seeing a ghost in the most frightful form which a disordered imagination ever ascribed to a departed spirit. He several times requested the physicians to bleed him to death. Several veins were opened; but the blood had so far lodged itself in engorgements in the viscera, that none could be discharged from the veins. He then requested that some of his limbs might be cut off, that the same object might be effected that way. Finding this request would not be complied with, he looked up to his rifle, and begged of me with tears in his eyes to take it down and shoot him through the head, saying "I will look at you with delight and thankfulness, while you are pulling the trigger. In doing this you will do right. I know from your countenance that you pity me; but you know not the thousandth part of what I suffer. You ought to put an end to my misery, and God himself will not blame you for doing so." What made these requests the more distressing, was the circumstance that they did not proceed from any derangement of mind; on the contrary, excepting during the time of his fits, which lasted only a few seconds at a time, he was in the full exercise of his understanding. His discourse until about three o'clock on Monday evening was quite rational. He requested prayers to be made for him, and deliberately gave directions about the place of his interment, and funeral sermon, all which requests were complied with.

CAPTIVITY OF MRS. GLASS.

We extract the incidents of this captivity from Doddridge's Notes:

On the 27th day of March, 1789, about ten o'clock, in the forenoon, as she was spinning in her house, her black woman, who had stepped out to gather sugar water, screamed out, "here are Indians." She jumped up, ran to the window and then to the door where she was met by one of the Indians presenting his gun. She caught hold of the muzzle and turning it aside, begged him not to kill, but take her prisoner. The other Indian in the meantime caught the negro woman and her boy, about four years old, and brought them into the house. They then opened a chest and took out a small box and some articles of clothing, and without doing any further damage, or setting fire to the house, set off with herself and son, about two years and a half old, the black woman and her two children, the oldest four years and the youngest one year old. After going about one and a half miles, they halted and held a consultation, as she supposed, about killing the children. This she understood to be the subject by their gestures and frequently pointing at the children. To one of the Indians who could speak English, she held out her little boy and begged him not to kill him, as he would make a fine little Indian after a while. The Indian made a motion to her to walk on with her child. The other Indian then struck the negro boy with the pipe end of his tomahawk which knocked him down, and then dispatched him by a blow with the edge across the back of the neck, and then scalped him.

About four o'clock in the evening, they reached the river, about a mile above Wellsburg, and carried a canoe, which had been thrown up in some drift wood, into the river. They got into this canoe and worked it down to the mouth of Rush run, a distance of about five miles. They pulled up the canoe into the mouth of the run, as far as they could, then went up the run about a mile and encamped for the night. The Indians gave the prisoners all their own clothes for covering and added one of their own blankets. A while before daylight, the Indians got up and put another blanket over them.

About sunrise they began their march up a very steep hill, and about two o'clock halted on Short creek, about twenty miles from the place from whence they had set out in the morning. The place where they halted had been an encampment shortly before, as well as a place of deposit for the plunder which they had recently taken from the house of a Mr. Vanmeter, whose family had been killed. The plunder was deposited in a sycamore tree. They tapped some sugar trees when there before. Here they kindled a fire and put on a brass kettle, with a turkey which they had killed on the way, to boil in sugar water.

Mr. Glass, the first husband of Mrs. Brown, was working with an hired man in a field, about a quarter of a mile from the house, when his wife and family were taken, but knew nothing of the event until two o'clock. After searching about the place and going to several houses in quest of his family, he went to Mr. Wells' fort and collected ten men besides himself, and the same night lodged in a cabin, on the bottom on which the town now stands.

Next morning, they discovered the place from which the Indians had taken the canoe from the drift, and their tracks at the place of their embarkation. Mr. Glass could distinguish the track of his wife by the print of the high heel of her shoe. They crossed over the river and went down on the other side until they came near the mouth of Rush run; but discovering no tracks of the Indians, most of the men concluded that they would go to the mouth of the Muskingum by water, and therefore wished to turn back. Mr. Glass begged of them to go as far as the mouth of Short creek, which was only two or three miles farther. To this they agreed. When they got to the mouth of Rush run, they found the canoe of the Indians. This was identified by a proof which goes to show the presence of mind of Mrs. Brown. While going down the river, one of the Indians threw into the water several papers which he had taken out of Mr. Glass' trunk; some of these she picked up out of the water, and under pretense of giving them to the child, dropped them into the bottom of the canoe. These left no doubt. The trail of the Indians and their prisoners up the run to their camp, and then up the river hill, was soon discovered. The trail at that time, owing to the softness of the ground and the height of the weeds, was easily followed.

About an hour after the Indians had halted, Mr. Glass and his men came within sight of the smoke of their camp. The object was then to save the lives of the prisoners, by attacking the Indians so unexpectedly, as not to allow them time to kill them. With this view they crept as slyly as they could, till they got within something more than one hundred yards from the camp. Fortunately Mrs. Glass' little son had gone to a sugar tree to get some water, but not being able to get it out of the bark trough, his mother had stepped out of the camp to get it for him. The negro woman was sitting at some distance from the two Indians, who were looking attentively at a scarlet jacket which they had taken sometime before. On a sudden they dropped the jacket, and turned their eyes towards the men, who, supposing they were discovered, immediately discharged several guns, and rushed on them, at full speed, with an Indian yell. One of the Indians, it was supposed, was wounded the first fire, as he fell and dropped his gun and shot pouch. After running about one hundred yards a second shot was fired after him, by Maj. McGuire, which brought him to his hands and knees; but there was no time for pursuit, as the Indians had informed Mrs. Glass that there was another encampment close by. They therefore returned home with all speed, and reached the Beech bottom fort that night.

The other Indian, at the first fire, ran a little distance beyond Mrs. Glass, so that she was in a right line between him and the white men; here he halted for a little to put on his shot pouch which Mr. Glass, for the moment, mistook for an attempt to kill his wife with a tomahawk. This artful manoeuvre, no doubt, saved the life of the savage, as his pursuers durst not shoot at him, without risking the life of Mrs. Glass."

After the death of her husband, Mrs. Glass married a Mr. Brown, who by his first marriage had a daughter called Margaret. This daughter subsequently became the first wife of Alexander Campbell.

Mrs. Brown lies in the Campbell family cemetery, not far from the place where she was captured by the Indians in 1789. Her last resting place is marked by a tombstone, that bears the following inscription: "Ann Brown, born March 1754. Died June 22, 1836, aged eighty-two years."

A RACE FOR LIFE.

Among a number of other quite interesting incidents of early times in Brooke county, and on the opposite side of the Ohio, related at the pioneers association at Steubenville, was one narrated by Colonel Nathaniel Wells, of Joshua Davis, which is illustrative of the perils of those times, which so sorely "tried men's souls."

In those early days, all the salt procured by the settlers in this vicinity was transported from Baltimore on horseback, and in return for it the people dug up through the forests here large quantities of ginseng, for which at that time there was a great demand in the markets of Baltimore. At the time in which this incident happened there were no settlers on the Ohio side of the river, but when there were no rumors of Indians about, those on the Virginia side were frequently in the habit of crossing over from the settlement at the fort to gather "sang root," as it was then popularly called, on the hills near where Steubenville now stands. At the time of the occurrence we are about to relate, Joshua Davis, of whom many of the old citizens have heard, and who was then a young man, in company with a number of others, had crossed in canoes, and proceeded to a little clearing upon what is now the farm owned by John Bustard, for the purpose of laying in a supply of this marketable vegetable. The manner of digging it was by sharpening a long stick with which the root was "pried" up from its native earth, and afterwards dried, when it was ready for market.

The party had reached the clearings, but only two had entered it—young Davis, and an old man named Anderson. The old man had kneeled down on the ground and was busy at his work, while Davis was standing by him, engaged in sharpening his stick, when suddenly a wild whoop was uttered, two rifles rang out on the air, and old man Anderson fell a corpse, over his work, but Davis was untouched. The remainder of the party the savages did not appear to have seen. They immediately made for their canoes and hurriedly crossed the river, and reported the tidings to the distracted families, at the settlement, that Anderson and Davis had both fallen under the bullets of the savages. This was incorrect, however. At the fall of Anderson, Davis realized the perilous situation at once, and being exceedingly fleet of foot, darted into the forest, in a southerly direction, leading toward what is now called Jacksonville. Then began a fearful race for life, between this young, unarmed boy and the band of screeching, bloodthirsty demons that were after him, whose terrific yells as they rent the forest, would have frozen to stone the heart of the modern youth of this land with terror. Twice after his start did his pursuers get sight of him, and sent the leaden messenger of death on its errand, but God's hand shielded this brave lad who was so nobly striving to save his companions from massacre, by misleading the howling heathen who were on his track. Fortunately through the thickness of the forest, he succeeded in out distancing them and throwing them off his track he finally reached the river, near the present site of the rolling mill, into which he plunged and swam across. His friends were shortly after greatly astonished as well as gratified to see him bound into the cabin, with his knife still open in one hand and the stick he had been whittling, in the other, both of which in his terrible race for life and his long dive through the river, he had never dropped from his hands.

AN IRISHMAN'S ADVENTURE.

Although the early days of the settlements here were times of considerable trouble and discomfort to the people, yet they had many occasions to celebrate in which the full sum of enjoyment was made manifest, and even in the very midst of danger, events often happened of the most ludicrous character. An old citizen related to us an event that transpired at old fort Edgington, which stood on the Virginia side of the river nearly opposite where Steubenville now stands, that admirably illustrates the fact, that into whatever position an honest Irishman is placed, he generally manages to make the most of it possible.

One day about the close of the last century, a number of horsemen were heard in the vicinity of the fort, and suspicion was strong that it was Indians. A large scouting party left the fort in the evening to reconnoitre along the trail. After proceeding some distance without seeing any signs of the braves, and night was approaching, and not wishing to spend it in the forests in those dangerous times, they resolved to return to the fort, and next day make a further reconnoisance. Shortly after turning back, they came to a small log cabin, which although, quite a cosy and comfortable spot was then tenantless.

Now with the party was an Irishman, who had but lately come from the old country, and who had but a day or two before arrived at the fort, and had not yet had the satisfaction of seeing an Indian in full war costume. The Irishman, when he arrived at the hut and saw how comfortable it looked, determined to go no further, but would spend the night there and wait till his companions returned next morning. He could not be induced to change his determination, so they moved off and left him in his comfortable quarters. A large fire place was in one corner of the cabin, and a few slabs were stretched along the joists, up to which, after eating his little lunch, the Irishman climbed, and stretched himself for slumber. He was soon comfortably wrapped in the arms of Morpheus, and his dreams were doubtless of the far-off Erin land, when he was suddenly awakened by a loud jabbering of voices outside, and immediately the door was opened, a number of parties came in, set their guns down in a corner, and proceeded to kindle a fire and cook some eatables. The Irishman, knowing full well that it was a band of redskins, maintained a deathly stillness for some time, but curiosity overcame the more discreet impulses of his nature, and he determined to take just one peep at the reds and see what manner of men they were. No sooner thought of than he put his project in execution and began to climb quietly along the slab he was on, to make an observation. He reached the end, stretched himself cautiously over to take a look, when the treacherous slab uplifted and landed the Hibernian right in the middle of the circle. He had hardly touched the floor when he bounded up again, yelling at the top of his voice, "Be Jasus, ye are all prisoners," and stretched his brawny arms for fight. The astonished troop of redskins, however, whose superstitious fears made them imagine that this huge mass of humanity was some thunderbolt hurled by the arm of the Great Spirit, broke out from the cabin with hideous yells and darted into the obscurity of the forest, leaving their guns in the hut. There was no more sleep for Pat that night, who remained faithfully at his post, blockading the door, and in the morning he was found in sound condition by his friends, to whom he turned over quite a number of guns and other Indian accoutrements.

VAN BUSKIRK'S FAMOUS FIGHT.

For many reasons—probably not the least of which was the fact of this being the last fight of any moment with the redskins in Jefferson county—more than ordinary interest has ever been generally taken in the memorable occurrence.—Hence, no efforts have been spared to collect and compile the following account from the most reliable sources—in number, probably exceeding 12 or 15—that an absolute faithful record may be preserved in history. During the summer of 1793, depredations on the part of the Indians so increased that it was resolved some decisive measure should be put on foot to hunt them down, and, if possible, impose a lasting castigation on the savage marauders. Instigated in no measured degree by an earnest desire for revenge, Captain Lawson Van Buskirk, whose wife had been barbarously murdered less than a year previously, took the initiative, and experienced little difficulty in enlisting a formidable band of followers, numbering some thirty in number, all told—many of them being expert scouts, and not a few of them experienced in Indian warfare. Among them was David Cox, two of the Cuppy boys (one named Abraham), John Aidy, John Parker, ——Carpenter, Jake Ross, &c., and by the way, we may here remark, that Abraham Cuppy was, sometime afterwards, killed by Indians near Mt. Pleasant. Now, Buskirk was an officer of noble courage and acknowledged efficiency, hence his men placed implicit confidence in his command, and only awaited orders to take up the march. A close scout was instituted for the Indians' trail, when one George Cox, an experienced frontiersman, but not of the party who went out, was the lucky one to get first on the track of the enemy, which he discovered between George's run and the creek, on the Ohio side. He hastily returned to the Virginia side and apprised the newly organized band, but was taken so sick himself that he could not guide them to the spot. With the best information they could glean from George they proceeded in the direction named and instituted diligent search, but failed in their mission, continuing to explore hill and dale until they approached what is now known as "Battle Run," a point on the present farm of Mr. Adams, about one mile from Mingo. Here they suddenly espied a loin of "jerk," when Buskirk exclaimed, "Now, boys, look out, there are Indians close, too." At his request the main body of them ambuscaded, when he deployed to the right, sending Carpenter to the left to

ascertain the location of the redskins. Suddenly, Carpenter espied them in strong force concealed in a thick cluster of paw paw and blackberry bushes just behind Buskirk, when he yelled out, "Indians," and treed, receiving no fewer than five shots through his knapsack while doing so. Buskirk exclaimed, "where?" and had barely uttered the word ere a perfect volley was poured forth at the apparently only other one—himself—and his body was pierced with no fewer than eleven balls, as counted by the father of our informant, and also by John Parker, who was present—an old soldier, once in Wayne's army.

It need hardly be said that upon the frontiersmen observing the spot whence the smoke issued those bushes quickly resembled a pepper dredger, and bullets rained like hail for some short time, when the red skins beat a hasty retreat. Jake Ross being especially athletic, gave one Indian chase along the creek, and coming within sure range he planted a bullet in the red skin's back, from the effects of which his strength so failed that he knew he must be captured, and rather than submit to the indignity of a scalping, he plunged into the creek beneath the straggling roots of an old tree and a quantity of drift wood that had accumulated around it, from which position no trouble was taken to recover the body. Though sharp as the action proved while it lasted, none but the gallant Buskirk died on the field, yet the ground appeared, as it were, watered with blood. Three of the whites were wounded, while a much larger number of the Indians were hardly pressed to drag their mangled bodies out of reach of the scalping-knife, as abundantly demonstrated in after years by farmers in the locality finding several skeletons concealed in the rocks, one of them with a bullet lodged in the hip joint, and the remains of what had been a fire by the side of it. In fact, were it necessary to particularize each similar finding of bones, we could, with ease, place five or six that almost *undoubtedly* owed the loss of their lives to that sanguinary encounter. It has been circulated freely that Buskirk's body was removed to Wellsburg for interment, but from the most reliable sources we have been assured that he was buried near the spot on which he died, where the grave was kept green for many a year, and the noble veteran like General Sir John Moore was left to

"Lay like a warrior taking his rest,
With his martial cloak around him."

DEATH OF MRS. LAWSON VAN BUSKIRK.

Other accounts, notwithstanding we have it upon the unquestionable testimony of several pioneers, whose respective accounts agree, as received from eye witnesses and others connected with the occurrence, at the time that the estimable lady in question came to her sad end as follows: During the summer of 1792, nearly twelve months prior to her husband's death, a number of Indians came down to the river about where the present ferry is constructed, at the foot of Market street, Steubenville, and crossed to the Virginia side, where they sank their canoes and proceeded on a marauding expedition in the direction of Wellsburg. Arriving not very far distant from that place at a small bridge, crossing what is known as Painter's creek, they met Mrs. Buskirk on horseback, on her way to Washington county to get some weaving done. She no sooner caught sight of them than she endeavored to turn her horse quickly to gallop back, but as the animal stumbled she received a sprained ankle by being thrown, and ere she could recover her seat, was surrounded and taken prisoner. They proceeded back with her along the ridge, in the direction of the spot where they had sunk their canoes. A man named White, with two other followers, ascertaining the fact, lost no time in hurrying along the shore to the spot already indicated opposite Steubenville, where they felt assured they would cross, intending, if possible, to recapture her. Arriving at the scene, they ambushed till the red skins came down, being concealed in the rocks. But, alas! on their arrival they were found far too numerous to admit of any hope of success, and they remained almost breathlessly silent as they watched the Indians raise their canoes. By this time another party who had followed swiftly on their trail, along the ridge, hove in sight, when the savages threw the poor woman onto a huge stone, now known as "Town Rock," and tomahawked her to death, leaving the body in a mangled mass, as they narrowly escaped with their lives across the river. Directly White and his associates saw them hurriedly flee, they had their suspicions that others were on the scout and came from their hiding place, when the two parties viewed the sad scene and immediately joined in the pursuit, crossing at what is called "Wells' Riffle," where they had no alternative but to wade the river, but were unable to obtain revenge. How far the following may be true, we are unable to say, but an opinion is freely entertained that the body of the unfortunate lady was subsequently taken back to Wellsburg for interment.

THE LAST WHITE MAN KILLED IN BROOKE COUNTY BY THE INDIANS.

The last man killed in this county by the Indians, was John Decker. He lived near West Liberty, but in Brooke county. Being unwell for some time, he started one morning, to Holliday's cove, some sixteen miles distant, to consult a doctor. After traveling about half the distance, following an old Indian path or trail along the ridge on the east side of Scott's run, and near where it empties into Cross creek, he got off his horse to get a drink from a spring near the path, when he discovered Indians. He immediately sprang to his horse and started at full speed. The Indians fired and broke a fore leg of the horse, but Decker spurred the animal on with three legs, till he came to a log; in attempting to leap it the horse fell, and was unable to proceed further. He then attempted to escape on foot, but did not get far, till he was overtaken by the Indians, tomahawked and scalped. A family living near by named Wiggins, was at dinner, and heard the report of the guns. Young Thomas Wiggins, jumped up from the table, took down his rifle, and went in the direction of the firing, where he soon found the body of the murdered man, who lay at the foot of an oak tree, scalped. The alarm was immedietely given, and a body of men were soon in pursuit. The savages were followed to near Holliday's Cove, thence down Harman's creek to the Ohio river, opposite to where Steubenville now stands, where it was found they had crossed over—and the pursuit was abandoned.

Decker was killed on the farm of Mr. Wiggins, now owned by Silas Magee. He was buried on a ridge, some three hundred yards from where he fell. The Wiggins family were afterwards buried there, and the small plat of ground is enclosed by a stone wall. But no stone marks the grave of Decker.

This is supposed to be the last Indian murder committed in the present limits of Brooke county.

The writer is indebted to Mr. Ewing McCleary, near Fowlertown, for the foregoing narrative.

PAPERS PERTAINING TO THE ALARM AND EXCITEMENT ON THE FRONTIER AFTER THE DEFEAT OF GENERAL ST. CLAIR IN 1792.

THE COMMITTEE AT HOLLIDAY'S COVE TO COL. BAIRD.

Washington, February 7, 1792.

Sir:—Together with this will be presented to you a copy of Resolutions entered into at a Very Respectable Meeting of the Inhabitants of this part of the frontier. Although we make not the least doubt, Sir, that You, as a man and fellow citizen, are alive to all the feelings of Humanity for our Dangerous situation, and that, in your publick Capacity, You will use all the authority in your hands to the best advantage. Yet fearful of being overlooked, and Sensible that our immediate Support must come from Your County, The Meeting thought it advisable to address You on the occasion. We then, a committee of said Meeting appointed for that purpose, Beg leave, according to the Resolution of the Meeting, to lay before you a Short Statement of our Situation, both with Regard to the Country we live in and the peculiar Circumstances we live under. This part of the County of Ohio which we Inhabit is Stretched along the Ohio River, between that River and the western boundary of Pennslyvania, for at least thirty miles from Herman's Creek upwards to Beaver, a Narrow Country, in many places not three miles wide, and not exceeding five where Broadest. To Defend this great extension of frontier, only a few Scattered Settlers present themselves, and numbers of them Without arms. In an open frontier Country, such as we have Described, with an Enemy to deal with who carry on war against Women and Children, and Committ their Murders at our doors and in our houses, a Man's own Safety and that of his family is his first object. For this Reason we are not in a Condition to help Ourselves, as no person will turn out for the Common defence when what ever is dear to him is left in so much hazzard. Another Circumstance of our local situation, which has hitherto been very unfavorable to us, is our being frontier to two States. This, one would think, would be productive of contrary effects, but the fact is otherwise, for the Reasons Mentioned in our Resolutions. Last Year the Neglect we Suffered was Shamefull. In the most Dangerous and alarming times not a man was Left to defend the River from Raccoon to Buffaloe, a Space, we Suppose, of about forty Miles, and, to add to our Distress, at

this very time our men were drafted off to a Distant part of the Country. To whose Misconduct this is to be ascribed We will not pretend to say, but we have thought it our duty, by an early application to you, Sir, on whose help we chiefly depend, to prevent for the future such ungenerous treatment. We therefore, Sir, in the name and by the Order of the Meeting, pray you to take our situation, which we have now laid before you, into Your Consideration, and send us such assistance As You may think our Circumstances Requires.

JAMES CAMPBELL,
RICH'D BROWN,
DAV'D BRUCE,
WILL'M LEDLIE.

Colo. A. BAIRD, L't W. County.

PROCEEDINGS OF THE MEETING AT HOLLIDAY'S COVE.

At a Meeting of the Frontier Inhabitants living on the Ohio River in and near Holliday's Cove, held on Saturday, the 4th day of February, 1792. the following Resolutions were unanimously adopted, Collo. Rich'd Brown, chairman.

We, a Number of the Inhabitants living on the Ohio River, in and near Holliday's Cove, justly affirmed at our Situation in Consequence of the late defeat of the American Army under the Command of Major Gen'l St. Clair, and contemplating the dreadful Prospect before us, if no speedy and Effectual Relief is afforded us—Ourselves, our Families and Property exposed to the Cruelties and Ravages of a subtle and a barbarous Enemy—Relying, however, on the Energy of the General Government, and fully satisfy'd that nothing will be wanting for our safety which a wise and an active Administration can effect; yet to show that We are not unworthy of Protection, but are willing and ready by our own Exertions to promote and facilitate the Execution of any Plan which the Wisdom of Government may see best for our Defence, Have entered into the following Resolutions, Viz:

Resolved, That the River Ohio is the safest and easiest maintained Frontier Line on this Side the Mountains, and We bind ourselves by the most sacred Ties of Honor and Good Faith to Keep up, support and defend the same to the last Extremity.

Resolved, That the better to put in execution the foregoing Resolution, and the better to secure our own safety and particularly that of our Women and Children, Places of strength be erected within our Bounds in such convenient Places as may be hereafter fixed upon.

Resolved, That draughting the Frontier Inhabitants to serve upon Militia duty in any other part of the country but where they reside is equally unjust, oppressive and impolitick; and resolved that an address on this subject be drawn up and presented to the Lieut. of this County, and that Dav'd Bruce and Wm. Sutherland, Esqs., be a Committee to draw up & present the same, together with a copy of these Resolutions.

Resolved, That every member of this Meeting shall bind himself, and We hereby bind ourselves, in the most sacred Bonds of Honor and good Faith, Each of us to Keep in good order at least one Gun, and have always in readiness a sufficient quantity of ammunition to be prepared at a Minute's warning to repulse any Attack which may be made on this part of the Frontier where we inhabit.

Resolved, That an Address be drawn up and presented to the Lieut. of Washington County, stating to him the Peculiarity of our local situation, being Frontier to both States, representing the Neglect we have hitherto experienced this Circumstance, The one State tending our defence to the other till we have been totally forgot by both, and praying him if drafts from the Militia of this County are ordered down to cover the River, not to forget this part of the Frontier, and ordered that James Campbell, Ritchard Brown, Dav'd Brace and Wm. Ledley be a Committee to draw up and present s'd Address, together with a Copy of these Resolutions.

Resolved, That the foregoing Resolutions be published in the Pittsburgh *Gazette*.

Signed by order of the Meeting

RICHARD BROWN, *Chairman*.

MATTHEW RITCHIE TO COLONEL BAIRD.

WASHINGTON, February 10, 1792.

SIR:—A Long acquaintance of that part of Ohio County, entioned in the within address, induces me to assure you it is ste, and am confident that A Company will be wanted to age from the Mingo town to meet those from Beaver. If this be obtained, they will attempt to continue on their farms, if not, they will abandon them, and leave thirty miles of Washington County exposed. I am Sir,

your most humble servant,

MATT'W RITCHIE.

Colo. A. Baird, L. Washington County.

THE COMMITTEE OF HOLLIDAY'S COVE TO COLONEL BAIRD.

March 20th, 1792.

SIR:—The time is now come when our Situation is growing every day more Critical; the Indians have already begun their depridations in our Neighborhood, and it is the opinion of the most experienced Men among us, that they are at this moment lying in Bodies at no great Distance waiting for the Removal of the Snow, which at present is deep in their Country, to make an Invasion upon us. For this Reason, We the Committee of the Inhabitants in and near Holliday's Cove, have again thought it necessary to trouble you on this subject. We formerly Represented to you, Sir, the Manner in which we have been Hitherto neglected, and from every appearance at present (unless relief comes from your County) we will this year be no better protecketed than we have been in years past. The Rangers of your State come down no lower than Beaver, and the Rangers Raised by the State of Virginia will not come higher up than the Mingo Bottom, so that we are left intirely to our own exertions, which, considering the circumstances of our Country, laid before you in a former address, must be but feeble and enable us to make but a short stand, Let us then, sir, urge you, if consistent with your orders, to draft as many of the Militia of your County (as no other provision is now made) as will serve this part of the frontier. In our opinion, Sixty men would not be more than sufficient for this purpose. We would further Remark, Sir, the more to evince the Necessity of immediate assistance, that from the Dread of the Indians, numbers of People holding no Landed property here, have already moved and are daily Moving off, and we have the greatest Reason to believe, that upon the very first attack, unless encouraged by protection being afforded, the greatest part of the Inhabitants will Remove at the most Convenient places for Stations. Block-houses are already erected, we mean, Sir, at Yellow Creek, Croxton's Run and Mouth of Herman's Creek. Men placed In these Stations would, in our opinion, be the best mode of disposing them and Most agreeable to the Inhabitants. The Spies now in the Indian Country would likewise be greatly Benefitted by the filling these Block-houses. When a Discovery is made they will have these posts to Repair to, where a Boat can always be had to convey them over the River for the purpose of Warning the Inhabitants. Sir, we submit these hints to your better Judgment, and hope you will do everything for us that our Dangerous Situation Requires.

RICH'D BROWN,
WILLIAM LEDLIE,
DAVID BRUCE,
JAMES CAMPBELL.

COLO. ABSALOM BAIRD.

CAPTAIN SAMUEL BRADY TO COLONEL BAIRD.

MOUTH OF YALLOW CREEK, March 20, 1792.

D'R COL.:—I am Glad I have it in my power to Send you a Line, and Likewise happy that I have not as yet made aney Discovery of Indiens, altho' everey Industerey Has bean made by myself and brother Spies; but Every Day Expect to have the pleashure of meeting with Some of them. We have bean about twentey miles out from the river, and in the flat Lands the Snow last thursday was at Least ten Inches deep, which, I Expect, is one reason why they have not paid us a Vissit before this time.

I Start to-morrow morning, and make no doubt I Shall mak a Discovery Before I am maney days on the west Side the ohio. The Inhabitants in this Quarter have bean for these Three weeks past, Looking for and Expecting men to fill the Block-house at the mouth of yallow Creek. But this Day, to their Great mortification, they have Heard news Quite the reverce, which is, there are no men from Pennsylvania to Range Lower Down than the mouth of big Beaver. Some families who heard the news before the People at this place heard it, have already Moved of, and the rest are, tho' Contrarey to their Former Intention, makeing ready; and it is my opinion that if Something

is not Done shortly for their Safety there Will be but few people, if aney, Between the mouth of Little beaver and the Cove. I thought it onely my Duty to inform you what I have done, and do declare I much Lement the Situation of the Inhabitants in this Quarter.

I am D'r Sir, with Due Respekt
your H'l Servant,
SAM'L BRADY.

COL. BEARD.

THE COMMITTEE OF HOLLIDAY'S COVE TO COLONEL BAIRD.

April 8th, 1792.

SIR:—Your Letter of the 4th Current is now before us. We observe what you say with regard to fixing a Station at Yellow Creek, and return you our sincere Thanks for your Kindly Regard and generous attention to our Situation. But we must beg Leave for to mention to you, that a Station at Yellow Creek alone will not be sufficient for the Defence of this part of the Frontier which we inhabit. Between Yellow Creek & Holliday's Cove, a space of 15 miles will be uncovered. At present, indeed, we have twelve Men at the Station of Croxton's Run, being a part of 20 Men draughted from the Militia of this County & destined for Holliday's Cove, but by the application of the Inhabitants, so many of them have been got up this far. These alone, are only sufficient barely to Keep the Bl'k House, being too few to render any effectual Service, and we must request of you, Sir, to order as many of the Militia, which you speak of in your letter, to strengthen this Station, as will enable the Post to send out Scouting Parties, without which they can afford no Protection. A Party of Indians have been discovered, last Saturday night, at the Station at Holliday's Cove. The bearer will inform you more particularly.

We are, sir,
Your mo. Ob't servants,
DAV'D BRUCE,
WILLIAM LEDLIE.

Coll. ABS'M BAIRD, Lieutenant of Washington.

SOLDIERS OF 1812.

Muster roll of a company of light infantry under the command of Capt. Moses Congleton, Virginia Militia, in the name of the United States, in the Sixth Regiment. commanded by Lieutenant-Colonel James Scott, from the third day of May, 1814, when last mustered, to the third day of June, 1814.

COAL.

Under the stimulating effect of a brilliant sun, a humid atmosphere charged with carbonic acid, myriads of ages before man appeared, vast forests gorgeous in their beauty and dense in their foliage, sprung up in widely extended swamps, flourished for a while, decayed and made thick mats of slimy organic

matter. Earthquakes with tumultuous throes upheaved mountains and produced depressions. These depressions were swept over by the huge waves of a stormy ocean, depositing their burdens of sand, gravel and clayey matter upon the vegetable mass. Oscillations afterward elevated this sand and clay-covered deposit, and vegetable life appeared to be at some remote period again submerged. These processes continued through ages, the deposits of earthy matter weighing down and shutting out from the influence of the atmosphere, and the light of day the remains of plant life, in which condition they were transmuted into coal. Such is the theory of Geologists, in regard to the formation of bituminous coal, and doubtless a true one. Anthracite coal is bituminous coal cooked under pressure and subterranean heat.

By far the most important coal field in America is the Appalachian, extending in a northeast and southwest direction, a distance of 875 miles, through the western part of Pennsylvania, the eastern part of Ohio, the western corner of Maryland, nearly all of West Virginia, and the eastern part of Kentucky. It crosses Tennessee, and ends near Tuscaloosa in Alabama. It covers an area of 80,000 square miles, 60,000 being available. This is about ten times the productive area of the coal mines of Great Britain. This great coal field has an average width of about 180 miles. It is in the form of a long trough or canoe, the strata dipping from their eastern or south eastern escarpments towards the northwest, while from their escarpments in the northwest they dip towards the southeast, meeting upon a common axis between the two escarpments. The western and eastern margins of this basin though nearly parallel about midway of its length, gradually approach each other as they extend toward the north, and thus bending round the former in Pennsylvania and the latter in Ohio, at length actually coalesce and form the head or northern termination of the trough. The Ohio river runs west of the center or axis of this trough.

When these coal measures were formed they were in unbroken strata, and the surface of the land above them a level plain, but from cracks or fissures formed in the crust of the earth, or some other cause, the waters have scooped out the valleys, cutting the strata of rocks and coal, leaving the veins cropping out in many places from the hill sides above the present level of the streams. The coal veins on the hillsides upon the opposite shores of the Ohio were once united, but have been cut through by the abrasion of the waters which have washed out the valley in which the Ohio river now flows between the hills.

While other states have, at great expense, commissioned scientific men to make geological surveys to ascertain the localities of their mineral wealth, and point out the way to its development, which has contributed so largely to their advancement in material prosperity, Virginia has paid but little attention to the subject, leaving the development of its wealth entirely to private enterprise, therefore our knowledge of the mineral resources of the state, their localities or availability, is limited to such generalities as men engaged in purely scientific pursuits have given us, together with such detached facts as have from time to time been gathered by individuals who have occasionally undertaken some private enterprise.

From this general outline given of the coal measures, it will be seen that the entire area of Brooke county is underlaid with coal. Except the meagre knowledge of the drift veins, which have been exposed by the waters cutting through them as they washed out the valleys between the hills, the most we know we have learned from the enterprising state of Ohio, which, by its elaborate geological survey, has accurately delineated the coal formations on her side of the river. We learn from the enterprise of that state that most of West Virginia lies within the great Appalachian coal field, and the strata of Brooke county being a part and parcel of this same field, is identified with the county of Jefferson across the river in Ohio.

The coal mostly worked is a drift vein, that cuts the upper portion of the hills back of Wellsburg. It is four to five feet in thickness and of a fair quality. It has been mined almost exclusively for local, or domestic purposes. There is in this section another drift below this, but the vein is not remunerative, and therefore not worked. No shafts have been sunken on the Virginia side of the river, though one has been contemplated in Wellsburg, and parties have gone over to Ohio and obtained the necessary information as to its practicability. They there learned that they can reach a vein at a depth of two hundred and fifty feet. They learned this shaft vein was four and a half feet thick, of excellent quality, free from sulphur, and the best in the country for smelting iron ore.

A company has been incorporated in Wellsburg for sinking a shaft at that place.

These strata all dip about seventeen feet to the mile southeast.

INDENTURE FOR AN EMIGRANT SOLD TO PAY HIS PASSAGE MONEY.

Witnesseth, that John Peterson, of the county of Bedford and provence of Pennsylvania, yeoman, of his own free and voluntary will, for the consideration of the sum of seven Pounds, sixteen shillings and seven pence lawful Money of Pennsylvania, and for other good causes, he the said John Peterson hath bound and put himself, and by these Presents, doth bind and put himself servant to Richard Wells of the County afs'd, to serve him, his Executors, Administrators and assigns, from the Day of the Date hereof, for and during the full term of one year and six months, thence next ensuing, During all which Term the said Servant, said Richard Wells, his Executors, Administrators and assigns faithfully shall serve, and that honestly and obediently in all Things as a good and dutiful Servant ought to do. And the said Richard Wells, his Executors, Administrators and Assigns, during the said Term shall find and provide for the said Servant, sufficient Meat, Drink, Washing and Lodging.

And for the Performance hereof both the said Parties bind themselves firmly to each other by these presents. IN WITNESS whereof they have hereunto interchangeably set their Hands and seals.

Dated the thirteenth day of March, Anno Domini one thousand seven hundred and seventy-three.

Done before me
GEORGE WOODS J. P.

his
JOHN ⋈ PETERSON.
mark

AN ANCIENT SEPULCHER.

In the summer of 1834, one Samuel Cummings, an enterprising stone-mason of Steubenville, Ohio, one day crossed the river to prospect along the ledge of rocks that line the hills on the Virginia side for a suitable place to quarry stone. In looking about he discovered a massive rock, that in some previous age of the world, had fallen from the overhanging cliffs above. While making an examination, with a view of quarrying it, he discovered an ancient stone wall built against one side of it, but almost hid from view by the accumulated rubbish of ages. Curiosity led him to throw this wall down, when an opening appeared in the rock a few feet from him, that disclosed a large cavern or vault scooped out of the underside of the rock, which, upon closer inspection, he found contained a large number of human skeletons, packed together in perfect regularity. Visitors estimated the number at seventy-five to one hundred.

At the time of this discovery the proprietor of the land—Colonel Nathaniel Wells—lived several miles distant, and did not hear of it for several days. In the meantime, in the absence of any one with authority to protect the place, visitors thronged to it by hundreds, each one carrying away prominent portions of these remains, till they were all scattered, as it were, to the winds. Thus were the remains of the dead, of a pre-historic race, dragged from the long repose of ages and ruthlessly destroyed, to gratify the idle curiosity of the ignorant and thoughtless. Had these remains been permitted to remain undisturbed, for the inspection of the Archeologist and scientists, they might have added something to our small stock of knowledge of a people that have long since disappeared and left but little of their history behind.

Mr. Wells sadly regrets that he knew nothing of the transaction till too late, for he would have protected the sepulcher by an iron door and lock for the inspection of men of science.

This vault is located on the Virginia side of the Ohio river, nearly opposite South street, Steubenville, about 100 rods below Mr. Wells' ferry landing, and few feet east of the Pittsburgh, Wheeling and Kentucky Railroad.

CHURCHES.

CHRISTIAN CHURCH, BETHANY.

This church, like most other religious organizations of Brooke county, has preserved no accurate history by records or otherwise from which to gather data to write its annals. This is more to be regretted from the fact of its being organized not only at the home, but under the immediate care and supervision of the illustrious founder of the now numerous and popular denomination known as "Disciples" or "Christians," of which this

was one of the first churches constituted. These circumstances will cause the followers of that faith in every land to attach a peculiar interest to everything relating to its early founding and subsequent history, the scanty details of which will only make them wish for more.

This was more properly a transfer of the old Brush Run Church a few miles above, to the residence of Bishop Campbell, than the organization of a new congregation. This Brush Run Church was probably the first one ever established exclusively on the new idea of the Campbells. It was founded by Thomas Campbell, father of Alexander Campbell. About 1827, it had become so weakened in numbers by death and removals, mostly the latter, that for the convenience of the remaining members, who mostly lived in Mr. Campbell's neighborhood, they often met at his house, or in a vacant store room on the premises, to worship, until finally meetings at the old church entirely ceased, and its organization was fixed at the house of Mr. Campbell, where they worshipped and trasacted business till 1832, when they erected a stone building where Bethany now stands. In this house they met for worship till about 1853, when they built the larger brick house they now occupy.

The following Elders have officiated at this church since its organization: Thomas Campbell, Alexander Campbell, Dr. Robert Richardson, Robert Y. Henley, W. K. Pendleton, Robert Milligan, Dr. A. W. Campbell, J. D. Pickett, C. L. Loos, A. Skidmore, present pastor.

From Mrs. Selina H. Campbell, the venerable widow of the late Bishop Campbell, we gather some of the names of the early members, to-wit: James Parkinson, Margaret Parkinson, David Parkinson and wife, Miss Susan Parkinson, Miss Jane Parkinson, whose aged mother was also a member; Dr. Archibald W. Campbell, brother of the Bishop, John Mooney and wife; Alexander Mooney and wife, Mrs. James Gist and her two daughters, Eliza Gist and Sarah Gist; Miss Mary Hanen, Mary Hanna, Edwin Bakewell, Mrs. A. M. Bakewell (Mrs. C's mother) Robert Y. Henley and wife, Elizabeth Patterson, Albert Gallatin Ewing and wife, all Mr. Campbell's daughters by his first marriage; Joseph Marin Carbajal, of Mexico—who came to Bethany to attend the College.

Of all these members Mrs. Campbell alone remains.

ST. JOHN'S CHURCH (EPISCOPAL).

This is one of the oldest churches in the county. It was founded by the celebrated Dr. Doddridge, and was the first church organized by him west of the mountains. It has a history, could it be resurrected from the buried past, that would be highly interesting, as well as useful, to the cultured and appreciative mind of the present day, and also in future ages. But the history of this venerable old church, as well as most of the other churches in this county, has not been preserved, and is now lost beyond recovery.

It seems to us there should have been regard enough for the memories of the forefathers of this land, who bore the heat and burden of the day of trial, planted the infant churches in this wilderness, and changed the forests into fruitful fields, to preserve the memory of their deeds and hand them down to posterity. But such, it appears, is not the case.

We give what few items about old St. John's we can gather, after the most diligent research and inquiry.

This church was organized by Dr. Doddridge about 1793. The first building was of logs. It stood about a mile west of the present brick building about three miles east of Steubenville. After a few years, the lot now used as a cemetery, and on which the present church stands, was procured, and a frame building put up, on the east side of the lot. This frame was used until 1849, when the present comfortable brick house was built.

From the memoirs of Dr. Doddridge, prepared by his daughter, Miss Narcissa Doddridge, for a new edition of his "Notes;" we are told:

"This parish continued under charge of its present pastor, for nearly thirty years, when declining health compelled him to sever a relation around which clustered many endearing and fondly cherished associations of his youthful and maturer years."

From the same, we learn the following were the names of the subscribers in this parish in the year 1800.

George Atkinson, Absalom Wells, Archibald Ellson, John Davis, Charles McKey, Charles Elliot, William Atkinson, John Strong, George Swearingen, William Davis, Richard Wells, Asel Owings, Andrew Mancally, Thomas Nicholson, John Myers, John Foster, Abel Johnson, William Baxter, James White, George Wells, George Mahon, Simon Elliot, jr., Simon Elliot, Daniel Swearingen, Anthony Wilcoxen, Andrew Morehead, Alex. Morrow, George Elliot, William Lowther, William Adams, James Britt, John Crawford, John Ellson, Peter Hay, George Richardson, Andrew Lockey, Hugh Lingen, John Hendricks, Richard T. Ellson, Israel Swearingen, Richard Ellson, Thomas Crawford, Jane Morrow.

From the examination of the monuments in the cemetery, we learn that the first interment was that of Elias Barney, who died September 11, 1805, in the 16th year of his age. The next monument is in memory of Alexander Morrow and Susan Morrow, 1808.

The old frame Church has disappeared, and left no memorial or record behind, to tell its history. The new brick building has inscribed upon the front, "Built in 1849."

DISCIPLES CHURCH—HOLIDAY'S COVE.

Of this church we can learn but little. After diligent search and inquiry among its members we can only gather that it was organized in the summer of 1830, that Thos. Brandon and wife, John Chambers and wife, George Atkinson and wife, Samuel Roberts and wife, John Hindman, sr., and Samuel S. Maxwell, were a part of the original members.

In 1833 they built a frame house for worship. The secretary writes:

"The above are about all the facts I can gather from our church records."

FRANKLIN METHODIST EPISCOPAL CHURCH, BROOKE COUNTY, W. VA.

In 1814, Cornelius H. Gist emigrated from Baltimore county, Maryland, and settled in Brooke county, Virginia, near the Pennsylvania line. There was at that time no place of public worship, or school house in that section of country. He therefore, erected at his own expense a hewed log house for school and church purposes. This was the nucleus of the Franklin Methodist Society. It was not long after till some of the Methodist itinerant preachers found their way to Col. Gist's meeting house. This house was used as a place for preaching for many years, and Gist's mansion was a Methodist home ever afterward.

About 1830 or 1831, Samuel Lee, a local preacher moved into the county, and settled on the Washington and Wellsburg pike and opened his own cabin for preaching. For a time preaching was sustained at both places at irregular intervals, but after a while the interests that centered around the Gist church were transferred to the pike and a school house was secured as a place of preaching. This was the inception of Brooke county Methodism. This union and reorganization took place in 1832, or in 1833. The society was called the "Franklin" a name it has borne ever since.

The preachers of these days were Archibald McElroy, Father West, Sammy Lee, L. L. Hamline, afterwards Bishop, Simon Lauch, Richard Armstrong, Westley Smith, and perhaps others. Quite an extensive revival prevailed in 1833. Among the subjects of God's converting power was one James Drummond, a young physician of culture and influence, who was soon advanced to the leadership of this band of pilgrims. Others being added to the numbers of the church, a more ample building became necessary. Through the influence of its zealous leader, the society resolved to build a new church, if an eligible lot could be secured. Dr. E. P. Smith, a wealthy practicing physician of the neighborhood, having espoused the cause of the Religionists, offered an acre lot on the pike, which was accepted, and in 1835, a plain brick edifice was erected thereon.

James Drummond, now Rev. Dr. Drummond, of the East Ohio Conference, secured the subscriptions, let the contracts, superintended the work, and paid the contractors.

Amos Buxton, then (1835,) and now (1879,) a member of the church, was the contractor and builder.

Rev. John Spencer, now of Oregon, was the pastor, and Rev. Dr. George Holmes was the presiding elder.

The first sermon preached was the funeral of Rev. Thomas Drummond, of the Pittsburgh Conference—elder brother of James. He had been transferred to St. Louis and died of cholera, on Sabbath evening, after having preached at eleven o'clock in the forenoon. His last words were, "tell my brethren of the Pittsburgh Conference, that I died at my post." Dr. Holmes preached the funeral from the text: "Blessed is that servant, whom his Lord when he cometh findeth so doing. Verily I say unto you, that he shall make him ruler over all his goods." Matt. xxiv. 46. 47.

The noble worthies who have served this church as pastors, as near as can be ascertained, are as follows:

Revs. John Spencer, James Henderson, George McCaskey, J. N. McAbee, Jerry Knox, T. Wierick, John Moffit, Joseph Boyle, James C. Taylor, Joshua Monroe, Shadrach Cheyney, H. McCall, Samuel Worthington, J. E. McGan, Charles Best, John White, Henry Snyder, William Leamon, Cornelius Jackson, J. Gibson, Thomas Baker, J. L. Deens, Warner Long and B. Morrison.

Most of these have died in the faith and passed to the land of spirits, awaiting the resurrection of the just. A small remnant still linger on the shores of time.

The old church becoming unsafe by a defective foundation, it became necessary, in 1854, to put up a new building. During that year the present church was built. It is a one-story substantial brick structure, erected on the upper end of the lot and nearer to the pike than the old one stood. The balance of the lot is used for a free cemetery, in which many of the former citizens of Brooke county lie buried.

The present church was built under the pastorate of Warner Long, at a cost of $1,900. The dedicatory sermon was preached by James G. Sansom, presiding elder of the district. The house was repainted and refrescoed by R. Nugent, under the pastorate of George B. Hudson, in 1872.

The church, from its erection in 1854 to the present time, 1879, has been under the ministration of the following embassadors of the cross, holding either the relation of P. E. (presiding elder), P. C. (preacher in charge) or J. P. (junior preacher), as follows:

1855—E. Birket, P. E.; G. W. Cranage, P. C., and J. R. Means, J. P.
1856—E. Birket, P. E.; G. W. Cranage, P. C., and W. Gamble, J. P.
1857—C. A. Holmes, P. E.; T. M. Hudson, P. C., and James Hollingshead, J. P.
1858—C. A. Holmes, P. E.; T. M. Hudson, P. C., and W. K. Brown, J. P.
1859—C. A. Holmes, P. E.; G. G. Waters, P. C., and W. K. Foutch, J. P.
1860—D. L. Dempsey, P. E.; G. G. Waters, P. C., and J. W. Weaver, J. P.
1861—D. L. Dempsey, P. E.; T. C. McClure, P. C., and S. F. Jones, J. P.
1862—D. L. Dempsey, P. E.; T. C. McClure, P. C., and S. F. Jones, J. P.
1863—D. L. Dempsey, P. E.; T. M. Hudson, P. C., and N. P. Kerr, J. P.
1864—W. Cox, P. E.; T. M. Hudson, P. C., and T. Hodgeson, J. P.
1865—The charge was this year changed from a large four weeks' circuit to a two weeks' one, consisting of Franklin Stone Church, Kadesh and Mahon's, with W. Cox, P. E., and T. M. Hudson, P. C.
1866—W. A. Davidson, P. E., and A. J. Lane, P. C.
1867—W. A. Davidson, P. E., and A. J. Lane, P. C.
1868—A. L. Petty, P. E., and W. Brown, P. C.
1870—A. L. Petty, P. E., and G. B. Hudson, P. C.
1871—S. F. Minor, P. E., and A. E. Ward, P. C.
1872—S. F. Minor, P. E., and G. B. Hudson, P. C.
1873—S. F. Minor, P. E., and G. B. Hudson, P. C.
1874—S. F. Minor, P. E., and J. F. Huddleston, P. C.
1875—J. A. Miller, P. E., and J. F. Huddleston, P. C.
1876—J. A. Miller, P. E., and H. H. Pershing, P. C.
1877—S. H. Nesbit, P. E., and H. H. Pershing, P. C.
1878—S. H. Nesbit, P. E., and W. D. Slease, P. C.
1879—J. W. Baker, P. E., and W. D. Slease, P. C.

There is at the present time (1879) one hundred and six members in good and regular standing, also two superanuated members of the Pittsburgh conference—Revs. T. M. Hudson and H. Cree—living within the bounds of the charge.

The society owns a parsonage and five acres of land three-fourths of a mile east of the church, which was purchased in 1868 for $2,075. The grounds embrace an apple and plum orchard of about 100 trees, a large yard decorated with evergreens, a vegetable garden and pasture field. The house is a cottage containing three good rooms and three inferior ones. It was repaired and repainted in 1878. Of all the present members of this church there now remain but eight—Mrs. Lucy Beall, Mrs. H. Cree, John Buckey, Rebecca Buckey, Dr. J. W. Gist, W. T. Hinkson, Amos Buxton and wife—who were members previous to the building of the first church in 1835.

EBENEZER CHURCH (BAPTIST.)

There was orgnaized October 20, 1794, on Short creek,* Virginia, a church, called the Regular Baptist Church of Short creek. This church at its regular meeting at Wheeling, held June 4, 1803, at the request of John Pritchard, John Edgington, John Magers, John Dorsey, George Wheatly, Nancy Gist, Martha Pritchard and Elizabeth Pritchard, voted unanimously that the above named brethren and sisters, together with such others in their neighborhood of the same faith and gospel order, who are in good standing in their respective churches, be constituted a church, &c., and called the Regular Baptist Church of Cross creek.

Thus the Baptist Church of Cross creek was constituted with the above named persons as its original members. A good frame house was built near Saunders' Mill.

Rev. John Pritchard was their first regular pastor. He officiated for a number of years, and was succeeded by Rev. Nicholas Headington, who preached a few years, Rev. John Long next preached for several years. Rev. J. Sperry next preached some two years. Sometime about 1844, Rev. Griffith preached for the church. He advocated the missionary cause, and other progressive ideas. The preaching of Mr. Griffith created a division in the church, which, becoming irreconcilable, the followers of Mr. Griffith withdrew from the church, formed a new organization and about 1850 built another church about a mile further up the creek.

This new church was called Ebenezer, as stated at the head of this article. The secession of the members that organized the new church so weakened the old one that their regular meetings presently ceased and no regular church now exists, though the building and ground still belongs to the Baptist denomination.

For a few years, the new organization formed by the seceding members, sometimes held its meetings at the old church, sometimes in a school house, and sometimes at private houses, till 1850, when they built a comfortable frame house, and called it Ebenezer Church.

The original members of the new church were John Headington, David Hardsock, Mary Hardsock and Letitia Cornelius.

It was dedicated in August or September, 1850. Dedication sermon by the Rev. Irving, of Steubenville, Ohio, assisted by Rev. William Ellis and Rev. John Thomas. The following ministers have since officiated as pastors:

Rev. L. Griffith, 1845–47.
Rev. E. C. Towne, 1848.
Rev. William Ellis, 1849.
Rev. John Thomas, 1850–55.
Rev. William Scott, 1856.
Rev. Joseph Rosell, 1857.
Rev. John Davis, 1858.
Rev. George Wharton, 1859–67.
Rev. G. W. Glass, 1868.
Rev. G. W. Blake, three months, 1869.
Rev. W. R. Mayberry, 1869—died January, 1870.
Rev. Daniel Secman, removed west.
No regular pastor for 1870–71—supplies.
Rev. G. C. Sedwick, 1872–73.
Rev. J. W. Scott, 1874.
Rev. William Ryan and John Simpson, 1875—supplies.
No regular pastor for 1876.
Rev. William Ryan, 1877–78.
Rev. John Simpson, 1879—supply.

CROSS CREEK CHURCH—UNITED PRESBYTERIAN.

Previous to the year 1800, there was a missionary station and preaching at the house of Mr. Wiggins, near Cross creek, Brooke county, Va., and about 1799, a church was organized by the United Presbyterians, about three miles north of said station, near the road leading from Steubenville to Washington, Pa., about half a mile west of the state line. Previous to the erection of the church, a small temporary building close on three sides and open in front, was put up as a stand or pulpit for the ministers, and seats were arranged among the forest trees before the stand, for the congregation. This temporary building

*It is thought by many that there was no Baptist Church on Short creek, but we have found in possession of Mrs. Smith, who lives near St. John's Church, an original paper containing substantially what we have set forth in the commencement of this article. In the minutes of the Baptist Association held at the Cross Creek Church, August 30, 1816, we find among the reports of the churches represented there, "Short creek, Virginia" with forty-three members, John Pritchard, pastor, and N. Evans, Joseph Hedge and George C. Young as delegates.—"See Life Alexander Campbell, volume 1, page 469, note."

was often used after the church was built, on occasions of large congregations, in pleasant weather. From this cause it was called the "tent," and the church is more generally known to this day as the "Tent" Church.

When this church was organized it was called Cross Creek, from the fact that the preaching that gave rise to its formation was held on that creek, at the house of Mr. Wiggins, as before mentioned. The first church erected was a hewed log building 30x36. A lot of two acres of land was bought of Mr. Hadden, and deeded to William Strain, William Wallace and others, as trustees for the associated church, to be used for a church and a cemetery. Rev. John Anderson preached to the society a short time, when the Rev. John Allison was regularly installed pastor of the congregation, and continued his ministerial services till about 1839. The Rev. David Thompson was then called to the pastoral charge, and continued about eight years. Then for some two or three years temporary supplies were had. Next the Rev. ——. Hammond officiated for about two years, as a stated supply, then for some time temporary supplies of different ministers, when the Rev James Purdy officiated as a regular supply, for two years. Rev. James C. Campbell was next given charge of the church, and continued till July 1, 1875, when the Rev. W. M. Hunter took charge, and remained one year and four months, and was released on his own request October 31, 1876. Then temporary supplies till October, 1877, when the Rev. S. Collins, D. D., was appointed a regular supply, and continued to the present time, (1879.)

The old log house continued to be used till 1873, when a good and substantial frame building 36x54 was erected in its stead. This new building contains a vestibule and two side rooms, one used for a cloak room, the other for a library. It also has a gallery and is covered with slate—a very substantial building, well finished inside and out.

It cost $2904; building committee, William P. Strain, Robert Boyd and M. H. Williamson; treasurer, John Wallace. It was dedicated September 28, 1873. Dedication sermon by Rev. J. C. McKnight; ministers present, Rev. John T. Brownlee, Rev. George Ormond, Rev. Boyd Stevenson, Rev. —— McCrea, of the Presbyterian church, and J. C. Campbell, present pastor.

At the beginning of the present century whiskey was always plentifully supplied at all public gatherings, such as log rollings, raisings, &c. At the raising of the log building for this church the supply was exhausted before the house was up and a boy was immediately dispatched to the nearest "still house" for a new supply.

METHODIST EPISCOPAL CHURCH—BETHANY.

This church was built in 1871–2, and was dedicated early in the spring of 1872. Dr. Pershing, of Pittsburgh, Pa., preached the dedication sermon. The presiding Elder, Rev. S. F. Miner, Rev. E. J. Smith, and the Rev. N. B. Stewart, assisted in the dedicatory services.

The following persons were the original members: William Snediker, Mary A. Snediker, J. F. Counselman, Mary Curtis, Nathaniel Moore, Mrs. Moore, Mary Henderson, Anna Henderson, Clark Criss, Mrs. Criss, Mrs. Thompson, William Martin. The church building is a neat brick, and cost $5,000.

The following ministers have officiated since its organization:

Rev. N. B. Stewart, 1873–74.
Rev. G. B. Hudson, 1875–76.
Rev. A. C. Cameron, 1877–78.
Rev. G. B. Hudson, 1879.

POST OFFICES.

There are five post offices in the county, viz: Wellsburg, Bethany, Short Creek, Fowler's and Pan-Handle. Wellsburg is given in the history of the town.

FOWLER'S.

This is a country post office, some three or four miles east of Wellsburg, on the Washington pike.

There was once an attempt made to lay off a town here, and a few lots were sold; but for want of enterprise it failed. A post office was established and called "Fowler's," in honor of the proprietor of the contemplated town.

The office was established about 1850, and Abram R. Sharp, appointed first post master, but resigned in 1854, and was succeeded by Thomas Baker, who resigned in 1857, and William M. Fowler succeeded him, and still (1879) retains the office.

PAN-HANDLE.

Neither the post master, or citizens of the place can give any account of this office.

SHORT CREEK.

This office is located some eight miles below Wellsburg, at the junction of Short creek and the Ohio river. It is called Short creek, because it stands on its banks.

There is no record showing when it was established. The first post master that we can find, was J. R. Windsor, appointed in 1852. He resigned and moved away in 1861, and was succeeded the same year by Samuel Trimble. Mr. Trimble died in 1872, and J. B. Trimble succeeded him, who resigned, and was succeeded by J. B. Hager, in 1873. He likewise resigned, and was succeeded by J. B. Wilson, who still retains the office.

CHAPTER LI.

WELLSBURG.

HISTORY OF THE TOWN OF WELLSBURG, IN BROOKE COUNTY, W. VA., FORMERLY CALLED CHARLESTOWN.

THE town of Charlestown, Ohio county, Va., was laid out probably in the fall of 1790, as at the January term, 1791, of the county court of Ohio county, Va., Charles Prather produced, in open court, the plat of the town of Charlestown, in Ohio county, which plat and survey was made by James Griffith, surveyor.

Charles Prather bought a tract of land, containing 481 acres, on the 6th of March, 1788, from John Cox, heir at law of Friend Cox, and William McMachon, attorney for Joseph and Jonathan Cox, of Ohio county Va., for the sum of six hundred pounds, Pennsylvania currency, in hand paid. This tract comprised all that portion of land lying south of the south boundaries of what is now known as Lazearville, to the waters of Buffalo creek, and from the Ohio river, east one hundred poles up Buffalo creek, and varying from that to the now Lazearville line, from two hundred and fifteen poles, and three hundred and twenty-six poles. At the south end of this tract, on what is called the river bottom and the second bench, or smaller hills, lies the town of Wellsburg.

The town derived its name, Charlestown, from Charles Prather, the proprietor, December 27th, 1816. By virtue of an act passed by the Legislature of Virginia, the name was changed from Charlestown to Wellsburg, for Alexander Wells, who married the only daughter of Charles Prather. Mr. Prather had two sons, Henry and John, of whom we shall speak hereafter.

Charles Prather, and his wife Ruth, sleep the sleep that knows no waking until the great last day, in a beautiful knoll situated about six hundred feet south-west of, and in full view of their once earthly mansion. Where the tomb is, is now the property of General I. H. Duval, originally located at the north end corner of the corporation limits, but now within the corporation, the same being extended September, 1877, by order of the Circuit Court, upon the prayer of a number of petitioners of the portion annexed. The annexation includes the residences and part of the lands of I. H. Duval, Mrs. Eliza Paull, Thomas Boyd, Mrs. Frances Tarr and J. G. Jacob on the bench or second bank, east of the Steubenville road. Also all that tract of land lying between the Ohio river and the Steubenville road, and between the north line of the Fair Grounds and Fleet street.

A tablet over the graves of Mr. and Mrs. Prather bears this inscription:

"In memory of Charles Prather, proprietor of Wellsburg, died September 25, 1810, aged 77 years."

"In memory of Ruth, consort of Charles Prather, died October 7, 1807, aged 75 years."

The first house that Mr. Prather built for himself and family to live in stood nearly opposite the present residence of Mrs. Frances Tarr, and west of the Steubenville road, on the south corner of the tract of land belonging to Samuel Jacob, lying

east of the Pittsburgh, Wheeling & Kentucky Railroad and between the lands of Benjamin F. Jacobs, and the land of John G. Jacob. Afterwards he built a stone house, which stood until 1848, when C. B. Prather, son of John Prather and grandson of Charles Prather, tore down the old stone house and erected on the same site the present residence of Mrs. E. Harker.

Mr. John Prather, the son of John Prather, and grand son of Charles Prather, was born May 8, 1802, is living here in Wellsburg at the present time. His memory is quite fresh as to the things of the past. He is a clever intelligent gentleman, to whom we are much indebted for many very interesting events of the days of yore.

VOLUNTEERS IN THE WAR OF 1812.

Captain Congleton commanded a company of infantry from this county during the war of 1812–14, and marched with them from here to Norfolk, Va. He also was Adjutant of the First Virginia Regiment during a campaign in 1813, at Fort Meigs, Upper Sandusky, etc. He bore the reputation of being the ablest drill officer in the division to which he was attached. He was generally beloved by the soldiers. At home he was esteemed by all his fellow citizens. There are those living yet in Wellsburg who knew him well, and speak in the highest terms of him as a civilian and soldier. After returning from the war he filled several important offices of honor and trust in this county. It is said of him that he made it a rule to attend all funerals in the town and vicinity, and as the custom was to walk to the grave yard in those days, he always arranged the funeral cortege with military precision, and they thus repaired to the grave. He died in 1838, and his loss to the community was greatly deplored.

November 27, 1798. The county courts of Brooke, were by order, held at the house of James McGinder, in Charlestown, until further orders. This house is still standing on the north west corner of Water and Prospect streets. It was built by Patrick Gass, who died a few years since, and who was the sole survivor of the Lewis and Clark expedition.

March 29, 1799. Philip Doddridge was "appointed attorney for the Commonwealth, in the room and stead of John Relfe, Esq., who has signified to the court that he will not further prosecute in behalf of said Commonwealth."

THE FIRST COURT HOUSE.

April 29, 1799. This we infer to be the first time that the county court met in the court house, as it is the first record of that kind appearing upon the minutes. We quote as follows: "Ordered that court adjourn fifteen minutes, then to meet at court house in Charlestown to hold court in the future." We are informed that the carpenter work of this court house was done by Samuel Herdman, Esq., who lived to see it torn down in 1849, and the present one erected. While the new court house was being built, the courts were held in Brooke Academy building (the successor of the original Brooke Academy building), which was converted into a dwelling some years ago by Thomas Everett, Esq., and is now owned and occupied by Mr. William Frank. The bell used on the old court house, now hangs in the belfry of the public school building, and summons the youth of the town and vicinity to school. It bears the following inscription: "G. Hedderly, Philadelphia, 1807. *Fecit.* The first Superior court held in the county of Brooke, was in April, 1809.

CEMETERIES.

The oldest burying ground used by the town is that located on the hillside just south of the residence of William Frank (old academy building), which has long since been abandoned as a place of interment for the dead. The grounds situated at the north of town on the north-west corner of Water and Fleet streets, from which the dead were removed in the year 1876, was laid out about the year 1814. On the corner east of this, there was a one-fourth acre lot on which the Regular Baptist church stood, part of which was used as a burying ground. This ground belongs to Mr. Samuel George. The dead were removed in 1877.

In these grounds lie the remains of Nicholas P. Tillinghast, born in Rhode Island, January 22, 1817—died June 13, 1808; also those of Miss Elizabeth Taylor, born in Newport, Rhode Island, August 27, 1737, died July 20, 1811, and the remains of Mrs. Patience T. McKibbon, born in Newport, Rhode Island, June 1774, died March 10, 1815.

In 1857, Brooke Cemetery, located about one mile from town, and immediately east of Lazearville, was bought from George Cox (to whose farm it belonged) and laid out and incorporated. It is the only one in use at present. The first person buried in the graveyard that was on the northwest corner of Water and Fleet streets, was a boy by the name of Eli McDowell, who died from the effects of a kick given him by a strong man, who afterwards fled the country.

The first person buried in Brooke cemetery, after its purchase from Cox, was Eleanor, wife of Samuel George.

In Brooke cemetery lie the remains of Captain Oliver Brown, a hero of the American Revolution. A neat monument over his grave bears the following inscription:

"CAPTAIN OLIVER BROWN,

of the Massachusetts line, revolutionary war, born in Lexington, Mass., 1752. He stood in front of the first cannon fired by the British on the Americans in the affray at Lexington; witnessed the "tea party" in Boston harbor; was at the battle of Bunker Hill; commissioned by Congress the 16th day of January, 1776; commanded the volunteer party that bore off the leaden statue of King George from the battery of New York, and made it into bullets for the American Army; bore a conspicuous part in command of the artillery at the battles of White Plains, Harlem Heights, Princeton, Trenton, Brandywine, Germantown and Monmouth.

After serving his country he enlisted in the armies of the Son of God, and surrendered to the last enemy on the 17th of February, 1846, in the full assurance of a never ending peace."

Another monument marks the spot where lies the remains of part of the Doddridge family. We notice there, inscriptions as follows:

"John Doddridge, born in Maryland, March 20, 1745; emigrated to Washington, Pa., in 1773; died April, 1791."

"Mary Wells, wife of John Doddridge; born Sept 19, 1748; died Nov 20, 1776."

On another side of the monument we find the following record:

"Rev. Dr. Joseph Doddridge, the first minister of the Protestant Episcopal Church in Western Virginia and in Ohio. Born in Bedford county, Pa., October 14, 1769; died in Wellsburg, November 9, 1826."

"Jemima Bukey, wife of Rev. Dr. Joseph Doddridge; born April 3, 1777; died September 25, 1829.

"Erected by their daughter, Narcissa Doddridge."

Narcissa Doddridge died January 30, 1874, at the Doddridge mansion, in Wellsburg. She was the last of the Doddridge family living in this neighborhood.

The Doddridge mansion is located on the northeast corner of Commerce and Liberty streets. It is in a dilapidated condition at this time. It is in the hands of a commissioner. When Dr. Doddridge lived there it was considered one of the most handsome places in the country; but the hand of time has left his unerring mark upon it. Mr. Doddridge had a family burying vault on the grounds connected with his dwelling, in which his and the remains of all deceased members of his family reposed for a number of years, when they were removed to a public burying ground and from thence to Brooke Cemetery.

Rev. Dr. Joseph Doddridge was the author of "Doddridge's Notes," the same being a history of the early settlement of this country.

PHILLIP DODDRIDGE,

(heretofore mentioned) was a brother of Rev. Dr. Joseph Doddridge. He was a celebrated lawyer of his day, who died in Washington city about 1822, while representing this district in congress, and was buried in the congressional burying grounds there. Along with Alexander Campbell, he represented this and several other counties in the Virginia convention of 1829–30.

CHURCHES.

The first house built here for public worship, that we have any account of, was what was called the Regular Baptist Church, before referred to. Dr. Richardson in his memoirs of A. Campbell, says that Mr. Campbell raised the money for the purpose of building this church, and that he was assisted in the work by John Brown, Mrs. S. H. Bakewell (afterwards Mrs. Alexander Campbell), and Miss Amelia Miller (afterwards Mrs. Nathaniel Carle). These two ladies are still living. Mr. Campbell died at his residence near Bethany in the year 1866.

Mr. Carle died in 1838 in Wellsburg, as will hereafter be more fully shown. But to the history of the church.

The record shows that a deed was made for the ground on which it stood in the year 1816, whereon to erect a house of worship for free white people. John Brown, father-in-law of Alexander Campbell, seems to have been the most prominent person in the establishment of this church, which was subsequently occupied by the Disciples, under the lead of Alexander Campbell, until 1848, when it was torn down, and a modern meeting house was built on the northwest corner of Charles and Prospect streets.

In the year 1872, a very serious difficulty originated in the Disciples Church, brought about mainly by one Joseph Berry, who had been employed as preacher. The result was that there was a division in the church, a very respectable number of the membership who felt themselves aggrieved withdrew and formed a new society of the same faith, and worshipping in one of the rooms of the public school building. The party remaining at the church and the seceding members entered into a law suit for the possession of the church building, which was decided in favor of the party remaining in the church or worshipping there. A few years afterwards these differences were satisfactorily compromised and both parties came together and are now worshipping in the church together as in days of yore.

The next church is that of the Methodist Episcopal, built some time in 1816. A deed was made for a lot of ground on the southwest corner of Charles and Walnut streets for the use of the Methodist Episcopal Church. George Plattenburg was a prominent mover in this work. The old church was torn down in 1853, and the present Methodist Episcopal Church erected on the same ground.

The Presbyterian Church situated on the north side of Queen street, between Water and Charles streets, was built in 1838. Rev. Daniel Hervey states that he assisted in administering the sacrament in that house in 1838, at the first meeting held in it.

The Episcopal Church, located on the south-west corner of Liberty and Yankee streets, was built in 1839. In 1800 Rev. Dr. Joseph Doddridge held divine services in Brooke Academy, by reference to his memoir by his daughter, we find that the subscribers to the church were, Philip Doddridge, Nicholas P. Tillinghast, Patience Vilettle, Elizabeth Taylor, Silas Bent, John Connell, Thomas Hinds, William McConnell, John Bly, A. Green, John T. Windsor, Alex. Caldwell, Robert T. Moore, James H. White, Robert H. Johnson, Charles Prather, Nicholas Murray, Samuel Talman, Oliver Brown, Sebastian Derr, Josias Reeves, James Danaw, William Thorpe, Henry Prather, James Clark, John Fling, Thomas Oram.

The Catholic Church, on the south-east corner of Commerce and Union streets, was built in 1854. Father Bazil was the officiating priest, he was succeeded by Father Huber, who still presides over the church. Prior to the building of this church the members usually met for worship at the house of some of the members.

The Union Chapel Methodist Protestant Church, on the south-west corner of Charles and Prospect street, was erected in 1864. Rev. E. A. Bindley, of the Pittsburgh Methodist Protestant Conference was the leading man in the building of the church, he being its pastor for a number of years prior to and after the building of the church. This congregation was an outgrowth of the Methodist Episcopal Church. The cause of the separating occurred in 1854, concerning a difference of opinion concerning family sittings in the Methodist Episcopal Church.

BENEVOLENT SOCIETIES.

Wellsburg Lodge, No. 2, A. F. & A. Masons, was instituted in 1817. This lodge is the successor of Lodge No. 78, chartered March 4, 1799, by the Grand Lodge of Pennsylvania, and once located at the old Mingo towns, on the Ohio river, about half way between Wellsburg and Steubenville.

Copy of the charter of Masonic Lodge, No. 78, held at the old Mingo Towns in the North-west territory:

J. P. Smith, GRAND MASTER.
(Name not legible) D. GRAND MASTER.
James Milnore, S. GRAND WARDEN.
Chas. Patton, J. GRAND WARDEN.

TO ALL WHOM IT MAY CONCERN

THE GRAND LODGE of the most ancient and honorable Fraternity of Free and Accepted Masons (according to the Old Constitutions, revived by his Royal Highness Prince Edwin at York, in the Kingdom of England, in the year of the Christian Era Nine Hundred and Twenty six, and in the year of Masonry Four Thousand Nine Hundred and Twenty six) in ample Form assembled at Philadelphia, in the State of Pennsylvania, SEND GREETING.

WHEREAS the right Worshipful Grand Lodge of England did by a Grand Warrant under the Hands of the Right Honorable Thomas Erskine, Earl Kelly, Vincent Fenton, Lord Baron of Pitten Weem, &c., in Great Britain, Grand Master of Masons, the Right Worshipful William Osborne, Deputy Grand Master, the Right Worshipful Mr. William Dickey, Senior Grand Warden, the Right Worshipful James Gibson, Esq., Junior Grand Warden, and the Seal of the said Grand Lodge, bearing Date June 20th, 1764, AM. 5764, nominate, constitute, and appoint the Right Worshipful William Ball to be Grand Master, the Right Worshipful Captain Bläitwaith Jones, Deputy Grand Master, the Right Worshipful Mr. David Hall, Senior Grand Warden, and the Right Worshipful Mr. Hugh Lenox, Junior Grand Warden, of a Provincial Grand Lodge, to be held at Philadelphia for the Province of Pennsylvania; granting to them and their successors in office duly elected and lawfully installed, with the Consent of the Members of the said Grand Lodge, full Power and Authority to grant Warrants and Dispensations for holding Lodges, to regulate all Matters appertaining to Masonry, to do and perform all and every other Act and Thing which could be usually done and performed by other Provincial Grand Lodges, as by the said above in Part recited Grand Warrant, Reference being thereunto had, may more fully and at large appear.

AND WHEREAS, the Right Worshipful William Adcock, Esq., Grand Master, the Right Worshipful Mr. Alexander Rutherford, Deputy Grand Master, the Right Worshipful Jonathan Bayard Smith, Esq., Senior Grand Warden, the Right Worshipful Mr. Joseph Dean, Junior Grand Warden, legal successors of the above named Grand Officers, as by the Grand Lodge Books may appear, together with the Officers and Representatives of a number of regular Lodges under their jurisdiction, duly appointed and specially authorized, as also by and with the advice and consent of several other Lodges by their Letters expressed, did, at a Grand Quarterly Communication, held in the Grand Lodge Room in the city of Philadelphia, on the twenty-fifth day of September, A. C. One Thousand Seven Hundred eighty and Six. After mature and serious Deliberation, unanimously resolve, "That it is improper the Grand Lodge of Pennsylvania should remain any longer under the authority of any foreign Grand Lodge." Therefore the said Grand Lodge did thereupon close sine die. AND WHEREAS all the Grand officers of the said late Provincial Grand Lodge, together with the officers and Representatives of a Number of Lodges of the Commonwealth of Pennsylvania, did on the said Twenty Fifth Day of September, One Thousand Seven Hundred Eighty and Six, meet in the Room of the late Provincial Grand Lodge, and according to the Powers and Authorities to them entrusted did form themselves into a Grand Lodge of Masons, to deliberate on the proper Methods of forming a Grand Lodge totally independent from all Foreign Jurisdiction.

AND WHEREAS the said Grand Convention did then and there UNANIMOUSLY RESOLVE, That the Lodges under the Jurisdiction of the Grand Lodge of Pennsylvania aforesaid, lately held as a Provincial Grand Lodge under the Authority of the Grand Lodge of England, should and they then did form themselves into a Grand Lodge, to be called THE GRAND LODGE OF PENNSYLVANIA AND MASONIC JURISDICTION THEREUNTO BELONGING TO BE HELD IN THE SAID CITY OF PHILADELPHIA, as by the Records and Proceedings of the said Convention remaining among the Archieves of the Grand Lodge aforesaid may more fully appear.

NOW KNOW YE, That We THE GRAND LODGE OF PENNSYLVANIA AND MASONIC JURISDICTION THEREUNTO BELONGING, by Virtue of the Powers and Authorities vested in us by the said Grand Convention, Do hereby authorise and impower our trusty and well-beloved Brethren William McKennan, Master, Senas Kimberly, Senior Warden, and John Agnew, Junior Warden of a new Lodge, Number Seventy Eight to be held at the Old Mingo Towns, in the North Western Territory or within five miles of the same. AND WE DO FURTHER authorise and impower our said trusty and well beloved Brethren, William McKennan, Senas Kimberly and John Agnew to admit and make Free Masons according to the most ancient and honorable custom of the Royal Craft in all Ages and Nations throughout the known World and not contrarywise.

AND WE DO FURTHER impower and appoint the said William McKeenan, Senas Kimberly and John Agnew, and their successors to hear and determine all and singular Matters and Things relating to the Craft within the jurisdiction of the said Lodge Number seventy-eight AND LASTLY, WE do hereby authorize and impower our said trusty and well beloved Brethren

William McKennan, Senas Kimberly and John Agnew, to instal their successors, &c., &c., &c. Such installation to be upon or near ST. JOHN THE EVANGELIST'S day, during the Continuance of this Lodge for ever. PROVIDED ALWAYS, That the said above named Brethren, and their successors pay due Respect to this Right Worshipful Grand Lodge and the Ordinances thereof, otherwise this Warrant to be of no Force or Effect.

GIVEN in Open Grand Lodge, under the Hands of our Right Worshipful Grand officers and the Seal of our Grand Lodge, at Philadelphia, this Fourth day of March A. C. One Thousand Seven Hundred and ninety-nine and of Masonry Five Thousand Seven Hundred and ninety-nine.

JOHN MCELWEE,
Grand Treasurer

Grand Lodge of Pennsylvania. [L. S.] Virtue Silentio Amori.

Attest

GEORGE A. BAKER,
Grand Secretary.

Brooke Lodge, No. 5, I. O. O. F., was instituted February 22, 1846. Both of these societies are in existence and flourishing. A number of other societies, such as Sons of Temperance, Know Nothings, Good Templars, etc., have been in operation here, but were doomed to short lives.

BANKS.

The first banking house in Wellsburg was known as the Charlestown Manufacturing and Exporting Company, which commenced operations in or about 1813, and went out of existence about the year 1815. The house immediately north of the Hudson House, lately remodeled, was built especially for this company. The branch of the Northwestern Bank of Virginia came next in 1832—the building, located on the east side of Water street, on the north-east corner of Water and Urana streets, was built about 1835. Dr. John C. Campbell, was president, and Samuel Jacob, cashier—which was merged into the First National Bank of Wellsburg, which closed May 19, 1871, and now known as the Wellsburg National Bank, began September 25, 1871. W. K. Pendleton, president of Bethany college, is president of this bank; Wilson Beall is cashier, and John S. Beall is assistant cashier.

The Bank of Wellsburg, owned and operated by Samuel George, assisted by James H. Lloyd, was put in operation about 1871. First occupied the upper room, ground floor, in Tarr building, on Water street, now occupying corner room of ground floor of Hudson House.

FACTORIES, MILLS, ETC.

In early days there was a carding mill and grist mill combined, owned and operated by John Brown, run by horse power, on the lot on the north side of Fleet street, on the corner of the alley running north to the residence of Andrew Nelson, and opposite the old cotton factory. The building was destroyed by fire in 1848. Immediately west of the old carding and grist mill, stood the first paper mill, built in 1835 by McCluney, Grimes & Co.; it burned down in 1848.

In the summer of 1851, Harvey, Manser & Co., i. e. William H. Harvey, William Manser and Thomas Palmer, came here from Wheeling and built a mill for the manufacture of straw wrapping paper, on the site of the one burned down, which was operated by the aforesaid firm until 1861, after which it was not operated as a paper mill. It was used by the firm for a warehouse and office. A few years since the mill portion was torn down. The office still remains and is used by the successors of the firm, Benjamin and W. H. Harvey. In 1852, William Jones, John McCrea, Franklin Carle and George Wable, under the firm name of Jones, McCrea & Co., built the straw paper mill now owned and operated by Benjamin and W. H. Harvey. It stands near the bank of the river at the foot of Prospect street, north side. The original owners run it for a while, when William Jones, of Wellsburg, and Thomas J. Carle, now of East Portland, Oregon, became owners of it, and was by them kept in operation until their failure in 1857, when it was afterwards purchased by Harvey, Manser & Co. Thomas Palmer subsequently withdrew from the firm, following the business of gardening and the cultivation of small fruits. He died in 1874. William Manser remained a member of the firm until November, 1871, when he withdrew. He died December, 1871.

The business was continued by W. H. Harvey until about 1876, when he disposed of his entire interests to his sons, Benjamin and W. H. Harvey. Mr. W. H. Harvey, sr., died September 30, 1877. In 1829, John Carle, Nathaniel Carle and John Miller built the Brooke Cotton Factory, a brick building, about 40x80 feet, and three stories and a half high, with a large cellar underneath, situated on the nothwest corner of Fleet and Factory streets. The firm of Carle, Miller & Carle operated the factory until 1838, when Mr. Nathaniel Carle, while trying to save the life of a man named Clark, who was working in the factory well and who was overcome with gas, himself fell in the well and was killed. Mr. Clark escaped injury. February 10, 1844, the factory was sold to John C. Perry and John Carle, who operated it tolerably successful until Wednesday, April 5, 1854, when they made an assignment for the benefit of their creditors. The failure was considered the most extensive that ever occurred in Wellsburg, and was looked upon as a great calamity to the town. Bazil Wells, Robert Moore and John Miller were sureties for Carle and Perry. It took most all of John Miller's worldly possessions to liquidate his share of the responsibility. Wells and Moore exonerated him by his conveying to them what was considered a sufficient amount of real estate to satisfy his portion of the claim. This left Miller a comparatively poor man, the balance of his days. Campbell Tarr, jr., was the assignee of Carle & Perry. The cotton mill was purchased at assignee's sale by Gould and Wells, of Cincinnati, O., afterwards Gould, Pierce & Co.—viz: C. H. Gould, James Pierce and Henry Pierce—who run it until 1873, when they took all the machinery, save the boilers and engine, to their cotton mill in Cincinnati, and sold the property to Wm. H. Harvey, sr., and Samuel George, who converted it into a mill for the manufacture of manila sacking paper. There were two sets of boilers in this mill, four single-flued boilers constituting one battery and two double-flued boilers the other. Both batteries were supplied with water by one and the same pump, and they discharged their steam into one and the same steam drum. On the morning of May 11, 1874, one of the double-flued boilers exploded, scattering the fire underneath throughout the mill, setting it on fire, and which was speedily and entirely consumed.

The same year it was rebuilt by W. H. Harvey, sr., Samuel George and Thomas P. Grimes, who continued to operate it until 1876, when Mr. Grimes withdrew from the firm. The mill was operated by Harvey & George, until the death of Mr. Harvey, when it was continued in the firm name; Mr. Harvey conveyed his interest to his wife, which is represented by W. H. Harvey, executor of W. H. Harvey, deceased. On the north-east corner of Yankee and Liberty streets, in 1814, stood what was known as the "Brooke Foundry" building, 44 by 30 feet, owned by Dr. Joseph Doddridge.

The house which John Blankensop, senior, now owns, and resides in, on the north side of and at the east end of Queen street, was originally a carding mill.

Horatio N. Bakewell (whose sister Miss S. H., was the second wife of Alexander Campbell) carried on the pottery business quite extensively here for some time prior to and up to 1852, or thereabouts. His works were located on the lots between Water street and the Ohio river, and between Prospect and Walnut streets. Robert Brown also carried on the pottery business here. His works were located on Yankee street, east side, between Urana and Liberty. The lot was purchased by the Pittsburgh, Wheeling and Kentucky railroad company for depot purposes, and the kiln demolished. The Bakewell kiln was demolished after the property passed out of the hands of his heirs Captain Wm. McCluney carried on a pottery on the lot south east corner of Water and Prospect streets, at an early date.

The Tarriff Foundry was built in 1834-35 by Robert Whan & Bro., and is at present owned by the Acme Mower and Reaper Company. The Acme Mower and Reaper Company occupy the bulding on Water street, between Prospect and Queen streets, and between Water street and the river, which was originally the Wellsburg Female Seminary, and which was built under the patronage of the Pittsburgh Conference of the Methodist Episcopal Church in the year 1852, and was presided over first by "a Miss Edson. One year later the Rev. Samuel H. Nesbit, pastor in charge of Methodist Episcopal Church at Wellsburg, was, by the annual conference at Pittsburgh, appointed principal, and was reappointed for two successive years. An effort was made to secure an endorsement for the seminary. Rev. W. Lemon was appointed agent for that purpose, but barely maintained himself, and the endorsement experiment failed. We had a pretty fair school from the fall of 1853 to the spring of 1856. The corps of teachers consisted of Miss Edson, Miss Carrie Edson, Miss Louisa Flinn, and Miss Fannie Jenkins. There was quite a number of students from a distance. In the sum-

mer of 1856, I ceased to have connection with the institution. A Mrs. Jones then became principal." Rev. Nesbit furnished the compiler with the foregoing.

Mrs. H. E. Jones had charge of it for some time on her own account. After the formation of the state of West Virginia in 1863, and the adoption of the free school system, it was used as a public school building until the erection of the present school building in 1868, which stands between Commerce and Yankee streets, and south of Queen street. This building is three stories high, and has eight rooms and a hall, all of which are used for school purposes. Under the proper head we shall again refer to schools.

The Acme Mower Works is an outgrowth of the Smith Mower Works, or Wellsburg Manufacturing Company, established in 1870 or '71, by Mr. Smith and others, which discontinued business in 1872. Thomas Everett & Co. leased the works for one year, for the manufacture of mowers and reapers, and other implements. The property was afterwards sold under a deed of trust, and purchased by Everett, Hobbs, Bracken & Co., who, uniting the Wellsburg Foundry with it, constituted the Acme Mower Works. All of the firm belonged to the city of Wheeling, except Thomas Everett and C. H. Bracken. Those coming from Wheeling were Edwin Hobbs, sr., Henry C. Taylor, Ed. Hobbs, jr., W. H. Hobbs, James Exley, and Albert Redman. James Exley, Ed. Hobbs, sr., and Ed. Hobbs, jr., have since withdrawn from the firm.

One of the first tanneries in Wellsburg, was located on Commerce street, west side, and between Washington and Federal streets. It was owned and carried on by R. T. Moore, some of whose heirs still occupy the mansion near by where once stood the tannery. On the east side of Commerce street, between Liberty and Ohio streets, is the Wellsburg Tannery, originally built by John Jackson, and afterwards sold to Jesse Edgington and Robert Moore, father of Dr. Eli Herdman Moore, subsequently owned by Cyrus Cunningham, and now owned by William Frank; it is doing a satisfactory business.

The property owned and occupied by George Letzkus as a dwelling, was once a tannery and was operated by William Dunbleazear. On the bank of the river between Fleet and Walnut streets and west of Factory street stands the old steam grist and saw mill. The saw mill was built first, the date of which is not given. A second story was added thereto, which was used for a woolen carding and spinning mill. In 1833, James W. Miller and Cornelius H. Gist, built in connection with it, a large grist mill. A heavy business was done at this mill as long as it remained a wheat growing region. It changed hands several times. All the machinery has been removed from it. It is now the property of Samuel George and W. H. Harvey's heirs.

Sometime about 1840, John Miller built a steam saw mill at the foot of Fleet street, south side. It was destroyed by fire, May 18, 1855. On the lot south west corner of Green and Commerce streets, once stood a glass house. There was another one on the lot north west corner of High and Urana streets—these have entirely disappeared.

On the last mentioned lot, along in 185–, John D. Weir erected a building, and used it a brief period as a planing mill. Owing to the failure to get water for making steam, the enterprise was abandoned. John Miller converted the building into a dwelling which is now owned and occupied by Alfred Glass, editor of the *Pan-Handle News*.

On the northeast corner of Urana and Yankee streets stands the planing mill of John Tweed and Thompson White, built in 1869. Employ three hands and do a jobbing business.

In August, 1873, Lewis Hall and James M. Haney converted the warehouse of Meyer & Bentz into a batting factory, using some of the cards from the cotton factory of Gould, Pierce & Co., removed to Cincinnati. In July, 1874, these men introduced machinery for grinding corn. In 1871, Waugh & Myers purchased the entire concern and converted it into a flouring mill. It is located on the east side of Yankee street, between Greene and Union streets.

On the west side of Charles street, between Queen and Prospect is a building that has been used for various purposes. The south portion was long used as a pork packing establishment. In or about 1860, Mr. Peter Curran, the owner, desiring to erect the present Curran building, on Water street, between Liberty and Urana, west side, took from that location some three brick buildings, which were used as store rooms, to which was attached a large frame warehouse. This warehouse he directed to be erected along side of the pork house on Charles street, which was accordingly done. Samuel George used it for a number of years afterwards as a pork house. In 1861, when the rebellion took place a quantity of arms and munitions of war were stored in this building, an account of which will appear hereafter. In 1869, Campbell Kimberland purchased the building and grounds and established the Globe Foundry, which he disposed of to the Wellsburg Manufacturing Company, when Everett, Hobbs, Bracken & Co. purchased the interest of the Wellsburg Manufacturing Company they discontinued its use as a foundry. Subsequently, it was used as a hay packing house, and finally converted into a steam wood working establishment by Wm. H. Hobbs, Albert Redman, I. C. Bigerstaff and John Hallett. James Exley purchased the interest of Hobbs & Redman—Hallett having previously retired—and he and Bigerstaff continue to operate it.

In 1874, W. C. Barclay and Thomas P. Grimes commenced the business of manufacturing paper flour sacks in the second story of the middle room of the Curran building, which is continued by Barclay & Jacob, northwest corner of Charles and Liberty streets.

The first public buildings erected for educational purposes were the Brooke Academy and the Jefferson Seminary. The former as heretofore stated, has been turned into a dwelling. The ground for this home was deeded April 24, 1778, to Charles Wells. William McKennan, Thomas McKeen Thompson, Joseph Doddridge, Bazaleel Wells, John Connell, Moses Chapline, James Marshall and Phillip Doddridge, trustees of Brooke Academy. The old academy was torn down and the new building erected in 1848. In the year 1852, the Meade Collegiate Institute came into possession of the Brooke Academy, and the Reverend Samuel D. Tompkins, a minister of the Episcopal Church taught school there, and preached in the Episcopal Church here. In 1862 the property reverted into the hands of the trustees again, who disposed of it to Thomas Everett. The Jefferson Seminary was built about 1835. It stands on Commerce street, west side, between Prospect and Walnut streets, and is now used as a dwelling. In its day it was the prominent school of the town. The house was built by a stock company, and now is the property of the heirs of Dr. E. H. Moore.

John M. Bell, now of Moundsville, W. Va., built a frame school house on the east side of Water street, between Walnut and Prospect, about 184—, in which he taught school for some years. It was afterward removed and converted into a dwelling. School has been kept in various places in the town, wherever a suitable place could be had. Wm. Patton, an old citizen, who died October 24, 1874, aged about ninety years, taught school at one time in the room over the Market House known as the "Council Chamber." In 1855 an attempt was made to establish the free school system in Brooke county, but it failed for lack of a two-thirds vote. The vote stood 308 for and 200 against. The returns from the precincts were as follows:

	For Free Schools.	Against
Neal's (Holliday's Cove)	15	14
Wallace's (Good Will)	35	23
Wellsburg,	158	62
Fowler's (on Wheeling and Washington pike)	24	40
Wells', (opp Steubenville),	18	40
Bethany (seat of Bethany college)	58	21
Total	308	200

Under the free school law of West Virginia, the first board of education, for Wellsburg district, was organized on Monday, June 27, 1864, at the office of Dr. George W. Caldwell, and consisted of the following members: George W. Caldwell, Joseph Applegate, and Joseph B. Harding, Dr. Caldwell was chosen president, and Henry C. Shearer, secretary. George W. Russell was appointed to take the enumeration of the youth. The first enumeration was made July 14, 1864, and showed the following number of youth entitled to attend the public schools: One hundred and seventy-three males; two hundred and four females, and five colored—two male and three females. The levy was fixed at fifteen cents per one hundred dollars. The first teachers that we find any record of, is September 16, 1866, Col. Milton Wells, principal. Salary, $50 per month. Miss Olive Parsons, Miss Emma Urquhart, and Ella Wells, at $25 per month. Miss Angie Harding was employed at $30 per month. Enumeration for the year 1878, five hundred and eighty-six.

The present County Superintendent of Public Schools is Mr. George A. Baxter.

The present school commissioners are J. G. Jacob, Hugh Barth and C. B. Turner. W. H. Anderson is principal, assisted by Miss Jane Anderson, Mr. George W. Russell, Mrs. Kate Sharp, Miss Jennie Rickey, Miss Ann Lazear, Mrs. Carrie Burt

and Miss Rose Wheeler. The present school building was erected in the year 1868. Joseph Applegate, John G. Jacob and James Hervey were the board of directors at that time. The stone work was done by Joseph Gaurse and others. William Merryman did the brick work, and the wood work was under the supervision of Thompson White—who had the contract for the entire building.

Mrs. and Miss Mong conducted a female high school here for two terms, during the year 1849.

A number of boat yards existed here at an early day. Away back in 1806, and along down until 1850, those yards were in existence. Quite a number of flat and keel boats were required to float away the produce gathered at this point.

In the early history of Wellsburg, a number of schooners were built near the mouth of Buffalo creek, and ladened with flour and sailed direct to Liverpool, England. We are unable to get the date of the enterprise. It is said that when these vessels were in mid-ocean, they were overhauled, and as their clearance papers were from this place, the mariners were sorely puzzled to find any such a port. A map was resorted to and the place pointed out, after which the vessels were allowed to proceed on their journey. They arrived safe at Liverpool.

The steamboats Arcadia, DeKalb and Liverpool were built and owned here, and the America, Swan and Columbus owned here.

Some time along in those days, James Holmes, a boat builder, built a keel boat on Yankee street, between Queen and Prospect, and conveyed it to the river out through Queen street, on rollers. John Brady, a boat builder, built a flat boat on Urana street, between Water street and the river, and put it in the river by the means of rollers. There was a boat yard on the lot at the foot of Walnut street, north side, and one at the foot of Prospect street, south side, and quite a number of others, which are not now definitely located. At the yard at the foot of Prospect street, a negro named Thomas Cole, assisting in building a flat boat, had occasion to be at work under the boat, when the supports gave way, crushing him to death. There were several ways of turning boats, as they had to be built bottom up, one of which was to slide the boat into the river and pile sufficient stone on one side to cause it to sink and turn right side up, after which the water was pumped out. Another mode was to turn them with block and tackle attached to the boat and to high posts planted securely in the ground.

Flat-boating and keeling was a prominent business here in early days, in fact up till about 1850, when it began to die out. We have been shown a diary kept by Cornelius H. Crawford, an Ohio river pilot. In the fall of 1837, it is noted that flour sold in Wellsburg at from $5 to $6 per barrel, and wheat $1 per bushel. January 1838, record is made of the weather being very cold all winter, the river being frozen over until March 10th. May 15, 1838, flour was worth in New Orleans from $7 to $9. The same fall the Ohio river was very low, only ten inches in this locality—Wellsburg. At New Orleans, June 20, 1839, business was dull and money scarce; flour from $4 75 to $5 25, whisky 32 cents per gallon. In this section (Wellsburg) that season there was a good wheat crop and an abundance of produce. Wellsburg, July, 1840, great political meeting of both parties at Steubenville. August, 1840, weather cold; average crop of wheat; flour $2 75. September 1, 1840, flour $3 00 and $3 25; money scarce; great whig meeting at Wheeling. Cincinnati, October 13, 1840, flour $3 50, whisky 18 cents. Bayou Sara, December 1, 1840, at New Orleans, flour $5, whisky 19, 24 and 25 cents; all kinds of produce in demand, plenty on the way to market. The news of Harrison's election seemed to revive trade on the river. Cotton and sugar crop good. December 23d, flour fell in New Orleans to $4 50; whisky 23 cents; arrivals heavy. January 15, 1841, New Orleans, flour $4 25, whisky 18a20 cents, produce plenty. Wellsburg, February 11, 1841, flour $3 per barrel; sixteen days from Wellsburg to New Orleans (on produce boats). New Orleans, April 14, flour $4 25 a4 30, whisky 18a20 cents, bacon 4a5 cents. Wellsburg, October, 1842, flour $2 88½, at Pittsburgh $3 25. New Orleans, January 2, 1843, flour $4. Wellsburg, April 28, 1844, flour $3 75, bacon 4a6¼ cents, butter 8 cents, beef 2½a5 cents. July 10, 1848, flour $3 75, corn 25a28 cents, bacon 4 cents, lard 6¼a8 cents, butter 10 cents.

Quite a number of the prominent citizens of Wellsburg and Brooke county, were Ohio river traders, and some of them pilots. Some of the old traders are living in the county yet; in this vicinity there is Lewis Applegate and James Palmer; in town there is John Ervin, G. W. Moren, James Gelthorpe, John Barrett and J. M. Duval, traders. George H. Crawford, pilot, and John B. Hagen, John Prather, Andrew Nelson, Isaiah Roberts, John T. Moren, Peter Blankensop, John Blankensop, Thomas White, Thomas Hersey, John Prather, and others, went to New Orleans at a very early period in the history of boating on the Ohio and Mississippi rivers, long before the days of steamboats, when they were compelled to walk all the way back home. They called it "coming through the wilderness," as the country along the Ohio and Mississippi rivers was very thinly settled.

Peter Curran, Campbell Tarr, William Tarr, David Coleman, Billy Parsons and John Parsons, were among the first traders that ever ventured from here to New Orleans. It was considered quite a risky business, owing to the wild, unsettled country they had to pass through. These last named have long since passed from earth. C. H. Crawford kept a diary of events coming under his observation while on the river, and in and about Wellsburg, commencing in 1837 and closing in 1858, when he went on a tour of inspection through the state of Texas, and died there in 1859.

Harry Prather, a son of Charles Prather, proprietor, in early days, carried on a rope works, or rope walk, on Yankee street, between Queen and Prospect. Joseph Sidebottom constructed a rope walk on which is now the Water street extension. It commenced at the north side of Fleet street and extended along side of and beyond the grave yard. John Frazier succeeded Sidebottom and carried on the business until about 1850, when the works were demolished. The manner of making ropes was as follows: The hemp was drawn first through a hackle, an instrument made by placing iron pins in a ward forming a kind of comb. These were of different kinds, as to coarse and fine. But before the hemp was drawn through the hackles a bunch of it was gathered up in the left hand and thrown over the end of an upright board of about ten inches wide and one inch thick; in the right hand was held a large knife like tool made of wood, with tolerably sharp edges. The operator would strike the hemp hanging on the side of the board with this wooden tool, the strokes freeing the hemp of the coarse woolly particles, when it was drawn through the different hackles and freed from any remaining dirt, and the fibres straightened and paralleled with each other.

The hemp was now ready for spinning. The rope maker would tie a bunch of hemp around his waist, and with a small boy, or some man who would choose to do so for the small remuneration of two or three dollars a month, at the wheel to do the turning, he would make the hemp fast to one of the spinning wheel flyers, and start down the rope walk backwards; feeding out the hemp and lengthening the cord at every step. The strands were doubled and twisted to any desired size and style on the same wheel. A finish was put on the ropes and cords with a sizing made of flour and water—this was applied and rubbed in with pieces of ropes folded on layers while the ropes were yet stretched along the walk. One of the finishing ropes was of peculiar make, having hogs bristles worked in it, which gave it a very rough appearance.

NEWSPAPERS.

The *Charlestown Gazette*, bearing date December 31st, 1814, is the first paper that we have any history of. It was printed and published by Samuel Workman. The specimen before us is a four page paper of four columns each. The four columns occupying nine inches in width, and fifteen and one half inches in length. It is composed mostly of foreign news and advertisements. It was published every Saturday at $2 per year.

Next in order comes the Wellsburg *Gazette*, new series, by John Gruber. Vol. 1, No. 7. Whole No., 319, and bearing date: Wellsburg, Va., Saturday, January 18, 1823. In this number of the *Gazette* is a card announcing that "Philip Doddridge, Esq., of Brooke county, will be a candidate, at the ensuing election, to represent the citizens of this district in the congress of the United States." The same paper contains the doings of the Virginia Legislature, Friday, December 27th, of which Philip Doddridge was a prominent member, and, as the records show, took an active part in the work in hand.

The same number of the *Gazette* contains the prospectus of "Notes on the Settlement of the Western parts of Pennsylvania and Virginia, by the Rev. Dr. Joseph Doddridge, 250 to 300 pages octavo, price in boards not to exceed one dollar."

The next issue of the *Gazette* that we have is 1829. By reference to its title heading, we find that the first number commenced October 9, 1826, Thomas Semice, proprietor and publisher. The paper has at this time increased probably one-fourth in size.

Saturday, May 25, 1833, the first number of the *Brooke Repub-*

lican made its appearance. Daniel Polsley was editor and S. R. Jones, printer and proprietor. January 4, 1834, the name of S. R. Jones as printer and proprietor, does not appear in the paper any longer.

Thursday, September 24, 1835, was the last issue of the *Brooke Republican*. The Wellsburg *Gazette* was still in existence at that time, but it did not exist long afterwards; but at what date it terminated its existence we are unable to learn. The *Brooke Republican* was a four page, twenty-four column paper, 18x14 inches, devoted to politics, foreign and domestic news, manufacturing and agriculture, and other interesting miscellany. It was a very able paper.

Thursday, October 1, 1835, the *Western Transcript* made its appearance, D. Polsley, editor. The specimen number was printed by D. Maclane, on the 5th of September, 1835, "in quarto form, on a royal sheet." Between that time and October 1, Maclane had arranged with Mr. Polsley, of the *Brooke Republican* to take the subscription list of the *Transcript* and merge it with the *Republican*. The arrangement was satisfactory and the *Transcript* was furnished at two dollars per year. It was "devoted to literature, miscellany, general intelligence and agriculture." "With politics," the editor said, "I will have nothing to do." He states that "more than two years' experience has proven to him that an exclusively political paper cannot be sustained (here) without the greatest difficulty, nor with any profit to the proprietor. In size the *Transcript* was the same as the *Republican*. Mr. Polsley continued to control and edit the *Transcript* until December 20, 1845. When Wills DeHass assumed control of it, soon thereafter J. W. Breckenridge became proprietor of it, during whose ownership it went out of existence. In 1824, Solomon Sola published a paper here called the *True Republican*. How long it existed or what was its character we are unable to ascertain. In 1840, Dr. Hazlett published a paper called the *Jeffersonian Democrat*. It was a campaign paper.

Next in order came the Wellsburg *Herald*, by Joseph A. Metcalf, bearing date December 9, 1846. December 9, 1848, it was purchased by John G. Jacob and James A. Smith. On the 25th of November, 1858, James A. Smith severed his connection therewith, since which time it has been conducted by Mr. Jacob. Mr. Smith died shortly after the dissolution. The *Herald* has attained its thirty-third volume, is a four page, thirty-two column paper, Republican in politics, devoted to general news. "Mr. John G. Jacob, the editor and proprietor, is the Nestor of the press in this part of the state, having been on the tripod these twenty odd years. He has seen his various competitors come and go while he and the *Herald* remain like the house that was built upon the rock. Mr. Jacob was one of the early Republicans, or rather he was one of the first to come out in print and defend the right of all Virginia citizens to express and vote their sentiments on the sacred soil to which he is 'manor born,' without respect to their political orthodoxy."

The *Item*, published by J. W. Plattenburg, is the next adventurer in the newspaper line. The volume before us bears date, Wellsburg, August 20, 1856, volume II., No. 5. It is a ten by twelve four page, sixteen column sheet, devoted to news and humor. It was published every Wednesday, at twenty-five cents for three months; single copies three cents; payable in advance.

March 4, 1866, Alfred Glass started the Wellsburg *Democrat*. Glass sold out to James E. Anderson, of recent Louisiana returning board notoriety. The number before us bears date, Friday, June 21, 1867. It was furnished at two dollars per year, and was democratic in politics. Anderson conducted the paper but a short time, when he sold out to J. F. Campbell & Son, who changed the name to the Wellsburg *Times*. It appears that the change took place some time during the winter of 1867, as the prospectus of Campbell & Son, in volume I., No. 10, of the *Times*, bears date December 20, 1867. September 1, 1868, Alfred Glass & Son purchased the *Times* and changed the name to the *Pan-Handle News*. They managed it until May, 1872, when they sold one half interest thereof to Eugene Tarr, and subsequently the remaining one-half. Then Glass & Son started a weekly paper called the Wellsburg *Independent*. It came to light in November, 1873, and lived six months.

Mr. Tarr associated with him in the management of the *Pan Handle News*, Mr. W. A. Brown, now editor of the *Hancock Independent*, as one-half partner. In July, 1874, Glass & Son, repurchased the *Pan-Handle News*, and are the present proprietors. It is a four page, twenty-eight column paper, democratic, and devoted to general news. Mr. Glass had an up hill business in establishing his paper here. So long had the community been without a democratic organ, that its advent was looked upon not in a very encouraging light. But from all appearances the paper is now on a firm basis, all of which is due to the indomitable energy of the proprietors.

Some where along about April 20, 1872, J. S. Hyle published a paper called the *Christian Star*, it was printed at the office of the *News*. It had a short life, and disappeared about March, 1874. Such has been, and is, the history of newspapers in Wellsburg so far as we have been able to ascertain, and our efforts have been untiring. There was a printer here by the name of John P. McArdle, along about 1820 or 1829, but whether he carried on a newspaper, or was only a journeyman printer, could not be ascertained definitely. Doddridge's Notes were printed at the office of the *Gazette*, in Wellsburg, in 1824.

MARBLE YARDS, STONE CUTTING, &C.

Leonard Hobbs manufactured freestone tombstones during the winter and did heavy masonry work during the summer and fall some years before his death, which took place in September, 1834. His shop was on Charles street, west side, between Fleet and Walnut streets.

The next person who engaged in the business was Louis Huebener (known as Hibner). His shop was on the ground now used as the extension of Water street, just north of Fleet street, and between the two grave yards. Hiram Wier served with him as an apprentice. John Hutson, who married the widow of Leonard Hobbs, carried on the masonry and tombstone business from 1844 to 1847, on the lot on the southeast corner of Charles and Walnut streets, now occupied by L. A. Grimes as a grocery stand. Marshall R. Hobbs, son of Leonard Hobbs, started on the same lot, in the spring of 1851, the first marble yard, and continued it until the spring of 1854. The first marble head-stone erected in a grave yard in Wellsburg was in memory of Debora Norman, a daughter of Nathaniel Norman. It was erected some years prior to the starting of the M. R. Hobbs shop.

In 1860, William J. Briggs started a marble works on the south-east corner of Charles and Urana streets, and has continued to operate it very successfully up to the present time.

RAILROADS.

Away back in 1834, in the *Brooke Republican*, we find an article, taken from the Baltimore *American*, entitled THE PITTSBURGH AND WATERFORD RAILROAD AGAIN." It is an account "of a railroad meeting held in Wellsburg, Brooke county, Va." From these proceedings it will be observed that the citizens of Ohio and north-western Virginia are about devising ways and means for the connection by railroad of the Cumberland road at Washington, Pa., with the Ohio canal at Still Water creek, in Tuscarawas county.

The distance between Washington, Pennsylvania, and the Ohio canal on the route designated by this meeting, is said not to exceed fifty or sixty miles, and passes through a rich, fertile and densely populated country. It would cross the Ohio river at Wellsburg, sixteen miles above Wheeling, at which place the navigation is as good as it is at Wheeling. It is also from eight to ten miles nearer to Washington, Pa., than Wheeling, and the face of the country peculiarly eligible for the construction of a railroad. The people in Ohio, it is understood, are acting with great spirit, and resolved speedily to form a junction between the Ohio river and the canal at the points designated. This, therefore, may be looked to as a prospect of no ordinary magnitude, and one which is to constitute that place on the Ohio river, a most eligible and desirable point for the termination of our own great work, the Baltimore & Ohio railroad. It is therefore the object of this communication to request you to publish the proceedings of the Wellsburg meeting.

A SUBSCRIBER.

"The 25th of November, 1871, W. C. Smith, civil engineer, reported to the Ohio county commissioners the estimates of surveys relating to the proposed railway from opposite Steubenville to Wheeling. A vote was taken in Ohio county as to authorizing the commissioners to subscribe $225,000 to the capital stock of said road. A vote was taken January 2, 1872—yeas 2,510, nays 190. Appropriated by council January 17, 1872.

On the 19th of January, 1872, application was made to the Supervisors of Brooke county for the remaining $40,000 of the $100,000 seven and a half per cent bonds as voted by the people November, 1868. Proposals for contracts advertised for March

1, 1872. Ordinances in both counties again affirmed in Brooke 22d of March, 1872; in Ohio, 26th of April, 1872.

On the 17th of January, 1872 the council of the city of Wheeling granted the right of way into and through the city. On the 17th of June, 1873, Ohio county voted $15,000 additional; on the 12th of July, Brooke county voted a like amount. First dirt lifted at the narrows below Wellsburg, Monday, May 6, 1872. It was understood that the Pittsburgh, Cincinnati & St. Louis Railway Company would take possession of the road January 1, 1873. The 27th of September, 1872, Cochran & Co., contractors, reported their section, two miles, finished, being the first sections completed. Their Beech bottom section was finished October, 1872.

Operations were suspended on the road and a deed of assignment made on the 28th of November, 1873, to J. H. Pendleton and William P. Hubbard. Sale of road advertised for 19th of October, 1874. Sale adjourned by Circuit Court.—*Herald record for* 1874.

January 23d, 1875. An election was held in Brooke county on the question of the county subscribing $8,000 to the Pittsburgh, Wheeling and Kentucky Railroad Company—estimated that that amount was the one-third indebtedness of the company and Brooke county's share of said debt. Also as to transferring the stock of the county in said road to any party or parties who would complete and undertake to operate it on satisfactory terms. The result of the vote is as follows:

For Subscription,	672
Against Subscription,	253
For Transfer,	669
Against Transfer,	216

At the ensuing February term of the court, the result of the vote was affirmed, and J. C. Palmer, Abram Wilson, and J. M. Duval were authorized to confer with the commissioners of Ohio county touching the matter, and a favorable report was made at the June term. Issue of bonds ordered. June 1st, Ohio county commissioners sanctioned the arrangement—the people having previously voted, and shortly afterwards, payment of the indebtedness—about $24,000—commenced in Wheeling. Reorganization on the basis of private subscription.—*Herald record for* 1875.

February 7, 1876.—The special committee of the Ohio county commissioners appointed to confer with Messrs. Hubbard, List and others in regard to a plan suggested for the completion of the P. W. & Ky Railroad, considered the same, and shortly after the proposition to transfer the entire interest of the two counties (Brooke and Ohio] to a proposed new company, was agreed to. Seventy-five thousand dollars, it was estimated, of a cash subscription, was required, and of this, it was the understanding, about $50,000 was provided, including a subscription of $10,000 by the town of Wellsburg, which was made on the 24th of June, 1876. The agreement required the new company to commence within six months, which not being done, owing to failure to raise the required fund, and alleged defect in the charter of the company, the contract failed by lapse of time. Brooke county, by order of court, cancelled her agreement August 14, 1876. The Pennsylvania company suggesting further legislation in September, and the suggestion being approved, the whole matter at this date is in abeyance, waiting legislation, and steps having been taken in the mean time for the issue of $200,000 mortgage bonds.—*Herald record*, 1876.

The bill authorizing the county authorities of Ohio and Brooke county to dispose of their property of whatever kind, in the Pittsburgh, Wheeling & Kentucky Railroad, being the legislation deemed necessary by the Pennsylvania Company, as heretofore mentioned, was introduced in the State Senate in January, 1877, and shortly after passed, as submitted. About the 1st of June ensuing, Mr. President Hubbard was notified officially by the Pennsylvania Company that they had taken definite action looking to a speedy resumption of active operations. Shortly after, the commissioners of Ohio county ordered a vote in that county on a subscription of $50,000 to the stock of the company on the reorganized basis, being a part of the $200,000 agreed upon as necessary to be raised by individual stockholders and the Pennsylvania Company jointly, to finish the road and stock it for business. One hundred and eighty thousand dollars was the estimated cost, and that amount was fixed as the capital stock of the new organization. The election was held on the 7th of August, and in Ohio county resulted affirmatively. The vote in Brooke, ordered June 11, on a subscription of $20,000, on the same terms and for the same purposes, held on the same day, resulted adversely—for subscription, 416; against subscription, 326. Necessary to carry, 444 votes.

In the matter of the previous subscription by the town (June 24, 1876), the proposition again came before the council June 22, 1877, in the shape of an ordinance to issue the proposed bonds to the amount of $10,000 to purchase first mortgage bonds of the railroad company, it was rejected by an unanimous vote. The vote was reconsidered, July 3, and passed. W. C. Barclay was authorized to make the subscription. Before this was consummated, objection was made to the whole proceedings, which resulted in their being annulled at a special meeting in September.

The Pennsylvania Company subscription was formally made at Wheeling on the 18th of July. On the 21st of August the contract for completing the road was awarded at Pittsburgh to C. Mackin & Co., of that city, their bid being $35,080, which was about $1,000 less than the estimate as made by Chief Engineer Becker. On the 23d of September work was actively commenced at a point opposite Steubenville and has been prosecuted to this date with very little interruption, Sundays included. The Wellsburg depot was located where the building now stands, southeast corner of Yankee and Urana streets. W. H. Brown was awarded the contract of building it, price $1,945.

The locomotive of the construction train crossed the corporation line (the north limit of the fair grounds) on the afternoon of Tuesday, November 6th, and in a day or two afterwards passed down Yankee street. At this writing (December 20) the road may be said to be completed as far as the depot in Wellsburg, ballasting going on for several miles below and track laying progressing at a point half way between Short creek and Wheeling, with a fair prospect of rails being laid to Wheeling by the 1st of January.—*Herald record*, 1877.

February 28, 1878. On Monday morning took place the formal and regular business opening of the Pittsburgh, Wheeling and Kentucky Railroad. On the Sunday previous, a train of passenger and freight cars passed down, and next morning a portion of the same left Wheeling at 5.05 arriving here shortly after 6, in the midst of a driving snow storm, and proceeded up the line. The train carried several of the officers and higher employees of the company; among them, J. H. Barrett, general inspector, Ross Kells, master mechanic, G. L. Layng, telegraph superintendent, J. W. Becker, Engineer in chief, C. Mackin, contractor, and others. The crew consisted of Charles Wolfe, engineer, Edward Tate, conductor, and J. L. Neely, baggage master.

I. P. Klein, took his place as agent at Wellsburg, in the newly finished depot. The stations and stopping places were all arranged, properly provided, and the railroad was unanimously pronounced a success. Length of road 24 $\frac{3}{10}$ miles; cost to Ohio county, $306,582; to Brooke county, $123,000. The telegraph line was completed and ready for business about May 1st, 1878.—*Herald record*, 1878.

On the 26th day of February, 1853, the Wellsburg *Herald* issued an extra containing an address to the voters of Brooke county, in favor of a subscription by the county to the stock of the Cleveland & Pittsburgh Railroad Company. The amount of stock the county was asked to subscribe to was $100,000. The election was announced for Saturday, the 5th day of March, 1853. In all probability this election was never held as no account of it is given afterwards. The committee who made the address were called a select committee, and consisted of Adam Kuhn, O. W. Langfitt, Campbell Tarr, jr., John Starr, Thomas Kirk, and Rev. David Hervey.

The following citizens of the county were selected as a general committee and requested to concur: William DeCamps, Lewis Hall, John Lazear, Milton Wells, James Palmer, Richard Clayton, J. Hervey, Luke McGuire, R. Bane, John Mendel, Lemuel Beck, Thomas P. Grimes, George Amspoker, J. C. Gist, Alexander Campbell, Dr. R. Richardson, Abram Wilson, Nathaniel Hunter, J. Hedington, J. Hindman, George Hooker, Nathan Reeves, C. Tarr, jr., W. Patterson, F. Patterson, J. Jones, D. Hervey, David Lattimer, J. Agnew and Howard Merryman.

The citizens of Wellsburg had been, from 1834, up to the completion of the Pittsburgh, Wheeling and Kentucky Railroad, agitating a railroad connection with other important cities and towns. When the Pittsburgh and Steubenville Railroad project was conceived to build a road from the mouth of Harmon's creek, opposite Steubenville, in Brooke county, to the city of Pittsburgh, crossing through the upper portion of the county, our citizens manifested a deep interest in the enterprise, and went to work at once to have the Legislature of Virginia grant the right of way. By reference to the Wellsburg *Herald* of December 24, 1852, we find the following editorial:

"*The Right of Way.*—We take it for granted that it is unnec-

essary for us to enlarge at any greater extent on the propriety of the citizens, generally of Brooke county, advocating the "right of way" for the Pittsburgh and Steubenville Railroad. Every imaginable consideration prompts them to the course. Not only regard for the interest of the north end of the county, but our own interest in the construction of the branch to Wellsburg, required by the charter petitioned for, makes it unquestionably our duty, as well as policy, as citizens, to advocate it. *Our* duty, as journalists, is not less plain. We regard a connection with Pittsburgh as the most important for this town that can be effected—more important even than the Wellsville and Wheeling connection. Believing so, from many and obvious reasons, we have ever advocated such connection. We believe that it is practicable to effect it only by bringing to bear upon the Legislature the moral force of the application of the citizens of Brooke.

The opponents of the project at Wheeling are representing that it is exclusively a foreign move, and upon this assumption they base their arguments. Upon us, it rests to disprove it. It is the only argument, or counterfeit of an argument they *can* use. We have no idea of attempting to reply to the broadsides of misrepresentation, and malice, fired during the past week by the Wheeling press. They have, upon their own faces their reputation. Scarcely a line, but is subject to criticism. Contradiction would only give them importance. "WORK," is the word now."

It will be seen from the above that Wellsburg had enemies to contend with. Wheeling was satisfied she had the great Baltimore and Ohio railroad at her doors. But alas, how time changes all things. After the completion of the iron railroad bridge across the Ohio at Bellaire, Wheeling virtually was at the end of a railroad switch. How willing she was to seek another outlet after the lapse of time, can be better imagined than described by reference to the action of her citizens in their labors to get the Pittsburgh, Wheeling & Kentucky Railroad through from Harmon's creek to their city.

On the 8th day of March, 1853, a railroad meeting was held in the court house in Wellsburg to consider our railroad interests. Peter Curran, Esq., was appointed president and G. W. Caldwell secretary. The following preamble and resolutions were unanimously adopted:

WHEREAS, In the winter of 1851 a railroad compromise was entered into between the citizens of Wellsburg and those of Holiday's Cove, concerning the bill granting the right of way to the Pittsburgh and Steubenville Railroad Company, to construct their road across Virginia, in which bill, by mutual concessions, such a scheme was effected as would promote the interests of the compromising parties, and to the success of which the honor as well as the interests of the parties are committed and bound;" and whereas another scheme commonly called the Wellsburg and Wheeling connection, has been projected, in which Wellsburg also feels a great interest, and is bound by her interests to give it her support; therefore

Resolved, That Wellsburg is bound by her honor, and by her interests to favor, and if possible to secure the grant of the right of way to the Pittsburgh and Steubenville Railroad Company, to construct their railroad under the terms of and according to the provisions of the bill heretofore preferred and commonly called the "compromise bill."

Resolved, That Wellsburg in like manner feels it to be her duty to favor, and if possible, secure the successful accomplishment of the railroad connection between Cleveland and Wheeling, on the eastern side of the Ohio river, and to that end feels bound to give the project her support.

Resolved, That we cordially concur in the resolutions adopted by our fellow citizens of Holiday's Cove, in the following words, to-wit: "That we feel that a great wrong has been inflicted upon us by the recent action of the legislature in indefinitely postponing the bill for the said road, at the same time that we confidently believe that no such grievance was intended, but that the same was brought about by misrepresentations of our wants and wishes, therefore, we now ask of the Legislature to re-consider its action in this behalf, and grant us the privilege of making a road over our own land with our own money."

On motion, such matters as related to the bill for the charter of the Wellsville and Wheeling connection, were referred to the railroad committee, which committee was fully empowered to act in the premises.

On motion, ordered to be published.

PETER CURRAN, *President*.
G. W. CALDWELL, *Secretary*.

COUNTY FAIRS.

The Farmers' and Mechanics' Industrial Society, of Brooke county, was organized the summer of 1854, and the first Fair held adjoining the town, on the tract of land of which are now the premises of Thomas Palmer's heirs, W. J. Briggs and Mrs. Otho Hedges, situated at the north end of the extension of Water street, west side, and adjoining the present Fair grounds. This society ceased to exist in 1858. The Pan-handle Agricultural Association, of West Virginia, was organized during the summer of 1876, and held its first exhibition in September of that year. The grounds are on the premises of J. G. Jacob, Esq., and are situated at the terminus of Water street, and west of the Pittsburgh, Wheeling and Kentucky railroad.

TURNPIKES.

The Wellsburg and Washington Turnpike company, was organized September 22, 1821. Joseph Applegate, Robert Scott, Samuel Herdman, Joseph Doddridge, John Brown, Esq., William McCluney, Thomas Grimes, Robert Marshall, and William Fowler, (Miller,) were appointed commissioners to open books of subscription to the stock. The stock, at the option of the stockholders, was to be paid in the following articles, or either them, delivered to the agents of the company.

Wheat Flour, per barrel	$3 50
Whisky, per gallon	33⅓
Fresh Pork, per pound	4
Fresh Beef, per pound	4
Oats, per bushel	25
Bacon, per pound	8
Corn, per bushel	33⅓
Rye, per bushel	33⅓
Potatoes, per bushel	33⅓

Country linens, flax or tow, linseys and country made cloth of every description, at the cash prices in Wellsburg when delivered, and in men's coarse hair at $1 50, to be paid in such quantities and at such times as the commissary shall call for.

The first directors were Cornelius H. Gist, Joseph Applegate, James Marshall, Philip Doddridge and John Miller. William Patton was the first clerk; C. H. Gist, president; Robert Scott, treasurer (bond $10,000), and John Miller, superintendent. The road was Macadamized to the state line.

The Wellsburg and Bethany turnpike was graded about 1850, and near 1869 or 1870 it was Macadamized.

LOTTERIES.

About 1830–32, a lottery was chartered by the state of Virginia to raise funds for the purpose of building stone walls for the protection of the river bank within the corporation of Wellsburg. The necessary amount of funds was raised and the walls built. The stone in them will average eighteen or twenty inches square and from four and a half to five feet in length. The walls were placed parallel and at right angles with the river. They have answered the purpose very well.

MARKET HOUSES.

The present market house in Wellsburg was built about 1828, and compares favorably with those of other places built at that date. There was a market house prior to the present one, but at what date it was built we know not.

HOTELS.

Hotels were once quite numerous. There was much traveling through here in years gone by. Large droves of cattle frequently passed through the place, on through Washington, Pa., to the eastern markets.

The Granite House, on Water street, opposite the steamboat landing, was built by General John Connell, about 1808. It is now owned by Mr. John Barrett, and is kept by Mrs. John Gelsthorpe & Son, It has been subjected to the various changes incident to a village hotel.

The Virginia House, which stood on the northeast corner of Water and Liberty streets, and was burned down in the spring of 1873, was built by John Hagen, about 1812 or 1813.

In April 1874, contracts were made to build a hotel on the site of the Virginia House, burned in 1873, by Samuel George, proprietor of the premises. Clemens Speidel took the stone work, William Merryman, the brick work, and Robert Scott, the carpenter work. The foundation walls were laid and nothing more done that season. In August, 1875, the brick

work was completed. February 11, 1876, J. B. Hagen, lessee, moved into the new hotel, during the week. The house was called the "Hudson House," for Rev. Thomas M. Hudson, a citizen of Brooke county, and a member of the Pittsburgh M. E. Church Conference. The building is three stories high. The basement is used for a barber shop and cellar; the barber shop was first and is now occupied by Lloyd Bowman (colored;) the ground floors are occupied by John D. Lloyd, furniture, T. M. Lloyd, notions, R. F. Craig, clothing, S. George, banker, and Cooper & McClellan, druggists.

FERRIES.

Charles Prather obtained a charter from the Legislature of Virginia on the 26th of December, 1792, for a ferry across the Ohio at Charlestown (now Wellsburg;) also same date a charter for a ferry across the mouth of Buffalo creek. The only ferry in existence now is owned by Oliver Waddle. Its charter calls for a ferry from Wellsburg to La Grange, or to the opposite shore. It is the same ferry as established by Charles Prather in 1792. The ferry over the creek was supplanted by a bridge, and the first one that we have any account of was what was called a "chain bridge, suspended by huge iron rods made into a chain. It had its day and various other styles have taken its place. An improved iron bridge of modern pattern now spans the creek.

EARLY SETTLERS AND OLD CITIZENS.

Van Swearingen, although not a citizen of the town, but locating so near to it—on the property now owned by George Freshwater and J. G. Jacob, just at the north-east boundary of Wellsburg—that we include a short history of him in our report. He located these lands at an early day. They were surveyed by the county surveyor of Ohio county, November 20th, 1786. It is probable that he made the settlement about 1771–4, as the Cox's came about that date, and Swearingen and they came about the same time. Van Swearingen is buried on the farm he settled, (Freshwater's now.) His tombstone is still at his grave, and bears the following inscription. "Here Lieth the body of Van Swearingen, who departed this life on the 2d day of December, 1793, in the fifty-first year of his age.

Captain Oliver Brown came to Wellsburg in 1790–1. At that time it was only a town in name; the country was an unbroken wilderness—the haunt of wild beasts and savages. Every home was a fort, and every man a warrior.

George and Friend Cox came to this place in 1771. They settled a large tract of land, and what is now Wellsburg, was sold by the heirs of Friend Cox, to Charles Prather, in the year 1788.

Captain William McCluney was born in the city of Belfast, Ireland, April 5, 1770. Came to Brooke county, Virginia, when quite a young man, where he resided until a few years previous to his death. He married early in life, Jane, daughter of Colonel Marshall of this county. Captain McCluney lived an eventful and active life. In early life he was surveyor of public lands in Ohio. He was identified with the "whisky insurrection." He was commissioner of the revenue for the county of Brooke for near twenty years. He was postmaster at Wellsburg for many years. He was considered the best equestrian west of the Allegheny mountains. For some years he commanded a company of troops in Brooke county.

His wife preceded him to the grave February 9th, 1835. She was a prominent member of the Methodist Episcopal Church at this place. A son of Captain McCluney, James McCluney, still resides in the city of Wheeling.

Isaiah Roberts, who is still living, came to Wellsburg about 1814. He was a volunteer soldier in the war of 1812–14, and of the late rebellion of 1861. He is up in the eighties, and enjoys remarkable health and retains much vigor for one of his age.

MISCELLANEOUS.

On the 16th day of June, 1836, Jacob Decamp sold to William Mayball, Peter Curran, Robert Moore, Samuel Herdman and A. P. Wheeler, who with others associated to subscribe funds to build a public wharf, the surplus of lots opposite numbers 15 and 16, in the town of Wellsburg.

The government of the town of Wellsburg consists of a mayor and six councilmen, who are elected annually by the qualified voters of the town. The charter of the town was renewed December 12, 1855, authorizing the election of a mayor. Samuel L. Marks was the first person elected mayor under the provisions of the charter of 1855. He was elected on the first Thursday of April, 1856.

The present mayor is George W. Caldwell, who is filling his second term. He was elected as an anti-license mayor, opposing the licensing of the sale of intoxicating liquors in the town of Wellsburg. The present councilmen are Henry C. Taylor, Rawland F. Craig, John Blankensop, sr., John Ervin, John Reid and Adam Hall; clerk, Wheeler Reeves; sergeant, William Linton; street commissioner, Thomas Bond.

The name of the post office at Charlestown (now Wellsburg) was Brooke Court House, April 1st, 1801. William Thorpe appears on the records as the first post master at Charlestown. It will be remembered that the first court that was held in and for the county of Brooke was held in 1797 at the house of William Thorpe in Charlestown. Prior to that time, what is now Brooke and Hancock counties belonged to Ohio county, and it is not likely at that time in our country's history that there was more than one post office in the county. Therefore we infer that the record is correct and that the mails were sent to Wheeling. Silas Dent appears next on the roll as post master, July, 1801. After which the following persons appear on the record:

ROBERT COLWELL, April, 1803,
DAVID OFFLEY, October, 1803,
JOHN FLING, April, 1805,
WM. MCCLUNEY, July, 1816,
WM. PATTON, January 4, 1821.

The name was changed from Brooke C. H. to Wellsburg, Brooke county, with Thomas McCarty as post master, about December 29, 1830. The foregoing is from the records at Washington city. Since then our people have been served in turn by Harrison Connell, James McCluney, Wm. DeCamps, Thomas M. Lloyd, Thomas Hagen, Thomas W. Griffin and others. The present incumbent is Henry M. Hall, who lost a hand in the war of the rebellion in the Union army. He was appointed 186–.

When the late civil war broke out Wellsburg proved to be loyal to the Union of the States, and many patriotic demonstrations took place. At an early day Joseph Applegate, Campbell Tarr and David Fleming, of this place visited Washington City in behalf of the Union party, and obtained from the Secretary of War, Hon. E. M. Stanton, after a consultation with President Lincoln, a quantity of muskets and ammunition. It is said that when the application was made the secretary of war could not just find where the law was authorizing the issueing of arms to citizens, but allowed them to have them, saying "that he would find the law for it again." The gentlemen named above gave their note collectively for the value of the arms and ammunition. When the war actually began, these arms were issued to the loyal Virginia troops. The muskets were brought here and stored in the pork house, on Charles street, afterwards the Globe Foundry—now the wood working establishment of Exley & Bigerstaff. One night soon after the arms were brought here, the men guarding them were notified to be on the lookout, as it was reported that the Rebels were coming to capture them. The whole town and its vicinity were aroused from its slumbers, and all able bodied men were requested to report at the armory for duty. A musket and ammunition were given to all who could and would take the oath on the spot to be loyal to the state and the United States, and were immediately assigned to a post of duty at the different approaches to the town.

A cannon about four feet long and of about three and a half or four inches in the bore, cast at the foundry by the workmen there, used for firing salutes, was charged to the muzzle with deadly missiles and planted on the river bank, as it was feared that the expected enemy would come by steamboat. A steamer hove in sight, and being hailed, stopped and answered inquiries, had she not, there is no doubt but what the contents of the little piece of ordnance would have been sent whizzing toward her. Such was the feeling of the people on that long to be remembered night, that it was dangerous for any but avowed Union men to be out of doors. When the war began, and the call was made for volunteers for three months, two companies of infantry were raised forthwith. Company F, Captain Thomas C. Parke, and company G, Captain James I. Kuhn. These two companies were assigned to the First Virginia Volunteer Infantry, Colonel B. F. Kelley, and served three months. When the call was made for three years, company B, Captain James White, and company G, Captain Oscar F. Melvin, were organized and mustered into the First Virginia Volunteer Infantry, Colonel Joseph Thoburn.

A large number of the men of these companies enlisted as veterans and served until the close of the war. The call of 1862 for more volunteers found Wellsburg still ready and willing

to do her part in the great struggle. Company K, Captain Thomas White, sr., was organized, and was mustered into the Twelfth Virginia Volunteer Infantry. Many men were recruited for the different commands of infantry, cavalry and artillery, and assigned to the organizations of their choice. And yet, when another call was made, and Wellsburg and the county of Brooke were required to furnish more troops, and volunteers could not be obtained and a draft threatened them, her citizens offered a large bounty, raised the required number and avoided the impending draft. That Wellsburg was one of the foremost towns in the state in declaring herself for the everlasting union of the states, at the commencement of the rebellion, cannot be gainsaid. Union meetings were very frequently held. October 4, 1860, the Virginia Republican Club, of Brooke county, was organized. It had for its object the election of Lincoln and Hamlin.

All white male citizens over sixteen years of age were allowed to become members. The minute book of this club shows the names of fifty-three that joined the club at its organization. In 1868, the Grant and Colfax Club enrolled one hundred and nine. The organization of the first Republican club was attended with some misgivings. As is well known to the present generation, the principles advocated by Republicans were anything but popular in Virginia in 1860. It is for these reasons that we here give the account of this new party which came into power at the inauguration of the great rebellion. As will be seen, the members of the Republican club were but few, but in 1861, when he war commenced, the preservation of the Union being the watchword, party was mostly laid aside, and an overwhelming majority rallied around the standard, and by word and deed labored for the cause. Patriotism ran high, flags soon made their appearance from several buildings. The first flinging to the breeze was that on the office of the Wellsburg *Herald*, and its editor and proprietor soon conceived the idea of placing the emblem of freedom at the head of his columns, with the words "NAILED TO THE MAST" attached, and it is there to this day, with every prospect of its remaining as long as the present proprietor controls the paper. The next one was placed upon the paper mill of Harvey, Manser & Co., soon followed by one on the mill now owned by Harvey & Bro., and they were soon flying at different places in town.

On one occasion there was a large Union meeting at the court house. The ladies of the town had made a very large flag. Sometime during the day, they with a number of gentlemen, assembled at the residence of E. F. Moore, where the flag was made. The ladies and gentlemen formed in double file, preceded by the band, and marched to the old Virginia House, bearing the flag upon their shoulders, where it was flung from the roof of the building amid deafening cheers. The crews of passing steamboats would pay their respects to the flag by sounding their steam whistle. The Pittsburgh and Wheeling packet S. C. Baker, was particularly attentive in her respects to the flag.

During the war a company of Home Guards was organized with William H. Harvey as captain.

In olden times there were two volunteer military companies in Wellsburg. The first was commanded by Capt. Congleton, which was probably the same that he commanded at Norfolk, Va., during the war of 1812–'14.

About 1837 or '38, the "Wellsburg Guards" came into existence commanded by Capt. Campbell Tarr. It was succeeded by the "Lafayette Guards," commanded by Capt. James McCluney. At present there is no military organization in the town.

Following is a list of soldiers as enlisted at Wellsburg during the war of the rebellion. The first company enlisted was called the "Enterprise," and was mustered into the United States army on the 14th day of May, 1861, at Wheeling Island by Major Oakes, of the United States army, for the term of three months. The following is the list of officers and privates of this company, afterwards known as Company F, First Virginia Volunteer Infantry:

Captain—Thomas C. Parke.
First Lieutenant—Oscar F. Melvin.
Second Lieutenant—E. W. Melvin.
Sergeants—J. A. Lewis, J. W. Plattenburg, G. M. White, and Wheeler Reeves.
Corporals—J. Jackson, C. B. Hall, George Amick, and T. Orrick.
Privates.—Jos. Aljo, J. H. Archey, Martin V. Anderson, Shepley Barnes, Wm. Brownlee, Geo. Blankensop, Jno. A. Briggs, D. F. Burchard, W. S. Bigger, Wm. A. Billingsley, R. Ball, J. Barratt, J. Brenamin, J. M. Clemens, F. Collins, J. Coen, Wm. Deighton, J. Dean, Chas. Davis, Lewis Davis, George Frazier, G. F. Frank, J. Foster, Robert Foster, T. C. Good, Wm. Griffin, Wm. Goudy, Henry Greir, J. B. Gilchrist, J. M. Haney, Wm. Howard, D. Ingler, W. Jilton, James Johnson, C. H. Kimberland, H. C. Kimberland, James Lazier, R. Letzkus, Wm. Melvin, Wm. Martin, A. McGrew, S. McCoy, J. C. Nicholls, Edward Nicholls, Robert Nicholls, Sam'l G. Nangle, S. D. Noland, J. Potter, C. Pilling, J. A. J. Palmer, James Reeves, Gabriel Robinson, C. Romp, Clark Riddle, Andrew J. Shearer, Wm. Shriver, Ed. Spraig, —— Shellett, W. H. H. Smith, J. Veite, Wm. White, Wm. Wetherell.

THE BROOKE OAKES GUARD

were mustered into the service of the United States Army, May 18th, 1851, by Major Oakes, at Wheeling Island, for the term of three months. The following is a list of the officers and privates:

Captain—James I. Kuhn.
First Lieutenant—James C. White.
Second Lieutenant—Albert W. Kuhn.
Sergeants—Thomas Bell, Edward Craney, Henry Russell, John Cogan.
Corporals—Thomas Duke, J. R. Donaldson, Jonathan Armstrong, Frank McBride.
Privates—Wm. Arnold, Thomas Arnold, James Barr, Alfred Bunker, E. H. Bayless, J. W. Bradshaw, Patrick Cronin, James Caldwell, Robert Caldwell, George B. Crawford, E. D. Cook, Thomas Carr, Elija Cole, Dennis Davis, George Dunn, E. W. Davis, Isaac Elder, Frederick Ferrell, Daniel Frazer, James Freil, Rodolphus Fox, Michael Fritz, John Fleming, John Gazaway, John Grim, Augustus Hively, Frank Hamon, Fred. Hall, jr., William Hindman, H. H. Hale, James Hamon, John W. Jacob, Wm. Lewis, John Lattimer, A. R. Murtagh, Henry Mather, Robert Moren, Thomas Merryman, George Marsh, J. G. McKonkey, James McNabb, John McGill, Joseph Noland, David O'Leary, B. S. Porter, Samuel Patterson, George Prather, John Rien, James Rungan, William Russell, Thomas A. Spence, Joshua Strond, James Smith, J. E. Smith, George Taylor, John Trash, John Upcraft, Wm. Walter, R. J. Wallace, Marshall Wright, Wlliam Winters, Benton Wright, Isaac Young.

Company B, First West Virginia Volunteer Infantry, was mustered into the United States Army, October 1861, at Wheeling, for three years, and mustered out of the service, November 26, 1864. The following list shows the changes from organization to muster out.

Captains—James C. White. Resigned January 1863; George M. White. Promoted First Lieutenant, May, 1863. Promoted Captain, January 16, 1863.
First Lieutenant—James McElroy.
Second Lieutenants—John W. Daugherty, transferred; Thomas H. McKee, promoted from First Sergeant; John F. Rien, promoted from First Sergeant.
Sergeants—John M. Clemens, James A. Russell, Robert M. Swords.
Corporals—John M. Nelson, Robert Waugh, James Caldwell, Thomas Miller, Jacob Updegraff.
Privates—W. H. Chambers, James M. Davis, John D. Gillespie, William Handle, James M. Jones, Isaac Jones, C. H. Kimberland, James McNabb, John McNabb, Samuel Patterson, George M. Prather, J. Perry Ross, Clark Smith, Samuel Still.
Prisoners of War—Henry H. Green, captured at Moorefield, September 14th, 1863; John C. Kimberland, captured at Moorefield, September 15th, 1863; Joe Noland, missing in action at New Market, May 15th, 1864; Henry C. Stock, captured at Moorefield; George D. Taylor, captured at Moorefield; Edwin Wells, captured at Moorefield.
Recruits—James E. Billingsly, John C. Crusen, Peter Conway, Henry C. Jeffers, Gamaliel Kems, Ezra Sines, Adam Swarr.

VETERANS RE-ENLISTED.

Sergeant—James M. Bums, January 25, 1864.
Corporal—William G. Roberts, January 23, 1864.
Privates—David W. Barcus, February 8, 1864; Erastus Carrins, January 23, 1864; James E. Calebaugh, January 23, 1864; Levi P. Davis, January 23, 1864; Marshall S. Green, January 23, 1864; James Halley, February 14, 1864; Daniel Kimberland, January 23, 1864; Thomas D. Merryman, February 14, 1864; Trovilla A. Russell, January 23, 1864; Sylvester Walters, January 23, 1864; Fredrich Behar, January 23, 1864; John C. Cunningham, January 23, 1864.

DISCHARGED FOR DISABILITY.

Sergeant—Andrew McLaughlin.
Corporals—John Gasaway and Daniel Daugherty.
Privates—Wilbur F. Devinney, Theodore Buckalew, John Cozan, William Crawford, Chas. S. Davis, Alvin Hall, Horatio Hamilton, John S. Jeffery, David Kerns, William I. Miller, Ebenezer F. Moore, James W. Murray, William McCafferty, Ebenezer McElroy, Burney McKeever, David Noland, Peter O'Hanlin, William Plummer, Edward S. Robinson, Washington P. Robinson, Benj. F. Shearer, Andrew J. Thompson, E. J. Thompson, William H. Wilson, Henry C. Durret, Asa C. White.

TRANSFERRED.

Privates—Thaddeus Clark, First Reserve Corps; Isaac Kelley, First Reserve Corps; Alexander Martin, First Reserve Corps.

DIED.

Privates—Shadrack Davis, Winchester, Va., May 23, 1862; Samuel Dunlap, Richmond, Va., November 3, 1863; William Fier, Winchester, Va., March 23, 1862; James Gillespie, Alexandria, Va., August 8, 1862; F. Briall, killed, Piedmont, June 5, 1864.

DESERTED.

Privates—Sophina Keller, Wheeling, October 4, 1861; Martin Walters, Columbia Bridge, Va., April 8, 1862; Jacob Garho, Fredricksburg, Va., May 5, 1862; James S. Davis, Cumberland, Md., August 31, 1863.

Company G, First West Virginia Volunteer Infantry, was mustered into the service of the United States Army, October 30, 1861, for three years. The following list shows the changes from the date of muster to the expiration of the service:

Captain—Oscar F. Melvin.
First Lieutenant—Thomas Lloyd.
Second Lieutenants—Chester B. Hull, transferred to company D; Wm. J. Robb, promoted from first sergeant, transferred to company A; Joseph Adams, promoted from first sergeant.
Sergeants—John Blankensop, jr., David Work.
Corporals—Robert W. Strobel, Eli C. Corbley, William Gundy.
Privates—Brise Brenheur, Jacob Coates, Andrew Corbley, Oscar F. Crawford, William Hall, William Howard, Robert R. Moren, James S. Parish, Clark Riddle, Jacob Soles, Oliver B. Thompson, Joshua Winters.

PRISONERS OF WAR.

Private—Wm. B. Shrimplin.

RECRUITS.

Privates—David Barcus, March, 1862; George B. Crawford, August, 1862; S. W. Cunningham, February, 1864; James Cook, February, 1864; John C. Cannan, March, 1864; Joseph M. Gonter, February, 1864; James C. Nicholls, March, 1864; William Slimer, August, 1862; Andrew J. Smith, March, 1864; Cyrus H. Wable, March, 1864.

VETERANS RE-ENLISTED.

Sergeants—W. H. Melvin, February, 8, 1864; Thomas C. Good, February 22, 1864.
Corporals—George W. Edie, February 22, 1864; George Montgomery, February 8, 1864; William Brownlee, February 8, 1864; William H. Cord, January 26, 1864; George A. Frazier, February 8, 1864.
Privates—John Adams, February 8, 1864; C. B. Armstrong, January 26, 1864; Shepley Barnes, February 8, 1864; John R. Connell, February 8, 1864; Joshua Curfman, February 8, 1864; John N. Edie, February 8, 1864; John Kelley, February 8, 1864; Daniel L. Kerr, February 8, 1864; Robert McCausland, February 8, 1864; John T. McAdams, February 8, 1864; Edward Nicholls, January 26, 1864; John C. Pugh, February 8, 1864; John W. Plattenburg, February 8, 1864; James Robinett, January 26, 1864; James T. Rose, February 8, 1864; Peter Shinner, February 8, 1864; Andrew J. Shearer, February 8, 1864; F. M. Torreyson, February 8, 1864; Charles Work, February 22, 1864; Valentine Williams, February 8, 1864; Frank Zimmerman, February 8, 1864; Albert E. Bonsall, August 30, 1864.

DISCHARGED.

Sergeants—William Clohan, promoted to Co. K., in 1862; Jas. E. Morrow, promoted to Co. E., in 1862; John W. Plattenburg, promoted to Co. K., in 1862.
Corporals—James M. Henry, disability, in 1862; James Lazear, disability, in 1862.
Musician—Robert Nicholls, jr., disability, in 1862.
Privates—John A. Bonsall, disability, in 1862; Samuel Calendine, disability, in 1863; John Camhouse, disability, in 1863; John Cruson, disability, in 1862; John F. Dowler, disability, in 1862; John Glass, G. O. War Dept., in 1862; Isaac Jonas, dssability, 1862; Isaac Johnson, disability, in 1863; Jos. Letzikus, disability, in 1862; Horace Langworthy, disability, in 1863; Calvin Lowry, disability in 1863; George W. Lazear, disability, in 1863; Wm. A. Marshall, disability, in 1863; Samuel McCann, G. O. War Dept., in 1862; Joseph McConkey, disability, in 1862; Samuel McCoy, G. O. War Dept., in 1862; James McSwords, disability, in 1862; Samuel G. Nangee, disability, in 1862; Benjamin L. Parsons, disability, in 1862; William Springer, disability, in 1863; Philip Whitim, disability, in 1862; Joseph H. Woodward, disability, in 1863.

TRANSFERRED.

W. G. Bonsall, Quartermaster Sergeant; Henry J. Johnson, Sergeant Major; Richard Ball, Veteran Reserve C.; Thomas J. Dillon, Veteran Reserve C.; James Wilson, Sergeant Major, vice Johnson promoted; William Wincher, Veteran Reserve Corps.

DIED.

Benjamin McHenry, Cumberland, Md., in May, 1862; Thomas Noon, Clareysville, Md., May 11, 1862; John Shriner, at Staunton, Va., of wounds, June 16, 1864; John Gornell, killed at Winchester, July 24, 1864.

DESERTED.

Thomas J. Cochran, in 1862.

List of Company K, Twelfth Regiment West Virginia Infantry Volunteers, showing its condition on the 3d day of December, 1864, together with a complete record of the changes that have taken place since its organization. Mustered into the United States army, August 30, 1862, for three years.

Captain—John B. Jester, promoted captain November 1, 1863.
First Lieutenant—John R. Brennaman, promoted first lieutenant November 1, 1863.
Second Lieutenant—John A. Briggs, promoted second lieutenant April 20, 1864.
Sergeants—Thomas H. Marks, Rowland F. Craig, George A. Baxter, W. B. Wells, Edward J. Smith.
Corporals—Alexander McConneha, Benjamin Harvey, Joseph E. Harding, Richard Mahan, John M. M. Roberts, William Rush, George Glass, Albert Caldwell.
Privates—Robert Arbaugh, Rufus J. Burgoyne, Elias L. Britt, Martin V. Brownlee, Daniel Baxter, James E. Brownlee, William A. Billingsly, James Cupples, John B. Cariens, David Cornelius, Jonathan Cox, Thomas Deganno, David S. David, John B. Everett, John W. Fenwick, John Freshwater, John J. Glass, John W. Green, John B. Gilchrist, Henry M. Hall, John H. Hendricks, Lewis C. Hall, Marshall Hays, Samuel Hindman, John H. Haney, Wm. C. A. Houston, Eugenius Hunt, John Kimmins, Jacob Knipple, McKendra Kelley, Philip Lucas, Joseph Marsh, George W. Maxwell, Jacob McCormick, Arthur F. McNally, William McHugh, James E. Montgomery, Charles E. W. Mason, Nathaniel Nelson, H. C. Plattenburg, William Philips, James A. Perkins, James M. Pepper, Gabriel Robinson, Anson W. Robinson, Jesse Robinson, Martin J. Roberts, Clemens Speidel, Hugh Scott, Benjamin Stock, W. H. H. Smith, Matthew Swan, George Strong, Stephen S. Sears, Clarence A. Smith, George W. Tetter, Joseph H. Williams, Wm. Pleasant Wise, George W. Williams.
Bugler—Harvey H. Young.

DISCHARGED.

Captain—Thomas White, resigned August 1, 1863.
Sergeant—H. C. Kimberland, disability, 1863.
Corporals—Bazel B. Lee, disability, 1863; Augustus C. Hall, disability, 1863.

Privates—Wm. T. Kelley, disability, 1863; John Keith, disability, 1863; James Smith, disability, 1863; John Thompson, disability, 1863; Joseph S. Amey, disability, 1863.

DIED.

Privates—Joseph R. Fleming, at Romney, W. Va.; Leonard C. Hall, at Cumberland, Md.; William Paden, at Romney, W. Va.; Robert Homer, at Winchester, Va.; Joseph A. Davis, at Clarksburg, W. Va.; Robert D. Sims, at Berryville, Va.; Derias Wright, at Moorefield, W. Va.; Joseph Plummer, at Annapolis, Md; Wm. C. Holbritter, killied at Piedmont W. Va.; Albert White, killed at Piedmont, W. Va.; James White, killed at Lynchburg, Va,

DESERTED.

John Algoe, 1864; Eli Adams, 1864—returned afterwards; Isaac Crooks, 1864; James E. Fleming, 1864.

Belonging to other organizations were the following:

First Va. Volunteer Cavalry, Isaiah Roberts. Discharged, 1862; Robert G. Dorsey, First Virginia Volunteer Cavalry; John Q. Roberts, Twenty-fifth Ohio Infantry; Company K, Fifteenth Regiment, Virginia Volunteer Infantry, John T. Moren, Isaac M. Johnson; Andrew McLaughlin, Company K, Fifteenth Regiment, Virginia Volunteers, James R. Lazear, Daniel Daugherty; Company C, First Regiment, Light Artillery, John B. Hager, E. A. Chamberlain, William Merryman, George Blankensop, William Blankensop (died at Washington, D. C.), John W. Jacobs, Thomas Duke—transferred to U. S. Navy; Gen. I. H. Duval, Major of First Virginia Volunteer Infantry, three months service, also Major of First Virginia Volunteer Infantry for three years, Colonel of Ninth West Virginia Volunteer Infantry, September 9, 1862, promoted to Brigadier Major General by Brevet. James Connell, United States Navy.

The above lists of soldiers are taken from the reports of the Adjutant General, published 1864-5. There may be some citizens that were soldiers of other organizations. The names of such as belonged to this state and are reported, and those out of the state personally known to the compiler, are given.

BUILDING ASSOCIATIONS.

The Wellsburg Building Association was organized October 20, 1874; 300 shares subscribed at $150 each; Thos. Everett, president; Thomas M. Lloyd, treasurer; Wheeler Reeves, secretary; Hugh Barth, Lewis Hall, Ed. Hobbs, sr., H. G. Lazear, and W. H. Harvey, directors. Dues twenty-five cents per week on each share.

On the 29th day of April, 1879, a new Building and Loan Association was organized; shares $150 each; dues twenty-five cents per week; J. E. Curtis was elected president, Thomas M. Lloyd, treasurer, and Wheeler Reeves, secretary.

COUNTY OFFICIALS

serving in Wellsburg, January, 1, 1879: J. E. Curtis, sheriff; T. H. Marks, clerk of circuit court; C. B. Turner, clerk of county court; Joseph Curtis, deputy sheriff; John Halley, constable; S. S. Quest and William Jones, justices of the peace.

FIRE COMPANIES.

Wellsburg possesses three hand fire engines of ancient pattern and make. They are known by name respectively as the Huron, Union and Enterprise. The former is a rotary and is operated by cranks, the second is worked by levers or brakes, and the third is operated by the men in a sitting position, the pump being horizontal and the handles in the same position. The supply of water is obtained from the river or cisterns located at various places in the town, and sometimes from the public wells. They were in their day good machines.

The citizens of the town obtain water for domestic purposes from wells, cisterns and the river. That which is most generally used in the preparation of food is taken from the wells which are from forty to sixty feet in depth, walled with stone, and furnish a good supply the year round of clear, cool water, known as limestone water. That used for other household purposes is hauled from the river or paper mills where water from condensed stream is had, or from cisterns or barrels located under the eaves of the house tops.

MERCHANTS, BUSINESS MEN AND MECHANICS.

The present merchants of Wellsburg are: John Reid, South Charles street, groceries and provisions; Mrs. McNally, South Charles street, dry goods and notions; C. Meyer, South Charles street, groceries, provisions, boots and shoes and general merchandizing; Hugh Barth, South Charles street, dry goods, groceries, provisions, &c.; Barclay & Jacob, northwest corner of Charles and Liberty streets, groceries, provisions, hardware and paper sack manufactory; W. W. Clendenen, North Charles street, groceries, provisions, notions and bakery; L. A. Grimes, groceries and provisions, North Charles street. [Liberty street, on which is the market house, is the dividing line between north and south in designating streets.] Misses Magee, North Water street, millinery and notion goods; James M. Jones, North Water street, groceries, provisions and notions; Hancelot McConnell, North Water street, fancy boot and shoe maker; H. E. Magee, North Water street, copper, tin and sheet iron worker; J. M. Charnock, South Charles street, copper tin and sheet iron worker; Wm. Simpson, North Water street, surgeon dentist; C. B. Brashear, Liberty street, surgeon dentist; Wellsburg National Bank, northeast corner Water and Urana streets, W. K. Pendleton, president, Wilson Beall, cashier, John S. Beall, assistant cashier; Clemens Speidel, livery stable, northwest corner Urana and Water streets; Clemens Speidel, southeast corner Urana and Water street, confectionery and ice cream; T. H. Marks, southwest corner Urana and Water streets, furniture and undertaking; George B. Crawford, Queen street, wood worker and repairer of household goods; Anderson Nelson, blacksmith, Fleet street; Harvey & Co., manilla paper mill, southeast corner of Fleet and Factory streets; Harvey & Bro., straw paper mill, foot of Prospect street, north side; Everett, Bracken & Co., Acme mower works, North Water street; Isaac W. Clemens, livery stable, Urana street; W. J. Briggs, marble works, North Charles street; L. Easterday, boot and shoe maker, North Charles street; Mrs. E. J. St. Clair, millinery, North Charles street; W. R. Curtis, surgeon and physician, North Charles street; J. T. Hall, physician, North Charles street; W. P. Campbell, attorney at law, North Charles street; Robert Thompson, carriages and buggies, South Charles street; Josiah Wynn, blacksmith, South Charles street; John Brown, livery, South Charles street; Levi Pitner, blacksmith, South Charles street; William Fouts, blacksmith, Ohio street; William Frank, tannery, South Commerce street; George H. Crawford, lumber dealer, northwest corner of Commerce and Liberty streets; Tweed & White, planing mill and lumber dealers, northeast corner of Urana and Yankee streets; John D. E. Farrett, carpenter and cabinet maker, south west corner, of Urana and Yankee streets; T. C. Parks, carpenter and cabinet maker, North Charles street; Robert Scott, carpenter, North Commerce street; James Lawson, carpenter, with R. H. Scott; Samuel McConnell, boot and shoe maker, adjoining T. H. Marks; Jas. W. Lattimer, saddlery and harness, with Sam'l McConnell; G. W. Caldwell, attorney at law, North Water street,; Henry M. Hall, post master, Emma Hall, deputy; Mrs. Sallie Lewis, confectionery and ice cream saloon, North Water street; Mrs. Clara Haney, millinery, opposite G. W. White & Co.'s; G. W. White & Co., dealers in and manufacturers of boots and shoes, North Water street; S. A. Lockard, agent Singer Sewing Machine company, North Water street; Philip Good, confectionery and bakery, North Water street; J. B. Harding, dealer in boots and shoes, North Water street; A. C. Hall, groceries and manufacturer of common cigars, North Water street; Wells Schell, dealer in boots and shoes, North Water street; Cooper & McClellan, druggists, under Hudson House; Hudson House, J. B. Hagen, lessee; S. George, banker, Hudson House; Lloyd Bowman, barber, Hudson House; R. F. Craig, clothier, Hudson House; Thomas M. Lloyd, notions, Hudson House; John D. Lloyd, furniture and undertaking, Hudson House; Applegate & Son, dry goods, North Water street, Curran building; D. Brown & Co., grain dealers, Curran building; D. W. Stier, dry goods, Curran building; Dr. T. H. Weirich, druggist and physician, northwest corner Liberty and Water streets; C. H. Bracken, dry goods and groceries, southwest corner Liberty and Water streets; E. A. Frost, druggist, South Water street; J. M. Duval & Son, groceries, provisions and dry goods, South Water street; William Jones, tailor, North Water street; Mrs. A. E. Nicholls, seamstress, North Water street; W. P. McKelvey, tailor, South Water street; Jas. Hervey, attorney at law, South Water street; Lewis Wellhardt, barber, South Water street; Henry Enrick, merchant tailor, South Water street; R. Helsey & Bro., cigar makers, South Water street; J. S. Poole, news dealer and varieties, Tarr build-

ing; Thomas P. Grimes, dry goods, Tarr building; Eugene Tarr, prosecuting attorney, Tarr building; W. C. Kirker, physician, South Water street; Mrs. Gelsthorpe & Son, livery stable, east of Granite House; H. G. Leazear, coal dealer, North Water street; S. S. Quest, south east corner Water and Ohio streets, cabinet makers; Granite House, Mrs. Jno. Gelsthorpe & Son, South Water street; Roney & Hall, South Water street, dry goods, groceries and grain; Dr. Davis, physician and druggist, South Water street; Hugh Scott, carpenter, South Water street; Misses Fennick, seamstresses, South Water street; John McNally, carpenter Washington street; W. T. Taney, attorney at law, North Water street; J. B. Somerfield, attorney at law, Tarr building; I. C. Wright, attorney at law, with S. S. Quest; Joseph Montgomery, saddlery and harness, Liberty street; S. L. Caldwell, cigar manufacturer, Liberty street; Marcellus Roberts, cigar maker, with S. L. Caldwell; A. J. Shearer, cigar maker, with A. C. Hall, Dr. John M. Cooper, at Hudson House, drug store; Peter Shuey, butcher, at Market House; Joseph Murphy, butcher, same place; T. H. Lewis & Bro., butchers, same place; G. W. Bowman, butcher, same place; Wm. M. Crawford, wagon and carriage maker, Walnut street; Jos. Ralston, teamster, North Yankee Street, R. Moren, plasterer, North Charles street; John Stewart, plasterer, South Charles street; Daniel J. Davis, pastor M. E. Church, adjoining parsonage; W. A. Mackey, pastor Presbyterian Church, parsonage on North Water street; L. S. Fleming, pastor Protestant Methodist Church, North Commerce street; Disciples Church, no pastor; Episcopal Church, A. Buchanan, pastor; Catholic Church, Rev. Father Huber, at the Church; Nathaniel Nelson, engineer, North Yankee street; John I. Moren, engineer, North Charles street; John Patton, engineer, North Water street; Andrew Applegate, drayman, South Charles street; Charley Jacobs, drayman, South Charles street; Reuben Patterson drayman, South Yankee street; William McCammie drayman, South Yankee street; Joseph Chamberland, drayman, South Yankee street; Alexander Chambers, drayman, South High street; Jackson Jones, drayman, North Charles street; R. G. Dorsey, drayman, North Commerce street; George Ralston, expressman; Barcley Jacob, Agent Adams Express Company; J. E. Curtis, Agent, Peabody Insurance Company; J. W. Cooper, General Insurance Agent; Thomas Everett, General Insurance Agent, and wool buyer; Samuel George, wool buyer; Henry Zilliken, watches and jewelry, North Water street; George W. Moren, carpenter, North Yankee street; Henry Leach, engineer, North Charles street; W. H. Baird, boot and shoe maker, Walnut street; Thomas W. Griffin, boot and shoe maker, North Commerce street; Martin Easterday, boot and shoe maker, South Charles street; Waugh & Myers, proprietors of steam grist mill, South Yankee street; Andrew Hebrank, brewer of common beer and porter, South Commerce street; Don Griffin, tailor, North Commerce street; Lawrence Giffin, moulder, North Commerce street; George Blankensop, moulder, South Yankee street; Joseph Blankensop, moulder, North Charles street; James W. Murry, cigar maker, Urana street; J. G. Jacob, editor and proprietor of the *Herald;* James F. Murphy, printer on *Herald;* Alfred Glass and F. C. Glass, editors and proprietors *Pan-Handle News;* William Richardson, attorney at law, North Water street; Joseph Gaune, stone mason, South Charles street; John Halley, stone mason, Liberty street; Clemens Speidel, stone mason, south east corner Water and Liberty streets; O. F. Crawford, coal miner, Walnut street; E. J. Roberts, High streets; Frank Roberts, Water street; Mr. Schwartz, R. Lazier, R. Mackey, A. Stephenson, J. Deighton, S. Patterson, Wilson Knight, Bazil Perkins, coal miners; Wm. Melvin, painter, North Water street; James Buchanan, painter, North Yankee street; John Blankensop, jr., painter, North Water street; Wm. Smeidd, painter, South Water street; Henry Bennett, blacksmith, North Commerce street; Edward Nicholls, tailor, North Charles street; Robert Nicholls, bricklayer, North Charles street; B. F. Jacobs, Emery Jacobs, Sam Jacobs, bricklayer, Steubenville road; Thomas Boyd, surveyor, Steubenville road; James Matthews, bricklayer, Walnut street; Edward Fenwick, bricklayer, Liberty street; John Fenwick, teamster, Steubenville road; Jacob & Buford, dairymen, Steubenville road.

Ohio River Pilots—J. H. Haney, William Oakes, Frank Williams and Nathan Potts,

We have given the names of the foregoing that it might show the industries of the town.

So endeth the history of the town of Wellsburg. Such as it is we lay before the public, with the belief that what we have recorded is correct in every particular, as the events and dates were obtained from records or from first-class verbal authority.

CHAPTER LII.

BIOGRAPHICAL SKETCHES AND FAMILY RECORDS.

ALEXANDER CAMPBELL.

THIS eminent man was born in the county of Antrim, Ireland, parish of Broughshane, September 12, 1786. His ancestors on both sides migrated from Scotland to Ireland. His mother's ancestors, however, were French Huguenots, who fled from their native country upon the revocation of the Edict of Nantes, by Louis XIV., sought refuge, it appears, first in Scotland, from whence they subsequently migrated to Ireland. His father, Thomas Campbell, was born in county Down, Ireland, February 1, 1763. He was of a mild and quiet disposition. In his earlier years, he became the subject of deep religious impressions, and acquired a most sincere and earnest love for the scriptures. The cold formality of the Episcopal ritual, and the apparent want of vital piety in the church to which his father belonged, led him to prefer the society of the rigid and devotional Covenanters and Seceders, and to attend their religious meetings.

Having a strong desire to devote himself to the ministry in the secession church, the matter was broached to his father who disapproved of it. He, indeed, had but little sympathy in his son's religious change, being attached to the Church of England, and determined, as he used to say, "to worship God according to act of Parliament."

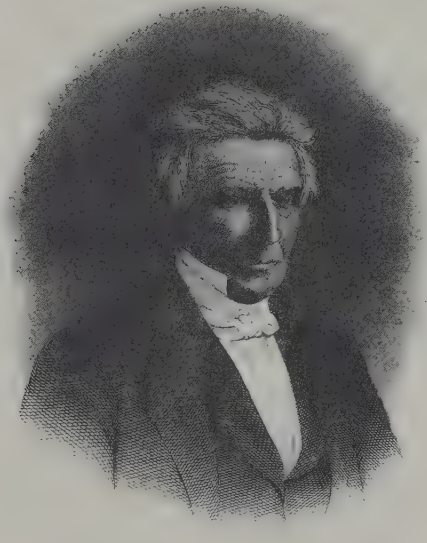
His father having finally acquiesced in his purpose, he went to Glascow, where he became a student at the university, and after completing his course of study, he left that institution and engaged in the ministry, and in June, 1787, he married Miss Jane Carmeigle, and September 12, 1788, Alexander, their first child, was born. His small salary soon became insufficient to support his increasing family, and other methods to increase his income were resorted to. He removed to Rich Hill and took charge of an academy, in addition to his ministerial duties. The multiplied labors of this addition broke down his health, and he was advised to try the benefits of a sea voyage to restore it.

With sore regrets, he relinquished his charge, and embarked for America, April 8, 1807, to see his native land no more. The family remained behind, and the son, Alexander, went to the Glasgow University, and completed his studies, then with the family, followed his father, in October, 1808.

Thomas Campbell was a man of medium stature, compactly built, in form and in feature, eminently handsome. His forehead, was somewhat square, and massive, his complexion fair and ruddy, his soft gray eyes, full of intelligence—the whole expression of his countenance, indicative of deep reflection and kindly feeling. He was a rigid disciplinarian; methodical and exact in all his business habits, and strictly instilled the same principles into the mind of his son Alexander. He died January 4, 1854, lacking only one month of ninety-one years.

The mother of Alexander, in personal appearance was tall, but well proportioned, exceedingly erect and dignified in her carriage, but, at the same time, modest and remarkably retiring in her disposition. Her features were strongly marked, and, in this respect, her son Alexander bore a striking likeness to her. The Roman nose, the expression and color of the eyes, surmounted by prominent frontal developments, the outline of the mouth, the general form and character of the face, so characteristic of the son, were equally so of the mother, though softened by the greater delicacy of the feminine in features. Her complexion was extremely clear and fine, contrasting agreeably with her abundant brown hair. She had been left an orphan, in her seventh year, by the death of her father, and, as the only daughter of a pious mother, had been brought up with tender affection, and in the nurture and admonition of the Lord, from her early infancy, so that she had become noted for her sincere devotion to religious duties. At the time of her marriage she was in her twenty-fourth year, having been born September, 1763.

At an early age, Alexander was sent to an elementary school in Market Hill, then was sent to an academy at Newry, under the charge of his uncles Archibald and Enos. Upon his return home, his father endeavored to superintend and continue his education, but he found him so exceedingly devoted to sport and physical exercise, that it was difficult to fix his attention



Affectionately and truly yours
A. Campbell

upon books. This uncommon activity of disposition seems at this time to have been his most striking trait. There was in his constitution no tendency to precocious mental development, nor did his peculiar mental powers begin to manifest themselves strikingly until he had nearly attained his growth. His extreme fondness for sport rendered him so averse to the confinement required in order to acquire learning, that study became to him a drudgery, and the tasks with which his over anxious father supplied him became dull and wearisome. About his ninth year, the French language was added to his other studies, but in this he appears not to have made a very satisfactory progress, if we may judge from the following anecdote, which he himself used, in after life, to relate among his friends with great glee: Having gone out on a warm day to con over his French lesson in "The Adventures of Telemachus," under the shade of a tree, he finally dropped asleep. A cow that was grazing near approached, and seeing the book lying on the grass, seized it, and before he was sufficiently awake to prevent it, actually devoured it. Upon making report of the loss, his father gave him a castigation for his carelessness, and enforced it by telling him that "the cow had got more French in her stomach than he had in his head," a fact which of course he could not deny. Certain it was, at least, that this was the *last* of "The Adventures of Telemachus."

On account of his great disinclination to confinement, his father at length concluded to put him to work on the farm with the laborers, in order to subdue his love of sport, and, as he said, "to break him into his books." He seems to have found field labor much more congenial, and to have worked hard for several years, until he had become a stout lad, full of health and vigor. At this time his intellectual nature began to assert its claims. He manifested a love for reading, and less inclination for out door exercise; and, with his father's approbation, betook himself to his studies again, filled with an ardent desire for literary distinction, and determined, as he said, to be "one of the best scholars in the kingdom." Although now diligently engaged under his father's guidance, in literary and grave pursuits, his natural vivacity and sportiveness, still demanded a sufficient amount of physical exercise, and he still delighted to engage, occasionally, in the games and amusements of youth. Having an athletic frame, and a hand unusually large, for one of his age, he soon made himself noted among his companions, for the largeness of his snow balls, and the force with which they were hurled. For the same reason he was expert in sowing grain, and loved to practice the art with the neighboring farmers, at the proper seasons.

But his greatest delight was to traverse the fields in search of game, to capture birds with nets, or with dog and gun, to rouse them from their hidden coverts. His indulgent parents freely sanctioned recreations at proper times, believing them conducive, if not absolutely necessary, to health and vigor. Thus we see realized the ideal of the educator, "a sound mind in a sound body." The careful and judicious training of these good and wise parents, in which his physical, intellectual and moral culture were so happily and harmoniously blended, prepared this remarkable man for the work he afterwards performed. His perfect physical development gave him a power of endurance that enabled him to endure the labor and fatigue of his extensive travels, through our own and foreign lands, to proclaim his principles, while his great intellectual power and the clear logic of his cultivated mind carried irresistible convictions of their truth to the minds of his hearers, and his candid honesty and sincerity impressed them upon the hearts of those who listened to his preaching.

Two thousand churches with one hundred thousand members in our own country, and the many followers that are found in every land, attest his success and the greatness of the work he performed, and although he has been called from the scenes of his earthly labor, still his work goes on. It follows after him.

Thomas Campbell had, at an early day, conceived the idea that the progress of christianity was greatly impeded by the barriers placed between the different denominations of christians, in the way of creeds and articles of faith made by human hands, and that if these barriers could be removed, and some common ground be found, upon which all the different denominations could stand, all professing christians would be united again, and with harmony and united effort, a more rapid spread of the Gospel would ensue. To effect this object he proposed that all creeds be discarded; that the object was to come fairly and squarely to the original ground, and take up things just where the apostles left them. In this way "becoming disentangled from the accruing embarrassments of intervening ages," they could stand on the ground on which the church stood at the beginning; declaring "where the scriptures speak, we speak, where the scriptures are silent, we are silent," that nothing should be required as a matter of faith or duty, for which a "Thus saith the Lord" could not be produced, either in express terms or approved precedent. It is probable that neither Thomas Campbell, or any of the advocates of his views, had, at that time, any intention or thought of forming a new religious party. On the contrary, the design of their efforts, was, perhaps, only to put an end to partyism and unite the different religious denominations by inducing them to accept the Bible as the only authorized rule of faith and practice, and to desist from their controversies about matters of opinion and expediency.

At this juncture the son, Alexander, arrived in this country and readily espoused the cause which his father and a few coworkers were laboring to build up. Alexander, by the versatility of his mind, and his energy and zeal in the cause, gave a new impetus to the movement. Their efforts to effect a union on the proposed basis failed, and finding it impossible to accomplish their object, by uniting the already existing churches, they resolved to organize a new church upon the plan for which they had so long labored.

Accordingly, in order to carry out this purpose more efficiently, it was resolved at a meeting held at the head waters of Buffalo, 17th of August, 1809, that they would form themselves into an association, under the name of "The Christian Association of Washington." They then appointed twenty-one of their number to meet and confer together, and, with the assistance of Thomas Campbell, to determine upon the proper means to carry into effect the important ends of the association.

As it had been found somewhat inconvenient to hold the meetings in private houses, it was thought advisable by the members to provide some regular place of meeting. The neighbors accordingly assembled, and in a short time erected a log building on the Sinclair farm, about three miles from Mount Pleasant, upon the road leading from Washington to that place, at the point where it was crossed by the road from Middletown to Cannonsburg. This building was designed, also, for the purposes of a common school, which was much desired in that neighborhood. Here Thomas Campbell continued to meet his hearers regularly. Here in the neighborhood at the house of a Mr. Welch, he wrote the celebrated "Declaration and Address," designed to set forth to the public at large, in a clear and definite manner, the object of the movement in which he and those associated with him were engaged. When this was finished, it was unanimously agreed to by the committee and ordered to be printed September 7, 1809. Alexander, after his arrival, always attended his father's meetings, and as he had already signified his determination to engage in the proposed reformation, his father, after some time, began to express the wish that he would take some public part in these meetings. From his youthfulness, however, and the fact that he was as yet unaccustomed to public speaking, this was for some time delayed, until at length, in the spring of 1810, his father being about to address a congregation at a private house (Jacob Donaldson's), told him that after preaching he would have a short intermission, and would expect him afterward to address the people. Accordingly, after the meeting was resumed, Alexander arose and spoke for a short time, chiefly, however, in the way of exhortation. His father appeared to be very much pleased, and at the close of his son's remarks, said, as it were, involuntarily, but loud enough to be heard by those sitting near him, "very well," and then went on to close the meeting. This was Alexander's first attempt at speaking; and although his remarks were brief and not in the usual form of a regular sermon, the result inspired him with confidence, so that, upon being afterwards urged to prepare and deliver a public discourse he agreed to do so.

At the advice and under the direction of his father, he at once devoted himself to the preparatory studies for the ministry. He abandoned all other cares, and applied his powerful and disciplined mind anew to the methodical study of the sacred Scriptures. Meantime his father had gathered together two small congregations, to whom he ministered, and who were agreed with him in the purpose of the proposed reformation. One of these was at Cross Roads, six miles northwest, and the other at Brush Run, some eight miles southwest of Washington, Pa. Before the latter of these, in May, 1810, Alexander Campbell preached his first sermon, on the text, "Therefore every one that heareth these sayings of mine, and doeth them, I will liken him to a wise man, that built his house upon the rock. And the rains descended, and the floods came, and the

winds blew and beat upon that house; and it fell not: for it was founded on the rock. And every one that heareth these sayings of mine and doeth them not, shall be likened to a foolish man, who built his house upon the sand: and the rains descended, and the floods came, and the winds blew, and beat upon that house, and it fell; and great was the fall of it." Matt. 7; 24–27.

The text was evidently chosen as suggestive of the proposed foundation of this new organization, and afforded a fruitful theme for the consideration of all human bases of ecclesiastical union and fellowship. It was received with the greatest enthusiasm by the entire congregation to whom it was addressed, and resulted in an immediate and unanimous call to the ministry. At this time his father and James Foster were the only official teachers recognized in the movement, and the two above named congregations, the only organizations formed upon the principles set forth in the "Declaration and Address." Alexander Campbell now added the weight of his rare powers, and the excitement everywhere to hear him became intense. In the absence of church edifices, meetings were held in the open air, and the groves in the valleys and upon the hill tops rang with the powerful voice of this bold and impetuous pleader for the authority of the word of God—above and against tradition, creeds, confessions of faith, and every human substitute invented to put ecclesiastic bonds upon religious freedom and Christian fellowship. Meantime these first movers in reform were themselves reforming. They had in the beginning only adopted the principle of reformation—that is, in all things, strict conformity to the word of God.

Though the struggle was for the re-introduction of primitive Christianity, Mr. Campbell, the younger, was now considered the champion of a new cause, and he went far and near, attracting immense concourses of admiring, and frequently of gainsaying hearers, stating the following as fundamental in all efforts to keep the unity of the spirit in the bonds of peace, viz:

"Nothing ought to be received into the faith or worship of the church, or to be made a term of Communion among Christians, that is not as old as the New Testament. Nor ought anything to be admitted as of Divine obligation in the church constitution or management, save what is enjoined by the authority of our Lord Jesus Christ and his Apostles upon the New Testament church, either in express terms or by approved precedent."

The subjoined extract followed as a legitimate corollary from the foregoing:

"*Christian union can result from nothing short of the destruction of creeds and confessions of faith, inasmuch as human creeds and confessions have destroyed Christian Union.*" That "*whenever the setting aside of creeds and confessions shall be attempted, Christians will give to the world and to the angels, and to themselves, proof that they do believe the word of God.*"

The establishment of the popular Buffalo Academy in 1819; the debate with Mr. Walker in 1820 and one with Mr. McCalla in 1823—both Presbyterian ministers—on the subject of baptism, served to intensify his studies and enlarge the area of his reputation. The work was accumulating on his hands, and in personal presence he was unable to perform it. The employment of the press became a necessity. The Baptists, generally, were favorably, and the Pedobaptists unfavorably aroused, and all over the west inquiry was being excited. August 3d, 1823, he issued Vol. 1, No. 1, of the Christian Baptist. The name was intended to intimate that Christianity professed and obeyed in immersion, was to be the burden of its pages. The ground plan and elevation and most of the specifications of his life work, were found in the seven annual volumes (now published in one super royal octavo) of this monthly. For clearness and comprehensiveness, though it had many faults, and was the most controversal, this was the best of Mr. Campbell's publications. He felt his power, and the impenetrability of his Scripture armor. All men competent to poise a lance, were freely invited into its arena, and they came from every quarter, Baptists and Pedobaptists, Congregationals and Episcopals, Calvinists and Arminians, Skeptics and Infidels. How they fell around him, the readers of that work know full well. No periodical has created so profound a sensation in modern times. At the expiration of seven years, it was merged in the new, more ornate, more diffuse and larger Millennial Harbinger.

About a year after the delivery of his first discourse, March 12, 1811, the subject of this address was married to Miss Margaret Brown, a true "help meet for him." Her parting address to her five daughters, preserved in the Christian Baptist, is thought to fairly represent this model mother. Alas, she lives now on earth only in her grand-children!

On the 25th of March he went, with his wife, to live with his father-in-law. His delight in active exercise, and the practical knowledge he had acquired of farming in his boyhood, led him at once to engage in assisting Mr. Brown in the management of the farm, in which he appears to have displayed his usual activity, and energy, devoting to it all the time he could spare from his ministerial duties. The physical exercise, of farm labor, which he greatly enjoyed did not materially interfere with the regular course of study which he was accustomed to prescribe for himself. When his horses, weary with the plow, were resting a little in the shade, he would take from his pocket the New Testament he always carried, and spend the time in committing a portion of it to memory, or in tracing out the order and method of a discourse upon some important theme. Being always an early riser, many quiet hours were appropriated to important studies before the household was astir; and when coming in, at meal time, warm and fatigued, he would recline carelessly upon a lounge with a book in his hands from which he would read aloud to his wife or others present.

Those who adopted the new faith were too widely scattered to take membership in the Brush Run Church, which owing to removals, scarcely preserved its original numbers.

By this time the advocates of these new principles became fully convinced that on account of the continued hostilities of the different parties it was necessary that the Christian Association should assume the character of an independent church, in order to the enjoyment of those privileges and the performance of those duties which belong to the church relation. It was with great reluctance that the step was finally taken, and a separation made from those whom it was desired to recognize as brethren.

At a meeting at Brush run on Saturday, May 4, 1811, a new church was organized.

At this meeting, Thomas Campbell was appointed elder, and Alexander was licensed to preach the gospel. Four deacons were also chosen, viz: John Dawson, George Sharp, William Gilchrist and Joseph Foster; and amid the prayers and solemn services of the day, they united in singing Psalm cxviii., from the thirteenth to the twenty-ninth verses, in the old metrical version, which, as seceders, they had been in the habit of using. They felt that the position they had now assumed was one of great responsibility, and one that was destined to lead to great results. They hoped, however, to have, in their relation, a happy end to that painful state of suspense in which they had hitherto been kept, in regard to the results of their religious movement. The next day—Sunday—the church held its first communion service. Alexander preached from John vi., 48: "I am that bread of life," and verse 58, last clause: "He that eateth of this bread shall live forever."

It appears at this time, that there were only about thirty members of the church. They were Thomas Campbell, Alexander Campbell, Mrs. Jane Campbell and her daughter Dorothea, James Foster and wife, John Dawson and wife, James Hanen and wife, Thomas Hodgens, sr., and his wife and son James Hodgens, William Gilchrist and daughter, with his wife and her mother, George Sharp, sr., and wife and son John, Thomas Sharp and a Mrs. Sharp, wife of George Sharp, jr., George Archer and wife, Abraham Altars, Margaret Fullerton, Joseph Bryant and John Donaldson.

Alexander, after maturely and carefully considering the subject, decided that it was his duty to be ordained, and he was accordingly set apart to the office of the ministry, with the usual forms, on the 1st day of January, 1812.

Of this fact the following certificate was presented in court, when, toward the close of the year, it became necessary for him to apply for legal authority to perform the marriage ceremony.

"We do hereby certify that Alexander Campbell, after a due course of trials preparatory to the work of the holy ministry, was, according to the principles of this church, regularly chosen and ordained a minister thereof, upon the first day of January, one thousand eight hundred and twelve.

Given under our hands at our church meeting, held at John Dawson's, this 1st day of September, 1812."

"THOMAS CAMPBELL,
Senior Minister of the first Church of the Christian Association of Washington Meeting, at Cross-roads and Bush run, Washington county, Pennsylvania.

"GEORGE SHARP,
WILLIAM GILCHRIST,
JAMES FOSTER,
JOHN DAWSON,
Deacons of the said Church."

"BROOKE COUNTY, December Term, 1812.

The foregoing was produced in court, and ordered to be recorded on page 122, of deed book F.

Teste . . JOHN CONNELL,
Clerk, B. C. C."

As many members of the Christian Association lived near Buffalo creek, it was about this time, resolved to erect a house of worship there. They accordingly selected a piece of ground on the farm of William Gilchrist, in the valley of Bush run, about two miles above its junction with Buffalo creek, as an eligible site for the building, which was to be framed. On the farm immediately adjoining, there was a saw mill, and the sons of the proprietor, David Bryant, one of whom, Joseph, was engaged in sawing out the necessary lumber. Meantime, it was agreed to erect a temporary stand near the ground chosen, and Alexander was requested to deliver the first discourse, which he did, standing beneath the shade of a spreading tree. The text he chose for the occasion was, in view of the subsequent events, singularly appropriate and prophetic. It was from Job VIII, 7: "Though thy beginning was small, thy latter end should greatly increase." In his introduction he illustrated the maxim from the works of nature, Providence and grace, showing how small the seeds of things, and how apparently insignificant the sources of mighty streams and the causes of the most important revolutions.

The Church at Bush run did not long maintain itself as a separate organization. It had already been reduced in numbers by removals, and in the spring of 1826, James Foster, John Wilson and others, sold out and removed. After these removals, the few remaining members at Bush run, continued for a time their connection with the Washington Association; but as it was more convenient for many of them to assemble in the vicinity of Mr. Campbell's residence, a church was finally constituted there, and the meetings at Bush run were discontinued.

Seeing the difficulty of making a decided impression upon the community around them, and infected with the prevailing spirit of migration, many of the members of the church were in favor of removing in a body to a more convenient place On the 13th of August, 1814, a meeting was called for the purpose of considering the matter. A committee was appointed to explore the country in order to find, if possible, a more suitable situation. The committee consisted of George Archer, Richard McConnell, Abraham Altars, John Cockens and Alexander Campbell, who, after examining different localities, reported in favor of Zanesville, Ohio, which report was accepted at a meeting held June 8, 1814, and the removal was to take place as soon as they could individually make the necessary arrangements.

It happened, however, that John Brown, for whose judgment Mr. Campbell always had great deference, was not much in favor of the project, and did not like to have his daughter and son-in-law to remove to so great a distance. Having also a desire himself to adopt some mode of life less laborious than farming, he determined to make Mr. Campbell a present of the fine farm on which he lived. He, therefore, frankly gave him a deed, in fee simple, of the entire premises, and removing at once with his wife to Charlestown, engaged there in the grocery business, becoming a member of the Baptist church on Cross creek, three miles above. This generous conduct of Mr. Brown, and respect for his wishes, occasioned, as a matter of course, an entire change in the proposed arrangements, so far as respected Mr. Campbell, who was now compelled to remain where he was. The other members of the church then, being unwilling to remove without him, relinquished, for the present, their intention of going to the west. Meanwhile, Mr. Campbell being thus providentially furnished with the means of carrying out his cherished wishes of public usefulness, immediately set to work with his accustomed energy to put the farm in good repair, and make such improvements as would enable him to be more abroad. These necessary duties occupied much of his time during the remainder of 1814, and the greater part of the year 1815, but were never allowed to interfere with his regular appointments for preaching. During this period, he was exceedingly laborious, and on one occasion is said to have laid up in one day, with his own hands, one hundred panels of rail fence. His being thus personally engaged in the labors of the farm, did not fail to commend him very highly to the good feelings of the neighboring farmers, who might otherwise have been disposed to regard with that jealousy, which the leveling spirit of republicanism engenders, one who had been brought up to a different vocation, and who, from his abilities and requirements, occupied necessarily a higher sphere. They were surprised, however, if not gratified, to find themselves surpassed at their own business by the scholar and preacher, whose plainness and simplicity charmed them, while his urbanity and hospitality placed him upon the most familiar and friendly terms with them all.

Aware of the great importance of obtaining the assistance of instructed and cultivated minds in the work to which he was devoted, and feeling the want, in his own neighborhood, of better methods of instruction than those which then prevailed, he determined, early in 1818, to open a seminary, chiefly for young men, in his own house, and take charge of it himself. He thought that by giving the youth of the neighborhood a better education than they could otherwise obtain, it would be the means of preparing some of them for the ministry. By boarding them in his own family, directing their studies, and imbuing their minds with a knowledge of the scriptures in their daily recitations and lessons of instruction which he kept up at the morning and evening devotions of his household, he thought the desired object might be gradually attained. With his well-known talent and energy, he had no difficulty in obtaining as many pupils as he desired.

They came from Pittsburgh, some from Ohio, a son of Dr. Joseph Doddridge, of Wellsburg, and many young men and young ladies came from their homes in the neighborhood to attend the day school. Devoting himself to his work with his usual assiduity and zeal, he endeavored to establish the strict method to which he had been accustomed. He soon found, however, that his materials were not the most suitable. Some who were almost grown young men, and who, on account of their insubordination, could hardly find admittance into any of the schools of Pittsburgh, attempted at first to create a rebellion against the strict rules which had been announced; but Mr. Campbell, seizing unexpectedly the ringleader with a strong hand, gave him so severe a castigation before the whole school with a whip he had provided, that he was completely subdued, and from that time the master's authority was perfectly established.

This academy, called the Buffalo Seminary, continued to flourish for a number of years.

Having found it inconvenient to send his letters and publications to mail at West Liberty, distant four miles, he, in 1827, induced the post office department to establish a post office at his own residence, which was named Bethany, there being a post town called Buffalo in Mason county. This was highly advantageous to him in many respects. Being postmaster, he enjoyed the franking privilege, which enabled him greatly to extend his correspondence. This privilege can be better appreciated when we inform the reader that the postage on letters in those days was from six to twenty-five cents, according to distance. This office Mr. Campbell held for over thirty-eight years.

By this time, through his writings, his public debates, and his many and extensive tours, through all the states of the Union, Mr. Campbell, aided by many able and devoted co-laborers, had attracted to the movement of which he was the great and acknowledged head, many myriads of zealous and earnest sympathizers. Congregations had been organized in almost every state of the Union, and in many localities they constituted the prevailing denomination. He had long seen and felt the growing want for an educated ministry, and earnestly meditated upon the best means for meeting the necessity. Already taxed to the utmost by the innumerable public demands upon his time and his energies, he, for some time, shrunk from undertaking what seemed the only alternative; but the necessity was urgent, and he resolved to postpone it no longer. In 1840 he commenced the great and crowning work of his life—the founding and endowment of Bethany College. He did not wait to raise the means from others, but with a sublime confidence in the merit of the enterprise, which was his strong characteristic in all that he undertook, he threw some *ten* or *fifteen* thousand dollars of his own capital into the business, and at once contracted for the erection of the necessary buildings. All the energies of his great mind and heart were thrown into the enterprise, and by the fall of 1841, the college was organized with a regular charter, board of trustees, faculty, and over one hundred students, assembled from ten or twelve different states of the American Union. He took upon himself not only the duties of president, but also the daily labor of lecturing on the Bible. Indeed, he made the daily and thorough study of the Bible the peculiar characteristic of Bethany College. As he regarded the Bible and the Bible alone

as the only authority to the church in all matters of faith and practice, and the only infallible source of a perfect morality, so he conceived it should form the basis of all Christian education, and be made a leading text-book in every college. This great thought he ever cherished, as the ruling principle of his college labors. To magnify the value of this book of books—to enforce its claims to authority over the hearts and consciences of men, to expound its great and eternal principles of righteousness and truth—and make men feel that it is the word of the living God, the divine standard of truth in religion, and of virtue in morality—these were ever prominent among the earnest and benevolent aims of his great and devoted life. To raise up men who would sympathize with him in these sublime aims, was the great motive which prompted him to superadd to his already oppressive labors the additional responsibility of Bethany College. Many of his friends thought that he would injure his public influence by confining himself to the College. In a letter just received from one of these, the writer says: "I remember visiting Bethany for the first time, when the old college was building. I said to Brother Campbell, You will, when engaged in the college, lessen your influence for good; you will not be able to travel and preach for us as you have heretofore done. Such was my short-sightedness. Said Bro. C. in reply, 'O brother, but I will rise up many young men in the college to preach the gospel in my stead, even when I am gone."

Early in 1830, he was, without seeking the position, chosen delegate to the Virginia Convention for amending the state constitution. Though not a politician, his known liberal and well digested sentiments commended him to the suffrages of the western citizens of that great state, at the moment when they demanded liberation from the burdens not shared by the tide water districts. Though he did not shine as a leader in this most august Virginia assembly of this century, he was intimate with the venerable and celebrated Ex-President Madison and Chief Justice Marshall, and a co-member of the judiciary committee with the latter. These gentlemen, with Philip Doddridge and the members of the convention generally, held him in high esteem. But never did our venerable brother shine more brilliantly as a preacher than during that spring, the First Baptist Church being constantly crowded in every part with anxious listeners, Mr. Madison often among them.

In October, 1827, his first wife died. She was a woman of remarkable excellence of heart and mind, and which were perpetuated in the lives of her five amiable and Christian-like daughters; and among her departing words, she indicated the person who in her estimation, would make a mother to her daughters, and a christian wife to her bereaved husband, if consistent with his own wishes. This providentially took place, and the lady indicated, baptized by himself in 1822, superadded to the endowments of the former, a rare energy, and a strength of constitution and mind which not only relieved Mr. Campbell of all necessity of household and farm affairs, and thereby enabled his mind undisturbedly to grasp the mighty idea of his mission, but also, by well timed suggestions (his constant practice being to read aloud to her his more important essays), to smooth the asperities of expression, and by a view from another standpoint to render them more acceptable to the reader. No man ever treated his wife with greater respect. No wife ever better understood her husband, or ever labored more assiduously and untiringly, under the influence of a sense of duty, as well as affection, to anticipate all his wishes; and it was one of the most affecting sights of his sublime and beautiful old age, to see with what affection he regarded her. If out of his sight but for a moment, he would ask "where is mother?" and repeat the question twenty times a day.

This second wife was Miss Selina H. Bakewell, whom he married in 1828. By his first wife he had eight children, all now deceased; by his second wife he had six—four of whom survive.

In height Mr. Campbell was full six feet, and from the first foot to the sixth, there was not one defective bone or muscle. Not a pound of flesh too much, not a pound too little. Toughness and power were palpably the two finest traits in it. Nor was ever a body more largely endowed with the true activities of life than his. His walk, his talk, his look and laugh were fervent with it. This through life, kept him from acquiring the courtly studied manner too often and always unwisely assumed by the great. A slow measured bow was something he could not make. Life rushed on too fast, it left him not the time. He shook your hand in passing you; looked back and made his hasty remark, and then darted on as if some grand inexorable current bore him away. This never sleeping energy of his nature often exhibited his body at a disadvantage. He had no time to study gestures. His act was as inartificial as the untutored child who does not know that the world has a criticism to make, and heeds not the world's criticism when it is made. When he walked he was apt to walk too fast, as if the leading idea were on the wing and he was pressed in the pursuit. When he rode he rocked on his horse, as if to aid his speed; and even when he talked he often articulated one word too hastily in hurrying to the next.

To give the reader some idea of the amount of labor he performed, we will give a brief synopsis of it. Besides his ministerial labors, and traveling many long and tiresome journeys, in most of the states of the Union, and making a trip to Europe, with the care and management of a college on his hands, which alone would require all the energy and ability of almost any ordinary man, he found time to write and edit:

The Christian System, 1823 to 1830,	7	Vols
Millennial Harbinger, 1830 to 1864,	34	"
Debate with Walker, 1820,	1	"
" " McCalla, 1823,	1	"
" " Owen, 1829,	1	"
" " Purcell, 1837,	1	"
" " Rice,	1	"
" " Skinner,	1	"
Christian System (revision of Christianity restored),	1	"
" Preacher's Companion,	1	"
New Testament—new version with notes, 3 editions,	3	"
Christian Hymn-Book, various editions, 4 or	5	"
" Baptism, its antecedents and consequences,	1	"
Life of Thomas Campbell,	1	"
Popular Lectures and Addresses,	1	"
Acts of the Apostles, revised translation, critical notes, etc.,	1	"

In all about sixty volumes.

Although Mr. Campbell never would accept any compensation for his ministerial labors nor ever engage in any business speculations, yet he acquired a respectable fortune. Wealth seemed to accumulate on his hands without effort.

His perfect system in all his business arrangements, and his indefatigable industry and methodical order in everything, greatly facilitated his labors, but his over-taxed powers finally began to fail. His memory failed him, and though at times, when aroused, his intellectual powers would seem to exhibit the brilliancy and strength of his earlier years, yet it was evident that the wear of sixty years of ceaseless exhausting labor began to show its effects in the worn out mental and physical powers of this great man. His strength continued to gradually fail him till on the 4th of March, 1866, in the bosom of his family and amid sorrowing friends he breathed his last. He lies buried in the family cemetery, on the farm on which he had always lived.

PHILIP DODDRIDGE—BIRTH, EDUCATION, MARRIAGE, &C.

Philip Doddridge, the subject of this sketch, was the second son of John Doddridge, who was a native of Maryland, born there in the year 1745, where on the 22d of December, 1765, he married Mary, the daughter of Richard Wells, of that State. They emigrated from Maryland to Bedford county, Pennsylvania; and there, Philip was born on the 17th of May, 1772. In the spring of 1773, they removed to Washington county, Pennsylvania. There is still standing near Middletown, in that county, an old church, known as the "Doddridge Chapel," on the farm where John Doddridge then settled, and where he continued to reside until he died, in April, 1791. It was built by himself for the use of the Methodist Episcopal Church, and it is said to have been the first chapel erected for that denomination west of the Allegheny mountains.

At that time this place was within the jurisdiction, and was supposed to be in the territory, of Virginia. But afterwards, when Mason and Dixon's line was established, and the western boundary of Pennsylvania was drawn due north from the western terminus of Mason's and Dixon's line, the residence of the Doddridge family was included, by a short distance, within the territory of Pennsylvania.

The writer has been furnished with what purports to be "an extract from the records of the Doddridge family," in which it is alleged that "John Doddridge was the son of Joseph and Mary Doddridge." There is reason to doubt the correctness of this statement. There still remains in possession of a niece of the subject of this sketch (Mrs. Polsley, wife of Hon. Daniel Polsley,

of Point Pleasant, West Virginia), and old book—"Hall's Meditations"—printed in London in 1617, which appears to have been a kind of *heir-loom* in the family. On the title page of this book there is a memorandum in the hand writing of John Doddridge, as follows:

"Once the property of John Charlton, of Fredericktown, Maryland. After his decease, the property of Joseph Doddridge, of the same place. After his decease, it became the property of Philip Doddridge, son of Joseph Doddridge. Written by me, January 1st, in the year of our Lord, one thousand seven hundred and eighty-seven.

JOHN DODDRIDGE.

Judge Polsley, from whom we make this extract, adds: "This John Doddridge, although he does not say so, was the son of the *elder* Philip, and the father of *our* Philip." It is possible, however, that this John Doddridge, although he does not say so, may have had a brother, named Philip, who was the last named proprietor of the book."

The first ancestor of the family in this country, came from England, and settled in the colony of New Jersey. He was of the same stock as the celebrated Philip Doddridge, author of "The Rise and Progress of Religion in the Soul;" and was said to have been nearly related to him.

During the minority of young Philip, the facilities for acquiring an education, were very meagre in the vicinity of his residence. There were neither colleges nor academies there; and the common schools were of an inferior character.

Indeed, there were few schools of any grade. Nor did the circumstances of his parents, enable them to send him to distant seats of learning. Until he was seventeen years of age, he was kept at home, working upon the farm; receiving, however, from his father, who was a "good English scholar," such instruction, as the intervals of their toil permitted the one to give, and the other to receive. At the age of seventeen, he was placed at school, in Charlestown (now Wellsburg, Brooke county, West Virginia), under the tuition of a gentleman by the name of Johnson. Here he remained a short time, devoting himself principally to the study of the latin language.

A writer* in the *American Pioneer*, shortly after the death of Mr. Doddridge, says:

"His vigorous mind drank in knowledge with the rapidity of thought, as a dry sponge absorbs water. It soon became a habit with him, to exercise his memory in changing the conversation around him into the idiom of his studies; and following his father in his evening and morning devotions, he soon learned to render his prayers into very good latin, and to converse with his teacher fluently. This close application to his books, although it invigorated his mental powers, yet enfeebled his body, and it became necessary, for awhile, to suspend his studies."

It is not surprising therefore, that growing up into manhood, in the midst of such disadvantages, dangers and difficulties, the early education of Mr. Doddridge was limited and imperfect—such as he would acquire from casual opportunities, and by his own unaided efforts, exerted amid the struggles for the means of subsistence. That he made good proficiency, under the circumstances, may be inferred from the following amusing incident:

At this early day, the principal commercial relations of the district of country where he lived, bordering on the Ohio river, were with the town of New Orleans, then under the dominion of Spain. The chief staples of trade from the section named, were flour and bacon, floated down the river, in what were called "Kentucky," or "flat bottomed boats."

Young Doddridge, not yet arrived at his majority, curious to see something of the world, made an engagement with the proprietors of one of these boats, to accompany them, partly in the character of a common laborer, and partly as supercargo, rendering such services, in consideration of his passage and support, during the voyage. Whilst the boat had stopped at Natchez, where the Spanish governor then resided, the youthful traveler availed himself of the delay to stroll about town, occasionally, to gratify his curiosity. During one of these rambles, he met the governor. Finding that neither of them understood the vernacular of the other, Doddridge addressed his Excellency in the Latin language, and was responded to in the same tongue. Surprised, that one so young, and, withal, so coarsely clad, could converse in a dead language, the governor prolonged the interview, his surprise being continually augmented by the sprightliness, intelligence and general information of the uncouth lad. The result was an invitation to dine at the executive mansion, and other flattering attentions. When the highly honored guest returned to the boat, he was boisterously saluted by the wondering crew, who, in the rude dialect peculiar to their class and vocation, demanded of him to know what the "old Spanish fool" could see in him worthy of such distinction. Young Doddridge facetiously replied that "It was all owing to his beauty." The point of this pleasantry consisted in the fact, that whilst he was, physically, strongly developed, he was by no means distinguished by the personal graces of an Adonis.

After his return from New Orleans, young Doddridge procured a few elementary law books, such as "Blackstone's Commentaries," "Bacon's Abridgement," "Coke upon Littleton," &c., and addressed himself to the study of law for two or three years, with little or no assistance besides his own resolution, industry and genius. Where he resided during this period of professional preparation, and for some years afterwards, we have no definite information; but on the 24th of December, 1829, he casually remarked in a debate in the constitutional convention of Virginia that "he had resided in the district where his home now was for thirty-three years." That home was Wellsburg, Brooke county; so that he must have settled there in 1796. And here he lived thenceforward until his decease.

In 1799, Mr. Doddridge married Miss Juliana P. Musser, of Lancaster, Pa., who survived him twenty-seven years. She died at Liverpool, Fulton county, Ill., in the year 1859.

The records show that at the first court held in Brooke county, Tuesday, May 23, 1797, Philip Doddridge was admitted to practice as an attorney in said court. Having thus established himself in life, as well as in the profession he had adopted, he pursued it with little intermission until the autumn of 1829. There is little in the routine of the life of a member of the bar to excite the public attention. The investigation of abstruse and naked questions of law before the courts, or the trial of issues of fact before juries, has seldom much attraction beyond the limited circle of those directly interested in the result. Nevertheless, his growing reputation as an able counselor and advocate soon extended beyond the quiet village where he resided, until he became famous in most of the counties of Northwestern Virginia, and finally came to be acknowledged as among the first, if not the first lawyer in that section of the state. His practice also extended into the state of Ohio, and into Western Pennsylvania.

An anecdote connected with his practice in Western Pennsylvania, will illustrate his power and tact as an advocate:

"A drover, stopping at a tavern, was murdered and robbed. Circumstances pointed to the landlord, who had hitherto sustained an excellent character, as the party guilty of the crime, and he was indicted for murder. An idler about the premises, assumed the character of an accomplice and accessory, and proposed to turn state's evidence, and testify that the landlord was the principal. The celebrated Ross, of Pittsburgh, Parker Campbell, and Mr. Doddridge, were employed in the defence—an array of professional talent not often united in the same cause. In addition to circumstances, which the accused was unable to explain, the testimony of this witness was explicit and positive as to his guilt. Against these the accused could only present a reputation of hitherto unsullied probity of character. But the circumstantial evidence, and the positive testimony of this self-confessed accomplice, were so direct and clear, that Ross and Campbell, had, apparently, made no satisfactory impression upon the jury. Campbell so told Mr. Doddridge, and appealed to him to come to the rescue. But Mr. Doddridge, leaning against the railing of the bar, in a rather careless attitude, addressed the jury to the following effect:

"May it please your Honor—gentlemen of the jury! I am not about to make a speech, but wish simply to relate a fact. Down in Eastern Virginia, in my younger days, there lived a celebrated lawyer, by the name of Gabriel Jones. He was of the old school of Virginia gentlemen."

Mr. Doddridge then described his cocked hat, his frilled shirt bosom and wristbands, his powdered hair, blue coat, white vest and cravat, silk stockings, and silver knee and shoe-buckles, so vividly, that if Mr. Gabriel Jones had been standing at the bar of the court, the impression of his appearance on the minds of the jury, could not have been more distinct and palpable:

"Well, gentlemen of the jury, when Fauquier county was set off, and held its first court, Mr. Jones went up there to attend to his professional engagements. He arrived on Sunday morning, where he found several junior members of the bar, who, being desirous of showing him such attentions as might be agreeable to him, invited him to go and hear a celebrated,

*S. P. Hildreth.

but somewhat eccentric preacher who was to occupy a pulpit in town that day. Arriving at the door, they stood aside for their honored senior to precede them. The preacher had commenced his discourse; and as Gabriel Jones walked in, he put his cocked hat under his arm, and reverently walked up the aisle. The preacher paused, and pointing his long finger toward him, exclaimed: 'Ah! you old sinner with your cocked hat under your arm; your hair not white enough, but you must powder it—you came into the house of God, after his services have commenced. I will appear as a witness against you in the day of judgment!' Jones looked his reprover calmly in the face, and said: 'I have no doubt you will, for in the course of a long practice, I have always found that the grandest rascal turned state's evidence.'"

It is impossible to transfer the manner of Mr. Doddridge to the page; nor is it pretended that the forogoing sketch does justice to the style and language of the recital. But the effect was electric. The jury was not only diverted by the anecdote, but its influence on their judgment, in connection with the good character of the accused, bore down the testimony of the witness, secured an acquittal of the accused, and saved an innocent man from an ignominious death.

The physical toil of an extensive legal practice in North Western Virginia, during the period of Mr. Doddridge's earlier life, was of no small magnitude. The area of most of the counties was large; and consequently, the seats of justice were far apart. The only practicable mode of traveling between them was on horseback, over rough, and sometimes, precipitous roads. He was sometimes retained in important cases in the Court of Appeals at Richmond, Va., involving the necessity of traveling three hundred miles, or more, in the saddle, across the Allegheny and Blue Ridge mountains.

It would be a tedious task to follow Mr. Doddridge in his constant attendance upon the courts, throughout the wide range of his practice; nor would the recital of his professional conflicts and achievements be very interesting to the general reader. It must suffice for this rapid sketch, to say, that his reputation as a jurist and advocate steadily increased as long as he lived; and at the time of his death, there was perhaps, no abler lawyer in the United States.

A writer in the *American Pioneer* (Dr. S. P. Hildreth,) says: "Mr. Doddridge, as is well known to the early inhabitants of Western Pennsylvania and Virginia, was, for many years, one of the most noted men in that region for his splendid talents at the bar; and has, probably, never been excelled, if he has been equalled in his discrimination in fathoming the depths of an intricate case, or in his powerful and logicalreasoning in unfolding it."

IN THE VIRGINIA LEGISLATURE.

The first important official position filled by Mr. Doddridge, so far as we have ascertained, was that of a member of the House of Delegates of Virginia, for the year 1815–16. He represented the extreme northwest point of the state—Brooke county. Northwestern Virginia was then, comparatively, *terra incognito*; and both its people and their political rights found very limited recognition in the exclusive and aristocratic sentiment of the Tide-water and Piedmont districts of the state. At this time, when Virginia was spoken of, it meant that part of her territory lying east of the Blue Ridge. Nevertheless, the abilities of Mr. Doddridge commanded a respect not usually extended to members from his section. He was placed on the committee on courts of justice; also, on the committee of finances; and during the session, was added to the committee on taxes on lands, &c. The journals of the House exhibit ample evidence of his industry, activity and influence during the session. It was at this session he commenced his opposition to the arbitrary and oligarchical principles of the then existing constitution of Virginia, which he never relaxed until the convention of 1829–30 crowned his efforts in behalf of popular rights with partial success.

He was again a member of the House of Delegates from Brooke for the year 1822–3; and was again assigned to its most important committees, viz: On courts of justice; on finance; and on schools and colleges; and was added to the committee on roads and internal navigation. It is not often that the same member, in a body so numerous as was the House of Delegates, is required to serve on so many committees at the same time.

During this session he manifested a lively interest in the promotion of education, both in the University of Virginia and in the primary schools. The proceedings of the legislature show many evidences of his intelligent and effective attention to the business of the house.

Mr. Doddridge was a zealous friend and persistent advocate of education—especially of the masses—the "sons of want and wretchedness," as he was apt to denominate them. The aristocratic hostility to such education was still prevalent in Virginia, and we have seen, in the speech just quoted, with what indignation he denounced this selfish and anti-republican policy. At a subsequent day of this session, when a bill, granting a loan to the Virginia University was under consideration, he offered an amendment to it, providing for the more efficient operation of the system of primary schools. He supported his amendment in a speech of characteristic force and ability, avowing his deep sense of the importance of popular education. He said he "was aware of the conflict of opinion that would ensue upon the amendment offered by him," but he was ready to meet it. He said that his "conduct had shown him as unqualified a friend of the university as any man in the house. But he was equally the friend of that system of education which embraced the poor and the needy. And if he was to give succor only to one of them, he should unquestionably award it to the primary schools." He spoke of the importance of elementary education to society, in its connection with colleges and academies, and through them with the university. The whole system was intimately connected. The university and the primary schools were, but in fact, the extreme links in the same chain. The success of the whole depended materially upon the union of the several parts. In conclusion, he "declared his determination not to vote for a cent to the university, unless something was done in aid of primary education."

The constitution of Virginia, as it then existed, contained no provision disfranchising persons guilty of fighting a duel. The progress and force of christian civilization had, however, so far prevailed as to procure a statutory enactment disqualifying those who should engage in this barbarious and felonious practice from holding certain offices. It seems, however, that not a few of the "hot bloods" of the state had so disqualified themselves, and a kind of *omnibus* bill was introduced into the legislature, relieving a considerable number of them from the penalty of the law.

The remarks made by Mr. Doddridge on this occasion are valuable, not so much because they expose the sophistry of the reasons urged in extenuation of the offense which had been committed by the parties seeking relief, as for the bold and emphatic language in which the turpitude of the offense itself is denounced. Mr. Doddridge classifies the duelist with murderers; and this is, clearly, a proper classification. And since this relic of barbarism seems to be assuming renewed prevalence and proportions in some sections of the country, it may not be amiss to briefly analyze and exhibit its true character. Surely death by the duel can be nothing less than murder. The laws of the country—of every civilized country—prohibit it. The law of God condemns it. And more than this, and to leave the duelist without excuse, the civil laws make ample provision for the vindication of every man's honor and reputation. But he withdraws himself from their protection, and voluntarily exposes his own life, whilst he seeks to destroy the life of another. Ordinarily, he is a coward, too. True courage is the offspring of moral principle. It cannot exist in the absence of a sense of moral rectitude in the bosom of the actor. Its distinguishing characteristic is inflexible adherence to what is right, and unconquerable opposition to what is wrong. That dueling is wrong, every man's moral sense must testify, who has any moral perception. The attempt to justify it on moral principles, would itself, be an offense. Public sentiment is appealed to by the abettors of the duel. But the public sentiment that justifies it, or requires it, must necessarily be a false sentiment. It finds no warranty in reason, in justice, or in common sense. And he who imperils his own life, or seeks to imbrue his hands in the blood of his fellow being, lest his courage should be impeached, precisely illustrates the difference between a false and a true courage, and is guilty of moral cowardice. Whenever his courage is inspired by passion, or a spirit or motive for personal revenge, as is not unfrequently the case, it is, like the ferocity of the wild beast, simply brutal. The duelist is doubly criminal. He imperils two lives; and partakes largely of the character both of the suicide and the assassin. It is true he fights according to prescribed regulations, upon equal terms and with equal arms. But this only augments the atrocity of the offence, as forethought and deliberation aggravate the guilt of any other kind of homicide. The intention to maim or to kill, is deliberately conceived; and this constitutes the fundamental element in the crime of mur-

der—or any other crime. The folly, too, of this species of mortal combat, is as patent as its criminality. What redress will the death of the offending party afford to the person aggrieved for the insult or wrong complained of? And how is a man's honor vindicated, by allowing the offending party to shoot him down?

"Am I to set my life upon a throw
"Because a bear is rude and surly? No!
"A moral, sensible, well bred man,
"Will not insult me, and no other can."

Mr. Doddridge suffered no appropriate occasion to pass, without manifesting his abhorence of this miserable custom. Subsequently, in the constitutional convention of 1829–30, he exerted himself to secure the insertion of a clause in the new constitution, disqualifying persons guilty of dueling from holding office—remarking, that "he should consider it a blessing to have all doubts of a constitutional kind removed from the act, [the dueling act then existing], and to see the law and public opinion moving harmoniously together."

And again, in the House of Representatives of the United States, he strongly rebuked certain attempts to resuce "from infamy and contempt the crime of dueling—a crime which is, at once a violation of the laws of God and man; a relic of barbarous times; the refuge and resort of the base coward, more frequently than the deliberate brave."—(Speech in the Houston case.)

Mr. Doddridge was again elected to the House of Delegates and served during the winter of 1828–9. He was placed on the following important committees, viz: On courts of justice, on finance, on schools and colleges, and on banks.

Through all the services of Mr. Doddridge in the Legislature, he kept steadily in view the primary purpose that induced him to accept a seat in it—namely, the amendment of the state constitution, so as to confer equal political and personal rights on the people of every section of the state. Nor did he confine his labors in this respect, to the Legislature; but in the intervals of his service there, he addressed the people from the hustings on all appropriate occasions, and, perhaps, exerted a greater influence in securing the call of the constitutional convention of 1829–30, than any other person in the state.

IN THE CONVENTION.

Yielding, at last, to the persistent demand for reform in these respects, the legislature of 1828 passed an act, submitting to the people, or rather, to the freeholders of Virginia, the question: "Shall there be a convention to amend the constitution of the commonwealth?" The vote on this proposition was taken at the general election held in April of that year, resulting in a decisive majority in favor of it. And thereupon, by another act passed February 10, 1829, provision was made for holding an election in the succeeding May, for four delegates to the convention from each of the twenty-four senatorial districts of the state. At this election Philip Doddridge, Charles S. Morgan, Alexander Campbell and Eugenius M. Wilson were chosen from the district composed of the counties of Ohio, Tyler, Brooke, Monongalia and Preston.

The convention met, and was organized at the capitol in the city of Richmond, on the 5th day of October, 1829. A more august and remarkable body of men, perhaps, never graced the halls of a deliberative assembly. James Monroe, ex-President of the United States, was called to the chair. Before him sat James Madison, who, also, had been President of the United States—"the father of the constitution" of the nation. There, also, was John Marshall, Chief Justice of the United States—"the illustrious expounder of the constitution." There, too, was Philip P. Barbour, worthy to succeed Mr. Monroe as president of the convention, when the ill health of the latter compelled him to resign. There was John Randolph of Roanoke, eager to hurl the shining shafts of his wit and invective against any one rash enough to assail his principles, his prejudices or his passions; and Benjamin Watkins Leigh, the chivalrous and accomplished champion of the eastern aristocracy; and Abel P. Upshur. But the roll of distinguished names is too long to be called through. With a juster pride than that which filled the breast of the Roman matron, might Virginia have pointed to this assembly of her sons, as "jewels" worthy of the "mother of states and statesmen." It was in such a body of men that Mr. Doddridge took his seat—men illustrious, in many instances, not only for the high stations of honor and trust which they had filled, but for the distinguished manner in which they had filled them—men of world-wide reputation, eminent in the measure of their intrinsic abilities, and fortified by the experience and prestige of their exalted official positions. Mr. Doddridge came among them almost unheralded, unsupported by any of these extrinsic advantages; but he came to establish his right to rank as the intellectual peer of them all; and before the convention adjourned this claim was generally and generously recognized.

Although Virginia boasted that one of her sons was the author of The Declaration of Independence, which asserts the great principle of American liberty, that "all men are created equal;" although the Revolutionary war had been fought in vindication of the maxim, that "Taxation without Representation is Tyranny;" and notwithstanding the Bill of Rights on which she had founded her political institutions, had distinctly announced that "all men are by nature, equally free and independent;" that "all power is vested in, and consequently derived from the people;" and that "no man, or set of men, are entitled to exclusive or separate emoluments, or privileges from the community, but in consideration of public services," there still lingered even down to the period of which we are writing, in the Tidewater and Piedmont districts of the state, much of the spirit of aristocracy and oligarchy, which the colonial gentry had brought over from the mother country.

During the convention, of which we are presently to treat, one of its most distinguished members* spoke of the laboring classes in the western part of the state, as mere "peasantry"—holding the "same place in political economy as the slaves" of the east; and contemptuously inquired, "What real share, so far as mind is concerned, does any man suppose the peasantry of the west—that peasantry, which it must have when the country is completely filled up with day-laborers as ours is of slaves—can, or will take in affairs of state?"

An animated discussion ensued upon this topic, in which most of the leading members of the body participated—Mr. Doddridge among them. The committee on the Legislative Department of the Government, had reported a resolution providing for a freehold, or a recorded leasehold for a term of five years, as a necessary qualification in each voter. The general sentiment of the eastern members was in favor of some such qualification. The general sentiment of the western members was, practically, in favor of what was called universal suffrage. Several amendments had been offered to the plan reported by the committee, and had been rejected by the convention, when Mr. Doddridge proposed the following:

"And shall be extended to every free white male citizen, aged twenty-one years, or upwards, who shall have resided at least one whole year in the county, city, borough or district in which he shall offer to vote, immediately preceding the time of voting; and who, during that period, shall actually have paid a revenue tax legally assessed—and to every free white male citizen, aged twenty-one years or upwards, who shall actually have resided at least one whole year in the county, city, borough, or district where he offers to vote; and who, for the period of six months, at least, shall have been an house keeper therein."

It is evident from the remark made by Mr. Doddridge when he offered this amendment, that it did not embody, exactly, his personal judgment of what should be the proper extent of suffrage; but restricted it more than he would have required, if the matter had been left to his own free determination.

His speech upon this amendment was distinguished by his usual ability. An extract or two will indicate its character.

Mr. Leigh had complained that the epithets—aristocrats, and oligarchs—had been opprobiously applied to those who opposed the extension of suffrage. Mr. Doddridge said:

"The gentleman from Chesterfield says he has so far forgotton his Greek as not to remember these terms in that language, and he only knows their meaning in good old English, and not in the modern dialect of that tongue. I will in that dialect explain my meaning of both terms. They are, in fact, synonymous. Each of these terms is descriptive of a government whose powers are vested in a minority. A government thus described is contradistinguished from a monarchy, or a government in the hands of one man, and from a pure democracy in the hands of every man. By government in the hands of a few, we do not mean a small, select few. Few and many, as the gentleman from Chesterfield says, are relative terms. In their just sense, they are equivalent with the terms majority and minority. In this sense I use them. A government, to be an aristocracy, or oligarchy, is not, necessarily, one in which power is acquired by descent or patent. This is the sense in

*Benjamin Watkins Leigh, in his speech on the basis of representation.

which I use the terms; and if I am correct, to constitute a statesman an aristocrat, or oligarch, it is only necessary that he should be one of those holding and exercising the power of the few over the many—of the minority over the majority."

Replying to the clamor of those who alleged that the efforts of the friends of extended suffrage were revolutionary in their character and tendencies, leading to the subversion of the peace and order of society, he said:

"What we contemplate is not revolution. The government is an elective republic, and we mean to leave it so. Yet we are warned of the dangers and horrors of revolution. Revolutions, it is said, never stop at the objects first had in view, but the ball once set in motion, goes downward on the road to anarchy or despotism, and never stops. One false step can never be recalled; the descent to ruin is easy, but to return difficult, if not impossible; *hoc opus, hic labor est.* Could we forget where we are, and listen to the speeches of gentlemen in opposition, we should forget the business we are engaged in; we should imagine we were listening to Burke on the French Revolution. All the horrors of that volcano are set before us, as if, in our madness, we were ready to plunge into it. We are likened to the priests of France in the last age; we are called fanatics, dreamers, and even drivelers, by gentlemen of this city; the history of the ancient republics is invoked to alarm us; at one time it is said that each of these perished, when suffrage was made general, and governments established on the rights of numbers.

"With much more truth, we are again told that these republics, with all their temporary governments, have fallen, without leaving in their history anything for our instruction. The truth is, that neither in antiquity, nor in the ages succeeding the fall of Rome, were there any governments formed on our model; not one. Before ours, there never existed one government in the world, in which the whole power was vested in the people and exercised by them through their representatives; in which powers were divided between separate and distinct bodies of magistracy, and in which no nobility or priviledged order existed. It is in vain, therefore, that we are incessantly lectured like schoolboys about the republics of Greece, Sparta, Lacedamon, Rome and Carthage. In our sense of the term, in the Virginia sense of it, neither of these was a republic. They have perished, indeed, as all others of the same age have done, some in war and conquests, some by one cause and some by another. Perhaps among the inscrutable decrees of Providence, there is one by which all governments, like the men composing them, are to have a beginning, a maturity, and an end."

Referring to the tenacity with which men vested with power always cling to it, and the opposition which they invariably make to progress and reform, he remarked:

"Mr. Chairman, what do we hear on this occasion, more than the alarming predictions, melancholy forebodings and evil auguries usual on every question of reform? When were men in power ever ready to reform? When did they yield power except to force or fear? We have lived to see Catholic emancipation in Ireland, after many attempts to accomplish that measure. On each of these occasions the ministers answered according to the custom; sometimes that the country was at war with France, or the whole continent; sometimes the Christian religion was in danger; and at others, that reform would jeopardize both church and state. Their predictions were never more gloomy and fearful than on the eve of Catholic emancipation. They were of precisely the same nature, and of the same justice, with those of our opponents here. The Catholics are emancipated, and England has gained strength by that act of justice. By a similar act of political emancipation, Virginia will increase her strength and happiness, notwithstanding the forebodings of men about to part with power."

Upon the oft-mooted question whether ministers of the gospel should be eligible to seats in the legislature, he said: "The resolution is, that a man's religious opinions shall not affect his civil capacities; but the proviso declares that those opinions uttered in the pulpit shall affect his civil capacities even to disfranchisement. At the *polls*, he should probably act with the gentleman; but why tie up the hands of the people?"

He was in favor of electing the Governor by the people; taking the ground of Mr. Jefferson, that an executive appointed by the legislature made him, in fact, an emanation of the legislative power; and was, therefore, a violation of the fundamental principle, that the legislative, executive and judiciary departments of the government should be kept distinct, separate, and independent of each other.

It would involve too many details and extend this sketch beyond the limits prescribed to it, to follow Mr. Doddridge through all his vigilant and active participation in the proceedings of the convention. Suffice it to say, that there was no question of importance before it, which did not receive his careful attention, and to the consideration of which, he did not bring an intelligence and comprehension which commanded the respect and admiration of the entire House.

IN CONGRESS—DEATH, &C.

In 1823, Mr. Doddridge was a candidate for a seat in the House of Representatives of the United States, from what was called the Wheeling district of Virginia. At that time the election was held and continued, on the first day of the county courts of the respective counties composing the district, during the entire month of April. There were, that year, five competitors for the position, all of whom appeared on the hustings at Wheeling on the first Monday of April, and addressed the people, according to the custom prevailing in Virginia. It soon became apparent, however, that the contest was, in fact, between Mr. Doddridge and Joseph Johnson, esq., of Harrison county, who still survives, who had served with Mr. Doddridge in the legislature of Virginia, and who was then just fairly entering upon his long career of public life; and on the second Monday, all the candidates retired from the canvass, excepting Mr. Doddridge and Mr. Johnson. Mr. Johnson was one of the most popular and effective speakers who ever appeared on the hustings in Western Virginia. He also had the advantage of belonging to the dominant party; and when the voting was concluded on the last Monday of the month, it appeared that Mr. Doddridge was defeated, notwithstanding his acknowledged peerless abilities. In 1825, Mr. Doddridge and Mr. Johnson were again opposing candidates for the same position, and with the same result. In 1829, they were a third time competitors, when Mr. Doddridge, after an animated canvass, was successful.

His duties as a member of the Virginia Convention detained him in that body until its adjournment on the 15th of January, 1830; so he did not take his seat in Congress until after that time. He found himself still surrounded by several of the distinguished men of Virginia, some of whom had served with him in the Convention. Among them, were Philip P. Barbour, William F. Gordon, and Charles Fenton Mercer; and with them, John S. Barbour, William S. Archer, and Andrew Stephenson. His reputation, acquired in the convention, had preceded him; and he at once occupied an intellectual rank equal to that of any of his eminent colleagues, and hardly second to any member of the House. Especially was this so, upon all questions involving the discussion of legal and constitutional questions. Soon his assiduous, intelligent, and effective attention to the business referred to the committees to which he had been assigned, attracted the notice, and commanded the confidence of his associates. He did not often address the House; but when he did so, he uniformly confined his remarks to the distinct question before it, speaking with brevity and perspicuity, as well as pertinacity. As a consequence, he was listened to with a respectful attention, not often accorded to each other, by the members of that tumultuous assembly, and commanded the confidence and influence to which his talents entitled him.

On his return home after the adjournment of the Twenty-first Congress, he was received by his constituents with great respect and enthusiasm. His manly and brilliant vindication of popular rights in the convention, had endeared him to the hearts of the people throughout the entire northwestern section of the state. A public dinner was tendered to, and accepted by him, at the Masonic hall in Wheeling, on Saturday, the 3d of July, at which Noah Zane, Esq., presided, supported by other prominent citizens as vice-presidents. Two hundred and thirteen guests sat down to the table. Wheresoever he appeared, he was the cynosure of all eyes. Sometimes men become suddenly popular, when no substantial grounds can be assigned for it—a kind of passionate, unreasoning excitement, subsiding with equal rapidity, like the mountain torrent after a storm. But the admiration of Mr. Doddridge was an intellectual one, having its source in the judgment of the people, resting upon the basis of unquestioned and unquestionable abilities, and supported by important services actually rendered.

Although the proceedings of Congress do not show that Mr. Doddridge often participated in the discussions on the floor of the House, his name is prominent in its journals, in connection with the actual business of the country before it. When, however, occasion required, he made his voice potential. He

always entertained the highest regard for the judiciary department of the government; and was ever on the alert to vindicate and protect it from encroachment by the co-ordinate branches. He considered that the supreme court of the United State, was, after all, the sheet-anchor of the constitution, and of the federal union. And when an effort was made in 1831, in the interest of those sectional antipathies which, afterwards, culminated in flagrant rebellion, to repeal the twenty-fifth section of the judiciary act of 1789, he startled the House by the declaration that the proposition to do so was incipient treason. During the debate in relation to it, he reiterated the avowal, remarking "that much had been said, and many allusions had been made to an expression of his on a former occasion, that he considered the proposition to repeal the twenty-fifth section of the judiciary act, as equivalent to a motion to dissolve the Union. "Such," said Mr. Doddridge, "is my opinion. It is my opinion, and I hope no angry feelings will be produced by my avowing it."

A special committee was appointed during this session of Congress, to draft a code of laws for the District of Columbia, with leave to sit during the recess, before the next session, but instead of remaining together at the city of Washington, they apportioned their labors among themselves and went home. Joseph M. White, Delegate from the Territory of Florida, was appointed clerk of the committee, with instructions to remain in the city. It was arranged that each member of the committee should prepare bills covering the portions of the code assigned to him, and send them to Mr. White, who should make copies of them, and transmit one to each of the other members of it; so that he should have time, prior to the next session of Congress, to examine them and make such notes of emendation as might suggest themselves as proper to be made. They were to meet at Washington two or three weeks before Congress convened in December, 1832, consolidate their separate work in proper order and form, and so have their report of the entire code ready to be presented as soon as Congress assembled. The portion of the code allotted to Mr. Doddridge, was the Judiciary Department.

His mode of preparing it was this. He obtained the codes of several states. When he wished to prepare a particular chapter, he would read the corresponding chapters in these codes, and then laying them all aside, would, with wonderful rapidity, write off a bill to suit himself. It was, uniformly, much shorter than that in any of the codes he consulted. His faculty as a draftsman was remarkable. He had a wonderful power of condensation. The appropriate words, like well-drilled battalions, fell harmoniously into their proper places; and there were neither too many, nor too few of them. It is related of Mr. Webster, that he should have said, during a tour he made through the western states in 1833, whilst stopping at Wheeling, that he would be willing to give all he possessed if it would secure to him this extraordinary faculty of Mr. Doddridge in the same degree of perfection. The great Massachusetts statesman often took occasion to express his admiration of the abilities of Mr. Doddridge. During the tour referred to, he stopped at Wellsburg, on his way from Steubenville to Wheeling for the express purpose of paying his respects, personally, to Mrs. Doddridge. Hearing that there was a portrait of Mr. Doddridge in the town he called to see it; and whilst he was looking at it, remarked. "He was the only man I ever feared to meet in debate." Nor was the impression which Mr. Doddridge had made upon the mind of Mr. Webster of a transient character. It remained indelible. In the letter of Mr. Neeson, to which reference has already been made, is the following: "During a recess of the Virginia convention (1850-51), on my way from Marion county to Richmond, I had the pleasure of spending an entire evening with Mr. Webster, then secretary of state, at Washington, at his private office, in company with Judge Camden, of Clarksburg, and Colonel (afterwards General) Haymond, our representative in Congress. I well remembered that Mr. Webster, referring to the distinguised men of Virginia, spoke in the kindest and most emphatic terms of the extraordinary ability of Philip Doddridge. He indulged in eulogy of Virginians that evening, but his most exaltod was that of Philip Doddridge.

According to the agreement before stated, Mr. Doddridge, having prepared the part of the code entrusted to him, went on to the city of Washington several weeks before the assembling of congress, to meet his colleagues on the committee. After a brief illness, he expired at Gadsby's Hotel, on the 19th of November, 1832; and his honored remains now rest in the Congressional Cemetery, by the side of those of others of the country's public servants, who died at the seat of government before the modern facilities of transportation were invented. His funeral obsequies, performed when congress was not in session, attested the great respect with which he was regarded. The civic authorities of Washington, and many of the public functionaries of the United States government, united in them. Ex-President John Quincy Adams, who happened to be in the city, honored the ceremony with his presence; and the *National Intelligencer*, distinguished for the dignity and propriety of its editorial department, and which always carefully measured its words of praise or censure, in announcing his decease, declared that in "intellectual ability and sound legal culture he had scarcely a superior in the House." And when we remember that such men as John Evans, of Maine; John Quincy Adams, Rufus Choate and Edward Everett, of Massachusetts; Tristam Burges, of New Hampshire; Charles Fenton Mercer, of Virginia; George McDuffie, of South Carolina, and John Bell and James K. Polk, of Tennessee, were then members of the House, this complimentary expression was equivalent to saying that Mr. Doddridge, in the respects mentioned, "had not a superior" in the whole nation. The corporate authorities of Alexandria passed a series of highly eulogistic resolutions expressing their sense of the loss the country had sustained in his demise.

On the first day of the second session of the twenty-first congress, soon after the house of representatives was called to order—

"Mr. Mercer rose and observed, That it was his melancholy duty to announce to the House the decease of his lamented colleague Philip Doddridge, and to offer a resolution assuring the friends of the deceased, and the country at large, of the sense entertained by this House of the loss it has sustained." In performing this duty, Mr. Mercer said, "that were he to indulge the feelings he possessed of the merits of his departed friend, he should find himself speedily arrested. In intellectual power, that friend had been surpassed by few in this or any other country; in integrity of motive he was excelled by none; and in simplicity of heart, by no man he ever knew."

The resolution passed by the House is as follows:

"*Resolved, unanimously*, That the members of the House of Representatives, from a sincere desire of showing every mark of respect due the memory of Philip Doddridge, late a member thereof from the state of Virginia, will go into mourning by the usual mode of wearing crape around the left arm for one month."

Mr. Doddridge was not a learned man—if extensive literary and scientific acquirements are to be included in the meaning of that term. He was a select, rather than a miscellaneous, or extended reader; but what he read, he read well—storing away whatever was valuable in the treasury of his never-failing memory—not in chaotic confusion, as some men glutinously devour knowledge, but well digested, classified and in order, ready for appropriation whenever there was a demand for it. He was, however, most thoroughly conversant with the legal, political, and constitutional history of Great Britain, and of his own country.

If he had had the education and associations of Webster, he would undoubtedly in public estimation and in fact, have been his compeer, if not his superior. Perhaps it was, in some measure, owing to the comparatively limited range of his scientific and literary researches that he was enabled to concentrate his great powers in the study of law, and thus become the great elementary lawyer that he was. Chief Justice Marshall once remarked, that Doddridge, as a lawyer, was second to no one at the Bar of the United States Court.

It could not be said in the ordinary sense of the word, that he was an orator. But he possessed, in an eminent degree, the qualities of a good speaker. His articulation, although a little guttural, was distinct; his language was pure and exact; his style was chaste and perspicuous; his utterance was easy and unhesitating; and his manner, though not rhetorical, was emphatic and forcible. He addressed himself to the understanding, more than to the imagination; and the weight of his argument was never impaired by the embellishment of fancy.

Another distinguishing feature in the character of Mr. Doddridge, was his ingenuousness. He abhorred all shams. At the bar, he scorned the chicanery and trickery of the pettifogger. On the hustings, as well as in the halls of the legislative assembly, he never stooped to the arts of the demagogue. His intellect was too large to form an alliance with anything so paltry. But, as not unfrequently happens to great natures, he was sometimes the dupe of the designing, and the victim of misplaced confidence. Conscious of his own candor, he was slow to suspect others of duplicity. It may be said of him, as Macauley said of his friend Lord Holland, that he possessed a

"magnanimous credulity of mind, which was as incapable of suspecting as of devising mischief."

It is one of the recognized canons of literary criticism, that simplicity is essential to the sublime. Sad experience has taught us, that we may not always rigidly apply the same test in our judgment of *great minds;* for, whilst it was said of Bacon that he was "the greatest," it had also to be said, that he was "the meanest of mankind." Yet simplicity is essential to the perfection of all truly great *characters;* and such simplicity, without "guile or hypocrisy," Mr. Doddridge did possess in an eminent degree. It was no unmeaning compliment of Mr. Mercer, when he declared in the United States House of Representatives, that "in simplicity of heart Mr. Doddridge was excelled by no man he had ever seen."

His manners were simple and unostentatious. He was the charm of the social circle. His conversation flowed as a perennial fountain, sparkling with a genial wit, and redolent of the kindness and goodness of his heart. With a memory stored with the treasures of history, and rich in anecdotes and personal incidents, he had the happiest facility in relating them; and was the centre of attraction and delight, in whatsoever society he was placed.

Mr. Doddridge possessed the faculty of intuition, in a remarkable degree. In the investigation of cases at the bar, he seemed to comprehend them, oftentimes, long before all the facts were disclosed by the evidence. His great experince, doubtless, qualified him, in a measure, to do this; but aside from this, he had an extraordinary penetration, that anticipated what was to come with almost unerring certainty. He frequently surprised witnesses by telling them what they knew, before they had fully stated it; and such as were disposed to prevaricate, or to falsify, seldom escaped from his examination without being exposed and confounded. He often cut short the prolix stories of his clients, in making known their cases, by giving the particulars of them himself. The following is an illustrative instance:—A gentleman called to consult him on professional business, and had partially related the matters involved, when Mr. Doddridge interposed, and briefly, but succinctly, detailed the remaining facts with such exactness as greatly to surprise his client, who inquired of him, from whom he had received his information. "From no person," said Mr. Doddridge; "but from what you have told me, I know the facts must be as I have stated them."

A correspondent* furnishes the following incident, upon the authority of Jesse Edgington, Esq., who was a cotemporary and worthy associate of Mr. Doddridge, and who lived to an extreme old age, dying only a few years ago, revered and respected by all who knew him. It affords an illustration of the charm and versatility of Mr. Doddridge's conversational powers, as well as of his retentive memory, and of the faculty of analysis and intuition just referred to.

"They were traveling on horseback to Richmond, and, in Maryland, were joined by a Mr. Hayden, of Chambersburg, Pa. That charming romance, Guy Mannering, had just been published in this country, but had not reached the West. Mr. Hayden had read it, and in whiling away the hours of the long ride, gave a pretty thorough sketch of it. After their arrival at Richmond, they met at a dinner party, and Guy Mannering being the subject of conversation, Mr. Doddridge gave such a clear and graphic *resume* of it as enchanted his auditors—making Meg Merrilies, Dandy Dinmont, Pleydell, and others, stand out in perfect relief in their true characters before them. Hayden was astonished; rather indignant, indeed, and took the first opportunity, privately, to say to Mr. Doddridge: 'Sir, I thought you said that you had not read that book?' 'Nor have I,' replied Mr. Doddridge; 'all I know about it is what you told me.'"

Mr. Doddridge died in the maturity and full vigor of his wonderful intellect, just at the time when his eminent abilities and distinction in the chief council chamber of the nation had so attracted and commanded the public attention and confidence, as to pressage for him a higher and still more illustrious career. More than forty-two years have, in vain, awaited a competent biographer. Until there shall appear a pen more worthy of the sacred task, this imperfect sketch is here recorded by one who has reason to cherish his memory.

W. K. PENDLETON.

W. K. Pendleton, the subject of the present sketch, now President of Bethany College, and superintendent of education in the state, is a native of Louisa county, Virginia. He is of English descent, and springs from a family many of whose members have from early periods of our history occupied distingushed positions in both state and national councils.

His early education was carefully conducted under the tuition of the best teachers, and after completing his preparatory course he entered the University of Virginia with the view of gratifying himself under the able instruction of Professor Davis for the profession of the law. A portion of this time was also given to the academic course of the institution, and at the close of his third session he was licensed to practice his profession.

In 1840, he married a daughter of the distinguished reformer Alexander Campbell, and removing to Bethany was appointed in 1841 to the chair of natural philosophy in Bethany College. In 1844 he was associated with Mr. Campbell in the editorship of the *Millennial Harbinger*, and continued in that relation until 1864, when he became editor and proprietor until its discontinuance, in 1870, after which he was soon associated with the *Christian Standard* as assistant editor, which relation he still occupies. After the death of his first wife, he was a second time married to anrther daughter of Mr. Campbell. This union was also of brief duration, and after her demise he contracted a third marriage with his present wife, a daughter of Judge Leicester King, of Ohio.

In 1871, he was elected by the concurrent action of both political parties, to represent his senatorial district in the convention held at Charleston for the purpose of framing a new state constitution. Whilst a member of that body, besides taking a prominent part in all of its most important deliberations, he was especially active in the promotion of every measure in furtherance of the educational interests of the state.

In 1873, President Pendleton was appointed by Governor Jacob to fill a vacancy in the office of state superintendent of education, and in 1877 he was elected to the same position by the voice of the people.

President Pendleton is a gentleman of fine literary culture, devoted more especially to the deep questions that affect humanity in the broad fields of theology, psychology, social and political science, and with the active intellectual energy necessarily resulting from such a course of study, possesses the ability to discuss philosophically all the great social problems that are continually arising in the midst of free advanced thought and a free people.

PATRICK GASS

the subject of our sketch, was born June 12, 1771, at Falling Spring, Cumberland county, near what is now Chambersburg, Franklin county, Pennsylvania. His parents appear to have been poor people, and moved frequently. After several of these moves, a notable one was made over the South Mountain, into Maryland in 1775, just as the revolutionary contest was assuming the form of a civil war. From 1777 to 1780, he resided with a grandfather, for the ostensible purpose of going to school, but the facilities for education must have been poor at that day, for he says, the amount of his education was what he learned of reading, writing, and arithmetic, in nineteen days. In after life he regretted his early mental culture had not been better, for he always thought he might, with his opportunity, mental and bodily vigor and energy, have ettained eminence and fame among the great men of the nation.

In 1782, his father removed his family west, which was then immediately beyond the Allegheny mountains. They encountered great hardships on the road, of which the following graphic reminiscence, taken from the pages of the "Old Redstone," will convey an idea: "My father's family," says the author, "was one of twenty, that emigrated from Carlisle and the neighboring country, to western Pennsylvania, in the spring of 1784. Our arrangement for the journey, would, with little variation, be descriptive of those of the whole caravan. Our family consisted of my father, mother, and three children (the eldest one five, and the youngest one less than one year old), and a bound boy of fourteen years. The road to be traveled in crossing the mountains was scarcely, if at all practicable for wagons. Pack horses were the only means for transportation then, and for years after. We were provided with three horses, one of which my mother rode, carrying her infant; with all the table furniture and cooking utensils. On another was packed the store of provisions, the plough irons, and other agricultural tools. The third horse was rigged out with a pack-saddle, and two large creels made of hickory withes, in the fashion of a crate, one over each side, in which was stowed the beds and bedding, and the wearing apparel of the family. In the center of these creels, there was an aperture prepared for

myself and sister; and the top was well secured by lacing, to keep us in our places, so that only our heads appeared above. Each family was supplied with one or more cows, which was an indispensable provision for the journey. Their milk furnished the morning and evening meal for the children, and the surplus was carried in canteens for use during the day.

Thus equipped, the company set out on their journey. Many of the men being unacquainted with the management of horses, or the business of packing, little progress was made, for the first day or two. When the caravan reached the mountains, the road was found to be hardly passable for loaded horses. In many places the path lay along the edge of a precipice, where, if the horse had stumbled or lost his balance, he would have been precipitated several hundred feet below. The path was crossed by many streams, raised by the melting snow and spring rains, and running in rapid currents in deep ravines. Most of these had to be forded, as there were no bridges and but few ferries. For many successive days, hair-breadth escapes were continually occurring; sometimes, horses falling; at other times carried away by the current, and women and children with difficulty saved from drowning. Sometimes, in ascending steep acclivities, the lashing of the creels would give way, and both children and creels tumble to the ground, and roll down the steep, until arrested by some traveler of the company.

In crossing streams or places of more than ordinary difficulty in the road, mothers were often separated from some of their children for many hours.

The journey was made in April, when the nights were cold. The men who had been inured to the hardships of war, could with cheerfulness endure the fatigues of the journey. It was the mothers who suffered; they could not, after the toils of the day, enjoy the rest they so much needed at night; the wants of their suffering children must be attended to. After preparing their simple meal, they lay down with scanty covering, in a miserable cabin, or, as it sometimes happened, in the open air, and often unrefreshed, were obliged to rise early, to encounter the fatigues of another day.

As the company approached the Monongahela, they began to separate. Some settled down near to friends and acquaintances who had preceded them. About half of them crossed the Monongahela, and settled on Chartier's creek, a few miles south of Pittsburgh, in a hilly country, well watered and timbered. The Gass family, however reached the forks of Yough, without extraordinary incident, in 1784, and immediately proceeded to locate near Uniontown, then called Beasontown, their stay however, was short at Beasontown, for in the ensuing year they again pulled up stakes and removed their household altar to Catfish Camp, where Washington now stands. This place took its title from being the head quarters of a noted Indian chief of that name. Catfish Camp, was also prominent in early times, from being a sort of half-way house between the Monongahela and Ohio, being about twenty-four miles from either river. It was a convenient stopping place, and became generally known to the settlers and scouts as a rendezvous. A regular path existed in those days from Redstone by the waters of Buffalo and Wheeling creeks, to the Ohio at Wellsburg and Wheeling, and was much traveled by the emigrants, as well as the Indians. From Catfish Camp, Patrick directed his explorations into the surrounding country, and gives us his impressions of Wellsburg, as the site appeared to him in 1790. The ground was swampy in places and covered with a dense growth of sycamore, walnut, sugar and wild plum trees. There was at that day but one building to be seen, and it was a log house on the lower end of the bottom near midway between the river and the hills. This house was built by Alexander Wells.

At Catfish Camp, Patrick remained on the farm leased by his father a considerable period of time, during which he made several trips over the mountains to Mercersburg and Hagerstown, for salt, iron, &c., which in those days had to be packed on horses—two hundred pounds of iron and two bushels of salt being the usual burden for a horse. Considering the almost absolute absence of roads, these excursions were attended with considerable labor and not a little peril; but they suited his roving disposition for travel and adventure, and probably developed a spirit that culminated in the notable enterprise of an overland journey in Lewis and Clark's expedition across the Rocky Mountains.

The year 1790 was remarkable for a drouth in the Catfish country, and Patrick came to Charlestown for corn, which he got of Mr. McFarland, the surveyor, who laid out the town—and then shot himself. His corn he took to Moore's mill, on Buffalo, took a receipt for it and returned to Catfish, thus traveling fifty miles or more to mill and back.

About this time, having attained his majority, Patrick began to feel a longing for the glories of war, and the next we hear of him is in 1792, when he was stationed under Captain Caton, at Yellow creek, to help guard the frontiers against the incursions of the Indians, who had been a long time troublesome, and were at this time particularly elated with their success in defeating General St. Clair and his army the preceding November; but the crushing defeat of the Indians by General Wayne and his army in August, 1794, which almost annihilated them, relieved the frontier settlers from any further molestation by Indians, and left Patrick without an occupation. Unwilling to be idle, he undertook to learn the carpenter's trade, and in 1794, bound himself as an apprentice for two years and three months, at his old stamping ground, Mercersburg, Pa. It is probable, however, that he never became much of a carpenter, though there is in Wellsburg a house or two that he built. He also had the honor of working on a house for James Buchanan, sr., father of President Buchanan, and saw General Washington at Carlisle when he went out with the troops, in 1794, to suppress the whisky insurrection. In this war, we believe, Patrick took no part. He was too much of a patriot to resist the government, and he loved good old Monongahela too well to fight against the whisky boys, so he remained wisely neutral. He worked for Mr. Buchanan for six months, and became well acquainted with "little Jimmy," who was then a bright little school boy of ten or twelve years of age, but thinks he must have inherited from his mother whatever qualities of a statesman he possessed, as his father was not particularly distinguished among his fellow citizens for any other qualities than thrift and success in money making. He was a merchant, and accumulated considerable property by supplying the settlers with iron, salt, &c., in exchange for peltry and hard dollars, on pretty much his own terms.

At this period a prominent speck of war appeared in a probable rupture with France. This was glorious news for Patrick, who threw down his jack-plane and apron, shouldered his musket and enlisted in the Tenth regiment of the American army, under the command of General Hamilton. His services in this war appear to have consisted in a series of marches and countermarches among the forts and recruiting stations of western Pennsylvania, without much glory or personal peril. The winter of 1799, he passed in the barracks at Carlisle. From there he was sent to Harper's Ferry, Virginia, in June, 1800, and was discharged at Little York, Pennsylvania, the French war, which had promised so much, winding up most ingloriously.

However, Patrick was not to be cheated out of his full share of military glory by French or American diplomacy; accordingly before the ink was fairly dry that recorded his discharge, he again enlisted in the five years service, under Major Cass, father of General Lewis Cass.

By this time, intelligence and merit had brought Mr. Gass into notice; he was promoted from the ranks, and entrusted with several responsible duties in the way of recruiting and in detecting deserters. The campaign, however, is barren of incidents worth recording. In 1800, the detachment to which he belonged under Gen. Wilkinson, descended the Ohio in flat-boats, passed the Falls on Christmas day, and landed at Wilkinsville, where they wintered in tents and huts. In the fall of 1801, he went with a company under Capt. Bissell, up the Tennessee river, and in the fall of 1802, the same, with a company of artillery, were sent to Kaskaskia, Illinois, where they remained until the fall of 1803, when a call was made for volunteers, for the government expedition under Lewis and Clark, being an exploring trip over the Rocky mountains and down the Columbia river to its mouth.

Capt. Lewis came to Kaskaskia in the fall of 1803, in search of suitable material for such a corps. Mr. Gass happened to be stationed there, and to his venturesome disposition, the opportunity presented charms that could not be resisted. Patrick was easily enrolled on the captain's book, as one of the party, but he had some difficulty in getting released from his military engagements. The detachment was about going into winter quarters, and Patrick, being a good carpenter, was needed, and his command did not like to let him off, but he was resolute on all occasions, and hard to be balked when he once set his mind on a purpose. Ascertaining that Capt. Lewis was on his way to camp he went to meet him on the road, and stating his case with soldier-like directness, the result of the conference was, that he was forthwith enrolled in the company of explorers, notwithstanding Capt. Bissell's objections. The selection of

volunteers was not limited to military men, but civilians were taken also. Among the latter class of volunteers, was George Shannon of Pittsburgh, a brother of ex-Governor Shannon, of Ohio, who accompanied the expedition to its final end and died some years after in Kentucky.

At the time of starting, the expedition consisted of forty-three men, including officers, privates, and a colored servant of Captain Clark, named York, who afterwards received his freedom in consideration of his services on the expedition.

The expedition made its first move from Kaskaskia in November, 1803, and proceeded up the Mississippi, until they came to Dubois, or Wood river, where they halted for the winter, and occupied their time in preparing boats and making arrangements for a final start up the Missouri in the spring. Finally, on Monday morning, May 4, 1804, the sun shining beautifully and brightly, they bid adieu to the last abodes of civilization and started on their far and tedious journey, and plunged into the unknown and trackless wilds. Our limits do not permit us to detail the incidents of this ever memorable expedition, as day by day they pursued their journey, encountering the currents of unknown rivers, as they followed their courses upward, or made their way through the pathless woods or wound their devious way around the sides of rugged mountains.

The history and incidents connected with this memorable expedition, have all the charm and interest of a romance—almost as eventful as the wanderings and trials of the famous Ulysses on his return from the siege of Troy.

They traveled on until they reached, on October 27, 1804, the country of the Maudau Indians, far up the Missouri—and by their reckoning 1610 miles from where they started, on the Dubois river, in the spring. With the prospect of an early and severe winter before them, a spot was soon found, surrounded with cottonwood, suitably situated for an encampment, and on the 2nd of November, 1804, they commenced to prepare for winter quarters. The winter was passed here till the 7th of March, 1805, when they broke up their encampment, and again commenced their onward march, till on the 19th of August, 1805, they reached the head spring of the Missouri, distant only one mile from the head of one branch of the Columbia, and on the 20th they passed the dividing ridge and were on the head waters of the latter river. They found the waters of the upper Columbia and its branches so rapid, and its bed so rocky, that it seemed almost impossible to proceed by way of the river, while the mountains were so steep and rocky, projecting into the river's edge, made the travel tedious and tiresome in the extreme. They proceeded on, however, till on November 16, 1805, they saw the waters of the Pacific, for the first time.

Having reached the mouth of the Columbia, after traversing over four thousand miles, in eighteen consecutive months, it became necessary to prepare winter quarters, and by Christmas day, they were completed, being made of puncheons and logs comfortably daubed with mud, and the men left their hunting ground and moved into them. Here they stayed till the first of March, 1806, when they set out on their journey homeward bound. After retracing the way they came, they finally arrived at St. Louis, September 23d, where they remained a few days and then started on to Washington City, to make their report and receive their discharge. They everywhere met with a warm reception from the people. They at last reached the Federal city, and after paying their respects to President Jefferson, making their report to the proper officials, delivering over their specimens and curiosities they were discharged with a vote of thanks and a worthy acknowledgment of their meritorious services.

Mr. Gass received his pay in gold, with the promise of future consideration at their hands, then returned to Wellsburg, where he spent a few months among his friends, in comparative inactivity, after his long and exhausting journeyings of over four thousand miles and back—nearly across the continent, and most of the way through the trackless wilderness, amid dangers of every kind, as well as the untold hardships they endured.

To the discredit of the government, the faithful and laborious services of these men were not remembered, nor requited as they should have been.

The quietude and the every day business of private life, were too tame for Patrick, for early in 1807, we find him again on his way to Kaskaskia, and for the next four years of his life, he was engaged in various duties about that outpost. For sometime, there, he held the post of assistant commissary, and transacted the duties of the office with his accustomed fidelity and zeal.

At the breaking out of the war of 1812, the news spread like wild-fire, and was in the south and west, hailed with enthusiasm. Volunteers crowded round the standard of the stars and stripes. The excitement reached the frontier, and a call was published in Kaskaskia, to the pioneers to organize in the common defense. A company was quickly raised at Herculaneum, Missouri, in consequence of the call. Mr. Gass was prevented, accidentally, from joining this party, the objects and organization of which suited his disposition, but quickly found that he would be needed in another quarter. For a short time previous to the declaration of war he had been engaged in the lead trade—then thriving, in the vicinity in which he was located, and it so happened that at the time the rangers were being organized, he was absent, at Nashville, Tenn., with a quantity of lead, for the purpose of trade. While here great excitement existed against the southern Indians for depredations they had committed; men were being raised, and preparations made for a campaign against them; and he was, much against his will, drafted into the regiment raised by Gen. Jackson to fight against the Creeks. He had the option, however, of enlisting in the regular army for five years, with $100 cash in advance, and the promise of $24 extra at the expiration of his time of service, and, perhaps, coming to the conclusion that the line of his usefulness lay in a military direction, he forthwith enlisted for the war under Gen. Gaines, and was immediately marched to the north, leaving his lead speculation in the hands of his partner.

Mr. Gass served throughout the war with credit to himself and honor to his country. He was engaged in some of its hardest fought battles; was at Chippewa, Lundy's Lane, and Fort Erie. He remembers hearing Col. Miller make the now historic remark, "I will try, sir," when ordered by Gen. Ripley to take the British battery on the hill at Lundy's Lane. "Silently and steadily the command of Col. Miller, drawn up in line but two men deep, marched up to the foot of the lane, the red church protecting them from the grape of the artillery; then without a halt or a waver, they advanced rapidly up the hill, with bayonets at a charge, the grape flying over their heads in a harmless storm, until they gained the very muzzles of their pieces." "Then," says Mr. Gass, "came a blast of flame and smoke, as if from the crater of hell, and they were among the enemy, hand to hand, bayonet to bayonet, and steel clashing on steel, in the close and murderous conflict. The fight was but for a moment." The British fled. In narrating his personal experience, he says that the affair was so rapid that he had hardly time for a distinct idea, until it was over; but that in marching up the battery, he felt, as he expresses it, "d—d bashful." We have reason to believe, however, that his modesty soon wore off. A ball through his hat was the only mark of merit he received in this encounter. The principal carnage took place after the battery was captured; the artillery being aimed so high as to do but little execution in the thin column of advancing Americans. The hand to hand fight over the guns is said to have been terrific, and the bloodiest ever fought on the American continent, considering the number engaged, and the number slain. The dead were literally piled in heaps. Blue uniforms and red, promiscuously mingled in ghastly piles, and the hand palsied by death, still held the musket with its bayonet sheathed in the bosom of the foe; and the kindred blood of Briton and American mingled in one red stain upon the soddened earth.

He served till the war closed when he was honorably discharged, and returned once more to Wellsburg, to engage no more in the perils of war, nor to leave them again in the wild search for adventure. The congratulations of his friends were embittered with the thought that forty years of his life were now passed, and he had nothing to show for its recompense—nothing laid up against the day when penury might plead in vain with cold hearted charity for alms in consideration of self-sacrifice and gallant deeds in the country's service. He was now a middle-aged man, and very naturally began to think about making some provision for the future. Accordingly, as the phrase goes, he settled down. The wild oats he had sown in his youth were now to be reaped. A life of settled industry was irksome to his temperament, and altogether contrary to his habits. Under a life destitute of excitement or incidents of adventure, he for some years gave way to habits of intemperance, but notwithstanding this weakness, he always had a manly, noble dignity about him that commanded the respect of his fellow-men. He was honest, sincere and truthful, and a patriot to the core.

He finally, in 1831, married Maria Hamilton, daughter of John Hamilton, of Brooke county, W. Va., rented a farm and settled down to a life of toil. He also left off his habits of drink and lived an humble, quiet life, living upon the fruits of

his labor. He raised a family of seven children. His wife dying in 1846, left upon his hands the support and care of this helpless family. He received from the government a pension of $96 a year in half-yearly payments. With this pittance and what he could eke out by such labor as he could perform he lived in patriarchal simplicity, scrupulously honest, owing no man anything, apparently contented and happy as a millionaire. So far as worldly cares were concerned, as to himself, he lived the life of a philosopher, satisfied that he would have enough for a decent subsistence while he lived, and friends enough to give him a decent burial when he died; and hence troubled himself but little about the accumulation of property. His wants were but few and easily supplied.

For many years preceding his death Mr. Gass lived a steady, temperate life. On the 28th day of April, 1867, he was baptized by Elder A. E. Anderson, by immersion in the Ohio river, at Wellsburg, and united with the Christian church at that place, of which he remained a member to the time of his death.

He died April 2, 1870, in a small log house, on the farm of David Waugh, near the first tunnel on the Bethany pike, on Buffalo creek, Brooke county, and is buried in Shrimplin's cemetery, on Pierce's run. No stone marks his last resting place. He was the last survivor of the Lewis and Clark expedition across the Rocky mountains in 1804–5. He died at the age of ninety-eight years, nine months and twenty days.

THE HERVEY FAMILY.

Brief Sketch of the Hervey Family, of Brooke county, West Virginia, by Rev. David Hervey (now, June, 1879, in the Eighty-fifth Year of his Age.)

The Hervey family is of Scotch origin. The members of it, from time immemorial, have been Presbyterian in their religious belief and church connection. At the time of the religious persecution in Scotland the family ancestors emigrated to the north of Ireland and settled in the county of Monahan. Here Henry Hervey, (the father of Rev. David Hervey, of Brooke county,) was born in 1740.

At the age of thirty, he, in company with his cousin, William Hervey, came over to this country, landing at Philadelphia in April, 1770. Thence two years later, in 1772, they came west of the Allegheny mountains.

William Hervey settled in Washington county, Pa., and Henry Hervey in Brooke county, Virginia. Henry Hervey forthwith entered his claim, by settlement, to the farm upon which his son Rev. D. Hervey now resides, located in Brooke county, about midway between the Ohio river and the Pennsylvania line. This farm was then, and for several years after, the frontier farm of the settlement. It is moreover believed to be the only farm in the county still owned and occupied by the children of the original settlers. It has been in the continuous ownership of the father and son for 107 years.

Henry Hervey was married in 1776 to Margaret Hutcheson. She came over in company with her half brother, William Young, emigrating from near Belfast, Ireland.

At the time of their marriage, from the best data at hand, he was thirty-six years old and she twenty-two. He was a man of retired habits, of great sweetness of disposition, yet of decided opinions and well established principles. She was a woman of remarkable force and power both mentally and physically, thoroughly devoted to duty under all circumstances, of more than ordinary intelligence, especially on religious subjects, of great decision of character, of persevering energy, and of great faith in prayer, in which she was unusually gifted.

Both were active and continuous co-workers in the organization and subsequent support of Lower Buffalo Presbyterian church, of which they were members, and in which he was at one time elected ruling elder, but with characteristic modesty, declined to serve.

Locating here in the troublous times of the Revolution, they were exposed to frequent alarms from fear of the Indians who often passed though this section. For mutual protection, the settlers built fort "Wells," situated near the site of the old Lower Buffalo church, and about three miles east of the farm on which Mr. Hervey resided. During the six or seven summers after their marriage, Mrs. Hervey lodged with others in the "fort," while her husband armed for defense, would go out on Monday morning to his work on the farm, remain during the week and return on Saturday evening and spend the Sabbath with his family in the fort. And so it came about that some of the children were born in the fort. Their family consisted of nine children, five sons and four daughters, viz: William, Jane, James, Mary, John, Isabel, David, Margaret and Henry.

The father and mother—the revered head of the family—lived together for twenty-nine years on the farm that their industry had made productive, and were mutually blessed in each other's society, when, in 1805, Henry Hervey, the father and husband, died after a short illness at the age of sixty-five, and was buried in Lower Buffalo graveyard. The mother, thus left in sole responsibility as the head of a large family, by her great executive ability, by her constant and even gladsome devotion to duty, by the depth and strength of her character, and by her life-controlling integrity and piety, raised a family distinguished for usefulness, intelligence and activity in the community and in the church. She communicated to them in some measure her own characteristics, making upon them an indelible impression, extending to the third and fourth generation, so that generation after generation of her descendents rise up and call her blessed. She lived in widowhood twenty-nine years, and died January 16, 1834, aged about eighty years (although her tombstone says seventy-seven), and lies buried in the graveyard of Beech Spring congregation, Harrison county, Ohio.

Of her descendents, three of the first, three of the second and three of the third generation became ministers, a much larger number were elected to the office of ruling elder, and all, so far as known, who arrived at the age of maturity became consistent professing Christians.

William Hervey, the oldest of the family of nine children, settled in Jefferson county, Ohio, and spent the greater part of his life in that state, but eventually returned to West Virginia and located in Ohio county, where he died in 1844, aged sixty-five years. He was a ruling elder in the Presbyterian church from 1808 until his death. He was especially fond of machinery, and was something of a genius in that direction. Colonel Thomas Y. Hervey, of Ohio county, is his son. His other descendents are living in the west, where two of his sons were elders in a church in Illinois.

Jane Hervey, the second child, married Andrew Eagleson, and settled in Ohio, living for the most part in Harrison county, in the bounds of Beech Spring church. She raised a large family, worthy of mention, for their intelligence and strength of character. Two sons became elders in Beech Spring church, and one, Rev. John Eagleson, D. D., was for thirty-nine years, pastor of Upper Buffalo church, Washington county, Pa. He was a man eminent for scholarship, prudence and wisdom.

Rev. James Hervey, D. D., the third child, graduated from Jefferson College in 1810—was licensed to preach in 1812—and the same year was installed pastor of the church of the Forks of Wheeling, in Ohio county, W. Va. Wheeling, at that time a small village, formed a part of his pastorate. He was the first minister of any denomination that held regular religious service in the town. He continued to preach in Wheeling one-half his time for twelve or fifteen years, when the organization there became strong enough to sustain a minister of their own. Remaining at the Forks of Wheeling, he, in addition to his pastoral work there, established regular services at West Union, and other places, from all of which separate churches have arisen. In accordance with the wish of the increasing membership of the church at the Forks of Wheeling, the last years of his ministry were spent wholly in that congregation, to which he continued to preach until his death in 1858, aged 77 years. He lies buried in the cemetery adjoining the Church where his pastorate continued unbroken for forty-seven years. He was beloved by his people, and eminently respected by his co-presbyters. He was a man of deep thought, great clearness in the conception of truth, and unusual power as a theologian. He has six children living; one resides in Ohio, and five in West Virginia, four of these in the Pan-handle. They are faithful, intelligent and useful christians.

Mary and John died single and early in life, aged respectively twenty-three and twenty-four years.

Isabel Hervey married James Black, of Harrison county, Ohio. She was the mother of three sons and one daughter. The daughter lives in East Virginia. One son died early; the other two sons live in affluence in their native county, influential, respected, worthy citizens, and pillars in the church, of which one has been an elder for many years.

Rev. David Hervey, the seventh child, was born on the homestead, October 29, 1794, and is consequently in his eighty-fifth year. He is the only living member of the family, and resides on the old home farm, which has been continuously in the ownership of his father and himself ever since the land was taken up by his father in 1772. He graduated at Jefferson College in 1825, was licensed by the Presbytery of Washington in 1827, installed and ordained pastor of Mount Prospect Church,

Washington county, Pa., in 1828. In 1836, he accepted a call to Lower Buffalo, Brooke county, West Va., giving part of his time to Wellsburg. In 1839, he was called to the church of Crab Apple, Ohio. This call he first accepted, but afterwards declined. The Presbytery decided that a new call from Buffalo would be necessary if he remained there. It was at once presented by the congregation and he was again installed in his old charge, where he remained until 1851, when he was released at his own request. During the continuance of this pastorate he organized the church in Wellsburg and preached there until the present church building was erected. He also organized the church of Pine Grove, Washington Presbytery. After leaving Buffalo church he preached two years in Illinois, and out of that labor have grown several self-sustaining churches. His children (nine now living) have all come to years of maturity, and are all professing christians. They have all enjoyed a liberal education. Two sons graduated at Washington College. James is an attorney at law in Wellsburg. John has been a teacher since graduating in 1847, and is now superintendent of public schools in the city of Wheeling. Three sons have filled the office of ruling elder in the church. Two daughters married Presbyterian ministers. Four children still reside at the homestead and seven in the Pan-Handle.

MARGARET HERVEY—the eighth child—married James Allison, of Jefferson county, Ohio. She died early in life, but left descendants who do her honor. Her sons are prominent citizens of Harrison county. They have acquired not only independence but affluence, and are withal christian gentlemen.

REV. HENRY HERVEY, D. D.—the youngest son of the family—was born 1798; graduated at Jefferson College in 1825; was licensed to preach in 1827, and ordained and installed pastor of the church at Martinsburg, Ohio, in 1830. He spent his whole ministerial life in that church, resigning the pastorate in 1868. He was a scholarly man, a prolific writer and a steadfast friend of the cause of education. His church prospered greatly under his ministry, and his influence must long remain to bless the community in which he labored. He died in 1872. Of his children, two sons entered the ministry and at once occupied prominent positions. Henry died in 1875, while pastor of the church of Newark, Ohio. Dwight is pastor of a large church in Granville, Ohio.

God's covenant blessing has thus attended every generation of the descendants of Henry and Margaret Hervey.

THE WELLS FAMILY.

Richard Wells, commonly called "Gray Beard," to distinguish him from two others of the same name in his neighborhood, was born in Baltimore county, Md., October 25, 1742. His wife, Edith Coale, was born July 17, 1740. They were married in Bedford county, Pa., some time in the year 1776, date not exactly known. Mr. Wells, in the year 1772, and previous to his marriage, came west and located a tract of four hundred acres of land in what is now Brooke county, then Youghiogheny county and afterwards Ohio county. This tract was situated on the dividing ridge between Cross creek and Harmon's creek, bounded on the east by the Pennsylvania state line. He returned to Maryland and brought back with him a party of men, some of whom he had bought their time of an emigrant vessel to pay their fare. It was the practice in those days for emigrant vessels to take passengers from Ireland to America who were unable to pay their fare, and sell their time to the settlers, who needed laborers and would pay their passage money for their labor, by the emigrant entering into an indenture to work a certain length of time for the sum paid. It is said the conditions of these obligations were always faithfully complied with.

Colonel Nathaniel Wells, of Middle Ferry, a grandson of "Gray Beard" Wells, aforementioned, has at this time, 1879, one of these printed indentures in his possession, it having been kept in the family these one hundred and six years.

With his party of men, Mr. Wells brought horses, tools and such farming utensils as he could pack across the mountains, arriving at his destination early in the spring of 1773. The first thing they did, was to build a stockade, or picket fort, to protect themselves and other settlers from attacks by the Indians, who were at that time and for many years after, frequently committing murders among the frontier settlements. The fort was built by cutting white oak logs, about twenty feet long, splitting them in two pieces, digging a ditch six or seven feet deep around a plat of ground sufficiently large to build their cabins inside and for other convenient room. These split logs were set on end in the ditch, two pieces facing inward and one set inside, facing out, to break or cover the joint, tamping them solid with earth or stone, thus surrounding the grounds, cutting a small door and a number of small port holes, from which to fire no the Indians in case of an attack.

Thus protected he commenced clearing his lands for cultivation, and in a few years, with his force of men, he converted a large portion of the forest into fruitful fields. He soon became one of the leading and most prosperous farmers in the then frontier settlement. His fort was never molested while others in the surrounding country were frequently attacked. He often related an incident, which he believed was the cause of his fort and property not being injured by the savages. One day, he was out some distance from the fort, with only his dog and gun, when he saw two Indians dodging through the woods. He prepared for attack, but they made signs of friendship, he responded and they come together in a friendly manner. They then made signs of hunger, he invited them home with him, fed them bountifully, kept them over night, gave them breakfast the next morning and when they started, filled their wallets with provisions enough to last them two or three days. When they left, they expressed their thanks by calling him "good man," "much good man," "friend to Indian" and other demonstrations of gratitude. Mr. Wells always thought these two Indians reported to their tribes his kindness to them, and true to their natural instinct, remembered not to return evil for good.

As time passed on he made frequent trips east, stopping in Bedford county, Pa., where he married as before mentioned. Believing it dangerous to bring his wife to the new settlement while the Indian troubles continued, he let her remain at the old home, where he went himself, to spend the winter, returning to the farm in the spring, till she died, February 10, 1783, leaving a son, Jesse, who was born January 3, 1779, and a daughter, Jemima, born June 25, 1780. In 1783, he brought these two children to the fort. To bring them across the mountains, he procured two large baskets, tied a rope to each handle, and swung them across a horse, over what was then called a wooden pack-saddle, the baskets being well cushioned and lined with sufficient blankets for comfort, the little chaps were put, one into each basket, and in this manner, they made the trip across the Allegheny mountains. They safely arrived at the fort, where, with the aid of a female servant and house-keeper, he remained, raised his children and settled for life. After Mr. Wells became permanently located in his new and commodious residence, which he built about the year 1790, he went east and brought home with him his aged father and mother, James and Honora Wells. The exact ages of these ancient pioneers are not now found on record, but sufficient is known, to say they were born early in the 17th century; both lived to be near one hundred years old. Mrs. Wells died in the year 1796, and her husband James died in 1804. Both are buried on the old homestead farm of their son Richard.

When Ohio county was organized, it embraced the whole Pan-handle of Virginia. Richard Wells, being one of the earliest and most prominent of the pioneer settlers, was appointed by the Governor, one of the first board of Justices of the Peace, who organized the first county court of West Liberty, which was selected as the county seat.

In 1797, he purchased a tract of 217 acres of land in Brooke county, on the banks of the Ohio river immediately opposite where Steubenville now stands. The price paid was small. The deed shows a sum of five shillings, but it is now believed it was five shillings an acre. Two years later, by legislative act, he established a ferry from this land to the Ohio shore, his friend and relative Bazil Wells, at that time, owning the land on the Ohio side, who had, in conjunction with James Ross, laid out the town of Steubenville. The rapid growth of this new town, with the large emigration to Ohio, made this ferry very profitable. It has been continued as a ferry without intermission to the present time.

A circumstance occurred with Mr. Wells, which may be worthy of a notice here. It was about the time the continental money became worthless and it required many days for the news to reach the frontier settlements. Some sharpers in the east gathered large quantities of it, and hastened to the west to purchase improved farms. Mr. Wells by this time had his land in a high state of cultivation, when one of these sharpers called on him, offered a high price for his premises, in continental money, which he agreed to take. They were to meet the next day, at the office of a notary public, to close the contract, but that evening a friend arrived from the east and reported the depreciation of this paper. The next day meeting the sharper, he exhibited such wrath that the scamp fled the country. From that time to the day of his death, Mr. Wells would never

receive any paper money in his business transactions, and it become understood by traders that whatever they bought of him must be paid for in gold or silver.

His daughter Jemima, growing into womanhood was possessed of many amiable qualities of both mind and person, and had many offers of marriage, but rejected them all, her father telling her he would never re-marry while she would remain single and be governess of his house. She often responded that she would not marry while he would live single. Neither of them ever married.

Mr. Wells lived to a ripe old age, enjoying life as a man should do, having an abundance of this world's goods for his own comfort, and to divide with the poor. He died September 24, 1831, in the eighty-ninth year of his age, and was buried on his farm beside his father. He willed one half his estate, including the old homestead, to his daughter Jemima, the other half to his son Jesse.

Jemima, continued to reside on the old homstead. In the year 1838, she erected a substantial stone vault at a heavy expense, alongside of her father's grave in which she designed to deposit his remains, as well as her own, surrounding the vault and grounds, with a substantial stone wall. On the completion of the work, she had her father's remains exhumed and laid in the vault in the place provided for them. She died August 6, 1860, aged eighty years. Her remains were encased in a metalic casket, and placed beside her father's remains in her beautiful and enduring vault.

Miss Wells spent the latter part of her life in the enjoyment of her home in the society of friends and neighbors, contributing a large portion of her surplus income to aid those around her, who were in indigent circumstances. She willed her real estate and personal effects to her brother Jesse's four children. The principal part of the real estate owned by her father, still remains in possession of his descendants, having been preserved in the family over a century, and now falling into the hands of the fifth generation.

Jesse Wells, son of Richard, was born in Bedford county, Pa., January 3, 1779, remained with his father until he was near twenty-two years of age, when he married Miss Susan Davis, September 4, 1800. This Susan Davis was the daughter of William and Catharine Davis, who removed from Baltimore county, Md., at an early day, purchased the second farm from Holliday's Cove, on the hill, on the Pittsburgh and Steubenville turnpike, where they resided, raised a large family, both died, and are buried in a cemetery near their residence.

Jesse, after his marriage, as above stated, built and settled on the west side of his father's tract of land, and commenced farming, which business he followed through life. He raised two sons, James and Nathaniel, and two daughters, Nancy and Edith.

He died March 21, 1841, in his sixty-first year, and his wife died June 24, 1864, in her eighty-sixth year. They are both buried in the family cemetery, near the vault, before mentioned.

Nathaniel Wells, youngest son of Jesse and Susan Wells, before mentioned, was born in Brooke county, Va., June 19, 1809. At the age of twenty-seven he was married to Mary Atkinson, daughter of William Atkinson, Esq., of Brooke county, on the 28th of February, 1836, and on the 1st day of April following removed to and took charge of the ferry property and hotel opposite Steubenville. This property at that time belonged to his father, Jesse Wells, and his sister Jemima, before mentioned. He immediately commenced improving it, by removing the old stone building, replacing it with a large, spacious brick hotel and necessary outbuildings, doing a prosperous business until August 18, 1840, when his wife died, leaving one son, Lewis, who is still living. Mr. Wells continued on in business, and on June 30, 1842, married Rebecca Owings, daughter of Asa and Mary Owings, of Brooke county. Again established in domestic life, he engaged in various kinds of business, carrying on the ferry, hotel, lumber yard, steam saw milling, dealing in all kinds of grain, doing a general warehousing, commission and forwarding business, dealing in farm lands, farming, raising sheep and other stock.

In 1849, Mr. Wells was elected to represent Brooke and Hancock counties in the Virginia legislature, in which he served from 1849 to 1852.

During his term in the legislature the people of his district were petitioning that body for a grant of the right of way for the Pittsburgh and Steubenville Railroad across Virginia, along Harmon's creek valley. Mr. Wells labored hard to procure the necessary legislation for the road. The right of way for several miles across the territory of Virginia would connect two great lines of railroads in Ohio and Pennsylvania, but the slavery question which was beginning to boil at this time between the free and slave states had aroused a deep seated predjudice in the Virginia heart against the free or abolition states, as they chose to call them, and any legislation that had for its object the benefit of Ohio or Pennsylvania received a cold shoulder from the Virginia legislature. From this and other causes the right of way was rejected at every session from 1847 to 1853. The prospect of obtaining it from Virginia being hopeless, Mr. Wells, in company with Jesse Edgington, who was a man of large means, possessed of energy and public spirit, purchased from the land owners along the route 100 feet wide, from the Ohio river to the Pennsylvania line, recived titles in fee simple, put the the road under contract and built it on private account, under the firm of Edgington & Wells. The work was commenced in June, 1853, and on July 4, 1854, a passenger train ran from the Ohio river across Virginia to the Pennsylvania line. When completed, it became a part of the great Pan-Handle road.

Virginia prejudice ran so high against the road that the governor ordered the attorney general to institute legal proceedings against the parties to stop the work. A suit was commenced by state authority against Edgington & Wells, in the circuit court of Ohio county.

With able counsel, they met the issue and the proceedings were quashed. Not satisfied with this repulse, the state commenced a suit in the Brooke county circuit court, charging Eddington and Wells with conspiring against the laws of the state. They again met the issue, and were sustained. The enemies of the road, still unwilling to abandon their opposition to it procured the introduction into the Legislature, of a bill, declaring it a misdemeanor, punishable by fine and imprisonment in the penitentiary, for any person or persons to build a railroad in the state, without first obtaining a charter from the legislature. Edgington and Wells hearing of this, proceeded to Richmond to look after their interest. The result was, the bill failed to become a law. Thus ended legal proceedings, and matters stood as they were, until after the rebellion began when the state of West Virginia was established, and upon an application to its legislature in session at Wheeling, an act was passed legalizing the road and authorizing the building of a bridge over the Ohio river at Steubenville.

Mr. Wells after disposing of his interest in the road, turned his attention to his own private affairs. He has always been an active politician, an ardent democrat till the rebellion broke out, when he espoused the union cause, working and voting with that party till the war closed. He, then, with many other union democrats of West Virginia, reorganized the democratic party, and has continued to act with it ever since.

It is now forty-three years since Mr. Wells located at the Ferry property the ownership of which has long since passed into his hands. He has been an attentive observer of the changes that have taken place in that time. He has seen the humble log cabin of the early pioneer with its great fire place and the spinning wheel and loom, where the mothers and daughters of the land early and late, with busy hands, wrought the fabrics from which they made the family clothing, replaced with splendid and commodious mansions with elegant rooms, where instead of these humble implements of industry, now are found the piano or organ, and elegant tables filled with elegantly bound books, (mostly novels, I presume—*Writer,*) sheet music, &c., the walls adorned with beautiful pictures in gorgeous frames, and instead of the plain, comfortable fire place, now stands the tasty stove with its highly polished surface, while in some corner stands the neat sewing machine. The old log school house, with its split slab seats, long windows filled with paper, greased with lard, to better admit the light, with the unskilled teacher, has given place to the symmetrical modern structure, supplied with all the conveniences and appliances that modern ingenuity can suggest, with skillful, well trained teachers to discipline the mind of the young, to qualify them for the duties and responsibilities of life.

THE ARCHER FAMILY.

Samuel Archer was born in Scotland in 1745. He, with a number of others, left that country on account of religious persecutions, and went to Irelend, where he married Miss Nancy Thompson, about 1768.

In 1770, he, together with many of the same company, emigrated to America, arriving in Baltimore in the fall of that year, at which place they separated and located at different places. Mr. Archer seems to have had two brothers in the company, who settled in separate localities. From different branches

of the Archer family have sprung some of the eminent men of this country, who have occupied prominent positions in the national councils. They have occupied seats in both branches of congress, with credit to themselves and honor to their country. Mr. Archer soon after landing in America, removed to Carlisle, Pa., and took a claim. While he was building a house on his land, which was some distance from the settlement, a heavy snow storm filled the paths, and on his return in the evening, he lost his way and remained in the woods all night. His feet were so badly frozen that amputation above the ankles was necessary. He was confined to the house some two years before his limbs were healed. About eight years after this occurrence, he removed from Carlisle to Canonsburg. About 1798, he removed to Brooke county, Va., to a farm now owned by Samuel Hindman, where he cultivated a nursery, being always obliged to walk on his knees. His wife died and was buried on that farm. Mr. Archer died about 1819, near Independence, Pa., and is buried in Mount Hope Church Cemetery.

EBENEZER ARCHER, son of Samuel Archer, was born about 1770, and came with his parents to Washington county, Pennsylvania, when young. In 1794, he married Miss Elizabeth Jordan and removed to Brooke county, Virginia, in 1797, where he settled on the farm now owned by William Williamson, on the Eldersville road, two miles east of Steubenville, Ohio. He lived there some sixteen years and died in 1814. He was buried at the U. P. Church, of Cross Creek. He was a very exemplary man, of great piety, and a member of the Associate, or Seceder Church, a strong friend of peace and good neighborhood.

SAMUEL ARCHER, son of Ebenezer Archer, was born near Canonsburg, Washington county, Pennsylvania, July 4, 1795, and came with his parents to Brooke county, Virginia, when about two years old. In March, 1821, he married Miss Mary Lee, by which marriage they reared a family of six children, five sons and one daughter. The sons were William L., Ebenezer, David Thompson, James and Samuel, The daughter's name was Elizabeth. In 1831, he bought the George Atkinson farm. His wife died May 1, 1851. His second marriage was with Mrs. Jane McNary, who died in December, 1861.

Of Mr. Archer's children:

ELIZABETH married George G. Orr, of Holliday's Cove, where she died, leaving six children.

WILLIAM L. married Miss Harriet L. Whitting, of Litchfield, Conn., and removed to near Burgettstown, Washington county, Pa., where he is engaged in farming and raising fine wool sheep.

BBENEZER died at an early age.

DAVID T. died at the age of twenty-one.

JAMES ARCHER, the principal subject of this sketch, was born on the farm where he now resides, June 8, 1832. He was married October 29, 1863, to Miss Susan Crawford, of Hancock county, West Virginia, whose family history will be seen in the "Crawford Family," found elsewhere in this volume. Mr. Archer owns and resides on the old "homestead," situated on the elevated plateau, directly east of Steubenville, and about one-half mile from the Ohio river. It is known as the "Archer Heights" farm, and has the appearance of being No. 1 in quality, and is kept in a very high state of cultivation. The western border of this farm has a very commanding view of the river, city of Steubenville and surrounding country, and is certainly a very desirable location for country residences, indeed the view is so fine and the air so pure, we cannot refrain from predicting the time is not far distant when this whole plateau will be dotted over with houses. James Archer, in religion adheres to Presbyterianism, being a ruling elder in the United Presbyterian Church, and a man of steady industrious habits; has always followed the occupation of farming, is shrewd and reliable in business; has acquired a handsome estate and is always liberal in contributing his means for the public good. He is appreciated in the community where he resides as a man always favorable to good order.

Mr. Archer has an estimable wife, who together with himself, are highly respected by a large circle of acquaintances and friends.

SAMUEL, the youngest son, married Miss Mary Wiley, of Hancock, W. Va. in January, 1864. He now lives in Missouri near Kansas city, where he is engaged in farming and stock raising, devoting especial attention to merino sheep.

WM. H. TARR.

is senator from the First district, was born at Wellsburg, Brooke county, February 22d, 1832, and is a son of Campbell Tarr, sr., an old and well known citizen, who died in 1857. Mr. Tarr received a thorough scholastic training at Bethany College, in his native county, and after graduating, engaged in the mercantile business, at Wellsburg, three years. In 1855, he went to Kansas, and for some four years engaged in buying and selling land, land warrants, and loaning money. During the gold fever, he visited the neighborhood of Pike's Peak, as agent for some banking firms. He returned to West Virginia, in 1860, and May 3d, of that year, married Miss Laura J., daughter of Smiley H. Johnston, of Jefferson county, Ohio. He invested in lands in the vicinity of Steubenville, and engaged in farming and wool growing till 1870, when he removed to his present home in Wellsburg. In 1876, he was called from his business as land dealer, to take his seat in the State Senate. Senator Tarr is one of those steady and indefatigable workers, who are sure to succeed in life. He soon made himself felt in the Senate, and rose to prominence. His influence and judgment were recognized, and he was placed in positions of trust and importance. He filled the position of chairman to the joint committee on the revision of the Judiciary System; chairman to committee on Penitentiary, and was a prominent member of the committee on Finance and Education.

ALFRED GLASS

was born in the city of Exeter, Devonshire, England, September, 1823; came to America and settled in Pittsburgh, in 1828. He received a common school education, went as an apprentice to the printer trade on the Pittsburgh *Gazette* in 1837; Craig & Grant, publishers. At the expiration of his apprenticeship, he went to Wheeling and worked on the Wheeling *Times*; James E. Wharton, publisher. He afterwards worked in Cincinnati, New Orleans and other Southern towns, from thence he went east, residing in Camden, N. J., for several years. In 1852, at the solicitation of W. R. Allison, he went to Steubenville, Ohio, where he was engaged for many years, as a job printer. Afterwards he started a job office in that city, on his own account. In March, 1866, he came to Wellsburg, W. Va., where he established the Wellsburg *Democrat*, issuing the first number on the 9th of March, 1866. Disposing of that paper in 1867, to James E. Anderson, of notorious fame in connection with the Louisiana election frauds. In 1868, Mr. Glass and his son Frank C., established the *Pan-Handle News*, which is still published and edited by the father and son, under the firm name of Glass & Son.

In 1842, Mr. Glass married Miss Eleanor Curran, of Montreal, Canada. They have had ten children—all boys—five of whom are now living, the youngest being thirteen years of age. The four oldest, Frank C., Alfred, Joseph, and William, are practical printers. Before settling in Wellsburg, Mr. Glass traveled over a large portion of the country. He has always been an uncompromising democrat—in religion, liberal.

GEORGE B. CRAWFORD

is a native of Wellsburg, Brooke county, West Virginia. He received such school training as the town afforded during his youth. At an early age he developed a taste for books, newspapers and writing. As he advanced in years he more plainly saw the necessity of a good education, and discovered that the limited training that he received at three dollars per quarter (the price of schooling prior to the free school system) was not sufficient; therefore he set about to gather such information as he desired and required, and is still a close student in those things that pertain to a plain practical every-day life. About eight or ten years of his youth was spent in working in the cotton factory at Wellsburg, where he had the advantage of receiving occasionally instruction in the different branches of mechanics from some of the best workmen in the country, among whom was Mr. John Carle, one of the original proprietors of the mill, who was unsurpassed in turning in both iron and wood, steam engineering, pattern making, carpentering and a general knowledge of mechanics. In 1860, the subject of our notice quit the cotton mill and engaged with Harvey, Manser & Co. as finisher of straw wrapping paper in their mill on Fleet street. This position he held until the spring of 1861, when the mill suspended operations.

When the call was made for soldiers for a three months campaign our subject enlisted in the U. S. volunteer army, and was assigned to Company "G.," 1st Virginia Infantry. Between the time of his discharge from the three months' campaign and August 1862, he was engaged in various pursuits. When he again enlisted in the U. S. volunteer army "for three years, un-

less sooner discharged," being assigned to Company "G.," 1st Regiment Virginia Volunteer Infantry. On the 11th day of September, 1863, at Moorefield, Hardy county, W. Va., while he was on duty, with five companies of his regiment, (the remaining five companies of the regiment and the one to which the one he belonged to (G.) remained at a place called Petersburg,) the battalion was surprised by Capt. McNeil's Confederate troops and the most of them captured, including our subject. They were taken to the City of Richmond, Va., and temporarily lodged in Libby Prison, afterwards transferred to Belle Isle—where Mr. Crawford remained until the 6th day of March, 1864, when he was paroled. During the spring he was exchanged and joined his regiment, with which he remained until his discharge by General Army Orders, June 25th, 1865, at Clarksburg, W. Va.

Returning home, he engaged in various pursuits until December, 1867, when he engaged with Messrs. Barclay & Lloyd, wholesale and retail grocers in Wellsburg, as salesman; also, as deputy to Mr. W. C. Barclay, who was sheriff of the county, for four years, term beginning January 1, 1868. After serving the above firm four years and a half, he left and went to Pittsburgh, where he engaged with J. S. Dilworth & Co., wholesale grocers, as a general worker about their establishment, remaining with them until February, 1872. He returned to Wellsburg, and soon afterwards engaged with Thomas B. Litton, as a grocer clerk. In a short time he and Little formed a partnership which was short lived. In 1873, he bought the stock of Litten and launched out for himself, continuing in the business until the summer of 1876, when he quit, turning his attention to the general repairing business, making household effects a specialty, at which he is at this time, January, 1879, actively engaged. During the winter of 1875–6, he designed and executed what he called a Centennial Memorial Bracket, which is composed of seventy-two varieties of wood, native of West Virginia, and containing over two hundred pieces. The work is of an oblong oval shape, and is six feet in length, by thirty-five inches in width at the widest point. It contains the names of the signers of the Declaration of Independence engraved in the wood, a piece of wood being assigned to each state. Below this, on a shield shaped section, is the names of the Presidents of the United States from Washington to Grant. There are stars for each state, and circles for the territories. The thirteen original states are represented, as well as many other mottoes and patriotic devices. The work was sent to Philadelphia during the Centennial exhibition of 1876, and placed on exhibition in the West Virginia state building, where it was admired and commented upon by thousands of visitors. The press throughout the country, at that time, paid glowing tributes to this piece of work. It is now in the hands of Mr. Crawford. Mr. Crawford, a number of years since, acquired a taste for newspaper writing. He has contributed to the Steubenville *Herald*, the Odd Fellows *Companion*, American *Odd Fellow*, Hancock County, W. Va., *Courier*, and is now the regular correspondent, at Wellsburg, of the Wheeling Daily *Intelligencer*, occupying that position since 1875.

During the early part of 1876 he wrote up the history of Brooke county for the *Intelligencer*, which is said to be quite interesting. During the summer of 1878 he furnished the *Intelligencer* with extracts from a diary kept by his father during a series of years of piloting on the Ohio and Mississippi rivers, which were well received by the public. His father, Cornelius Howard Crawford, was a son of Thomas Crawford, Esq., who resided on a farm near Bethany, W. Va., now owned by Wm. Rodgers, which he disposed of in 183– and removed to Illinois. Soon afterward he moved to Lawrence county, Missouri, where he died in 1837. C. H. Crawford remained in Brooke county, locating at Wellsburg, where he married Maria S., daughter of John and Mary Moren. There were born to them seven children, George B., Oscar F., Mary Helen, Narcissa, Eliza, John M. and William M. Mary Helen, Narcissa and Eliza died in infancy, the remaining four still survive, three residing in Wellsburg and one, John M., in Steubenville. C. H. Crawford died in Wharton, Wharton county, Texas, August 1859, his widow survives him, and resides with her son George. Oscar F., John M. and Wm. M. are married.

John Moren came to Wellsburg in 1806. He was born in Washington, Washington county, Pa., March 14, 1790. He learned the cabinet making trade with a Mr. McConnell at Wellsburg. In 1810 he married Mary Newhouse, who was born in Montgomery county, Md., January 20, 1793. Mr. Moren enlisted as a private in Captain Moses Congleton's company of Virginia troops recruiting at Wellsburg during the war of 1812, and marched with the company to Norfolk, Va., and back. He always resided in Wellsburg after locating there in 1806. He died on the 24th day of January, 1876. At the time of his death there was not remaining in Wellsburg a living soul who was there when he came. His wife survived him but a short time, passing away July 12, 1877. They were blessed with ten children, five boys and five girls, viz: Eliza, Caroline, Maria S., Narcissa D., Harriett D., George W., John T., William, James and Robert. William died in 1849, Caroline died in 1871, Eliza died in 1879, James went to California in 1852. After being there a few months he never was heard of again by his friends at Wellsburg.

JOHN BARRETT, ESQ.

Was born on the 17th of December, 1807, in Jefferson county, Ohio, within three miles of the town of Wellsburg.

His father came from Northumberland county, Pennsylvania, where he was born, grew up and was married. His name was also John Barrett. The following incidents of his life are furnished by his son, the subject of this sketch:

Born December 3rd, 1770, in Northumberland county, Pennsylvania. Married Elizabeth Kelly on the 11th of September, 1798, and reared a family of five sons and two daughters. He moved from Northumberland county to Lycoming, and started from there for the western country in November, 1801. He stopped at Big Redstone, in Fayette county, where he remained until the spring of 1804, when he went to Jefferson county, Ohio. He purchased land there and carried on farming throughout his life. He was elected to the Legislature of that State in the year 1819, and served two sessions. He served as Justice of the Peace for a consecutive period of more than thirty years. He also served in the office of County Commissioner for a number of years, being appointed to fill a vacancy, and subsequently elected for three consecutive terms. He died on the 1st day of April, 1839, highly respected by all who knew him.

Our subject's grandfather was born in Ireland, June 11th, 1695, and died March 20th, 1800, in the 105th year of his age, living throughout the seventeenth century, and witnessing all its events. The following obituary was published in a Northumberland paper of the olden time:

LONGEVITY.

"Died, at his home in Derry township, Northumberland county, in the 105th year of his age, John Barrett; he was born on the 11th of June, 1695, and departed this life on the 20th of March, 1800.

"Blessed are the dead that die in the Lord, they rest from labors and their works follow them."

Our subject was reared in Jefferson county, Ohio, educated at the common schools, and went on the river when scarcely twenty years of age. He was first engaged in transporting flour on flat-boats, and made his first trip to New Orleans in December 1827, in company with his brother James, who died at Natchez the following March. His brother Israel was engaged as Captain of a steamboat as early as 1829, and run the boat *Neptune* from St. Louis to New Orleans. This boat was sunk in 1830, and the following account in relation to it was published in the Steubenville *Herald* of that date:

ST. LOUIS, October 20, 1830.

Steamboat Disasters.—We have information of the loss of two more steamboats on the Mississippi. The Neptune, Capt. Barrett, from this port for New Orleans, on the morning of the 17th inst., struck a snag a short distance below the mouth of the Ohio, and sunk in two minutes, in twenty-two feet of water. Boat and cargo wholly lost. The passengers escaped by jumping on board the boats which the Neptune had in tow; all baggage was lost.

The new steamboat New Jersey, which left this port on Thursday last, for New Orleans, when near St. Genevieve, was snagged and filled with water to the guards. The boat, it is thought, would be raised.

(Capt. Barrett, whose boat is lost, as above stated, is a son of John Barrett, Esq., of this county, and is a most worthy and enterprising young man. From our knowledge of Capt. Barrett, we will venture to say, that the accident is not attributable to any negligence or want of care on his part.)

After writing the above, we received a St. Louis paper containing the following handsome testimonial:

To the Public.—We are under the disagreeable necessity of announcing one more unfortunate disaster, which happened the

of the Archer family have sprung some of the eminent men of this country, who have occupied prominent positions in the national councils. They have occupied seats in both branches of congress, with credit to themselves and honor to their country. Mr. Archer soon after landing in America, removed to Carlisle, Pa., and took a claim. While he was building a house on his land, which was some distance from the settlement, a heavy snow storm filled the paths, and on his return in the evening, he lost his way and remained in the woods all night. His feet were so badly frozen that amputation above the ankles was necessary. He was confined to the house some two years before his limbs were healed. About eight years after this occurrence, he removed from Carlisle to Canonsburg. About 1798, he removed to Brooke county, Va., to a farm now owned by Samuel Hindman, where he cultivated a nursery, being always obliged to walk on his knees. His wife died and was buried on that farm. Mr. Archer died about 1819, near Independence, Pa., and is buried in Mount Hope Church Cemetery.

EBENEZER ARCHER, son of Samuel Archer, was born about 1770, and came with his parents to Washington county, Pennsylvania, when young. In 1794, he married Miss Elizabeth Jordan and removed to Brooke county, Virginia, in 1797, where he settled on the farm now owned by William Williamson, on the Eldersville road, two miles east of Steubenville, Ohio. He lived there some sixteen years and died in 1814. He was buried at the U. P. Church, of Cross Creek. He was a very exemplary man, of great piety, and a member of the Associate, or Seceder Church, a strong friend of peace and good neighborhood.

SAMUEL ARCHER, son of Ebenezer Archer, was born near Canonsburg, Washington county, Pennsylvania, July 4, 1795, and came with his parents to Brooke county, Virginia, when about two years old. In March, 1821, he married Miss Mary Lee, by which marriage they reared a family of six children, five sons and one daughter. The sons were William L., Ebenezer, David Thompson, James and Samuel, The daughter's name was Elizabeth. In 1831, he bought the George Atkinson farm. His wife died May 1, 1851. His second marriage was with Mrs. Jane McNary, who died in December, 1861.

Of Mr. Archer's children:

ELIZABETH married George G. Orr, of Holliday's Cove, where she died, leaving six children.

WILLIAM L. married Miss Harriet L. Whitting, of Litchfield, Conn., and removed to near Burgettstown, Washington county, Pa., where he is engaged in farming and raising fine wool sheep.

BBENEZER died at an early age.

DAVID T. died at the age of twenty-one.

JAMES ARCHER, the principal subject of this sketch, was born on the farm where he now resides, June 8, 1832. He was married October 29, 1863, to Miss Susan Crawford, of Hancock county, West Virginia, whose family history will be seen in the "Crawford Family," found elsewhere in this volume. Mr. Archer owns and resides on the old "homestead," situated on the elevated plateau, directly east of Steubenville, and about one-half mile from the Ohio river. It is known as the "Archer Heights" farm, and has the appearance of being No. 1 in quality, and is kept in a very high state of cultivation. The western border of this farm has a very commanding view of the river, city of Steubenville and surrounding country, and is certainly a very desirable location for country residences, indeed the view is so fine and the air so pure, we cannot refrain from predicting the time is not far distant when this whole plateau will be dotted over with houses. James Archer, in religion adheres to Presbyterianism, being a ruling elder in the United Presbyterian Church, and a man of steady industrious habits; has always followed the occupation of farming, is shrewd and reliable in business; has acquired a handsome estate and is always liberal in contributing his means for the public good. He is appreciated in the community where he resides as a man always favorable to good order.

Mr. Archer has an estimable wife, who together with himself, are highly respected by a large circle of acquaintances and friends.

SAMUEL, the youngest son, married Miss Mary Wiley, of Hancock, W. Va. in January, 1864. He now lives in Missouri near Kansas city, where he is engaged in farming and stock raising, devoting especial attention to merino sheep.

WM. H. TARR,

is senator from the First district, was born at Wellsburg, Brooke county, February 22d, 1832, and is a son of Campbell Tarr, sr., an old and well known citizen, who died in 1857. Mr. Tarr received a thorough scholastic training at Bethany College, in his native county, and after graduating, engaged in the mercantile business, at Wellsburg, three years. In 1855, he went to Kansas, and for some four years engaged in buying and selling land, land warrants, and loaning money. During the gold fever, he visited the neighborhood of Pike's Peak, as agent for some banking firms. He returned to West Virginia, in 1860, and May 3d, of that year, married Miss Laura J., daughter of Smiley H. Johnston, of Jefferson county, Ohio. He invested in lands in the vicinity of Steubenville, and engaged in farming and wool growing till 1870, when he removed to his present home in Wellsburg. In 1876, he was called from his business as land dealer, to take his seat in the State Senate. Senator Tarr is one of those steady and indefatigable workers, who are sure to succeed in life. He soon made himself felt in the Senate, and rose to prominence. His influence and judgment were recognized, and he was placed in positions of trust and importance. He filled the position of chairman to the joint committee on the revision of the Judiciary System; chairman to committee on Penitentiary, and was a prominent member of the committee on Finance and Education.

ALFRED GLASS

was born in the city of Exeter, Devonshire, England, September, 1823; came to America and settled in Pittsburgh, in 1828. He received a common school education, went as an apprentice to the printer trade on the Pittsburgh *Gazette* in 1837; Craig & Grant, publishers. At the expiration of his apprenticeship, he went to Wheeling and worked on the Wheeling *Times*; James E. Wharton, publisher. He afterwards worked in Cincinnati, New Orleans and other Southern towns, from thence he went east, residing in Camden, N. J., for several years. In 1852, at the solicitation of W. R. Allison, he went to Steubenville, Ohio, where he was engaged for many years, as a job printer. Afterwards he started a job office in that city, on his own account. In March, 1866, he came to Wellsburg, W. Va., where he established the Wellsburg *Democrat*, issuing the first number on the 9th of March, 1866. Disposing of that paper in 1867, to James E. Anderson, of notorious fame in connection with the Louisiana election frauds. In 1868, Mr. Glass and his son Frank C., established the *Pan-Handle News*, which is still published and edited by the father and son, under the firm name of Glass & Son.

In 1842, Mr. Glass married Miss Eleanor Curran, of Montreal, Canada. They have had ten children—all boys—five of whom are now living, the youngest being thirteen years of age. The four oldest, Frank C., Alfred, Joseph, and William, are practical printers. Before settling in Wellsburg, Mr. Glass traveled over a large portion of the country. He has always been an uncompromising democrat—in religion, liberal.

GEORGE B. CRAWFORD

is a native of Wellsburg, Brooke county, West Virginia, He received such school training as the town afforded during his youth. At an early age he developed a taste for books, newspapers and writing. As he advanced in years he more plainly saw the necessity of a good education, and discovered that the limited training that he received at three dollars per quarter (the price of schooling prior to the free school system) was not sufficient; therefore he set about to gather such information as he desired and required, and is still a close student in those things that pertain to a plain practical every-day life. About eight or ten years of his youth was spent in working in the cotton factory at Wellsburg, where he had the advantage of receiving occasionally instruction in the different branches of mechanics from some of the best workmen in the country, among whom was Mr. John Carle, one of the original proprietors of the mill, who was unsurpassed in turning in both iron and wood, steam engineering, pattern making, carpentering and a general knowledge of mechanics. In 1860, the subject of our notice quit the cotton mill and engaged with Harvey, Manser & Co. as finisher of straw wrapping paper in their mill on Fleet street. This position he held until the spring of 1861, when the mill suspended operations.

When the call was made for soldiers for a three months campaign our subject enlisted in the U. S. volunteer army, and was assigned to Company "G.," 1st Virginia Infantry. Between the time of his discharge from the three months' campaign and August 1862, he was engaged in various pursuits. When he again enlisted in the U. S. volunteer army "for three years, un-

less sooner discharged," being assigned to Company "G.," 1st Regiment Virginia Volunteer Infantry. On the 11th day of September, 1863, at Moorefield, Hardy county, W. Va., while he was on duty, with five companies of his regiment, (the remaining five companies of the regiment and the one to which the one he belonged to (G.) remained at a place called Petersburg,) the battalion was surprised by Capt. McNeil's Confederate troops and the most of them captured, including our subject. They were taken to the City of Richmond, Va., and temporarily lodged in Libby Prison, afterwards transferred to Belle Isle—where Mr. Crawford remained until the 6th day of March, 1864, when he was paroled. During the spring he was exchanged and joined his regiment, with which he remained until his discharge by General Army Orders, June 25th, 1865, at Clarksburg, W. Va.

Returning home, he engaged in various pursuits until December, 1867, when he engaged with Messrs. Barclay & Lloyd, wholesale and retail grocers in Wellsburg, as salesman; also, as deputy to Mr. W. C. Barclay, who was sheriff of the county, for four years, term beginning January 1, 1868. After serving the above firm four years and a half, he left and went to Pittsburgh, where he engaged with J. S. Dilworth & Co., wholesale grocers, as a general worker about their establishment, remaining with them until February, 1872. He returned to Wellsburg, and soon afterwards engaged with Thomas B. Litton, as a grocer clerk. In a short time he and Little formed a partnership which was short lived. In 1873, he bought the stock of Litten and launched out for himself, continuing in the business until the summer of 1876, when he quit, turning his attention to the general repairing business, making household effects a specialty, at which he is at this time, January, 1879, actively engaged. During the winter of 1875–6, he designed and executed what he called a Centennial Memorial Bracket, which is composed of seventy-two varieties of wood, native of West Virginia, and containing over two hundred pieces. The work is of an oblong oval shape, and is six feet in length, by thirty-five inches in width at the widest point. It contains the names of the signers of the Declaration of Independence engraved in the wood, a piece of wood being assigned to each state. Below this, on a shield shaped section, is the names of the Presidents of the United States from Washington to Grant. There are stars for each state, and circles for the territories. The thirteen original states are represented, as well as many other mottoes and patriotic devices. The work was sent to Philadelphia during the Centennial exhibition of 1876, and placed on exhibition in the West Virginia state building, where it was admired and commented upon by thousands of visitors. The press throughout the country, at that time, paid glowing tributes to this piece of work. It is now in the hands of Mr. Crawford. Mr. Crawford, a number of years since, acquired a taste for newspaper writing. He has contributed to the Steubenville *Herald*, the Odd Fellows *Companion*, American *Odd Fellow*, Hancock County, W. Va., *Courier*, and is now the regular correspondent, at Wellsburg, of the Wheeling Daily *Intelligencer*, occupying that position since 1875.

During the early part of 1876 he wrote up the history of Brooke county for the *Intelligencer*, which is said to be quite interesting. During the summer of 1878 he furnished the *Intelligencer* with extracts from a diary kept by his father during a series of years of piloting on the Ohio and Mississippi rivers, which were well received by the public. His father, Cornelius Howard Crawford, was a son of Thomas Crawford, Esq., who resided on a farm near Bethany, W. Va., now owned by Wm. Rodgers, which he disposed of in 183– and removed to Illinois. Soon afterward he moved to Lawrence county, Missouri, where he died in 1837. C. H. Crawford remained in Brooke county, locating at Wellsburg, where he married Maria S., daughter of John and Mary Moren. There were born to them seven children, George B., Oscar F., Mary Helen, Narcissa, Eliza, John M. and William M. Mary Helen, Narcissa and Eliza died in infancy, the remaining four still survive, three residing in Wellsburg and one, John M., in Steubenville. C. H. Crawford died in Wharton, Wharton county, Texas, August 1859, his widow survives him, and resides with her son George. Oscar F., John M. and Wm. M. are married.

John Moren came to Wellsburg in 1806. He was born in Washington, Washington county, Pa., March 14, 1790. He learned the cabinet making trade with a Mr. McConnell at Wellsburg. In 1810 he married Mary Newhouse, who was born in Montgomery county, Md., January 20, 1793. Mr. Moren enlisted as a private in Captain Moses Congleton's company of Virginia troops recruiting at Wellsburg during the war of 1812, and marched with the company to Norfolk, Va., and back. He always resided in Wellsburg after locating there in 1806. He died on the 24th day of January, 1876. At the time of his death there was not remaining in Wellsburg a living soul who was there when he came. His wife survived him but a short time, passing away July 12, 1877. They were blessed with ten children, five boys and five girls, viz: Eliza, Caroline, Maria S., Narcissa D., Harriett D., George W., John T., William, James and Robert. William died in 1849, Caroline died in 1871, Eliza died in 1879, James went to California in 1852. After being there a few months he never was heard of again by his friends at Wellsburg.

JOHN BARRETT, ESQ.

Was born on the 17th of December, 1807, in Jefferson county, Ohio, within three miles of the town of Wellsburg.

His father came from Northumberland county, Pennsylvania, where he was born, grew up and was married. His name was also John Barrett. The following incidents of his life are furnished by his son, the subject of this sketch:

Born December 3rd, 1770, in Northumberland county, Pennsylvania. Married Elizabeth Kelly on the 11th of September, 1798, and reared a family of five sons and two daughters. He moved from Northumberland county to Lycoming, and started from there for the western country in November, 1801. He stopped at Big Redstone, in Fayette county, where he remained until the spring of 1804, when he went to Jefferson county, Ohio. He purchased land there and carried on farming throughout his life. He was elected to the Legislature of that State in the year 1819, and served two sessions. He served as Justice of the Peace for a consecutive period of more than thirty years. He also served in the office of County Commissioner for a number of years, being appointed to fill a vacancy, and subsequently elected for three consecutive terms. He died on the 1st day of April, 1839, highly respected by all who knew him.

Our subject's grandfather was born in Ireland, June 11th, 1695, and died March 20th, 1800, in the 105th year of his age, living throughout the seventeenth century, and witnessing all its events. The following obituary was published in a Northumberland paper of the olden time:

LONGEVITY.

"Died, at his home in Derry township, Northumberland county, in the 105th year of his age, John Barrett; he was born on the 11th of June, 1695, and departed this life on the 20th of March, 1800.

"Blessed are the dead that die in the Lord, they rest from labors and their works follow them."

Our subject was reared in Jefferson county, Ohio, educated at the common schools, and went on the river when scarcely twenty years of age. He was first engaged in transporting flour on flat-boats, and made his first trip to New Orleans in December 1827, in company with his brother James, who died at Natchez the following March. His brother Israel was engaged as Captain of a steamboat as early as 1829, and run the boat *Neptune* from St. Louis to New Orleans. This boat was sunk in 1830, and the following account in relation to it was published in the Steubenville *Herald* of that date:

ST. LOUIS, October 20, 1830.

Steamboat Disasters.—We have information of the loss of two more steamboats on the Mississippi. The Neptune, Capt. Barrett, from this port for New Orleans, on the morning of the 17th inst., struck a snag a short distance below the mouth of the Ohio, and sunk in two minutes, in twenty-two feet of water. Boat and cargo wholly lost. The passengers escaped by jumping on board the boats which the Neptune had in tow; all baggage was lost.

The new steamboat New Jersey, which left this port on Thursday last, for New Orleans, when near St. Genevieve, was snagged and filled with water to the guards. The boat, it is thought, would be raised.

(Capt. Barrett, whose boat is lost, as above stated, is a son of John Barrett, Esq., of this county, and is a most worthy and enterprising young man. From our knowledge of Capt. Barrett, we will venture to say, that the accident is not attributable to any negligence or want of care on his part.)

After writing the above, we received a St. Louis paper containing the following handsome testimonial:

To the Public.—We are under the disagreeable necessity of announcing one more unfortunate disaster, which happened the

steamboat Neptune, on her passage from St. Louis to New Orleans on Sunday, the 17th of October, at 3 o'clock, A. M. Yet with an uncommon spirit of satisfaction, we are happy to state, the pleasing situation we ultimately arrived at.

To Capt. J. Barrett, we are truly indebted for his exertions in saving our lives; also to his officers and worthy crew. We sincerely believe, had it not been for his immediate exertions and masterly management, we must ultimately have found an untimely and watery grave; and as passengers of the steamboat Neptune, most cordially return our sincere thanks to Capt. Barrett, and would recommend him as a trusty and worthy master, and should be pleased, hereafter, to know him as a commander of a steamboat. And at the same time, return our grateful acknowledgments to Capt. Moorhead, of the steamboat La Fourche, for his kind and timely assistance in relieving us from the disagreeable situation in which we were placed, in consequence of the wreck.

William E. Miur, John Gillespy, A. Mead, C. Empson, Daniel Murphy, J. C. Parry, Stephen B. True, Wm. H. Baker, Lieut. United States army; N. Sharp, Thomas H. Boman, Elijah Concklin, S. McCullen, Isaac Nolen, Thomas Slevan, Henry H. Marks, Fleming Marro, Robert P. Blair, John C. Casey, Adam Albert, O. Cross, Lieut. United States army; James Hamilton, Samuel Cross, N. M. Wilcox, Alex. E. Seaton, John Dougherty, Jacob Mull, Jerry James, John Fletcher, Benj. Olwin, W. Hersh, Theodore Watten, Cyrus Bull.

ST. LOUIS, October 22, 1830.

The following is an extract of a letter from Capt. Issaac Barrett, dated

"MOUTH OF OHIO, October 17, 1830.

"I have the mortifying intelligence to communicate to you, of the entire loss of the steamboat Neptune, with everything I possess. I had two keel boats in tow, which were the means, under Providence, of saving the lives of us all. I had lay all night at the mouth of the Ohio, and after the fog in the morning had cleared off, I started and went down two miles to where I had left the keel boats. I had got them fastened, and started; and in less than three minutes from starting the engine, the boat struck a snag, which passed through the larboard side into the cabin, and she sunk in less than three minutes. No lives lost."

We learn, in addition to the above, that the boat was insured.

Our subject continued in the flat boat business until about 1830, and then was engaged, for a time, as a clerk on a steamboat. He was engaged as captain of the boats Choctaw, Lady Franklin, Augusta, and Clairborne and attended the building of the first at Pittsburgh, and the third at Cincinnati. He continued in the steamboat trade principally during the winter season, and made his last trip in 1847. He was married on the 5th of August, 1832, to Nancy Sharpless. He continued to reside in Jefferson county, Ohio, until the year 1869, when he removed to Wellsburg, where he has resided until the present time. Mr. Barrett has never been the parent of a child, but has reared and cared for a number of orphan children.

He, in company with Nathaniel Wells, built the ferry boat which crosses the river at Steubenville, in the year 1876, and named it after the centennial year.

After quitting the river, he served for several years as a justice of the peace in Jefferson county, Ohio, and after his return to Wellsburg, W. Va., he served in the same capacity there. He also served as a member of the board of education, and of the cemetery board, of Brooke county, and in 1876, was appointed by the court as commissioner, to contract for and supervise the construction of an iron bridge, of 136 feet, across Buffalo creek, near its mouth, and also another one, of 110 feet, about five miles further up the creek, near the residence of A. A. Buchanan. He became a member of the Christian Church, the 12th of March, 1844, and has served as an elder in the same for twenty-eight years.

CHARLES WELLS

was born in Baltimore county, Maryland, April 6, 1745. He married Rachel Owings, December 27, 1764. She died May 17, 1783. He married for a second wife Elizabeth Prather, July 24, 1784.

Mr. Wells was one of the early pioneers of Brooke county. He settled on Buffalo creek, about two miles of the Pennsylvania line, north of the creek, in the year 1775. His brothers, William, Absalom, Caleb and Amon, all settled in the county about the same time. After his second marriage, he sold his land in Brooke county and moved to Tyler county, Virginia, where he purchased a large tract of river bottom land, and become wealthy in lands and stock, giving his children farms, as they married and settled.

Mr. Wells' family became one of the most remarkable in Northwestern Virginia, for their number and stature, as well as wealth and influence. He had by his first wife nine children, by his second wife he had eleven, making a family of twenty children, eleven daughters and nine sons. All these children grew to years of maturity and most of them married and raised large families. They principally all, settled in the Ohio valley, and now with their descendants, constitute the numerous families of Wellses, Russells, McCoys and others, from Steubenville to Parkersburg, principally on the Virginia side of the river. One son, Absalom, and one daughter, Mary Owings, still reside in Brooke county. They all, male and female, grew to an exceeding large size, were athletic and healthy, their weight ranging from two hundred, to two hundred and seventy-five pounds. They were noted for their family friendship and a habit of visiting among themselves, often going in companies of ten to twenty and spending weeks in visiting from place to place among friends. It became a by-word among steamboat and river men, on seeing a company of men and women coming to the boat, "There comes the big Wellses." They were known by all the boatmen from Pittsburgh to New Orleans.

The beautiful bottom, where Sistersville now stands, was given by Mr. Wells to his two daughters, who married two brothers, William and Joshua Russell and who afterwards laid out the town and called it Sistersville, in honor of the two sisters who owned the land.

Mr. Wells represented Northwestern Virginia in congress eight years, between 1789 and 1810.

THE BROWNING FAMILY.

The history of this family, is briefly detailed in a letter from Judge Lewis Browning, to the writer, dated in March, 1879. The Judge in this letter says. "My great grandfather came from England, and settled in Maryland, where my grandfather, my father, and myself, were born in Frederick county. In 1812, my grandfather purchased the farm of Zacheus Biggs, known as Mingo Bottom. The lands in West Virginia were originally taken up by settlement rights, and the titles afterward made by the state of Virginia. This tract was first settled by a Mr. McMechen; hence the name of the run emptying into the Ohio river nearly opposite the rolling mill on the Ohio side. A man by the name of Bernard Dougherty purchased the right of McMechen, and paid for it in continental money, which soon depreciated and became worthless. Dougherty procured a warrant from the state, thereby securing his title. He sold it to John Beard, who sold it to Zacheus Biggs, and he sold it to my grandfather who moved to it, together with his three sons, Lewis, Joseph and Jeremiah, with their families, in the fall of 1812, after a wearisome journey in wagons. This was before the National road was built. My grandfather purchased six hundred and fifty acres in one tract, for which he paid twenty dollars an acre—considered a very high price at that time.

"My father and uncle Jeremiah, were both local preachers of the Methodist church. They had appointments to preach almost every Sunday. After working hard all the week, they would ride sometimes eight or ten miles on Sunday morning, preach and return in the evening. My grandfather's house was, for a number of years, the place for week-day preaching by circuit preachers, supplied by a conference held in Baltimore once a year. They had to go once a year to attend this conference. The trip was made on horseback, and took four weeks.

"In the state of Virginia, the county courts were composed of justices of the peace, appointed and commissioned by the governor. They were a self-perpetuating body. Whenever a new justice was required, they nominated some one to the governor, who appointed and commissioned him. The justices received no pay for their services, but the oldest commissioned justice, in regular succession, become sheriff of the county for two years. For various causes, many never obtained the sheriff's office. Jeremiah Browning was justice many years, but never reached the sheriff's office.

"My grandfather, Jeremiah Browning, died on this farm, aged ninety years. My grandmother died at eighty-six, my father died in his eighty-eighth year, and my mother in her seventy-eighth year. All of them, with other friends, are buried in a family cemetery on the farm. Seth Clark, a son-in-law of my grandfather, occupied the ferry portion of the farm for a number of years. As to myself, I was born on this same farm, No-

vember 4, 1806, and have lived on it ever since, and am a farmer by profession."

When the constitution of Virginia was amended, giving the people the right to elect their own justices, Judge Browning was one of the first justices elected, which office he held for twelve years, being re-elected twice, and acting as presiding justice the last four years, when the war broke out and upset the judicial system of the state. After the adoption of the present constitution of West Virginia, giving the people the right to elect their presiding justice or judge, he was at the first election chosen to fill that office for four years, and at the expiration of his first term he was re-elected for a second term, which he is now serving out. Judge Browning enjoys the respect and confidence of his fellow-citizens for his quiet, candid honesty and sterling integrity.

John Curtis was born in Wales in 1750. A short time afterwards, his father, with wife and three sons emigrated to this country, and settled in Philadelphia, Pa.; the family scattering. John Curtis settled a few years afterwards near Baltimore, Md. When the war of Independence was declared, he enlisted in the defence of his adopted country under General George Washington, serving through the greater part of the war, until wounded, on account of which he drew a pension many of the latter years of his life. He was married to Ealsy Wilkins, of Baltimore, Md., by whom he had four sons and four daughters, viz: William, John, Priscilla, afterwards wife of Captain Joe Wood, of the war of 1812, of Wheeling. Rachel, afterwards wife of James Darling, of Ohio county, Va. Josiah, Mary Ann, Ealsy Ann, afterwards wife of Jesse Wheat, of Wheeling, Va., and George Washington. His wife Ealsy, died in 1838, in the 80th year of her life.

John Curtis died in West Liberty, Ohio county, Va., in 1843, in his 90th year.

Josiah Curtis was born in Hagerstown, Md., June 6th, 1794; was married May 16th, 1820, to Hester Ernsparger, by whom he had five sons and one daughter, viz: William Baker, Jacob Ernsparger, George Washington, Ealsy Ann, John Henry and Josiah. Hester Curtis died in 1833, in the 36th year of her age. Josiah Curtis was married again to Marianna Robinson, October 10th, 1842. She is still living. Josiah Curtis died in Bethany, Brooke county, May 10th, 1864, in the 70th year of his age.

William Baker, born April 18th, 1821, is still living in West Liberty, Ohio county—was formerly a merchant of that place. Early in the Rebellion of 1861, he raised a company in the cause of the north, and after serving but a short time, was promoted to the Colonelcy of the 12th West Virginia, and near the close of the war, was promoted to the rank of Brigadier General.

George Washington, born May 20, 1827, was a private in the Mexican war. At the commencement of the rebellion of 1861, he resided in Bethany, Brooke county, Va., and held a commission as colonel of the militia under Governor Letcher. When Virginia was invaded by the northern troops, he immediately, upon the call of Governor Letcher, crossed the lines. He acted as a private a short time in defense of the state, but was soon promoted to the lieutenant colonelcy of the Twenty-third Virginia, Colonel Toliver's regiment. At the battle of Cedar mountain, while commanding the Twenty-third (Colonel Toliver having charge of the division), he was killed, on the 11th day of August, aged thirty-five years and twenty days.

Ealsy Ann, since the wife of Wm. McFarland, now resides in California.

John Henry and Josiah both died at an early age.

Jacob Ernsparger was born in Hagerstown, Md., October 29, 1824; was married to Melissa G. Kerr, of Brooke county, on July 16, 1849, by whom he had three sons and two daughters, viz: George Clarence, Wickliffe Kerr, Sarah Bell, Josiah Lewis and Ida May, all now living in Brooke county, W. Va. Melissa G. Curtis, his wife, died on August 15, 1862, aged thirty years and seventeen days. Jacob E. Curtis was married again to Sarah B. Kerr, who is now living, on October 21, 1863. He was engaged in the mercantile business in Bethany, Brooke county, from 1847 to 1876, when he retired, after serving the public in that capacity nearly thirty years. In the fall of 1876 he ran for sheriff of his county as the regular democratic nominee, having been nominated by the popular vote system, and was elected by a handsome majority over the regular republican nominee and an independent democratic candidate, in perhaps the fiercest contest for county officers ever had in Brooke county, a great many republicans voting for him and nearly all voting for him at his own precinct. For many years he has been a member of the best standing in the Christian Church, worshipping at Bethany. In his thirty years of business he never sued a man.

George Clarence was born June 6, 1850, in Bethany, Brooke county. Graduated at Bethany college at the age of twenty-one; soon afterwards entered into partnership with his father in business, and continued in that relation till 1876, after which, his father retiring, he took the old stand established in 1847, and is now carrying on the business; the house now entering upon its thirty-third year. He was married April 15th, 1873, to Mollie R. Rodgers, by whom he has one son, Jesse Erle, born April 17th, 1875.

Wickliffe Kerr, was born in Bethany, Brooke county, on August 10th, 1852; graduated at Bethany College, in June of 1873; studied medicine at home until March of 1876, when he began his attendance at Jefferson Medical College, Philadelphia, Pa.; graduated at Jefferson College in March, 1878, with honors—having shared the Prof. Gross prize, with another contestant—and is now practicing his profession in Wellsburg, Brooke county, West Virginia.

Sarah Bell, was born July 9, 1855, and is still at home, near Bethany.

Josiah Lewis—born April 22, 1858—is at present deputy sheriff of Brooke county.

Ida May—born May 1, 1861—is at Hamilton College, Lexington, Kentucky.

Clarence Brooke Turner.—The ancestors of the subject of this sketch, were among the earliest settlers of Virginia. It is now two hundred years since since they first came to that state. His great grand father, Judge Pendleton, held the appointment of District Attorney from Patrick Henry, while Governor of Virginia. The family was related to Presidents Madison and Taylor, and also with the families of Page and Pendleton. George Turner, father of Clarence B., was born October 29, 1793, near Port Royal, Virginia. He married Miss Philadelphia Frazer, who died a few years after, leaving two daughters, Elizabeth and Julia. He married in 1836, Miss Martha Frazer, for second wife. This lady was the mother of the subject of our sketch. She was the daughter of Reuben Frazer, of Spottsylvania county, Virginia, who was of Scotch descent. She was born at Spottsylvania Court House, Virginia, October 11, 1811. She was a cousin to Lieut. Herndon, who was commissioned by the government in 185 to explore the Amazon river in South America, and whose report was published by order of congress. He perished in the ill-fated Central America, which wrecked in the Carribean sea in 1858, by a storm, Lieut. M. F. Maury, the author, and Nautical scholar, and she was also related on her mother's side to the families of Crutchfield, Chandler and Hansford. Geo. Turner, by his second wife, had ten children, seven sons and three daughters. His children in all were Mildred and Julia by his first wife and Elizabeth, Georgiana, Reuben F., Edmund P., Carolinus, S. Wilson, Frederick F., Erasmus H., Clarence Brooke, and Selina C.

Mildred, married—Ricketts, who removed to Missouri, where she died. Julia married T. C. Johnson, assistant cashier Merchants' National Bank, Cleveland, Ohio. Elizabeth married W. H. Lillard, merchant, Knoxville, Tennessee. Georgiana married Col. W. S. Hawkins, of Nashville, Tennessee. During the war he was chief of staff of Wheeler's Cavalry, C. S. A. He died soon after the war. Reuben F. married Miss Ella Bates, of Wheeling, and is now practicing medicine there. Edmund P. is a farmer, of Marion county, Ohio; he married Miss Alice Hendricks, of the town of Marion. Carolinus married Miss Elizabeth Welcker, of Knoxville, Tennessee; he was engaged in the cotton trade; he afterwards removed to Evansville, Indiana, where he died in 1875. S. Wilson married Miss Lou Gleason, of Farmersville, Louisiana, where he engaged in general merchandising. Frederick F. died in childhood. Erasmus H. died in 1874, in his 29th year; he never married. Selina C. died at an early age. Clarence Brooke, the subject of this sketch, was born April 6th, 1850, near Bethany, Brooke county, Virginia, now West Virginia. He entered Bethany College in the fall of 1867, and graduated in the school of Mental and Moral Philosophy, Belles-Lettres, English Literature, Chemistry and Natural Science in 1870; was engaged in teaching till the fall of 1874; when he was elected Clerk of the County Court, to fill the vacancy caused by the death of W. P. Latimer, and was re-elected in 1878, by an increased majority, for a full term of six years. In addition to being a clerk of the court the duties of the office embrace the probating of wills, appointing personal representatives, issuing marriage licenses, recording deeds, mort-

gages, and settlements of fiduciaries. He was married July 18th, 1876, to Miss Callie Burt, of Wellsburg, who died Nov. 21st, 1877. He was married a second time, March 27th, 1879, to Miss Ida E. Halley, of Wellsburg.

JOHN GELSTHORPE was born at Whatton, Nottinghamshire, England, August 10, 1819. He was married, about 1838, to Miss Mary Scarborough, by which marriage he raised three children, Elizabeth, Alice and James. In 1850 he emigrated to the United States, arriving in New York about the 1st of November, and got to Wellsburg, where his brother James lived, about the middle of the month. After remaining at Wellsburg a short time he removed to Bethany, where he lived five or six years. While living at this latter place, he married for a second wife Miss Margaret Rogers. He afterwards removed to Wellsburg, and bought the flouring mill, which he carried on for a few years, and then sold out and removed over the river to Lagrange, Ohio. While here, the war broke out, and he volunteered in the One Hundred and Twenty-sixth regiment Ohio volunteer infantry, commanded by Colonel Smith, company D, Captain Paisley. He enlisted August 20, 1862, as a private, was promoted to sergeant, served nearly a year, and was discharged for disability, from disease contracted in the service. After his return from the army, he leased the Virginia House, in Wellsburg, and in 1871 he bought the Granite House, where he carried on a hotel until his death, January 22, 1879. While Mr. Gelsthorpe's kind and genial disposition made him popular in any business, it seemed to specially qualify him for a genial landlord. By his second marriage he raised six children, three sons and three daughters, named Carrie, William, Francis, Emma, Ida and John. Mrs. Gelsthorpe and her sons continue the hotel, which retains its popularity. Mr. Gelsthorpe, by honest dealing and industry, acquired a comfortable property. The following notice of his death, by the Wheeling *Register* of January 24, 1879, briefly gives the traits of this estimable gentleman's character: "Wellsburg lost another one of her old and highly esteemed citizens in the death of Mr. John Gelsthorpe, of heart disease, which occurred on Wednesday morning. He had been quite sick for some time past, and his death was not unexpected. The funeral took place on Thursday afternoon. Professor C. L. Loos, of Bethany College, conducted the services in a solemn and impressive manner. A large number of people gathered at the house to take a last look at him, whose friends were many and whose enemies were few. "Uncle John," as he was familiarly called by all who knew him, came direct to Wellsburg from Nottinghamshire, England, in 1850, and was engaged ever since his arrival, at various occupations. He kept a store, owned and operated a grist mill, was an oil operator, was in the Union army during the war, after which he commenced hotel keeping, for which he was especially adapted, and at his death was proprietor of the Granite House. He was a man of warm impulses, genial nature and of such an amiable disposition that to know him was to like him. His liberality was well known, and those who were needy always found him ready to give. He leaves a wife and eight children, with whom the entire community sympathize in their sad bereavement.

ASA OWINGS, came from Baltimore county, Md., in the fall of 1795. He stopped with William Griffith for some time, to look for an improved farm, but not finding one to suit, he desired to return east to spend the winter. He had with him several thousand dollars in gold and silver, which he did not want to take back with him, as he expected to return in the spring and buy land. He and Griffith buried this money deep in the ground, under the hearth in Griffith's cabin, where it lay till his return in the following May. He then purchased a tract of land south of Harmon's creek, on the hill. He married in 1797, Mary Wells, daughter of Charles Wells, near Buffalo creek, Brooke county, W. Va. He and his wife lived on this farm during their life time. They raised a family of ten children, five sons and five daughters. The youngest child, Rebecca, married Nathaniel Wells. Mr. Owings, died about 1819, and Mrs. Owings raised her family, saw them all married and settled in life. She died August 19, 1849, aged 72 years, eleven months and three days. Her youngest son, Charles W. Owings, now owns and occupies the old homestead.

WILLIAM and SAMUEL STRAIN.—These were two brothers who came from Ireland, and settled on Cross creek, Brooke county, in 1774, on what is known as the Strain farms, where some of their descendants still reside. Their brother John, settled about ten years later on the same tract, but subsequently bought on the head waters of McMahon's run, in the same county, where his son John resided till 1876. During the Indian troubles, they forted in Wells' fort, near the Pennsylvania line. William enlisted and served in the Revolutionary war, under Gen'l Washington. Samuel returned to Ireland for his family, and was pressed into the British service, served his time out, and returned to America with his family. William Strain's son, Ebenezer, lived and died on the same tract of land. His sons Thomas and Eleazer, own and occupy the old homestead at this time.

HARMON GREATHOUSE settled in Holliday's Cove about the year 1771. From him Harmon's creek, which runs through the cove, takes its name. He settled near where Brown and Caldwell built the woolen factory. Mr. Greathouse, wife, three children and his sister, Mrs. Muncy, constituted his family. One night Benjamin Davis, son of Nathaniel Davis, sr., was at Mr. Greathouse's house, when it was attacked by a party of Indians. While the Indians were prying at the door, and Greathouse and Davis were resisting them, Mrs. Greathouse and Mrs. Muncy ran and made a great noise among the chairs and other furniture, and called loudly men's names, urging them to come to the chest and get powder and ball. The Indians heard the calls and supposed the upper story was filled with men. At the proper time Mrs. Greathouse fired a rifle from the garret window, which dispersed the Indians. The family then fled to Edgington's fort, protected by the darkness of the night. The following night the fort was surrounded and attached by Indians, but was successfully defended by twelve men, among whom was Greathouse, three Davis brothers, Huston, Edgington, Griffith and others.

JOSEPH COLBEN.—This gentleman settled on King's creek, Brooke county, Va., about the year 1776. He and his wife started one day to visit a neighbor, she on horse-back, carrying a child in her arms, he on foot. On their way they were fired on by a party of Indians. Mrs. Colben received a ball through her arm above the elbow, which passed through the child's clothes and through the mother's wrist. Both mother and child fell from the horse, and Mr. Colben, supposing them dead, mounted the horse and fled, the Indians endeavoring to seize him as he started. He soon reached a party of settlers who went in pursuit of the Indians, without overtaking them. Returning to the scene of the tragedy, they found Mrs. Colben scalped, but still breathing. She soon expired. The child had been dashed against a tree, and was dead. Peace being made, some years after, the Indians frequently made friendly visits among the whites. One day a party of them called on Mr. Colben, who still lived on King's creek, for a dinner, which he gave them. Before leaving, one of the Indians told Mr. Colben that he was the one who shot and killed and scalped his wife. Mr. Colben's feelings can be better imagined than described, but being alone and helpless he had of course to let the villians go unpunished.

THOMAS EVERETT was born in Wellsburg, Dec. 15th, 1825, and has resided in the place ever since. His father, Joshua Everett, settled in Wellsburg in 1804, from Maryland, and engaged in the business of coopering. He enlisted in the war of 1812, and was at Fort Meigs, in the infantry, under Maj. Conkleton. He returned from the war to Wellsburg, and in 1815 married Miss Margaret Buchanan; resumed his trade of a cooper; reared a family of seven children. Our subject was educated at the Wellsburg Academy. Married in 1849 to Miss Martha Johnston. Mr. Everett first engaged in the grocery trade. In 1856 he went into the manufacturing business, in connection with merchandising. About 1860 he also commenced operating in the wool trade. In 1876 he purchased over 500,000 pounds of wool. He quit the mercantile business in 1876, and has turned his attention more exclusively to manufacturing, in which he has been engaged for the last twenty-two years, and during that time the firm name has undergone several changes, and is now styled Everett, Bracken & Co.

GEORGE HOGG was born April 1, 1800, in Yorkshire, England. Sailed from Liverpool, England, June 8, 1819; landed at Baltimore, Md., July 24, 1819, and came on at once to Brownsville, Pa., where he remained for about two years, working with John Snowden, at blacksmithing. When in England he was apprenticed to John Snowden's father, and served six years learning his trade. He and John Snowden came from England together. He married July 28, 1822, to Miss S. S. Richards, of Wheeling. Mr. Hogg left Brownsville and moved to

ıeeling in 1821, where he commenced business for himself. connection with blacksmithing, after he got able, he manutured wagons and run extensive works for about fifteen ırs. On September 16, 1835, he purchased the farm where ı son William now resides, and moved with his family to it, ere he remained till his death on July 11, 1875. He followed ming the latter part of his life. Reared a family of ten ldren, seven of whom are still living. He was a member of ı M. E. Church for about fifty-five years. He owned at the ıe of his death over 800 acres of land.

William Hogg was born November 25, 1844, on the farm ere he now lives. Post office, Short Creek, W. Va.

Robert Miller, jr., was born October 8, 1845, in Wheeling, ere he was reared and educated. Came to Brooke county in 0. Married in 1868 to Miss S. J. Naylor. Business of mer and wool grower. Grows about 1,200 pounds of wool ıually.

John Agnew came from Washington county, Pa., to Brooke ınty about 1800, and settled in Wellsburg. Was a hatter by de. He married a daughter of Major W. McMahon, one of ı first settlers of Brooke county, and reared a family of eight ildren, six of whom are still living. After working a few ars at his trade, he went to farming and followed it until ı death in 1837. His wife survived him about one year. He s reared in the Seceder Church, but when he came to Brooke ınty he joined the United Presbyterian Church, in which he ıtinued till his death.

James M. Agnew, son of John Agnew, was born July 16, 1810, Brooke county, where he has always lived. Farmer by ocpation, but in his younger days he run flat boats on the er. Made twenty-one trips to New Orleans. Has been mard three times, and has reared a family of two sons. Has en a member of the Presbyterian Church for the last twenty ars. Produces annually about 1,500 pounds of wool.

Talbott Hammond was born February 3, 1802, in Brooke ınty, W. Va., where he was reared and spent most of his life. ı was called upon to fill the office of justice of the peace and ıool commissioner for about fourteen years, under the old contution of Virginia. His father, George Hammond, settled Brooke county in 1782, near the Washington county line. lbott Hammond was married in December, 1824, to Miss ınnah Collins, and reared a family of ten children, of whom e are still living. He bought the farm where his son Wilm now resides in 1835, where he remained until his death, 1870. He devoted his attention almost exclusively to wool owing, and was one of the first to introduce the Spanish meıo sheep in Brooke county. In 1822 he commenced to raise eep, and in 1845 he had a flock of 1,200 head.

William Hammond, son of Talbott Hammond, was born May , 1842, on the farm where he now resides and has always lived; ıs educated at the common school; married January 24, 1867, Miss L. V. Mulhollen, of Washington county, Pa. Business, ıol grower. He produces yearly about 3,000 pounds.

John B. Trimble was born November 16, 1849, in Ohio ınty, and came to Brooke county about 1853, with his paıts. Has been engaged in farming for the last three years. ırried December 13, 1877. Post office, Short Creek, W. Va.

William Boner was born in 1751 in Virginia, and came to ooke (then Ohio) county, December 9, 1774. Was a single ın at that time and lived with Oliver Gorrell, who lived on e farm now owned by R. M. Wells. In 1776 he bought the ıprovements of Isaac Meeks, on the farm where he lived un- his death, and the same where his son George now lives. ı was married to Miss Jane McColloch, a cousin to Major Saml McColloch, and reared a family of ten children—six daughs and four sons, all of whom are dead except two. Was enged in several expeditions against the Indians in Ohio. He ed July 23, 1830. His wife died March 8, 1849, at the advanl age of eighty-five.

George Boner, son of William Boner, was born October 9, 98, on the farm where he now lives. Has devoted his time farming. Married January 12, 1843, to Miss Nancy Hedges, d has reared a family of six children, five of whom are now ing. Mr. Boner, although eighty years of age, is still active mind and body. Has always lived a quiet, retired life.

Abram Wilson was born July 23, 1825, in Ohio county, West Virginia, where he lived till 1848, when he came to Brooke county. Was married in 1847, to Miss E. Bane, and moved to the farm where he now lives the next year. Has always been a farmer. Served the people in the capacity of justice of the peace from 1853 to 1861. Took an active part in procuring the railroad. Negotiated the county bonds to the extent of $130,000; at that time, he was President of the Board of County Supervisors. He has now retired to private life and is engaged in wool growing; he grows annually three thousand pounds of wool; his father's name was Joseph.

James Hindman was a native of Ireland, and at what time he settled in Brooke county we cannot learn, but it was at a very early date in the settlement of this portion of West Virginia. He was married in Lancaster county, Pa., to Miss Mary McCully and reared a family of five sons.

Francis Hindman, the fourth son of James Hindman, was born in 1793, in Brooke county, West Virginia, where he resided all his life; was a farmer by occupation; married in about 1816, to Miss Mary Litton. He served all through the war of 1812, under Gen. Harrison; reared a family of nine children, of whom six are still living. He died in 1856.

James Hindman, son of Francis Hindman, was born in 1819, in Brooke county, where most of his life has been spent; is a carpenter by trade; was married March 4, 1841, to Hester Wallace and reared a family of five children, three sons and two daughters, all of whom are living.

William Rogers.—Nicholas Rogers, grandfather of William Rogers, was one of the earliest pioneers of this section. He emigrated from England to this country, sometime previous to the revolutionary war, and settled in what is now Ohio county, West Virginia, a short distance from the Brooke county line, on the farm now known as his home place, and owned by John Rogers. Abram Rogers, father of the subject of this sketch, was born on his father's place in Ohio county. At the commencement of the Revolution he was but sixteen, but he enlisted in the service, though he was not taken from the border. He was in Fort Henry, at Wheeling, at the siege in 1777, and was with Colonel David Williamson in his expedition against the Moravian towns in 1782. He always denounced that terrible massacre, but stated that the finding of garments of the murdered wives and children of some of the volunteers, exasperated them beyond control. He died in October, 1837. For many of the latter years of his life, he drew a pension for his services in the revolutionary struggle.

William Rogers, the subject of our sketch, was born in 1800, on his father's farm, on Castleman's run, in Brooke county, and which he owned till 1875, and where he resided till 1862, when he purchased the old Glass farm, rendered memorable by the capture of Mrs. Glass (who afterwards became Mrs. Brown), by the Indians on the 27th of March 1789. Mr. Rogers still owns this farm but lives in Bethany. The old house in which Mrs. Glass was captured, was burned in March 1879 He was married December 24, 1839, to Miss Margaret Atkinson, by whom he has had ten children, six sons and four daughters. Rebecca E., now the wife of Dr. C. Shriver, of Bethany; A. Linn, who was elected a member of the legislature for the term of 1874–6; Albert S., James P., Mary R., now the wife of George C. Curtis, of Bethany; William A., Elizabeth H., Joseph S., Sarah B., and Sansom M. They are all living.

Mr. Rogers is in easy circumstances and respected by all who know him.

Abram Montgomery was born in Westmoreland county, Pennsylvania, in 1800; was a tanner by trade. He married Miss Nancy Snelling, by whom he had eleven children, of whom two sons and six daughters are still living. J. E. Montgomery (one of the sons of Abram,) was born March 13th, 1836, at West Liberty, Ohio county, West Virginia, where he attended school until he was nine years of age, when he commenced work in a woolen factory, where he worked till eighteen years of age. He then went into the saddle and harness trade, in which he has been engaged ever since.

Lewis Hall was born in Brown county, New York, on the 15th of October, 1809, and came to Holliday's Cove, in Brooke county, in the year 1817, with his father, who settled in that locality. At the age of twenty he came to Wellsburg, and first engaged in milling and wool-carding. He owned a half interest

in a mill and carding machine at this place, which he operated for about three years, when he disposed of his interest and entered the cotton factory of Carle, Miller & Carle, as clerk. He married Louisa Markley in 1831, and the next year he started on a trip with his brother-in-law to New Orleans, and his wife died during his absence, leaving one child. In the year 1834 he married Sarah Lawrence. He had retired from the cotton factory the year previous; was appointed Deputy Sheriff of Brooke county, under George Parkinson, Esq., during 1834 and 1835. He was President of the Board of Trustees for Wellsburg during 1836 and 1837. At this time he purchased a farm and hotel, at what is now known as Fowlerstown, where he resided until 1842, when he returned to Wellsburg, purchased a small farm in the country and resided in town. In August 1843 he purchased the store-house and stock of John W. Jackson, consisting of general merchandise, and has been engaged in the mercantile business ever since, and has operated successfully and passed through all the vicissitudes of trade for the last thirty-five years, and has been engaged longer in business than any man in Wellsburg. In November 1862 he left his store in charge of a clerk and went to Livingston county, Illinois, and operated a ware-house for about nine months, after which he returned to Wellsburg. He is at this time closing out his stock of goods, preparatory to removing to Cincinnati, Ohio. Since the year 1830 he has been a member of the Disciples Church, at Wellsburg. He has reared a family of five children, all of whom are now residing at Cincinnati, Ohio.

THE BRADY FAMILY.

BERNARD BRADY—The first one of the name that settled in Brooke county, emigrated from Ireland. He first settled near Philadelphia, where he remained till in 1796, when he removed to Brooke county, and settled on a farm near Cross creek. His son, John Brady, was about three years old at the time his father came to Brooke county. His education was very limited, and at an early age, he was bound out to a Mr. Russell, of Wellsburg, to learn the cooper trade, where he remained until of age. Shortly after, he went on the river as a trader, in which business he remained for about forty years, amassing quite a fortune. He walked from New Orleans to Wellsburg, eleven times. He run the flat boat down, and as that was before steamboat days, they had to make the journey back on foot. He first bought 200 acres of land on Cross creek, where he lived for about eight years. He then sold, and bought the farm where his son John now lives. Before his death, he owned 1,000 acres; was married in 1818, to Miss R. Shimplin, and reared a family of four sons and two daughters, of whom four are still living. He died March 8th, 1877, in his 88th year, respected by all who knew him.

JOHN BRADY, jr., was born October 15th, 1825, in Brooke county, where he has always resided. Was married April 6th, 1852, to Miss J. Hamilton, and reared a family of seven children. Business—farmer, wool and grain grower. Produces about 1,600 pounds of wool annually.

WILLIAM S. BRADY, the oldest son of John Brady, sr., was born December 2, 1820, in Wellsburg. Received a limited education. Followed farming as a business all his life. Married October 9th, 1845, to Hannah Cory, of Brooke county, and reared a family of three children, all of whom are living. Grows about 1,200 pounds of wool annually.

OBED GREEN was born in Chester county, Pa., October, 1775, and came to Brooke county in the fall of 1819, and settled on the farm now owned by Mrs. Wilson. He served in the war of 1812 for two years in the cavalry. Served in the capacity of "dispatch rider" between the army and Baltimore. His brother, Eli Green, was also in the war; he is still living in this county at a very advanced age. Obed Green reared a family of eleven children, all of whom are dead, except the two oldest. Was a member of the M. E. church.

W. E. GREEN, son of Obed Green, was born May 16, 1802, in Maryland, and came to Brooke county with his father when at the age of seventeen years. Married August 25, 1825, to Eliza Lucas, and reared a family of thirteen children, eleven of whom are living. He has resided for forty-six years on the farm where he now lives. Has been a member of the M. E. church for thirty-eight years.

T. M. LLOYD was born in Jefferson county, Ohio, in March, 1829. His father, William Lloyd, removed to Wellsburg a few years after. Our subject attended the public schools of Wellsburg, but at quite an early age he went into a dry goods and grocery store as clerk, where he remained about one year, when, on account of his health, he quit the store and went to the country and lived on a farm with his uncle for about four years, when he again returned to Wellsburg and entered the mercantile business, in which he has ever since been engaged. In 1867 he was appointed post master and served about three years and resigned. He now keeps a variety store, consisting of fancy goods and notions and is doing a good business.

JOHN W. LLOYD was born in Jefferson county, Ohio, attended school at Steubenville and at Wellsburg. After leaving school he commenced to learn the trade of making chairs with his father. In 1856 he went to Clinton county, Iowa, where he remained about one year, when he returned to Wellsburg and formed a partnership with his father, in the furniture business, in which he continued until his father's death, when he formed a partnership with Hugh Barth in the same business. He bought Mr. Barth's interest and is now running the business alone.

J. F. COUNSELMAN.—The grandfather of the subject of this sketch was born on the river Rhine, in Germany, and emigrated to this country at an early period, and settled in Maryland, where the father of our subject was born, in 1776, and where he married Elizabeth Jones. The father removed to Brooke county in 1814, and bought the farm on which the subject of our sketch was born, April 1, 1819, where he still resides. The father raised a family of eight children, who grew up to years of maturity. This son, J. F. Counselman, married, August 26, 1841, Miss Emiline B. Locke, daughter of Rev. Simon Locke, a pioneer Methodist minister. He has raised a family of four children, two sons and two daughters, William F., Clarinda V., Mary R. and J. E., Clarinda V. married H. C. Morgan, and lives in Ohio county, W. V., and Mary R. married Alexander Kuhn, and lives in Mason county, W. Va. The father of Mr. C. died in 1866, in his ninetieth year, lacking only two months of being ninety years old at the time of his death. Mr. Counselman is an energetic enterprising farmer, and lives about a mile south of Bethany.

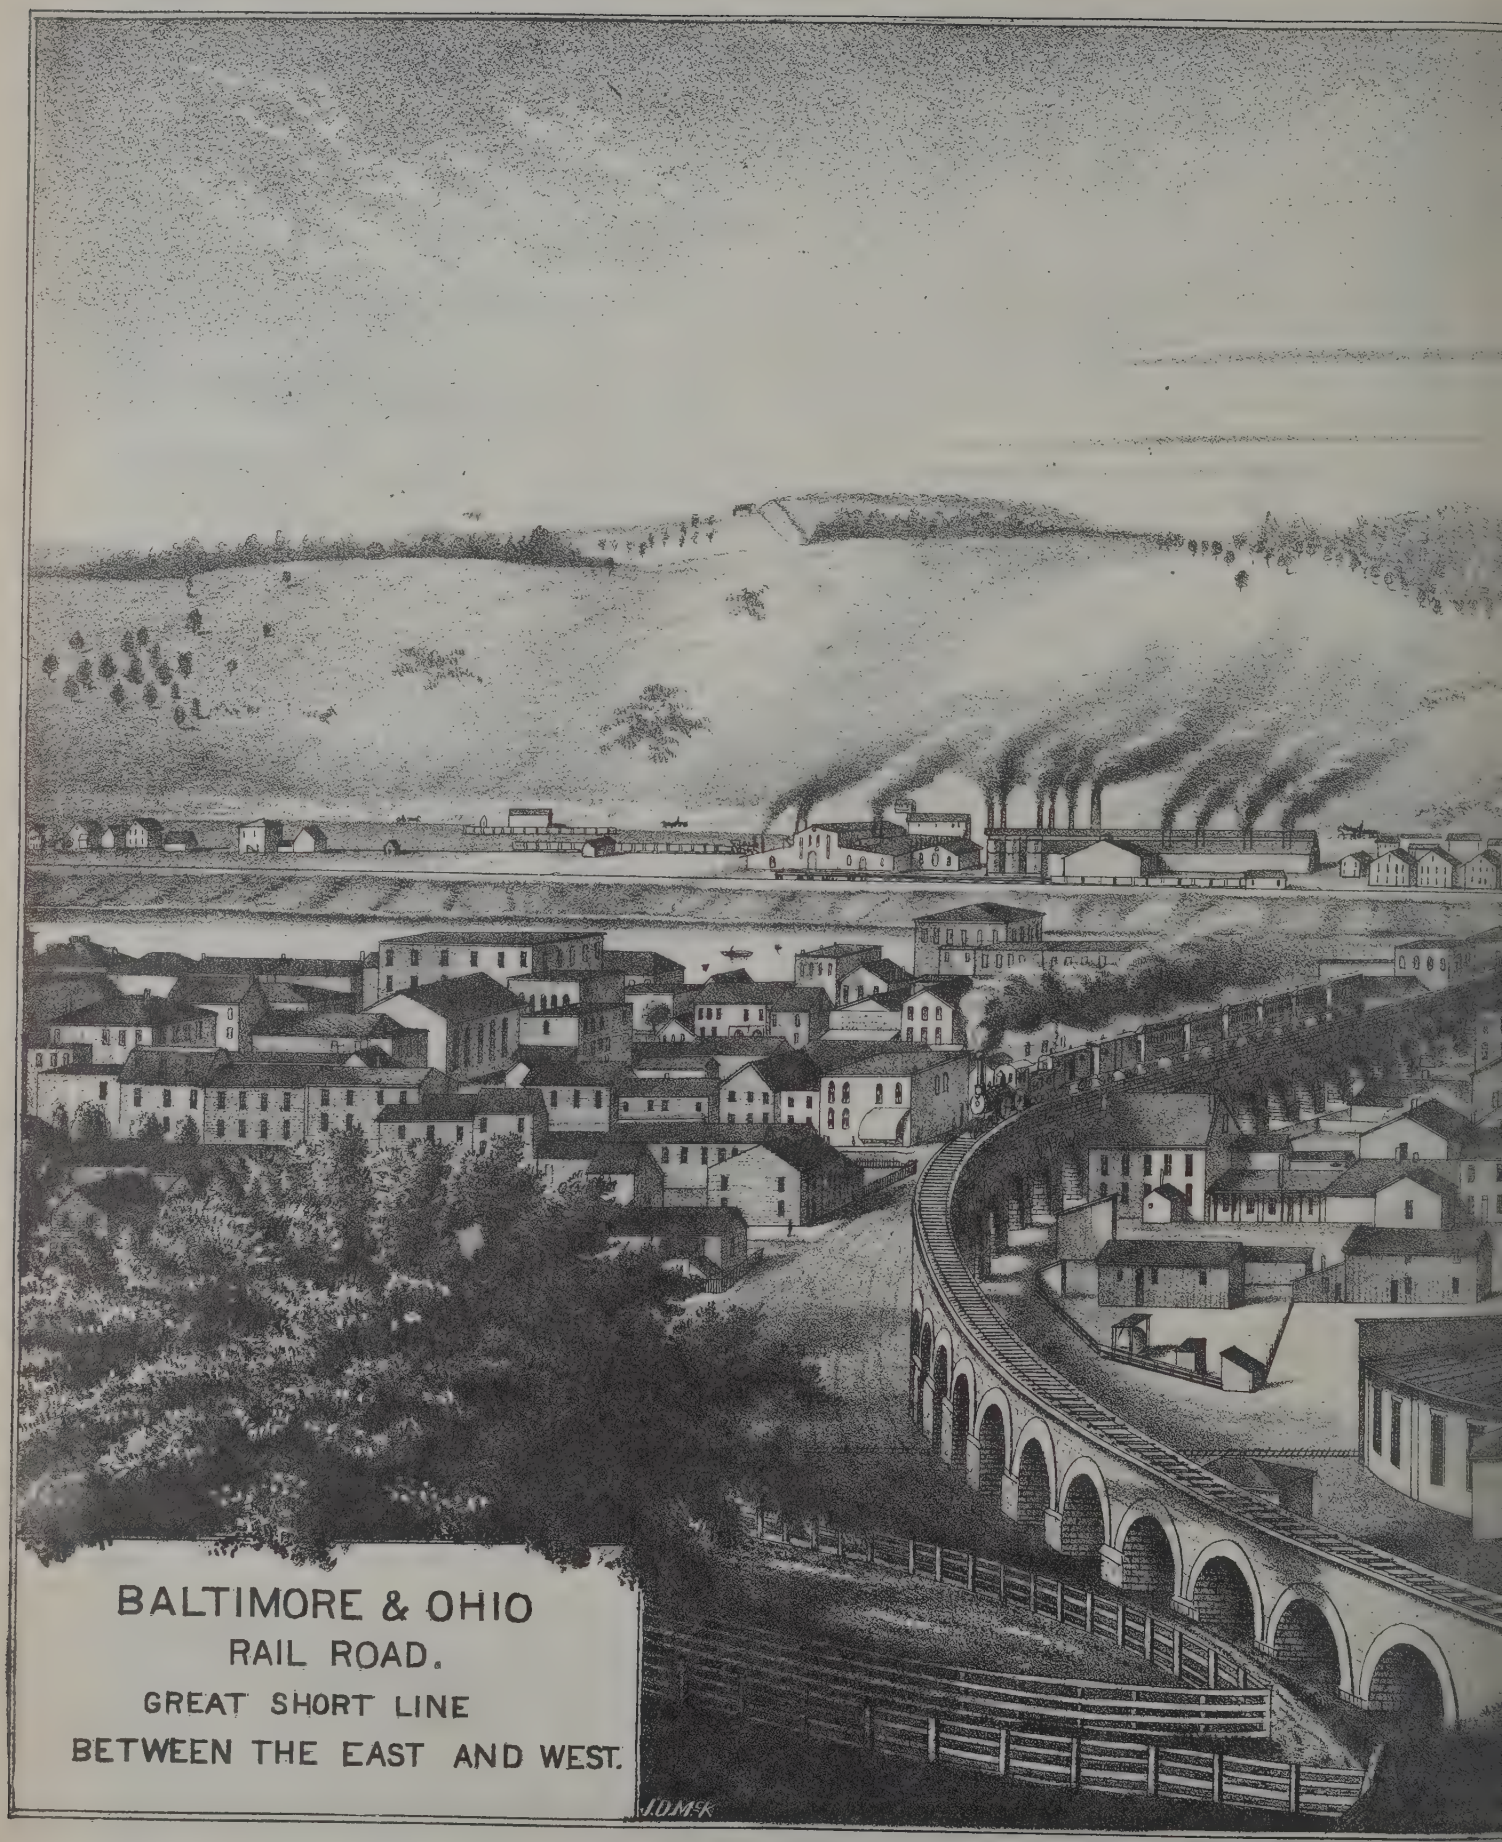
SAMUEL GEORGE was born in Washington county, Pa., May 22, 1827, but came to Brooke county, W. Va., with his father in 1832. Was educated in the common schools, which were then supported by subscription. He came to Wellsburg in 1852, and engaged in the grocery business. Was married in the year 1854 to Miss Elenora Miller, of Wellsburg. His wife died in 1856, and in 1857 he married Miss Eliza Kimberland. In 1860, he engaged in the wool business successfully, and at this time is operating in the same business in connection with banking. In 1871, he established the Bank of Wellsburg, which he is successfully carrying on at the present time. In the wool trade he frequently handles 500,000 pounds per year, and is recognized as one of the principal buyers.

CHAPTER LIII.

HISTORY OF MARSHALL COUNTY.

EARLY HISTORY.

VERY little, of course, is known with regard to the period that preceded the advent of the whites in this county. The space indicated comprehends an indefinite rule of darkness and barbarism. How long the untutored savage had made this his home and hunting-ground is unknown. Hundreds of years he evidently tarried in these rich hills and pleasant valleys, hunting game, nursing papoose and smoking his rudely constructed pipe. The life he led was joy to him, and his worship to the Great Spirit was unquestionably sincere. The hunting grounds were changed from place to place, but he was untraceable only by a few hieroglyphics coarsely engraven upon some rock, or by an occasional pipe or flint. His history is a mystery not solvable. There are many speculations, conjectures and opinions, but like the author that



VIEW OF THE BALTIMORE & OHIO R

ROAD BRIDGE AT BELLAIRE, OHIO.

rounds them into language, they die. The Indian never thought to preserve his own history; but before he ever traversed these hills and valleys—before his whoop echoed and re-echoed—there lived another race of beings. Traces of their footsteps through the country are seen. They have received the appellation of mound builders. They were of large stature. Whence came they? we ask, but no answer. Many of the acres of Marshall county have doubtless been the theatre of events that would render them classic ground were the history known. The mounds tell in their silence of a people that lived here perhaps thousands of years ago. They were a people or nation that revered their dead, and built lasting monuments of earth above their deceased to mark their resting place for all ages to come. Where Moundsville now stands may have been the home of the greatest of their great, for it contains the largest mound known in this country. Here some great king or personage was laid away to rest, followed by a solemn cortege of people. But they, like every nation, have had their day and now are totally extinct.

PIONEERS AND THEIR TIMES.

Over one hundred years have elapsed since the first settlement was made within what is now Marshall county. A century is a large measure of time for this nation. Compared with Egypt, Greece or Rome, our republic is yet in its veriest infancy. What changes have been wrought within that period of time. The first pioneer found the country without market, road, merchant, mechanic, and the virgin soil undisturbed—excepting a few spots that may have been marked by the rude efforts at tillage by the uncivilized and barbarous red man. Wild beasts and the savage Indian were in deadly conflict through the vast wilderness. The earth teemed with venomous and loathsome reptiles, except when winter withdrew them to their caverns. A wilderness filled with antagonistic creatures. Such, in brief, was its condition when that band of moral heroes, the pioneers, entered the country and grappled with privations and dangers altogether unknown to the generation who now live here, enjoying themselves off the abundant products the well cleared land yearly bears. No churches, schools, merchants or mechanics were then found.

The early settlers made their way hither from their eastern homes a foot and on horseback, carrying enough food to last them a few days, and when that run out they were obliged to hunt wild game, which, however, was plentiful. They set to erecting cabins and clearing ground, all the while guarding themselves from the savage beasts and Indians. They raised corn and lived on coarse food. The pioneers did their own grinding, in many instances. Mills were few and very far apart. They used what is called hand-mills for a number of years. It was a cheaply arranged appliance. Simply two flat stones. The corn was placed on the largest stone, whilst the smaller one, with its flat surface down, was turned about by the hand and thus pulverized by friction. After being perfectly triturated it was then ready for use. In 1791, the nearest mill was at Shepherd's, a distance of sixteen miles from Moundsville. The next mill was built by Tomlinson on Grave creek.

The settlers used to pack salt, on horseback, from Hagerstown, at the great distance of two hundred miles. Two bushels of salt carried in this manner was considered a load. The salt costing then, at this early period, the sum of $10 per bushel. What marketing they had was carried to the river and sometimes was disposed of at a trivial or paltry sum, and sometimes a great many things given away to keel boats that passed up and down the river. Many of these boats were from New Orleans. They were loaded with freight, which was carried for $10 a hundred. Chickens, eggs and butter were the products for market. The cattle were driven to the east for market, and sold at Philadelphia and New York. Hogs were driven to Baltimore. Then potatoes sold for twenty-five cents per bushel at retail, and twelve and a half wholesale. Chickens sold for sixpence a piece. Butter and eggs the same per pound. Cattle and hogs sold for a cent a pound. Horses found slow sale at from $20 to $40. In 1810 salt sold at $6 per bushel. The traveling done on foot in those days were at great distances, and thirty-three miles were considered a day's journey. A great many of the pioneers often walked to Cincinnati, Louisville, Nashville and Memphis.

Thus the author has summed up in a brief manner a mere outline of pioneer life. Many stories of hardships, privations and suffering of the pioneer have never been related and neither can they now be told, for they that moved about then have all been gathered to their long homes. The present generation can only imagine the frontiersman's life and dangers they were continually exposed to.

FIRST SETTLERS.

The following were among the first settlers of what is now Marshall county:

Joseph Tomlinson settled on what is since known as the Grave Creek Flats in the year 1770.

Con. O'Neal settled on what is called Fork Ridge in 1770, and herded Tomlinson's cattle and took care of his premises, whilst he (Tomlinson) returned home, and he was then the only white man in the county. He received for his compensation a tract of land.

In 1770, James McDonell and Bartholemew McDonell settled in Yankee bottom.

Nathan Masters settled on what is known as Roberts' ridge, in 1777.

John Riggs and James Riggs, settled the same year a short distance from Nathan Masters.

James Freeland, also settled on Roberts' Ridge, in about 1777.

In the year 1790, Benjamin Fish, Jonathan Roberts, Reuben Roberts, Gay Roberts, settled on same ridge. John Roberts, a brother, settled several years later on Yankee bottom, on the property now owned by Captain David Roberts.

Old Peter Yoho, settled on Fish creek, in about the year 1792.

An old gentleman by the name of Sims, settled on Big Grave Creek, in 1795, on the James Markley farm.

Harry Clark, settled on the old Clark farm, known as the Riley farm, in about the year 1771. He refused to settle in the valley, on account of ague, and located on the hills.

George Dowler settled on what is known as Dowler's ridge in 1796.

In 1790, John Bonar, James Bonar, David Bonar, all settled on Bonar's ridge, or Fork ridge, and there located a great deal of land.

Benjamin McMechen, settled in what is known as McMechen's bottom, about the year 1777.

Jonathan Purdy settled on Grave creek in 1798. He built the first distillery on the flats, that was built in this county, and the second distillery was built by Henry Baker, in the lower end of Round bottom.

Zeke Lewis settled in the Round bottom, in 1798.

In about the year 1805, Hugh Nixon, William Nixon and James Nixon, settled on Roberts' ridge.

The Jeffersons settled on the same ridge, about the year 1810.

There was a number of others that settled before the last named date, and a great many since, which cannot be enumerated.

When Dunmore was Governor of Virginia, there was a large territory lying here unoccupied, and he wanted the land taken up, and offered as an inducement to emigration a clear title, if they would come and tomahawk their way. A proclamation to that effect was issued, and it caused quite a large number of people to settle here. The country and the lands were favorable. Some of the titles did not hold good, and as a consequence, some of the early settlers lost ther claims. It took an effort to tomahawk their way among the Indians in the location of tracts, and in many instances took an effort to retain what they located on.

INDIAN TROUBLES—EARLY REMINISCENCES.

From an article published in the Wheeling *Intelligencer*, of May, 1866, the following is obtained:

Colonel Samuel P. Baker, from whom these facts were ascertained, lives near Benwood, Union district. He is the second son of Henry Baker, and was born in the year 1798. In the year 1825 he married Caroline, oldest daughter of Samuel Tomlinson. He now lives on a part of the 600 acre tract of land formerly owned by Tomlinson, and is now in his eighty-first year, and is the oldest native born citizen living in Marshall county. He is a very intelligent old gentleman and what he relates is authentic. The following was written nearly *verbatim*:

"John Baker, my grandfather, was a Prussian, and he came to the United States in the year 1755. He landed at Philadelphia, where he married a German lady by the name of Elizabeth Sullivan, in the year 1760. Immediately after his marriage he moved to the Shenandoah valley, Virginia, where in the year 1773 Henry Baker, my father, was born. In the year 1767 he emigrated from there to Dunkard creek, Greene county, Pa., and settled among the Indians, four tribes of whom were then living there in peace with the whites, viz: the Delaware

the Wyandots, the Swanees and the Mingoes. He remained there until the breaking out of Dunmore's war, when he took refuge with his family in what was then called Redstone Old Fort, now Brownsville, Pa.

IN THE YEAR 1781

he went to where Washington, Pa., now stands, then known as Catfish Camp. About this time the country about there was very much alarmed, and the people were on the look out for the Indians, who were reported to have crossed the river near Holliday's Cove, and were expected to make inroads upon the settlements. An express was sent to Wheeling fort to give the alarm concerning it. The party sent consisted of Henry Baker, my father (then eighteen years of age,) Henry Yoho, and —— Starnater. They traveled in safety until they came to the Narrows, on Wheeling creek, near where Col. Woods lived and died. Here they were ambushed by a party of Indians. Starnater shot the Indian nearest him and in return he and his horse were immediately killed. Yoho's horse was shot and fell but arising almost immediately it dashed through the Indians, carrying him away in safety to Wheeling fort. Baker's horse was shot but ran some hundred yards when it fell on him. Extricating himself as soon as possible, and throwing away his arms to lighten himself, he ran for about a quarter of a mile, when, seeing a very large red skin approaching him directly in front with a pistol in one hand and a tomahawk in the other, he saw that escape was impossible and stopped. He said the Indian took him by the hair of the head and shook him till he almost thought he would shake his head off, telling him at the same time in good English

YOU ARE A PRISONER.

He was taken back to the body of the Indians, among whom was a brother of the one killed by Starnater. This Indian was raving mad, and was determined to kill Baker in revenge for the death of his brother, but he was prevented from doing so by the chief. They came rapidly down this ridge where I live, no doubt thinking they would be pursued. They struck the river at Kate's Rock, where they found several canoes filled with Indians, who seemed to be waiting for them. From this point, after rowing a short distance down the river, they left the stream, and going back of the Grave creek flats they crossed the creek near where the water station now is and struck the river again at the lower end of the Round Bottom. Here they crossed the river and encamped for the night at the head of Captine Island. All this time he carried his own and Starnater's and the dead Indian's rifles strapped to his back. He was tied to a sapling and passed the night without food.

They started early next morning and traveled three days and three nights without stopping to camp, or with scarcely anything to eat. At the end of thist ime they arrived at Chillicothe. Here, thinking they were out of danger of pursuit, they traveled more leisurely and killing some deer, they had plenty to eat. Arriving at Sandusky they found a band of at least three hundred warriors, and there were nine other men from Kentucky as prisoners. They were all compelled to run the gauntlet. My father being young and active ran it easily, which so enraged a young Indian that he knocked him down with his club after he had entered the house. He witnessed the burning of the nine Kentuckians, one being burned each day, all the time being warned that his fate was to be the same as theirs. On the tenth day he was ordered to be taken out and tied to the stake by an old Indian. He resisted somewhat, and tried to parley with them, but on starting out toward the stake he saw a horseman rapidly approaching. When the horseman came up he saw a man dressed in the uniform of a British officer. He immediately ran to the man. He told him that the Indians were about to burn him, and he wanted him to save him. He found out the man to be

SIMON GIRTY,

who, on finding who Baker was and where he was from, plead with the Indians for two hours to spare his life, and finally succeeded. My father always supposed that Girty anticipated making an attack on Wheeling and expected him to be useful to him as a guide, for he took him aside and asked him all manner of questions concerning Wheeling and vicinity. Through the interposition of Girty he was sent to Detroit and reported to the Governor. He was then set at liberty. Hiring himself to an Indian trader, he remained with him some time trading with the Indians.

At length he started with two others for Virginia, and after a tedious march, getting lost at one time for near three weeks, they arrived at the point where Bridgeport now stands. The inhabitants of Wheeling were some of them on that side of the river, making sugar and selling it. They supposed them to be Indians and fled to the fort and gave the alarm. Finally, when the inhabitants of the fort found out who they were, they welcomed them within its walls.

Baker here found that during his absence his father had moved to the Round Bottom, whither he went, and when summer opened they all went to Fort Tomlinson.

IN THE YEAR 1784

my father built what was long known as Baker's station, near Cresap's grove. In the same year a family by the name of Parr settled in the Flats, and a short time thereafter Henry Baker married one of his daughters. After marriage he settled at Tomlinson's fort, and in the year 1786 his first son, John Baker, was born. (He was the father of Captain A. O. Baker, present clerk of the circuit court.) He lived at the fort until Wayne's treaty in 1791, when he moved to Round Bottom, where he bought a tract of land at the lower end of the bottom, including also Captine island. Here he lived and died His oldest son, John, married Elizabeth, daughter of Jonathan Roberts.

Joseph Tomlinson left his house, near Fort Cumberland, Md., in the year 1770, in company with his brother Samuel, traveling on horseback, until reaching the valley, since known as Grave creek flats. Being delighted with the beautiful appearance and the rich soil, they took possession of it and much of the hill lands, deciding to make it their future home. They erected a cabin near where the residence of the late Judge Caldwell now stands. He remained during that summer, then returned to Maryland and married a Miss Elizabeth Harkness, and removed back to his land in the spring of 1773. The journey was made by the young couple on horseback, the bride using as a saddle-cloth, the only piece of household goods she possessed, a bed-tick. When they arrived at their destination, she found in one corner of the cabin, a pile of wild turkey feathers, with which she filled her bed. This constituted all her household goods.

There was a fort erected here between the years 1784 and 1793, which was known as Tomlinson's fort at Grave creek. De Hass says, "among those forted at Grave creek in the year 1791, was William McIntosh, his wife and child. Early one morning the cry of a turkey was heard against the hill-side, across the river. McIntosh, although warned against the deceptions of the enemy, started with his gun and dog. He landed with his canoe at a point nearly opposite the fort, and commenced ascending the bank. Before taking ten steps, the "turkey," from his concealed position, fired and shot his victim through the head. McIntosh remaining much longer than was right, some men from the fort went over on the third day and there found the unfortunate man scalped, with his faithful dog sitting by his side."

De Hass also tells an occurrence which took place the year previous to this—1790—by which a nephew of Joseph Tomlinson, named Robert Carpenter, came very near losing his life. "He had gone out early in the morning for the horses, and while hunting near Grave creek was fired on by a party of Indians who were concealed near the bank. The ball took effect in his shoulder, breaking the bone and inflicting a severe wound. Thus disabled, the Indians soon overtook and made him prisoner. Anxious to get possession of the horses, but being unable to catch them, the Indians concluded to let Carpenter try it, as the animals knew him and would be less difficult to capture. Accordingly Carpenter was untied and started in pursuit. Going about two hundred yards, he determined to escape, and instead of catching the horses, ran toward the house of a friend, but his flight was so greatly impeded by the old shoes which he wore and his disabled arm, that the savages soon overtook him. Another attempt was then made by the Indians to get the horses, but utterly failing, Carpenter ventured to offer his services, declaring that he would not again try to escape, but do his best to catch the horses and go along with them to their country. Finding they could not get near the animals, they concluded to trust Carpenter once more, threatening him with all manner of horrid deaths if he attempted again to escape. This time he adroitly drove the horses before him a considerable distance, and then kicking off his shoes and taking a firm hold of his maimed limb, started on the race of life or death. He safely escaped to the house Nathan Masters, living on the farm now owned by Jesse Lydick and others.

THE FOREMAN MASSACRE.

At the extreme northern end of Washington township, just on the line between it and Union township, at the head of Grave Creek narrows, may be seen a monument erected to the memory of Captain Foreman and his brave men, who were killed by the Indians on that spot September 27, 1777. The incident is given in DeHass' words:

Captain William Foreman, a brave and meritorious officer, organized a volunteer company in Hampshire county, Virginia, and marched to Wheeling in the fall of 1777. It was known that Patrick Henry, governor of Virginia, had determined early in the spring of that year to send an expedition against the Indian towns at the head of the Scioto, and with this view ordered three hundred men to be raised in the counties of Youghioghany, Monongalia and Ohio. Some of the most patriotic of the citizens east of the mountains, thinking the west in this emergency might stand in need of aid, determined to go to her assistance. Of this number was captain Foreman, who soon raised a company, and by the middle of September was at Wheeling. A gallant soldier, but wholly unfamiliar with Indian warfare, he proved himself unfit for the service, and in his very first expedition suffered the deplorable ambuscade, an account of which we will now give.

After the withdrawal of the Indians from Wheeling, nothing more was seen of them, or heard of their movements up to the time of which we now speak; and the impression became general that they had retired to their towns.

On Sunday morning, September 26, 1777, a smoke was noticed by some persons at Wheeling in the direction of Grave creek, which caused an apprehension that the Indians might be burning the stockade and houses of Mr. Tomlinson. In order to ascertain this fact and afford protection if any was necessary, Captain Foreman, with his company and a few experienced scouts, were dispatched by Col. Shepherd for the purpose.

The party proceeded without interruption to Grave creek and found all safe. Remaining over night, they started early on the following morning to return. When they had reached the lower end of Grave creek narrows, some of the more experienced frontiersmen suggested the expediency of leaving the river bottom, and returning by way of the ridge. The commander, however, hooted at the idea of so much caution, and ordered the party to proceed. The order was obeyed by his own men, including several of the volunteer scouts, but some declined to go with him, and of these there was a man named Lynn, whose great experience as a spy, added to his sagacity and judgment, should at least have rendered his opinions valuable and entitled to weight. His apprehensions were that the Indians if lurking about, had watched the movements of the party, and would most likely attack them at some point on the river.

He said that in all probability they had been on the opposite side of the river and noticed the party go down; that they had crossed during the night and most probably at that time were lying in the ambush for their return. How fearfully were his apprehensions realized.

During the interchange of opinions between Foreman and Lynn, a man named Robert Harkness, a relative of Mr. Tomlinson, sat on a log near the parties and afterwards said the controversy ran high.

Foreman, who prided himself on being a thoroughly disciplined officer, was not disposed to yield to the suggestions of a rough backwoodsman. Lynn, on the other hand, convinced of the fatal error which the other seemed determined to commit, could not but remonstrate with all the power of persuasion at his command. Finally, when the order to march was given, Lynn with some six or eight others struck up the hill sides, while Foreman with his company pursued the path along the base. Nothing of importance occurred until the party reached the extreme upper end of the narrows.

Just where the bottom begins to widen those in front had their attention drawn to a display of Indian trinkets, beads, bands, &c., strewn in profusion along the path.

With a natural curiosity, but a great lack of perception, the entire party gathered about those who picked up the articles of decoy, and whilst thus standing in a compact group, looking at the beads, &c., two lines of Indians stretched across the path, one above and the other below, and a large body of them simultaneously arose from the bank, and opened upon the devoted party a most deadly and destructive fire. The river hill rises at this point with great boldness, presenting an almost insurmountable barrier. Still those of the party who escaped the first discharge attempted to rush up the acclivity, and some with success. But the savages pursued and killed several.

At the first fire Capt. Foreman and most of his party, including his two sons, fell dead. The exact loss cannot with certainty be ascertained, but is supposed to have been about twenty, including the captain.

The presumption is however, that most of those whose names are mentioned, suffered death on the occasion referred to. When Lynn and his party heard the guns, they rushed down the side of the hill, hallooing as though they were five times as numerous. This had the effect of restraining the savages in pursuit and perhaps saved the lives of many. Of those who escaped up the hill, were Robert Harkness and John Collins. The former in pulling himself up by a sapling, had the bark knocked into his face with a ball from an Indian's gun. Collins was shot through the left thigh, breaking the bone and completely disabling him. Lynn and his companions carried him to a spring, said to have been just over the hill, and throwing together their supply of provisions, left him in a sheltered position, promising to send a messenger on the following day with a horse.

Those who were so fortunate as to escape this terrible affair, made their way in safety to Wheeling.

On the second day, a party went down and buried the dead. Colonel Shepherd, Colonel Zane, Andrew Poe and Martin Wetzel, were of this number. They were thrown into one common grave, and the place of their interment is still pointed out to the passer-by.

Collins, the wounded man, was taken off on horseback the second night. They carried him to Shepherd's Fork. * * * He suffered greatly with his wounded limb in riding, but finally recovered, and lived for many years."

DEATH OF CAPT. JOHN BAKER BY THE INDIANS.

Captain John Baker, who located here in the early settlement of the country, was captain of a company of men fighting the Indians, and about 1778 met with his death. He was in company with the Wetzels, three in number, in a block house that had been erected at the head of Cresap's bottom. They were watching Indians who sauntered around on the opposite banks of the Ohio river, evidently waiting an opportunity to kill the whites that had taken refuge in the fort. Baker seizing the first chance fired and killed an Indian that was in range of his gun. The Indians pretending they were frightened, scattered and ran in different directions, leaving their bleeding and dying brother upon the ground. Baker seeing at once that his shot had proven fatal, and being somewhat daring, suggested to the Wetzels to cross the river and examine their dead foe. No Indians then, of course, were in sight—all tranquil and every appearance of safety. But the savages were using strategy. They had secreted themselves not far from their dead companion. He was left there for a bait, and Baker was thus decoyed. A canoe was secured and they crossed to the opposite bank to take a look at their dead victim. Whilst reconnoitering him, several shots from the Indians were unexpectedly fired, and one taking effect on Baker, who fell and was captured by the Indians. The Wetzels recovered the body shortly afterwards—they found he had crawled partially under a log, lying insensible, with both eyes gored out—and he was carried across the river on the canoe, only surviving but a short time after reaching the fort, or block-house. He was buried at that place. The following named persons attended the funeral: Henry Baker, the old Indian warrior, and family; Reuben Roberts, and family; George Baker, Leonard Raigor and two brothers; Aaron Hughes, and Capt. Roberts. There were three canoe loads went from the Round bottom to Baker's Station, where the block-house stood. Col. S. P. Baker and Capt. Roberts are the only two persons now living that attended on that occasion.

In about the year 1804-5, John Wetzel migrated up the Missouri with Jonathan Clark, and whilst there his brother Martin, who remained here, died in the fall of 1812, and before his death he requested that his remains be laid along the side of John Baker's, which request was granted, and accordingly his body was interred there. Before he breathed his last he told his brother Lewis, who bent over him, to encourage John, and tell him never to bury the tomahawk.

ABOUT COLONEL BEELER AND THE MOHAWK TRIBES.

When Colonel Beeler emigrated to this section (Cameron) he located a great deal of land, the greater part of which was about the fort. The entire neighborhood where Cameron now stands, and a wide scope of the country extending to the forks of Fish creek, also, was owned by him at that early day. Shortly after

his coming to this point, in company with other men, they were permanently located at the fort. A great many Indians from the Shawnese and Mohawk tribes, who were then stationed about Wheeling and the Flats of Grave creek, came to prowl about the fort to annoy Colonel Beeler in every conceivable way they could, and, if possible, drive him from the dominions, which they claimed the "Great Spirit" had bequeathed unto them. Beeler's station, at that time, was indeed a situation of sadness. The sun rose in the morning, and as its glittering beams gleamed down upon the earth, through the heavy timbers that then clothed the hills and vales of Virginia, its dawning influence came in contact with a solitary fort, standing in the midst of a desolate wilderness. Evening came, and the inmates of Beeler's fort look with eyes expressive of the saddest reluctance to see the sun sink down in the west. The curtain of darkness is drawn over creation and darkness settles around and envelopes the fort. The women and children of this secluded structure shudder with awe to think of the monotony of the night. And truly the nights were terrible. The valley of Grave creek sloped off to the west. The deep, dark valley of Wolf run stretched far to the north. In the darkness and stillness of the night, birds of "evil omen" flew from one valley to the other, and as they passed over the fort they flapped their wings and uttered their unearthly shrieks. In the deep valleys and ravines, on all sides the howls of the wolf, the fierce shrieks of the panther, and the yells of the wild cat could be distinctly heard. The harsh toned voice of the terrible "Red man" could be heard on every hill-top as they echoed and re-echoed their answers to each other. These were the agencies and elements that surrounded Beeler's station in the night time during the primeval ages of Virginia.

During the summer of 1780, it is said that Colonel Beeler became discouraged, and I presume it was no wonder; for where is the man of this day and date that could have faced what Colonel Beeler did, and live?

New obstacles were constantly being conceived and brought into existence day after day to barricade his pathway, to frustrate and hinder him from accomplishing the great designs he had undertaken.

His enemies were so numerous, and they were so terribly disfigured with evil design, that the lives of Colonel Beeler and his family were constantly endangered whenever they went outside of the fort. Under these terrible circumstances, for Colonel Beeler to establish a colony in this neighborhood presupposed to him the idea that he must have additional aid.

Accordingly, in the dead of winter, 1780, he, accompanied by Tomlinson, of the fort at Moundsville, and Ryerson, of Ryerson's Station, Pa., walked through the deep snow, in the dead of winter, over the mountains of Pennsylvania to the city of Philadelphia. He there laid in a complaint to the chief officers of that state regarding his sad situation in the wilds of Virginia. He requested them to send him assistance. They were moved by his story and agreed to furnish the desired aid. So, in the spring of 1781, fifty-three men, under the command of Captain Jeremiah Long, arrived at Beeler's fort. They assumed the name of "six months men," and their duty was to guard the different forts which were then located at different points in this country, and to pilot and protect men who wished to go from one station to another. Braver and nobler men never lived than were these who composed Captain Long's company. They were all in the prime of manhood, except Captain Long, who was a tolerably old man. They staid in the wilds of Virginia for a number of years, and the greatest respect was manifested toward them by those early settlers whom they then protected. And the services which these six months men rendered were the very instrumentalities which enabled these early frontiermen to colonize this neighborhood and bring about settlements of civilized people.

During the year 1782, spies were appointed by the different parties throughout this country. Thomas Younkins was appointed a spy for Beeler's Station. Martin Wetzel was appointed by the people at Wetzel's fort to act as a spy in conjunction with the spy at Beeler's Station. These two men were not only well acquainted with the Indians and their language, but also understood thoroughly their customs and places of warfare. The energy, bravery and perseverance these two men possessed did not only secure for them the position of spies, but won them destinies which will live, as history bears on record the account of great deeds and daring feats performed by the heroes of an early frontier. Their history is one repeated scene of combat, bloodshed and massacre with the Indians, and that degree of success which attended them on all occasions and under all circumstances, has gone far toward characterizing them as among the bravest and most daring men that ever walked the face of the earth.

The duty of Younkins and Wetzel, when acting as spies for Beeler's Station, was to scout through the woods round about the fort, to ascertain, if possible, the exact strength of the Indian forces, and to determine whether they were making any signs indicative of an attack on the fort.

The year in which Colonel Beeler died, is not known, but the spot of ground that now contains his smouldering ashes, is only a few rods distant from where his old fort stood. The graves of many others who had undergone the terrible ordeals which surrounded and afflicted the early settlers of this once distracted neighborhood, can plainly be seen near the fort.

But what a change has taken place in this vicinity since they have passed away. One hundred years ago, and the fort could have been seen standing alone in solitude—to-day can be seen two magnificent church-houses, where men, women and children come up each Sabbath to worship—not an imaginary spirit as the Indians once did—but to worship the true and the living God.

KILLING OF THREE INDIANS AT THE MOUTH OF GRAVE CREEK.

The sketch of John Wetzel, jr., in another part of this volume, relates his capture the second time by the Indians, and his rescue on the last occasion, by an event which took place at the mouth of Grave creek. The event is said to have occurred about the spring of 1786. Early the next morning after the Indians had captured young Wetzel, they struck the Ohio river at a point near the mouth of Grave creek, and just below the clearing of Mr. Tomlinson. Here they found some hogs, and killing one of them put it in a canoe they had stolen. Three of the Indians took possession of the canoe with their prisoners, while the other was busied in swimming the horses across the river. It so happened that Isaac Williams, Hambleton Kerr, and Jacob, a Dutchman, had come down that morning from Wheeling, to look after the cattle, etc., left at the deserted settlement. When near the mouth of little Grave creek, a mile above, they heard the report of a rifle. "Dod rot 'em," exclaimed Mr. Williams, "a Kentuck boat has landed at the creek, and they are shooting my hogs." Quickening their pace, in a few minutes they were within a short distance of the creek, when they heard the loud snort of a horse. Kerr being in the prime of life, and younger than Mr. Williams, was several rods ahead, and reached the bank first. As he looked into the creek, he saw three Indians standing in a canoe; one was in the stern, one in the bow, and the other in the middle. At the feet of the latter, lay four rifles and a dead hog; while a fourth Indian was swimming a horse a few rods from the shore. The one in the stern had his paddle in the edge of the water, in the act of turning and shoving the canoe from the mouth of the creek into the river. Before they were aware of his presence, Kerr drew up and shot the Indian in the stern of the boat, who instantly fell into the water. The crack of his rifle had scarcely ceased, when Mr. Williams came up and shot the one in the bow, who also fell overboard. Kerr dropped his own rifle, and seizing that of the Dutchman, shot the remaining Indian. He fell over into the water, but still held on to the side of the canoe with one hand. So amazed was the last Indian at the fall of his companions, that he never offered to lift one of the rifles which lay at his feet, in self-defence, but acted like one bereft of his senses. By this time the canoe, impelled by the impetus given to it by the first Indian, had reached the current of the river, and was some rods below the mouth of the creek. Kerr instantly reloaded his gun, and seeing another man lying in the bottom of the canoe, raised it to his face as in the act of firing, when he cried out, "Don't shoot, I am a white man!" Kerr told him to knock loose the Indian's hand from the side of the canoe, and paddle to the shore. In reply, he said his arm was broken and he could not. The current, however, set in near some rocks not far from land, on which he jumped and waded out. Kerr now aimed his rifle at the Indian on horseback, who by this time had reached the middle of the river. The shot struck near him, splashing the water on his naked skin. The Indian seeing the fate of his companions, with the utmost bravery, slipped from his horse, and swam for the canoe, in which were the rifles of the four warriors. This was an act of necessity as well as of daring, for he well knew he could not reach home without the means of killing game. He soon gained possession of the canoe, unmolested, crossed with the arms to his own side of the Ohio, mounted the captive horse, which had swam to the Indian shore, and with a yell of defiance escaped into the woods. The canoe was turned adrift to spite his ene-

mies, and was taken up near Maysville, with the dead hog still in it, the cause of all their misfortunes.

NATHANIEL PARR'S FIGHT WITH FIVE INDIANS.

About the year 1770, a man by the name of Parr settled in what is now Marshall county, on the flats of Grave creek, at Parr's Point (which afterwards took his name), and included all the lands that Burley's estate comprised. He came out after Dunmore's proclamation had been issued, the substance of which was, that any person who might come out and tomahawk all the land they could settle on, the same would be given them as a possession, and that of course caused rapid immigration here. Mr. Parr was a man who wished to pursue a civil life, and led a peaceable one with the Indians. He also kept free from civil feuds, or quarrels, with his neighbors. He had two sons, Nathan and Samuel.

One day Nathan was sent out for the purpose of hunting deer, and had gone upon what is called Little Grave creek, and there came across a fine large deer, standing at the water's edge drinking. It had not noticed the approach of the hunter, who cautiously slipped up within range of his gun, and as the animal raised its head, he fired and brought it to the ground. He proceeded at once to skin the deer, and as it was growing late, concluded to hang it upon a tree, out of the reach of wolves, and let it remain for the night. After he succeeded in getting it hung up safely, he picked up the hide and his gun and returned to his home undisturbed.

The next morning Nathan started, bright and early, for his game. In the meantime five redskins chanced that morning to pass by this deer, and suspecting that the person who placed it there would soon come along to secure it, they ambushed for their prey. It was not long before Nathan made his appearance, little dreaming even of danger. After reaching the spot, he began leisurely taking down his venison, when several shots were fired at him by the Indians from their concealed places, which so startled Nathan, that for the moment, he did not realize that one shot had taken effect in his right hip. The Indians, for some reasons, ceased firing and jumped from their hiding places, and made for him. He grabbed his gun, which stood against a tree, then discovering for the first time that he was shot. He fired at the approaching Indians twice, each load taking effect on his enemies, but leaving three for encounter. Nathan was a muscular young man and full of pluck, and standing on one foot, defended himself against the three red skins, who were striking at him from all sides with their tomahawks but not approaching quite within reach. The unexpected repulse the Indians received at the loss of two of their companions, so frustrated and confounded them that they were unable to accomplish anything. The unsuspected bravery and strength of their opponent seemed to completely unnerve them. Nathan finally fell to the ground and was unable to rise again. He happened to fall in between some stone which protected him from his enemies on one side. He seized the loose stone that were plentifully lying about, and thus warded the Indians off. When they found there was little chance of killing him, and a couple Indians having received several slight bruises from the stones which were hurled at them by Parr, left him lying there and proceeded to carry off their companions. It is thought the reason they did not shoot him was because they run out of ammunition. They had thrown down their guns and had used their tomahawks against him. The two that were killed were evidently the older ones, and three were young and cowardly. Perhaps their fear of other whites coming may have hastened their footsteps from the place. His father becoming alarmed at his long stay, started out in pursuit of him with a horse. Diligent search was made for several hours, when finally he was found nearly exhausted, lying near a large rock. With considerable difficulty he was placed upon the horse and carried to his home. Next day, it is said that two Indians were seen, by different parties, skulking about the forests, apparently out of ammunition, carrying guns. It was supposed that they were the Indians that had fought Nathan Parr. He recovered from his wound, but remained a cripple. He lived to be about ninety years of age, and raised a family of ten boys and two girls. His death occurred in 1862, and his remains are resting in what is known as the Long Reach, in Washington county, Ohio, twenty-four miles above Marietta.

His brother, Samuel Parr, was in the battle of Tippecanoe, under General Harrison, and was shot twice.

MURDER OF THE THREE MISSES CROW.

Next to the Tush murder, perhaps the most melancholy occurrence on Wheeling Creek was that of three sisters—the Misses Crow, which occurred in 1785. The parents of these girls lived about one mile above the mouth of Dunkard, or lower fork of the creek. According to the statement of a fourth sister, who was an eye witness of the horrid tragedy and herself almost a victim, the four left their parents' house for an evening walk along the deeply-shaded banks of that beautiful stream. Their walk extended over a mile, and they were just turning back, when suddenly several Indians sprang from behind a ledge of rocks and seized all four of the sisters. With scarcely a moment's interruption, the savages led the captives a short distance up a small bank, when a halt was called and a parley took place. It seems that some of the Indians were in favor of immediate slaughter, while others were disposed to carry them into permanent captivity.

Unfortunately, the arm of mercy was powerless. Without a moment's warning, a fierce-looking savage stepped from the group, with elevated tomahawk, and commenced the work of death. This Indian, in the language of Lena, "Began to tomahawk one of my sisters—Susan by name. Susan dodged her head to one side, the tomahawk taking effect in her neck, cutting the juglar vein, the blood gushing out a yard's length. The Indian who held her hand jumped back to avoid the blood. The other Indian then began the work of death on my sister Elizabeth, and a third on Katie."

Lena thus describes her escape: "I gave a sudden jerk and got loose from the one that held me and ran with all speed, taking up a steep bank, but just as I caught hold of a bush to help myself up, the Indian fired and the ball passed through the clump of hair on my head, slightly breaking the skin. I gained the top in safety, the Indian taking round in order to meet me as I would strike the path that led homeward. But I ran right from home and hid myself in the bushes near the top of the hill. Presently I saw an Indian passing along the hill below me; I lay still until he was out of sight; I then made for home."

She lived to be an old woman. Her brother Jacob was afterward slain by the Indians while out hunting on Fishing creek, in what is now Wetzel county. He and his two brothers were together. Jacob was shot nine times. Martin and Frederick were wounded, but they both escaped.

MASSACRE OF THE TUSH FAMILY.

The valley of Wheeling creek, one of the most beautiful and productive in West Virginia, was the theatre of many a painful and bloody drama. Scarcely a quiet bend, or a surrounding hill, or a rippling tributary, that is not memorable as connected with the wars of the Indians. To one unacquainted with its tragic history, it would indeed be difficult to imagine that those clear waters were once tinged with the blood of helpless women and children, and those stern old hills ever echoed to the terrible whoop of the savage. Of those who settled at an early day in this region was George Tush. He located at the mouth of Bruce's run. His residence was about twelve miles from the river, and his family consisted of himself, wife and five children. During the year 1794 the settlements on Wheeling creek had been almost entirely exempt from Indian visitation, and many of the inhabitants began to console themselves with the reflection that day was about to dawn upon their long night of terror.

On the evening of Saturday, September 6th, as George Tush was in the act of feeding his hogs, in a sty close to his cabin, he was fired upon by three savages, who had concealed themselves and waited until he should leave the house. A ball struck him transversely upon the breast, cutting a deep gash and inflicting a serious and painful wound, as it carried off a portion of the bone. It lodged in the shoulder blade. Tush, losing entirely his presence of mind, or, in all charitableness, we may allow that his pain deprived him of self-control, rushed madly by his own door, in the direction of the forest, leaving his helpless family to the mercy of relentless savages. The next moment the Indians were in the house.

The mother was instantly made prisoner, and in powerless but quivering agony, compelled to witness the horrid butchery of her innocent children. In an instant the youngest born was dashed against a tree, and the other four fell beneath the reeking tomahawk. Pillaging the house of such articles as they could carry off, a hurried retreat was made, lest the escaped husband should follow in pursuit. The feeble woman was brutally urged on before them. But, alas! the scenes which she had just witnessed, together with her own situation, rendered her movements both slow and painful. Fearing discovery, the wretches tomahawked their helpless victim and left

her at a point about two miles from the place of captivity. Her bleached remains were found some years afterwards by her husband while hunting.

Of the children tomahawked and scalped, one, a little girl of four years, recovered, and the infant, whose brains were supposed to have heen dashed out, was found alive on the following day, lying upon its dead sisters and brothers. That child lived and became the wife of George Goodrich, residing near Shelbyville, Ind. The children had, a few days before, gathered a quantity of acorns, which, it is supposed, prevented the hogs disturbing the remains.

THE GRAVE CREEK MOUND—ITS STONE AND HISTORY.

The Grave creek mound is situated on the left bank of the Ohio river, near the centre of Moundsville. It is located on an elevated table land, and is an artificial truncated mound, some seventy feet high and nine hundred feet in circumference at its base. The mound evidently was built by a race superior and anterior to the Indians, and is the most celebrated and largest mound in this country. The first settler that discovered the mound was Mr. Joseph Tomlinson, who came here in 1770. Early one morning, but a few days after the erection of his cabin, he went hunting, and having shot a deer, he started homeward; but going in a westerly direction, he was suddenly stopped in his course by a strange looking hill rising abruptly in front of him. Laying down his burden, he started to walk around it, and soon found himself again in the very place whence he had started. After going home, he in company with his wife returned, ascended the side of the hill until he reached the summit, and then, for the first time, the first settler of this county stood on the top of America's most noted mound. S. D. Peet, A. M., in speaking of it, says:

"The cubic contents of the Grave creek mound are equal to the third pyramid of Mycerinus, but was heaped up by a people destitute of the knowledge of iron, and who had no domestic animals or machinery to aid them. They were evidently people like the Egyptians, ruled by some one monarch who was able to combine vast numbers in the erection of one structure, and, at the same time, able to provide them with food in abundance. The mound-builders cultivated the soil like Egyptians, and had maize for their food, as the date and leek and onion supplied the wants of the laborers on the Nile. No Indian was ever known to toil in this manner. No government existed among the Indians that could bring them to such servitude. The authority of a chief or sachem is too slender a thread for such a people."

Buckle says of the pyramids:

"No wealth, however great, no expenditure, however lavish, could meet the expense which must have been incurred, if they had been the work of free men. It took two thousand men three years to carry a single stone from Elephantine to Sais. The canal of the Red Sea cost the lives of one hundred and twenty thousand Egyptians, and to build one of the pyramids required the labor of three hundred and sixty thousand men for twenty years."

This mound was visited by white men at a very early date, for, in 1818, one of the large trees growing on the mound bore the date of 1734, and several names cut in the bark were yet distinguishable. Mr. A. Tomlinson, the owner of the mound, was induced—by his neighbors and friends in Wheeling—to open the mound, which he did in 1838. Mr. Tomlinson, in his tract, says:

"From the north side we excavated toward the centre an adit ten feet high and seven feet wide, along the natural surface. At the distance of 111 feet we came to a vault that had been excavated in the earth before the mound was commenced, eight feet by twelve square, and seven feet in depth. Along each side, and across the ends, upright timbers had been placed, which supported timbers thrown across the vault as a ceiling. These timbers were covered with loose unhewn stone, common in the neighborhood. The timbers had rotted, and the stone tumbled into the vault. In this vault were two human skeletons, one of which had no ornaments. The other was surrounded by 650 ivory beads and an ivory ornament about six inches long."

A shaft was also sunk from the top of the mound to meet the other. At thirty-four feet above the first or bottom vault, was another, similar to the first. In this vault was found a skeleton which had been ornamented with copper rings, plates of mica, and bone beads. Over 2,000 dices cut from shells were found here. The copper rings, or bracelets, found weighed about seventeen ounces. There were also about 200 pieces of mica, and about seventeen bone beads. About two feet from this skeleton was found the "Inscribed Stone." Much has been said and written about this stone, and it is the intention of the writer to submit the views and opinions of some of our most eminent archæologists on the subject. What we want is truth, and the truth must in time prevail.

Schoolcraft, who visited the mound in 1818, speaking of it says: "It was covered with forest trees of the native growth, some of which were several feet in diameter. On ascending the flat summit of the mound I found a charming prospect around. The summit was just fifty feet across. There was a cup-shaped concavity in the center, exciting the idea that there had been some internal sub-structure which had given way and caused the earth to cave in." Speaking about the opening of the mound, and the discovery of the stone, he continues his narrative as follows: "The occasion would not indeed have justified the high expectations which had been formed, had it not been for the discovery, in one of the vaults, of a small flat stone, of an oval form, containing an inscription in ancient characters. This inscription, which promises to throw new light on the early history of America, has not been deciphered. Copies of it have been sent abroad." It is thought by the learned at Copenhagen to be Celtiberic. It is not in their view Runic. It has apparently but one hieroglyphic, or symbolic figure. A good deal of interest clusters about this discovery of the inscribed stone. Tomlinson, the grandfather, settled on these tracts in 1772, two years before the murder of Logan's family. Large trees, as large as any in the forest, then covered the flats and mound. There stood in the depression I have mentioned in the top of the mound a large beech tree, which had been visited earlier, as was shown by several names and dates cut on the bark. Among these was one of the date of 1734. This I have seen stated under Mr. Tomlinsons's own hand. The place was much visited from 1770 to 1790, as was shown by newer names and dates, and, indeed, continues to be so still.

"There was standing at the time of my first visit, in 1818, on the very summit of the mound, a large dead or decayed white oak, which was cut down, it appears, about ten years afterward. On counting the cortical layers, it was ascertained to be about five hundred years old. This would denote the desertion of the mound to have happened about the commencement of the thirteenth century. Granting to this what appears quite clear, that the inscription is of European origin, have we not evidence, in this fact, of the continent having been visited prior to the era of Columbus? Visited by whom? By a people or individuals, it may be said, who had the use of an antique alphabet, which was much employed (although corrupted, varied and complicated by its spread), among the native priesthood of the western shores and islands of the European continent, prior to the introduction of the Roman alphabet."

INSCRIBED STONE.

Under a later date, that of 1843, the same writer, in writing for the New York *Advertiser*, speaks of the mound and its stone in the following language: "I have visited and examined seven mounds, situated within a short distance of each other. Stretching on the left, or Virginia bank of the Ohio, between the junctions of Big and Little Grave creeks with that stream, they appear to have been connected by low earthen entrenchments, of which plain traces are still visible on some parts of the commons. They included a well, stoned up in the usual manner, which is now filled with rubbish. The summit of this plain is probably seventy-five feet above the present summer level of the Ohio. It constitutes the second bench, or

rise of land, above the water. It is on this summit, and on one of the most elevated parts of it, that the great tumulus stands. It is in the shape of a broad cone, cut off at the apex, where it is some fifty feet across. This area is quite level and commands a view of the entire plain, and of the river above and below, and the west shores of the Ohio in front. Any public transaction on this area would be visible to multitudes around it, and it has, in this respect, all the advantages of the Mexican and Yucatanese teocalli. The most interesting object of antiquarian inquiry is a small flat stone, inscribed with antique alphabetic characters, which was disclosed on the opening of the large mound. These characters are in the ancient rock alphabet, of sixteen right and acute angled single strokes, used by the Pelasgi and other Mediterranean nations, and which is the parent of the modern Runic as well as bardic. It is now some four or five years since the completion of the excavations so far as they have been made, and the discovery of this relic. Several copies of it soon got abroad, which differed from each other, and, it was supposed, from the original. This conjecture is true; neither the print published in the Cincinnati *Gazette*, in 1839, nor that in the *American Pioneer*, in 1843, is correct."

From a pamphlet issued by P. P. Cherry the following is obtained:

Below I give a communication from Col. James Wharton, an eye witness of the opening of the mound and the discovery of the inscribed stone:

PORTSMOUTH, OHIO, April 7th, 1876.

I will give you the full facts, with such incidental relations as bear upon it. In all I say, except in regard to the taking out of the stone, I am fully sustained by Hon. W. C. Howells, Consul-General to Canada, dated Quebec, Sept. 28th, 1875.

I went to Wheeling, Virginia, in 1835, over forty years ago, and there edited and published a daily paper for twenty years. Although it is a long time since, as this was my first knowledge of archæology, the circumstances are all strongly impressed on my mind. Grave Creek is on the south bank of the Ohio river, twelve miles below Wheeling.

The large mound was about seventy-five feet high, by three hundred in diameter. On the top was a fallen tree about three feet in diameter, which had evidently been decaying one hundred years. There were large trees also growing on the surface. The mound and a large tract of land were owned by Abelarde Tomlinson, a man of but moderate capacity and little culture, but honest, and he was urged by neighbors and persons in Wheeling to open the mound; and some money was given to aid him. They commenced by an entry on the north side, and subsequently by a shaft from the top. Learning of this, Dr. Morton, of Philadelphia, then preparing his work on Crania Americana, wrote to Dr. Clemens, of Wheeling, requesting him to visit the mound and report. He ascertained the day the workmen would reach the centre, and went down. I accompanied him, by his invitation. There was no one present but about twenty citizens of Grave Creek, the laborers, Dr. Clemens and myself.

In the forenoon they struck the centre of the vault, and brought out decayed wood, stones, rings, beads, mica and bones —one skull, nearly perfect, found in Morton's work. Among this dirt was brought out the inscribed stone, and picked up by one of us from the loose dirt. A fraud was impossible. There was no one present who would have done so if he could, or could if he would, while its whole appearance proved its age. After the stone was examined, Mr. Tomlinson handed it carelessly to Dr. Ganns, who had it most of the time, till in 1850 Dr. W. De Hass placed it in the Smithsonian Institute. The fact is, few of us then regarded the stone of much importance, and none of us appreciated its value as a link in the chain of evidence respecting the people and condition of those who built the mound. You will find a correct copy of that and some other matters in Mr. Schoolcraft's great work, vol. I, plate 3, page 123.

Dr. Clemens was a very careful writer, and did not finish his account of the opening for four months. In the meantime, Mr. Tomlinson had, as an afterthought, sought to make some money by opening the mound to visitors for a shilling fee. Dr. Morton looked upon the stone as a fraud, as he afterward wrote me, and omitted it with nearly all of Dr. Clemens' report.

Copies of the stone had been published, and much written upon it, when, some years after, Mr. Squiers, returning to the east to publish the "Monuments of the Mississippi Valley," (of all of value in which he had cheated Dr. Davis, of Chillicothe,) requested me to go with him to Grave Creek, to see the stone. We went; but it had been stolen from Dr. Ganns. Some months after I found it and sent him a copy; but he ignored it. From these facts, other writers have done the same, who never saw the stone. Thus a falsehood has become prevalent.

Col. Whittlesey, in one of his letters to me, gave as his main reason for supposing it a fraud that the letters were partly Phœnician and partly Runic. That fact I regard as conclusive that it is genuine. Anyone attempting a fraud must have written a pure language, while all ancient languages became corrupted by the mingling of peoples. The Israelites and the Runes had probably been many years together when they reached Grave Creek, where many of them stayed, while many other towns existed elsewhere. There are, perhaps, others living, who saw the stone taken out; but I do not know them. There are several who saw it soon after.

Turning to the sketch, you will find, between the fort and the large mound, a small one. This one Dr. Hullihen, of Wheeling, and myself spent a day in opening. It was little more than a foot high, and ten feet across; but in it we found two tibiæ, some teeth, part of a skull, and some quarts of copper beads, chipped from the native copper. Some two years later I heard of an inscribed stone taken from the large mound toward the east of the fort, in 1832, and sent to the University of Virginia. I procured a copy—found it broken at one end. I procured men and opened that mound, which was about six feet high and eighteen in diameter. We found nothing above the surface level, but a foot below, on the centre of a neatly-laid circle of granite bowlders, we found the other piece of the stone—ashes, beads, bones, and one pipe. The whole stone was about eight inches by four, and the inscription a counterpart of those in the Patent office, brought by Mr. Stevens from Central America. On Lake Superior, in 185–, I saw two chisels of tempered steel that had been used in cutting the native copper and beads—the counterpart of those we had found at Grave Creek. How do I read these facts? That some portion of the Hebrew tribes who used the Phœnician language, and had learned from Egypt to temper copper, wandered here with other friendly people, and scattered themselves from the lakes over the Mississippi Valley; they were annoyed by hostile tribes, built their fortifications—the large mound for dead chiefs, the smallest for common persons, and that the eastern mound was built by hostile tribes who burned their dead and buried them below the surface; that both were ultimately conquered by a hostile race, many driven off to the south, others submitting to the conquerors, and mingling with them as did the Saxons with the Normans after the conquest of 1066. The conquerors were the ancestors of our Indians. It is known that our Indians have some of the rites and usages of the Jews of old. These mounds were not built by our Indians, but by an industrious race who were more civilized and advanced; yet in the big mound were found several pieces of mica. In a mound opened a few years ago at Ceredo, W. Va., there were bones, beads and mica found. In all the modern Indian graves I have ever seen opened, and they are many, there was a piece of mica on the breast of the body, sometimes four inches square, and a half-inch thick. This must have come from the mines of North Carolina, from which comes our mica of commerce.

Trusting that I have furnished the information required, though in a hasty manner,

I remain yours, truly,

J. E. WHARTON.

In a private letter to me, under a later date, the same writer continues his narrative:

"The stone was doubtless on a shelf in Dr. Ganns' office, where I saw it more than once, and was taken by some loafer and pawned for whisky at a grocery half a mile above Grave Creek. It was perhaps three months after I went down with Squiers, when the grocery-man called to me that he had the stone I had been hunting for, and brought it to me. I paid the 25 or 50 cents the man had pawned it for and took it back to Dr. Ganns. I presume the man knew it was stolen when he took it, and I told him so. I knew it was the same stone I saw taken out, and it had not been tampered with. It is one of those things you cannot mistake. Every mark on it was a thousand years old. It had been handed to Dr. Ganns when it was found at the mound; afterward it was placed in a case in the mound, and later with other curiosities in Dr. Ganns' office. In 1850, it was taken by Dr. Wills De Hass and sent to the Smithsonian Institute.

"The position of the second stone of which I spoke, which was found in 1832 (by whom I do not know), was sent to the University at Charlottsville, Va. Hearing of that, I obtained from a professor there a copy, procured laborers, and proceeded

to open that mound, and myself found the other piece. After comparing that with the stones Stevens brought from Central America, then in the Patent Office at Washington, I sent my piece to Charlottsville, that the stone might be perfect.—Whether their collection was damaged by the troops during the late war, I do not know. I remember something of the burning of some of the buildings."

Schoolcraft, in his work entitled "The American Indians," speaks of the stone just mentioned by Colonel Wharton, in the following language:

"Among the articles found in this cluster of mounds, the greater part are commonplace in our western mounds and town ruins. I have noticed but one which bears the character of the unique type of architecture found by Mr. Stevens and Mr. Catherwood in Central America and Yucatan. With the valuable monumental standards of comparison furnished by these gentlemen before me, it is impossible not to recognise in an ornamental stone found in one of the lesser mounds here a specimen of similar workmanship. It is the heavy feather-sculptured ornaments of Yucatan—the material being a wax-yellow sandstone, darkened by time."

In the *American Pioneer*, published in 1843, Mr. Levering comments upon the stone in the following manner:

"In examining a work relating to the chirography of the ancient Britons, I was astonished and gratified to discover a striking similarity between the fac-simile of their style of writing and that found at Grave Creek. . . . The ancient Britons cut their alphabet upon a stick with a knife which, thus inscribed, they call "billet of the signs of the Bards," or the Bardic alphabet. Compositions and memorials were registered in this way on long narrow boards, several of these being connected together, forming a connected composition. Although there are but a few characters on the flat stone of Grave Creek, several of that few exactly resemble the stick book of the ancient Britons."

Below we give a communication received from the Hon. W. C. Howells, Consul-General to Canada:

"UNITED STATES CONSULATE,
Quebec, April 26, 1876.

"P. P. CHERRY, ESQ., Wadsworth, O.

"DEAR SIR—In reply to your note of the 10th inst., asking me for views of the genuineness of the engraved stone found, or said to be found on opening the famous mound at Grave Creek, W. Va., I can only give you qualified views. Till within a few years, in common with many who take an interest in the Mound-builder question, I believed this stone to have been found in the mound along with the other articles there found, when it was opened by Mr. Tomlinson, and that it then bore the characters with which it was marked. In 1839, I visited the mound, which had been opened some time, and was fitted up for the reception of visitors, who paid 25 cents for admission to the interior, which had been built up with brickwork so as to form a chamber at the centre of the foundation of it, where the skeletons and other relics found when it was opened were arranged so as to form a kind of museum. The man in charge seemed to be ordinarily intelligent, and familiar with the general history of the mound and its opening. He made no parade of this stone, and showed it along with the beads, etc. I handled it, and scrutinized it as well as I could by two dimly burning candles, for the vault was otherwise dark. It appeared to be a piece of thinly stratified sandstone, quarter of an inch thick, water-worn, so as to give it a nearly oval form, and to make the surface tolerably smooth. There was a small desk in the vault, on which was kept a book for registering the names of visitors, and the relics were kept in this desk. At my request he gave me a loose piece of paper out of the book, on which I made a copy of the inscription. That copy I have either lost or given away. Many copies have been made and published that I have recognized as correct, and which have differed very slightly. In the library of the historical Society of this city, I found a copy in an English work on the Pre-historic man, which I will transcribe for you. It is said to have been made from an impression on wax. I should say it is correct. Mr. John S. Williams, in his *American Pioneer*, published in Cincinnati in 1844 or '45, gives an account of the opening of the mound by Mr. Tomlinson, to which I would refer you. It is a very simple and straightforward narrative, apparently free from any fraudulent purpose.

In a conversation I had with Col. C. Whittlesey on this subject a few years ago, I found him firmly set in the belief that this and the engraved stone, said to have been found in Licking county, were both frauds. I could not accept his unbelief, though he affected me with doubts. From my knowledge of the community near Grave Creek, I have always felt pretty sure that there was nobody in that region capable of making the inscription on this stone who was sufficiently dishonest to commit such a fraud. It might have been done for a trick, to hoax some enthusiastic antiquarian, or the like; but in that case somebody would have been invited to share the fun, and in time it would have leaked out. That Mr. Tomlinson, or any one interested, had it made to draw visitors to the museum, I regard as the least probable of theories; for he was not the man to do so; and then, he never "made a run" on the engraved stone. The Licking county stone was found by an eccentric man, who likely had a theory on hand, and unfortunately the inscription was in Hebrew! Mr. Tomlinson was not eccentric, and had no theory. The mound was on lands that he inherited, and he wanted to improve the place. He certainly did not lose money on it."

Of the actual identity of this stone with the contents of the mound, I regard James E. Wharton, Esq., of Mansfield, Ohio, as the best witness. He was present when the stone was found, and knew the persons present with him. Of this he published a statement in the Cleveland *Herald*, last September. To him for one I refer you. In his article in the *Herald* he refers to Dr. Hullihen, of Wheeling, who was cognizant of the finding of the stone. Dr. H. was an exceedingly sharp and sarcastic fellow, who would only have been too well pleased to expose a fraud of the kind, and quite as ready to suspect any trickery. The fact that G. W. Clemens, in corresponding with Dr. Morton, of Philadelphia, about the crania of the mound, does not refer to the stone—that has been cited in proof of a fraud—would not affect my confidence in its genuineness, for the doctor was writing about skulls, and I doubt if he thought of anything else; or if there had been readable tablets found there, and they said nothing about crania, it is questionable if he would have referred to them.

I think the evidence favors the genuineness of this stone, or the inscription on it; and if it be genuine it will stand alone as the only lettered relic of the mounds. But even then it is of little value in any point of view, since it is isolated from all other literature to which it might possibly have belonged. It tells no story, even if it could be deciphered. If we could read it, it would disclose no secrets of the mysterious prison-house of Mound-builders' history. The most that can be drawn from it is a conjectural date of the era of the mound, or a period when some indian chief used them for a burial place. I incline to think the stone may be proved to be genuine, and possibly might cast a ray of light upon the subject in question. But I incline to adopt the French proverb: "Le jeu ne vaut pas la chandelle."

Respectfully yours,

W. C. HOWELLS.

The next communication is from the pen of Peter B. Catlett, a resident of Moundsville, W. Va., a living witness of the opening of the mound and the discovery of the inscribed stone. His letter is particularly valuable from the fact that he is the second living witness of the discovery, he in fact being the first man that saw and picked it up. But we will let him tell his story in his own quaint style.

MAY 6, 1876.

Dr. P. P. Cherry:

DEAR SIR,—Your letter was received and contents noted. In the first place, I will say that I have been living in this place sixty-three years, and I know all about the mound alluded to from that date. In answer to the question, "Were you present at the opening of the mound?" will say that I was, and helped to do the work. Question: "Is there any other person or persons living at or near your place." Answer: There are none. In answer to the third question, I will say that there was a stone in the mound that had engraving on it. One side was filled with engraving, and about half filled on the other. I was the man who found the stone. In answer to the question, "Was there a matrix, or, in other words, an impression of the stone where it lay?" I would say that the engraved stone was found in the inside of a stone arch that was found in the middle of the mound, and in that stone arch was found a skeleton that measured seven feet and four inches. When the bones were placed upon wires, I took the lower jawbone, and put it over my chin, and it did not touch my face, and I was at that time a man who weighed one hundred and eighty-one pounds. There were beside this skeleton some thousand of ivory beads, and five copper rings, two and a half inches in diameter, and about the thickness of a crayon pencil, and a lot of other

things, such as stone pipes manufactured out of sandstone, but very neatly done. In regard to the nature of the soil all I can say is that the whole of the mound is mixed with charcoal and bones, and on the top of the stone arch was found a skeleton of common size, and at the side of it there was charcoal the size of a man's fist. From the appearance of the coals, and the quantity of them, it was intended to burn the skeleton, but was extinguished before it was burnt. In the stone arch alluded to there was no mechanical work. It was twenty-two feet in diameter, and we took the stone out, and put a frame in its place, and plastered it. AS FOR ANY ONE PLACING THE INSCRIBED STONE THERE, IT COULD NOT HAVE BEEN DONE. We found that the other stone arch had a common-sized skeleton but very few trinkets in it. There are a great many other things that are connected with this mound that have slipped my memory, and I am so nervous that I cannot write. I owned a square lot about the centre of the town, that had two small mounds. They were about twenty feet high, and sixty feet in diameter. They were of coarse sand, and I made use of them for laying brick. There were some trinkets in them, such as darts and tubes. The tubes were about fifteen inches long, and about one inch in diameter. They were neatly made, and as smooth as glass on the outside. I gave them to a man who came from New York, who belonged to the antiquarian society, and the version that he gave of them was that they were used as breathing tubes in times of danger, by hiding themselves in water. Col. William Alexander tells me that his wife has a copy of the diary of her grandfather, old Joseph Tomlinson, the man who first settled in this country, and who owned the mound. I believe I have said all that is necessary to your questions. Hoping to hear from you again,

I remain yours,

P. B. CATLETT.

Moundsville, W. Va.

The following letters are respectfully submitted in the cause of the truth, and show why Dr. Clemens has been maligned, and the true reason why Dr. Morton did not publish an account of the Grave creek stone. Under ordinary circumstances, I would not publish them, but every art and device has been brought to bear to prove the Grave creek stone a forgery and Mr. Tomlinson and Dr. Clemens guilty of *Punica fides.*

The first and second letters following are from the Hon. Sherrard Clemens, of St. Louis, from whose eloquent lips fell the burning, scathing words of warning, in the halls of congress, in 1861.

WHEELING, May 4, 1876.

DEAR SIR: I have received your letter, directed to me in St. Louis. My father's papers are here. I will try to find the original report to Dr. Morton. My father complained very bitterly of the discredit Dr. M. threw on the sculptured, or inscribed stone found by him in the mound at Grave creek, and ignored by the doctor in his "Americana." He demanded the return of his manuscript, and my impression is that he received it. I have seen the stone myself, as have hundreds of others, at Wheeling, W. Va., and Moundsville. A copy, or facsimile, was printed in the Wheeling *Times* soon after the discovery. The fact of its existence is as undeniable as the opening of the mound itself, and I presume it will not be difficult to prove all the facts by living witnesses.

Some correspondence took place between Dr. Morton and my father in regard to the discredit with which the stone was received; and, if I can find the correspondence, I will send it to you.

SHERRARD CLEMENS.

WHEELING, May 18th, 1876.

DEAR SIR:—I was called here from St. Louis by the death of my sister. It seems rather providential that, under your call, I can vindicate the sacred shade of her father and mine, in regard to the inscribed stone found in the Grave Creek mound.

I sent you yesterday a letter from Dr. Frissell, of this city, giving his ideas of the character of Dr. Morton. I have found the abstract of what I suppose was the original communication from my father to him. The relative characters of the two men come into relation to each other, in regard to this controversy. The circumstances which led to the acquaintance between my father and Dr. Morton were as follows: Thomas Johnston, of this city, was born with club feet. His father was wealthy, and he desired to have an operation performed to cure the defect. My father accompanied Mr. J. to Philadelphia, and remained until he recovered sufficiently to return to Wheeling. Dr. Morton, with the intense vanity and arrogant opinionativeness of himself and his endowments, in which nobody ever concurred but himself, took to himself the whole credit of the operation—although I know, from the declaration of Mr. Johnston to me, that my father was of the utmost importance to him, not only in the actual result, but before it. So in regard to the inscribed stone. When my father, after months of labor, and through his influence with Mr. Tomlinson, of Grave Creek, had the mound opened, and, after long exertions in the midst of professional and pressing duties, prepared his report for Mr. Morton, he ignored all parts of the same which did not square with his preconceived opinions in regard to his theory of "Crania Americana," and therefore suppressed all my father said in regard to the inscribed stone. My father's manuscripts are very voluminous, and I was engaged all day yesterday in the examination of them. I will continue the search to-day, and until I leave for St. Louis.

SHERRARD CLEMENS.

DR. CLEMENS' MANUSCRIPT.

"The great mound, situate on the flats of Grave creek, Marshall county, Virginia, was opened and examined by myself and Abelard Tomlinson, grandson of A. Tomlinson, who came to the flats in 1771. Abelard Tomlinson was assisted in the workings by Thomas Biggs and such other persons as could be hired during the month of March, 1838. The examination was commenced on the north side of the mound, four feet above a trench which surrounded it. From this point they made a horizontal opening—or tunnel—about ten feet high, which was afterward arched with brick, and continued it until it reached the centre of the mound. This opening, or tunnel, was seven feet wide and ten feet high. After going ten or twelve feet from where the work commenced, the original surface of the earth appeared. It was covered by a stratum of blueish-looking earth, varying from one to one and a half inches thick. This blueish stratum had an inclination upward of about fifteen degrees, and can now be very distinctly seen by any one visiting the mound.

When going five or six feet further toward the center, blue bunches of earth were observed above this blue streak, but none below it. These blue bunches were of an oval shape, and varied in size from six to ten inches. At first they were scattering, but, as the centre of the mound was approached, they became more numerous, so as to nearly touch one another. These blue bunches contained pieces of charcoal and bits of burned bone. On the breaking up of these bunches, no traces of leaves, stalks, weeds, or any other burned vegetable remains could be observed. But in the yellow and brownish loam sand, or earth, used to fill up between these blue bunches, the impressions of leaves with the stems attached to them, as well as the stalks of weeds and blades of grass—some lying the same way, and others crosswise, as if bruised together. They could be very distinctly seen.

These impressions of leaves were of the oak and beech, but the most perfect were those of the *polamonium reptans*, or Greek valerian, which grows plentifully around the base of the mound. These impressions were found frequently in the whole of the excavations, as well in the one through the centre as the one made twenty-eight or thirty feet above the base of the mound.

In carrying this horizontal opening inward, an appearance was observed, showing that when the mound was small. say sixty paces at the base, a covered passway, inclined ten or fifteen degrees downward from the north to the base of the vault. The trace of its existence were indubitable. This passway was originally covered with timber. The impression of the bark in the earth could and can still be seen distinctly. This passway was in a measure filled up by the timbers giving way, and the earth from above falling. The timbers were, from the impression left in the earth, originally from four to five inches in diameter.

The direction of this covered passway agreed with the direction of the horizontal tunnel, or excavation, made under the direction of Mr. Tomlinson—save that the natural passway had an inclination from above downward to the base of the vault, which could be distinctly seen after the vault was reached and cleaned out. Distinct and unequivocal evidences of this passway can now be seen by any persons curious to visit the mound.

* * * * * * * * * * * *

In the vault a large skeleton was found, with a necklace composed of perforated shells, two copper bracelets, and a curiously inscribed, or hieroglyphic stone, the characters of which are

distinctly traced in parallel lines. These curiosities were all found together, near the skeleton. The stone is now in my possession, and I have had an exact fac-simile of it taken. The characters are perfectly copied, and it may, if ever deciphered, reveal something which to science is not now known. Abelard Tomlinson, Thomas Biggs, myself, and others were present when the stone was discovered with the copper bracelets and the shell necklace. I retained the stone for the purpose of sending it to some scientific person, for the purpose of having it solved or explained."

I hereby certify that the foregoing is an exact copy of my father's manuscript in regard to the subject to which it relates.

SHERRARD CLEMENS.

Wheeling, W. Va., May 13, 1876.

The following letter is the one mentioned by the Hon. Sherrard Clemens in his second letter:

Mr. Clemens,—

DEAR SIR:—In answer to your note, I would say, what I remember is that your father spent nearly two weeks at Moundsville in collecting the material for his paper—that he spent much time for several weeks in writing up the history of the mound, fortifications, etc., about the place. He often read portions of the paper to me, so that I was, at that time, familiar with the whole subject. He took great pains to have his account of the Indian relics full and accurate. He sent his paper, and I do not remember what else, to Dr. Morton, in Philadelphia. He expected Morton would publish most of the paper, but he made only a short and unsatisfactory notice of it. Your father was not pleased with the way Dr. Morton treated his paper. The manner in which Dr. Morton passed over so large a section of the most important information in regard to Indian antiquities made an unfavorable impression upon me in regard to the man. I came to the conclusion, from what I saw of his work, and learned of him after it was published, that he was a vain man of large pretensions, and with only very moderate capacity. This work, so far as I know, attracted attention, and gained notoriety mainly before it was published. It was talked of much before publication, but never much after. I am sure that your father sent to Dr. Morton everything he could gather up on the subject, for he was doing his best to do him a great favor. I am sorry I can not remember more, but I have hardly thought of the subject since 1838.

JOHN FRISSELL.

The next letter is introduced to show what the leading men of Wheeling think about the matter.

WHEELING, June 6, 1876.

Mr. P. P. Cherry,—

DEAR SIR:—Your letter to J. C. Hupp, containing a letter from S. Clemens, Esq., was by the former transferred to me. I can only say to you that, soon after the mound at Moundsville was opened I visited it, and was shown an inscribed tablet of stone by the proprietor, said to have been taken from the mound during the opening. Many other articles were with it, said to have been found during the same excavation, and I never entertained a suspicion that there was any fraud in any way connected with it, nor do I now. I have a cast of it, and my faith of its genuineness is undoubted. I have no reasons to doubt it.

A. S. TODD.

As the vindication of Dr. Clemens seems to be complete, we now introduce a letter from A. B. Tomlinson, the man who opened the mound, and who is yet able to speak in his own vindication, and in a manner that must bring conviction.

FOLSOM, SACRAMENTO COUNTY, CAL., August 3, 1876.

SIR:—Yours of April 9 has just come to hand, in which you inform me that I am charged with having fraudulently produced the inscribed stone that I found in the mound at Grave Creek. Sir, I will in the presence of God, before whom I must expect shortly to appear, being now sixty-eight years old, give the event of my finding it, according to my recollection, which is clear and distinct, although thirty-eight years have elapsed since the event. There had been two vaults in the centre of the mound. This stone was found in the upper vault, which was about thirty feet, perpendicularly, above the bottom of the lower vault. Each vault had been supported by timbers or rude stones. On the floor, and under the confused mass of rock, were found all the relics of each vault. I was engaged in removing the rocks of the upper vault, and at the same time gathering the relics. The relics lay confusedly, commencing near the east wall, and promiscuously inclined to the centre of the vault. Being thus engaged, and near the side of the vault, the stone spoken of was found. I removed it with my own hands, as I supposed from its ancient bed, believing it to be a genuine antiquity. I have entertained that belief as firmly as I believed that the accompanying beads and bracelets were of ancient origin; and, if it was even possible that the stone was fraudulently imposed upon me, it was no less a foul slander to impute it to those interested in the enterprise.

A. B. TOMLINSON.

The first doubt was cast by Dr. Morton's refusing to make mention of the stone. The reason of this has been clearly explained. The next doubt, and the largest stumbling-block, is the course taken by E. G. Squires. The cause of this is also fully explained. Dr. Wills DeHass says that it was in a fit of pique against Mr. Schoolcraft, while no doubt the greatest cause was his not being able to find the stone when he sought it, consequently he ignored it when found, jumping at the conclusion that there was something underhanded about it; but Mr. Squires has withdrawn his objections and admitted the authenticity of the stone. Are not his followers generous enough to admit that the bottom has fallen out of their pail?

The next gentleman falling into the errors and prejudices of his predecessors is Mr. Foster, who was inclined to rather overdo the matter by perpetuating a falsehood, to the effect that the stone was not produced until two years after the mound was opened. This is so palpably false that it needs no comment.

Next comes Colonel Charles Whittlesy, whom I regard as an able-headed, candid and cautious investigator, but I have no doubt but that Colonel W.'s first doubts came from the above sources, and consequently that perhaps his investigation of this subject has not been entirely free from prejudice, as the wish is often father to the thought. I do not think that Colonel W. could by any means be influenced to willingly and knowingly perpetrate a wrong; but human nature is often imperceptibly leavened with prejudice; a person whose sensibilities are so tender that he is continually in fear that a fraud will be inflicted upon the public, will sometimes go to the opposite extreme, and regard a tangible truth as an untruth unless backed up by the most incontestible evidence.

Whether this is so in the case of Colonel W. I do not know, but he has frequently asked for the man who saw the stone in the mound, and I take great pleasure in presenting him, believing the man's statement true, as he had no cause to misstate it. Thus you see the mistakes of a few have been perpetuated by succeeding writers, until the stone is regarded by many who have not given this subject an earnest investigation, as a fraud. As a general thing, our scientific men are too willing to rely on the word of some predecessor whom they regard as authority, and consequently do not use the powers they possess to investigate for themselves. This is wrong, and we should take no man's say-so if we are able to prove it ourselves. I regarded this stone as a fraud, but was led to investigate, and the more I investigated the clearer did I see the truth, until I am firm in the conviction that the stone and its inscription are authentic and of great antiquity. Another argument which has been used against this stone is that there has been other inscribed stones found, which have been proved frauds. This is no argument against the stone in question, but rather for it, as this was the first production of the mounds in the line of inscribed stones. The conception is the most difficult, but after an idea has been conceived, imitators become plenty. Before the false prophets came the true prophet. Neither are the differences found in the many (said to be) correct engravings of stone an argument against it, as the fault lay in the draughtsmen and in the engravers, not in the stone. The stone remains, and is capable of demonstrating the fact to those who are skeptical.

Dr. Wills DeHass, in a letter to me, under date of August 7, 1877, says:

"Quibbles have been raised by ignorant and presumptuous writers as to the authenticity of its discovery, but there is now no question as to the genuineness of the inscription, or to the existence of the huge tumuli from which it was taken. E. G. Squires never took the trouble to inquire whether the tablet was genuine or not, beyond some doubt, and attempted to discredit the discovery in a fit of pique against a Mr. Schoolcraft, toward whom he cherished personal animosity. Certain novices in archolæology, and one or two careless writers on pre-historic America, have taken E. G. S. as authority, and marred their works by recording his mischievous notions on the subject.

* * * * * * * *

The Grave Creek inscription was carefully described in a paper which I read before the American Ethnological Society,

New York, February, 1858, at which meeting Mr. Squires was present, and took back all of his objections, moving in conclusion a vote of thanks for the value of the contribution. His few followers have not been candid enough to do the same. I have repeatedly, in lectures and various contributions to the press, affirmed the genuineness of the Grave Creek inscription. I may say in this connection, that no investigator, whose opinions are worth noticing, doubts the genuineness of the inscription. * * Colonel Whittlesey does not exactly repudiate, but inclines to doubt. I am sorry for this, as I regard him as an earnest, cautious investigator. The tablet forms part of my large and valuable collection."

In the last tract issued by Colonel Whittlesey on Archæological Frauds, Colonel Wharton was placed in the position of telling two stories, but in the following letter he fully vindicates himself, and explains any apparent discrepancies that may exist. Colonel Whittlesey must have been misled about the authorship of the article in question.

PORTSMOUTH, O., August 31, 1877.

DEAR SIR:—I did not write for the *Pioneer* in 1843; Mr. Abelarde Tomlinson did. He states, as Mr. Whittlesey says—I do not remember, not having seen it for a number of years—that it was taken from the upper crypt, or grave. I have never stated that it came from the lower grave. I have never described the place from which it came in any private letter to him, and in all my public statements have simply said that it was brought out with other matter from the drift. A drift was run in from the north side of the mound, high enough for the tallest man to walk after it was arched with brick, say eight feet high. This was run to the centre, where they came to decayed wood, which was evidently put up in a square box, or enclosure. A shaft was sunk from the top till they struck the same evidences. Then Dr. Clemens was sent for to see it opened, and report, and took me down to witness it. Grave Creek was a small and scattered village, twelve miles below Wheeling. The workmen went on taking out the debris, or grave-dirt, and wheeling it out for inspection. After looking at the work, I spent most of the time in hunting amongst the dirt, as did most of the others. Dr. Clemens and Tomlinson, perhaps others, occasionally went into the drift, but did not stay long, as they were in the way of the workmen. As the lower grave was taken out the dirt gradually fell, until at last the whole came down, opening a communication between the shaft and drift. This dirt was all removed and showed two separate graves, similarly enclosed, one having been above the other, and, I think, some feet apart. Whether the stone was taken from the lower or upper grave I do not remember, and have never stated, even in the publication I made in the Wheeling *Times*, so far as I remember, because I did not regard it as of much importance. I simply knew it came out with the debris through the drift, as there was no dirt taken from the shaft that day, nor could it have been wheeled down the steep side of the mound. I presume Tomlinson found it as he states, in the upper or fallen grave, or inclosure. Mr. T. seemed to regard it as of little importance compared with bones, mica, beads and spear heads, and no one else seemed to, except Dr. Clemens, while I looked at it as curious, but presumed other specimens of the kind had been or would be found, and so they will, when other mounds are properly opened. As to the stone having been a genuine relic, there can be no more question than of the light of day. No one who saw it doubted it. There is an unmistakable difference that no sensible man can mistake. A man who could be deceived, I would not trust to buy a common hatchet, for he could not distinguish between cast iron and wrought steel. A stone must be handled to cut it as that was. The handling makes it darker, and fills the interstices in the sandstone. This is changed, and the sand resumes its natural color, by long lying in the earth. Nothing else will do it. The form of making the letters in ancient times can never be imitated. The very corruption of the language which Mr. W. regards as evidence of fraud is strong evidence of its genuine character. A fraud would have been made in Phœnician as we know it. Mr. W.'s most ridiculous effort is in his half dozen engravings showing the different copies made by tyros in drawing. One might as well contend that there was no Washington because an attempted likeness had been a thousand times daubed on country signboards. The cut by Schoolcraft is the only true one.

Yours truly,

J. E. WHARTON.

THE PRESENT.

The following letter is from G. S. McFadden, the present owner of the Grave Creek mound. It will be found full of information, and of a very interesting nature.

MOUNDSVILLE, W. VA., April 14, 1876.

P. P. CHERRY:

SIR—A description of the stone has been published in Wills De Hass' history of the western borders; there has nothing new developed. To give you some idea of the mound and its surroundings, there are several small ones in the valley, not of any importance, all having been plowed over but "the mound." It stands back from the Ohio river one-third of a mile, and is supposed to have occupied, at an early day, the centre of our valley, which contains six thousand acres of the most productive land on the Ohio river. Our town bears the name of Mound. I believe that in 1867, the Legislature of our State consolidated Elizabethtown and Moundsville, both being called Moundsville, now. We have a population of about 2,500, two steam gristmills, one rolling-mill, the West Virginia Agricultural Works and the Penitentiary, with one of the best graded schools in the state. Excuse my digression—to the mound again: The base of the mound covers an acre in surface, and was as round as could be made (without turning.) The elevation is now seventy-five feet, and about seven feet in diameter at the top. The sides are covered with forest trees of seventeen varieties, all of thrifty growth except one large black oak which stands near the summit. This particular tree girths fifteen feet and four inches, a very straight body and thirty feet to the first limb. When I came to this part of the country, nineteen years ago, it was thought by the old settlers that this vast pile of earth had been carried from a certain locality known as the basin. The basin as it is called, was formed by a very short bend in the little Grave creek. My theory is, that the mound as it now stands is a monster tomb, where thousands have been cremated. The mass as it now stands is a pile of human bones, ashes and charcoal, all of which can be seen at any time. I became proprietor of the mound over two years ago, and since that time, or shortly after, the old theory exploded about the dirt being carried from the basin. The substance of the mound and the earth of the basin are about as much alike as coal cinders and rotten tanbark. The Board of Directors of the West Virginia Penitentiary talk of purchasing the mound for the purpose of putting a basin on the top to supply the prison with water. The property should really belong to the State, and be beautified for a pleasure ground. There are now very few stone hatchets, hammers, arrow-heads, or what is termed Indian relics, to be found in this vicinity. My wife is still able to hold on to a few beads (bone) that were strung on copper wire, around the neck of the large skeleton which was found in the shaft thirty feet from the top of the mound. Dr. Ganns has passed to the other shore. He died suddenly while in the Union Army. Dr. Clemens has also gone. The names of some of the old settlers are Captain David Roberts (quite old) and Peter B. Catlett; he did the brick work, and helped to excavate the mound, and I believe it was he who found that stone. He is over sixty years of age.

I am yours, etc.

G. S. MCFADDEN.

THE PAST.

MOUNDSVILLE, W. Va., June 23, 1876.

MR. P. P. CHERRY:

DEAR SIR—My wife's grand-father came here in the year 1770, and located his land and built a cabin. He left the cabin in the care of Con O'Neal, and returned to Allegheny county, Md., where he married Elizabeth Harklas. He and his wife came here in 1772. While he was gone O'Neal killed turkeys, the feathers of which made them their first bed. He first discovered the mound in the west. He was out hunting and killed a deer south of the mound, and in coming home he found it. He then brought his wife and they went to the top of it. The ground on which it stands is called the flats of Grave creek. It was covered with large trees, and the the timber on the flats was very thick, so you could not discern the mound till you were close to it. The land and mound, under the will of Jos. Tomlinson, were left to his son, Jesse, in the year 1837 or 1838. Jesse, and A. B. Tomlinson, a grand-son of Joseph, opened the mound. There was a large oak tree standing on the centre of the mound which they had to remove.

WM. ALEXANDER.

The article referred to in the foregoing, from the *American Pioneer*, was published in the May number for 1843, and is as follows:

AMERICAN ANTIQUITIES AT GRAVE CREEK.

"The following graphic account of the mammoth mound, &c., at Grave Creek, was obtained from A. B. Tomlinson, the proprietor. Great praise is due to him for his careful preservation of that tremendous structure of ancient American aboriginal industry. His museum will, with care, become one of the most interesting in the west. Many of our towns, vandal-like, have destroyed their ancient curiosities. What a pity!

"From A. B. Boreman, of Elizabethtown, we received a *fac-simile* of the engraving on the stone. We extract from his letter the following, but as Mr. Tomlinson's account is the most full, we give it entire:

"The *fac-simile* gives the true shape and size of the stone; its color is dark and of a grayish cast. It was found in the above mentioned mound by Mr. A. B. Tomlinson in 1838, while excavating it, a short distance from the centre, and near one of the skeletons found therein. The characters engraved on this stone have produced excitement in the different parts of the United States, into which the *fac-similes* have been transmitted, and also in Europe. I have been informed that the antiquarians of England, more particularly, have been exerting their minds and historical faculties, in order to decipher those characters, and discover something by which they can trace them to their origin. This is a problem which, if solved, would no doubt throw some light upon the antiquities of America. There are a great many mounds in the vicinity and country surrounding Elizabethtown, some of which have been dug down, in which there has been found a great many bones of human beings, among which are skulls, &c.; copper beads have also been found, and a number of stone tubes ten and one-half inches in length, having a calibre of three-fourths of an inch, some of which were full of something which might be called red paint of a light shade, with other things of a similar character. But I will proceed to the description of the mammoth mound. It is beautifully situated in the same extensive plain, and within the suburbs of Elizabethtown, two hundred and fifty yards from the court-house, and a quarter of a mile from the Ohio river. Its altitude is sixty-nine feet, the circumference of its base is a little more than three hundred yards. Its shape is that of a frustrum of a cone, being flat on the top, and the distance across is fifty feet."

MR. TOMLINSON'S LETTER.

Flats of Grave Creek—Settlement—Elizabethtown—Mammoth Mound—Its Antiquity—Horizontal Excavation—Lower Vault—Its Contents—Perpendicular Excavation—Upper Vault—Its Contents—Trinkets—Skeletons—Their State of Preservation—Their Character Beads, &c.—How Situated—Kinds of Earth—Preservation of Vaults—Arrangement of Curiosities—Observatory—Stone Image and Other Relics.

J. S. WILLIAMS, ESQ.,

"SIR:—The flats of Grave Creek are a large scope of bottom land in Marshall county, Virginia, and on the eastern shore of the Ohio river, which here runs due south. They extend from north to south about four miles, and contain about three thousand acres. Big and Little Grave creeks both empty into the Ohio river at these flats, from which they derive their names. The creeks themselves doubtless derive their names from various tumuli or mounds, commonly called Indian graves, which are found on these flats, and especially between the two creeks. Little Grave creek enters the flats at the upper end and runs parallel with the Ohio river about three miles, and then turns at right angles and enters the river one mile above Big Grave creek, which occupies the lower termination of the flats. These creeks are what are called mill streams, and, of course, are not navigable. These flats are composed of first and second bottoms. The first bottom is about two hundred yards wide, and runs the whole length of the flats. The great flood of 1832 was about ten feet deep on the first, but lacked from ten to twenty feet of the height of the second bottom, on which all the ancient Indian works and mounds are situated; no signs of them being on the lower land. It may reasonably be inferred that the brow of the second bottom was the bank of the river, when the ancient works were erected. This, I believe, is not an uncommon circumstance where mounds and ancient works appear near the streams that have first and second bottoms.

"The flats were early settled. My grandfather settled on them in 1772, two years before the murder of Logan's family. It was on these flats that young Cresap pursued the Indians, as related by Col. Ebenezer Zane in his affidavit, published in the appendix to 'Jefferson's Notes on Virginia.' There are many interesting incidents connected with the settlement of these flats, which I may at another time communicate from the life of my father, but as these incidents are not my present subject, I will proceed.

"Elizabethtown is about twelve miles below Wheeling, and is situated on the second bottom, near the mouth of Little Grave creek, and at the widest part of the flats; it is the seat of justice for Marshall county.

"In the suburbs of Elizabethtown stands what is called Mammoth Mound, which with its contents is made the subject of this narrative. This mound is surrounded by various other mounds and ancient works, and in respect to the surrounding localities, the situation, as respects defence was well chosen, on the brow of the second bottom, and partially encompassed by steeps and ravines. The Mammoth Mound is sixty-nine feet high. Its circumference, at the base is over three hundred yards. It is the frustrum of a cone, and has a flat top of fifty feet in diameter. This flat on the top of the mound, until lately, was dish shaped. The depth of the depression in the centre was three feet, and its width forty feet. This depression was doubtless occasioned by the falling in of two vaults, which were originally constructed in the mound, but which afterwards fell in; the earth sinking over them, occasioned the depression on the top.

"The mound was discovered by my grandfather soon after he settled the flats, and was covered with as large timbers as any in the surrounding forests, and as close together. The centre of the hollow on the top was occupied by a large beech. This mound was early and much visited. Dates were cut on this beech as early as 1734. It was literally covered with names and dates to the height of ten feet; none of a more remote period than the above; most of them were added after the country began to be settled—mostly from 1770 to 1790. On the very summit of the mound stood a white oak, which seemed to die of old age fifteen years ago. It stood on the western edge of the dish. We cut it off, and with great care and nicety counted the growths, which evidently showed the tree to have been about five hundred years old when it died. It carried its thickness well for about fifty feet, where it branched out into several large limbs. Top and all, it was about seventy feet high, which, added to the height of the mound, it might well have been styled the ancient monarch of the flats, if not of the forest. A black oak stands now on the east side of the mound, which is as large as the white oak was, but it is situated on the side of the mound, about ten feet lower than the throne of the white oak, to which it may now be proclaimed the rightful heir.

"Prompted by curiosity or some other cause, on the 19th of March, 1838, we commenced an excavation in this mound. I wrought at it myself from the commencement to the termination, and what I am about to tell you is from my own personal observation, which, if necessary, could be substantiated by others. We commenced at the north side and excavated toward the centre. Our horizontal shaft was ten feet high and seven feet wide, and ran on the natural surface of the ground or floor of the mound.

"At the distance of one hundred and eleven feet we came to a vault that had been excavated in the natural earth before the mound was commenced. This vault was dug out eight by twelve feet square and seven feet deep. Along each side and the two ends, upright timbers were placed, which supported timbers that were thrown across the vault and formed for a time its ceiling. These timbers were covered over with loose unhewn stone, of the same quality as is common in the neighborhood. These timbers rotted, and the stone tumbled into the vault; the earth of the mound following, quite filled it. The timbers were entirely deranged, but could be traced by the rotten wood, which was in such a condition as to be rubbed to pieces between the fingers. The vault was as dry as any tight room; its sides very nearly correspond with the cardinal points of the compass, and it was lengthwise from north to south.

"In this vault were found two human skeletons, one of which had no ornaments or artificial work of any kind about it. The other was surrounded by six hundred and fifty ivory beads, and an ivory ornament about six inches long, one and five-eighths inches wide in the middle, and half an inch wide at the ends, with two holes through it of one-eighth of an inch in diameter. It is flat on one side and oval shaped on the other. The beads re-

RESIDENCE ICE HOUSES AND SURROUNDINGS OF CONRAD SEIBERT THREE MILES FROM WHEELING WEST VIRGINIA.

semble button molds, and vary in diameter from three to five-eighths of an inch. In thickness they vary from that of a common pasteboard to one-fourth of an inch; the size of the holes through them varying with the diameter of the beads from one-eighth of an inch to the largest. Some of the beads are in a good state of preservation, retaining even the original polish; others, not so favorably situated, are decayed—some crumbled to dust. Above I count only the whole ones left. The large ornament is in a good state of preservation, but is somewhat corroded. The first skeleton we found on the 4th of April, and the second on the 16th, but I shall speak more particularly of these further on.

"After reaching this vault, we commenced a shaft ten feet in diameter, at the center of the mound on top and in the bottom of the depression before spoken of. At the depth of thirty-four or thirty-five feet above the vault, at the bottom, we discovered another vault, which occupied the middle space between the bottom and the top. The shaft we continued quite down through the mound to our first excavation.

"In the upper vault was found one skeleton only, but many trinkets, as seventeen hundred ivory beads, five hundred sea shells of the involute species, that were worn as beads, and five copper bracelets that were about the wrist bones of the skeleton. There were also one hundred and fifty pieces of isinglass [mica] and a stone. The stone is flat on both sides, and is about three-eighths of an inch thick. It has no engraving on it, except on one side, as sent you. There is no appearance of any hole or ear, as if it had been worn as a medal. The drawing is the exact size of it. It is sandstone of a very fine and close grit. The beads found in this vault were like those found in the lower one, as to size, materials, decay, &c. The shells were three-eighths of an inch long and one-fourth of an inch in diameter at the swell or largest part. The bracelets are of pure copper, coated with rust as thick as brown paper. They are an oblong circle. The inner diameter of one is two and one-fourth inches one way, and two and five-eighths the other. They vary in size and thickness; the largest is half an inch thick, and the smallest half that thickness. They were made of round bars bent so that the ends came together, which forms the circle. The five bracelets weigh seventeen ounces. The pieces of isinglass are but little thicker than writing paper, and are generally from one and a half to two inches square; each piece had two or three holes through it about the size of a knitting needle, most likely for the purpose of sewing or in some way fastening them to the clothing.

"The beads were found about the neck and breast bones of the skeletons. The sea shells were in like manner distributed over the neck and breast bones of the skeleton in the upper vault. The bracelets were around the wrist bones. The pieces of isinglass were strewed all over the body. What a gorgeous looking object this monarch must have been! Five bracelets shining on the wrists, seventeen beads, and five hundred sea shells, that we found whole about the breast and neck, besides one hundred and fifty brilliants of mica on all parts of his body! no doubt oft the object of the throng's admiring gaze. The stone with the characters on it was found about two feet from the skeleton; could it be read, doubtless would tell something of the history of this illustrious dead, interred high above his quite gorgeous companion in the lower story.

"The skeleton first found in the lower vault, was found lying on the back, parallel with and close to the west side of the vault. The feet were about the middle of the vault; its body was extended at full length; the left arm was lying along the left side; the right arm as if raised over the head, the bones lying near the right ear and crossed over the crown of the head. The head of this skeleton was toward the south. There were no ornaments found with it. The earth had fallen and covered it over before the ceiling fell, and thus protected it was not much broken. We have it preserved for the inspection of visitors; it is five feet nine inches high, and has a full and perfect set of teeth, in a good state of preservation; the head is of a fine intellectual mould; whether male or female cannot be ascertained, as the pelvis was broken. Opinions differ as to sex; my own is, that it is that of a male.

"The second skeleton found in this vault, and which had the trinkets about it, lay on the left side, with the head to the east, or in the same direction as that on the opposite side. The feet of this one were likewise near the centre of the west side. The earth had not crumbled down over it before the ceiling fell, consequently it was not much broken (as was also that in the upper vault). There is nothing in the remains of any of these skeletons which differ materially from those of common people.

"The skeleton in the upper vault lay with its feet against the south side of the vault, and the head toward the north-east. It is highly probable that the corpses were all placed in a standing position, and subsequently fell. Those in the lower vault most likely stood on the east and west side, opposite to each other, and the one in the upper vault on the south side.

"The mound is composed of the same kind of earth as that around it, being a fine, loamy sand, but differs very much in color from that of the natural ground. After penetrating about eight feet with the first or horizontal excavation, blue spots began to appear in the earth of which the mound is composed. On close examination, these spots were found to contain ashes and bits of burnt bones. These spots increased as we approached the centre. At the distance of one hundred and twenty feet within, the spots were so numerous and condensed as to give the earth a clouded appearance, and excited the admiration of all who saw it. Every part of the mound presents the same appearance, except near the surface. I am convinced that the blue spots were occasioned by depositing the remains of bodies consumed by fire. I am also of the opinion that the upper vault was constructed long before the lower one, but for this opinion, I do not know that there is any evidence.

"We have overlaid the excavation, from the side to the centre, with brick, and paved the bottom. We excavated the vault in the centre twenty-eight feet in diameter. It is well walled with brick and neatly plastered. The rotunda, or shaft in the centre, is also walled with brick. The foundation of the rotunda is in the centre of the lower vault, and around this we have made departments for the safe-keeping of the relics nearly where they were found; this vault we light with twenty candles for the accommodation of visitors, many of whom have never seen it.

"Upon the top of the mound, and directly over the rotunda, we have erected a three-story frame building, which we call an observatory. The lower story is thirty-two feet in diameter; the second story is twenty-six feet, and the upper story ten. The manner of constructing the building, accommodates the visitor with a walk quite around on the top of each story, and a good stand for observation on the top. From either of these elevations, the visitor has an unobstructed view of the surrounding country and river to a considerable distance. It is our intention to run a winding stairway from the bottom of the mound through the rotunda and observatory on the top. The height of this stairway will be over one hundred feet. The observatory was built in 1837.

"In addition to the relics found in the mammoth mound, I have a great number and variety of relics found in the neighborhood; many of them were found with skeletons which were nearly decayed. I have some beads, found about two miles from this great mound, that are evidently a kind of porcelain, and very similar if not identical in substance with artificial teeth set by dentists. I have also an image of stone, found with other relics about eight miles distant; it is in human shape, sitting in a cramped position, the face and eyes projecting upwards; the nose is what is called Roman. On the crown of the head is a knot, in which the hair is concentrated and tied. The head and features particularly, is a display of great workmanship and ingenuity—it is eleven inches in height, but if it were straight would be double that height. It is generally believed to have been an idol.

Your friend,

A. B. Tomlinson.

The following article is from the pen of E. W. B. Canning:

Among the most mysterious antiquities of our country are the ancient *tumuli*, or, as they are commonly termed, Indian mounds, which are found scattered over large portions of the states west of the Alleghanies. Volumes have been written concerning their probable builders, and still the question has not been satisfactorly settled. These structures are of various dimensions; they occur isolated, and again in groups, or forming, apparently, portions of military fortifications, more or less extensive, of a former intelligent but forgotten people. Explorations into their interiors have proved them to have been, almost universally, burial places of solitary tenants, or of multitudes, and erected either at once or by protracted accumulation.

One of the largest of these remarkable structures stands near the banks of Grave creek, West Virginia, at its confluence with the Ohio river, twelve miles below Wheeling. It rises directly out of the level plain, a regular cone, eighty-four feet in height and about one hundred in diameter at the base. In 1834–40, when I was accustomed to visit it, it was covered by the primeval forest, and on its top stood a huge oak, seemingly the growth of centuries. It is entirely alone, and no appearance around

its base justifies the belief that it was constructed of the neighboring soil. On account of its size the early settlers considered it natural rather than artificial, and many held to this opinion until the investigations, which I am about to describe, were made in 1836 or 1837. The former owner of the land on which it stands, honoring it as a relic of a bygone race, persistently refused, during his life-time, to have it violated by curious explorers or scientific men, or to sell the locality at any price. After his death a division of his estate placed it in the possession of an heir, in whose eyes such memorials of the past were less sacred, and who determined to admit himself and the public to its contents, though preserving it from demolition or even unnecessary injury.

The summit of the mound being regularly sunken toward the centre, suggesting a falling in of the earth over some internal cavity, and the investigation commenced by probing from the top with iron rods screwed one upon another and thrust perpendicularly into the loamy material composing it. In so doing, about half way down to the level of the plain the implement met some obstruction which hindered its further progress. Directly opposite this impediment, a horizontal opening was made from the surface to the centre of the mound. There the explorers discovered an inclosure built of stone, eight or ten feet square, which had evidently been once covered with some wooden material, now fallen in and turned to dust, but having formerly rested upon cross beams, whose ends still remained in a powdered state in the stony niches made to receive them. The sides were some three feet in height and rather loosely laid of stone, whose water-worn appearance indicated their having been taken from the neighboring bed of the Ohio. In the centre of the space they inclosed, lay a male and female skeleton in tolerable preservation, and of ordinary size. Beside them had been placed several articles of dress or furniture, which decay had rendered indistinguishable. A few implements of stone, weapon-like, were perfect, and also a quantity of ivory beads, made by sawing a stick of that substance into the requisite lengths and then perforating each piece. Around the wrists and ankles of the male skeleton were copper rings, about three-eights of an inch in thickness, roughly hammered out and bent together. Beneath these rings, preserved doubtless by the chemical properties of the metal, the mummified flesh and sinews were perceptible.

All these having been removed, the rod was thrust downward again, and at the bottom of the mound met a second obstacle. Another gallery was accordingly opened on a level with the plain, and directly beneath the above mentioned chamber another, similar in all respects, was encountered. It contained but one skeleton, a male, no larger, but in better preservation than those occupying the upper enclosure. Remains of weapons and clothing surrounded it, with similar ornaments, and something like two quarts of the same kind of beads. Here, too, was found a dark, flat, oval stone, rudely inscribed with unknown characters. Much interest attached to this relic, as it was supposed to give some information concerning the lonely tenant of this ancient sepulchre. It was visited and inspected by the most eminent antiquarians of the west, but none could throw any light upon the mysterious cipher. From some resemblance to the characters upon the famous Dighton rock in our state, they were suspected to be of Runic origin, the stone was sent to the Royal Antiquarian Society of Copenhagen, to be deciphered. As I left the vicinity shortly after, I have never learned what report, if any, was returned thereon.

INTERESTING FACTS CONCERNING THE RIGHT TITLE OF ROUND BOTTOM.

Suit Between George Washington and Colonel Cresap's Heirs—Washington Sells the Land to Archibald McLean—The Courts Sustain the Father of His Country—A Letter of Washington Filed in the Case.

The following are extracts from the old records in the chancery cause of Cresap *vs.* McLean, in the old chancery court of Harrison county, in which Washington is charged with improperly locating a tract of land, now in Marshall county, known as the Round Bottom. There are several other papers in the case, among them the depositions of Mark Harden, of Washington county, Ky., and of George Cox, of Brooke county, Va., who were with Colonel Crawford in his surveying expedition spoken of by Tomlinson in his deposition, and corroborate him as to the survey being made at Round Bottom, and as to only one line being run along the river.

Also a copy of the proceedings of the privy council of the colony of Virginia, upon the petition of Colonel Washington and others, granting them 200,000 acres of land in the western part of the state for services rendered in the French and Indian wars.

The memoranda, in the writing of Washington, is written in a distinct, plain business hand, indicating that attention to neatness and accuracy of detail, which was characteristic of the the great man who wrote it.

You will observe by the proceedings of this court that the bill was dismissed, as untenable, by the lower court, which action, upon an appeal was sustained by the Court of Appeals of Virginia.

This decision of course approves the legality of the survey and grant to Washington, sustains his course in the matter, and virtually denies that he was guilty of any wrong.

CRESAP'S BILL OF COMPLAINT.

Michael Cresap
v.
Archibald McLean } In Chancery.
and
Jonathan Roberts. } Bill filed December, 1822.

To the Hon. Dabney Carr, Judge of the Supreme Court of Chancery holden at Clarksburg:

Your Orator, Michael Cresap, sheweth that in the year 1770 or 1771 his father, Michael Cresap, caused a settlement to be made in the Round Bottom, on the Ohio river (in the now county of Ohio) adjoining and below lands claimed by Joseph Tomlinson. That in the year 1775 he departed this life, having made and published his last will, by which he devised to his daughters, Mary Elizabeth and Sarah, the aforesaid land, who at the death of their father were infants of tender years. That Luther Martin inter-married with one of the said daughters, and in the year 1781 obtained a certificate in the right of the settlement of the said Michael Cresap, and on the 24th of February, 1784, caused a survey to be made of said land, and on the 5th of April, 1784, the plot and certificate of survey was returned to the Register's office. On the 29th of July, 1785, the late General George Washington entered a caveat to prevent the issuing of a grant upon said survey, and in April, 1787, said caveat was dismissed, and a grant issued to the said Luther Martin and Mary his wife, and the said Elizabeth and Sarah Cresap.

Your Orator further begs leave to show that in the distribution of the estate of his father, the said Michael Cresap, an arrangement took place by which your orator acquired the right of the said Luther Martin and the other patentees by conveyances duly recorded, and in pursuance thereof he was regularly and peaceably invested with the possession of said land, and continued in such peaceable possession for a long time.

Your Orator further shows that he was an infant at the death of his father, and it was not until many years had transpired after his death, that your orator first heard of a claim to said land by the late General Washington. Upon application to the late Luther Martin, who was an acute and learned lawyer, he ascertained that a state of facts existed in relation to the claim of said Washington as seemed to forbid the idea that the claim would ever be asserted, or, if so, that it could not be an available one.

That in fact, and your orator so charges, that said Washington caused a private survey to be made of the Round Bottom (containing altogether 1,200 or 1,300 acres); that the person who made said survey avowed at the time of making the survey, that it was not upon the authority of any warrant or location; that he was instructed to make a survey for the said Washington, but for what purpose he did not know; that the said surveyor was at the time of making the said survey shown the improvement and settlement made by your orator's father, and admonished not to make the survey, and further, that it was a fact that said survey was unauthorized by any warrant or location, is manifested by reference to the certificate of survey upon which the said Washington obtained his grant, by which it appears that at the time said survey purports to have been made, the warrants by which it is alleged the survey was authorized were not in existence. It is likewise manifested that it was the intention of the said Washington after having obtained the field notes of the aforesaid unauthorized survey to procure land warrants sufficient to cover the whole of the Round Bottom, (1,200 or 1,300 acres) but being only enabled to procure 587 acres of warrants he *fraudulently concealed the fact that his boundaries embraced* 1,200 or 1,300 acres, but had the area

stated so as to correspond with his quantity of warrants, viz: 587 acres. That the grant to the said Washington could not be available to pass to him said land, seemed to have been established by and in fact acquiesced in by said Washington after the decision of the caveat, prosecuted by the said Washington to prevent a patent from issuing to the devisees of said Michael Cresap. It seems to your orator, as an inference fully warranted by the circumstances, that the dismissal of the caveat resulted from the conviction that the grant to the said Washington could not impair the equitable or legal claim of the caveatees to the land for which they were endeavoring to obtain a grant.

Your orator also begs leave to show that after he had been for a long time in the peaceable possession of the land derived by him as aforesaid from the said Luther Martin and the other patentees, or those holding under them, and not suspecting an attempt would ever be again made to assert the claim of the said Washington, one Archibald McLean, under the authority of a conveyance from the said Washington, finding the said land unoccupied, entered into the possession thereof against the will of your orator, and continues in such possession, and availing himself of his having the oldest grant for the land, threatens to retain the possession to the exclusion of your orator's right thereto; notwithstanding he, the said McLean, had full notice at the time of his contract with the said Washington, of the nature of your orator's claims thereto, and has since sold, or in some manner disposed of part of said land to one Jonathan Roberts, who had also full notice of all the circumstances connected with the claim of your orator.

Your orator further states that he is advised, and so relies for the confirmation and establishment of his title to the aforesaid 400 acres of land, granted to the said Luther Martin and others, that the grant to the said Washington, *from the fraud by which it was obtained*, is void so far as it regards the part covered by your orator's claim. That the prosecution and decision of the caveat prosecuted as aforesaid by the said Washington is a judicial recognition by a competent tribunal of the validity of your orator's claim thereto.

Or if it should be alleged that it was the duty of those claiming, under your orator's father, to have caveated the issuing of a grant to said Washington, a satisfactory answer would be found in the fact that your orator's father died before the grant was issued to said Washington, and that his heirs were infants at that time, and that on February 24th, 1784, they caused a survey to be made of their land, and on April 5th, 1874, before the grant to said Washington was issued, the plat and certificate of survey was returned to the Register's office, the money paid and a grant applied for. A further excuse for not caveating the grant to the said Washington is in the history of the country—the revolutionary war having just terminated, the scarcity of money and the dangers and difficulties in traveling from the western part of the state to Richmond, all tended to throw impediments in the way of the actual settler of the frontier in perfecting his title to lands he was invited to settle, and which was accomplished at so much peril

Your orator further begs to remark, as a reason for his failure to assert judicially his right to the said land before the present period, that he was advised that the grant to the said Washington was void in the law from the fact appearing upon its face; that the warrants were dated subsequent to the survey, and a suit at law having been instituted by Joseph Tomlinson, who claimed a part of the land covered by the grant to the said Washington, in which the question as to what would be the legal question of said grant would be decided, and after pending a long time it was at length determined in the Court of Appeals, reversing the judgment of the inferior court that adjudged the said grant to be void, and is the same case reported in 5th Munford. Your orator still hoped, notwithstanding said decision, that said Archibald McLean and Jonathan Roberts would surrender possession of said land, but they still refuse to do so, and your orator resorts to the interposition of a court of equity, and prays, etc.

* * * *

Deposition of Joseph Tomlinson, taken before J. H. Fitzhugh, commissioner for Ohio county, January 9, 1823.

Joseph Tomlinson being sworn says that he came to Ohio county about the year 1771, in the month of March, with two of his brothers to search for places on the Ohio river where he might establish settlements for his father's family. In the spring of 1771 he made improvements on the Grave Creek flats, and proceeded down the river to the Round Bottom, and finding no claim on that land he and his brothers made several improvements along the river bank. From that place he went on down the river, and some place between there and the mouth of the Little Kanawha he fell in with Col. William Crawford, who was on his way with several persons in his employment to survey the military land between the Little Kanawha and Big Sandy rivers. That he engaged with Col. Crawford to serve him by the month as a hand, and continued with him until he made surveys of a considerable quantity of lands and returned with him to the Round Bottom. That before he arrived at the Round Bottom he was informed that Col. Crawford intended making a survey of the land there, and when he arrived there he stopped on the lower end of the bottom and said that he wanted to make a survey there. This deponent told Col. Crawford that he must not survey there, because himself and brothers had made settlements on that land and intended establishing improvements on it immediately. Col. Crawford replied that it was Col. Washington's request that he should make a private survey of that land and pledged his word that the survey should do this deponent no harm, for it was no more than a private survey, and should be so returned. This deponent as far as he could opposed the survey, but the Colonel went on to make the survey of the land, and ordered one Charles Morgan, a surveyor in his employment, to survey the bottom, who did as he was directed, and William Jackson carried the far end of the chain, and this deponent thinks that one Mark Harden or George Cox carried the other end. This deponent went along as a spectator, and they surveyed the river line to the upper end of the bottom and no other line. That Michael Cresap, from Old Town, sent out about fourteen hands to settle the Round Bottom, who arrived there, to the best of deponent's recollection, in the spring of 1772. They settled in two different places near the river, and about the middle of the bottom cleared two pieces of ground, but did not fence them. The hands then went on down the river to improve other lands, and in the spring of 1773, Cresap sent out one Francis Purcell and his family, who settled there, cleared about six acres of ground, fenced and planted it, built a house on it and raised corn, and remained there until the fall of 1773, when he removed on the coming in of the Indians.

This deponent remained at the Flats of Grave Creek, where he now lives, from 1771 until 1774, at which time he left his settlement and went to the Monongahela, above Fort Redstone, where he was in fort with the inhabitants of the county. In February, 1775, this deponent returned to Grave Creek. That although Cresap had a claim on the Round Bottom, this deponent insisted on holding his improvement made there against Cresap until the commissioners for adjusting the claims to lands in the western country sat at or near Morgantown in 1779, at which time he sent a message to the widow of Michael Cresap, requesting her to appear before the commissioners and have their claims to the Round Bottom decided; that one Michael Cresap, a young man, son of Daniel Cresap, the brother of Michael Cresap, sr., appeared on behalf of Mrs. Cresap, before the commissioners, and then the said Michael Cresap and this deponent agreed to divide the bottom as equally as possible, without respect to improvement, by a line from the river to the hill. Mrs. Cresap was to have the lower end, this deponent the upper end, and the commissioners ordered their clerk to make out the certificates according to the agreement, and to state the same in the certificates, which was done, and they take date from 1771. This deponent further states that he resided at the Flats of Grave Creek, within three and a half miles of the Round Bottom, from the year 1771 until Dunmore's war in 1774. That his brother James lived on the Round Bottom in 1772 and 1773, and kept possession of the same; that there was a constant intercourse between his brother and himself, and that Francis Purcell lived on the bottom, holding under Cresap and taking care that no surveys were made on the bottom. That Colonel Crawford never was in the neighborhood of the Round Bottom from the year 1771 until 1775, when David Rogers went after him to where he lived, upon the Big crossing of Yough river, a distance of more than seventy miles, to survey his military location on the Ohio river at the Flats of Grave Creek and Fish creek bottoms. This deponent knows that Crawford never made any other survey than that in July, 1771, upon the Round Bottom, and that Michael Cresap, sr., was always considered the owner of the lower part of the Round Bottom, until McLean came in with his claim under Washington.

That this deponent has resided here at the Flats of Grave Creek from 1771 until the present time, and was never absent from the same save when driven off by the Indians in 1774,

and occasionally upon business for short periods, and a survey could not have been made on the bottom without his knowledge, because he was constantly on the watch for fear one would be made. JOSEPH TOMLINSON.

The Answer of Archibald McLean to the Bill of Michael Cresap.

Respondent states: That he purchased from the late General George Washington, August 8, 1798, 587 acres of land, situate on the Ohio river, in Ohio county, known as the Round Bottom; that the boundaries of said deed, which corresponds with the boundaries set forth in the grant to Washington, contains 2,293 acres; that the consideration to be paid for said land was $5,870; that at the time of the purchase he was ignorant of the claims of Michael Cresap, but shortly after his arrival in the neighborhood, he was informed that the heirs of said Cresap set up a claim to said land; that in the fall of 1798, and the following spring, he placed tenants on said land, and has cleared a great part of it and made valuable improvements thereon; that on the 30th of October, 1785, General Washington obtained a patent for the land aforesaid, and that the patent includes within its boundary 1,293 acres, the whole of which the respondent claims by virtue of the deed aforesaid, and that it is purely a question between the Commonwealth and the patentee and his alienee as to the surplus land; that he knows nothing of the settlement alleged to have been made by Michael Cresap in 1770 and 1771; that the survey whereon the patent aforesaid was issued to said Washington, was founded on military warrants, and was made long before the Act appropriating lands to actual settlers. That as to the caveat, respondent knows nothing, and suggest that it does not appear whether the said caveat was dismissed by the said Washington or by the court upon a final hearing, and that the grant aforesaid had been issued to said Washington previous to the date of the caveat aforesaid, and previous to the Act of Assembly respecting the filing and trial of caveats.

Respondent knows nothing of the charge in the said bill of the said Washington causing a private survey to be made of the said land, but insists that the survey on which the grant was founded, was made by a lawfully authorized surveyor and not by a private person. That although in fact it appears from the face of the grant aforesaid, that the survey was made upon warrants subsequent in date to the date of the survey; yet it is manifest that some mistake must have been made by the surveyor, and it is most certain that *no fraud was meditated or intended*, as the discrepancy of dates would detect any such attempt if any were intended; and as a further evidence that the said Washington never intended or meditated a fraud, as in the bill charged, this defendant says that during the negotiation between him and the said Washington in relation to said purchase, the said Washington, by a letter addressed to him, which is here filed, proffered to this defendant to take the land aforesaid at 587 acres called for in said grant, or to have the land surveyed, and pay for the quantity found by actual measurement; that respondent closed with the first branch of the proposition, and took the land for the said 587 acres. This respondent denies that the said Washington fraudulently concealed any fact or facts in relation to the survey on which said grant was founded, or in relation to the boundary, or lands included in the survey.

Respondent further states that he leased a portion of said land to Jonathan Roberts for a term of years, and denies all fraud and combination as charged in the bill, &c.

ADJUDICATION OF THE CASE BY THE COURTS.

At a Superior Court of Chancery held at Clarksburg, on the 17th of May, 1826, present the Hon. Henry St. George Tucker, Chancellor of the District.

Michael Cresap, }
v.
Archibald McLean. }

This came on this day to be heard on the Bill, answers, depositions and exhibits, and was argued by counsel, on consideration whereof, it is adjudged, ordered and decreed, that the plaintiff's bill be dismissed, and that the defendant recover against the plaintiff his costs here expended, from which decree the plaintiff prays an appeal to the next term of the Court of Appeals which is granted upon his executing bond conditioned according to law.

VIRGINIA:

At a Court of Appeals held at the Capital, in the City of Richmond, on Monday, April 28, 1834.

Michael Cresap, }
v.
Archibald McLean. }

Upon an appeal from a decree pronounced by the Superior Court of Chancery held in Clarksburg on the 17th of May, 1826, in a suit in which the appellant was plaintiff and the appellee was defendant. It is considered by the Court that there is no error in said decree, therefore it is decided and ordered that the decree in the court below be confirmed.

A Memorandum at Clarksburg by our Father G. W.

The note or memoranda, filed in the case, in the hand writing of Gen. Washington, in reference to the sale or lease of the land to McLean, states the quantity to be 587 acres at the price of $5,870 "be the quantity more or less," and says:

"It may be taken now at that quantity, or now be determined to abide by the quantity that shall be found therein if resurveyed."

The note closes in the following words:

"I have set too low a price on my land in the opinion of a very judicious gentleman (well acquainted with the land) whom I have seen since I concluded the bargain with you."

GEO. WASHINGTON.

Mount Vernon, 6 Aug. 1798.

GENERAL WASHINGTON'S LETTER.

The following is a transcript from the original letter of General George Washington to Archibald McLean. The letter is now in the possession of Mr. Linsey T. Gray, of Moundsville. It pertains to the land known as the Round Bottom:

MT. VERNON, 6th Aug. 1798.

SIR: The annual meeting of the Potomack Company requires my attendance in Alexandria to-day. It will be held, I presume, at Gadsby's. If so, I shall be there from ten o'clock until three, and shall be ready to see you at any hour between —the earlier the better.

Enclosed is the Patent for the 587 acre tract (with a plat thereof on the back), and memorandum of my undestanding of our agreement by which the writings are to be drawn.

Mr. Keith has usually done this kind of business for me and I presume would draw the writings between us as accurately as any other, but it is indifferent to me who the draughtsman is, if professional, and can be correct.

If a lease is preferred to an absolute sale, the usual covenants to enforce buildings, Planting Orchards, making meadow, Reentry in case of non-performance, &c., &c., must be inserted—for although the privilege of becoming the purchaser in fee in seven years is granted it is not less incumbent on me to attend to the Property while the right remains unalienated. To render it unnecessary hereafter, to see that these are complied with, and to avoid difficulty in securing the Rents, were my inducements for suggesting the alternative of a final bargain, on the terms proposed in the mem'm (memoradum), but I repeat, that I am equally ready to execute the other. I am, Sir,

Your Very Humble Servant,
G. WASHINGTON.

MR. ARCH. MCLEAN.

THE FIRST ROADS.

It was a number of years after the first settlements in different parts of this section of the country, before a road was located. The whites followed the Indian trails and made paths to different points. The traveling was mostly on foot and a horseback. In 1800 there was a general order for a road, by the court of Ohio county, to run from Wheeling to Middle Island creek, but was not opened until 1810. Captain Roberts, in company with his father, assisted Morgan Jones, the surveyor, in locating the road from Grave creek to Fish creek. A. McMann having run the road from Wheeling to Grave creek. The road from Paris Point to Waynesburg was located in about 1811. The river road was located about 1820.

AN OLDEN TIME FUNERAL.

The following narrative concerning the burial of two large and corpulent persons is obtained from Capt. Roberts, who

served as one of the pall-bearers, and, although rather a peculiar circumstance, is perfectly authentic:

In 1824 there was living in Round Bottom a family by the name of Craig, who had settled there several years previous to the date mentioned, and who were both taken sick with a fever. There were but man and wife, and he weighed 300 pounds and she 303. Both taking the fever in the worst form, nearly at the same time, and only survived a week, dying an hour apart. They were dressed and laid out by their friends. A large grave, six feet and a half square, was dug to receive them. There being at that early date no practical cabinet maker, rough boards were nailed together as nicely as possible, making only a coarse coffin. The funeral was set for Saturday afternoon. The corpses were carried out and placed in a wagon, and the funeral moved toward Moundsville (then Elizabethtown,) for interment, followed by five persons. It was high meridian when they left the house, and the roads being in very bad condition they made exceedingly slow time. When they reached the lower Grave creek narrows the wagon upset and threw the coffins over a steep embankment, bursting them open, and the corpses rolled out, down over stones and brush to the water's edge of the Ohio river. They gathered them together and carried them up the almost perpendicular bank and replaced them into the coffins. The lines of the horses were taken and tied about each coffin, there being no nails or anything else with which to fasten them together. Considerable time was lost in this unfortunate accident, and it grew quite late before they were enabled to reach the graveyard. It was in the month of August, and the people were holding camp-meeting near the burying place. Several men from the meeting came to their assistance as the team halted in front of the grave. Then it was after the hour of twelve o'clock at night. Rails were placed in a slanting position into the grave, for the purpose of lowering the coffins. Whilst in the act of letting down the first corpse the rails gave way, precipitating the corpse down into the grave rather abruptly, causing the line that had been wrapped around the box to tear and the coffin to fall apart. It was arranged as well as possible under the circumstances, and then the other one was lowered. Fortunately no accident attended this one. The grave was filled in, and the parties separated to their respective homes. This is the only funeral that has ever taken place in Marshall county at so late an hour. While the story is rather a diverting one, it nevertheless must have been a sad affair for those who witnessed it.

MUSTER ROLL OF A COMPANY OF VIRGINIA MILITIA.

The following is the muster roll of a company of Virginia militia under the command of Capt. John Bonnett, at Norfolk, in the service of the United States, commanded by Lieut. Col. Henry E. Coleman, from the 30th day of May, 1814, when last mustered, to the 28th of June, 1814:

Officers—John Bonnett, captain; James Ewing, first lieutenant; Peregrine Wells, second lieutenant; Jacob Keller, ensign; Daniel Wells, ensign; John Boner, Vachel Harding, Jonah Porter, Jonathan Thomas, James Vanscyal, sergeants; Daniel Toviel, Thomas Adams, Jacob Crow, William Bills, Cornelius Ogden, corporals.

Privates—Augustus D. Alten, James Aikine, William Ankrum, Aaron Ankrum, John Betts, Spencer Biddle, John Baker, William Bell, Francis Burris, Daniel Bludgett, John Bond, Benjamin Baker, John Bogard, Isaac Blake, Barney Belford, James Buchanan, Isaac Brown, John Bulliman, John Caroll, Daniel Carland, David Craig, Joseph Cox, John Carmichael, Thomas Clegg, Justice Chanot, John Cline, Daniel Day, Daniel Darling, William Dougherty, James Denison, Levi Darnel, Chage Doty, Archibald Neal, John Evans, George Evans, Robt. Edging, Bruce Enoch, James Francis, William Fletcher, Levi Gregg, Neal Gwin, James Gray, George Goodrich, Moses Grindstaff, John Glaspy, John G. Hicks, Jonathan Howell, Richard Hanlan, James Jefferson, Abraham Jones, Samuel Hover, John Kyger, Andrew Kyger, Thomas Kiggins, James Knox, David Lyon, Daniel Lyon, Aaron Lewis, Samuel Martin, John Maly, Jacob McVay, Asa Martin, William Melong, David Medly, William McClelland, Morgan Morris, Uriah Morgan, Horace McCardle, James McCrerey, David McCarty, Thomas More, Ferdinand More, William Murphy, Nicholas Moreland, Andrew Marvis, Alexander Martin, Elijah Martin, William Orr, John Owens, David Patterson, Jacob Price, Bethnel Rush, James Robison, Levi Roberts, Henry Riggle, Henry Ryan, Pardon Starks, John Stone, Joseph Stone, John Sims, William Smith, John Smith, James Taylor, William Taylor, Isaac Underwood, John Vansyoc, Nicholas Vandwender, William Watson, James Weekly, Daniel Ward, Samuel Westbrook, Jacob White, John Whitkanach, John Wayman, Robert Barclay, James Burns.

The above militia company was composed of men in what is now Marshall county. It is copied from the original roll now in the hands of attorney J. Alexander Ewing, at present a member of the House of Delegates. It belonged to James Ewing, his grandfather. Out of this entire company there remains but two, James Knox and Jacob Crow. The former resides in Wheeling and the latter in the southern part of Marshall county.

CHAPTER LIV.

MARSHALL COUNTY, COMMENCING WITH ITS ORGANIZATION.

THE law to erect the county of Marshall passed the Assembly of Virginia, March 12, 1835. It originally belonged to Ohio county, and was taken therefrom in the year mentioned. The act forming it is herewith appended, which reads as follows:

An act forming a new county out of a part of the county of Ohio.

1. *Be it enacted by the General Assembly*, That all that part of the lower end of the county of Ohio, lying south of a line beginning on the Ohio river at a stone to be fixed on the bank of said river, one half mile above the mouth of Boggs' run, thence a direct line to the northern boundary of the town of West Union, and thence continuing the same course to the Pennsylvania line, shall form one distinct and new county, and be called and known by the name of Marshall county.

2. The governor shall commission eight persons as justices of the peace in and for the said county of Marshall, and the justices now in commission residing in that part of Ohio county which will be in Marshall county, after the commencement of this act, shall be of said number, all of whom shall, before entering upon and executing the duties of said office, take the several oaths now required by law of persons commissioned as justices of the peace which oaths may be administered by any justice of the peace now in commission for either of the counties of Ohio or Tyler.

3. A court for the said county of Marshall shall be held by the justices thereof, on the first Thursday after the third Monday in every month, after the same shall have been organized, in like manner as is provided by law for other counties, and shall be by their commissions directed.

4. The place for holding courts and erecting public buildings for the said county of Marshall, shall be on the lots in Elizabethtown, selected by the commissioners appointed by the Act, entitled, "an Act to provide for the location of a site for the permanent seat of justice for Ohio county," passed on the (8th) eighth day of December, eighteen hundred and thirty-two; and the county court of said county of Marshall, shall proceed to cause the necessary public buildings to be erected on said lots; which when completed shall be the permanent place for holding courts for the said county of Marshall.

5. The justices of the peace, commissioned and qualified as aforesaid, for the said county of Marshall, shall meet at the brick school house in Elizabethtown, on the first Thursday after the third Monday in May next, and a majority of them being present, shall proceed to the appointment of a clerk of the said court; shall nominate to the governor suitable persons to be commissioned as sheriff and coroner of the said county, and fix upon a place for holding the courts of the said county until the necessary buildings shall be constructed on the lots aforesaid.

6. It shall be lawful for the sheriff of the county of Ohio, to collect and make distress for any public dues or officers' fees which shall remain unpaid by the inhabitants of the county of Marshall at the time when this Act shall commence and be in force, and shall be a constable for the same in like manner as if this act had never been passed: Provided, however, that nothing herein contained shall be construed to prevent the present sheriff of Ohio county and his deputy, or deputies, from acting as such in both counties during the remainder of his term of office. And, moreover, until a jail shall be erected in the county of Marshall, the jail of Ohio county shall be used as the jail for said county of Marshall.

7. The courts of the county of Ohio shall have jurisdiction of all actions and suits depending before them on the first Thursday after the third Monday in May next, and shall try and determine the same and award execution thereon.

8. The said county of Marshall shall be in and attached to the same judicial circuit with the county of Ohio, and the circuit and superior courts of law and chancery thereof shall be holden on the fourteenth day of May and on the fourteenth day of October in every year, and be of the same brigade district with the county of Ohio.

9. The said county of Marshall shall belong to the same senatorial, congressional and electoral districts as the county of Ohio.

10. The said county of Marshall, and the county of Ohio, shall each send one delegate to the house of delegates of Virginia, until a future re-appointment of representation shall take place.

11. The courts of quarterly sessions for the said county of Marshall shall be holden in the months of March, June, August and November in every year.

12. Robert C. Woods, of the county of Ohio, and Joseph McClean, sr., of the county of Marshall, are hereby appointed commissioners to run and mark the line between the said counties of Ohio and Marshall, as designated by this act, which, when run and marked, shall be taken and considered as the dividing line between the said counties; and the said commissioners are hereby required to make a report of their proceedings in writing to the county courts of Ohio and Marshall respectively; which reports shall be recorded in the clerk's office of each of said counties, and in all controversies which may hereafter arise touching said lines, shall be conclusive evidence. The said county courts of Ohio and Marshall shall allow the said commissioners a reasonable compensation for their service, to be paid out of the county levy of each of said counties respectively, in equal proportions.

13. It shall be the duty of the county court of the county of Ohio, at their next May term, or at any term as soon thereafter as may be practicable, to levy on and cause to be collected of the tithables of the county of Ohio, as well as the tithables of the county of Marshall, the sum of six thousand dollars, to be collected by the sheriff of the county of Ohio, and paid one-half to the order of the county court of the county of Marshall, for defraying the expenses of constructing the public buildings thereof, and the other half of said six thousand dollars to be paid by said sheriff to the order of the county court of the county of Ohio, to be used for county purposes, under the control of said court of Ohio county.

14. *Be it further enacted*, That all separate elections heretofore authorized to be holden in the county of Ohio, and falling within the county of Marshall, shall be conducted for the county of Marshall, in the same manner as heretofore for the county of Ohio.

15. *Be it further enacted*, That the circuit superior court of law and chancery for the county of Ohio shall, after the commencement of this act, be held on the twentieth day of May and the twentieth day of October of every year. And no abatement or discontinance of any process, recognizance, or notice heretofore issued, given or taken, before the commencement of the next term of said court, shall take place, but the same shall be returnable to the time fixed by this act for holding said court, and shall be as available and binding as if this act had never passed.

16. This act shall be in force from and after the first day of May next.

TOPOGRAPHY.

The land is generally hilly, and the valleys formed of greater or less width and depth by their indentation. Hence the county presents a rolling character, and, although not belonging to the class called mountains, yet may be termed hilly. These hills rise to an altitude of from six hundred to eight hundred and fifty feet above the Ohio river, and they are cultivated on their summits and part way down their slopes, the ground in many places being nearly as rich as the alluvial soil along the river bottoms. The soil is calcarious and argillacious. Owing to the general fertility, little of the land lies uncultivated, and in point of agriculture and grazing are not inferior to any part of the state.

The undulating surface of the county presents scenery unsurpassed and picturesque, supporting thousands of sheep, cattle and horses, and is truly deserving the name of being a fine grazing and agricultural county.

GEOGRAPHICAL DESCRIPTION.

Marshall county is nearly twenty miles long and eleven miles wide at the northern and extending to eighteen at the southern end. It derived its appellation in honor of Chief Justice Marshall. It is the extreme southern county forming the district known as the Pan-Handle. The county is bounded on the north by Ohio county, on the east by Pennsylvania, on the south by Wetzel county and on the west by the Ohio river. It is divided into nine townships or districts, viz:

Washington, Union, Webster, Sand Hill, Clay, Cameron, Franklin, Meade and Liberty.

They are bounded respectively as follows:

Washington is bounded on the north by Union, on the east by Webster, on the south by Cameron and Clay, and on the west by the Ohio river.

Union township is bounded on the north by Ohio county, on the east by Sand Hill and Webster, on the south by Washington, and on the west by the Ohio river.

Webster is bounded on the north by Sand Hill, on the east by Pennsylvania, on the south by Cameron, and on the west by Washington and Union.

Sand Hill is bounded on the north by Ohio county, on the east by Pennsylvania, on the south by Webster, and on the west by Union.

Clay is bounded on the north by Washington, on the east by Cameron and Meade, on the south by Meade and Franklin, and on the west by the Ohio river.

Cameron is bounded on the north by Webster, on the east by Pennsylvania, on the south by Liberty and Meade, and on the west by Clay.

Franklin is bounded on the north by Clay, on the east by Meade, on the south by Wetzel county, and on the west by the Ohio river.

Meade is bounded on the north by Clay and Cameron, on the east by Liberty, on the south by Wetzel county, and on the west by Franklin.

Liberty is bounded on the north by Cameron, on the east by Pennsylvania, on the south by Wetzel county, and on the west by Meade.

ELEVATIONS ABOVE OCEAN LEVEL.

The following shows the elevations above the ocean level in Marshall county. This gives nearly all the highest points within the county.

	Feet.
Benwood Station (P. O.)	648
Moundsville Station (P. O.)	640
Opposite Rosbey's Rock	786
Rosbey's Rock Station (P. O.)	773
East Portal of Shepard's Tunnel	838
Cameron Station (P. O.)	1050
West portal of Welling Tunnel	1195
East " " "	1203
Bellton Station (P. O.)	886
West portal of Board Tree Tunnel	1077
Mt. Olivet M. E. Church, in Union district	1300
Sherrard (P. O.)	1300
John Goudy's residence in Washington district	1365
Limestone (P. O.)	1350
Pleasant Valley, at school house	1353
Pleasant Valley, at store (Beeler's Station P. O.)	1308
Poplar Springs, John Ingram's residence	1354
Rock Lick, at store	1418
Highest Point—Laughlin's hill	1505
Cameron fair grounds, (highest point)	1410
Seatonville, seven miles north of Rock Lick	1300
West Union (Dallas P. O.), at Bane's hotel	1340
West Union, highest point	1400
Sand Hill	1345

RIVER, CREEKS AND RUNS.

The water advantages are good. The Ohio, that beautiful stream, washes its entire western border. Then there are four creeks, with their numerous tributaries flowing through its interior, enriching and making glad its soil. Wheeling creek heads in the western part of Pennsylvania and runs in a northwesterly course, and empties into the Ohio immediately below Wheeling. Big Grave creek forms in Pennsylvania's western border, and flows a northwesterly direction, reaching the Ohio river at Moundsville. Fish creek likewise flows into the Ohio below island by same name in the Ohio river.

THE COURSE OF THE BALTIMORE AND OHIO RAILROAD.

The Baltimore and Ohio railroad, which was completed December 28, 1852, follows the meanderings of the river in Marshall from Benwood to Moundsville, where it takes a southeasterly course along the banks of Big Grave creek, until it reaches the Welling Tunnel in the southeastern border of the county, thence an immediate southern course to Grafton.

MARSHALL GEOLOGICALLY CONSIDERED.

In a geological view, the rocks belong to the upper series of our bitumous coal formation, consisting of alternate stratas of sandstone, shales and limestone, with interposed beds of coal from three to six feet in thickness. These nearly level stratas extend along the Ohio river and Wheeling creek, in the northern part of the county, and are sometimes cut through by the deep valleys of the streams, and are exposed in varied succession in the steep banks and along the hillsides, in situations favorably to access, and affording great facilities for mining and quarrying.

The Pittsburgh coal is worked as far south as Moundsville, though at this place it is a little below the water level. It can easily be reached by shafting as we go south.

COAL, IRON ORE AND LIMESTONE.

Coal and iron ore are found cropping out along the river bottoms. The latter is only seen occasionally, and is not, as thought by some, in large quantities. Coal abounds more freely, and stratas are found at an elevation in the county of 1,100 feet above the level of the ocean. Limestone is plentiful throughout the county. The stone in the hills adjacent to the river is quarried, and shipped extensively to the blast furnaces at Benwood and Martin's Ferry.

Freestone is also found in abundance. Moulding sand has been shipped from this county to different points in Ohio and other states, and is considered by many as being unexcelled for that purpose.

GOOD CLAY FOR BRICKS.

The clay that is so plentiful here, is of an excellent quality for brick. The brick manufactured in Marshall, are being sought after from various points, and are becoming quite noted for their superiority over a great many other counties. Many thousands lately have been shipped out of Marshall.

FORESTS, TREES AND SHRUBS.

Although nearly a century has elapsed since the first ax was applied to the wild forests of what is now Marshall county, there is yet scattered over the county plenty of good timber. On the hill tops and sides are seen trees in almost all their native variety swinging their branches "to the will of the winds" and growing more stately each year. Such as ash, white ash, black, water or hoop ash, blue ash, green ash, beech, water beech, sweet buckeye, feted buckeye, wild cherry, chestnut, cotton wood, dogwood, red or slippery elm, white or rock elm, wahoo or witch elm, black or sour gum, sweet gum, hemlock, hickory, scaly bark hickory, white hickory, red hickory, hackberry, ironwood, common locust, red locust, green or yellow locust, white locust, honey locust, linn, (this tree bears various names, being called the American lime tree or basswood) sugar or rock maple, black sugar maple, white silver maple, (soft maple), red maple, red mulberry, white oak, post oak, burr oak, chestnut oak, swamp white oak, willow oak, laurel or shingle oak, blackjack oak, Spanish oak, scarlet oak, red oak, black oak, pin oak, poplar, yellow poplar, sassafras, sycamore, black walnut, white walnut, white willow, yellow willow, leatherwood, mountain laurel, great laurel, (rhododendron), persimmon, service or shade bush, spice wood.

AGRICULTURE.

As an agricultural county Marshall stands well. In the early settlement the bottoms, or low lands, were first taken up, whilst the uplands, in a majority of cases, were last sought. But by and by the monarch oaks and luxuriant herbage, which adorned the sides and summits of the lofty hills, suggested to those who had a better knowledge of agriculture as a science that such productions could not spring from a soil naturally sterile. The idea of its non-productiveness was soon abandoned after a trial was given. Now the hills, in many instances, produced as abundantly of the great cereal staple of the county as the valley lands. All other things being equal, this county produces as largely, for her area, as any other in the state. What ever farming is done here yields a large return upon the capital and labor invested. The market for her produce is right at home, and, consequently, need not seek their market over land and sea, hundreds or thousands of miles away, as some counties in the west. The following census, of 1860, shows the number and value of live stock in the county:

Number of horses,	2,413
Number of milch cows,	2,501
Number of work oxen and other cattle,	3,686
Number of sheep,	10,002
Number of swine,	8,447
Total valuation of live stock,	$252,063

The following statement is the principal items of farm produce, according to the census of 1860, of the county:

Wheat,	74,759 bus.
Indian corn,	241,911 "
Oats,	133,617 "
Tobacco,	10,590 lbs.
Irish potatoes,	46,634 bus.
Value of slaughtered animals,	$44,944
Improved farms, (acres of land,)	59,136
Unimproved farms, (acres of land,)	62,543
Cash value of farms,	$2,489,909
Value of farming implements and machinery,	58,262
Number of pounds of hemp,	146
Number of pounds of flax,	7,722
Number of bushels of flax seed,	675
Number of pounds of silk cocoons,	20
Number of pounds of maple sugar,	19,520
Number of gallons of maple molasses,	1,958
Number of gallons of sorghum molasses,	13,954
Number of pounds of beeswax,	213
Number of pounds of honey,	7,709
Value of home-made manufacture,	$14,179

Below is given the census of the wealth and taxation, taken in 1870:

Assessed value of real estate,	$3,358,151
Assessed value of personal estate,	1,283,830
Total assessed value of real and personal property,	$4,641.891
True valuation of real and personal property,	$7,543,945

The following shows the census of the number of manufactories, employees, capital and products, taken in the year 1870:

Number of establishments,	44
Hands employed,	427
Capital,	$ 230,870
Products,	1,468,921

According to the census of 1870 on the number of acres of land, valuation of farms, products, live stock, and value, the following exhibit is shown:

Improved land,	78,852
Woodland land,	68,992
Other improved land,	601
Cash value of farms, land,	$3,511,574
Value of live stock,	550,730
Horses,	3,109
Mules and asses,	32
Milch cows,	3,076
Working oxen,	515
Other cattle,	3,366
Sheep,	37,508
Swine,	10,968

AGRICULTURAL PRODUCTS.

Indian Corn is by far the most important crop in the county. The first is, that the soil and climate are more generally adapted to the production of corn than of any other grain. The soil is usually light, quick, easily penetrated by the heat of the sun. In such lands, corn produces abundantly with the very poorest cultivation.

Wheat.—Crops of thirty bushels are frequently raised. The

kind of soil and climate suited for the successful raising of wheat is not found so generally as that suited for corn and oats. A well drained clay, or clay loam with calcareous matter, suits it best. An equable winter climate, dry weather about ripening time, and a freedom from heavy rains when the bloom is on, are all required for the heaviest yields.

Oats.—Their productiveness, adaptiveness to the soil and climate, and the ease with which they are raised, render the crop a favorite one.

Barley—Has received but little attention, owing to the lack of a good market.

Rye—Is not much cultivated. It is well adapted to the soil and climate.

Buckwheat.—It thrives with little or no care in every part of the county.

Sweet Potatoes.—The sweet potato, to obtain perfection, requires a sandy soil, of moderate fertility, and a hot sun during the period of growth.

Irish Potatoes.—They are a favorite crop, and are grown in comparatively large quantities. They grow in great perfection all over the county. In size, mealiness and delicacy of flavor, our Irish potatoes are unsurpassed.

Turnips.—They are another valuable production, well suited to the soil and climate. They do well on virgin soils full of vegetable matter and ashes, and require a mere scratching of the surface.

Sorghum.—The Chinese sugar cane is cultivated to a considerable extent. It is used entirely for the manufacture of molasses for home consumption.

Fruit Culture.—The nature of the soil and the climate of Marshall county permits the cultivation of any fruit which can be grown in the cooler parts of the temperate zone. A failure of any of these fruits must depend upon special or local causes, or on conditions other than those of the soil or climate. The apple being a pretty sure crop, is cultivated everywhere. Peaches, pears, quinces, and most of the small fruits that are cultivated in the temperate zone, seem to do well. Grapes—While every character of soil, whether limestone, clay loam, calcareous, sandy and gravelly loam, vegetable mould or alluvial, appear to be almost equally well adapted to the grape, the summer suns are amply sufficient to secure superior strength and quality to the wine.

Grasses.—From the peculiarity of the structure of the hills, grass does not suffer from dry weather on their summits. There is lime in the soil, as is the case with most of our lands, decaying vegetable matter is favorable for the improvement of the land, as the carbonic acid formed, brings the lime into a condition in which it may be used for the plant. Many of our shales which show no lime to the eye, contain enough of it to derive a great benefit in the soils which they form, from a course in grass, and it is not necessary to have, in such cases, ledges of limestone among the rocks, in order to have a calcareous soil produced. But whether there be calcareous matter present in the soil or not, a sound system of agriculture teaches the farmer to discontinue at certain intervals the cultivation of grains on his land, and to allow it to rest in grass. Orchard grass, timothy, English blue grass, and red clover, all do well. Red clover and timothy are preferred to all others in the production of hay. White clover, this favorite lawn grass of the apiarian, may be considered a natural product of our soils.

VALUE OF LAND IN 1835.

The value of the lands in Marshall county in the year 1835, was as follows: The wild lands were worth from three to eight dollars per acre. The cultivated hills sold at fifteen to twenty dollars per acre; and the river bottoms, on the Ohio and the streams generally, were valued at from thirty to forty dollars per acre.

POPULATION OF THE COUNTY IN 1840.

In the year 1840 the county was sparsely populated. At that time the population did not exceed 7,000. It was estimated—whites 6,854, slaves 46, free colored 37; making in all only 6,937.

THE FIRST OFFICIALS OF THE COUNTY.

The justices of the peace were recommended and appointed by the goveruor. Every two years the oldest justice became the sheriff. Those who were justices of the part that was taken off for Marshall when organized, remained so. But the law regulating this changed, and instead of appointment the judiciary was elected.

Under the old system they had a coroner, but this likewise has been done away with, and the justices of the peace fill that office.

Sheriff—Blair Moran.

Deputy Sheriffs—James Burley and William Alexander.

Prosecuting Attorney—D. H. Caldwell.

Clerk of the Court—James Morris.

Justices—Jacob Burley, Benjamin McMechen, Jacob Parrot, Samuel Howard and Thomas Buchanan.

Circuit Judge—Jos. L. Fry.

MARSHALL COUNTY JUDICIARY IN 1835.

The following synopsis is extracted from the Court Journal No. 1, showing the formation of its first court, in connection with a few of its important proceedings for that year.

June 18, 1835.

In pursuance of an act of assembly passed March 12, 1835, forming Marshall county out of the lower part of Ohio county, Jacob Burley, Benjamin McMechen, Jacob Parrot, Samuel Howard and Zadoc Masters met at the brick school house in Elizabethtown, in said county, and producing commissions from the governor of the commonwealth, commissioning them justices of the peace for said county, and having severally taken the required oath, a certificate whereof under the hand and seal of A. Woods, Esq., of Ohio county, took their seats upon the bench, and proclamation being made by the sheriff the court proceeded *vivi voce* to the election of an attorney for the commonwealth, and Elbert H. Caldwell, Esq., was declared appointed commonwealth's attorney.

The court then proceeded to the election of a clerk, which resulted in the appointment of James D. Morris.

Here Moses C. Good, William McConnell, Zachariah Jacob, John McFerren, Francis C. Campbell, Lewis Steenrod, Morgan Nelson, Isaac Hoge, James A. Clarke, J. Y. Armstrong, Esq., were licensed to practice the law in this commonwealth, and on their motion were given leave to practice.

It was then ordered that the court meet after dinner, at four o'clock, at Mrs. Susan Parriott's, in Moundsville, and that that be the place for holding the courts of the county in future until the public buildings shall be erected.

AFTERNOON SESSION.

Walter Gray, gentleman, foreman, Jesse Burch, John Criswell, John Riggs, Vincent Cockayne, John Ward, Samuel Burris, John Barto, John Huggans, James Dunlap, Reuben Roberts, Edward Gregg, James Riggs, John Taylor, Zachariah Wayman, John Anderson, William McFarland, Benjamin Cockayne, Samuel Vencies, William Woodburn and John Brown were sworn a grand jury for the body of this county.

License was issued to Samuel Cockayne to keep an ordinary (hotel); also, to Benjamin Harvy to keep private entertainments at his house.

John Parrott was authorized to celebrate the rites of marriage in the county.

Friday, June 19, 1835.

The court present. License was granted William R. McClure and Susan Parrott to keep an ordinary. Michael Wilson licensed to keep a house of private entertainment at his house.

Robert Shoemaker, Joshua Burley, Samuel Gatts, Jesse V. Hughes and Thomas Stewart were appointed constables to serve for the term of two years.

Van Caldwell was licensed to keep an ordinary.

Richard Morton and William Woodburn were commissioned to execute the office of coroner.

Thomas Buchanan was appointed to celebrate the rites of marriage.

Isaac Hoge, jr., was commissioned by this court in chancery to take depositions for the court.

John Riggs, Jacob Leives and George Dowler were appointed overseers of the poor, of this county.

The following persons were appointed by the court as

SUPERVISORS.

Edward Gregg, James Ramsey, Bennet Logsden, David Lutes, R. B. Howard, Thomas Howard, John Ward, Wm. O. Rowell, Samuel Venice, Richard Ruling, John Barts, Joseph Mayers, Joshua Garner, Job Smith, Andrew Jenny, David Jenny, David Wells, Miner Burge, James Standiford, Jacob Reed, James

Chambers, James Ewing, Ebenezer Gorby, David Rush, Henry Ewing, John Stricklin, Edward Dowler, John Gray, Silas Price, B. S. Gregg, John Minson, James Nixon, Thomas Pollock, William Vanscoyoe, John Rine, Michael Dowler, Samuel Dowler, Philip Jones.

SATURDAY, June 20, 1835.

The court present.

Ordered, that the sheriff summon the justices of this county to appear here on the first day of next July term of court for the purpose of making a recommendation of other persons to be appointed and commissioned justices of the county.

Ordered that the $200.00 laid in the levy for this year for the improvements of the navigation of Fish creek, be paid to the future order of this court.

Ordered, that Samuel Howard, Esq., and Joseph McClean, jr., be and they are hereby appointed commissioners to examine the improvements made by Jacob Burly, Esq., in navigation of Fish creek and make a report thereof to the October term of this court.

The court proceeded to lay the county levy of the year of 1835, which is as follows:

To E. H. Caldwell, attorney for commonwealth,	$ 50.00
To J. D. Morris, clerk,	40.00
To Blair Moran, sheriff,	30.00
To J. D. Morris, clerk, for books and stationery,	90.00
To Joseph McClean, running Co. line,	45.00
To George Carrothers, jailor,	12.00
For the improvement of the navigation of Fish creek,	200.00
To. B. Moran, sheriff's commission,	35.00
	$502.00

It appearing to the satisfaction of the Court, by the return of the commission of the revenue, that there are 1,305 tithables in this county. It is ordered that the sheriff collect off each tithable in this county the sum of forty-eight cents, as a county levy for the year 1835.

Thomas Buchanan was appointed a Justice of the Peace for the county of Marshall, by a commission under the hand of Littleton W. Tazewell, Governor.

A vote was taken for County Surveyor, for this county, by the Court. There being five candidates, and the Court failing to elect, it was referred to the Sheriff of Ohio county, who was the Sheriff of this county by an act of Assembly forming this county, was called to give the casting vote, and Joseph McClean was chosen and commissioned to execute the office.

Samuel Dorsey. *vs.* Thomas J. Baltzer. } Attachment.

This day came the plaintiff by his attorney, and the constable having returned upon the warrant of attachment awarded against the defendant's estate, "that he had executed upon one large box of medicine; one small box of medicine; one box of glass tumblers and glassware; one small box of glass tumblers; one small box of glass bottles: seventy-two glass jars of different sizes, with the medicine in same; fifty stem glasses; forty-eight glass cream cups; eighty Liverpool cream cups; eighteen glass bowls; fifty small pepper jars; eight dozen cup plates; three dozen glass butter plates; one small box of oils, blacking, &c.; two jars of wafers; one half keg of madder; one half keg of salts; six kegs of medicines or dye-stuffs; one box of castor oil bottles; five large tin vessels for turpentine; two kegs of glass tumblers; one box of glass, &c.; one copper soda fountain, the property of defendents. On motion of plaintiff, it is considered by this court that the said plaintiff recover against the said $73.28, the debt in the said attachment mentioned, with interest on the sum of $70.00, parcel thereof, from the 19th day of June 1835, until payment, and his cost in this behalf expended. And it is ordered that the sheriff make sale of the property so attached as aforesaid, according to law, and pay the money arising from such sale to the plaintiff towards satisfying this judgment, and that he also return an account of the sale to the court.

Philo W. Stockings, *vs.* Thomas J. Baltzer. } Attachment.

This day came the plaintiff by his attorney, and the constables having returned upon the warrant of attachment awarded against the defendant's estate, that he had executed upon 227 glass jars of different sizes, with their contents of drugs, medicines, dye-stuffs, &c., and ten show bottles, the property of the defendant. On motion of the plaintiff, it is considered by the court that the said plaintiff recover against the defendant $145.29, with interest on $100, parcel thereof, from the 3d day of July, 1835, and interest on $45.29, parcel thereof, from the 23d day of July, 1835, till payment, and his costs in this behalf expended. And it is ordered that the sheriff make sale of the property so attached as aforesaid, according to law, and pay the money arising from such sale to the plaintiff, towards satisfying this judgment, and that he also return an account of the sale to this court.

Next term of court was held July 24th, 1835, and third, August 20th, 1835, and the fourth, September 11th, 1835.

At this term, Christopher Parrott was appointed commissioner of revenue for the county; Benjamin Blodget was appointed constable; Robert Shoemaker and Jacob Jefferson, were appointed deputy sheriffs.

The court appointed the following persons as commissioners to superintend the election for a senator to fill the vacancy occasioned by the death of Colonel John McCoy, to be held in this county, at the several precincts in said county, on the — day of October court, viz: At Elizabethtown—James C. Bonar, Joseph McClean, jr., John Biggs, Simon B. Purdy and Walter Gray. At Fish creek—C. P. Wells, Nicholas Wykart, Timothy Myhall and Joseph Alexander. At Howard's—Jesse Burch, John Wilson, sr., and Edward Dowler. At Buchanan—James Ewing, John B. West and Lewis Bonnett.

The clerk of the overseer of the poor, presented in court, a settlement with their collector, which is as follows:

This day the overseer of the poor of Marshall county met, and it appears that there is no money in the hands of their collector unappropriated.

WALTER GRAY, *Clerk.*

December 24, 1835.

On Monday, June 20th, 1836, court convened in the county jail.

The court proceeded to lay the county levy for the year 1836, as follows:

To the Bank of Mt. Pleasant,	$1,500 00
To Joseph McClean, for books,	11 00
To J. Masters, for county seal, &c.,	17 00
To Benjamin McMehen,	26 41
Bridge at Jim's Run,	150 00
One dozen and a half chairs (common),	18 00
Tables for the court,	15 00
Benches for the jury room,	12 00
James Dunlap, for costs,	3 00
Thomas Clegg, for three days' work on road,	1 50
R. B. Howard, seven days' work on road	3 50
Robt. Davis, two days' work on road,	1 00
Isaac Hubbs, work on road,	3 00
James Nixon, work on road,	3 00
E. Lambert & Co., advertising for public buildings,	7 00
L. H. Davis, same,	7 00
Wm. Airey,	50 00
Public buildings,	665 00
Jacob Crow, two days on road,	1 00
Samuel Venies, five days on road,	2 50
Joshua Garner, two days' work on road,	1 00
Samuel Dorsey, three days' work on road,	1 50
John Scott, five days' work on road,	2 50
Benj. S. Gregg, five days' work on road,	2 50
James D. Morris, clerk,	40 00
E. H. Caldwell, Attorney for commonwealth,	50 00
S. Howard, sheriff,	50 00
S. Howard, jailor,	35 00
James D. Morris, stationery,	5 00
S. Howard, sheriff, for commission,	200 00
David Rush, seven days' work on road,	3 50
	$2,887 91

It appearing to the satisfaction of the court by the return of the commissioners of the revenue that there are thirteen hundred and thirty-four tithables in this county, it is ordered that the sheriff collect off of each tithable in this county the sum of two dollars and fifty cents as a county levy for the year 1836.

In 1837, the court made a levy of $2,952; and in 1838, a levy of $3,347.96.

(Session 1838.)

Ordered, that E. H. Caldwell proceed as attorney for this court to enforce, according to law, the payment of the $3,000

which the county court of Ohio county was required to levy, collect and pay to this court by the act entitled "an act forming a new county out of part of Ohio county," passed March 12, 1835.

FIRST ATTORNEYS.

The following named gentlemen were the practicing lawyers in 1835:

Major Moses C. Good. Lewis Steenrod, J. S. Wheat, Wm. McConnell, Isaac Hoge, E. H. Caldwell and Albert Clark.

EARLY MARRIAGES.

The following are among the first that were married after the organization of the county, as appear on record for 1835 and part of 1836:

Alexander Ogle and Julia Ann Baker, November 22, 1835; William Tounds and Ruth Muison, November 22, 1835; Joseph Logsden and Sally McGarry, October 25, 1835; William Cavalt and Hannah Garner, October 11, 1835; John Williams and Prudence Richardson, December, 1835; Frederick Bane and Martha Hervy, November 22, 1835; James W. Crerey and Sarah Snider, October 29, 1835; Daniel Snider and Nancy Caldwell, November 26, 1835; Frederick Smith and Mary Doty, September 17, 1835; Adam Morrow and Jane Harry, August 22, 1835; William White and Mary A. Linsey, October 10, 1835; Hamilton Johnston and Elizabeth Holliday, December 17, 1835; Sherman Terrel and Amanda Potter, August 27, 1835; John Billiter and Lucy A. Crow, November 12, 1835; Isaac Brown and Elizabeth Davis, October 31, 1835; Peter Orum and Margaret McHenry, January 28, 1835; Andrew Smith and Elizabeth Higgs, June 5, 1836; Simeon Arnell and Elizabeth Ward, October 13, 1836; Joseph Marple and Sarah Adams, October 13, 1836; David McConaughy and Sarah A. Mitchetree, November 3, 1836; David Allen and Elizabeth Brown, September 8, 1836; John Dausey and Catharine Bonar, April 28, 1836; Jeremiah Jefferson and Jane Wright, April 3, 1836; William Gosney and Jane Wilson, March 17, 1836, Adams Helmes and Elizabeth Bonar, April 21, 1836; Thomas Davis and Elizabeth Crow, May 13, 1836; Smith Richmond and Rebecca Garner, October 23, 1836; Samuel Gamble and Ann Carver, January 10, 1836; Peter Shaver and Jane Nay, October 20, 1836; Stephen Workman and Margaret Gatts, October 27, 1836; George Gray and Mary Ann Doty, August 10, 1836; Nathaniel Blake and Susanna Richardson, February 15, 1836; John Maslander and Nancy Moore, January 22, 1836; George Davidson and Eliza Purdy, January 14, 1836.

PAUPERISM.

The building used at present for the Marshall County Infirmary is on what is known as the poor farm, situated about four miles north-east of Moundsville. The house was not built for this purpose, but was an ordinary farm residence. The farm contains about 130 acres. There are at this time (1878) twenty paupers in the Infirmary, and about as many more that are partially supported throughout the county. The levy made for the support of the poor for the year 1878 was $3400. A number of years previous to this date it has averaged almost $3,000. The present board of the overseers of poor are as follows:

President—John S. Riggs, Washington district; David Montgomery, Union district; W. A. Knox, Webster district; J. W. Winters, Sand Hill district; M. Dunn, Clay district; Thomas Allen, Cameron district; James Grimes, Liberty district; Henry Mason, Meade district; G. W. McKinny, Franklin district.

It was customary about half a century ago to sell the paupers of the county (then Ohio) to the lowest bidder. At these sales amusing incidents often took place. The following obtained from an authentic old gentleman, is given as a specimen:

A pauper standing nearly six feet in height was set up for sale. Being in the prime of life, he looked as though he might be able to do considerable labor, and as a consequence, of course, soon disposed of. During the progress of the bidding the pauper hung his head and said nothing. When the auctioneer cried "sold," the man's head came up erect, his face overshadowed with a melancholly look, and in half-sobbing tones said: "Its darned hard to be sold this way, but I reckon it's all right. But it does make me mad when such a man as I am, must be sold by no better person than W—— (the auctioneer).

MARSHALL COUNTY AGRICULTURAL SOCIETY.

In the spring of 1853, the farmers and mechanics of Marshall county met in pursuance to notice and organized an agricultural society by the election of the following officers:

President—James Burley.

Vice Presidents—Jeremiah Shepherd, Joseph McLain, Vincent Cockayne, Samuel Dorsey, 'Squire D. Martin, Robert B. Hunter, John H. Dickey, George Dowler, sr., John Scott, Ezekiel Caldwell, Wm. Holliday, sr., James C. Bonar, Esq., Isaac Hoge, Esq., Colonel John Parriott, Isaac Fish, Henry Sockman, sr., John Winters, James Campbell, Esq., Noah Harris, Wm. McFarland, Esq., James Jimeson, Martin Bonar, Jonathan Lockwood, Allison Morris, Major Philip Barry, James Alexander, Marshall county; T. M. Gally, Esq., and Thomas Sweeney, Ohio county; R. W. Cox, Wetzel county; Eli Wells, Tyler county; Dr. Edward Smith, Brooke county; Colonel T. S. Haymond, Marion county; W. T. Willey, Monongalia county; Hiram Pennington, Belmont county, Ohio; Peter Dillon, Monroe county, Ohio; Rezen Welsh, Harrison county, Ohio; Samuel Vannatta, Greene county, Pa.; Wm. Wyley, Washington county, Pa.

Corresponding Secretary—Wiley H. Oldham.

Recording Secretary—James M. Hoge.

Treasurer—Joseph W. Gallaher.

Executive Committee—Jeremiah Shepherd, Jacob Jefferson, Joseph Alexander, jr., Joshua Burley and Walker Thompson.

General Superintendent—Captain David Roberts.

Assistants—Walker Thompson, Joseph W. Gallaher, Elbert H. Caldwell.

This society leased about six acres, known as the Mound field, from T. H. Bakewell, who was then guardian for the Tomlinson's heirs, for a term of five years, James Burley, Jeremiah Shepherd and W. H. Oldham, who acted as their agents.

The first fair was held on Tuesday, Wednesday and Thursday, October 18th, 19th and 20th, 1853.

At this exhibition Capt. David Roberts was awarded the first premium ($5) by the society, in accordance with the rules, on a piece of meadow land, that had been down in grass for forty years. Below is given their statements:

"I, David Roberts, of Marshall county, Virginia, do certify that the * * * * ground, containing two and a quarter acres and twenty poles, has been owned by me since 1837. I have known the ground well since 1812. Forty years ago it was sowed in red-top grass, and has never been plowed since. The soil is black and heavy, and hard to cultivate. It is almost one foot or eighteen inches above the level of the floods of 1832 and 1852. I had it mowed this season (in the latter part of July, 1853,) and stacked on the ground."

Marshall County, To-wit:

Before me, Simeon Arnett, a Justice of the Peace in and for said county, in the state of Virginia, came Franklin Roberts who, being duly sworn, says; That he is the son of David Roberts, and has known the plat of ground surveyed by Joseph Alexander, Jr., containing two and a quarter acres and twenty poles, for the last twelve years. He has helped mow it for several seasons, and put it up. He helped mow it this season, (in July 1853.) I did not see the hay weighed, but at the time we mowed it and stacked it I considered there were not less than seven tons of hay on the lot. I have, for the last ten years, had a good deal of experience in mowing and handling hay, and consider myself a pretty good judge of the quantity of hay on the ground.

FRANKLIN G. ROBERTS.

Sworn to, and subscribed before me, this 26th day of September, 1853.

SIMEON ARNETT, J. P.

This meadow still remains unplowed. It is now sixty-five years ago since its soil was turned. In 1812 it was put down in red-top grass, says Captain Roberts.

The next season the society held their fair nearly a month earlier, which came off on the 6th, 7th and 8th of September, 1854. They paid out about $200 in premiums that year. The fair was poorly patronized.

In 1856 another exhibition was given. This time the fair continued but for two days. It was held on the 16th and 17th of October. The premiums awarded did not exceed $100. The interest year by year kept gradually waning until the year 1857. That was the last fair given by the society. It occurred on the 14th, 15th and 16th of October. There was a large list of awards that year, but the receipts were small. The

society feeling that all their efforts to build up a good county fair seemed to be availing nothing and further attempt to agitate this was only a waste of time and money, so the society mutually dissolved and their exhibitions discontinued.

FROSTS AND SEVERE WINTERS.

In the year 1816 there was frost in every month of the year.

A heavy frost occurred on the first day of June, 1834, doing great damage to grain and other things.

On June 5, 1864, frost destroyed all the grain, except here and there where fields were protected from the storm by timber or hills.

The first severe winter of which any knowledge can be obtained was in 1818. The snow fell to the depth of three feet, laying about a month when the rains descended and the flood came causing it to melt and leave. The winter set in early in November and the flood occurred in the latter part of December. It was termed the pumpkin flood. By waters overflowing the banks of the Monongahela river and carrying in its course to the Ohio hundreds of pumpkins on its turbid bosom, it thus derived its name—"pumpkin flood." There was great damage done. The winter broke rather early that season, after the high waters passed off, which continued three or four days. When the waters subsided quite a number of drowned cattle were found conveyed out in the low lands and they were skinned for their hide by persons finding them.

The nex flood was in 1822, but the damage was not so great as that of 1818.

On the 9th of February, 1832, another flood occurred, overflowing all the bottoms and doing immense damage. It washed fences and buildings down. There were three or four buildings washed away from Elizabethtown (Moundsville). The houses were not of any very great value; however, they were occupied nevertheless. The household goods were secured and no lives lost.

The next high water came in 1852. It was of short duration and did no damage particularly.

The following is gleaned from a memorandum:

JAN. 1, 1856.—Thermometer at Zero; gusts of snow. 9th—16 degrees below Zero. 12th—heaviest snow occurred to-day known within the memory of the oldest inhabitant. Snow on the ground to the depth of sixteen inches. Thermometer ranging from zero to eighteen degress below zero during the week. 15th.—The snow is the heaviest since 1818. 30th—thermometer ranging from ten to fifteen degrees below zero. Snow has been on since December 24th. Feb. 4th—thermometer ten degrees below zero. Feb. 5th—twenty degrees below zero. Had six week's nice sleighing. Feb. 13—thermometer twelve degrees below zero. Feb. 22—snow on the ground for nine consecutive weeks; river crossable for teams eight weeks. Feb. 28—Ohio river commenced breaking. March 10th—snowed to the depth of four inches. Thermometer at twelve degrees below zero at six o'clock. March 14—ice, ice, snow, cold weather. 22nd—weather moderating.

MARSHALL COUNTY'S WAR RECORD OF THE REBELLION.

It was a dark cloud that overhung old Virginia in 1860. A portion of its people sought to and did withdraw from the Union. Whilst West Virginia, like a father to a wayward child, said remain with us. But she only chided with this part of the state. They were advised to leave not the parental roof, as it were, and go out not knowing whither, for they could not well get along without West Virginia's need and counsel. Stay! stay! was her last words to the state. But prodigal like they receded from their home and would fain have eaten of the husks before they returned.

When the war of the states began Marshall was among the first counties to respond to the call for troops. There were twelve different companies recruiting here and served during the war, viz:

One company in the First Infantry for three months service, afterwards recruiting again for three years, one company for the First Cavalry, one for the Sixth Cavalry, one for the Ninth Infantry, three for the Twelfth Infantry, one for the Fourteenth Infantry, one for the Sixteenth Infantry, one for the Fourth Cavalry, one for the Seventh Infantry.

The county had enrolled 1,635 men. The amount levied and paid as local bounties for volunteers mustered into service and money for the relief of soldiers' widows was $181,325 65, $1,500 of which was appropriated to soldiers' families.

Aside from this, there were many individual enlistments in different regiments. Marshall county had about sixteen hundred men in the field, and they have a good record for it. The county deserves the highest encomiums for the gallant service her brave soldiers rendered in that perilous and trying hour of her country.

Here and there over the county are found those that still carry the scars indicative of hotly contested battle-fields. The soldier is proud of his wounds. Although he may have lost a limb or health, still he refers with pleasure, and even enthusiasm, to the rough campaigns of his soldier life. They love to recount those days, and to impart to their friends and families their experience of the hardships and deprivations of a soldier's career.

But there are some who left their homes just as joyful as any, but never returned again. Where are they? Ah! Ask their companions, and they will tell you, perhaps, that their blood flowed out on the field at Bull Run, or before Richmond, or Fair Oaks, Fredericksburg, Chancellorsville or Antietam, or perchance starved in some prison, or fainted away and died in the hospital, causing a thousand streams of affection to flow back in an Alpine torrent upon as many hearts, because they were not. But there is a hope of another union of hearts and hands. The poet says:

"There is a realm where the rainbow never fades; where the stars are spread out before us like islands that slumber on the ocean, and where the beautiful beings which pass before us like shadows, will stay forever in our presence."

RATE OF TAXATION.

The rate of taxation for the county, commencing from 1864 to 1878, is as follows:

1864,	$2.00	$100	1872,	.40	$100
1865,	3.00	100	1873,	.30	100
1866,	1.33⅓	100	1874,	.30	100
1867,	1.33⅓	100	1875,	.50	100
1868,	.60	100	1876,	.45	100
1869,	.20	100	1877,	.45	100
1870,	.30	100	1878,	.35	100
1871*	.00	100			

CENSUS OF 1870.

According to the last census which were taken in the year 1870, the county contained an aggregated population of 14,941. Below is given the population by townships or districts:

	Total.	Natives.	Foreign.	Whites.	Colored.
Cameron District,	1,627	1,563	64	1,625	2
Clay "	1,005	967	38	1,004	1
Franklin "	1,610	1,574	36	1,603	7
Liberty "	2,062	1,954	108	2,034	28
Meade "	1,308	1,246	62	1,308	00
MOUNDSVILLE,	1,500	1,397	103	1,444	56
Sand Hill District,	951	915	36	945	6
Union "	2,742	2,336	406	2,736	6
Washington "	993	971	22	979	14
Webster "	1,143	1,109	34	1,143	00

ESTIMATED CENSUS FOR 1878.

From the tithables of the several districts taken from the assessor's report, the following estimate of the population is given:

	Tithables	Pop'ation	Total.
Cameron District,	345	1,725	
Clay "	337	1,685	
Franklin "	338	1,690	
Liberty "	363	1,815	
Meade "	263	1,315	
Sand Hill "	239	1,195	
Union "	660	3,300	
Washington "	202	1,010	
Webster "	317	1,585	
Washington, Ind., District,	250	1.250	16,570

*The county of Marshall instituted suit for 1864, '65, '66, '67, '68, '69 and '70 against the Baltimore and Ohio railroad for county purposes, but the suit, by mutual arrangement, was dismissed, the road paying the county $25,000. This sum was sufficient to meet the expenses of the county, and for that reason no levy was made for that year. Marshall is out of debt, and the levies that are made each year are for its annual incurred expenses.

THE LEVY FOR THE YEAR 1878.

The levy for the county was made for the year 1878, for the following purposes:

Salary of Sheriff,	$200 00
Salary of clerk of the circuit court	200 00
Salary of clerk of county court	200 00
Salary of prosecuting attorney	400 00
Jailor and janitor	100 00
Salary of two assessors	900 00
For pay of grand jurors	150 00
Civil jurors	2,500 00
Sheriff's commissions, &c.	1,500 00
Support of poor	3,400 00
Stationery and books	150 00

VALUE OF REAL AND PERSONAL PROPERTY.

The value of real and personal property within the county of Marshall, for the year 1877, is $4,703,075. The Baltimore and Ohio railroad property is assessed at $372,000, making a total of $5,075,075.

The number of acres in Marshall county, is 187,639. Value of lands and buildings for 1878, is $3,881,960 00, and the amount of personal property is $703,510 00. The total is $4,585,470.

JUDGES.

Joseph L. Fry, from 1835 to 1854; G. W. Thompson, from 1854 to 1862; *R. L. Berkshire, from 1862 to ——; E. H. Caldwell, from 1862 to 1866; Thayer Melvin, from 1866 to 1880.

SHERIFFS.

The following list shows whowere sheriffs from the organization of the county up to the present time:

From 1835 to 1837, Jacob Burley; from 1837 to 1838, Samuel Howard; from 1838 to 1840, John Parrott; from 1840 to 1842, Zadoc Masters; from 1842 to 1844, Thomas Buchanan; from 1844 to 1846, Jacob Burley; from 1846 to 1848, Wm. McFarland; from 1848 to 1850, Francis Kelly; from 1850 to 1854, Joshua Burley, deputy for S. B. Purdy; from 1854 to 1856, Enos Howard; from 1856 to 1858, Jacob Jefferson; from 1858 to 1862, Jackson Reed; from 1862 to 1863, A. O. Baker; from 1863 to 1867, Jackson Reed; from 1867 to 1871, Henry Keltz; from 1871 to 1873, Linsey T. Gray; from 1873 to 1877, John P. Wayman; from 1877, H. W. Hunter, whose term of office expires in 1880.

JUSTICES OF THE PEACE.

First Justices.—In 1835—Jacob Burley, Benjamin McMechen, John Parrott, Samuel Howard, Zadoc Masters and Thomas Buchanan.

Present Justices (1878)—William Alexander, President. Union district, Frank McJilton and and A. L. Pelly; Sand Hill district, Wm. Bane and David Lutes; Webster district, Isaac Gorby and George A. Jones; Washington district, Reuben Zink and G. W. Evans; Clay district, Jonathan Purdy and Joseph Wallace; Cameron district, O. Moore and S. L. Bloyd; Liberty district, A. J. Mathews and J. H. McGlumphy; Meade district, J. W. Richmond and William Lutes; Franklin district, John Nixon and Jason Parsons.

COUNTY SUPERINTENDENT OF FREE SCHOOLS.

1863—Dr. Alexander, elected for two years. 1865—John Lorain, elected for two years. 1867—John Lorain, re-elected for two years. 1869—J. W. P. Reid, re-elected for two years. 1871—S. R. Hanen, elected for two years. 1873—S. R. Hanen, re-elected for two years. 1875—W. M. Wirt, elected for two years. 1877—W. M. Wirt, re-elected for two years.

*R. L. Berkshire died after serving but a short time, and E. H. Caldwell was appointed to fill the unexpired term, and then elected.

REPRESENTATIVES.

The following named persons have served Marshall county in the House of Delegates: Zadoe Masters, E. H. Caldwell, Jefferson T. Martin, Alexander Newman, Wiley H. Oldham, R. C. Holliday, Wellington Jenny, Robert Alexander, Garrison Jones, B. W. Price, J. D. Morris, Remembrance Swan.

Restored Government—Joseph Turner and Michael Dunn; Michael Dunn and Col. William Alexander; Col. William Alexander and T. H. Trainer; T. H. Trainer and Townsend Armstrong; Townsend Armstrong and John Ferguson; Dr. S. B. Stidger and Dr. Marshman; George Edwards and John Reynolds; Dr. E. C. Thomas and William Howe; H. S. White and George Bier; Lewis Newman and Wm. McDonald; Capt. A. O. Baker and H. S. White; H. S. White and Alfred Turner; W. E. Parriott and G. S. McFadden; John Nixon and J. A. Ewing.

Mr. Swan served out his time under the reorganized state government. At the formation of the new state, Marshall county was allowed two members of the House of Delegates.

THE PRESENT COUNTY OFFICIALS.

Circuit Judge—Thayer Melvin.
Sheriff—H. W. Hunter.
Clerk Circuit Court—A. O. Baker.
Clerk County Court—Thomas Finn.
Prosecuting Attorney—J. E. Hooton.
President County Court—W. Alexander.
Assessor, 1st district—J. C. Wayman; 2d dis., Jer. Mason.
Surveyor—E. H. Criswell.
School Superintendent—W. M. Wirt.

TERMS OF COURT.

County.—For trial of causes, the second Mondays of January, April, July and November. For police and fiscal business, second Mondays in May and August.

Circuit.—The fourth Mondays in March and September

CHAPTER LV.

HISTORY OF THE TOWNS AND DISTRICTS OF MARSHALL COUNTY.

MOUNDSVILLE.

MOUNDSVILLE, the county seat of Marshall, is beautifully situated in a rich and fertile valley on the east bank of the Ohio river. It contains a population of about two thousand. The advantages of this growing little city, both natural and artificial, are excellent. The scenery around it is picturesque and grand. On its west flows that beautiful river, and, all around it, in the distance, rises the natural hills in their grandeur, and is well intended to excite pleasureable emotions in him who views or contemplates it. No wonder Moundsville is sought out by pleasure seekers for not only being the seat of ancient mound builders, which invites such curious interest, but for other reasons. Its healthy location and the general hospitality of its people; its delightful surroundings, &c., all combine to make it a place of note and resort.

WHEN LAID OUT.

The town was originally known as Elizabethtown, and laid out by Joseph Tomlinson in the year 1798. He named it after his wife Elizabeth. The first sales of lots occurred in 1799. The first lot was deeded by Tomlinson to Andrew Rogers, November 15, 1799, containing one hunderd and twenty feet square, in consideration of $8. Joseph Riggs purchased the next lots, which were two in number, at $8 each. Then James O'Neal purchased the next, in 1800, for $11. In the same year Wm. Ward bought a lot "containing sixty feet front and two hundred and forty feet back," for $8. Again, the same year L. Harris contracted for a lot at the same price. These were the first persons that purchased lots in the town. When it was originally laid out it contained forty-five acres, one rod and twenty-seven perches. Joseph Tomlinson died in 1825.

In the year 1815, James Nixon opened the first store in the town, and in 1817 John List started the second store. He was also the first post master. The post office went by the name of Grave Creek. The town at that early day numbered about one hundred houses. All were log buildings and mostly one story, and very small at that. The population did not exceed 300. One post office, one hotel, two stores and several small shops comprised the business houses of Elizabethtown.

In the year 1830 the widow of Joseph Tomlinson laid out an addition to Elizabethtown of eighteen acres and thirty perches. Near about this time, or little earlier, Simeon Purdy also laid out a town immediately above the confluence of Big Grave creek and the Ohio river, which he called Moundsville. A rivalry sprang up between these two towns, but the former took the lead. This competition existed between the towns for a number of years.

In 1830 the former town, then having a population sufficient for incorporation, thought best, for the regulation of disorderly conduct, to have the town incorporated. Proper applications were made and, accordingly, it was incorporated by an act of the legislature, passed Feb. 17th, 1830. The act is herewith appended:

An act concerning Elizabethtown, in the county of Ohio, Passed Feb. 17th, 1830.

Be it enacted by the General Assembly, That Elizabethtown, in the county of Ohio, as the same has been heretofore laid off into lots, streets and alleys, or as the same may be hereafter further laid off and extended into lots, streets and alleys shall be, and the same is hereby made a town corporate, to be known and distinguished by the name of Elizabethtown, in the county of Ohio. And for the better governing and well ordering the affairs of said town, it shall be lawful for the free-holders and house-keepers thereof, to meet at some convenient place in said town, annually, on the second Monday in May, and elect twelve fit and able men, being free-holders or inhabitants of said town, to serve as trustees thereof. The persons so elected shall, annually, before they enter upon the duties of their respective offices, take an oath, or make solemn affirmation, before some Justice of the Peace of the county of Ohio, well and truly, faithfully and impartially to do, execute and perform the duties of their several offices according to the best of their skill and judgment. The persons so elected as trustees shall, within ten days after their election, proceed to choose out of their own body one person to preside at their meetings, and give the casting vote at any meeting of the trustees, when they are equally divided. And the said trustees shall have power and capacity to receive and hold any and all tenements which may be, or which have been given or granted to said town, and the same to give, let, grant, sell or assign again.

Be it further enacted, That the president, or any two of said trustees, shall have power to summon a meeting of said trustees so often as occasion may require, which shall be composed of seven members at least, including the president, or in his absence, a president *pro tempore*, elected by any seven of said trustees who may be present; and all questions before a meeting of said trustees shall be decided by a majority of the trustees present, each having one vote, except the person who presides, who shall vote only when the others are equally divided.

Be it further enacted, That the trustees of said town shall have power and authority to establish markets and regulate the same; to lay out the streets, walks and alleys of said town, and to improve the same; to provide against and prevent accidents by fire; to erect school houses and other public buildings necessary for said town; to prevent and punish, by reasonable fines, the practices of firing guns and running horses in said town; to license and regulate shows and other public exhibitions; to appoint all such officers as may be necessary for conducting the affairs of the said town, not otherwise provided for by this act, and to allow them such compensation as they may deem reasonable; and to make all such by-laws, rules and regulations as they may deem necessary and proper for the good government of said town; provided, they be not contrary to, or inconsistent with, the constitution and laws of this commonwealth, or of the United States; and the same to enforce by reasonable fines and penalties, not exceeding, for any offense, the sum of ten dollars, to be recovered, with costs, at the suit of the president and trustees aforesaid, and by them applied in aid of the taxes imposed upon said town.

Be it further enacted, That the said trustees, or a majority of them, shall have power to assess and levy an annual tax within the said town, for the purposes before mentioned, not exceeding in any one year the sum of 25 cents on every tithable, and 50 cents on every hundred dollars value of taxable property therein. And the said trustees, or a majority of them, shall have power to appoint a sergeant or town collector, who shall have and possess the same right of distress, and powers in collecting the said taxes, and executing process, that sheriffs of the county have and possess in collecting taxes due the commonwealth, or serving process. And the said sergeant or town collector, shall execute to the said president and trustees for the time being, bond with approved security, payable to them and their successors in office, conditioned for the faithful discharge of his duties, and payment of said taxes by him collected, and he and his securities, his and their executors and administrators, shall be subject to such proceedings, by motion or otherwise, before the court of said county, for enforcing payment of such taxes at the suit of the said president and trustees, or other persons entitled, as collectors of county levies are by law subject to, for enforcing payment of the levies by them collected.

Be it further enacted, That all fines, penalties and amercements, and all other monies received or raised by virtue of this act, or any by-law in pursuance of this act, and not otherwise directed to be applied, shall be subject to the disposal of the said president and trustees for the benefit of the said town.

Be it further enacted, That the strip of land lying on the north side of said town, between the northern boundary line thereof, and Parr's run shall be, and the same is hereby made, a part of said town, and subject to the same by-laws, rules and regulations, as if the said land, included within the following boundary lines, to-wit: beginning at the corner of the western and northern boundary line of said town as now established; thence a straight line to the north of Parr's run; thence up said run opposite to the eastern line of said town; thence, a straight course to the said eastern line; had been included within the original limits of the said town at the time it was established.

Be it further enacted, That the trustees of said town, or a majority of them, shall, so soon as convenient, under their own superintendence, cause the land hereby added to said town, as well as the land within the former or original boundaries thereof, (wherever the same has not been already done,) to be laid off into lots, with convenient streets and alleys, and shall mark with convenient and lasting signs, the divisions, metes and bounds, the relative situation and distances of the lots, streets and alleys thereof; and they shall cause to be made, a full and complete survey of the same, and a plat or drawing of the plan thereof, with such remarks and explanations thereon, or thereunto annexed, in writing, as they may deem necessary and proper; which plat, together with the remarks and explanations so made, they shall produce to the county court of Ohio county, and if no sufficient objection be made thereto in open court, the said court shall order their clerk to enter the same of record. But, if any sufficient objection be made thereto, by any person or persons interested therein, then the said court shall order the said trustees, from time to time, to make other survey or surveys, until such objection or objections be obviated, and to return a true and correct plat or drawing thereof, until no sufficient objection be made thereto in open court, which shall be then recorded as aforesaid. And after such plat or drawing of the plan of said town shall be recorded, any true copy thereof, attested by the clerk of said court, shall be read as evidence in any controversy relating thereto, in the same manner, and shall have the same weight, as if it were the original.

Be it further enacted, That in all suits or prosecutions, arising under any by-law or ordinance, made by the president or trustees of the said town, or a majority of them, where the constitutionality or validity of such by-laws or ordinance shall be contested, appeals shall lie from the judgment of any justice of the peace for the said county of Ohio, to the superior court of law for the said county of Ohio, without regard to the sum, or amount in controversy; such appeals to be taken within the same time, and upon the same terms as are prescribed by law, for taking appeals from the judgment of justices of the peace, to the several county and corporation courts within this commonwealth; and the said superior court of law, shall try and decide such appeals, in the same manner, as the several county and corporation courts within this commonwealth, are by law directed to try appeals from the judgment of justices of the peace; and, judgments of the said superior court of law, rendered upon such appeals, shall be executed as other judgments of the said court are executed.

This act shall be in force from its passage.

On the second Monday in May, an election was held in Elizabethtown for the purpose of electing twelve men to serve as trustees. On that day the following named persons were chosen as officers of the town:

Thomas H. List, S. P. Baker. Dr. Thomas McCormick, Joseph McClean, James McKean, David Nace, J. B. Roberts, Walter Gray, John Jefferson, sr., Thomas Nichols, Benjamin Cockayne, B. W. Price and Governor Price.

The first ordinance that was passed by the common council was for the laying out of streets and regulating sidewalks. The ordinance is as follows:

"The president and members of the common council of Elizabethtown, in general meeting, ordained that the streets of said town be thirty-six feet wide between the curbstones, said curbstones running in a direct line the whole length of said streets, allowing twelve feet on each side of streets as sidewalks—only in such cases when the buildings have been built previous to any accurate survey or the act of the general assembly incorporating said town, and in such cases where buildings have encroached on said streets, the sidewalks thereof in front of said buildings shall be reduced agreeable to their encroachment on said streets. THOMAS H. LIST, *President.*"

BUSINESS OF ELIZABETHTOWN IN 1830.

In this year the town had a population of about three hundred. Thomas H. List, John Gallaher, Ebenezer McGuire and B. W. Price were the merchants. Mrs. Alice Morris, best known as Aunt Rachel, and Mrs. Parker dealt in groceries. Colonel S. P. Baker and Jackson Robert kept an ordinary. David Nace, E. H. Blair, William Rains and Robert McClean carried on blacksmithing. John Jefferson and the Bakers followed wagonmaking. Benjamin Cockayne, G. M. Price and George Roberts engaged in shoemaking. Buffington & Hogan carried on tailoring. William Kearns, O. T. Koch and Joseph McClean were bricklayers. Carpenters—Adam Granstaff, E. Clegg, John Rose, Jonathan Moore, Thomas Blakemore and Steinburg. W. M. Nichoal carried on the saddlery trade. Joe Hagar followed hat-making. Thomas G. Barrett and Daniel Cady run tin stores.

In the year 1832, there was an act to amend an act entitled "an act concerning Elizabethtown," which was passed by the general assembly, February 7, of that year, as follows:

An act to amend an act, entitled, "An act concerning Elizabethtown in the county of Ohio." Passed February 7, 1832.

Be it enacted by the General Assembly, That if the freeholders and housekeepers of Elazabethtown, in the county of Ohio, fail to elect, on the second Monday in May, in any year, twelve fit and able men qualified to serve as trustees thereof, according to the provisions of the act, entitled "an act concerning Elizabethtown, in the county of Ohio," passed February 17, 1830, the president and trustees in office, or last elected, shall remain in office with their powers and duties, as in said act prescribed until a new election shall be had. And it shall be lawful, notwithstanding such failure, for said freeholders and housekeepers to meet as therein provided, on any subsequent day, and make such election; provided, ten days previous notice of such subsequent meeting shall be publicly given by the president, or any two of said trustees in office.

Be it further enacted, That it shall be the duty of the said president and trustees to appoint, annually, in the month of April, three discreet and proper persons, whose duty it shall be to superintend and conduct the election of trustees for said town, fairly and impartially, according to the provisions of the act herein before cited; and when the election shall have been closed, to examine the votes thereof, and expunge from the poll the name of any person who may have voted contrary to the provisions of said act. And if any two or more persons shall have an equal number of votes, (and not being elected,) it shall be the duty of the said superintendents, or a majority of them, forthwith to determine and say which of the persons voted for as aforesaid shall be returned elected, together with the names of all the trustees elected, and shall certify such return from under their hands and seals, which certificate shall be lodged with the clerk of said town, or other person having the legal care of the papers and records thereof, and shall be entered on the journal of the proceedings of the said president and trustees of said town.

Be it further enacted, That the president and trustees in office, or a majority of them, shall have full power and authority to fill any vacancy that may happen in the office of trustee of said town, from death, resignation, refusal to act, or otherwise. And any person or persons, so appointed or elected, shall be a trustee or trustees of said town, as fully and amply with all the powers and duties conferred or imposed upon them by the act aforesaid, as if elected at the time prescribed in the act herein before cited.

Be it further enacted, That the limits of Elizabethtown, in the county of Ohio aforesaid, shall be, and the same are hereby extended, so as to include within the same so much land as lies within the following boundary lines, to-wit: Beginning at a stone at or near the present south line of said town; thence running south, fourteen hundred and sixty-eight feet; thence west, eight hundred and seventy-four feet; thence south, four hundred and fifty-six feet; thence west, one hundred and twenty feet; thence north, thirty feet; thence south, eighty-four degrees west, one thousand eight hundred and six feet, to the Ohio river; thence north, four degrees west, one thousand and ninety-eight feet; thence north, thirty-nine degrees west, one hundred and sixty feet (crossing little Grave creek;) thence north, thirteen degrees west, one hundred and twenty feet, to a sugar tree; thence north, fifty degrees east, two hundred and forty feet; thence south, thirteen degrees east, one hundred and twenty feet; thence north, (crossing again little Grave creek,) seventy-eight degrees east, three hundred and ten feet; thence south, thirty-three degrees east, four hundred and twenty-nine feet; thence north, fifty-four degrees east, one hundred and sixty-five feet; thence north, eighty-four degrees east, three hundred and twenty feet; thence north, four degrees east, two hundred and thirty-one feet; thence north, thirty-four degrees east, seven hundred and twenty-six feet; thence north, five hundred and ninety-four feet; thence east, eight hundred and seventy-four feet, to the beginning; containing seventy-three acres, be the same more or less.

And the said land, so taken into the limits of said town, shall be, and the same is hereby made a part of Elizabethtown, subject to the same by-laws, rules and regulations as if the same had been included within the original limits thereof, and as if the same land hereby added had been included and made a part of said town by the act aforesaid, passed on the seventeenth day of February, one thousand eight hundred and thirty, and expressly made subject to the provisions thereby enacted. The proprietors of the land hereby added to Elizabethtown, and the person or persons residing upon, or owning or occupying the same, or who may hereafter reside upon, own or occupy the same, shall be entitled to enjoy all the rights and privileges, and be subject to the same or like fines, penalties, forfeitures and tax in relation to the land or lots, and in relation to their persons and other property, as persons, residing upon or owning or occupying the same or who may hereafter reside upon, own or occupy the same, shall be entitled to enjoy all the rights and privileges, and be subject to the same or the like fines, penalties, forfeitures and taxes, in relation to the land or lots, and in relation to their persons and other property, as persons residing upon, owning or occupying lands or lots within the original limits of said Elizabethtown or within the limits as extended by the act aforesaid.

Be it further enacted, That nothing herein contained, or in the act aforesaid, passed on the seventeenth day of February, eighteen hundred and thirty, shall be construed to affect, hinder, or in any manner whatsoever abridge the rights or privileges of the owner of the ferry or landing in or near the limits of said town, either as hereby or any former act extended.

This act shall commence and be in force from and after the passing thereof.

THE VILLAGE OF MOUNDSVILLE.

The same year the above amendment passed the Legislature, Moundsville was incorporated. In the year 1831, Simeon Purdy purchased a large tract of land lying on the Flats of Grave creek which had been conveyed to Jonathan Purdy from David Jones in 1810. Mr. Purdy thought he would lay out a town and call it Moundsville, which he did, and had it incorporated in 1832. In 1830 there were only three houses. In 1812 a house was built by Mr. Purdy for a warehouse, but was used very little for that purpose, and finally in 1816 was washed away by the flood. In 1832, Simeon B. Purdy erected a brick tavern, which still remains and has been used pretty much for that purpose ever since. The same year John Riggs built a brick house which is also standing. It is the third house below Mr. Gallaher's store. John Parriott and James Taylor started the first store in said building. From 1830 to 1840 the town built up rapidly. The following is the act of incorporation:

An act to establish the town of Moundsville, in the county of Ohio, passed Jan. 28th, 1832.

Be it enacted by the General Assembly, That, not exceeding seventy-three acres of land, the property of Simeon Purdy, lying near the mouth of Big Grave creek on the Ohio river, in the county of Ohio, shall be, and the same is hereby established a

WEST VIRGINIA STATE PRISON—MOUNDSVILLE.

town, by the name of Moundsville, so soon as the same shall be laid off into lots, with convenient streets and alleys; and that John Riggs, Lewis D. Purdy, John B. Roberts, Blair Morgan, Samuel Dorsey, Samuel Tomlinson, David Lockwood, Christopher Parriot and James Ramsey, gentlemen, be, and they are hereby appointed trustees thereof, who shall, before they enter on the duties of their appointment, take an oath, before some Justice of the Peace for the county of Ohio, to execute the same faithfully and impartially, according to the best of their skill and judgment, any three of whom may form a quorum, and proceed to business under the authority of this act.

Be it further enacted, That the trustees of said town, or any three of them, shall be, and they are hereby empowered to make such by-laws and ordinances for regulating the police thereof, and for the regular building of houses therein, as to them shall seem best, and the same to amend, enforce, alter or repeal. Provided, however, that such by-laws and ordinances shall not be repugnant to, or inconsistent with the constitution and laws of the United States, or of the commonwealth.

Be it further enacted, That the said trustees or any three or more of them, shall have power to remove or abate nuisances, or cause the same to be done, and to improve and repair the public streets and alleys, and to do or cause to be done, all other things necessary or proper for the general good of the said town, within the limits of the powers conferred by this act; and to enable the said trustees, to carry into effect the said powers, they are hereby authorized, annually to levy a tax, if deemed necessary, on the houses, lots, slaves and horses within the limits of said town; and to appoint a clerk and collector, (taking from the latter, bond and security, for the due and faithful discharge of his duties, as they shall be prescribed by the trustees;) provided, however, that the said tax shall not exceed, in any one year, one dollar on each one hundred dollars value of such property.

Be it further enacted, That in order to afford the citizens of said town, an opportunity of knowing, at all times the proceedings of said trustees, there shall be provided, a well bound book or books, as they become necessary, in which shall be recorded, in a plain hand writing the several certificates of the qualification of said trustees, and all their by-laws, ordinances and other proceedings; which book shall be kept in said town at all times accessible for the inspection of the citizens thereof.

Be it further enacted, That every free white male citizen of this commonwealth, who shall be possessed of a freehold estate, or such other interest in any lot in the said town, having a house thereon, the superficial contents of the foundation whereof, is twelve feet square, or equal to that quantity, as will entitle him to vote for delegates to serve in the general assembly, under the amended constitution, and who shall have been so possessed for the time prescribed by law, shall enjoy the same rights and privileges, that freeholders and others qualified as aforesaid, of other towns in this commonwealth not incorporated, are entitled to.

Be it further enacted, That so much of the act, entitled "an act to reduce into one act, all acts and parts of acts, concering the office of trustees or directors of the several towns within this commonwealth, and for supplying vacancies in the same," as is of a public and general nature, shall be recorded as the law in relation to the town of Moundsville, hereby established.

Be it further enacted, That the trustees of said town, or any three of them, shall so soon as convenient, under their own superintendence, cause the land, so allotted for said town, to be laid off into lots, with convenient streets, lanes, walks and alleys, and shall mark with convenient and lasting signs, the divisions, metes and bounds, the relative situation and distances of the lots, streets, lanes, walks and alleys thereof; and they shall cause to be made a full and complete survey of said town, and a plat or drawing of the plan thereof, with such remarks and explanations thereon, or thereunto annexed, in writing, as they may deem necessary and proper; which plat, together with the remarks and explanations so made, they, the said trustees, shall produce to the county court of Ohio county, and if no sufficient objection be made thereto in open court, the said court shall order their clerk to enter the same of record. But if any sufficient objection be made thereto in open court, by any person or persons interested therein, then the said court, shall order the trustees from time to time, to make other survey or surveys, until such objection or objections be obviated, and to return a true and correct plat or drawing thereof, until no sufficient objection be made thereto in open court, which shall then be recorded as aforesaid. And after such plat or drawing of the plan of said town shall be recorded, any true copy thereof attested by the clerk of said court shall be read as evidence in any controversy relating thereto in the same manner, and shall have the same weight, as if it were the original.

This act shall commence and be in force from the passage thereof.

THE BUSINESS OF MOUNDSVILLE IN 1860.

The town at this date had a population of nearly 400. Col. John Thompson, Purdy & Gray, M. Dunn, and Jos. Gallaher composed the merchants. George Roberts and Billy Morrow, carried on shoemaking. Adam Morrow, John Nuller, and David Staley were running blacksmith shops. John Wherry carried on the milling business in the Mound City Mills, and John Thompson owned and carried on the lower mill. Old Garrison Jones kept the first hotel in the place, and at this date John Higgins and Samuel Gamble were engaged in the business. There were a few other small business places and these comprised the business for 1860.

THE CONSOLIDATION OF MOUNDSVILLE AND ELIZABETHTOWN.

In 1865 it was thought advisable to consolidate the towns of Moundsville and Elizabethtown with the addition into one corporation and to be known as Moundsville. Accordingly, early in 1866 the towns were consolidated. The following is the act:

An ACT to consolidate the towns of Moundsville and Elizabethtown.

Passed February 23, 1866.

Be it enacted by the Legislature of West Virginia:

1. That the towns of Moundsville and Elizabethtown, in Marshall county, are hereby consolidated into one corporation, under the name of the town of Moundsville.

2. The corporate limits of the town of Moundsville shall be and remain the same as are now fixed and defined by existing laws as the corporate limits of Moundsville and Elizabethtown.

3. The council of said town shall consist of a mayor and eight councilmen, who, with the sergeant and two, at least, or more aldermen, if the council shall so direct, shall be elected annually on the fourth Thursday in May, and shall continue in office for one year, or until their successors shall be elected and qualified.

4. The first election for mayor and councilmen, sergeant and aldermen, shall be held at the court house on the fourth Thursday in May next, under the supervision of the sheriff, and succeeding elections under the supervision of the sergeant, and the mayor and councilmen so elected shall constitute the common council of the town of Moundsville. And all the powers, rights, capacities and privileges vested in the council of a town by the fifty-fourth chapter of the code of Virginia, shall be vested in the council of the town of Moundsville.

5. The council of the town aforesaid, and all the other officers, shall continue in office with all their existing powers, rights and duties, until the first election is held as hereinbefore provided, and the council of the town of Moundsville shall have been duly qualified, and no longer, and when the council of the town of Moundsville is elected and duly qualified, all the real and personal estate, and all the funds, rights, titles, taxes, credits and claims, and rights of action of the town of Moundsville, and also of Elizabethtown, or which have been appropriated for the benefit of said towns, or either or both of them, shall be and the same are hereby transferred to and vested in the said corporation created by this act. And all contracts with, and all rights, claims and demands against the corporations of Moundsville and Elizabethtown shall be good in law against the corporation hereby created.

6. The lands lying within the corporate limits not yet laid off into lots, streets and alleys, shall not be subject to town taxes so long as they remain in their present state, but when they shall have been so laid off by the proprietors thereof respectively, no lots remaining unsold in the hands of such proprietors shall be subject to taxation by the corporation until assessed, unless improvements of the assessed value of one hundred dollars shall have been erected thereon.

7. Every male citizen of the state, of the age of twenty-one years or upwards, and who, for sixty days preceding any election, has resided in Moundsville or Elizabethtown, or the town of Moundsville hereafter, and is qualified to vote for members of the legislature, and no other person, shall be qualified to vote at all town elections.

8. The mayor and aldermen, in addition to the duties and powers conferred by the fifty-fourth chapter of the code of Virginia, shall have cognizance of any claim to a fine or penalty

under any ordinance or by-law of the said town, and any other claims in or against the corporation or any person residing therein, if the same be not of greater value or amount than one hundred dollars, exclusive of interest, and shall have power to issue writ of *fieri facias* upon any judgment obtained on any such fine, penalty or claim.

9. In any civil case in which the amount in controversy, exclusive of interest, shall exceed ten dollars, either party feeling aggrieved by the decision of the mayor or aldermen, shall have the right to appeal to the circuit court of Marshall county, in the same manner and on the same terms, and subject to the same limitations, as appeals are now allowed from the judgment of a justice of the peace. And in any case, not civil, in which a fine exceeding five dollars, or imprisonment in the county jail, shall be imposed, the person against whom such judgment is, shall have the right to appeal from such judgment to the circuit court of said county, on the same terms and subject to the same limitations that appeals are now allowed to said court from the judgment of a justice of the peace. But in all cases of appeals, other than for fines, the mayor or aldermen shall fix the penalty in an appeal bond to be entered into by the appellant with good security, conditioned that the said appellant shall, in case such judgment or license be affirmed, abide by and perform the same.

10. The sergeant of said town shall in all criminal cases, as well as in the service of warrants and execution of writs of *fieri-facias*, have the same powers, duties and fees, and be subject to the same penalties that are prescribed by law for constables in similar cases, and shall give bond, with good security, in a penalty to be approved by the council, and payable to the town of Moundsville, conditioned for the faithful discharge of the duties of his office, and may, with the consent of the council, appoint one or more deputies.

11. For the purpose of carrying into effect the police regulations of said town, the town shall be allowed the use of the county jail for the safe keeping and confinement of all persons who shall be sentenced to imprisonment under the ordinances and laws of said town, and all persons so confined shall be under the charge and custody of the sheriff of said county, who shall receive, keep and discharge such persons in such manner as shall be prescribed by the ordinances of said town, or otherwise shall be discharged by due course of law. But the town shall in all such cases be liable to the sheriff for the fees and expenses so incurred.

12. The council of said town shall have power to tax dogs, and subject them to such regulations as the council may deem proper.

13. The council of said town shall have power and authority to change the streets and alleys, and to lay off and open additional streets and alleys in any part of said town, upon making just compensation to the owners of lots or ground taken for such purpose or affected thereby; and also to sell and convey in fee any street or alley which said council may deem of no public utility.

THE FIRST TOWN OFFICERS.

The first town officers elected after the consolidation of the towns, at an election held on the fourth Thursday of May that year, as prescribed in the act, were as follows:

Mayor—Robert McConnell.

Clerk and Treasurer—H. W. Hunter.

Councilmen—Wm. L. Roberts, Wm. Allum, W. K. Wade, Morris Rulong, Richard Shadduck and J. P. Shimp.

Sergeant—David Brantner.

At a regular meeting of the council, held Dec. 20th, 1867, the following resolution was passed:

Resolved, That the committee on ordinances be instructed to draft an ordinance dividing the town into wards.

The following ordinance was then drafted.

An ordinance for dividing the town of Moundsville into wards, and for other purposes.

SEC. 1. Be it ordained by the common council of the town of Moundsville, That that part of the town formerly called Moundsville shall constitute the First Ward, and shall be represented by three members in the town council.

SEC. 2. That part of the town adjoining the above and extending north to E street, shall constitute the Second ward, and shall be represented by two members in the town council.

SEC. 3. All that part of the town lying north of E street shall constitute the Third ward, and shall be represented by three members in the town council.

SEC. 4. *And be it further ordained*, That at the annual election for mayor, two aldermen, sergeant and eight members of the common council, the polls shall be open at the Latrobe House, in the First ward, for the voters of Clay district, and also at the court house for the voters of Washington district, including the second and third wards, and the council shall appoint two inspectors of election for each voting place.

SEC. 5. *Be it further ordained by the Common Council of the town of Moundsville*, That the regular meeting of the council shall be held on the first and third Fridays of every month throughout the year, at such place as the council shall, from time to time, fix, at its regular adjournment or otherwise. His honor, the mayor, shall preside at all council meetings, and whenever he deems it necessary may call a special meeting, and in case of his absence the council may appoint one of their number to fill the chair *pro tempore*.

SEC. 6. *Be it further ordained*, That a majority of the members of the council being present shall constitute a quorum to do business.

SEC. 7. *Be it further ordained*, That unless otherwise provided therein, all ordinances passed by the council shall commence and be in force from and after their passage.

SEC. 8. *Be it further ordained*, That the mayor, councilmen, aldermen, sergeant, clerk of the common council or any other officer appointed to any office in this town, each and every one of them shall, before proceeding to exercise the functions of their respective offices, take the accustomary oath prescribed by law, which oath may be administered by any officer authorized to administer oaths in the corporation.

SEC. 9. *Be it further ordained*, That there shall be appointed annually by the council, a clerk of said council, who shall, in addition to the oath prescribed by law, take the following: "I ——— do solemnly swear (or affirm) that I will well, truly and impartially, to the best of my ability and judgment, perform the duties of clerk of the council of the town of Moundsville; that I will carefully keep and preserve all the books, papers, records and other documents appertaining to said office, which may be committed to my charge, so help me God."

SEC. 10. *Be it further ordained*, That the clerk of the council shall be present at all meetings of the council at its respective meetings, draw all orders on the treasurer, and countersign them after having been signed by the Mayor, and attend to all other matters appertaining to the office of clerk of the common council, for which service so performed, the council shall pay him a salary as they may direct.

SEC. 11. *Be it further ordained*, That the common council of the town of Moundsville shall, at their first regular meeting, or as soon as possible thereafter, appoint a superintendent of roads, streets and alleys, whose duty it shall be to see that the streets, alleys, pavements, sidewalks, gutters, bridges, etc., are kept in good repair, and be hereby empowered to perform said duty; the council shall appoint at the same time, of their number, three members, who shall act as a sanitary committee for the town, whose duty it shall be to see that the regulations for the health of the town, as hereinafter provided, are duly carried into effect, and to suggest any new measures to the council they may deem necessary to insure the health of the town; the council shall further appoint at the same time, of their number, three members as a committee on ordinances, whose duty it shall be to suggest any new ordinances, or amendments to ordinances they may deem necessary for the preservation of the good order, peace and prosperity of this town; each of the above committees to report to the council from time to time, the result of their doings.

SEC 12. *Be it further ordained*, That each of the aldermen of this town shall, before proceeding to exercise the functions of his office, take the oath of office as prescribed by law, and enter into a bond in the penalty of five hundred dollars, payable to the town of Moundsville, for the faithful performance of his duties; said bond to be subject to the approval of the common council, &c., &c.

THE PRESENT OFFICERS OF THE TOWN OF MOUNDSVILLE.

The common council is composed of the following named gentlemen:

Mayor—L. B. Purdy.

Aldermen—B. T. Meighen and W. C. Criswell.

Sergeant—J. L. Hanen.

Council, First Ward—W. J. Purdy, Adolphus Weidebusch and S. R. Hanen.

Council, Second Ward—D. L. Logan and S. W. Dix.

Council, Third Ward—F. W. Brown, G. W. Evans and J. A. Ewing.

COUNTY BUILDINGS.

The first improvement made after the formation of Marshall county was the erection of a jail, which was built early in 1836. It was a small but substantial building. Its dimensions were 39x20. Built of brick and gray sandstone. The stone was quarried at Kate's Rock. The walls were three feet thick, and the cells lined with heavy sheet-iron. The court held its sessions here until the completion of the court house. On Monday, June 20, 1836, the first court convened in this structure.

The old court house was erected in 1836, by Elisha Linsey. It was fifty feet square, and built of brick. It was two stories high. Located very near the middle of the public square. Court was held on the first floor, and the second floor used for jury rooms. It cost the county $4,200.

NEW COURT HOUSE AND JAIL.

In 1875, the county commenced replacing the old court house and jail by erecting new ones, and in 1876 they were completed and ready for occupancy. The court house is one of the finest and neatest county buildings in the state of West Virginia.

It is located near the center of the public square, and presents a commanding appearance. The building is of brick, and the outside walls are twenty-seven inches in thickness. These walls rest on solid masonry four or five feet high, of the best of stone. There is a large hall running through the center of the building on the first floor, measuring about nine feet at the lower end. In front, as you enter, there is a large recess and on either side of this is a winding stairway leading into the court room on the second floor. The first floor is divided off into eight neat offices, and are occupied by the county officials. The ceilings in the lower rooms are sixteen feet high. There is also a stairway in the back end of the building leading into the court room and jury rooms. Both clerks of the court are supplied with a vault each leading from their offices, for the security of books and papers. These vaults are 19x16 feet. The walls are twenty inches thick and lined with a wall of fire-brick nine inches in thickiness, with an air chamber of six inches between wall and wall. The floor is four feet in depth, graveled and grouted, with a smooth cement floor covering that. Over head there are three large iron girders or joist. Between each and from the outer walls are arches made of fire-brick nine inches thick, over which there is placed about sixteen inches of sand and lime core, reaching almost to the floor of the court room. Immediately below the ceiling there are four iron rods extending lengthwise to support the walls. These vaults have double iron doors with combination locks. In these vaults papers and books are perfectly safe from fire and burglars.

The court room up stairs is furnished in the most modern and approved style. The seats, which are iron-trussel and of walnut and ash, commence with a gradual ascent until reaching the other end of the room, and will seat about six hundred persons. The ceiling in the court room is twenty-six feet high. Besides the court room there are three jury rooms, one witness room and the judges' rooms. The furniture was purchased of a firm in Richmond, Ind., at a cost of $4,500. The court room is heated with two furnaces. In front of the building on both sides are two towers, rising above the roof some distance. These are seventy feet in altitude, and are beautifully bracketed and finished on top with sheeting. The rooms throughout are carpeted with matting.

Judge J. H. Dickey held the first court in it December 27, 1876.

The sheriff's residence is two stories high and measures 44x32. It is built of brick also. The jail part is attached to the building, in rear of residence. The cell part is 28x35, and the corridors 12x28. The water closet 12x14. It cost $1,200. It is a good substantial building. There are eight cells completed. The jail is intended to contain sixteen persons. These cells are made of iron and are well calculated to hold prisoners in security. It also has a female department. These public buildings are all covered with tin roofs.

THE WEST VIRGINIA PENITENTIARY.

The West Virginia Penitentiary is located in Moundsville, and is one of the finest and most imposing structures in the state. In architecture, magnificent. It is built of gray sandstone, shipped from Grafton, Wheeling and Steubenville.

In the month of July, 1866, they commenced the erection of this building. The warden's apartment is 70x70 feet and five stories high, including the basement. To this is added two wings, or cell buildings, the dimensions of which are 180x50 feet each. The south wing contains 224 cells. These cells are seven feet long, seven feet high and four feet wide. Each one has a separate ventilator. There will be 448 cells when the prison is completed. Ten acres of ground belongs to this institution, and five are enclosed with a stone wall four feet in thickness at the base and two at the top, where it is mounted with brackets and coping, making the entire wall twenty-four feet high. On each of the four corners of the wall is a round tower in which are stationed guards, who from their lofty positions can see all that passes within the enclosure below.

The warden's building is also surmounted on each front corner by round towers.

The present workshops consist of two brick buildings 240x40 feet, and two stories high. The other one is 215x40 feet, one story, and is used as an engine and boiler room, and blacksmith shop.

There is a reservoir located in the center of the yard, whose capacity is estimated at 30,000 gallons.

The water to supply the building is forced from the Ohio river, a distance of 3,000 feet, at the rate of 8,000 gallons per hour.

The number of convicts at present confined is 251.

The state expended in the erection of this institution, for labor and material, $363,061.15.

The present officers of the penitentiary are the following named persons:

President—Joseph W. Gallaher.

Superintendent—Joseph M. Bridges.

Directors—J. K. Smith, of Taylor county; Thomas Smith, of Wood county; Nathan Goff, of Harrison county; Andrew Wilson, of Ohio county.

Clerk—Frank W. Brown.

SCHOOLS.

The first school opened in Moundsville in the year 1799, and was taught by Wm. Ransom, a native of Ireland. It was taught in a small log cabin. From his death, which occurred in 1804, until 1812, there were no schools. A man by the name of Greene then opened a school, but as to how long he continued it the author is not advised. Hiram Coffin started teaching in 1826, and run a school for two years. William Morgan taught during part of the year 1828 and perhaps 1829. John McCulloch, father of Samuel McCulloch, of Wheeling, taught in 1830. He was followed in turn by Mr. and Mrs. Harris, of Hagerstown, Md.; Frederick Stevens, of Eastern Virginia; Thornton James, Elisha Moss, Joseph McClain, Messrs. Carson & Murray, and McKenna & Chattuck. These all taught before the free school system. The free schools opened in the year 1867, and was taught in the town by Messrs. Russell, McFadden, Chattuck, Lorain, Miss Lizzie Finn and J. W. P. Reid. In the fall of 1873, the present principal, F. H. Crago, took charge of the schools. He was assisted during the first year by his wife, Messrs. J. F. Parsons and Hanen, and Misses Belle M. Steele, Mary Peck and Maggie McGaw. The following year Miss Emma Moore succeeded Mrs. Crago, and Miss M. C. Wallace Miss Belle Steele. In the fall of 1875, the teachers elected were as follows:

F. H. Crago, principal; S. R. Hanen, assistant principal; Maggie McGaw, Mary Peck, Lizzie Sloan, India Evans and Ada Wallace, who continued teaching until the fall of 1878, with the one exception, that in the spring of 1876, Mr. Hanen resigned his position, and Mr. E. Bonar was appointed in his stead. The present corps of assistants are as follows: Miss S. L. Orr, of Pittsburgh, assistant principal; Miss Ollie McClaskey, room 5; Cora Myers, room 4; Lizzie Sloan, room 3; Jennie St. Clair, room 2, and Mary Peck, room 1.

The school now numbers about 450, with an average attendance of nearly 400. The higher branches are taught, and a regular course of normal training is taken by those wishing to become teachers. Diplomas are issued to those finishing the common school course and passing a creditable examination therein. The diplomas are signed by the county superintendent and principal of the board of education.

The schools bid fair to become better year after year, and with the proper encouragement from the patrons they will soon be an institution of which all may feel proud.

The act of the legislature establishing the schools contemplates that the higher department shall be a preparatory school to our best colleges, and pupils have been and are still being taught in all those branches necessary to this end when desired.

The seminary at one time, before the days of free schools, was in a very flourishing condition; but after the graded school was established, it soon went down, as the citizens preferred to educate their children where the cost was least.

Moundsville may well feel proud of its school. Under the management of Professor Crago, who certainly deserves great credit for his indefatigable labor in bringing them up to their present standard, the schools have been unusually successful, and the pupils make rapid progress in their studies.

JOURNALISM.

Before the formation of the county, in about the year 1831, Dennis Parriott began the publication of a twenty-column sheet, styled *The West Virginian*. The town, at that early day, was not quite ready for such an enterprise and, in consequence of this, the publication was soon abandoned.

A short time after the erection of the county, in 1835, Mr. David McLain started the *Sentinel*, which was also a financial failure, and lived but a short time.

The *Marshall Beacon* then superceded and was first edited by Archibald McLain, who continued the publication until about 1840 and then sold out to M. M. Blakemore. In 1850 R. C. Holliday purchased the office, and several years afterward cut down the size from a six to a four column folio, and changed the name to *Herald*. Mr. Holliday sold out to a couple of young men, after a few years experience. They started the *Reporter*, under the firm name of Wallace & Co. In 1871 Hanen & Bonar bought, and took charge of the paper for a couple of years. Dawson & Evans followed them, and then Evans & Rook, the present proprietors, and under their management it is being made a success.

The *National* was first started by T. B. Taylor & Co., and then afterward edited by R. G. Patrick. Its circulation was very limited, and was published for a short time and then discontinued.

J. Remington started a paper in 1872 called the *Moundsville Democrat*. It had a short existence here, and then removed to Parkersburg.

The *New State Gazette* was started in Moundsville by its present proprietor, G. A. Creel, in 1874, and has existed about four years and is beginning, it is thought, a successful career.

CHURCHES.

THE METHODIST EPISCOPAL CHURCH.

The first Methodist society formed in or near Moundsville, was organized in about the year 1820. They held divine worship in an old log church which was erected for that purpose. The building was twenty-five feet square, and had three windows. The church stood in the old grave yard northeast of Moundsville. Little is known of its history until 1831, any more than the society was composed of energetic christians and devoted to the espoused cause. There were only about fifteen members when first established.

In 1831, Rev. Cook commenced his services with them and continued for two years, and then Rev. Knox; Rev. J. W. Minor in 1834; Rev. J. Summerville and J. Boyle in 1835; William Summers and John J. Smyze in 1836; Rev. Moses Tichenell in 1837–8; Rev. R. W. Lauck in 1839; John Flowers in 1840; B. F. Sedwick and John Flowers in 1841; William McFarland in 1842; Rev. William Summers in 1843; Rev. Peter M. McGowan in 1844 and David R. Hawkins in 1845. These were among the early ministers that took charge over this little flock at the periods indicated.

In the year 1841, a new church edifice was erected in Moundsville, and dedicated in 1844. Built of brick and cost between three and four thousand dollars. Its size was 50 by 60; had twelve large windows, and ceiling eighteen feet in the clear. The walls were substantially built, measuring eighteen inches in thickness. In 1878, the building was condemned and at present writing is being torn down. They hold divine worship now in the free school hall. They will soon commence the erection of a new edifice which will be 45 by 75. Audience room to be on the second floor. Sabbath school and lecture room in basement. Daniel Ross, Samuel Mount and William Night were the first class leaders. Hugh Nixon, John List and T. H. List were the first stewards. The present pastor is Rev. James M. Warden. Membership 200.

EPISCOPAL CHURCH.—(Trinity Church Parish.)

The first Episcopal services held in this parish were by the Rev. William Armstrong, who occasionally preached in the court house between the years 1837 and 1847. Rev. Mr. West and Rev. Mr. Gray preached in the court house in the winter of 1841. On one occasion the latter clergyman, who was then stationed at St. James' Cross creek Parish, Jefferson county, Ohio, came from that place on a winter day. The snow was descending rapidly and the weather intensely cold the night he arrived at the house of Mr. Curtis. On this trip he almost perished. He preached, however, according to appointment to a congregation of four persons in the court house. A number of families attached themselves to the church and it increased gradually. For ten years services were held at irregular periods in the above named place and the Presbyterian church. During that long period the Lord's supper had not been administered. In 1849 the Bishop sent a Rector to this Parish in the person of Rev. William H. Hyland, who remained eight years as their Rector.

The building now occupied as a church was erected in 1853, at a cost of $1,700. It was consecrated by the Right Rev. Wm. Meade, D. D., in the year 1854.

Among the first members, the following named persons are found: Mrs. A. A. Curtis, John Thompson, Sarah A. Thompson, Mrs. Ellen Caldwell, Mr. Isaac Hoge, Mrs. R. M. Hoge, Miss Eliza M. Hoge, Mrs. Rebecca R. Thompson, Mrs. Nancy J. Nickols, Mrs. Mary Bruce.

The Rev. Mr. Hyland organized a Sabbath school in the Academy building, where the congregation held divine worship a short time previous to the construction of their church building. In the spring of 1858 their Rector was called to a new field of labor and the Rev. W. F. M. Jacobs was appointed for this charge. He remained until 1859 when Rev. David J. Lee succeeded him. In 1864, Rev. J. T. Woods took charge of the Parish, and is at present in charge, having, in 1876, taken charge the second time. Present membership numbers about sixty.

DISCIPLES CHURCH.

An organization of this society was effected on December 16, 1868, with twenty-seven members. Their pastor was E. Doolittle. The elders were Hanson Criswell and J. B. Colvig. S. H. Inman, A. Brown and J. C. Beam, deacons. Divine worship was held in Liberty Hall, since known as Odd Fellows' Hall. Under the pastorate of Doolittle, there were thirty-nine accessions, nineteen removals by letter, two deaths and four removals for disorderly conduct. Elder White supplied this church for a short time. In August, 1870, the congregation was deprived of a house in which to meet, and not being able, financially, to build, was scattered and did not meet again until June, 1873, when a reorganization was effected with 21 members, since which time they have rented and used the Odd Fellows' Hall. Elder S. R. Wilson, was pastor during 1875 to 1877. Since 1877, they have had no regular pastor. The present officers are, J. P. Wayman and S. R. Hanen, elders; J. C. Beam, A. Brown and J. W. Floyd, deacons.

Since the reorganization, there has been forty-four accessions, making a total memberhip at present of about sixty-five. Social meeting every Lord's day. Sunday school at 9 A. M., and Prayer meeting every Tuesday evening.

PRESBYTERIAN CHURCH.

It is now almost a half century since a few trembling christians who clung to the Presbyterian faith, organized under the direction of Revs. Weed and McClasky, in Elizabethtown, now Moundsville, in an orchard near and southeast of where Blake's store stands. There were only a few names of them, numbering, perhaps about twelve. William Cochran, Elijah Clegg, and Cady were elected elders. Among the early ministers were Revs. Linsey, Smith and Knox. In 1837 a church edifice was erected. From that time forward the church received an impetus and has gradually grown into a large and able congregation. In the year 1871 the church was rebuilt. They now have a pleasant place to worship in. The present officers are as follows: R. C. Holliday, William Calhoon, and John Kile, elders; John C. Simpson, John Clegg, R. C. Whittingham, and R. H. Holliday, deacons; Robert McConnell, Joseph Haring, and R. C. Holliday, trustees.

Their present pastor is Rev. J. A. Pomeroy.

The following are among the more recent ministers that used to supply them: Revs. McKenan, Karson, Murry, Gilmore, Wishut, Todd, Doolittle, and Alexander.

The membership at present numbers about eighty.

CATHOLIC CHURCH.

As to the exact date of the organization of this congregation the author cannot definitely ascertain, there being no very re-

liable source to depend on. It is thought by some of its members to have been formed in about the year 1848 or 1849. Services were held for several years after its temporary organization at Major Barry's and also at Mr. Hugh McGuire's house. Mass twice a month alternately at these places, Fathers Braizel and O'Neal officiating. A church edifice was erected in the year 1854, by Rev. James V. Cunningham, and dedicated in 1856 by Bishop Whelan, the first bishop of West Virginia. The edifice is a neat brick building 30x40 feet, with vestry in the rear. This church for a long while remained as a kind of a missionary one. Rev. J. T. Sullivan, at present rector of the Cathedral at Wheeling and vicar general of the diocese of Wheeling, supplied this congregation from 1859 to 1862. In 1862, Rev. Ed. Delahuntz succeeded to the pastorship, and ministered for several years, being followed by Rev. D. V. Collins, who is now assistant pastor of the Wheeling Catholic Church. Since 1872 or 1873, there has been no resident minister, but the services have been conducted by Rev. Keleher, Jos. Mullen, P. F. McKernan and Rev. John Elligott, from Wheeling. From 1855 to 1861, the noble Major Philip Barry (so favorably known by the older citizens of Moundsville) with his excellent lady was the most prominent member of the Catholic congregation. The church building was put up at a cost of $1,200. Present membership, 70.

SECRET SOCIETIES OF MOUNDSVILLE.

Marshall Union Lodge, No. 8, A. F. & A. M.*—This lodge received its charter from the Grand Lodge of Virginia and was organized December 11, 1849. The following named persons comprised its charter members and first officers:

J. W. Ney, W. M.; W. S. Lane, S. W.; Michael Dunn, J. W.; O. G. Koch, Treasurer; A. H. Smith, Secretary; John H. Dickey, S. D.; J. Alexander, J. D,; P. McGill, Tyler.

The lodge was re-chartered after the division of Virginia, and on November 25, 1868, was re-organized by the authority of the grand officers of the state of West Virginia. The charter members and officers were as follows:

W. H. H. Showacre, W. M.; S. G. Martin, S. W.; Harry Cox, J. W.; Thomas Medford, Treasurer; J. W. Ney, Secretary; E. P. Richardson, S. D.; R. G. St. Clair, J. D.; Joseph Wallace, Tyler,

The present officers of Marshall Union Lodge are:

W. H. H. Showacre, W. M.; T. S. Bonar, S. W.; J. B. McPeek, J. W.; D. L. Logan, Treasurer; F. H. Crago, Secretary; J. H. Purdy, S. D.; Wm. McConkey, J. D.; Joseph Wallace, Tyler.

Membership number forty-three. Nights of meeting, the first and third Tuesdays of each month. Place of meeting, above the auditorium of the Methodist Episcopal Church.

Moundsville Lodge, No. 425, of Knights of Honor.—An organization of this institution was effected on January 13, 1877, by a special dispensation from the Supreme Lodge. The charter members are as follows:

Hanson Criswell, H. W. Hunter, S. R. Hanen, J. Alex. Ewing, W. W. Evans, A. J. Martin, W. H. Strauss, William Harris, Thomas Finn, Dr. G. W. Dodd, Dr. W. Z. Phillips, Hugh Harris, J. Z. Hanen, W. L. Bridges, J. N Comly, A. X. Shyler, Thomas S. Bonar and Dr. J. R. Davis.

The following named persons were the first officers elected and installed into their respective stations:

Past Dictator, Hanson Criswell; Dictator, H. W. Hunter; Vice-Dictator, S. R. Hanen; Assistant Dictator, J. Alex. Ewing; Guide, Thomas S. Bonar; Reporter, W. H. Strauss; Financial Reporter, William Harris; Treasurer, Thomas Finn; Chaplain, W. W. Evans; Trustees, Hugh Harris, Thomas Finn and J. Alex. Ewing.

The motives that prompts its members are:

1. To unite fraternally all acceptable men of every profession, business or occupation.

2. To give all moral and material aid in its power to members of the order, by holding moral, instructive and scientific lectures, by encouraging each other in business, and by assisting each other to obtain employment.

3. To establish a Benefit Fund, from which a sum not to exceed $2,000 shall be paid at the death of each member to his family, or to be disposed of as he may direct.

4. To establish a fund for the relief of sick and distressed members.

5. To ameliorate the condition of humanity in every possible manner.

Below is a list of the present officers:

Past Dictator, F. H. Crago; Dictator, James E. Hooton; Vice-Dictator, Thomas S. Bonar; Assistant Dictator, A. O. Baker; Guide, D. L. Logan; Reporter, W. M. Warden; Financial Reporter, J. W. Lowe; Treasurer, A. J. Martin; Chaplain, Jos. Walters; Trustees, Hugh Harris, Thomas Finn and J. Alex. Ewing.

At this time they have a membership of forty. No deaths since their organization. Examining physician, W. Z. Phillips. Meets in Odd Fellows' Hall, second and fourth Thursdays in each month.

Mound City Lodge No. 13, I. O. O. F.—The first organization of this Lodge was under a charter from the Grand Lodge of the state of Virginia, bearing date October 1st, 1852. It was known as the Mound City Lodge, No. 115. The charter members are as follows: F. T. Frye, George Frank, James Arie, M. M. Blakemore and Wm. Lane.

The following persons were the first officers installed:

F. T. Frye, Noble Grand; George Frank, Vice Grand; James Arie, Recording Secretary.

After the breaking out of the war, there seems to have been no regular meetings until about the 9th of October, 1865. The Lodge was then reorganized, and elected George Edwards, Noble Grand; N. W. Wurber, Vice Grand; J. H. Sheets, Secretary, and E. Clegg, Treasurer.

The order had regular meetings from this date on, until the 5th of December, 1865, when the Society was again reorganized under the same name, but No. 13. The new charter members were, George Edwards, N. W. Wurber, John H. Sheets, Elijah Clegg, A. O. Baker and W. L. Roberts. Since that time, the order had regular meetings. The best of harmony has prevailed and as a consequence, the Lodge is prosperous. They now own a large two story brick building and have several hundred dollars in their treasury.

The present officers are:

J. L. Parkinson, N. G.; J. Alex. Ewing, V. G.; G. W. Evans, Secretary; L. B. Purdy, Treasurer.

George Edwards has held the offices of Grand Marshal, Grand Warden, Deputy Grand Master and Grand Master.

Number of members, 36. Meets every Monday evening.

White Oak Lodge, No. 25, I. O. F.—A formal organization of White Oak Lodge was made on Wednesday evening, April 3, 1878, in the court house, in Moundsville by the following named persons:

W. L. Bridges, J. E. Hooton, A. J. Martin, Thomas Finn, J. A. Ewing, James P. Park, A. O. Baker, C. A. Weaver, J. W. Low, W. B. Umphries, J. L. Parkinson, H. W. Hunter, Adolph Weidebush, Alonzo Winters, J. H. Baird, Timothy Stilwell, J. A. Gamble, G. W. Dodd, L. W. Hedrick, George A. Creel, L. B. Purdy and Melvin Jobes.

The following members were elected, temporarily, to the offices below indicated:

W. L. Bridges, president; Thomas Finn, secretary; J. W. Low, treasurer.

The club adopted the name of Court White Oak, and Dr. Mayer, R. W. H. C. R. for the State of West Virginia, being present, numbered the Court in its order, No. 25.

Another meeting for permanent organization was affected in Odd Fellows' Hall, Tuesday evening, April 9, 1878, upon the call of Dr. D. Mayer, R. W. H. C. R. for the State of West Virginia, W. L. Bridges in the chair and A. O. Baker, recording secretary.

An election was had for permanent officers, which resulted as follows:

W. L. Bridges, C. R.; L. B. Purdy, V. C. R.; A. O. Baker, recording secretary; H. W. Hunter, financial secretary; J. W. Low, treasurer.

The R. W. H. C. R. appointed J. E. Hooton, District Deputy H. C. R. for Marshall county. On the 13th of July, 1878, W. L. Bridges was elected to represent this Court in the Grand Court of the State.

An election was held June 8, 1878, and the present officers were elected for the following positions:

L. B. Purdy, C. R.; H. W. Hunter, V. C. R.; A. O. Baker, recording secretary; W. J. Purdy, financial secretary; J. W. Low-treasurer; J. A. Ewing, chaplain, whose several offices expire on the 31st day of December, 1878.

Nights of meeting—every second and fourth Saturday of each month.

THE WEST VIRGINIA AGRICULTURAL WORKS.

This corporation, a joint stock company, known as The West Virginia Agricultural works, is located in Moundsville, and was incorporated November 23, 1875, for the purpose of manu-

*The old number of lodge was 87.

facturing and selling farming implements. The charter will expire in 1895. The shares of stock are $100 each. Its charter members, with number of shares each, were as follows:

	Number of Shares.	Value.
R. H. Gee,	30	$3,000
E. C. Thomas,	40	4,000
J. D. Ewing,	10	1,000
Wylie Arnold,	10	1,000
John Jefferson,	10	1,000
B. W. Price,	3	300
Jacob T. Cox,	3	300
John Nixon,	5	500
R. G. Rosenbarger,	5	500
H. B. Yoho,	10	1,000
S. R. Hanen,	5	500
H. D. Whipple,	10	1,000
Joseph Harris,	5	500
J. C. Roberts,	4	400
Making a total capital of		$15,000

The main building of this establishment is 150 feet long and 45 feet wide, and was erected in December, 1875, by H. S. White, of Bellton. The machinery, engine, cupola, &c., was purchased and put in place under the management of H. D. Whipple, who also built a paint shop 45x31, engine house, core room, and an additional blacksmith shop. In December additional stock was sold to J. N. Jefferson, three shares; J. C. Roberts, six; David Roberts, five; J. S. Eakin, five; Wm. Lutes, five; R. J. Zink, five, and in the following April, B. B. Newman, five; Jacob T. Cox, two; J. S. Eakin, five; J. C. Roberts, two; David Roberts, five, and H. W. Rook, two shares. Making in all a capital of $20,000. During the year 1876 the Company engaged in the manufacture of the well known Crawford improved mowing machine.

The first board of directors were:

E. C. Thomas, President and Treasurer; J. D. Ewing, Secretary; John Jefferson, R. H. Gee, and Wylie Arnold.

At the January election of directors the number was increased to seven, and J. C. Roberts and David Roberts with the first elected members constituted the board for the year 1876, with E. C. Thomas, President; J. C. Roberts, Secretary and Treasurer. The present board consists of nine members, constituted as follows: S. R. Hanen, President and Superintendent of Works; H. W. Rook, Secretary, and J. C. Roberts, Treasurer; E. C. Thomas, Joseph Harris, David Roberts, Wm. Lutes, John Nixon and John Jefferson.

In November 1878 the capital stock was again increased $5,550, being now over $25,000. The works have connected with them a very fine foundry, where all kinds of castings are made. The principal work in which this company is engaged is in the manufacture of the Crawford Improved Mower, but they do all kinds of jobbing work, building engines, mill gearing, hot and cold water pumps, coal cars, rolling mill castings of all kinds, build cast and wrought iron fences, stove castings and plow points, heating-stoves, and repair all sorts of machinery and do a general jobbing trade, under the management of John Scott, one of the best mechanics in the Ohio Valley. The principal moulder, William Stoop, has no superior in his department. The hands now employed in the shops are nearly all stockholders. These works are shortly to be enlarged, and supply a need long felt in this county. The works have been under the immediate supervision of S. R. Hanen since March 1877.

THE OHIO VALLEY IRON WORKS.

These extensive iron works are located directly opposite the Baltimore and Ohio railroad depot and immediately on the bank of the Ohio river. An organization was effected in 1872, by the choice of the following officers:

V. L. Cockayne, president; G. S. McFadden, secretary; H. D. Whipple, superintendent.

The same year of its incorporation, the company erected the present building, the dimensions of which are 110x160. The ground upon which these works are situated was donated to the company by Charles Thompson. The concern is admirably located as to receiving and shipping facilities, whether by rail or river, and has a territorial domain of some four or five acres, giving ample room for future enlargement and all other necessary buildings. The machinery consists of one nineteen-inch muck train, one sixteen-inch and one eight-inch guide train, and one hoop mill, which are driven by a direct acting engine, twenty-four and a half-inch cylinder and seven-feet stroke. Steam is furnished from a battery of three boilers, twenty-eight feet long and forty-four inches in diameter. There are ten furnaces in operation, eight boiling and two heating. The capacity of the mill is ten tons of finished iron per day. The furnaces consume eight hundred bushels of coal in each day's run. Their pig iron is purchased from Wheeling and Bellaire. The capital stock invested in these works is over $60,000. The aggregated sales exceed $200,000 annually. This establishment gives employment to from fifty to sixty hands. Their trade is extensive. They manufacture all kinds of merchant, bar and hoop iron; supply the Camden Consolidated Oil Company, at Parkersburg, W. Va., with oil barrel hoops, the Pittsburgh Barrel and Stave Company, located at New Martinsville, W. Va., and numerous small works throughout western Virginia and Ohio. The machinery placed in the works cost about $45,000. The present officers of this concern are as follows:

J. W. Gallaher, president; S. T. Hersey, secretary; L. H. Joy, superintendent.

Under these officers this establishment is looking up, and great credit is due these gentlemen for their energy. The company is realizing larger sales every year, owing to the good management of the business affairs.

CAMP GROUND.

These grounds are situated about half a mile north of the town and is a point of some historic note. In the year 1850, in the fall, Rev. Callender held the first camp meeting on the ground, which at that time was leased for that purpose. Meetings were held there annually without intermission for nine years, the last one being held in 1859. From that time until 1867, no meetings were held on the ground. In that year the ground was re-leased, and the present Camp Meeting Association was formed. From that time until the present meetings have been held, and generally great success has attended the preaching of the word. Very many of the christians of the surrounding country point to the old camp ground as the place of their conversion. The ground has been enclosed with a substantial paling fence, and is very tastefully decorated. Large and substantial buildings have been erected, and the enclosure for the assembling of the public congregation is beautified by the planting of shrubbery, which in a few years will give it a very fine appearance. All the houses that have been erected for the past few years are permanent buildings, and will stand for many years. The camp meeting may now be considered an established institution and a part and parcel of the town.

COUNSELLORS AT LAW.

Below is given a list of members of the Marshall county bar, at present residing in Moundsville, and the year of their admission to practice:

Robert McConnell, 1834; R. C. Holliday, 1850; J. D. Morris, 1852; J. W. McCarriher, 1855; Hanson Criswell, 1860; J. B. McLure, 1866; J. L. Parkinson, 1862; J. E. Hooton, 1868; J. P. Reed, 1868; J. Alex. Ewing, 1871; B. F. Meighen, 1874; N. C. Criswell, 1877; O. L. Holliday, 1877; F. M. Hugus, 1878; Charles R. Oldham, 1878.

PRACTICING PHYSICIANS.

The following is a list of the practicing physicians at present residing in Moundsville:

J. W. Ney, G. W. Bruce, E. C. Thomas, G. W. Dodd, W. L. Phillips.

SUMMARY OF THE BUSINESS OF MOUNDSVILLE.

The following shows the number of business houses that are now in the town of Moundsville:

Eleven dry goods stores; two hardware stores; three tin stores; six hotels; five shoe shops; two printing offices; two tanneries; one rolling mill; one agricultural works; four groceries; two drug stores; two flouring mills; one tailor shop; three millinery stores; one feed and livery stable; three butcher shops; six physicians; eleven lawyers; five saddle shops; one silver smith; two cabinet shops; three wagon maker shops; three carpet weavers; one cigar manufacturing shop; six blacksmith shops; four hot houses; one post office; two barber shops; one marble shop; one school house, and five churches.

THE CENTENARIAN.

Michael Edwards was born in 1767. In the year 1801 he migrated from York to Washington, Pa. Whilst at that place, in 1805, he was married to Miss Eleanor Cady, a lady nineteen

years his junior. They had a family of four children, all boys, who are still living, the eldest is now in his seventy-second year. He remained in Washington until 1835, then removed to Moundsville. He learned gunsmithing and followed that vocation until he advanced to the age of ninety years. When ninety-three years of age he walked from Wheeling to Moundsville, a distance of twelve miles in about two hours and a half. He possessed a healthy constitution and was seldom ever severely sick, although he frequently exposed himself, never taking extra care of his health. His wife, a fine lady, kind and affectionate, died in the year 1858. Over a half century these two shared each others pleasures and sorrows—the sunshine and murky trials of life. His general habit was to rise and retire at an early hour. During the most of his life he seldom slept after four o'clock in the morning. He comes from a long-lived ancestry, as do most persons who attain great age, his mother having lived to be upwards of 103 years of age. He believed he remem bered the time when the news was heralded through the land of the Declaration of Independence and the joy and enthusiasm that permeated the people and the great pealing of bells that filled the air with their tones, when it reached York. Being very young it is thought he might possibly have confounded this event with the news of the restoration of peace in 1783. He heard Washington make a short address in York, after the war, among other things, he said that there was likely to be sometime in the future, a war, caused by office-seekers, that would be worse than the revolution. His first vote was for Washington for the presidency. He voted for him both times, afterwards for John Adams. He died March 17, 1866, at the advanced age of 109 years. His funeral was one of the largest, and the occasion one of the most solemn ever witnessed in Moundsville. He was a kind and faithful friend, an indulgent and affectionate father, and an upright man in all the relations of life. To the poor he was kind and liberal, and many a penniless beginner, as he started on his voyage to fight the battles of life has been cheered on by the kind assistance and good counsel of Michael Edwards. He was strictly honest and he has left behind him a bright record and illustrious examples. Cheerfully he bore his sufferings, waiting patiently and trustingly for his release, ever looking to the author and finisher of his faith. He passed away

> "Like one who wraps the drapery of his couch about him
> And lies down to pleasant dreams."

BIOGRAPHICAL SKETCHES.

CAPTAIN A. O. BAKER,

a son of John Baker, was born June 11, 1828, in the Round Bottom, on a farm then occupied by his grandfather, Jonathan Roberts. His father died in 1831, when he was three years of age. In the spring of 1833, he removed with his mother to Elizabethtown. At the age of six years he went to live with his uncle at Cincinnati, where he remained for the most part of fourteen years. In 1848, he migrated to Bonharber, Ky., where he was employed by Triplet & Barret, who were engaged in the lumber business, and remained there one year. In 1849, he returned to Elizabethtown, and followed merchandizing with his brother Henry. Thus he was engaged until 1854, when he received the appointment as Deputy Sheriff for Enos Howard, who was then sheriff of Marshall county. He was married to Miss Elizabeth Kountz, an affable young lady, in 1851. As the result of their union, they had a family of four children, viz: Flora V., Frank, Clara and Ella. Flora V., the eldest, was united in marriage in 1872, to Orlando Stevenson, a son of Ex-Gov. Stevenson. In 1857, our subject received the appointment of deputy clerk of the court, for Judge E. H. Caldwell, and in 1858, he was again appointed deputy sheriff for Jackson Reed, in which capacity he served for four years, and at the termination of that time, was elected sheriff of the county. He served as sheriff until the division of the state of Virginia, which occurred in July, 1863. When the rebellion broke out he then received the appointment of provost marshal, for this county, held that office for about a year, and upon the reception of a commission as Captain in the volunteer service of the United States, from Gov. A. I. Boreman—he resigned his marshalship. He recruited Company A, of the 17th West Virginia Infantry, in this county, and served in that position till the close of the war, and was honorably discharged with his regiment in August, 1865. In 1867, he received the appointment of warden in the West Virginia Penitentiary, serving four years. In August, 1872, after the adoption of the new constitution of West Virginia, he was elected to the legislature in his native county, by an overwhelming majority. He served in the house of delegate two years. In 1876, he was elected clerk of the circuit court, to fill an unexpired term of two years, and was re-elected in 1878, for the term of six years, which office expires in 1885. He has been elected to a number of minor offices at different times in his life; was mayor of Elizabethtown in 1858–9, and of Moundsville in 1876–7. He was also school commissioner for the independent school district of Moundsville, and drew up the article, and received the proposals for the first public school building built in Moundsville in 1866. He is an obliging and accommodating officer, with hosts of friends.

J. E. HOOTON, prosecuting attorney of Marshall county, was born in Kingwood, Preston county, W. Va., in the year 1838, and is the son of Colonel Charles and Ann Hooton. He was educated in a common school and studied law with his father at that place. He served for three years as deputy clerk of Preston county. In 1861, he emigrated to Wheeling, where he received a clerkship in the auditor's office, remaining about a year. At the breaking out of the rebellion, he enlisted as regimental quartermaster of the Fourteenth West Virginia Infantry. He was through the entire valley campaign with Sheridan, and was there when he made his famous twenty-mile ride. He was mustered out of service in July, 1865. After the close of the war he located at Littleton, Wetzel county, W. Va., and was for three years engaged in the mercantile business there. In 1866, he was married to Miss Ella E., daughter of George Sawtell, of Short creek, Ohio county. They have a family of three children, one boy and two girls, all of whom are still living. He was admitted to the bar in 1868, whilst residing in Littleton. He was assistant clerk of the state senate in the sessions of 1868 to 1871. He removed to Cameron in 1868 and remained until April 1, 1877, then settled in Moundsville. In the year 1870, he took the census of Marshall county, and in 1876 was elected prosecuting attorney by a handsome majority. He is an estimable gentleman and a good lawyer.

H. W. HUNTER, sheriff of Marshall county, was born in the city of Wheeling, June 7th, 1837. His parents were Robert and Artimasa Hunter. His father removed to Marshall county in 1844, and settled on a farm. He received his education in the Marshall county Academy, under Prof. Shattuck. In 1859 he commenced clerking for George Edwards, where he remained until January 1861, when he removed to Pittsburgh and hired on a steamboat, and made two trips down the river, as far as Madison, Indiana, and back. He returned home in May, 1861, and engaged with Capt. W. J. Purdy, as salesman in his store, remaining until July of the same year. When the war broke out he assisted in recruiting company I, Third West Virginia Volunteer Infantry, and received the commission of Lieutenant. In 1862 Capt. W. J. Purdy resigned, and he was then promoted to the position of Captain. The first engagement was at McDowell, May 8th, 1862, under Gen. Milroy, and was defeated. Joined Gen. Fremont and marched to Strasburg, in the valley, to cut off Jackson, who was advancing, but he got ahead of them. On the 9th of June another engagement took place at Cross Keys, which continued for three days, and neither party were successful, Gen. Jackson retired to Richmond and Gen. Fremont withdrew to the valley, when Gen. Pope took command. In August 1862 he was detailed on Gen. Milroy's staff. He was in Gen. Pope's retreat, and at the second battle of Bull Run. In the latter part of that year he acted as Provost-Marshall of the second division of the eighth army corps, remaining in that position until 1863, at that time he joined his regiment at Phillippi, W. Va. In December they started on what was known as the Salem raid with Gen. Averill, and finally fell back and went to Grafton, and thence to Martinsburg, where they remained until April. The regiment to which he was attached was converted to the Sixth West Virginia Cavalry. He was then commissioned as Major of that regiment. He was sent to Beverly, in command of a body of troops, remaining there until mustered out of service, August 1864. On the 22nd of February, 1865, he was married to Miss Jane Edwards. Their union has resulted in a family of two children—a boy and girl. In that year he went into partnership with George Edwards in the mercantile business, which firm continued for nearly four years. He received the appointment as deputy sheriff, under Henry Keltz, in 1877, and was elected sheriff the following year. His term of office does not expire until December 1880. He has served in minor offices to which he was elected. Has always proved faithful to his trust.

G. W. EVANS is a native of Iowa, and was born near Burlington in 1844, and is the son of Walter and Sarah Evans. His parents emigrated to Virginia when he was a mere child, and located about six miles east of Moundsville, near what is now known as Roseby's Rock. He lived with his father until December, 1854, assisting on the farm and attending subscription schools, (there being no free schools at that time), and then, after the death of his mother, which occurred at that time, he was bound out to a Mr. Roberts, at the age of ten years. He only remained with him one winter, when he went to his grandfather Evans', who was living at Roseby's Rock. In 1856, his father married again, and he then went back to live with his father. He enlisted in 1861, and was a member of company D, First West Virginia Infantry. Was in the engagement at Blue's Gap in that year. In the spring of 1862 he was discharged on account of disabilities. In 1865, he took a commercial course under Professor Hitchcock, of Wheeling Commercial College. Married Miss Mary L. Edwards in 1872. They have a family of two children, a boy and girl. He has followed various vocations. He is at present serving as justice of the peace.

MARSHALL JACKSON, proprietor of Campbell House, Moundsville. Born at what is called Barnes' Mills, Marion county, in 1819. His parents removed to Middletown in the same year. He assisted his father at cabinet making. In 1837, his father purchased a mill on the Monongahela river, at Fairmont, which he enlarged and improved. Our subject was married in 1840, to Miss C. J. Hamilton, an estimable lady. In 1847, his father deeded the mill property over into his boys' hands—three in number, our subject being the oldest. The boys paid their father a stipulated amount as an income for life. The subject removed to Cameron in 1857, but still retained his interest in the mill for several years after that. He erected a grist mill at the last named point in the same year he settled in the place. After a residence of five years in Cameron, he moved to Wheeling, and built a mill there also. He disposed of his mill in Marshall county several years afterward. He engaged in the milling business in that city from 1862 until 1873, when he sold his interests there, took up a short residence in Bridgeport, and in 1875 he came to Moundsville and took charge of the Campbell House, and is now running a first-class hotel. He is an accommodating landlord, and his lady knows how to cater for the wants of the traveling public.

JOHN L. PARKINSON, attorney at law, Moundsville, was born at Ryerson's Station, Greene county, Pa., September 3, 1834. He removed with his parents, John and Elizabeth Parkinson, to Marshall county in 1842. He attended the Waynesburg College, and graduated there in September, 1858, remaining with R. W. Downing of that town, and read law a short time; then going to Cleveland, Ohio, he attended the law school of that city. He was admitted to practice in his profession in 1862. His father was United States assessor for the First congressional district for the state of West Virginia, and our subject transacted the business for him, and consequently did not practice law for four years subsequent to his admission to the bar. In October, 1864, he was married to Miss Mary M., daughter of John Elliott, of Cameron, W. Va. As the result of their marriage, they have a family of six children—four boys and two girls. His family is identified with the Presbyterian congregation, whilst he is a supporter of the same. In April, 1867, he located at Moundsville and began the practice of law. He has twice been elected prosecuting attorney, and a third nomination was tendered him, which he declined. He is a stockholder and a director in the rolling mill at this place, also attorney for the same. Is mostly employed in all the important cases in court. He is strictly temperate, a fine lawyer and a gentleman.

G. W. DODD, M. D., druggist, Moundsville, was born near Beeler's Station, April, 1842, and the son of George and Mary Dodd. He attended the Franklin College for nearly four years, then took a course of lectures at Cleveland and Cincinnati, and finally graduated in the Physico Medical College in 1873; then removing to West Middletown, Pa., engaged in the practice of medicine. In 1875, he migrated to Strasburg, in the Shenandoah valley, practicing medicine there one year, and then came to Moundsville, where he has been practicing ever since. In August he engaged in the drug business in connection with his practice.

LEWIS B. PURDY, miller, was born in Moundsville, May 3rd, 1841. His parents were Simeon B. and Jane Purdy. He enlisted in July, 1861, in Company I, Third West Virginia Infantry. Was engaged in all the West Virginia battles and went through the second Bull Run fight. Served three and a half years in the army. He assisted in the recruiting of his company and was commissioned 2nd lieutenant, and afterward promoted to captain. When he returned home from the army he engaged in various vocations until about 1873, when he rented the Mound City Mills, and in the year following purchased two-thirds interest in it. In 1867 he married Miss R. V. Lindsey. Their family consists of three children. He is at present holding his second term as Mayor of Moundsville. He is a member of the Disciples congregation. In November, 1878, he became sole proprietor of the Mound City Mills.

JOHN SCOTT, a native of Norristown, Pa., was born in the year 1830. Remaining with his parents until fourteen years o age, when he learned the machinist and engineering businessf at Pittsburgh. In 1847 he went on the river as an engineer, engaging in that for about three years. He quit the river and worked journey work for Phillips & Co., and afterwards for Sweeney & Son, acting as foreman under their employ for eighteen years. In 1867, he migrated to Moundsville and is now engaged in the agricultural works, in which he has an interest. He was married to Miss Elizabeth Dunn, in 1853. Has only two children living. His family belongs to the Presbyterian church. In 1861–2 he was elected a member of the City Council. At present he is school commissioner of Washington district. He is also foreman and manager of the agricultural works.

S. R. HANEN, was born in Coshocton county, Ohio, in 1839, and removed with his family to Washington county, Pa., in 1840. He remained there until he reached his twentieth year when he emigrated to Marshall county, W. Va., locating in Glen Easton, and engaged in school teaching until 1861, then he enlisted in company I, Third Regiment West Virginia Infantry, serving in the infantry two years, and was then transferred to the Sixth West Virginia Cavalry. He received a wound at Ashby's Gap, in the foot, which crippled him for some time and is not entirely free from the effects of it yet. In 1864, he was commissioned second lieutenant of company D, same regiment. In 1865, he was appointed provost marshal of the second brigade, second army division of West Virginia, acting *aid-de-camp* to Colonel Higgins, commanding brigade. Served also in the same capacity with Colonel Lightburn. He was promoted to first lieutenant. He commanded the guard at the trial of the conspirators in Washington city. He resigned in July, 1865, at Fort Leavenworth. When he returned he engaged in school teaching in Marion county, W. Va., where he remained something over a year, and came back to Marshall county, employed in farming and school teaching for several seasons. In 1872, he was elected school superintendent for the county. Was for a couple of years publisher of the Moundsville *Reporter*, under the firm name of Bonar & Hanen. He disposed of his interest in the summer of 1874. In 1864, he was united in marriage to Miss Margaret J. Titus, who died that same year. In 1868, he was married again to Miss Elizabeth A. Titus. They have one child living. He is president, superintendent and one of the directors, and also book-keeper of the West Virginia Agricultural Works. He taught school in Moundsville about three years. He is indentified with the Disciples Church.

J. R. CARNEY, architect and engineer, Moundsville. Born in the above named town, September 26, 1853. He is the son of James and Susan Carney. He invented the design for the jail at Moundsville. He has been engaged in this business for several years. Is at present employed on a design for the extension of the capitol at Charleston. He also follows civil engineering.

REV. J. M. WARDEN was born in Marshall county, June 20, 1833. Educated at West Alexander, Washington county, Pa., where he attended school about three years. He was married in 1856 to Miss Joanna Carman. They have a family of seven children. He was ordained as Deacon in the Methodist church, at Fairmont, March 22, 1863, by Bishop T. A. Morris; and ordained as elder, March 25, 1866, by Bishop D. W. Clark, Morgantown. He is the present pastor of the Methodist Episcopal church of Moundsville, and a member of the West Virginia Conference.

H. W. ROOK.—The subject of this sketch was born in Pittsburgh, Pa. At an early age, he was apprenticed and learned carriage making, but as this was not congenial to his liking, he secured a position in the mercantile job printing establishment of Barr & Myers, and learned all the branches in the art "preservative of all arts." He received a public school education, and improved his leisure hours in patient study when his day's work was accomplished. For two years he was on the corps of the *Evening Chronicle*, and in the winter of 1866, emigrated to Fairmont, W. Va., and in the summer to Moundsville, where he conducted the editorial columns of the *National*, for the Marshall County Publishing Association, where he continued until the fall of 1868, when he married Miss Eliza R., daughter of Capt. D. Roberts. In the following spring, he formed a partnership with Mr. C. M. Shinn, in the purchase and publication of the *West Virginian*, at Fairmont. After remaining there three years, he disposed of his interest and returned to Moundsville, purchasing an interest in the *Reporter* with Mr. W. W. Evans in 1873. New type was purchased and the improvement of the paper commenced. Shortly after doing so, business increased so rapidly, that it was deemed expedient to supercede the old style hand press by more modern inventions, and accordingly a large cylinder press and two "jobbers" were added to the establishment. The wisdom of doing these things proved correct, for soon the *Reporter* was on a solid basis, receiving a hearty support, in a field where its predecessors had pined and died after a short existence. After a short life of wedded bliss, death took his wife in its cold embrace, and in 1876, he married Miss Fannie B. Davis, of Marshall county. His father Frederick G. Rook, was a native of New York, and his mother, Clarissa J. Campbell, of Scotland, came to America at the age of twelve years, with her father and family. In 1874, he was brought prominently before the public as a republican candidate for congress, from the first district of the state.

WILLIAM W. EVANS, senior editor of the Moundsville *Reporter*, is a son of Rev. Walter Evans, and was born in Marshall county in 1851. The first twelve years of his life was passed on a farm. In 1863, his father moved to Moundsville, having been selected recorder of the county. This afforded better opportunities for schooling, which was improved and a liberal education was acquired by W. W. Evans. In 1867, he was apprenticed to the printing trade in the *National* office. Having completed his trade, he went to Waynesburg, Pa., where he attended college several terms, and having but little encouragement in this, he abandoned the idea of completing a collegiate course, and returned to his former home, and was employed on the *Reporter* by Bonar and Hanen. By industrial and frugal habits he was enabled to purchase the paper in 1873, and in the fall of the the same year, H. W. Rook was taken into the paper as a partner. In April, 1874, he was married to Miss Mary Webb, daughter of W. T. E. Webb, Esq., of Waynesburg, Pa. In 1876, he was elected a member of the town council and served as city clerk. In 1867, he became a member of the Methodist Episcopal Church, since which time he has held an official position in said church, having been chosen as leader of class No. 2, besides occupying other positions of trust and responsibility in the same.

W. L. BRIDGES, superintendent of the West Virginia Penitentiary, is a son of Wm. M. and Mary E. Bridges, and was born in King and Queen county, near the banks of the Rappahannock river. His father taught school and practiced law for a livelihood. At the age of eight years his mother died and he was taken by an aunt to raise, who lived near Richmond, where he lived until eighteen years of age, during which time he had attended the Fleetwood Academy of that county. In 1852, he migrated to Baltimore, Md., and clerked between one and two years in a wholesale clothing house. He then went to Augusta, Va., a short time and taught a school. In 1854 he removed to Mercer county, where he remained for several years teaching, and whilst there formed the acquaintance of an estimable young lady, Miss Rebecca J. Thompson, and they were united in wedlock. When the war broke out he enlisted into the service on the Confederate side and served during the war. He held the position of first lieutenant and was then promoted to captain. In the years 1867, '68 and 69, he was engaged extensively in the mercantile business, running a line of stores from Bland to Wyoming county, W. Va., a distance of about one hundred miles, having six establishments in operation, with a capital stock invested of over $15,000. He was elected to the legislature from Mercer county in the year 1871 and re-elected in 1872, and upon his appointment to the superintendency of the West Virginia Penitentiary, April, 1873, he resigned his position. In 1875 he was reappointed, and again in 1877, for the same. He has an interest in the Boone Mining, Mineral and Railroad Company, running through Mercer and Summers counties. He has a family of three children.

WM. MCCONKEY, manufacturer and dealer in tobacco and cigars, Moundsville. Born in Fetterman, Taylor county, W. Va., in May 1856. Emigrated with his parents to Moundsville, in 1867, and hired on a farm for two years, and then engaged in the cigar and tobacco business. He Married Miss Flora M. Lee, of his native town, on July 4th, 1878. He manufactures the McConkey's celebrated seed stogies.

G. C. GORDON, Miller. Born in Wellsburg, Brooke county, Va., February 14th, 1830. He is a son of David and Elizabeth Gordon. He removed with his parents near Lockwood's Landing, in 1842, where he worked with his father on a farm until he reached the age of twenty years. He learned milling, on Captina creek, Belmont county, Ohio, in 1851, after which time he led a migratory life until the rebellion broke out, and then he enlisted, in 1864, and was commissioned First Lieutenant of company C, Seventeenth Ohio National Guards, serving six months. In 1866 he migrated to Moundsville, and rented the River Shore Mill for a short time, then purchasing the same, which he has had in possession ever since. In 1870 he was married to Miss Judith Burch.

D. L. LOGAN, dealer in furniture, undertaking a specialty, Moundsville. Born near Adamsburg, Sept. 16th, 1836. When he was but six years of age his parents removed to Wheeling, where he lived until 1865, then he located at Moundsville, and engaged in the furniture and undertaking business, having learned his trade with William Seamon. In 1856 he married Miss N. J. Burton, of Pittsburgh. They have a family of seven children—four boys and three girls.

RICHARD FERREL, dealer in hardware, Moundsville. The subject of this sketch was born January 25, 1853, at Lebanon, Monroe county, Ohio, and emigrated to Moundsville in 1871. In 1877, he was united in marriage to Miss Mary, daughter of George Edwards. They have one child. He has never aspired to office and has repeatedly declined to be a candidate. He carries a fine stock of hardware, having about three thousand dollars invested in goods all the year round.

J. W. NEY, M. D., was born near Columbiana, Columbiana county, Ohio, October 8, 1817, and was educated in Salem, Ohio. Commenced reading medicine in Minerva in 1835, where he remained one year and then removed to East Fairfield, same state, and completed his study with Sylvanus Fisher, after which time he attended Willoughby Institute one term. He subsequently practiced with his preceptor for four years. He emigrated to Moundsville in September, 1844. In 1840, he married Miss S. K. Wallahan, who died in 1843. He formed the acquaintance of Miss Mary J., daughter of S. P. Purdy, and was married to her in 1846, she only survived two years, when death clasped her also in its cold embrace. He married the third time to Miss Mary J., daughter of H. J. McClean, in 1849. He was the father of several children, but one only is living. He is the oldest practicing physician in the place, and has been a remarkably successful one. His general courtesy as a man, and his ability as a physician, has won for him a host of friends.

REV. JOSEPH A. POMEROY was born in Lawrence county, Pa., and educated at Jefferson College, Canonsburg, Pa. He was licensed to preach in 1849. Ordained in April, 1850. Preached in Fairview twenty-two years, and is now pastor of the Presbyterian Church of Moundsville, W. Va.

J. ALEX. EWING was born October 11, 1845, on the waters of big Wheeling creek, in what is called Sand Hill district, in the county of Marshall, and state of West Virginia (then Virginia); lived on the farm with his parents, William and Martha Ewing. At the age of fifteen years his father died, and the late civil war coming on his two oldest brothers then at home went into the federal army. On their return, in 1865, he left home and joined his eldest brother, J. Dallas Ewing, in the county of Wetzel, in this state, who was then practicing law at that bar. After clerking some months in a store in which his brother was a partner, he attended an academy for three months. In the year 1866, they removed to Catlettsburg,

Ky. There again his brother engaged in merchandising, and he again entered the store as salesman. In the year 1868, his brother closed out his store and removed to this place early in the year. In May of that year he returned here to his native county and commenced the study of law, and was admitted to practice in 1871, and has been engaged in the practice of his profession in this and adjoining counties ever since. In May, 1876, he was elected a member of the city council for the second ward of Moundsville, and in the fall of that year (on the resignation of Captain A. O. Baker, as mayor,) was appointed mayor to fill the vacancy, and in the spring of 1877 and 1878 was re-elected a member of the city council from the third ward, and during those three years has been annually employed and appointed by the city authorities as city solicitor, and on October 8, 1878, was elected a member of the state legislature for the county of Marshall for a term of two years. He was married May 14, 1872, to Miss Mary V. Blake, daughter of William and Ann H. Blake, of Moundsville. They have a family of five children, one boy and four girls. Is a member of the Methodist Episcopal Church. He is a promising young lawyer, and with his integrity to clients and his affability to all he is making rapid progress in practice.

CAPT. DAVID ROBERTS, the fifth son of Jonathan and Rebecca Roberts, was born near Moundsville, Marshall county, West Virginia, January 1, 1801. His father was a native of Virginia, and was born in Culpeper county, in the year 1756. He migrated to Oldtown, Maryland, in 1780, and in 1787 came to this county, locating in Davis' settlement. He raised a small crop the same season, but owing to the hostilities of the Indians and their depredations on the whites, was driven back as far as Red Stone on the Monongahela river, taking refuge in a memorable fort situated there. He returned however in a short time and resided here until his death. He passed quietly and peacefully away in 1827, with a blessed hope of an abundant entrance into "that building not made with hands eternal in the heavens, at Round Bottom, aged seventy-two years.

The subject of this sketch engaged in farming with his father until he advanced to his eighteenth year, then went to keel-boating on the Ohio river in the summer season, and in winter was employed at clearing land, for about three winters. In the spring of 1821 he built a flat-boat and made a trip down to New Orleans, taking with him a cargo of produce which was disposed of advantageously. The trip was made in five months. In the spring of 1822 he took passage on the Manhattan, commanded by Capt. Story, the third boat that ever came up the Mississippi. They were twenty-two days coming from New Orleans to Louisville. From the latter place he took voyage in the Rufus Putnam, and reached home ten days later. He followed keel and flat-boating from 1822 to 1831, and in that year built a steamboat at a cost of over $4,000. He ran it down as far as Tennessee, and made trips up the Hatchee river for one season, and brought her back in the fall of 1832, and after his return he was united in wedlock to Miss Ann C. McClane, a resident of Wilmington, Delaware." He left his wife and went up to Wheeling, just as the cholera broke out there, lying anchored for three days, and when loaded with merchandise, started for the lower country, but was impeded on his course by the cholera at Louisville, where they lost two of their crew. They were all down with the disease except the subject and his wife. After they had journeyed southward and near the mouth of the Ohio river, the Captain took down with the cholera and they were delayed several days there, in consequence, after which time they pursued their course down the river about two hundred miles to the mouth of the Hatchee, and worked on that river until the first of February, carrying up produce and bringing back cotton; then he started for Red river, above the raft, reaching the foot of the same on the 15th of February. The raft at that time was nearly two hundred miles in length. It took them forty days cutting and hauling through, before they reached the upper end, where Shreveport now stands. Roberts, in company with a McKane, first discovered the big spring at this place, which now supplies the entire city with water. From that point they journeyed up to Fort Townsend, a distance of about six hundred miles—cutting wood through the day for fuel, to run during the night, and reaching it on the 10th of April. Two hundred miles above Shreveport they overtook a keel-boat, loaded with government freight, flour, whisky, beans and pork, that was lying there "tide shore." The crew had all taken sick and were unable to go any further. The goods were placed on their boat and carried to the fort, for which he received $1,000. He remained at Fort Townsend four days, then returned, stopping at Long Prairie, situated about four hundred miles below, taking in the second load for Fort Townsend.

Here our subject left the boat in charge of his brother, and started, accompanied with his wife and part of his crew, for home. They took voyage on a keel-boat, that was owned and steered by the Indians, and came down on that boat as far as Natchitoches. They met Mr. Shreve, the founder of Shreveport, about sixty miles up the river in the raft, at a place called Log Bayou, where he was engaged in clearing out the same, with nearly a hundred men. The party remained with him for several days, sharing his hospitality. Mr. Shreve was two years in cleaning out the logs in the river. At Natchitoches the party took passage on a steamboat about the middle of May. At this time the cholera prevailed all along the river and hundreds died with it. When they reached the mouth of Red river they got aboard a larger steamer and arrived at their destination June 1st. On the first of September he again started back for Red river. The river at this season being very low he was obliged to take a flat-boat to Louisville. He was accompanied with an engineer. At Louisville he purchased two horses and with his engineer started on horseback, through Tennessee to Memphis, crossing the Mississippi and on to the Arkansas river, crossing at Little Rock, striking the Red river at Lost Prairie, camping out after leaving Memphis. On the 20th of October they arrived safely at their destination. Upon their arrival they found the boat sunk. She had run aground shortly after he left her and never made a trip after that. The crew, who had the vessel in charge, took sick and deserted it, returning home. In the spring of 1834 he loaded his keel-boat with cotton and made a trip to the mouth of the river, delivering his goods to the owner at that point, and returned home about the 1st of April. In the summer of the same year, he built another steamboat, at a cost of $5,000, styled "The Denmark," and navigated up and down the Hatchee river for several years. He sold that boat in 1838, and in 1839 the parties purchasing it made a trip up the Red river and there it sunk near where the first one went down. In 1839 he and his brother built another one, "The Walker," which they held for about one year and disposed of it at New Orleans. In 1840 his brother died at Randolph, Tenn., and in 1841, the subject got out timber for another, but it was not built until 1844, and cost $9,000. It was styled "J. E. Roberts;" named in honor of his deceased brother. It was run on the Tombigbee from Mobile to Cotton Gin. On the last of May, 1845, he returned home with a load of sugar and molasses for Pittsburgh. In 1846 it was loaded for Red river and run that season from New Orleans to Shreveport. The latter place had then grown to be quite a town. The distance between these two points is about a thousand miles. In the fall of that year he sold his boat to some parties that carried General Taylor and his men from Red river to the Rio Grande, in the commencement of the Mexican war, and were the first troops sent from there around. In 1846 he retired from the river and paid his entire attention to farming, in which he has been engaged ever since. He heard the celebrated Davy Crockett make his first speech at Bolivar, Tenn., in the year 1828, and remembers well how he looked when he came riding up to the court house on a mule, with a Spanish saddle, no blanket or any thing else under him. He carried a saddle-wallet full of papers to prove, as he said, his cause, but in the course of his remarks forgot to refer to his papers. When he had finished Mr. John H. Bills, who had been listening attentively, spoke up as follows:

"Davy, why didn't you produce your papers to prove your politics?"

Davy scratched his head a moment, and then in his eccentric manner said:

"Every man knows that I am a Jackson man."

That fall he was elected to congress by a small majority.

Captain Roberts is next to the oldest male settler born in the county now living here. He is seventy-eight years of age, and is yet hale and hearty, with an excellent memory, and bids fair to live many years yet. He has always been temperate—never using tobacco in any shape.

WALTER EVANS, a native of Maryland, was born near Baltimore city in the year 1815, on the 15th day of September. In the fall of 1816 his parents removed to western Virginia, now the state of West Virginia, Marshall county, and, as can well be imagined in those days, had hard times and poor chance for obtaining an education. He was sent, occasionally, to the country school, taught in a log cabin with but two windows on either side, and instead of glass the windows were made of pa-

per. He always had an inclination to learn, and a love for books. He joined the M. E. Church at the age of twenty-one years, under the ministration of Rev. Joseph Boyls, an excellent young man. At the age of twenty-two he commenced teaching school, and taught for two years. In the fall of 1838 he emigrated to Iowa. He was married in the fall of 1839 to Miss Sarah Roberts. In March 1847, with his sick wife and family of four children, he started to Virginia, where his wife died in the year 1854, with a full triumph of a living faith. At that time his family had increased to seven children. On January 25th, 1853, he was licensed to exhort. In January 1855 he was licensed to preach. In 1855 he married again, to Mrs. Susannah Hutchison, an excellent woman. In 1862 he buried his eldest son, who had been killed at the battle of Winchester, on the Strasburg road. In 1863 he was elected to the office of recorder, for Marshall county, being the first under the new state organization, and in 1864 was re-elected to that office. He was elected clerk of the Circuit Court in 1866, and was re-elected in 1870. He is at present engaged in the mercantile business.

Judge Wm. Alexander, was born in Ohio county, now West Virginia, May 10, 1814. His father, of Scotch-Irish, emigrated to America, landing at the New York harbor, and subsequently settled at Short creek in the above named county. His mother's maiden name was Margaret Davis, who was born in Ireland in 1781. Joseph Alexander was married to her in 1803. She died in 1853, and in 1870, his father died on the Flats of Grave Creek, in his 90th year. In the early part of life, our subject followed farming with his father. Received a limited education in the subscription schools. Attended one term in the Franklin College, of New Athens, Ohio. In August, 1835, was sworn in deputy sheriff of Marshall county. Engaged in the mercantile business in Moundsville, in 1837, which he followed until 1842, and then went back again to farming. In October, 1844, he married an affable lady, Miss Ellen C. Tomlinson. He retained the office of deputy sheriff from 1835, to 1852, when the constitution of the state was changed, after which, he was appointed aid to Gov. Pierpoint, and served under the restored government up till 1863. Was then appointed aid to Gov. Boreman—colonel of Cavalry, remaining in the service until the close of the war. Elected to the legislature for two terms, during the years 1864 and 1865. In 1876, was elected presiding justice of the county, which office he still holds.

In the year 1845, he built where he now resides, on the gravel bottom, one mile west of north from the court house, Moundsville.

CAMERON DISTRICT.

From what little records that are now extant, we are only able to procure a meagre and very indefinite account of the organization of Cameron district. It appears the commissioners met at Glen Easton on the second of September, 1865. Thomas Wilson's name being the only one given on the book as commissioner. The name of Luther Rice occurring in said record as clerk, and here it is presumed an organization was effected.

Borders on the south on Liberty district, on the east on Greene county, Pa., on the north on Webster district. It is irregular in shape, the lines following roads and streams. The land is hilly, soil is good and produces excellent crops of grass and grain of all kinds. This district is also well adapted for raising sheep. Many of the farmers are turning their attention to raising wool in preference to grain, the former proving the more profitable, with the least amount of labor. Fine wooled sheep are preferred to the coarser ones. This district furnished at the Centennial Exposition at Philadelphia, 1876, ten fleeces of fine combing wool, raised by John Ingram, Esq., that received a medal and diploma for length, fineness and density of fiber. The district is well watered by never failing springs, and several streams, such as Upper North Fork Grave creek, Straight run, Burche's run, French run, and several smaller streams. The public roads are generally good. In most cases they are located on high ground, and where they descend to the streams or low ground are of easy grade. The Waynesburg pike leading from Wheeling to Waynesburg, is located through the northern portion of this district.

Cameron is watered by Big Grave creek and its smaller streams. The surface of the country is hilly but the soil is very fertile and productive. Perhaps no other district in the county of Marshall contains as many good farms as this one does. Its arable acres number 19,825 and a fraction. No minerals of any consequence are found here.

EARLY SETTLERS.

The oldest settlers in the immediate neighborhood were Reason B. Howard, John Ryan, John Welling, Long John Chambers, George Kerr, James Howard, Abram Mackey and Wm. Cecil. Of these men R. B. Howard and James Howard are the only ones living at present. R. B. Howard is in his eighty-fourth year.

The oldest inhabitants at present are R. B. and James Howard, Samuel Kettle, John Coe, Brice Howard, Joseph Loudenslager, John Parker, Levi Boyd, Wm. McDonald, John Riley and George W. Byrnes.

EDUCATION.

Since the introduction of the free school system her educational interests are carefully looked after. In an educational point of view, this district will compare favorably with the best. In 1865 the number of youths between the ages of six and twenty-one years reached 585. At present the township has an enumeration of 611 youths. It has ten school houses, and employs eleven teachers. Expends annually for educational purposes about $2,212. The valuation of school property is estimated at $8,000.

WEALTH OF CAMERON DISTRICT.

The following is obtained from the assessor's report. The value of land is $327,439; on buildings on the lots, $29,617, and the value of lots including buildings is $45,167. This we find makes an aggregate sum of $402,223.

VILLAGES.

In this district is found the village of Glen Easton, Loudensville, Cameron and Rock Lick. Cameron is the most important of these. Since the building of the Baltimore and Ohio road these places have sprang into existence. Prior to this, so we are informed, the territory now comprising Cameron district was sparsely settled, and there were no towns.

GLEN EASTON

derived its name from an early settler who owned the land upon which the village is now built. Lots were disposed of to a few parties during the construction of the Baltimore and Ohio railroad. It contains two dry goods stores, one steam grist mill, one shoe shop and a post office.

CAMERON.

This enterprising little village lies in a narrow valley and on either side of Grave creek, on the line of the B. & O. R. R., seventeen miles east of Moundsville, the county seat of Marshall county, and twenty-seven miles east of Wheeling, being three hundred and fifty miles west of Baltimore, Md. It is acknowledged to be the best business centre between Wheeling and Grafton. On both sides of this place rise very steep hills. To the south, and up against the base of which the town is built, is a mountainous hill, over a hundred and fifty feet in altitude, and almost perpendicular in places. To the north again appears a steep bluff, debarring the town's expansion in either of these directions. In fact, the town now covers all the really eligible land for village property. Its trade is extensive, reaching Wetzel county on the south and Pennsylvania on the east, being the most acceptable shipping point for Greene and Wetzel counties, east and west.

WHEN STARTED.

The town was not regularly laid out with streets and alleys at first. Lots were sold by David McConaughey, the original owner of the land, in parcels and localities to suit purchasers, and the price estimated by the quantity and locality of the territory desired, until in 1858, when Oliver and Marshall Jackson, with Dr. S. B. Stidger, bought and laid out in streets and alleys one hundred and eleven acres on the south side of the B. & O. R. R., which is known as Jackson's and Stidger's addition to the town of Cameron. Subsequently Wm. McConaughey laid out and numbered a row of lots on the north of the county road and railroad. The first building was erected by Wm. McConaughey, for a store-room, in 1851. Mr. Martin Dunlap was the contractor and builder thereof. The eastern section of this

house is now known as the Corcoran house. Goods were sold in this building by him for a few years. An addition was made to it when McConaughey removed to the R. R. company's ware-house, which had been built by one Cameron, the right-of-way agent for the Baltimore and Ohio R. R., and was the second house put up in the place. It was from this gentleman that Cameron received its name, and who in 1853 took the cholera and died suddenly at Moundsville, and was carried to Charleston, Jefferson, county, W. Va., for interment. He was a very prominent man at the time of the construction of the railroad. Dr. S. B. Stidger built the third house, which was used far an office, but which has since been torn down, and the hardware store built upon its site.

In 1855 there were only four good buildings in the place. Andrew Clark was the second merchant. He sold to John Miller in 1864. In 1869 Mr. Woodburn commenced the mercantile business, and in 1872 Hicks & McDonald began. Alexander Black carried on a small dry goods store for a short time, then went to buying grain and shipping.

Jacob Rit and John Marshall started the first blacksmith shops in the village in 1855

SCHOOLS.

The first school building in Cameron was built in 1854, for both church and school purposes the dimensions of which was 20x22 feet. Samuel Patterson, John Pipes, Lloyd Parkinson and Eli Brant, were among the first teachers. In 1865 a new school building was erected and the old one torn down. It was built at a cost of $2000, and is a good substantial house. In 1878 the board of education bought a church edifice which is used also for school purposes. The schools are in a flourishing condition and the citizens of Cameron are much delighted to know that the children are well provided for, educationally speaking.

The two school buildings, both of which are frame, cost about $3,000. The schools have enrolled 250 pupils, with a daily average attendance of 200. Expends annually for teachers, &c., about $500. The schools are graded. Mr. John Lorain, the first superintendent of the schools of Marshall county was probably the first who taught in the graded school.

THE OLDEST SETTLERS.

The oldest settlers in the town of Cameron, were Reason B. Howard, John Ryan, Wm. Gosney, Isaac Hubbs, Isaac Coe, Philip Coe, John Welling, John Chambers, D. McConaughey, and George Kerr. In 1851, all the land lying south of the south branch of Grave creek was in woods.

POSTMASTERS.

David McConaughey was the first postmaster at Cameron village, having received the appointment under President Pierce. He held the office for several years. In March, 1857, J. R. Bell, received the post office under Buchanan's administration, and held it until 1861. E. Whitmire, was then commissioned postmaster, retaining the office up to 1865. In January of the year 1867, M. C. Todd, was appointed by President Johnson, and filled the office until March 4, 1867, when John W. Davis, under the same administration, was placed in his stead. Mr. Davis has been holding that office ever since.

HOTELS.

Mr. J. A. Fry, started the first hotel in the building erected by McConaughey for a store in 1852. Some time afterwards John Fitzgerald started a hotel, where Scott now keeps. In 1873, Mrs. Marling started a hotel in the property now known as McDonald's, where she remained until 1875, and then purchased the Fitzgerald hotel, and continued for a while, and then removed to the present stand. The names of the present hotel keepers are as follows: Scott, Marling, Wells and Cochran.

THE FLOURING MILL.

In 1857, Oliver and Marshall Jackson erected the steam grist mill, which is still in operation. Reese, Dunlevy & Co., are proprietors of this mill at present.

STAVE FACTORY.

This establishment is run by Miller & Boerner. It was built in 1869. They can manufacture staves sufficient for one thousand kegs per day. These works find ready sale for their staves.

THE FREE PRESS.

In 1875 in the latter part of December the first number of a five column quarto journal styled *The Free Press* made its first appearance in Cameron, which was the primitive and only newspaper published in the village. It was printed by J. R. Faulkers but was short-lived. Mr. F. issued the *Free Press* for about a year and a half at a subscription price of $1 50. For want of proper support he was obliged to discontinue this little journal, which, it is said, was a spicy paper during its lifetime.

SHIPPING.

As a shipping point for stock, Cameron surpasses many towns along the line of the Baltimore and Ohio railroad of more than double its population. In 1878 over one hundred and seventy-five car loads of stock, (principally hogs) were shipped from Cameron. For passenger and freight the receipts averaged $1,200 per month. It is thought that fifty car loads of grain would not be too large an estimate to place upon the shipments as an average for each season. The station agent reports for the month of February, 1878, alone, the shipping from Cameron of forty cars of stock, grain, &c. Although the trade of the town is not quite as large and extensive as it was several years ago, owing to the fact that country stores have been started through the territory which cut off a certain portion of trade from the town, nevertheless the shipments remain the same with some times increasing proportion. A great deal of grain and stock is wagoned to this station from Greene county, Pennsylvania, and carred here for the eastern markets, and often, too, from a portion of Wetzel county, shipments are made at this place.

INCORPORATED.

Cameron at one time was incorporated. This occurred about the out-breaking of the war and only remained incorporated for several years. It received its charter, so we are informed, from old Virginia. The village is again making an effort for incorporation, and it is thought likely to succeed before long.

VALUATION OF PUBLIC BUILDINGS.

The valuation of public buildings in Cameron, namely: Churches and school property is estimated at $12,000.00.

FAIR.

The first fair held in Cameron was in the fall of 1871. It is styled "The Western Pennsylvania, Eastern Ohio and West Virginia Agricultural Society." Dr. Stidger and Criswell originated the fair and it was run by them for two years, with very flattering results, clearing $1,200.00 the first year after paying liberal premiums. In 1873, Dr. Stidger sold his farm upon which the grounds were situated, and then a company of twenty persons took it in hand and one fair was had under that association. Since which time Squire Keyser has held two fairs. The two first exhibitions paid for the enclosure of the grounds and the erection of the necessary buildings, which cost $2,100.00. Other improvements have since been added to the amount of $700.00, making the total cost of fair grounds $2,800.00.

In connection with the history of Cameron, the following anecdotes have been related: There lived a family by the name of Hines, near what is now Cameron Station. About the year 1788, a bushel of apples was procured by one of the family in Washington, Pa. Being thought considerable of a luxury at that time, they were sparingly distributed among the members of the family. A little —— had finished one and accidentally choked on the core. After some time it was relieved, and through curiosity a member of the family procured the heart seed and planted it. It grew to a large tree, and is still standing on the farm now owned by Mr. David McConaughey.

The Hines brothers, Joseph, Christopher and John, built a block-house for defense against Indian depredations. Near it at one time, they had a nice lot of hogs fattening for use. A band of savages suddenly came upon them and took quite a fancy to them, and asked permission of the Hines brothers to kill one. Permission was readily granted and the Indians assisted by the family soon killed and dressed the hog. The circumstance afterwards proved to be of material benefit to the Hines family. It was the means of sustaining friendly relations between them and the savages.

The following is related of Christopher: On one occasion he climbed a poplar tree for the purpose of procuring bees. He

ventured too far out on a limb; it swung down, and he was unable to reach the body of the tree. With great presence of mind he asked his companions to clear away the stones to give him a soft place to light. His companions fearing the result, admonished him to pray. "Clear away the stones and logs, and never mind the prayers," said he. The logs and stones were finally cleared away. Christopher unlimbered and reached the ground in safety. "Now," said he, "If I had waited to pray there would have been a dead man about here; we must *do* something as well as pray."

CHURCHES.

METHODIST EPISCOPAL CHURCH.

The Methodist Episcopal Society at Cameron, was organized in the year 1854 by Rev. A. A. Reager, pastor of the Grave creek circuit, of which it continued to form a part for some fourteen years. The following named persons were among its earliest members: George W. Merchant, Daniel Anderson, William Steele, Joshua Fry and John Marshall. Services were held sometimes every two weeks, and frequently only once a month. It was under the pastorate of Revs. F. Guthrie, William R. Howe, J. L. Irwin, D. H. K. Dix, T. H. Trainor, R. L. Woodyard, J. A. Kibbee and R. M. Wallace.

In the year 1868, it became a station, with one hundred and forty members, J. P. Farmer being pastor. Since the time referred to above, it has been served by the following ministers: F. M. Hughes, M. Dowler, H. C. Sandford, T. B. Hughes, J. L. Clarke and A. Hall, the present pastor.

The first officers of the church after it became a station were as follows: Dr. S. B. Stidger, William Clouston, John Marshall and John Burley, stewards. The two former, with Dr. John Pipes, were trustees.

The chapel is a neat frame, and was erected in 1868 at a cost of $3,300.

The society, under the pastorate of their courteous and agreeable minister, is in a flourishing and prosperous condition, with a membership of 250, and a good Sabbath school—the nursery of the church. Where you find an active Sabbath school, there can also be found a live church, as is the case in the above church.

PRESBYTERIAN CHURCH.

The Presbyterian Church of Cameron was organized September 23, 1867, by a committee of the Presbytery of Washington, consisting of Revs. J. S. Pomeroy, Jonathan Crosse and Samuel Graham. The following named persons united with the church in its organization, viz: Mr. Wm. Hosack, sr., Mrs. Nancy Hosack, Mrs, Mary Marling, Mrs. Sarah Grey, Mr. Gustavus Bowers, Mrs. Mary Ellen Bowers, Mrs. Minerva E. Davis, Mr. Milton McCuskey, Mr. John B. Kilpatrick, Mrs. Mary Kilpatrick, Miss Rebecca Fisher, Mr. Martin B. Cummins, Mrs. Clarinda Cummins, Mr. John Fry, Mrs. Rebecca Fry, Mr. Geo. W. McCuskey, Miss Mattie McConoughey, Mrs. Ann McConoughey, Mr. Ernest Cully, Miss Caroline Cully, Miss Nancy J. McCuskey, Miss Elsinda Cummins, Mr. James Miller, Mrs. Elizabeth Miller, Mrs. Mary Cunningham, Mrs. Mary McCuskey, Mrs .Mary Pearsons, Mrs. Nacy M. Wallace, Mr. David Murphy, Mrs. Eleanor Grey, Mr. Samuel Wallace, Mrs. Maria Burley, Mrs. Susan Murphy, Mrs. Kane, Mr. J. H. Goshorn, Mr. C. C. Turner, Mrs. A. M. Turner, Mr. Virgil L. McCuskey.

Messrs. Wm. Hosack, Sr., Gustavus Bowers and George W. McCuskey were elected ruling elders. Efforts were immediately put forth to erect a church edifice. The building was begun early in the spring of 1868, and was completed and dedicated in autumn of the same year, at a cost of about $3,000.00. It is a brick structure, fifty feet long, thirty feet wide and sixteen feet in height, from the floor to the ceiling. The interior of the building is well arranged, and will comfortably seat about 225 persons. The congregation has lately taken measures to erect a belfry.

The first minister of this church was Rev. D. H. Laverty, who labored here, half of his time, from January 1st, 1868, until April 1871. During the two following years the church was without a pastor, but was supplied occasionally by ministers of the Presbytery, chiefly through the efforts of Elder J. B. Kilpatrick. In April 1873, Rev. J. S. Pomeroy began to labor here a portion of his time, and continued for three years. On May 1st, 1876, Rev. R. B. Farrar, the present pastor, who is a genial and scholarly gentleman, began to labor as ministerial supply for this church, in connection with the Church of Unity. The church here has been weakened by the removal of Elder J. B. Kilpatrick and other members, occasioned by the removal of the R. R. engines and repair shops. It has sustained a flourishing Sabbath School ever since its organization. The elders are Messrs. Milton McCuskey, Wm. Keyser, Isaac Moose and Dr. M. R. Boyd.

SECRET SOCIETIES.

Cameron Lodge, No. 17, A. F. and A. M.—This society was originally organized February 22, 1858. Upon the petition of the following named persons: John H. Dickey, David W. Gray, Dr. S. B. Stidger, Solomon Kraus, John Fitzgerald, John Woodburn and Francis Gray, a dispensation by the Grand Lodge of the State of Virginia, was granted. A charter was received on December 15, 1858, by them from the Grand Lodge of Virginia, signed by Powhatting B. Stark, Grand Master, and John Dobe Secretary. It was then styled Cameron Lodge, No. 180. In 1863, West Virginia was formed, and then in the year 1867, a new charter was granted under the new state, which was dated January 24, 1867. This was signed by William J. Bates, Grand Master, and Thomas H. Logan, Grand Secretary, and then renumbered 17.

First officers and members under the charter granted by the Grand Lodge of Virginia, December 15, 1858:

John H. Dickey, W. Master; David W. Gray, S. Warden; Francis Turner, J. Warden; William T. Head, Secretary; John Fitzgerald, Treasurer; William H. H. Showacre, S. Deacon; John Woodburn, J. Deacon; John W. Allen, Tyler.

First officers and members under the charter granted by the Grand Lodge of West Virginia, January 24, 1867:

John H. Dickey, W. Master; John Miller, S. Warden; Charles A. Woodward, J. Warden; Martin C. Todd, Secretary; Charles Boenar, Treasurer; Francis M. Reynolds, S. Deacon; John Kilpatrick, J. Deacon; Sample Parker, Tyler.

Present Officers.—James W. Dunlevy, W. Master; Francis M. Reynolds, S. Warden; Robert McConaughey, J. Warden; James McCuskey, Treasurer; Darwin A. Woodburn, Secretary; E. Perry Richardson, S. Deacon; Josephus Hicks, J. Deacon; Samuel Mellon, Tyler.

The society has been very successful since its organization. Everything seemed to work for its good, and nothing to impede its onward movement in numerical strength and in the accumulation of means. To-day, it has realty to the amount of $3,000 00, and a rental income of $200 00 per annum. Membership at present numbers 60. Since the organization of this institution, it has initiated about one hundred. Meets on the first and third Tuesdays in each month in their Hall.

Cameron Lodge, No. 36, I. O. O. F.—This society, which has for its principles "Friendship, Love and Truth," was organized October 18, 1867. The charter members were as follows, viz: W. R. McDonald, jr., J. M. Pipes, David Dickey, J. W. A. Lily, and B. W. Andrews. The first officers elected after its institution were for Noble Grand, Capt. J. M. Pipes; Vice Grand, J. W. Lily; Secretary, W. R. McDonald; Treasurer, B. W. Andrews.

They organized in the Mason's Hall, but held the first meeting over McConaughey's store, and then removed to the Fitzgerald Hall.

The following named persons are the present officers:

Noble Grand, P. Willard; Vice Grand, James McCuskey; Secretary, O. Moore; Treasurer, D. A. Woodburn.

This body has met with success, both financially and otherwise. Its present membership is fifty-one. Since its formation here it has initiated about 122, and five deaths have occurred. The society now meets in its own hall, which is tastefully furnished. Lodge property is estimated to be worth $2,000. Meets every Wednesday evening.

Pearl Lodge, No. 427, K. of H.—This lodge was instituted on the 18th of January, 1877. The society organized with nine members, as follows: J. M. Pipes, J. W. Dunlevy, W. H. Hicks, W. H. Reese, J. H. Fitzgerald, E. S. Davis, H. Pipes, C. F. Boerner and Dr. M. R. Boyd. The following officers were then elected and installed into their respective places: Past Dictator, J. M. Pipes; Dictator, J. W. Dunlevy; Vice Dictator, W. H. Hicks; Chaplain, W. H. Reese; Reporter, T. C. Pipes; Financial Reporter, E. S. Davis; Treasurer, C. F. Boerner.

The subjoined list shows its present officers: Past Dictator, J. M. Pipes; Dictator, J. H. Fitzgerald; Vice Dictator, Isaac Moose; Reporter, T. C. Pipes; Financial Reporter, J. L. McDonald; Treasurer, C. F. Boerner; Chaplain, J. R. Jones; Trustees, J. W. Dunlevy, Isaac Moose and C. F. Boerner; Representative, J. M. Pipes; Medical Examiners, Drs. S. B. Stidger and M. R. Boyd. It has, at this writing, Jan. 1869, a membership

of twenty-five. Meets in the Fitzgerald hall twice a month, on Saturday evenings.

Lodge of the Knights of Pythias.—This guardian brotherhood, the Knights of Pythias, was organized September 1st, 1873. The charter members, petitioning for a lodge here, were as follows:

John Miller, C. A. Woodward, Charles F. Boerner, W. T. McGhan, T. C. Pipes, T. L. Davis, Hyder Riley, F. M. Reynolds, J. S. Lemon, J. A. Fitzgerald, E. W. Fitzgerald, C. H. Mackin, John T. McGhan, A. J. Booher, M. R. Boyd and William Collins.

First Officers.—C. A. Woodward, P. C.; John Miller, O. C.; F. H. Mackin, S. C.; F. M. Reynolds, P.; L. C. Pipes, K. of R. and S.; T. L. Davis, M. of F.; C. F. Boerner, M. of E.; W. T. McGhan, M. at A.

The following named members comprise the list of the last officers elected:

J. B. Hicks, P. C.; John T. McGhan, C. C.; T. L. Davis, S. C.; T. C. Pipes, P.; William M. Nowels, M. of E.; F. M. Reynolds, K. of R. and S.; D. T. Murphy, M. at A.; Wilford Emery, O. G.

Stated meetings on Monday evenings. Hall in Fitzgerald building. Membership at present about 20. The principles inculcated in this institution are to soften the pillow of its deceased and dying brethren, and cheering the widows and orphans by assisting them with means for their support.

CAMERON CEMETRIES.

These grounds were purchased of Robert Crawford, and contain two acres. On the 11th of May, 1868, it was incorporated. The officers names of this incorporation are as follows: John Miller, Wm. Franklin, W. B. Williams, sr, J. B. Kilpatrick, Wm. Hosack, sr., Josiah Lydick, B. Parkinson, J. H. Pipes and C. A. Woodward. This beautiful cemetery is located at the west end of town.

THE SUMMARY OF BUSINESS.

Cameron contains a population of about 600. It has four hotels, four dry goods stores, one clothing store, two tin shops, one drug store, two furniture stores, four saloons, two saddler shops, three blacksmith shops, one steam mill, one stave factory, one hardware store, two tailor shops, one jewelry shop, two shoe shops, four physicians, three churches—Methodist, Presbyterian and Catholic, three secret societies and postoffice with daily mails.

LOUDENSVILLE.

This village is situated in Cameron District, and received its name from a Mr. Louden, the original owner of the site upon which the place now stands. It is a very small village, even if it can be called such. Contains one wagonmaker shop, blacksmith shop, dry goods store, a steam grist mill with saw mill attached. It has a population of about fifty inhabitants.

ROCK LICK.

Another small place, with a post office, shoe shop, wagonmaker shop and one blacksmith. Population about eighty. The Cumberland Presbyterian Church and a school stands adjacent to the village.

ROCK LICK PRESBYTERIAN CHURCH.

In 1866 a small congregation, then being a branch of the Harmony Church, Jacksonville, Greene county, Pa., erected a church edifice at this place, at a cost of $2,375. The house was dedicated on the first Sabbath in June, 1867. Rev. A. B. Miller, D. D., preached the dedication sermon. A permanent organization was effected on the 20th of June, 1868, Rev. A. W. White delivered the sermon on that occasion. Revs. P. Axtell, G. W. McWhorter, J. B. Nail (now in Japan,) and P. R. Danley have ministered unto the congregation since its establishment. Messrs. John Laughlin, Joseph Snider, J. White, Adam Earlywine, Wm. Keller, James Buchannon and Mrs. John Parkinson, Mrs. John Laughlin, Mrs. Eliza Snider, Mrs. Mary Earlywine, Mrs. Jane Keller, Mrs. Margaret White, Mrs. A. Barney, Mrs. James Buchannon, Mrs. Mary Archer and Miss Mary Parkinson were the primitive members. The congregation is a prosperous and active band of christians.

"THE BLOCK HOUSE ON THE FRONTIER."

On Liberty Ridge, about two miles east of Cameron, stood for many years an old church building known as the "True Wesleyans," but referred to oftener as "The Block House on the Frontier," being the primitive church there. The building stood on the farm of Mr. Z. G. White. Nothing now remains of the church but a little debris scarcely sufficient to mark its site. It was built about the year 1848. Among the first members were Z. G. White and wife, William Clyde and wife, Rachel Clyde; Sarah Jane Clyde, Benjamin Chambers and Elmer Chambers and wife; Nancy Piles, David Clyde, Noah White, sr. and wife, Elmer White, Reason and Elizabeth Riggs, Andrew Murdy, and Mrs. Chambers. The church building was not erected until several years after its organization was effected. Prior to this meetings were conducted around in private houses among its members. Rev. William Crooks was the first minister who remained with this congregation two years. He was followed by Revs. J. P. Belker, Caleb Preston and others.

Mr. Solomon Hendrickson was also one among the first members of this congregation and who subsequently became an itinerant local preacher. Whilst engaged in preaching in a church located about a mile from the above, was attacked by a *posse* of enraged men and mobbed as he stepped from the church door. He had been showing up the evils of slavery and made the remark in the course of his sermon that, "We should do unto others as we would they should do unto us; and if that was obeyed, it would destroy slavery." For this observation he was mobbed. He received such internal injuries from the hands of the mob that he died in three weeks from the effects.

CLOUSTON CHURCH.

The first Methodist Society in what is now called Cameron district, was organized in 1836, by Moses Tichenell, pastor of Marshall circuit, assisted by a local preacher named Edward Dowler.

The congregation was composed of the following persons: William Clouston and Jane, his wife, John Ryan and wife, John Tarr and wife, Mrs. Isaac Coe, Mrs. Philip Coe, Edward Strickland and Elizabeth, his wife, John Merrical and wife, Zuby Gosney, Silas B. Kittle and Susan, his wife.

William Clouston was class leader and held meetings in his own house, which was open for preaching twice a month. Through his efforts, mainly, a chapel was built in the year 1841, which still bears his name. It is situated two miles north of the village of Cameron, built of logs in the old style. There worships in it a small but active congregation.

DR. S. B. STIDGER was born December 1, 1830, in Springfield, Jefferson county, Ohio. Educated in the common schools of that day. Read medicine in his father's office at Moundsville. In 1851 he located for practice at Jacob Burley's, near the present site of Cameron, where he remained one year. After the closing of the track of the Baltimore & Ohio railroad, in 1852, he removed to, and built the second house in Cameron. On the 12th of September, 1864, he was married. In 1856 he migrated with his family to Iowa, where he practiced, in partnership with his father, for one year. In 1858 owing to the sickness of his wife, he concluded to return to Cameron, where he continued to have a large practice until the breaking out of the rebellion. At the commencement of the war he raised a company and was; mustered into the service of the United States army in 1861, Was elected captain, but declined on account of inexperience, in favor of Captain James Donly, who had served in the Mexican war, and accepted the position of first lieutenant, serving three months, the time for which he enlisted. Under the President's call for three months men, most of this time down he served in the medical department with detached forces reporting to Dr. Thoburn, then surgeon of the First West Virginia Volunteer Infantry. At the expiration of three months the regiment was re-organized and Dr. Thoburn was promoted to colonel and wrote to our subject requesting him to go out with him as surgeon of his regiment. He then went before the board for examination and passed, and received the position of assistant surgeon, serving until July, 1862, when he resigned on account of having been appointed administrator of his father's estate, before entering the service, and thinking the war would not last long, when it could be closed up; but finding that it would be prolonged, and that the estate was losing by parties entering the army indebted thereto. He had charge of the post hospital at Cumberland, Md. He returned from the field to the regular routine of hospital duty. Since the war he has had a large practice. In 1866–7 he attended his last course of lectures at Jefferson Medical College, Philadelphia. In 1868 was elected to represent his county (Marshall) in the legislature.

M. C. TODD, tailor; born in Ireland, 1829; migrated with his

parents to America, when a mere child; learned tailoring in Pittsburgh; moved to Moundsville in 1853; married in 1860; removed to Cameron in 1861, where he is engaged in tailoring.

F. M. REYNOLDS, furniture dealer, was born in Greene county, Pa., October 15, 1830. At the age of seventeen, he apprenticed to learn the cabinet making trade. After serving four years at the business with his "boss," he then lead a migratory life for several years. In 1853, he was married to Miss Sarah M. Harris. He is the father of six children. Removed to Cameron, and started in the furniture and undertaking business, and in the year subseqeunt, removed his family to this place. He is a member of the Presbyterian church. Was elected, and held the office of mayor of Cameron, one year. Elected and held the office of township treasurer from 1867 to 1870. He drives a good trade, making a specialty of undertaking.

W. S. PIPES & BROS., dealers in watches, clocks, jewelry, spectacles, silver and silverware, &c. This firm started in 1874, and has been carrying on a good trade ever since. They keep a fine stock and sell at reasonably low prices. One year ago, a branch office was started at Waynesburg, Pa., where they are also establishing a good business. They are gentlemanly fellows and deal fairly with all customers.

E. S. DAVIS, druggist, was born in Richmond, Va., in 1850. Migrated to Cameron on the 3d of August, 1877, and opened out a drug store, which business he has carried on ever since. He keeps on hand constantly a fine stock of goods, and sells lots of medicines.

A. S. HARRIS, harness maker, Cameron, was born in Prince William, Virginia, in 1800. Migrated to above village in 1857, and started the first saddle shop in the place. Was married in 1825, and is the father of seven children. He manufactures harness and saddles, and does general repair work.

SAMUEL HOUSEHOLDER was born in Morgan county, W. Va., in August, 1828. He was married August 11, 1853, and raised a family of seven children. His business is repairing telegraph. Post office, Cameron, W. Va.

GEORGE A. STIDGER. M. D., was born in Moundsville, W. Va., December 27, 1844, and moved to Cameron May 10, 1864. He is the father of three children. Post office, Cameron, W. Va.

LEE WELLS was born in Marion county, W. Va., July 16, 1850; came to Cameron, W. Va., in 1871, and was married April 15, 1875. He has one child. Business, hotel keeper. Post office, Cameron, W. Va.

JOSEPH SNYDER was born in Somerset county, Pa., May 10, 1833, came to Cameron township, Marshall county, W. Va., in 1851, and was married October 5, 1854. He raised a family of three children. Business, blacksmith and wagon maker. Post office, Rock Lick, W. Va.

W. M. GLUMPLY, M. D., was born in Ohio county, W. Va., September 3, 1850, and moved to Rock Lick, Cameron township, Marshall county, W. Va., in 1873. He was married May 28, 1874, and has one child. Post office, Rock Lick, W. Va.

CHARLES E. BELL was born October 23, 1851, in Marshall county, W. Va. He was married November 20, 1872, and has one child. He is employed in farming. Post office, Rock Lick, W. Va.

JOSEPH HUBBS was born in Webster township, Marshall county, W. Va., August 7, 1828. He was married in September, 1848, and raised a family of ten children, seven of whom are living. He is a farmer and stock raiser. Post office, Cameron, W. Va.

J. D. COE was born in Marshall county, W. Va., July 13, 1833. Business, farmer and stock raiser. Post office, Cameron, W. Va.

ELIJAH ADAMS was born in Greene county, Pa., May 24, 1841, and moved to Cameron township, Marshall county, W. Va., in 1871. He was married May 24, 1873, and had four children, three of whom are living. He is a farmer and stock raiser. Post office, Cameron, W. Va.

JESSE BANE, JR., was born December 5, 1842, was married March 29, 1866, to Hannah Rayl who was born April 11, 1841. Their children are as follows: John Bane, born February 13, 1867; Mary Bane, born April 1, 1868; Jesse Bane, born November 15, 1869; Lenileota Bane, born April 26, 1872.

JOHN A. BURLEY was born in Marshall county, W. Va., May 30, 1848. He moved to the farm on which he now resides in Cameron township in 1873, and carries on farming as his vocation. He was married September 19, 1867, and is the father of five children. Post office, Cameron, W. Va.

JOHN LAUGHLIN was born in Washington county, Pa., January 27, 1827. He was married, April 8, 1857, and moved to Rock Lick, W. Va., in 1848. He raised a family of four children. Business, merchant. Post office, Rock Lick, W. Va.

THOMAS HILL was born in Washington county, Pa., September 16, 1818. He was married September 12, 1844, and moved to Cameron district, Marshall county, W. Va., in 1872. He raised a family of ten children, nine of whom are living. He carries on farming as his vocation. Post office, Glen Easton, W. Va.

JOHN INGRAM was born in Washington county, Pa., May 17, 1819. He moved with his parents to West Virginia in 1829. Has been engaged in farming and stock raising the greater part of his life. When a boy he worked out at times at low wages, but always succeeded in saving money, keeping his expenses below his income. Notwithstanding he was economical, he was generous, and always appreciated a kind act. He married his second wife and raised a family of seven children, four living at present. Of late years his attention has been turned to raising fine wooled sheep. In the fall of 1866 he purchased from Childs, of Vermont, sixty-eight head of ewes at thirty-five dollars per head; one ram at three hundred and twenty-five dollars, one at three hundred, one at one hundred and fifty, two at seventy-five each, and five at forty-five dollars per head. Six ewes at one one hundred dollars each, twenty ewes at eighty dollars each, making nearly six thousand dollars invested. His home farm at Poplar Springs, Cameron district, Marshall county, W. Va., contains 872 acres, with a fine large brick dwelling and good barn. His farm in Wetzel county, W. Va., contains 500 acres. This he keeps for a summer range for his flocks.

Below we give his certificate of award and diploma received at the International Exhibition at Philadelphia for fine wool.

INTERNATIONAL EXHIBITION,
1876.
CERTIFICATE OF AWARD.
JOHN INGRAM,
Poplar Springs, Marshall county, West Virginia.
WOOL.
No. 175—Group IX.

United States Centennial Commission. In accordance with the act of Congress, Philadelphia, September 27, 1876.

JOHN S. CAMPBELL, *Secretary.* A. T. GOSHORN, *Director Gen'l,* JAS. R. HAWLEY, *President.*

INTERNATIONAL EXHIBITION (No. 233.)
PHILADELPHIA, 1876.

The United States Centennial Commission has examined the report of the judges and accepted the following reasons, and decreed a reward in conformity therewith.

PHILADELPHIA, September 20, 1878.

REPORT ON AWARDS—PRODUCT, WOOL.

Name and address of exhibitor—JOHN INGRAM, Poplar Springs, Marshall county, West Virginia.

The undersigned examined the product herein described, respectfully recommend the same to the United States Centennial Commission of award, for the following reasons, viz.: *For ten fleeces of excellent merino combing and beautiful merino clothing wool.*

INTERNATIONAL EXHIBITION, PHILADELPHIA.

MDCCCLXXVI.

UNION DISTRICT.

Those acquainted with the history of Union District will find it difficult to realize, in traveling over its territory, the wonderful transformations which have taken place within the short space of twenty years. Nothing appears to indicate that the condition has ever been other than what it now is, viz: that of a quiet and prosperous farming section, conservative, as such regions invariably are, and opposed to every innovation upon the old order of things. Until a few years ago agriculture was the only pursuit of that robust and intelligent population, but the iron manufacturers of Wheeling, having their attention directed to the natural advantages of this district, have erected a large furnace and nail mill, and the thriving village of Benwood has sprung to life. Its growth has been, to use a hackneyed expression, like Jonah's gourd, or, better, like the towns in the oil region, or, better still, like the thriving towns of the fertile west, which are laid out and built in a day, and which endure, despite the predictions of "Old Probabilities," and against which the rains descend and the floods come in vain. Its rapid rise in prosperity and importance has been as healthy and substantial as it was sudden, and no better proof of this need be offered than that it has continued to grow and prosper through all the financial prostration of the past few years.

SETTLEMENT.

Long after Sand Hill was a thriving settlement, what is now Union was only known as the "*woods*." Colonel Stricker and the McMechens were the first to settle on the bottom lands in the vicinity of what is now Benwood. They, like all men of those days, first improved the level land, the hilly parts being considered worthless, and only fit for timber and hunting grounds. Henry and John Stupe came in 1790, and made a clearing and built a cabin on the farm now owned by Mrs. Allen, near Sherrard. Near to where this clearing was made was a block house, built some time previous to this settlement, but as it was about the close of hostilities with the Indians, it was of but little use.

Henry Clark came soon after the Strupes, and made a settlement near them. A man by the name of Burch was a pioneer in Union district also, and settled at the head of Burch's run. These men opened up the forest and others soon followed. The McHenrys, the McCombs, the Allens, the Dowlers, the Blacks, the Barteaux, the Caldwells, are among the most prominent who first settled here. But the first settlers have all passed away and their traditions are perishing with them; but printed pages will bear testimony of their existence in early days.

It was in this district, near the line of Washington, that Captain William Foreman and his party lost their lives on the 27th of September, 1777. This was the only massacre of any note committed by the Indians within the limits of Union district.

COAL.

Coal is found in abundance in almost every part of the district. On the farm of Mr. E. Conners, is a vein locally known as *block or splint coal*. It was first discovered by accident, cropping out of the hillside, lying immediately east of the Ohio river, in the year 1878; an analysis was made of it and it was found to be of a superior quality. It possesses a laminated appearance, splitting into sheets, and is very difficult to break on the opposite of the lamina. The faces of the layers are often covered with a soft, dead, carbonaceous material, like charcoal, and the whole seam throughout is marked by alternate layers of dead and bright looking coal. In the act of combustion it neither swells or changes form. In the furnace the blocks retain their shape until they fall to ashes; neither does it cake by running together. Possessing these qualities it is fit for the furnace in its raw state. Taken directly from the mine and thrown into the furnace without preparation, it is claimed that it produces the best pig iron made in America. The mills in Benwood are all supplied with coal from the river hills near by.

Iron Ore is found on the farm of Mr. Conners; it has been represented as a three foot vein and of as good quality as any native ore in this part of state.

SCHOOLS.

It was a number of years after the first settlers came in before their attention was directed towards schools. The remains of one of the old-time school houses is still standing on the farm of M. D. Campbell, but the exact date of its erection is not known; it was built of logs, about 18 by 20 feet, with chimney occupying one whole side of the house; it was capable of taking in a log twelve feet long. But these ancient log houses have about disappeared, and their places taken by magnificent brick or frame buildings, costing from five hundred to ten thousand dollars. There are two graded schools, number 1 and number 10, the latter having an addition put to it in 1878, and has ample accommodation for one hundred and fifty pupils.

The following is the enumeration of each sub-district in Union, for 1878:

No. 1,	298	Males.	269	Females.	4	Teachers.
" 2,	68	"	56	"	1	"
" 3,	41	"	45	"	1	"
" 4,	24	"	23	"	1	"
" 5,	46	"	34	"	1	"
" 6,	49	"	33	"	1	"
" 7,	21	"	35	"	1	"
" 8,	13	"	19	"	1	"
" 9,	13	"	18	"	1	"
" 10,	15	"	68	"	2	"

Much credit is due to the following board of directors, for the improvement in educational matters, especially the president of the board, who has given much time and attention to the promotion of education in the district.

Henry T. Ford, president; Richard Allen, Isaac Shepperd; H. U. Bumgardner, secretary.

Union, like other parts of Marshall county, is fast improving in her schools, and is keeping pace with her sister towns, both in school buildings, and in the manner of teaching pupils.

THE ALLEN GROVE PRESBYTERIAN CHURCH.

This church organization was effected in 1852 with a membership of sixteen. Their first pastor was the Rev. John R. Duncan. After him followed Dr. James Alexander, Rev. Samuel Graham, Rev. D. H. Loverty, Rev. W. C. Smith, Rev. J. F. Curtis, Rev. J. A. Brown.

First Elders—William Kyzer and John McCombs.

Trustees—Joseph Harris, C. Kemple, James Standiford and John Allen.

The present membership is thirty-six, and has a flourishing Sunday school of about sixty scholars. The church edifice is frame.

PLEASANT HILL METHODIST EPISCOPAL CHURCH.

This society was organized at the house of Mr. Salters, in 1808. Meetings were held at this house for a number of years, and in other houses throughout the neighborhood. In 1835 the first church building was erected on the site of the present edifice.

MOUNT ZION METHODIST PROTESTANT CHURCH.

The first meeting of the society, which is now extinct, was held at the house of Rev. George Dowler, in 1833. Burnes then succeeded Dowler. In 1848 a log church was erected. During the rebellion it united itself to the Methodist Episcopal Church. It was only a mission field. The bulding is still standing, but is unoccupied.

GRAVEL STREET CHAPEL (CHURCH OF GOD).

This was organized in 1873 with a membership of twenty-seven. The first minister was Rev. J. Hickwell; second Rev. R. L. Burnes; third Rev. J. S. Marple; fourth, Rev. S. Wood, and the present incumbent is Rev. D. L. Leech, and the present membership fifty-five, with a Sabbath school of seventy-seven scholars.

SHERRARD P. O.

Sherrard is situated on the Wheeling and Waynesburg road, It contains one store and post office, two churches, two wagon and blacksmith shops, one shoemaker shop, one doctor and two ministers. There is no hotel in the place, and, consequently, no accommodation for travelers. The spirit of enterprise does not run at a very high rate in Sherrard; Unlike its sister village Benwood, it is in the yellow leaf, and will soon be one of

the things of the past. Its close proximity to Wheeling renders it unfit for a commercial point, except in the smallest way.

The farming community of this district are an industrious and reading class of people, and the growth of its population and the rapid rise in the value of property are witnesses of the energy of its inhabitants, and the style of the improvements made is such as to almost dispel the thought that the territory comprised within its bounds was, so short a time since, covered with heavy timber, and its forest paths roamed by savage men and beasts.

The following are short biographical sketches of the most prominent and enterprising men of Union district:

Henry T. Ford, M. D.—The subject of this sketch was born in Monroe county, Ohio, in 1843. At an early age he inclined towards a professional life, and his parents wishing to gratify him, he was educated for the medical profession. After completing his course in a classical school, he commenced his favorite study, medicine, and in 1864 completed his course. Finding his profession full in his native county, he moved to Noble county, and commenced practice, but by his arduous labor while a student, his health became impaired and he was therefore compelled to give up his practice for a time. He then moved to Benwood, his present residence, and engaged in the drug business, where he soon regained his health; finding such a demand for his professional aid, he gave up his drug business and again devoted his whole time and attention to practice, in which he has been a success, and he now stands among the leading men of his profession as a skillful physician. He is an earnest patron of education, and is well informed, and has conversational powers. In pursuing his profession he never fails to respond to the call of the sick, whether in sunshine or storm, and for the poor, without the means of remuneration, or the wealthy, he is equally ready to devote himself. He is one of Benwood's most enterprising citizens, always ready in any improvement or matter of charity.

Professor Leonard Eskey was born in Marshall county in 1850. He was raised a farmer. He received his first instruction in a school near his home, and afterward attended the State Normal School at West Liberty, W. Va., and finally graduated at Union College, Ohio. On completing his collegiate course, he was appointed principal of the Benwood school, which position he has filled with entire acceptance to the public and honor to himself. He has chosen the profession of medicine, and is a student of Dr. Henry T. Ford. He has attended one course of lectures at Ann Arbor, Mich., and intends to complete his course at Jefferson College, Philadelphia. The Professor is a close student and gentleman of high culture, and with his energy is sure of success.

Oscar N. Carr, M. D., was born in Northfield, Ill., in 1849. He was educated at Sandwich High School, in his native state. After completing his education at this place, he commenced the study of medicine under Dr. Charles Winn, a learned and skillful physician; and when advanced sufficiently in his studies, he entered Rush Medical College, Chicago, and graduated in the class of 1874. He came to Benwood and commenced practice, and his efforts have been crowned with success.

Hiram McMechen.—Mr. McMechen was born near Benwood, in 1807, and was a son of Benjamin McMechen. He was educated at home, by attending such schools as they had in his young days; when he was about seventeen years of age he went to Moundsville and engaged as clerk with his brother-in-law, Thomas List; he afterwards became a partner in the store. Some time after he went south with a boat load of goods, and remained some time. He returned and went into the grocery business with Thomas List, on Market street, Wheeling, and remained for some time, and then moved to his farm near Benwood. He was justice of the peace for a number of years. In 1853, he married Miss Hannah Armstrong, daughter of the Rev. J. Armstrong, of Wheeling. They have two children. Mr. McMechen died in 1876, in his sixty-eighth year.

Nicholas Dowler, was born in Ohio county, in 1832, and was a son of Michael Dowler. He was raised a farmer, and received a common school education. In 1856, he engaged in mercantile business in Bellaire, and remained there until 1861. At the age of twenty-six, he married Miss Harris. They have four children. After leaving Bellaire, in 1861, he moved to a farm in Union district, where he still resides.

Isaac Dowler.—The subject of this sketch was born in Ohio county, Virginia, in 1824. He was a son of George Dowler, who came from Maryland, in 1790, and settled at Brownsville, Pa., and remained until 1811, when he came to Ohio county, and settled in Union district, where he lived until his death in 1862. Isaac was raised a farmer, and educated at the common school. He married Catharine Caldwell, in 1851. They have four sons and two daughters.

W. S. Dowler, was born in Ohio county, in 1832. He was a son of Michael Dowler, and grandson of George Dowler. He received a liberal education when young, and learned the cooper trade, but finding it unprofitable, he engaged in farming. He come into possession of the old homestead of his father, and still occupies it. He is a farmer and stock raiser, and has made many improvements in the old homestead, and has one of the finest improved farms in Marshall county.

Thomas Dowler was born in Ohio county, in 1820. He was a son of George Dowler, a pioneer preacher in that part of the country, having come from Pennsylvania in 1811. Thomas was educated at such schools as they had then, log cabins with greased paper windows. He married Miss McHenry, of Union District. Mr. Dowler has been a public man for several years, having served as Justice of the Peace, and held other offices; he is a prosperous farmer and a good neighbor.

Mrs. Mary Orem, widow of the late William Orem, was a daughter of George Dowler; she married Mr. Orem in 1840, he was a native of Brooke county, and was born in 1819, he learned the cooper trade and followed it for several years, and then engaged in mercantile business, which he continued for eleven years, he then moved to the farm where his family now live; he died leaving a large family.

Shepperd McMechen was born in Ohio county, in 1827. He was a son of Benjamin McMechen, and was raised a farmer; he received his education in Wheeling and Marietta. After leaving school he engaged in farming, and continued it until his death, Oct. 24th, 1874. He was among Virginia's most prominent and successful farmers, having accumulated a large fortune. He married, March 18th, 1868, Miss A. Cockayne, daughter of Col. V. L. Cockayne; they had one son and one daughter—Mary L., born Jan. 12th, 1869, and Shepperd V., born Sept. 16th, 1874, who died Nov. 7th, 1878.

C. C. McMechen was born two miles below Benwood, in 1844. He was a son of David McMechen; he was educated at Morgantown, and upon leaving school engaged in farming; he married Miss A. E. Hickernell, daughter of the Rev. John Hickernell, of Westmoreland county, Pa., they have had two sons.

Rev. John Allen Brown was born August 7, 1822, near Youngstown, Westmoreland county, Pa. He graduated in the class of 1850, at Jefferson College, Canonsburg, Pa., and in 1852, married Miss Amanda Christy, a graduate in 1850, at Washington Female Seminary, Washington, Pa. Rev. Brown, assisted by his wife, taught the Saltsburg academy for three and a half years. Was licensed by the Presbytery of Blairsville in 1854, and ordained and installed pastor of Ligonier church at Ligonier, Pa., in 1856. Took charge of the Presbyterian Church at Fredericksburg, Ohio, in 1860. In April, 1864, he took charge of the church at West Liberty, Ohio county, W. Va., and at the same time leased the academy there for five years. Before this lease expired the academy was sold to the state in order to pay off an old debt; but continued in charge of the congregation at that place until 1876. In the spring of 1877, Rev. Brown took charge of the congregations at Allen Grove, Limestone and Wolf Run, in Marshall county, where he still remains. He has five children living, one son being a student of Union Theological seminary, New York, and another a student of Lafayette College, Easton, Pa.

Edward Conner.—The subject of this sketch was born in Trent county, Delaware, October 19, 1817. He came to the Pan-Handle in 1823, with his father, William Conner, and settled at West Liberty, Ohio county. He was educated at West Liberty, and on completing his education, he engaged in farming. He married, in 1840, Sarah Dowler, daughter of George Dowler, and has five sons and four daughters. He was at one time captain of a militia company, in old militia days. Mr. Conner is an enterprising and energetic farmer, and has one of the finest improved farms in the county.

GEORGE MCCOMBS—Mr. McCombs was born in County Derry Ireland, and immigrated to America before the revolutionary war, leaving his family behind him, in the Emerald Isle, with the intention of returning for them. But the high seas being blocked at that time, he was compelled to stay. He enlisted in the American army, and braved the trials and hardships of a true soldier, until the close of the war. The blockade being raised, he sent for his family, who joined him soon after. He settled in Washington county, Pennsylvania, and remained there until his death. His family then moved to Ohio county, West Virginia, about the year 1800. His two sons, James and John, grew up to be men of unusual size, James being considered the most muscular man in the state. It is told by some of the family that he at one time lifted fourteen bushels of wheat, the weight being 840 pounds. James and John both were married here, and each had a family of twelve children. Many of the family are still living in Marshall county. John joined the Presbyterian church when quite young and was a devout christian.

JAMES MCCOMBS was born in Ohio county in 1812. He was a son of John McCombs and grandson of Geo. McCombs, a revolutionary soldier. James was educated at such schools as they had in those days, and upon reaching manhood engaged in farming, which he continued until 1864, when he engaged in mercantile business at Sherrard. He remained there until 1875 when he moved to the farm where he now resides. He married Mary Caldwell, daughter of Ezekiel Caldwell, in 1835. They have seven children, four sons and three daughters.

JOSEPH MCCOMBS.—The subject of this sketch was born in Ohio county in 1817. He was a son of John and grandson of George McCombs. He received his education at the common schools of that day. He married Nancy E. E. Baird, March 8, 1849. They have three daughters and two sons. Joseph, the oldest son, married Miss S. Hisher, August 23, 1873. Joseph, senior, was a delegate to the State convention, when West Virginia was made a seperate State.

ALEXANDER CALDWELL was born in Ohio county in 1802. He was a son John Caldwell, who was one of the first settlers in the Pan-Handle. They were a large family, and as they grew up they all moved to different parts of the country, and have all died, excepting the subject of this sketch, and one sister, Mrs. Laura Tidball, Millersburg, Ohio. Alexander was educated at the common schools of his boyhood. Being brought up on a farm he chose that as his occupation and has spent the life of a quiet and prosperous farmer. In 1821 he married a daughter of Martin Wetzel. They had ten children, six sons and four daughters.

JOHN CALDWELL was born in Ohio county in 1835. He received a limited education and has been in the farming business all his life. He married Miss Sidney McCrary, daughter of Thomas McCrary. They have five children, two sons and three daughters.

MARTIN CALDWELL was born in Ohio county in 1824. He is a son of Alexander Caldwell, who, having a large family to support and being of limited means, did not educate his son Martin to any great extent. He, like all the rest of the family, chose farming as a means of making a living. He married Miss Jane Clendenning in 1855. They have one son and one daughter.

CHARLES SEABRIGHT, the subject of this sketch, was born in Germany in 1828, and immigrated to this country in 1849 and settled in Wheeling. He first worked with Mr. George Hartman, in a brick-yard, at common labor. He remained there one year, then went to work in the glass-house and continued to work there until 1863. Having saved his earnings during that time, he purchased a farm in Union district, since which time he has made some of the finest farm improvements in the district. In 1870 Mr. Seabright made a trip to his native land for the purpose of getting some rare kinds of fruit trees. He remained three months, and returning brought with him various kinds of trees. Finding that many of them bore fruit the first or second year, and that they were adapted to this climate, he returned to Germany in 1873 and purchased a large quantity of trees, among which were apple, pear, peach, German prune, fourteen different kinds of cherry trees, various kinds of apricot, quince and other fruit trees. He also brought various kinds of strawberry, gooseberry and raspberry vines, a quantity of ornamental shrubbery, and sixty different varieties of roses, besides many other plants, too numerous to mention. Mr. Seabright intends, if possible, to improve the culture of fruit in West Virginia.

ISAAC GOUDY was born in Brooke county in 1817. He is a son of Isaac Goudy, a pioneer carpenter of Brooke county. Isaac, jr., recived a liberal education, and at the age of eighteen commenced to learn the carpenter trade under his father. He served two years and then started out as a journeyman, getting the pay of older hands. In 1839, he married Miss Sarah Stewart. They lived in Wheeling until 1866, when they came to Marshall county where they now reside.

GEORGE KIMPLE was born in New Jersey, in 1812. When he was six years of age, his father died leaving a family of nine children, George being the seventh child. His father being a poor man, without property, the consequence was that George received a very poor education, but by close application to study acquired sufficient to enable him to do ordinary business. He worked on a farm until he was seventeen years of age, when he apprenticed himself to learn the tailor's trade. After serving three years he engaged in business in Harmony, N. J., on his own account. In 1837, he came to Westmoreland county, Pa., and there worked at his trade until 1839, when he moved to Marshall county to the farm he now occupies. In 1833, he married Miss Foster. His first wife having died, he married Mrs. Garland in 1845. They had a family of ten children.

SAND HILL DISTRICT.

Many years, probably many centuries, before the western world became the home of the eastern explorer, the territory now embraced within the limits of Sand Hill was a favorite resort of that race whose monuments in the shape of various mounds and stone implements remain in profusion throughout the greater part of the Mississippi Valley. The wild and romantic beauty of the scenery allured them, and the clear waters of Wheeling creek and its tributaries, for which the district is justly noted, furnished numerous watering places for the deer and other animals, which were pierced by their stone arrows as they wandered to the banks to drink. The speckled trout darted through the brooklets, which were, then, seemingly inexhaustible depositaries of food, and the beaver sported in his meadow, inviting capture. All that uncultivated nature ever furnishes in this northern climate was produced in abundance, and it may be supposed that the pre-historic man found here enjoyments adapted to his rude tastes, and as elevated as he was capable of appreciating. The superior polish of the weapons that he has left, and the pieces of ancient pottery exhumed in this district indicate that he had attained a degree of civilization never reached by the Indian tribes which succeeded him, and the fact that these remains are invariably found in the greatest abundance in the most charming localities may lead to the conclusion that, like many of the Indians, their appreciation of the sublime and beautiful in nature was by no means undeveloped. Their traces are very numerous in all parts of Marshall county, but in Sand Hill, which is incontestibly the most picturesque region, they abound in unusual numbers. Darts, and arrow-heads, hatchets and skinning knives, pipes and ancient fragments of pottery have been found upon the farm of David Dague, in sufficient number to form a very respectable collection, and there are, no doubt, equal numbers on adjoining farms.

Mr. Dague has preserved a number of these relics of a by-gone age, which are generally passed by unnoticed. Several of the specimens in his possession are of peculiar interest, and their use is not known with certainty. On the farm of Mr. Dague, on Big Wheeling creek, opposite the mouth of Wolf run, may be found several mounds or stone piles, varying in size from eight by ten feet to seventy-five feet in circumference, the largest of which was removed a few years ago, and a number of skeletons were found, but they were in such a decayed condition that their size could not be determined; but it was evident that they were the remains of some of the pre-historic race. This is only one of the many such burial places that have been opened in this vicinity. When the writer visited the spot human teeth could be found in abundance where the mound had stood. Mr. Dague thinks that there were probably from five to six hundred bodies buried here.

ANCIENT MANUFACTORY.

A short distance from the residence of Mr. Dague, on the bank of Wheeling creek, may be seen what was once a village and manufacturing place. Fragments of ancient pottery may be found here in great quantities; in some places they are at least two fe[illegible] ground. The ancient race displayed considerable skill in the manufacture of their vases, judging from the many different patterns that have been found, and the way in which they were decorated. The composition of their pottery is supposed to be of muscle shells, charcoal and fire clay. These remains cover about three acres of land, and at the time the farm was settled by Mr. Dague's father, in 1793, there was no large timber on this spot, except one large walnut tree.

It is supposed from the number of human bones found here, that the inhabitants of this village had been slain in battle and their remains left unburied.

On the homestead of the once noted Wetzel family, of Indian times, may be seen one of those sacred burial places of the aborigines, who trod the soil of Sand Hill many years ago. The property is now owned by David Lutes. A magnificent hill rises just back of his house, and overlooks the surrounding country; as you ascend toward the summit, about one-third of the way up, the stones which formerly were abundant upon the lofty table, have been collected and piled in an oval shaped mound. The stones are in their natural shape, and the mound, though having been disturbed at different times by early settlers, still has its original shape; it extends east and west, like all the graves of that race, and was probably the monument of some celebrated chieftain or warrior, built "where the earliest light of morning might gild it, and parting day lingers and plays on its summit." The above are merely the more prominent remains of the stone age, which appear to the casual observer in passing through the district.

After these mound builders had all disappeared in the ocean of time, that part of Sand Hill lying along Big Wheeling creek, became no less a favorite hunting ground for the Indians, who are said to have been the manufacturers of the rudely chipped arrow heads, in such striking contrast to the elegantly polished implements of their predecessors. The same causes which operated to people the valley of Big Wheeling creek with mound builders, viz: Abundant game and fish led the Indians to make it a resort for years, the evidences of which are as common as those of the people whom they designate as their "grandfathers."

Game was abundant in this district for several years after it had became settled by the whites; it was the contested territory for several years between the Indians and the white men, on account of its being the great hunting ground of this region, and for this reason was the many murders committed upon the whites by the Indians in this district. Game in this locality consisted of bears, deers and turkeys. "Painters" were numerous, and wolves were so plenty that it was extremely difficult to protect sheep, hogs and even young cattle from their ravages. Small game was also abundant, such as partridge, wild duck, quail, squirrel and rabbit. Foxes are still numerous, and their pursuit is a favorite amusement, while the small game still make their home here and furnish sport during the hunting season.

Among the remarkable curiosities in this district are the footprints of deer, turkeys and human beings in the sand rock, on the farm of Mr. Dague. According to tradition, these footprints were *made* by the Indians for a landmark, pointing in the direction of some hidden treasure. In the same rocks may be seen round holes, several in number; it is supposed they were used for moulding lead in, although there has never been any found here.

SETTLEMENT.

From the first settlers in Sand hill, in 1769, until the ratification of the treaty of "Greenville," sometimes called "Wayne's treaty," in 1795, the attitude of the Indian tribes toward the settlers was that of extreme, unrelenting hostility. The military organization which had marched against them before the establishment of civil government in the great northwest, had signally failed to subjugate them, or secure a permanent cessation of hostilities. The disastrous expedition of General Braddock in 1755, of Major Wilkins in 1763, of Colonel Bradstreet in 1764, of Colonel Lochry in 1781, and of Colonel Crawford in 1782, and the massacre of the Moravian Indians on the Tuscarawas, in the last named year, only tended to inflame the hostile Indian tribes, and inspire them with greater courage in their hostile movements against the white settlers. The fruitless, if not, abortive, campaigns of Colonel McDonald in 1774, of General McIntosh in 1778, and of General Broadhead in 1781, of course, led to no salutary results. Even the successful campaigns of Colonel Boquet in 1763–4, of Lord Dunmore and General Lewis in 1774, of General George Rodgers Clark in 1778, failed to secure a permanent peace with the western Indian tribes. The inhabitants of what was then West Augusta District," were therefore, from 1769, when the first emmigrants arrived at the mouth of Wheeling creek, until the treaty of Greenville was concluded in August, 1795, constantly liable to the stealthy but deadly attacks of the savage tribes of the northwest. But they met their relentless foes in the spirit of genuine manhood—of true, determined, unflinching heroism. They were men worthy of the heroic age of the west. Bravely did they bear themselves during these many years of toil and privations, of dread and apprehension, of suffering and sorrow, of blood and carnage.

Among these may be mentioned, John Wetzel and family, who came to this district in 1769, from Pennsylvania, and made a small clearing and built a cabin on Big Wheeling creek, just opposite to where Alexander Caldwell now lives. Wetzel's was a tomahawk right, but by actual settlement, his letters of patent right was granted in 1785, to the land now owned by E. and D. Lutes, Alexander Caldwell, Hiram McCombs, and others. The entire history of the Wetzel family may be found in another portion of this work. The Earlywines and Siverts came about the same time, making their settlement on the ridge near Sand Hill post office. Fredrick J. Earlywine, son of Jacob Earlywine, was captured by the Indians, in company with John Wetzel while out hunting their horses, the Indians secreting themselves in the bushes and rattling the bell that they had taken from the horses to decoy the boys. Fredrick being of an obstinate disposition, was determined not to accompany them as a captive, and in spite of the entreaties of his companion to go quietly along and try to escape afterwards, resisted all efforts made to take him, and was consequently left behind in charge of one Indian, who killed him and left the body lying in the woods. It was not until John Wetzel had made his escape from the savages that the sad fate of young Earlywine became known to his friends His body was found and buried on the spot where he was killed.

The Siverts were a loyal family; Jacob served as a soldier in the revolutionary war, and his son Jacob in the war of 1812, and he (Jacob, jr.,) had six sons in the late rebellion. Adam Grandstaff came from east of the mountains in 1780 or 1781, and made a settlement on Wheeling creek, where Samuel Grandstaff now lives. The Rodafers came also while this part of the country was almost an unbroken wilderness.

After wandering over an extensive territory and considering the comparative advantages of various localities, Richard Campbell, a native of County Down, Ireland, concluded to cast his lot in this district in 1793, while Thomas Buchanan settled land where James, his son, now lives. He cut the first road from Elm Grove to Haneytown in 1794. On the present site of Samuel Alley's store, at Majorsville, stood the block house of Robert Whortem, or Wortem, but at what date it was built could not be ascertained. He was compelled to flee from here several times to Ryerson station for protection from the Indians before the country was sufficiently settled to get aid from his neighbors. In 1795, Henry Conkle came from Pennsylvania and bought the land at present owned by Henry Harsh. In 1801, he built what was probably the first grist mill in this part of the country, and there has been a mill in constant operation on this site ever since. Philip Conkle still lives on part of the old homstead.

According to Daniel Dague's statement, his father came in 1793, but there is some doubt as to the actual date.

The Caldwells and Lutes were also among the first to settle in this district, and their descendants occupy the old Wetzel farm.

Many were the hardships and privations endured by the first settlers in this district, and even the later settlers, until 1815, were here soon enough to obtain some notion of the manners, customs and inconveniences of pioneer life. The Davises, Winters and Jamisons were obliged to wear buckskin clothing before their fields were sufficiently cultivated to raise flax and the wild beasts permitted them to keep a few sheep. The well-known linsey-woolsey clothing was then adopted, being a combination of home-spun and home-woven flax and wool, for the manufacture of which each house was provided with those musical instruments, the spinning wheel and loom, and upon these the young ladies received their early instruction in *fine arts*. Log-rolling and raising was one of the common amusements of

the day, and it was not uncommon for help to come to them for a distance of five miles. Moccasins of deer-skin were the common dress for the feet in winter, and in summer all sexes and ages went barefooted for better comfort and less expense. It would be difficult to portray, in sufficiently gloomy colors, the privations of these early pioneers and the straits to which they were reduced. These hardships were especially severe during the first season of their emigration. They were never wealthy, and were, more often than otherwise, families who were unable to gain a comfortable sustenance in the more cultivated parts of the country.

Stern necessity compelled them to emigrate, and they brought but little food with them. They were, therefore, obliged to return to some of the older settlements many times before their grain was ready to harvest, and at those places supplies were sold at an enormous profit, and at prices beyond their means. They were never able to purchase large quantities of provisions at a time, as there were no means of transportation more convenient than the backs of horses or men, and thus it happened, more than once, that the last loaf in the cabin was eaten, the barrel of meal exhausted, and famine knocked at the door. It was a fortunate circumstance that the supply of small game never failed, and deer were generally abundant.

The surface of the district is a succession of forest-crowned hills, wide spreading meadows and fertile valleys, whose soil is second to none.

The scenery is beautiful, beyond all description, and would require the pen of an Irving to give an idea of its charms.

The district is well watered by Wheeling creek and its tributaries.

Coal is found in abundance along all the streams in the district, and is of a good quality.

The industries of Sand Hill are exclusively agricultural, and the land is admirably adapted to farming and grazing.

MILLS.

In 1801 the first grist mill in the district was erected by Henry Conkle, on big Wheeling creek; it stood on the site of the mill owned at present by Henry Harsh. A few years later, there was a large mill erected about four miles and a half below the first one, on the same creek; it is owned and operated at the present time by E. & D. Lutes. This is one of the finest mills in the country, and is run by steam, when the water is too low to operate it by water power. It is known throughout the country as the "Wheeling Valley Mill." There is one other small mill in the district, but it can only be operated during high water.

SCHOOLS.

The education of this district has been well cared for. It was reorganized as a softening and elevating influence, without which, other labor was regarded as comparatively useless. Upon the clearings there was work for all. The child could gather brush, watch the corn from all depredators, bring home the cows, and ride to mill with the grist, yet the necessity for instruction in the essentials of learning, was apparent and the want soon supplied. Voluntary action followed timely suggestion, and if families were not many, they were large, and where seven or eight children were not uncommon, the little rude school building was generally filled, and the foundation was laid upon which the general free school system has been built. The school building has been described in the general history of this work; it was consistent with the homes of the children and youth in attendance. The same necessity which substituted greased paper for glass at home, was apparent here. The long foot-paths for miles was made by the pupils, who brought their dinners, corn dodgers being an essential and staple portion. The nooning was employed in games of base and drop-ball, or, if the weather shut them in, many an old, well remembered play was had, and cheerily the voices mingled in "The needles eye that doth supply," etc. Traps for game were set between home and the school house, and visited morning and evening, and some times, when the school was late in closing, and evening's darkening shadows fell, the children hurried homewards, fearful of the beasts which ranged the roads by night. Sand Hill was one of the first districts in Marshall county, to adopt the free school system, and has become one of the leading districts in the county in its educational interests. It has eight school buildings, and one joint building, between it and Webster district.

The following is the enumeration for 1879:

School No. 1,				Males	30	Females	20
" 2,				"	44	"	23
" 3,				"	8	"	16
" 4,				"	31	"	23
" 5,				"	29	"	28
" 6,				"	27	"	23
" 7,				"	16	"	28
" 8,	Joint District,			"	14	"	12
" 9,				"	19	"	13

School Board for 1679.—President, James Wilson; Joseph Fuller, John Trussel; Clerk, John Rosberry.

POST OFFICES.

Sand Hill is well supplied with post offices. Dallas was established first. Fair Hill post office is situated on Wheeling creek, at Harsh's mill; Sand Hill, situated in the centre of the district; Wheeling Valley, on Wheeling creek, at Lute's mill; Turkey Run, situated on Wheeling creek, at the mouth of Turkey run; Majorsville is near the forks of Wheeling creek, at Alley's store. There is a tri-weekly mail carried between Wheeling and Ryerson's station:

DALLAS.

Dallas was settled in 1815 by Thomas Haney. It is situated on the Wheeling and Waynesburg turnpike, sixteen miles east of Wheeling. It contains about one hundred inhabitants. Has two churches, one Presbyterian and one M. E. church, three physicians, two ministers, two stores, one drug store, two hotels and a post office. The first school house was built in 1815.

PROGRESS.

Wonderful have been the changes in habits and customs since the days of the early settlers in this district, and great the advancement in prosperity and wealth, and in the innumerable conveniences which characterize a well-established and progressive civilization.

Though Wheeling was much earlier in her settlement than Sand Hill, at the time when the Davises, Lutes, Buchanans, Campbells and Caldwells came, her settlers had not emerged from that semi-primitive condition of society found in all border counties, and their manners were, of necessity, imparted to a great extent to the immigrants whose district adjoined them. Some of these customs were unique. One in particular, in which a reliable resident of Sand Hill assures us that he has participated, will make the belle of 1879 faint to contemplate.

Before fulling mills were extensively established in Ohio county, it was common to have *bees* for the fulling of flannel, as for log-rollings and raisings. At these interesting gatherings, the barefooted young men and women would seat themselves in two rows, upon the puncheon floor, facing each other, so that the feet of each of the former would just reach those of a fair damsel, the ladies being, of course, gallantly accorded seats with their backs against the wall. The flannel was then well soaked and laid between them, and by successive kicks in concert from each side, the same object was accomplished that was afterward gained by the more modern inventions. There was nothing objectionable in this performance at that time, and nothing vulgar or shocking in the row of graceful ankles, so bare or brown, for propriety is but the slave of popular opinion, and Venus, arrayed like the Syrian women—"*Unda jenu, modoque sinus collecta, fluentis*"—appeared no less modest than the American lady of the day, closely enveloped by the art of the modern dressmaker.

There were few law suits in those early days. When a dispute arose between two neighbors it was settled in a very different manner, and sometimes as much to the satisfaction of both parties as by the more civilized methods of obtaining redress. Each would strip to his pantaloons, and have a "knock down," in which they would fight with the ferocity of "painters" and bears, until one of the combatants cried "enough," when common usage forbade his antagonist to strike another blow. It was considered allowable during these combats to bite, scratch or inflict any other bodily injury, provided, that no weapons were used except those which nature had furnished. It was not uncommon for the friends of either party to prepare for a contest, when in any public gathering an affair of this kind arose, which demanded "settlement," and if any

unfair play was resorted to, as to striking after a call for quarter, or the using of sticks, stones, or knives, a general war would ensue.

An old settler informs us that they were terrible fighters, and that a man was not considered anybody who would not fight if given the lie. After one of these primitive courts of justice ended, friendly relations were frequently resumed.

Yet with all the rudeness incident to the lives of these men and women, and notwithstanding the existence of some customs which were little above barbarism, they were a noble race. Their ideas of honor were actually romantic; no people in the world were ever more hospitable, and their patriotism was glorious. Many of their admirable traits of character have been continued in their prosperity, while the ruder features have disappeared.

Hospitality is as general as in the earlier history of the district, and there is always a welcome for the stranger. This is almost remarkable in people who have made such advancements, as that virtue too often dies with the first settlers.

In conclusion, we will give short biographical sketches of some of the most prominent men of the district, and we respectfully acknowledge our obligations to those who have generously aided us in collecting material for this work, and trust its merits will be fully equal to their expectations.

Alexander Caldwell was born in Ohio county, on Big Wheeling creek, near the old Wetzel homestead. The Caldwell's were among the first to settle on the frontier of West Virginia. He was educated at the common schools; at the age of twenty-one he married Miss Amanda Price. Mr. Caldwell is a farmer, and has a fine improved farm; his post office address is Wheeling Valley.

James Buchanan was born in Ohio county, Dec. 16th, 1805; his father, Thomas Buchanan, came from Pennsylvania in 1794, and settled on the farm now owned by his son. James, the subject of the sketch, was educated at the common school—and they were then *very* common, log houses, with greased paper for windows. Mr. Buchanan has devoted his entire life to his farm. In 1852 he married Nancy McConnell. He has filled the office of Justice of the Peace several years. His post office address is Sand Hill.

Albert Davis was born in Ohio county, in 1805. His father, Isaac Davis, came to this county from Maryland in 1804, and remained until his death in 1849. Albert was the oldest of ten children, and, like most people in those days, had a limited education, but by close application to study he acquired a fair education. At the age of twenty-two he married Mary Rodefer. He has held the office of Justice of the Peace, school trustee and other similar offices of trust. He is a devoted christian and a worthy citizen.

James Campbell was born in Ohio county in 1806. He was a son of Richard Campbell, one of the pioneers of the county. He received a limited education when young, but as he grew toward manhood acquired sufficient to do ordinary business. At the age of eighteen he went to learn the hatter's trade at West Liberty, with a man named Holliday. After serving three years, he opened in business for himself in West Liberty, and remained there four years, when he moved to West Alexander, Pa., where he remained for two years, when he again moved to Wheeling. He remained in Wheeling three years, when he moved to the farm where he now resides. In 1828 he married Margaret Dement. They have raised a family of children, most of whom have settled in the vicinity. Mr. Campbell has been a representative man, having served in almost every office in the gift of the people in his township, and is respected by all the citizens of the county.

James Smith.—Mr. Smith was born in Sand Hill district, in May, 1817. He received his education here and has lived in the district ever since his birth. His father was born in Pennsylvania, and came to West Virginia in 1794; he died in the ninety-first year of his age. Mr. Smith married Miss Jane Hand, February 17, 1848. They have two children. Mr. Smith was elected justice in his district in 1863, and served for ten years, when his health failing he gave notice that he could not serve any longer, but by some misconstruction of the law, was compelled to serve four years more. Mr. Smith is engaged in farming.

William Douglas was born in Allegheny county, Pa., in 1809. He is of Scotch descent, and was brought up on a farm, receiving a common school education. In 1830, he married Mary A. Stewart, daughter of Hugh Stewart of Pennsylvania, but at present a resident of Ohio county, W. Va. They have had eleven children, seven of whom are living, three sons and four daughters. They had two sons in the Union army, Alexander M. in the Fifth Artillery, Pennsylvania Volunteers, and Joseph, who enlisted in the First Virginia Cavalry. He died in Philadelphia of typhoid fever, October 3, 1864.

John Mooney was born in Ohio county in 1819. His father came to this county from Easton, Va., in 1796. John was raised on the farm, and in 1845 married the daughter of Albert Davis, of Marshall county. In 1846, they moved to Wetzel county, where they remained until 1855, when they returned to Marshall county and settled where they now reside. They have three children dead and six living, one son and five daughters, all of whom are married but the youngest daughter.

M. W. Glass, M. D., was born in Brooke county, in 1854. He received his education at West Liberty Normal School. After completing his classical education, he entered the study of medicine under Dr. Cooper, of Wellsburg. He afterwards attended Jefferson Medical College, in Philadelphia, and graduated in 1878, when he located in Sand Hill and began the practice of his profession.

Samuel Grinestaff was a son of Jacob, and grandson of Adam Grinestaff. The Grinestaffs first settled in Ohio county in 1780 or 1781. Samuel was born in 1823, on the farm where he now resides, in Marshall county. He received a common school education, and engaged in farming as a business. In 1855, he married Rosanna Black, daughter of Abner Black, of Marshall county. They have seven children, three sons and four daughters.

Charles McCarrehan was born in Ireland. He came to America about 1795, and settled in Ohio county, and cleared a farm on which he lived until his death in 1847. He had a family of six children, who all settled in different parts of the state. Charles A. remained on the old homestead. He married Nancy McCausland in 1851. They have three children.

D. A. L. Sivert was born in Ohio county in 1830. He is a son of Jacob Sivert, who was a soldier in the war of 1812. David, the subject of this sketch was reared a farmer and educated in the common schools of his native county. In 1861 he enlisted in the Union army in company A, Third Regiment of West Virginia Cavalry. He was in seventy-six engagements. and wounded September 4, 1864, at the battle of Winchester, Va. He received a gunshot wound through his right breast, He was discharged June 6, 1865. The Siverts are a patriotic family, as the father of David Sivert was in the war of 1812, his grandfather served in the revolutionary war, while he and five brothers were in the late war. All the six brothers were wounded and disabled for life. In 1856, David married Miss Maria Culver. They have seven children living, five sons and two daughters.

Phillip Conkle was born in Ohio county, April 11, 1812. His grandfather, Henry Conkle, emigrated from Germany and settled in Washington county, Pennsylvania. In 1795 he moved to Ohio county and purchased a large tract of land which has remained in the Conkle family ever since. Phillip received a limited education, and at an early age engaged in farming. On April 9, 1836, he married Miss B. Dunsmore, of Greene county, Pennsylvania, and moved on a part of the old homestead, where he still resides. They were never blessed with any children of their own, but have raised ten children who had been left orphans at different times. They have all grown to be men and women, and have received good educations. Mr. Conkle's house is always open to the homeless and friendless.

James Thompson.—Mr. Thompson was born in Washington county, Pennsylvania, in 1827, and came to Marshall county, in 1839, with his father, James Thompson. In 1860 he married Miss M. J. Long. Mr. Thompson received a common school education, and by his energy and industry, has became possessed of a finely improved farm. He is a citizen who is highly esteemed in his own neighborhood and by all who know him.

HARRISON THOMPSON was born in Washington county, Pa., in 1826, and came to Marshall county in 1859. He came with his father, who after being here for a time purchased a farm and improved it. He received his education at the common schools of the county, and in 1868 married Miss A. E. Carroll, of Washington county, Pa. They have three children. Mr. Thompson is a devoted Christian and member of the Presbyterian Church.

SAMUEL TURNER was born in London, England, in 1831, and came to America in 1840, with his father, William Turner. Samuel received a common school education and learned the blacksmith trade, but never worked at it much, preferring to work on the farm. In 1861, he enlisted in Company I, Fifteenth Regiment Infantry, West Virginia Volunteers. He was captured near Maryland Heights, in 1864, and taken to Danville, Va., and afterwards taken to Libby Prison, where he remained eight months. In 1869, he married Sarah J. Davis. Mr. Turner is a member of the Methodist Episcopal Church at Sand Hill.

JAMES H. ROMEY was born in Marshall county, W. Va., on the place where he now lives, December 29, 1840. He received a common school education and has acted as school director. Mr. Romey owns three hundred and forty acres of land, which is in a good state of cultivation, well watered, abundance of fruit, &c. He married Rebecca, daughter of William Lucas, of Ross county, Ohio, November 19, 1866. They have one child, Margaret Fidelia. William and Lydia Romey, parents of James H. Romey, were born in Washington county, Pa., and settled in Marshall county, W. Va., in 1834.

WILLIAM BANE was born in Amwell township, Washington county, Pa., March 18, 1814. His grandfather with four brothers came to Washington county even before the revolution, and settled on the waters of Ten Mile creek. His grandmother, Hannah Bane, was a sister of Sergeant Jasper, who immortalized himself at Fort Moultrie. His grandfather built the first brick house ever erected on Ten Mile, and this same house was the birth place of the subject of this sketch. William Bane's father owned a farm and grist mill, so he was necessarily employed at farming and milling. He received a common school education, and married for his first wife Mary Patterson, December 15, 1836, which union was blessed with seven children, four sons and three daughters. Two sons served in the late war, one of whom died at Sandy Hook, Maryland, of typhoid pneumonia, and the other returned home. Our subject has two sons of extraordinary stature, one being six feet and nine inches in his bare feet, and the other six feet and four inches, and weighs 200 pounds. Mr. Bane's wife died December 21, 1862, and November 7, 1867, he married for his second wife Helen M. Power, of Marshall county, W. Va. He moved to Dallas in 1871, where he has been keeping the hotel known as the "Bane House" ever since. In 1876 he was elected justice of the peace for a term of four years.

J. C. MCAFEE, was born in Washington county, Pa., and lived in West Alexander until he moved to Haneytown, Marshall county, W. Va. He studied and practiced dentistry a number of years. He married Rachel Sullivan, of Washington county, Pa. They are the parents of five children, four sons and one daughter. Mr. McAfee has invented and secured a patent on a valuable compound for grinding and polishing marble, &c.

JAMES JAMESON, was born February 2d, 1805, on the place where he now resides on Turkey run, Sand Hill township, Marshall county, W. Va. He was educated in the common schools of the early days of the county. He married for his first wife, Jane McCurdy, of Butler county, Pa. She had one child. Nancy Miller, of Ohio county, W. Va., was his second wife. She left three children. His third wife was Elanore Baird, of Ohio county, W. Va. His fourth wife was Jane Reed, of Ohio county, W. Va. They had one child, a son. Lucy Williams, from near Harrisburg, Pa., is his fifth wife. Mr. Jameson is the owner of 120 acres of land.

Samuel Jameson, father of James Jameson, was born in Ireland, emigrated to America, in 1790, and settled in what is now Marshall county, W. Va., when it was all a wilderness. He married Margaret Harper, of Claysville, Pa. They were the parents of six children, viz: Sarah, James, William, Mary, Samuel and Margaret.

JOHN MCCRACKEN was born September 5, 1835, on the place where he now lives, in Sand Hill township, Marshall county, West Virginia. He received a common school education. Married Nancy E. Spilman, of West Finley township, Washington county, Pennsylvania, in November, 1852, and reared a family of four children, viz.: James W., John C., Quintilla J., and Sarah M. Mr. McCracken owns 108 acres of land, and follows farming as his vocation.

H. M. DAGG, M. D., was born in Washington county, Pa., July 26th, 1850. He graduated at Washington College in 1868, then studied medicine three years with Dr. McCracken, at Dallas, and graduated at the Cleveland Medical College, in 1875. He immediately commenced practice in Dallas, where he now resides, and married Josie Kimmins in the fall of 1875. They are the parents of one daughter, Nora. James T. Dagg, father of the doctor, was born and lived in Washington, Pa., and was engaged in the grocery business for many years. He held several town offices, was a prominent mason for many years, and also an elder in the church.

J. B. HENDERSON was born in Sand Hill district, Marshall county, West Virginia, April 10th, 1837. He received a common school education, and has always followed farming, as his occupation. He married Margaret E. Jones, November 28, 1861. They are the parents of three children—two daughters and one son. David Henderson, father of J. B. Henderson, was born on Short Creek, Ohio county, West Virginia, in 1790. He served in the war of 1812, and held several town offices. He died at Sand Hill, Marshall county, West Virginia, in 1850.

LIBERTY DISTRICT BIOGRAPHIES.

H. S. WHITE, was born in Monongalia county, W. Va., July 12, 1840. Married July 11, 1865; also, June 5, 1877. He has six children, four living. Business, merchant and manufacturer.

WM. RIGGS, was born in Greene county, Pa., July 21, 1838. Married February 22, 1865, and moved to Marshall county, W. Va., in 1871. Has had six children, five of whom are living. Occupation, farmer and stock raiser.

JAMES R. DICKSON, was born in Allegheny county, Pa., May 17, 1842. He married December —, 1862, and moved to Marshall county, W. Va., in 1864. Raised a family of seven children—six living. Teacher and farmer, also writes for journals.

ANDREW GILL, was born in Belmont county, Ohio, December 15, 1823; moved to Ohio county, W. Va., 1824, thence to Marshall county, 1829. Married June 7, 1852, and raised a family of 14 children—13 living. Occupation, farmer.

ROLLEY QUIGLEY, was born September 17, 1829, in Monongalia county, Va. Came to Marshall county, in 1834, and married June 3, 1853. Has eight children. Follows farming.

ANDREW GILL was born in Belmont county, Ohio, December 15, 1823, and may with propriety be classed among the early inhabitants of Liberty district, Marshall county, W. Va. He came with his parents to Ohio county in the spring of 1824. (Marshall county at that time had not been stricken from Ohio county.) He lived with his parents until within two years of his marriage. In June, 1852, he married Annie Birch and began married life on the farm of Isaac Richmond. A large portion of the work then consisted of making shingles, getting out hoop poles and making ties for the railroad, very little land being cleared. These were the days when chestnuts were dried and used as a substitute for coffee. Chocolate was made from chips taken from the roots of the sycamore tree and boiled. Grain was ground on the old-fashioned hand mill. Wolves, bears, panthers, deer and wild game were plenty. Mr. Gill raised a happy family of fourteen children, thirteen of whom are now living. Two sons and two daughters are married. Robert B. Gill lives in Greene county, Pa. The other son and two daughters live in Liberty district. The remainder of his family is still with him, three boys and six girls.

WEBSTER DISTRICT.

This district contains 22,323 arable acres, and is a fine farming country. It ranks third in size, and the surface is undulating, like most of the lands lying in Marshall county. It has seventy-two miles of public road.

FIRST SETTLEMENTS.

Peter Crow settled, where his son Samuel now lives, one mile east of Limestone, in the year 1796. Peter Crow was a spy employed by the government. He was born in 1763, and died in 1826.

Robert Martin came from Pennsylvania, in 1819, and built a mill on Steele's run. He had a large family of children, and some of them are still living in Marshall county. John Martin is living on the old place.

George Beeler was the first settler in the central part of Webster district. He located where Andrew and James Wilson lives. He came in 1784.

The Blair's emigrated from Maryland, and settled on what is called Blair's Ridge, in 1824.

BEELER'S STATION.

Beeler's Station was built on the farm owned by Andrew Wilson, and has been the scene of Indian troubles, an account of which can be found in the early history of Marshall county. Mr. and Mrs. Beeler died and were buried on the farm. Their resting place is barely discernable. The first postmaster at this station was John Wilson.

WOLF RUN P. O.

Was started in 1875. W. B. Robinson was the first postmaster. James L. McCombs is the present one. It contains one store, one blacksmith shop and one saw mill.

TRADING AXES FOR LAND.

William Scott, a blacksmith, purchased one hundred acres of land, and agreed to pay for it in axes. He was to make three yearly installments, giving seventeen axes each year. His first payment became due April 1823; second, 1824; third, 1825. The axes were to average six pounds each. He fulfilled the contract promptly.

HEWED LOG SCHOOL HOUSE.

The first hewed log house for school and church purposes was erected in 1826. It was built on Steele's run. Thomas Dakin, a Baptist minister, was the first preacher. At present there are eleven schools taught in the district. The school board is J. M. Blair, president; J. G. Phillips; T. M. Pedley, secretary.

KNOX'S MILL.

The first mill was built by James Knox, in 1835, on Middle Grave creek. After the death of Mr. K. his widow and a Mr. McMellen built a larger one on the site of the first, in 1855. It is a large three story frame building, with three run of stone. It is owned at present and run by Wm. Knox, son of James Knox. The Knoxville post office takes its name from him.

BLAIR'S RIDGE M. E. CHURCH.

In 1835 a log house was erected for the worship of different denominations. In 1869 it was replaced with a frame. It has a membership of seventy, with a good Sunday School. The land was donated by Mr. Blair, and in 1868 the people got up a petition, and had it presented to the legislature, to have the ground deeded to the M. E. Society, and by that means they became the legal custodians.

MT. HOPE M. E. CHURCH

Was organized and dedicated October 28th, 1871. The congregation erected a frame building, at a cost of $1,100. The first ministers were Revs. Feather and Steward. James Black was the first class leader. Present class leader, George Seaton; minister, Rev. Mr. Sandford. During the summer months they hold Sabbath School; was organized with twenty-two members —enroll about sixty-five at present.

WEBSTER DISTRICT BIOGRAPHIES.

SAMUEL CROW, farmer, was born in Marshall county, W. Va., October 5, 1814. He was the son of Peter Crow, and a grandson of Michael Crow. The Crow family was among the first settlers in the Pan-Handle. Samuel the subject of this sketch, like other old settlers, received a limited education, having never attended school but a few months. His father died when he was young. He commenced work on the farm at an early age to help support his mother and sisters. In 1836, he married Miss Fannie Hadsell. They had a family of seven children, four sons and three daughters. The eldest son, John Crow, was in the late war. Enlisted in the Twelfth West Virginia Volunteers, captured and held as a prisoner of war at Andersonville for nine months before he was exchanged. Peter Crow, the father of Samuel, was an Indian spy, employed by the government, serving in that capacity for several years.

JOHN MARTIN, farmer, was born in Greene county, Pa., August 3, 1805, and came with his parents to Marshall county, locating near where John now lives. Robert S. Martin, our subject's father, had a family of nine children, John being the seventh child and fourth son. John learned the trade of millwright, and followed that until twenty-nine years of age, when he married Miss Mary Rush, in 1834. He then set out to clear land and make a home for himself and wife. He first cut logs and built a cabin, and then began clearing the land. The first year he cleared five acres and planted the land in corn, and the following winter he put that in wheat, and cleared five acres more. In this manner he continued until his land was cleared.

DR. S. B. MCKENEHAN was born in Greene county, Pa., in 1847. Educated at Waynesburg. Studied medicine with Dr. S. B. Stidger, of Cameron, W. Va. Graduated at the Medical College in Cincinnati, Ohio, in 1876. He married Miss Crow, daughter of Samuel Crow. He built up a good practice. Has been very successful in his profession.

DR. G. W. HASKINSON was born in Greene county, Pennsylvania, in 1842. Came to West Virginia, in 1868, and located on Fish creek. In 1876 he came to Beeler's Station and commenced the practice of his profession, where he has continued with success ever since.

JOHN WETZEL was born on Big Wheeling creek, in Ohio county, in 1797. He was a son of Martin and a grandson of John Wetzel. Martin's father was a brother of Lewis Wetzel. They were of German descent on their father's side, and their mother was of French extraction. Her maiden name was Bonnet. The subject of our sketch is the oldest Wetzel now living. He has a family of seven children—five boys and two girls; but three sons living in Marshall county: Lewis, Martin and John. He married Miss Elizabeth Prince, daughter of Captain William Prince, who served as such in the war of 1812. He had two sons out in the late war, Martin and John Wetzel. The latter was the youngest son and was born in 1847. Married Miss Mary Purdy. They have two children—Elbert and Florence C.

MAHLEN RIGGS was born in Ohio county, in 1815. Educated at such schools as they had at that early day. He was reared a farmer. Married Miss Lydia Dickinson, of Washington county, Pennsylvania. The same year he located on the farm now occupied by him, near Pleasant Valley. They have seven children—only three remaining at home. Had one son in the late war, Thomas G. Riggs. He was a member of Company B, 12th West Virginia Regiment, serving three years. Our subject received the appointment by the county court of Marshall county, in 1876, as road surveyor and has filled said office up to the present time. He is a member of the M. E. Church at Pleasant Valley.

MARTIN WETZEL was born in Ohio county, in 1834. He is a grand son of the celebrated Lewis Wetzel. He was reared a farmer. In 1855, he went to learn the carpenter trade and follows that trade yet. In 1857 he married Miss M. Haynes, of Marshall county. They have six children, three boys and three girls. In 1862 he enlisted in the Twelfth West Virginia Regiment. Served three years; was in several engagements, but escaped without a scratch.

J. G. PHILLIPS was born in Washington county, Pa., in 1847. Came to Marshall county in 1869. Elected a member of the Board of Education and served as secretary for four years. Was educated at Waynesburg, Greene county, Pa.

G. A. JONES was born in Marshall county in 1836. In 1872 he was elected justice of the peace, and in 1876 was re-elected. Is still holding the office.

JACOB CROW was born in Greene county, Pa., near the Virginia line, on the old Crow homestead, where the Crow girls

were murdered by the Indians, in 1815. They were of German origin. His mother's maiden name was Johnson. Jacob was reared a farmer. He lived on the old place until twenty-nine years of age, when he located on the farm he now occupies. Married Miss Susan Lazear in 1845. They had three children, two boys and one girl.

OLIVER CALDWELL was born on Wheeling creek, Ohio county, in 1831. Educated in a common school. In 1854 he married Mary A. Shook, of Marshall county, W. Va. They had a family of seven children, five girls and two boys. He is an enterprising farmer.

JAMES STANDEFORD, son of Skilton Standeford, was born in Harford county, Maryland, January 25, 1800, and came to West Virginia with his parents when quite young. James, when a young man purchased 896 acres of land from John McLee, of Wheeling, November 27, 1827, a part of which he cleared and erected a cabin. He was married to Miss Eliza Smith, July 26, 1827. She died and he married again in 1844, to Sarah Henderson. He had a family of four children, one girl and three boys. He died January 17, 1877. John Standeford, the oldest son, is living on the old homestead. He was born in 1832, and in 1866, he was married to Miss Rebecca Cunningham. They have a family of four children, three boys and one girl. William, a brother of John's enlisted in company B, Twelfth West Virginia Regiment, and was killed in action at the battle of Winchester, Va.

G. W. LIVINGSTON was born in Jefferson county, Ohio, in 1846. Came to Marshall county in 1858. Married in 1875. Has a family of two children.

WASHINGTON DISTRICT.

This district lies immediately south of Union, and its western border is washed by the Ohio river. Grave creek forms its southern boundary. It is watered by those two and their tributaries. Surface is unusually hilly, although as fine valleys are formed in this district as anywhere in the limits of Marshall county. It was here the memorable Tomlinson discovered the home that he sought. The richness of the soil attracted his attention and he located and held as much of the land as he could. The district, generally speaking, is quite fertile and productive. Excellent farms are numerous. It contains 14,837 arable acres. It is not the largest in area, but is first in wealth, or nearly so. It has been the scene of several incidents with Indians.

EDUCATION.

Education is especially looked after in the district. A number of school houses dot the hill-sides and valleys, and the education of her youth is carefully attended to. The township authorities employ competent teachers as instructors, and, as a consequence, realizes great benefit therefrom.

TOWNS.

There are two towns in this district, Moundsville, the county seat, and Limestone post office. The former is the leading town in the county, whilst the latter is but a small station with a store and a few houses. Population about one hundred.

THE LIMESTONE PRESBYTERIAN CHURCH.

On the 24th of May, 1871, a few persons, numbering in all fifteen, who had adopted the Presbyterian faith, met and organized this congregation under the supervision and direction of Rev. D. H. Lafferty. Wm. C. Smith succeeded him, and he was followed by Rev. J. F. Curtis, Rev. J. A. Brown, John K. Francis, Emanuel Francis, Daniel Wilson, James Standiford and John Allen are elders. The church has a membership of thirty-two, with a good Sunday school of about fifty scholars.

WASHINGTON DISTRICT BIOGRAPHIES.

JOHN GOUDY, farmer, was born in Washington county, Pa., in 1804. Removed to Brooke county with his parents in 1807. In 1812, he married Rebecca Morgan, and had a family of three children. Moved to Wheeling in 1848. From the latter place he removed to Marshall county, in 1869. William M. Goudy, his son, served three years and three months in the rebellion. He was a member of the First West Virginia Infantry.

JOHN JEFFERSON, farmer, was born March 7, 1819, in (now) Marshall county. Married Rachel Lowrey, February 24, 1842. They have eleven children living and two dead. His father served in the war of 1812.

JOHN S. RIGGS, farmer, was born in then Ohio county, November 19, 1821. On September 11, 1841, was married to Eliza J. Murphy. His second wife, Mary Burley, was united to him March 9, 1871. They have three boys.

BENJAMIN HILL was born in Ireland. Migrated to America and settled in Wheeling in 1818. Lived until 1872 and died. His son, Joseph B. Hill, lives on the old homestead. He married Miss Mary White in 1871.

JOHN G. CALDWELL, farmer, was born in Marshall county in 1851. Was a grandson of John Caldwell. He was married to Miss Sarah Clayton. They had three children—all girls. He is a descendant of one of the old settlers of the Pan-Handle.

JEREMIAH JONES, farmer, was born in then Ohio county in 1805. He was a son of George Jones, who migrated from Maryland to Ohio county as early as 1785. Our subject married Miss Jane Perry in 1833. He has a family of eleven children, five boys and six girls. He had three sons in the late war.

GEORGE W. BLAKE was born in Marshall county in 1848. Married Miss J. E. Keyle in 1869. Has one child, Nancy C. He is a farmer.

WARREN BLAKE was born in 1846. Is a son of Robert Blake. He follows farming as his occupation.

W. J. BURLEY, farmer, was born in Marshall county in 1842. Enlisted in the Twelfth West Virginia Infantry as a private, in 1862. Was promoted to first lieutenant in 1863, and to captain, December, 1864, and February, 1865, he was lifted to major. Served with distinction. He was in a number of engagements during the service. He married Miss Emma Dunn in 1863. He has two children, a boy and a girl.

L. L. NEWMAN, farmer, was born in 1834, in Marshall county, W. Va. Was educated at the Moundsville Academy. After completing his course he engaged in farming. In 1864, he married Miss Pecket. They have seven children, three boys and four girls. Mr. Newman is a very active politician. Having received the nomination for state senator by the democrats, in 1878, he was elected by a large majority.

RIVER VIEW HOTEL.

This hotel is located in the lower town, near the steamboat landing, on Water street. James Haniaty, proprietor. It is a first-class hotel; charges moderate and accommodations pleasing to a traveling public.

MARBLE WORKS.

P. Cawfield is the proprietor of this establishment. He came to Moundsville in 1845. Deals in monuments and tombstones.

CLAY DISTRICT.

Clay, like the other districts, was organized soon after the act directing the several counties in the state to be divided into townships. It is, perhaps, the smallest district of any in the county in territory. It contains 16,843 arable acres. Total value of lands and buildings, $408,368.

TOPOGRAPHY.

Big Grave creek and its tributaries, water this district. The land is very rough; hills rise to considerable altitude. The soil, is, however, quite fertile for the most part. The Round Bottom, once the property of General George Washington, is very fine land. The scenery is beautiful, being well diversified with hills and valleys. Coal is found in different parts of this district.

EARLY SETTLERS.

Probably Nathan Masters was as early a settler in this district as any. It is claimed he came out early in 1777. The same year came John and James Riggs, and James Freeman. Benjamin Fish settled in 1790. The Bakers, McLains and Roberts were also among the earliest settlers. Zeke Lewis settled

FARM, AND RESIDENCE OF **MADISON EVANS**, POE DISTRICT, HANCOCK COUNTY, WEST VA.

"STEENROD HILLS," PROPERTY OF COL. D. STEENROD THOMPSON, CAMERON, MARSHALL COUNTY, WEST VIRGINIA.

in Round Bottom in 1798. In about 1805 the Nixons—Hugh, William and James, came. And the Jeffersons located there in 1810, then came the Martins, Boners and Evans.

THE BALTIMORE & OHIO RAILROAD

passes through Clay up the narrow valley of Grave creek. The only station is Rosbey's Rock. It having taken its name from an early settler—Roseby. Some claim he was murdered by the Indians soon after his migration here. Three stores, post office, blacksmith shop, one shoe shop and one grist and saw mill comprises the business of the place. It was started about 1852.

SCHOOL HOUSES.

Clay has six school houses—all of which are frame, and furnished in the latest modern style. The educational interests are well cared for.

What is known as Lower Town, in Moundsville, lays in Clay.

CLAY DISTRICT BIOGRAPHIES.

WILLIAM S. PIERCE, farmer, was born in Ohio county, W. Va., in 1817. His father migrated from Delaware in 1806, and settled near Wheeling. William received a common school education. He married Miss Susan Bonar in 1842. They had a family of three children, all of whom are married.

A. MCGARY, farmer, was born in Belmont county, Ohio, in 1823; came to Marshall county with his father, William McGary, in 1835, and located on Fork Ridge. Arthur was brought up on the farm. In 1854, he married Miss L. Perkins, of Belmont county, Ohio. He has a family of nine children.

GEORGE TAYLOR, farmer, was born in Ohio county (now Marshall) in 1820, and settled on Taylor's ridge at an early day. He married Miss Elizabeth Pelley. They have a family of five children. Mr. T. has a large farm, and well improved.

MEADE DISTRICT.

Meade borders on Wetzel county on the south. Its organization was effected in about 1864, in conformity to an act passed by the general assembly of the state of West Virginia, in July, 1863. At the last census, taken in 1870, the district contained a population of 1,308. Has 21,746 arable acres. The total value of lands and buildings, $222,978.

FIRST SETTLERS.

The earliest settlement made in what is now Meade district was by a man named Eanic. He settled on Fish creek, where Conrad Thayer now lives, in about 1780. A Mr. Boman came in about the same time, locating on the land now in the possession of the Kelleys; but soon after his migration here he was captured by Indians and was subsequently murdered by them.

TOPOGRAPHY.

This district is watered by Fish creek and its smaller branches. The face of the land comprising this locality is exceedingly rough and hilly. In many places, however, the soil is rich and quite productive. The scenery is not altogether without interest; the narrow valleys and pointed hill tops present some beautiful features, whilst to the poet it might suggest excitable fancies

BLOCK HOUSE.

In about 1787, a block house or fort, as it was called, stood on the land owned now by Thayer. Soldiers at one time were stationed in this building, to watch the movements of the Indians and to prevent them from attacking the whites and massacreing them.

STONE PILES—ANCIENTLY BUILT.

Along the banks on either side of Fish creek, still remain at prominent points, stone piles, evidently built up by the Indians or a race of beings inhabiting the country prior to them. Judging from the appearance of these piles, one would conclude that they had been placed there for fortifications. The stones are piled to the height of about three feet. These are found, commencing at the land owned by the Kelley's extending up, towards the head of said stream, a distance of about four miles. At the mouth of Lynn camp and Maggoty streams, these occur more prominently. Several of these stone piles have been torn down, and discovered to contain the remains of human bones.

COAL,

is found in different parts of the township, on Lynn Camp run, Fish creek, and all its tributaries, but not in paying quantities. The veins run from fifteen inches to two feet in thickness.

IRON ORE,

is also found in this district, but not to any great extent.

ST. JOSEPH'S GERMAN CATHOLIC CHURCH.

The St. Joseph's Catholic congregation was organized in 1851, at Linn Camp, with little over a dozen members. In the year 1853, they increased in membership to twenty-five, and a church edifice was erected by them that year. The building is 25x50 feet. Father Huber, a German minister, supplied this litle flock in its primitive days. At present it has a large membership. The church runs in connection with it a good school, which has acquired considerable reputation. This enterprise was started about the time of the organization of the church, and has kept up continually, with the exception of about six months.

LINN CAMP.

At this point is found a store kept by A. Bishop, Esq., who is also postmaster. The name of the post office is St. Joseph, and was established in 1877.

FAIRMONT M. E. CHAPEL

Was organized in 1848, in the house of John Gorbey. Martin Bonar was the first class-leader. The first minister was Philip Greene. They now have a good church building to worship in, and the congregation is in a flourishing condition.

NEW BETHEL DISCIPLES' CHURCH.

In 1848 this society erected their first house of worship, built of logs. David Anguish supplied them, as pastor, at that time, remaining with them until October 5th, 1872, when death called him from his field of labor. The membership at present numbers about seventy.

MEADE DISTRICT BIOGRAPHIES.

WILLIAM LUTES, farmer, was born in Ohio county, in 1825. He was a son of David Lutes. Received a common school education when a boy. Married Nancy Jefferson in 1847. Was the father of eight children, seven of whom are still living, viz: Mary A., Elizabeth, John J., David C., James J. and Amanda M. Mr. Lutes was supervisor from Meade township for five years, and justice for three years, first receiving the appointment by the court and was subsequently elected by the people.

ABLE BONER, farmer, was born in Ohio county, in 1814, and is a son of James Boner, who migrated to this county about the year 1798. Our subject was married to Mary Vance in 1841. They had a family of nine children, five of whom are still living, viz: William M., Sarah E., Nancy B., Mary V. and James A. William M. was in the Twelfth West Virginia Volunteers, company B, and served three years; was wounded in the engagement at Hatcher's run.

JOHN ALLEY, a native of Ohio county, W. Va., was born in 1807. Educated in the common schools. In 1830, he married Miss Mary Gibson. They had a family of seven children, four boys and three girls.

FRANKLIN DISTRICT.

This district was created agreeably to the act of the General Assembly of West Virginia, passed on the 31st of July, 1863. Soon after the passage of this act an organization was effected. It was then called Franklin township, but not long afterward the present name took the place of "township." Has 28,393 arable acres. Total value of lands and buildings $461,222.

TOPOGRAPHY.

Franklin is watered by Fish creek and its tributaries, affording excellent mill privileges. The surface is very hilly and sometimes quite rough, especially so along the meanderings of

said creek. Very little land uncultivated. Scenery in many places picturesque and beautiful. The land lying along the river is rich and productive, suitable for gardening.

PRIMITIVE SETTLERS.

When the pioneers were going westward in search of land for tillable purposes and looking up a suitable place where they might locate and have a home, Cresap being among that number found his way into the rich valley now comprised in the territory forming Franklin district, in 1785. This place has since been given the name of Cresap's Bottom. The Cresaps' migrated from Maryland. After them followed Lazarus Rine, who came in about 1794 and settled near where John Hornbrook lives. Philip Heep came at the same time, who were all of German descent. The Wells, the Sims, the Bakers and Burches also came early.

Taylor bought land from a man named Blackford, who was probably one of the first white settlers on what is now known as Taylor's ridge.

INDIAN MOUNDS.

There is found one of these artificial elevations of earth on Cresap's bottom and three on Wells'. The largest one on the latter, is about thirty feet in height. Wherever excavations were made, they were found to contain skeletons along with pipes, flints, implements of Indian warfare and other relics. Smaller mounds of less notice are seen, here and there, in this vicinity. For ages, perhaps, these have been here.

MINERALS.

Coal and iron ore are found in all parts of the district, but the latter mineral is not in as large quantity, as the former. Coal is not worked to any extent. Probably the largest vein of coal found in the county, was discovered at a depth of four hundred feet below the surface at the mouth of Whetstone creek, being fourteen feet in thickness.

AN OLD BURIAL GROUND.

On the farm of Thomas McFarland, near the river's edge, is an olden time burial place, and, is probably, the oldest in Marshall county. This is the resting place of John Wetzel, father of the famous Lewis Wetzel. Above his remains, was placed a plain stone, simply bearing the initial inscription, "J. W. 1775." This still is seen, although nearly hid in the ground.

Baker's station or fort, stood on this spot. There are a number of other graves here, barely noticeable by a slight elevation. of the ground, or an occasional indentation.

SUMMARY.

There are two post offices, three stores, two grist mills, two physicians, four churches, and thirteen school houses, some of them log. Population about 1,690. The education of this district is about the same as in other parts of the county.

M. E. CHURCH.

The first organization of the M. E. society, in this district, was effected at the residence of George Baker, about 1810. In 1833, the first church edifice was erected and dedicated by Rev. Philip Green. In 1874, a new church building was put up at Hornbrook's mill. The people generally assisted with liberal hands in its completion. The dedicatory ceremonies were conducted by Dr. Riley, October, 1874.

FRANKLIN DISTRICT BIOGRAPHIES.

JOHN NIXON was born in Ohio county, W. Va., February 28, 1828. His parents came from Washington county, Pa. He was educated by going to school a few weeks in winter. As the schools were not very plenty those days, and rather poor at best, he received but a limited education. By close application to study he became sufficiently educated to do his own business. He engaged in farming in early life and has been successful in that direction. In 1848, he married Miss Eveline McCollough. They have three children, one son and two daughters. In 1876, Mr. Nixon was elected justice of the peace from Franklin district, on the republican ticket, and having filled that office with entire acceptance, he was elected to the Legislature from Marshall county, W. Va., in 1878, without opposition, leading his party by a handsome majority.

WILLIAM CROW was born in Marshall county, W. Va., in 1836. He is a son of William Crow, of Webster district, same county, and a grandson of Philip Crow, one of the first settlers of the state. He received a limited education in his younger days, as those sturdy old pioneers thought that it was more beneficial to develope the muscle than the mind. In 1859, he married Miss Melvina Cunningham, daughter of John Cunningham. They have three children, two girls and one boy. Alice was born March 30, 1860, and married Wesley Boner March 29, 1876. Thomas W. was born July 22, 1864. Rachel A. was born April 21, 1868.

JOHN Z. TAYLOR was born in Ohio county, W. Va., in 1828. He is a son of Paterson Taylor, and a grandson of John Taylor, who came from Westmoreland county, Pa., in 1802, and settled on Taylor's ridge. The subject of this sketch received a common school education while young, and as soon as he entered into manhood he engaged in farming. In 1854, he married Miss Ellen C. Martin, daughter of S. D. Martin, of Clay district, Marshall county, W. Va. They have ten children, five boys and five girls.

W. F. HAYNES was born in Hagerstown, Maryland, June 19th, 1847. He came to Marshall county, W. Va., in 1878. He married Miss Jane Sippet on the 4th of September, 1869. They have one child—Cora E., was born April 30th, 1872. His father, James E. Haynes, was born in England, August 14th, 1809, and came to America with his father in September 1819.

JANE HARVEY was born in Westmoreland county, Pennsylvania, February 27th, 1853, and came to Marshall county in 1876. Has been engaged in school teaching for four years.

R. H. MCFARLAND was born in Washington county, Pennsylvania, in 1832, and came to Marshall county with his parents in 1835, and settled where T. B. McF. now lives. His father, William McFarland, was a very energetic man. He cleared a large tract of land and made the best improvements in Franklin District. The spirit of enterprise still continues with our subject. He has an improved farm of 230 acres, and it may be said that he has one of the best in the township. In 1859 he married Miss S. J. Swam. They had a small family.

T. B. MCFARLAND, farmer, was born in Washington county, Pa., in 1829; came to Ohio county (now Marshall), W. Va., with his father; received a common school education at Moundsville; served in the late war of the rebellion in the Fourth West Virginia volunteers. In 1865, he was married to Miss Mattie Hogan. They have a family of two children—Sarah and Mary.

HIRAM LUTES, farmer, was born in Washington county, Pa., in 1824; migrated to Marshall county in 1858; was married to Miss Casey Dobbs in 1852. In 1861, after the death of his first wife, he married a second time. He is the father of three children living, viz: one boy and two girls.

CHARLES C. WELLS, farmer, was born in Wells' Bottom, Ohio county, in 1809. Received a common school education. In 1852, he was married to Miss Anne S. Scott.

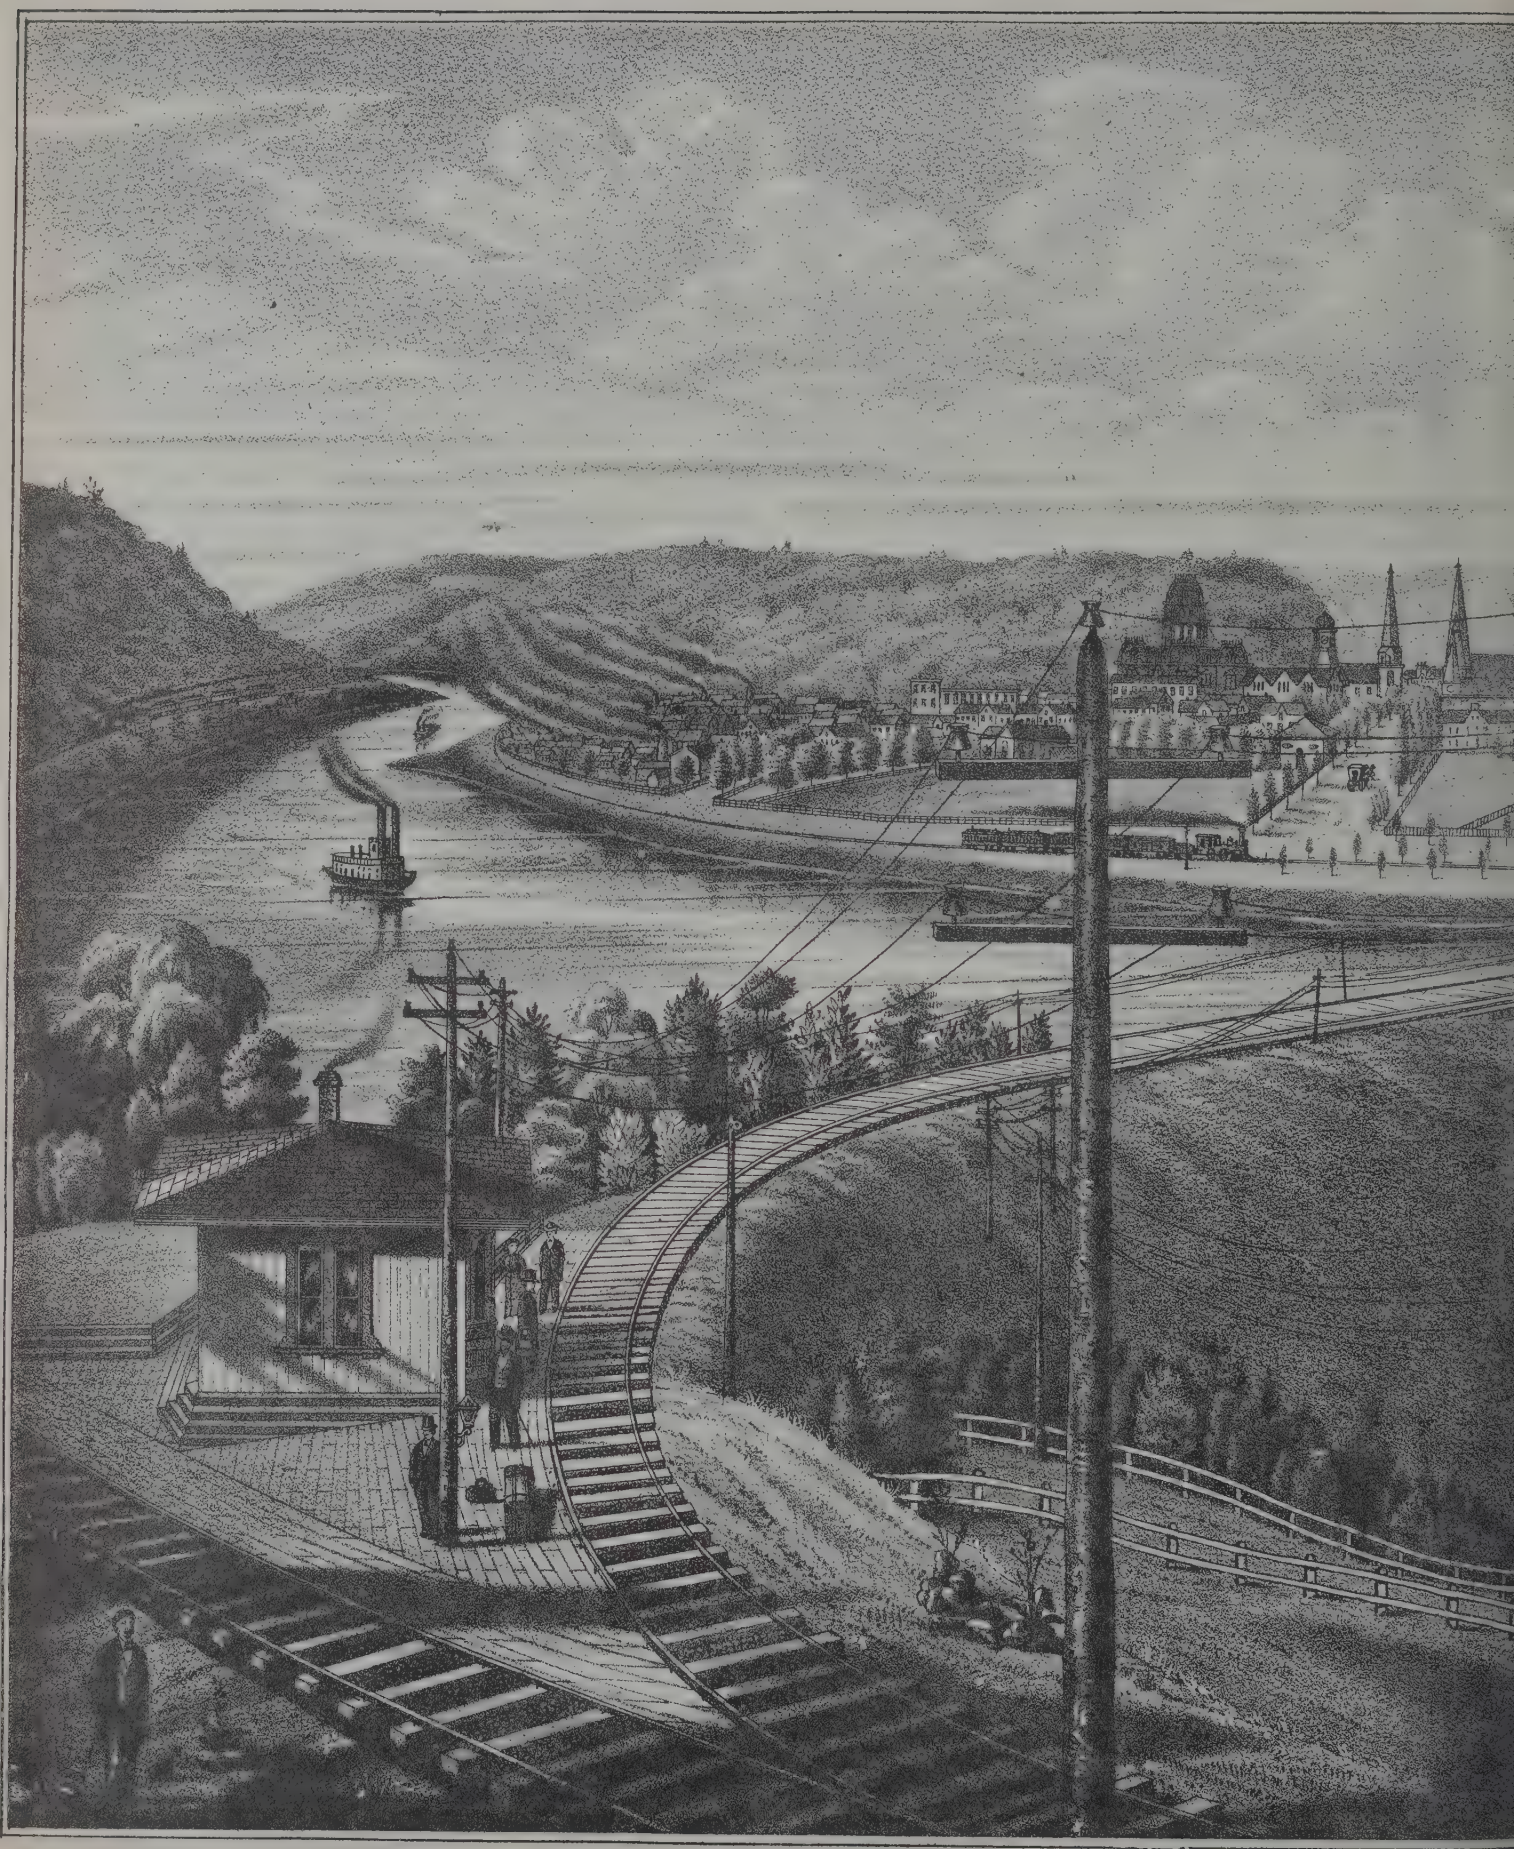
THOMPSON SIMS was born in 1815. Married Miss Elizabeth Scott in 1840. Was a pilot on the river for thirty years. Made his first trip in 1832. After leaving the river he engaged in the coal business. He has a family of seven children—three boys and four girls—living.

R. N. WELLS was born in what is now Marshall county, in 1807. He married Miss Drusilla McMahon in 1836. They had a family of eight children—four boys and four girls. Mr. S. died in 1871, at the age of sixty-four years.

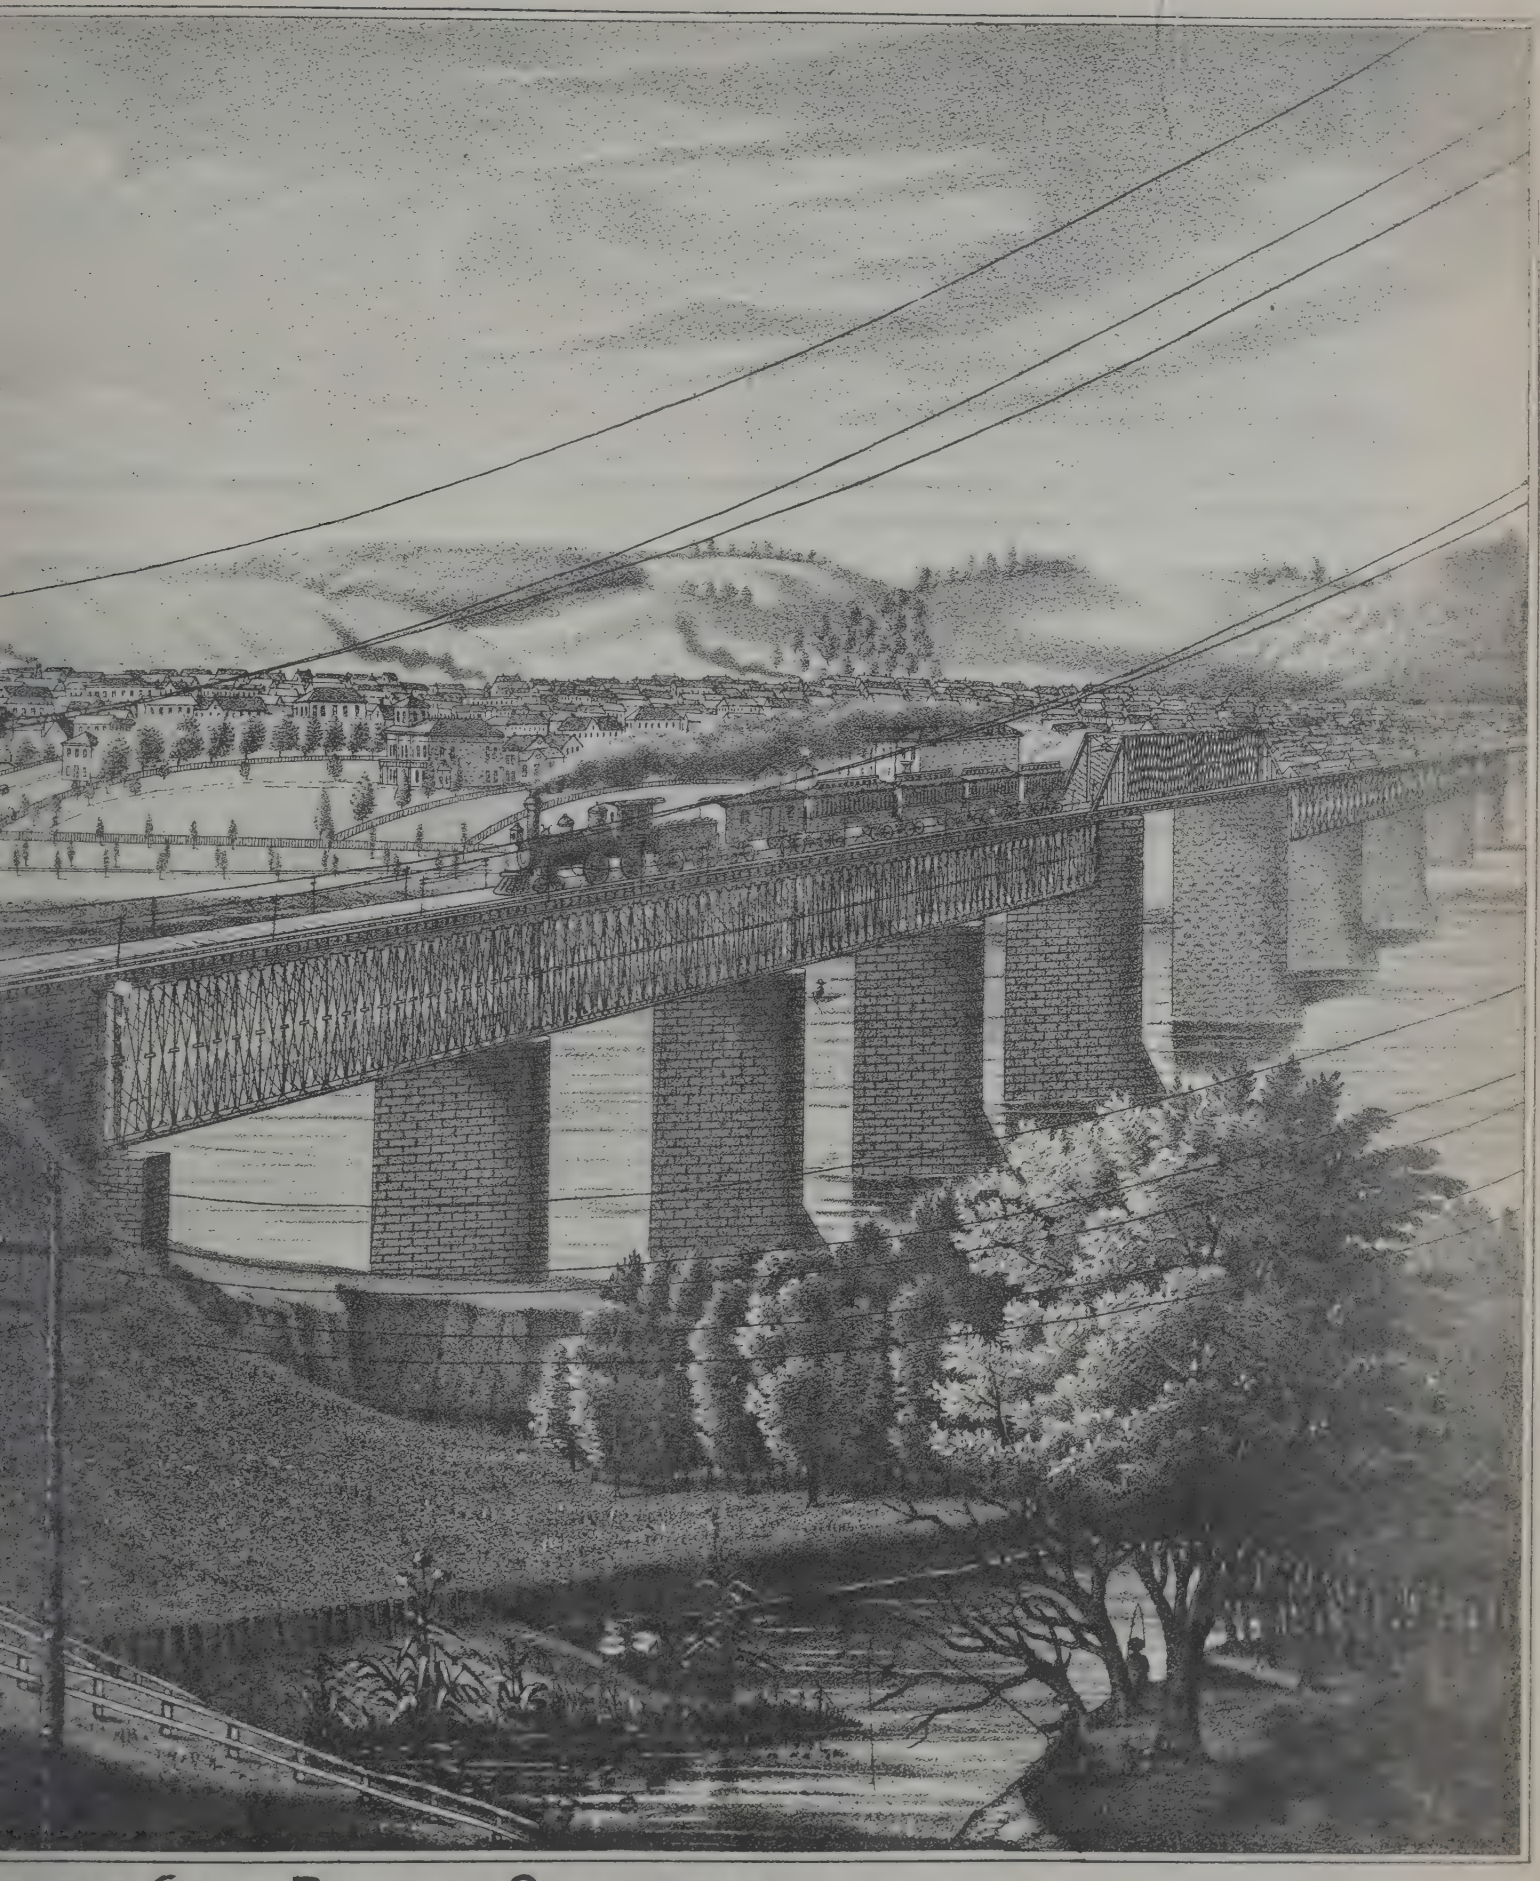
JAMES CRESAP was born in Marshall county, in 1845. He was a grandson of Michael Cresap. In 1870 he married Miss Margaret Whitaker. They have a family of four children.

E. H. CRESAP was born in Franklin district, in 1847. Married and has one daughter, who was born June 1, 1877.

HENRY MILLER, farmer, was born in Westmoreland county, Pa., in 1816; came to now Marshall county, W. Va., in 1826; married Miss Sarah A. Wayne in 1839. They had a family of six children. On the 7th of September, 1851, his wife died.



THE P. C & St L. RAILWAY IRON BRIDGE A



S THE OHIO RIVER AT STEUBENVILLE.

In 1853 he married his second wife, Miss E. Templeton, who also bore him six children.

Miles Bonar was born on Fork ridge, in Clay district, Marshall county, W. Va. In 1853, he married Miss S. A. Gibson. They have three boys and two girls.

Quincy Cresap was born in Marshall county, W. Va., on the 4th of July, 1844. He was a grandson of Michael Cresap. On the 15th of December, 1875, he was married to Miss Elizabeth Price. They have two children.

CHAPTER LVI.

HISTORY OF HANCOCK COUNTY.

EARLY HISTORY.

PIONEERS AND THEIR SETTLEMENTS.

THE land lying along the Ohio in this immediate section of the Pan-Handle was not settled upon quite as early as the middle and southern portions. There were, however, but a few intervening years. Soon after the people began to settle about Wellsburg, Wheeling and Grave creek, emigration commenced here.

The introduction of settlements was made in the year 17—, and from that time on for many years it continued until all the land was taken up. People came from Pennsylvania, Maryland, and other parts. They were not confined to any nationality, but among them were found English, Irish, Scotch, Germans and others.

It is hardly important here to mention the fact of the early condition of the land, covered with its dense timbers, and the home and habitation of the Indian, ravenous beasts and poisonous reptiles, for this is recounted in other portions of the history.

But when the woodman's ax was heard echoing and re-echoing through the wild retreats and desolate caverns of the immense forests, and the sound of the hunter's rifle, as it fell on the game that so plentifully abounded in the valleys and on the hills, it only incensed the more the barbarous inhabitant thereof.

The Indian became at once so inured to the settlers that they (the whites) were unable to make them believe they would treat them kindly were they willing to be kind to them. His suspicion bars him against any favorable conclusion.

By gradation the light of civilization shed its refulgent rays westward driving the Indian by its brilliancy into the darker recesses of the forests. He at first thought he might chase or kill the pale face as they undertook to settle upon his hunting ground and home. Whilst he committed many crimes upon the early people he was finally obliged to recede from these lands, and did, although very reluctantly. His indignation was doubly aroused and his thoughts were evilly disposed toward what he considered his intruder.

Under these circumstances the pioneers were in great danger continually. The Indian laid in wait for him; prowled about his home at night, watching for an opportunity when he could seize upon them without incurring any mishap to himself. For some time after the first settlements the pioneers were often greatly annoyed by these treacherous fellows.

It became necessary for them, whether at home or in the clearing, to have in readiness their gun, for they could not tell at what moment the Indian would make his appearance. He skulked about, and did many things to decoy the settler. Sometimes he has been known to drop valuable trinkets upon the ground that the paleface might pause to pick up, and while thus engaged in the act, fire upon him and, if possible, secure his scalp.

Every period of time seems to produce its men for such things that come to pass. They are fitted for the certain duties set before them. And like the pioneer acquit themselves nobly. The present generation are very unlike those of their forefathers. A pioneer life is the last life they would choose, nor is it necessary even that they should. But the contrast is so observable. Yet, again, on the other hand, what has been the change—the advancement from that period to this? Would they be prepared to cope with the present improvements? Most certainly not.

BLOCK HOUSES.

Owing to the perilous condition in which the frontiersmen were exposed buildings were often erected that they might protect themselves from the invasion of their foe. Many private residences were built in the shape of block houses. There was one built on the farm of Alfred Chapman by his grandfather, besides others and more substantial ones were built by the government for the protection of the whites against the raids of the Indians. These were sought by them for refuge during the night.

One of these forts stood on the bank of the Ohio river, a short distance below Hamilton town, and another one was built above where the same village is now situated. The ground upon which the lower block house stood has been used for a graveyard many years, and quite a number of persons are buried there. Above the resting place of Nicholas Dawson, who was buried there in the year 1795, there has grown a white oak tree nearly three feet in circumference.

EARLY SETTLERS.

An effort has been made to obtain, as accurately as possible, a list of the first settlers in what is now Hancock county. The early heroes herewith appended are given from tradition by a few of the older people yet living in the different districts of the county, and it is thought by them to be nearly correct in most every given date:

John Eaton settled on King's creek in the year 1792.

John Cameron settled on the north fork of King's creek in 1794.

A Mr. Butler settled near King's creek in 1790.

Oliver Brown settled in the Cove in the year 1790, and was driven out by the Indians.

John Harden settled on Harden's run in about 1797.

John Wiley settled in 1795.

James Campbell settled on King's creek, three miles from its mouth in 1797.

Alexander Morrow settled in what is now known as Butler district in 1798.

Robert Campbell settled not far from the mouth of King's creek in 1797.

Joseph Ralston settled in Butler district in 1788.

William Ledlie settled in the county in 1784 and his conveyance of land was from Patrick Henry, governor of Virginia.

William Hamilton settled in 1795 and laid out Hamilton town.

Samuel Baxter settled in now Grant district in 1798.

John Nesleroad settled about 1795.

Jacob Nessly, near Tomlinson's run in 1785.

John Spivy settled on the farm now owned by his son, Nicholas Spivy, in about 1794, and about the same time came the Cochrans, Jesse Ellis, Thomas Philson, John Gratehouse, Robert Grafton, the Hamiltons, William Ryon, the Pattersons, who built the first grist mill in the county.

And in 1800, or near that time, George Baxter, old Mr. Corey and George Wilhelm migrated to the country.

Alexander Scott settled on the farm now owned by J. C. Scott in 1802.

W. W. Evans settled on the farm now owned by Jeremiah C. Evans.

McCoys' settled in 1804 near New Cumberland.

William Hutson settled near Hamilton town in 1808.

William Chapman settled near New Cumberland in 1785.

Samuel Williams settled in Holliday's Cove in 1800.

William Murry settled where Murry's mill now stands in 1818.

William Mercer settled in what is now Grant district in 1823.

Robert Glass settled in 1813, one mile east of Fairview.

John Huff settled on the farm now owned by his son, Wm. Huff, in 1802.

Hosea Geer settled in 1808.

John Gallagher settled in 1801.

James Allison settled in 1780.

R. Rodgers settled in 1819.

Samuel E. Marks settled on the farm now owned by Alfred B. Marks in the year 1827.

George Chapman settled on the farm now owned by his son Alfred, in 1782.

Samuel Carson settled on King's creek, in 1797.

Hugh Pugh settled on a four hundred acre tract where Fairview is situated, in 1800.

James Allison settled on the farm now owned by Jonathan Allison, the grandson of James, on the road leading from Fairview to East Liverpool, in about 1800.

Samuel Allison settled on the Wellsburg road, in about 1800.

John Johnson settled on the north branch of Tomlinson's run, in 1802. At this time there were a number of settlers located here.

James Danlins settled in 1800.

Samuel Caruthers settled on the head-waters of Tomlinson's run, in 1800, and there erected among the first still-houses in what is now Hancock county. David Pugh also had a small still-house the same run, from about 1804 to 1812.

J. Bailey settled on the north branch of Tomlinson's run, in 1800.

Mr. —. Pittenger located here in 1798, settling on the road from Fairview to Liverpool.

James Goddard and Jacob Neicewanger settled near Fairview, in 1800.

W. Rodgers settled in 1795.

Thomas Bailey, John A. Johnson, John Lowe, David Work and Richard Fowler were early settlers, whose dates of settlement are unknown.

Christian Braneman settled in 1806.

Wm. Hewitt settled in 1801.

Samuel Banting settled in 1828.

Wm. Langfitt settled in 1812.

John Crawford settled on the farm now owned by W. L. Crawford, in 1819.

Andrew Young settled in 1809.

Peter Tarr settled in about 1798. He was a partner in the old Brooke Furnace, located on King's creek.

William Griffith settled in the cove on the farm now owned by Benjamin Griffith, in about 1782. He built a stone house in 1793, which is occupied as a dwelling. He kept government ammunition in the building for the use of the settlers.

Col. George Stewart settled in 1790, on the farm now owned by Franklin Stewart.

Roland Rogers settled in 1819.

John Edie, a soldier of the war of 1776, settled in now Butler district, in about 1792 or 1793. He was engaged in making nearly all the surveys for the government that were made in this section of the country for a number of years.

Abraham Croxon settled on the farm now owned by Alexander Edie, sr., in about 1779 or 1780.

A Mr. Holliday settled, in about 1776, in what is now known as Holliday's Cove.

Samuel and Joseph Ralston, with their father Joseph Ralston, sr., settled on King's creek, near where the old Ralston mill stands, in about 1783 or 1784.

In 1775, Philip Bell patented 1,000 acres, including a part of the Cove, and extending back to King's creek. The land is now owned by thirteen different parties.

William Logan settled on King's creek in about 1785.

Ephraim Brice settled in Hancock in 1818.

Jacob Nessly settled on Tomlinson's run in 1785, and owned all the land along the Ohio river for a mile back, and extending as far up as opposite Wellsville, a distance of five miles. His first improvement was on the farm now owned by Jacob N. Brown. The fight between Andy Poe and Big Foot was on Nessly's land at the mouth of Tomlinson's run. Nessly built a block house on his land for protection against the Indians. The government's block house was built on his grounds, which was used as headquarters for the guards and spies who were engaged in watching the movements of the Indians. Isaac Mills, James Downing and George Folks, the latter of whom was captured and held as a captive by the Indians for a number of years and then made his escape, and with the above named two persons acted as spies. When Mr. Nessly made his settlement on the said tract, he improved it as fast as possible, at different places along the river, and planted orchards. A number of the fruit trees then planted by him, bear fruit nearly every season. He erected a distillery on his property in about the year 1803. The stone building used for his malthouse is still standing.

Jacob J. Tope settled in Holliday's Cove in 1818.

William Ledlie purchased a tract of land containing 719 acres from Abraham Edie, in 1784. Said tract is now owned by three different parties, namely, James M. Crawford, William S. Crawford and Thomas Anderson. It is located on King's creek. The creek derived its name from one King who was the first settler on said stream. It was formerly known and called Indian creek, when in Youghiogheny county.

POE AND BIG FOOT.

The famous fight between Andrew Poe, and his brother Adam, and the Indian known as "Big Foot," familiar to every school boy throughout the land, occurred at the mouth of Tomlinson's run, in Hancock county. It will be found fully described in the chapter on "Events and Noted Characters of the Border Warfare."

WILLIAM RODGERS KILLED BY INDIANS.

Along in the year 1795, a man by the name of William Rodgers, settled in what is now known as Grant district, Hancock county, on the land at present in the possession of a Mr. Allison.

He had erected a small cabin in the woods, and was endeavoring to clear enough land about him to raise a few articles for food, as were also those of his neighbors who had located some little distance from him. He owned several cows that were permitted to graze upon the grass that might be found through the dense forests. Often these cattle strayed off so far that they could not or did not come home when they were needed. It was no uncommon occurrence, and frequently Mr. Rodgers was obliged to search for them through the woods until night overtook him, and sometimes returned to his home without the cows, but he had never met with any accidents or molestations. He had time and again seen the Indians prowling around the neighborhood, but he and his family gave them little concern. He had occupied his premises nearly a year, during which time he lived undisturbed. Indians occasionally stopped to beg something to eat, but never manifested the least hostility towards them. Although mean and dastardly tricks were being done to many of the settlers in other localities by the Indians of various tribes, his house and family, and even the immediate community had passed along, undisturbed. But the sneaking, thieving, lazy and unprincipled red skins were only decoying him. They were wanting him to feel secure, that they might have the better opportunity to obtain his scalp. Rodgers, however, was not at all cowardly, in fact that was an unknown principle in the pioneers of that day, but his bravery in this instance was rather derogatory to himself, for had he been a little cowardly he evidently would have taken the precaution to turn his footsteps homeward when the luminary of day declined behind the western slopes, instead of roaming around through the dense timbers, in search of his cows, as was his practice.

One evening in the fall of 1796, the cows failed to put in an appearance and it was growing late. He being somewhat fearful of their return, started in pursuit of them. Whilst searching through the woods, least expecting to be attacked by Indians, as it is supposed, he was discovered by them, who were just out on a stealing and massacreing expedition. He was shot, scalped and his body left lying in a terribly mutilated condition. He not returning that night as soon as was expected by his family, they were suspicious and considerably alarmed, feeling that something dreadful had taken place. As soon as possible (the neighbors being apprised of his disappearance), an effort to ascertain his whereabouts was made, and after a short search along an Indian trail, the body was found scalped and otherwise mutilated. Near the place where he met with his death, the neighbors interred the remains. The Indians who perpetrated the deed went undiscovered, and were presumed to have crossed the Ohio at the mouth of Yellow creek, they being tracked to that point. It is supposed that the object in crossing at this time was to steal and plunder from the sparsely settled whites and return over the river with their spoils. This was no uncommon trick for the redskins to play upon the first settlers of the country. No doubt other stories similar to this one could be related by those who witnessed and experienced the hard and dangerous times of pioneer life, were they still living.

The above is given nearly as the author has received it from some of the older citizens of the county, who vouch for its authenticity.

THE MURDER OF THOMAS CAMPBELL AND CHILD BY THE INDIANS.

When the Indians were driven back across the Ohio river by the rapid emigration of the whites, it made them still more savage toward their pale-faced foe. The red man would cross the

river, at convenient points along its meanderings into sparsely settled localities, bent upon the intent of stealing and scalping the men, women and children that were unprotected.

In the spring of 1782 a man by the name of Thomas Campbell, who resided in a log cabin on the bank of King's creek, near where Ralston's grist mill now stands, one day, during sugar-making season, returned from a small camp he had over the brow of a hill with a vessel containing the syrup, and, being considerably fatigued from performing the labor attending saccharine camps, concluded that he would take charge of the child whilst his wife might go and bring to the house a remaining vessel of molasses. She had not gone far from the cabin, however, merely reaching the top of the hill, when she heard Indians in the direction of her home. As she turned to look back an Indian, noticing her from the foot of the hill, fired a shot at her which, luckily, unharmed her. Observing the perilous situation she and her family were in, she ran with all speed to the nearest neighbors, the farm now owned by James Gardner, to inform them of the presence of Indians and the expected murder of her husband and child. A posse of men proceeded at once in the direction of the log cabin, but before they could possibly have reached the place the murder and thieving had been committed by the red-skins. The neighbors, upon reaching the spot, found the man lying dead within the doorway and the child, from appearances, had been caught by the heels and its brains knocked out against the side of the log cabin. Mr. Campbell had evidently reached for his gun, for it lay where he fell. He and the child were both scalped. The Indians were pursued, but were not overtaken. Their foul deed was perpetrated in this instance without retribution.

WILLIAM LANGFITT'S NARROW ESCAPE.

In the year 1785 or 1790, a respectable gentleman by the name of William Langfitt, settled near where Hookstown, Pa., is now situated, and erected a cabin and cleared a small portion of ground for the purpose of raising corn. He remained there but a short time, owing to the rumored hostilities of the Indians and their inhuman actions upon the settlers in or near that neighborhood. As he felt somewhat insecure, he concluded to remove his wife to her folks (Mr. Campbell) on King's creek, near the river. After having raised a small crop of corn and safely stowing it away, then arranged their household, taking with them such articles as were most valuable and started for his wife's people to remain during the winter. Their destination was reached in safety. Early the next spring Mr. Langfitt concluded to go back and get his corn, of which there still remained four sacks full. In company with a Mr. John Garren, he set out on horseback on his journey for his home in the woods. In due season the place was found and the corn discovered to be undisturbed. The horses were each loaded with two sacks of corn a piece and then their heads turned homeward by their drivers. They had not proceeded far, however, having reached the land now owned by Swearingen, when a number of shots were fired at them. They were riding along in single file, and Mr. Langfitt was considerably in advance of Garren. Some Indians had concealed themselves near the foot path, and when they had gone a short distance past them, raised up and all took dead aim at the two whites and fired upon them. Three bullets passed through the lobe of Mr. Langfitt's left lung, and one of the bullets struck his left arm, breaking it, after having passed through his body. All three struck a small hickory tree near by, and so close were the bullet holes that they could be covered with one hand.

Mr. Langfitt heard the screams of his companion, but was fainting away so rapidly that he merely had presence of mind enough to lay close to his horse's mane as it sped through the narrow road. He was discovered and picked up near the old fort not far from Frankfort Springs, about four miles from where he was shot. His horse carried him there. When found he was still clinging to his faithful animal. He lay there for a number of months, but finally recovered entirely from his wounds and died at the age of ninety-six years. His companion was never heard from after that. A number of years later, when the land there was cleared, a gun barrel was found, which was thought by some as being his.

THE FURNACE OF THE LAST CENTURY AND THE IRON FORGE OF THE YEAR 1800.

In an early day, somewhere between 1790 and 1800, there was erected a furnace on King's creek, now Butler district, where the manufacture of iron was continued for a number of years. It was built by a man named Grant, and, it appears, was run by a company of which Grant was a partner. The firm, however, failed, and then it was operated by Connell, Tarr & Co., who likewise failed. In the immediate neighborhood of where this furnace stood, iron ore is more plentiful. The old ruins of this building can still be seen. It may seem strange to the people of this day that the coal, abundant as it is, was not then used at all, but that the immediate vicinity was stripped of its wood, the bulk of which was first charred, for use in the furnace. The lining of the furnace was composed of a kind of stone which seems to have increased in durability and hardness as the heat was intense. The interior is so well preserved that nothing but the removal of the support will cause it to fall. Most of the metal there produced was moulded on the ground into skillets, kettles, grates, &c., which found a market at the furnace, the purchasers being from the sparsely settled region for twenty-five miles in all directions. Many of these articles that were manufactured there are yet preserved and still in use. The residue of the metal, crude and manufactured, was transported over the hills to Wellsburg, the home and business place of John Connell and Peter Tarr, owners of the manufactory. The furnace ceased operations along in 1812 or 1815.

THE IRON FORGE.

On King's creek, below where the Campbell's bridge spans the creek, William Griffith erected an iron forge in 1800, which was operated for a number of years. The principal part of the iron malleated here was boated down from the furnaces located on the Cheat river, a branch of the Monongahela, through the same to the Ohio and thence to the mouth of King's creek, where it was loaded on wagons and hauled up the creek to the forge. Metal was also used from the King's creek furnace. It is said that the best quality malleable iron was made here.

THE MANUFACTURE OF GUNPOWDER.

About the year 1795 a small gunpowder manufactory was started on the farm now in the possession of George Baxter by a man named Nesselroad, who had emigrated somewhere from the east and located, about the year alluded to, on that place. Here he built a log cabin and followed making gunpowder for nearly six years. At that early date powder and lead were very scarce, being of course in great demand by the settlers they brought a nice round price. Game abounded in the forests in large quantities, and in order to secure it ammunition must be had by them. Besides, to have none, placed the frontiersmen in a bad and dangerous position—no defence against the momentary attack of the Indian or wild animals that then inhabited the country. This Nesselroad thought to accommodate the pioneers as well as for his own pecuniary benefit manufactured powder and supplied those in that neighborhood with the article at a dollar per pound. His process for making it was a very slow one, as he was compelled to make his own ingredients—saltpetre, charcoal and sulphur. The process in which it was manufactured was without the requisition of machinery, being confined to hand-made altogether. The charcoal was ground fine by friction caused by the rubbing of two stones with flat surfaces together. Similar to what was well known by the early settlers as the hand-mills, which was used for the pulverizing of corn into meal. The other ingredients received like treatment. This was rather slow work, but the refining, which immediately followed the grinding, must have been still slower. The mill, if it can be so called, continued for nearly six years. A few years ago evidences of this establishment could yet be seen, but now there remains no marks where it stood.

THE TEUTONS' VOTES.

When this county formed part of Brooke, in the early days, it was customary for the voters who wished to vote, to go to Wellsburg, that being the only place of voting within the county. Along in 1815, there was an election coming off, which was expected by the politicians to be very close. Under these circumstances, all the citizens entitled to a vote, were earnestly urged to the polls. There were three candidates in the field, and each one had his political tricksters out electioneering. They rode over the length and breadth of the county, hailing every one whom they might meet to go the polls and vote for so-and-so. At this time there lived in the northern extremity of Brooke, two Germans, named respectively Neicewanger and Goddard, who never attended elections, and by the way very little acquainted with the laws of the land, and were easily

made to believe anything that might be told them. The politicians called on them, and attempted to electioneer. But neither could be made interested in the affair. About all that they said was to shake their heads, and in their own tongue, uttered "*Nein.*" One of them said, "I no don't care for some of dese bolitical matters what you speaks," and the other said, "des mox nix ouse." Finally they were made to believe that in case they failed to go and vote, a fine would be imposed upon them. With such positiveness was this told them, that they thought it must be true. At once they became frightened, and saddled their horses and off to Wellsburg they went. But when they reached the voting place, they were informed that they could vote or let it alone. No fine would subject them to perform this act. When this was ascertained, the Teutons got very angry to know that they had been deceived in that way. Stubbornness seized them at once, and all that the candidates could do to get them to vote, proved of no avail.

Voting then was conducted on the *viva voce* plan, and the polls were kept open for three successive days.

Neicewanger and his neighbor Goddard concluded, as they had traveled thirty-one miles to vote, they would vote for each other.

"Well," said the judge, "Mr. Neicewanger, who do you want to vote for?"

"Ov dese candidates I no like some, und I wotes for Jim Gottard."

He was informed by the judge that Goddard was not a candidate.

"I wotes for Jim Gottard anyhow," he replied.

The folks tried to reason with him, but it was no use; he only said:

"I wotes for Jim Gottard every dimes."

And when Goddard was asked the same question, he said:

"Me wotes for Neicewanger."

This was so good a joke that the laugh which followed by the listening crowd almost brought the house down.

PRIMITIVE SCHOOLS, SCHOOL HOUSES AND TEACHERS.

Little opportunity was afforded the children of the early settlers for obtaining an education. There was no law providing for schools, no tax levied for that purpose, or any other funds set apart for the payment of teachers in that day. The only alternative, under the circumstances, was resorted to by the citizens, and that was to raise by voluntary contributions sufficient means to employ some respectable person in whom could be placed implicit confidence to teach their offspring, because they fully realized the necessity and usefulness of even the limited knowledge the children might secure. Reading, writing and arithmetic comprised the studies then. When one received an inkling of these branches and got along pretty well, he was considered, it is said; a scholar among them.

Log cabin school houses were built here and there where the settlements occurred more numerous, by the people meeting on a certain day, understood by them, for the purpose of erecting cabins. This was done repeatedly. The cabins, as we are informed, were usually about 18x22 feet, and from seven to eight feet high; and constructed of round logs. A description of a log cabin in this connection will not be amiss, and to give the youthful reader an idea of some of the peculiarities of such cabins. They were built of round logs, the size being suited to the peculiar wants or notions of the builders. When raised to a sufficient height to prepare for the roof a log was laid across each end of the building, projecting on each side of the house about eighteen inches; these logs being three feet longer than those below, and were intended to support logs laid on them, called "butting poles," against which the first row of clapboards were made to rest. The building is then ready for "cobbing off," as it was called, which is done by putting a log on each side, perpendicularly with the main building; then a log on each end, and on them again one on each side, but far enough from the outside of the building to form a sufficient slope for the roof, and on which the boards used for a covering were laid, (and in the absence of boards, logs and bark off of trees, and moss and leaves often furnished the covering,) then another log on each end, these being necessarily about four feet shorter than those immediately below them, and on these end logs another pair of side logs, laid still further in toward the middle of the building, and ranging with those below them, and so on until it is finished off with a single log on the top and middle of the building. Then it is ready for covering, which is done with boards, split out of different kinds of wood, about four feet long, from eight to twelve inches wide, and about one and a half inches in thickness. These are laid on without nailing, but confined to their places by small logs laid on each course. To stop the crevices between the logs pieces of wood were driven in, called "chinking," and on this a thick mortar was put, which was called "daubing," this was sometimes done inside and out. The inside finish was, in all respects, as rough as the outside appearance. The floors were laid with timbers, called "puncheon," which was usually from eight to ten feet long, and made as broad as the logs would admit, and about four inches thick. The door was also made of these same "puncheons," and hung on wooden hinges, and fastened with a wooden latch.

To those familiar with the days of log cabins, the phrase so often used, "the latch string is out," is clearly understood. This latch or fastening was made of wood, and in order to enable those from without to enter the dwelling, a small string was attached to the latch (which was always on the inside) and passed through the door to the outside, and hence to prevent the entrance of any person, the inmates would pull in the latch string, so that when it was not seen on the outside of the door, it was evidence that no one could be admitted. Two windows were usually all that was considered necessary in a log cabin. This was made by cutting out one log on either side of the room nearly the length of the building and then closing up by putting in small sticks, in the form of sash, and pasting greased paper over them to cause it to admit the light more readily. A fire place was used instead of stoves which were then almost unknown. These fire places were made by cutting out a hole in one end of the building, in some cases large enough to pass a two horse wagon through the cavity. On the outside of the house, and connected with this, the chimney was built of wood and mortar, sometimes lined on the inside with stone and mortar immediately adjoining the fire place. In front of the fire place was a large space left in the floor, called the hearth, and was usually covered with flat stone, and hence the old phrase "hearth stone." The seats were made out of split timber, with legs in them so long that very few feet were able, after being properly seated, to touch the floor. One object at least was attained by this arrangement of seats, viz: the pupils were so elevated above the floor as to be unable to make any noise with their feet, but whatever good was attained by this was conteracted by causing the scholars to sit in this unpleasant posture during school hours.

As nearly as can be ascertained from the older settlers still living the first school within their recollection in now Hancock county, was started in a log house built for that purpose, and stood where Smith's mill now stands, by W. H. Grafton in 1811 or 1812.

D. Pentecost taught a term of school in a house that stood near where Robert Morrow now lives, in Butler district, in about 1813, and he was succeeded the year following by John McMinner, who only taught one term also.

Henry Holmes taught in an old school house near the Flats church in 1822. Thomas Bambrick taught in the same school house commencing in the latter part of the year 1822, and continued for several winters. A log cabin school house stood near the Paws spring, on the farm now owned by J. C. Evans, and used for school purposes a number of years. It was built in 1820, or about that date. Children went two and three miles to attend school. The first teachers were John McConn, Thomas Dill, Bambrick Claton, and Miss Philena Fair.

In an early day there was a school house stood on the farm in the possession of Robert Prosser, and one on the Alex. Bunting farm.

William Ledlie taught in a log house situated on a piece of ground now owned by I. N. Young. He taught a number of terms between the years 1784 and 1815. He taught surveying in connection with the common school branches.

James Rainey taught between the years 1810 and 1820 in a school house, located near William Wyles, which was soon afterward destroyed by fire.

For a great many years a log house occupied the site where the Jefferson school is situated. William Lang, B. S. Forbs, L. W. Beall and Samuel Wilcoxon, taught here along in 1827, 1828 and 1829. This house was used until 1850.

Hugh Laird taught for a number of terms in Holliday's Cove and vicinity in the years 1790 to 1815 or 1820.

David Goorley was one of the early teachers in the Jefferson school house. He taught in 1825.

On the site of the Liberty school house stood a log school building that was erected in about 1808, and Hugh Laird taught here a short time, soon after it was built. 1838 the house was torn away and a hewed log house took its place, and

used until 1848, then a brick house was erected, which remained until 1869, and then replaced by the present frame building.

Charles Stewart taught a school in a log cabin that stood near the Nessley's mill, along in 1825 or 1826.

Mark McGarven taught in 1811, in a cabin on a branch of Tomlinson's run.

Mark McGovern taught a term of school in a log cabin, located about one mile down the run from where Allison's present residence is standing, in Grant district, in about 1811. Among the scholars were James and Robert Hewitt, a Miss Kirk, Samuel and Sarah Micks, Charles Allison. A Mr. Martin, Isaac Bailey and Thomas Thompson, also taught in that neighborhood in an early day.

James Daubins taught a term of school in now Grant district in 1819.

In the year 1820, David Edie taught a term in an old log school house that stood on the farm now owned by George Chambers. And in the following year David Cameron taught a term in the same house. The Camerons, Pittengers, Swearingens, Harts, Carsons and others attended.

Mr. Brandon, an Irishman, taught where the Fairview Presbyterian Church now stands in 1818.

McCoy followed Brandon in about the year 1820, and taught a few years in the town of Fairview. On the hollidays, one year, the scholars demanded a treat and closed the doors and windows of the house against their teacher until he would promise to treat. The wages teachers received in that early day did not justify a luxury of this sort, and of course he absolutely refused to countenance anything of the kind, and insisted upon coming in the building, which the children, who were all within the house, refused absolutely his admission without their wishes were gratified. It was a cold blustery day, and the teacher was getting cold standing around the outside. He had made every effort imaginable to gain an entrance, but had been outwitted in every attempt. Finally a new idea seemed to take a hold. It was to crawl down the large chimney, which he proceeded to do. This caused great commotion below, for they perceived at once what was going on, and they immediately placed more fuel on the fire, and the master gladly retreated up the chimney, almost choked to death. He saw that all efforts were futile and concluded lastly to settle the affair by treating, which he did.

PRIMITIVE PREACHING.

The first preaching done in now Hancock connty, dates back to 1798. Rev's Marquis, Hughes, and Macurdy, were the earliest ministers in this section. Along in those days, the people came a great distance to preaching. Services were held in the open air. Accommodations for seating the folks resembled in many respects those of the modern camp-meeting style. Only, instead of being made out of sawed boards, they were split timber, with pins driven in for legs. The costume of the people would not compare with the elegance of dress now seen on the camp-grounds. They came, carrying their loaded guns, with moccasins and hunting dress on. During the preaching of the Word of God, some four or five persons would be stationed around some little distance from the rest, guarding against the Indians, for fear they might unexpectedly slip upon them and massacre the whole party. The assemblages were usually small. They would gather in from ten and eleven miles distant. These meetings were held, alternately in different localities throughout the summer season. This way of holding meetings was practiced until the country became more thickly populated and then log churches were erected.

These exercises lasted during the greater portion of the day, and on the Sabbath only. The settlers carried their food with them to these meetings. It is said that they were enjoyable occasions.

CHAPTER LVII.

ERECTION OF HANCOCK COUNTY.

IN the earlier days of Brooke county, there were no roads by which to guide the pioneers. Only a few Indian trails led here and there, with almost indistinct indentation, which perhaps were of less importance than the paths soon made by the primitive settlers. As early as possible, roads were laid out, but, of course, were very poor for many years, even as late as 1840 and later. This county being a long, narrow strip, bordered on the east by Pennsylvania and on the west by Ohio, the northern portion found great inconvenience in reaching the county seat. The roads were in such a condition that travel was almost impossible.

For a number of years previous to the erection of Hancock, the question had been considerably agitated by the people living in the northern portion of Brooke for a division of the county, whilst those residing more centrally wished for the county seat to be removed to Holliday's Cove, which would make the seat of justice near the centre of Brooke county, and would be more convenient for the taxpayers and the people generally. This, of course, met with hearty approval from the farmers in the northern district, though not regarded quite as well as the erection of a new county; but it was known to them that even such a change would prove advantageous to them. The most northern portion of the county was not able of itself to make the division without the co-operation of other portions of the county, and fully realized its short hand in this respect. The population in the southern part of Brooke was so much larger, that with the little assistance even it might receive from the central portion, it had ever been able to carry things as it desired, whether it was thought derogatory to the interests of the northern farmer or not.

Finally the subject of forming a town at Holliday's Cove and removing the seat of justice to that point was introduced before the people, which would have placed the county seat nearly in the centre of Brooke. Holliday's Cove is situated opposite Steubenville, on the east bank of the Ohio river. This question seemed to meet with likes and dislikes, but apparently began gaining favor, until the people living near Wellsburg, becoming somewhat fearful of losing the court house, at once coincided with the northern portion for a division, thinking that much the best course to pursue in the emergency. Brooke county extended from the Ohio river on the north to where Short creek empties into the Ohio on the south, a distance of over forty miles. The distance being so great and the roads in such bad condition, made it quite inconvenient for those living above Holliday's Cove to reach Wellsburg and transact such business as was usually required to be transacted.

A petition was carried by Hon. Thomas Brambrick, who was then a member of the Legislature, elected from Brooke county, and a resident of Fairview, praying for the formation of a new county.

Among some of the most prominent men who were instrumental in effecting a division, are the names of David Pugh, Peter Pugh, John Mayhue, Andrew Henderson, David Willy, and others.

The act creating Hancock county is given below, showing the boundaries of same, with regulations, etc.

THE ACT.

An ACT establishing the county of Hancock out of the northern end of Brooke county.

Passed January 15, 1848.

Be it enacted by the General Assembly, That all that part of the northern or upper end of the county of Brooke, contained within the following boundary lines, to-wit: Beginning on the Ohio river, at the ledge of rocks commonly called and known as "Williams' rocks;" thence by straight line to the toll gate on the Holliday's Cove turnpike road; thence a due east course to the Pennsylvania state line; thence (from the point of intersection or meeting with said state lines), with and along said Pennsylvania state line, north, to the Ohio river; thence with and along the said Ohio river, as it meanders, to the place of beginning, shall form one distinct and new county, and be called and known by the name of Hancock county.

The governor shall commission as justices of the peace for the said new county all the justices of the peace now in commission in the county of Brooke, whose dwelling houses shall be included within the boundary of the said new county of Hancock, after the commencement of this act; and they shall be commissioned, in point of seniority, according to the dates of their present commissions, respectively; all of whom shall (before entering upon or exercising any of the duties of said office) take the several oaths, and within the time now required by law of persons commissioned as justices of the peace; which oaths may be administered by any justice of the peace remaining in commission in the county of Brooke; and the justice or justices who may administer such oaths, shall grant a certificate of the fact from under his or their hand and seal of

office, and which certificate shall be by the justices so qualified, delivered to the clerk of the county court of Hancock county, who shall record the same in his office and preserve the original therein: *Provided*, that nothing herein contained shall be so construed as to prevent any justice of the peace now in commission for the county of Brooke, and residing within the boundary of the new county of Hancock, from exercising the duties of his office as and for the said county of Brooke until the organization of the said county of Hancock, on the second Monday in April next as hereinafter prescribed.

A county court for the county of Hancock, shall be holden by the justices thereof on the second Monday in each and every month, after the same shall have been organized in the manner prescribed by law for other counties of ths commonwealth, and as shall be by law and their commissions directed.

The permanent place for holding the several courts for the county of Hancock, now required by law to be holden for the several counties of this commonwealth, shall be at the town of New Manchester, unless otherwise determined by the vote of the majority of the lawful voters of the county, taken and ascertained in the following manner: It shall be the duty of the sheriff, other officers and commissioners conducting elections in the county of Hancock, at the several places of holding elections in said new county for a delegate to the general assembly, at the time of taking the poll for the next annual election of such delegate to open a separate poll for the purpose of ascertaining the sense of the people of said county of Hancock, whether a majority of them prefer the town of New Manchester or New Cumberland, as the permanent site for the seat of justice for said new county. The said polls shall contain two colums, one headed "For New Manchester as the site for the court house," and the other headed "For New Cumberland as the site for the court house," and the names of the voters shall be written in that column headed with the name of the place voted for. The sheriff, other officers and commissioners conducting said elections shall poll the vote of every person claiming the right to vote, who is qualified according to the constitution and laws of this commonwealth to vote for a delegate to the general assembly; and also the vote of every white male citizen of said county of the age of twenty-one years and upwards who has resided in the boundary of said new county, as hereby established one entire and continuous year next before the said election, and who was assessed with a part (his due proportion) of the county levy for said preceding year (or at the last assessment of the county levy), and has actually paid the same.

Provided, That any such voter does not labor under any legal or constitutional disability. The sheriff, other officers and commissioners conducting said poll at the time and place aforesaid, shall proceed with, certify and return the same to the clerk of the county court of said new county of Hancock, in the same manner in all respects as they are required by law to proceed with, certify and return the poll taken by them for a delegate to the general assembly, and shall be liable to the like penalties for similar failures as therein provided against. If it shall appear to the said sheriff, other officers and commissioners, after examining the polls required to be taken and returned as aforesaid, and striking therefrom the names of all such persons as, in the opinions of a majority of them, are not entitled to vote according to the provisions of this act, that a majority of the votes taken are in favor of either of said places as voted for, that fact shall be certified by them to the county court of said new county of Hancock; whereupon such place, so having a majority of votes, shall be the permanent place for holding the courts of the new county of Hancock, now required by law to be holden for the several counties of this commonwealth, and conducting business incident thereto. And if, at the close of the examination of the polls so taken, it shall appear that an equal number of votes have been given in favor of each of said places voted for, then the high sheriff of said county of Hancock, as in elections for a delegate under similar circumstances, shall elect and decide between the two said places. And thereupon the county court of Hancock county shall provide a lot or lots of land at such place so designated, not exceeding two acres, (unless land be furnished by donation, in which case the justices of said county may take and hold the same, provided such donation shall not exceed five acres, and a full and satisfactory title, as herein required, can and shall be made thereto,) upon which to erect a court house and such other necessary public buildings and fixtures as the convenience of the county requires, under existing laws, for holding courts and conducting business incident thereto, in the manner now required by law, where land shall not be already provided and appropriated for that purpose. And said court shall cause said buildings and fixtures to be constructed at the charge of the county of Hancock by levy, in the manner now prescribed by law. The title to any such land, purchased as aforesaid for valuable consideration, or furnished in free gift, (as the case may be,) shall be made in fee simple to four, or more, justices of the peace for the said county of Hancock, and their successors in office, in trust for the use and benefit of said county.

The justices of the peace, commissioned and qualified as aforesaid for the county of Hancock, shall meet at the house, now the residence of Samuel C. Allison, situate in New Manchester, on the second Monday in April next. The whole number of said justices commissioned and qualified as aforesaid, having been summoned by the acting sheriff or his deputy or deputies of the now county of Brooke, to attend on that day; and it is hereby made the duty of said sheriff of this now county of Brooke aforesaid, to summon said justices to attend as aforesaid, at least ten days before the time of meeting fixed as aforesaid, under the penalty of forfeiting and paying not less than fifty dollars for the benefit of the literary fund, recoverable as other fines imposed by law on sheriffs and their deputies for similar omissions of duty. And two-thirds of the said justices being present, (otherwise those who do attend, may adjourn from day to day, and from time to time, until two-thirds be present,) shall proceed to appoint a clerk for the county court, an attorney for the commonwealth to prosecute and defend her interests in said court, (or may adjourn said latter appointment to a subsequent term, not later than the third term after said first meeting, if not fully so informed as to make a judicious appointment of such attorney at said first meeting,) a commissioner of the revenue, and a surveyor for the said county of Hancock, and also at the same time, the necessary number of school commissioners for said new county, or at some early day thereafter, if at that time the said justices shall not be fully or sufficiently informed, so as to make advisedly a judicious and proper appointment as to such school commissioners. The said justices shall also, at the same time, nominate to the governor, suitable persons to be commissioned as sheriff and coroner for said new county; and fix upon such place, and some suitable house in said county, as may seem most convenient for holding the courts thereof, until the necessary public building shall be constructed at such place as shall be determined upon by the majority of the lawful voters of the said new county in the manner aforesaid. And said justices shall cause all the said appointments, orders and proceedings made and had aforesaid, and particularly as mentioned and required by the provisions of this section, to be entered of record in their said county court.

It shall be lawful for the sheriff or other collector lawfully appointed, of the county of Brooke, to collect by distress or other lawful mode, any public dues or officers' fees which may remain unpaid by such of the inhabitants of the county of Brooke as will be included within the boundary of the said county of Hancock, at the time when this act shall commence and be in force; and such sheriff or other collector, shall be accountable for the same in like manner, and under the same fines, forfeitures and penalties, as if this act had never passed.

The courts of the county of Brooke shall have and retain jurisdiction of all actions and suits depending before them on the second Monday in April next, and shall try and determine the same, and award execution thereon, when necessary, except in cases in which both parties reside within the new county; which last mentioned cases (together with the papers appertaining thereto) shall after that day be removed to the courts of the county of Hancock, and there tried and determined as other cases.

The said county of Hancock shall be in and attached to the same judicial circuit with the county of Brooke and the circuit superior courts of law and chancery thereof shall be holden on the twenty-fifth day of May and on the twenty-fifth day of October in every year; and shall be in the same militia brigade district with the county of Brooke; and shall be in the same congressional district, the same senatorial district, and the same electoral district (for choosing electors for president and vice-president of the United States) with the county of Brooke.

The courts of quarterly sessions for the said county of Hancock shall be holden in the months of January, April, June and October, in every year.

The boundary lines of the said new county, as described and established by this act, shall be run and marked in the manner prescribed by the act entitled "an act for making more effectual provisions for running and marking the boundaries of new counties," passed on the eleventh day of February, in the year eighteen hundred and forty-five.

The said new county of Hancock and the county of Brooke shall constitute one electoral district, and together send one delegate to the house of delegates in the general assembly of Virginia, until a reapportionment of representation shall take place, or until otherwise ordered by the said general assembly. And all separate elections heretofore authorized to be holden in and for the county of Brooke, and falling within the boundary of the new county of Hancock, shall be conducted for the said new county in the same manner as heretofore for the county of Brooke until it shall be ascertained whether either or any such are unnecessary for the said new county; and upon the fact of any being unnecessary and being represented to the general assembly, upon notice given in the manner required for establishing a separate election, may be discontinued. It shall be the duty of the county court of Hancock county, at its first term, or as soon thereafter as convenient or necessary, according to law, to appoint as many persons as may be requisite to perform the duties of sheriff at the several places of holding separate elections in said county of Hancock, and who shall attend at the court house of Brooke county to compare the polls, and to perform such other duties as are required by law of sheriffs and their deputies in that behalf, and who shall be liable to the same penalties as are now imposed by law on sheriffs and their deputies for failing or refusing to hold separate elections, or other omissions of duty in that behalf; and the said court shall also appoint as many superintendents of election as are required by law, for the polls to be taken at the court house and other places of voting in the said new county of Hancock. The persons hereby required to be appointed to attend and compare the polls shall take with them fair copies of all the original polls taken in said new county of Hancock.

And be it further enacted, that the treasurer of the school commissioners of the county of Brooke shall be, and he is hereby authorized and required to pay to the treasurer of the school commissioners of the new county of Hancock, upon the order of the school commissioners of said new county, out of the fixed and surplus quotas of the school fund of the said county of Brooke, for the present fiscal year (ending in eighteen hundred and forty-eight.) such sum as shall seem to them to be in due proportion to the population of the said new county of Hancock, taken from that of the said county of Brooke, including any balance remaining unexpended, as also of the due proportion as aforesaid accruing from such quotas to which Brooke county is or may be entitled for any former year. And it shall be the duty of the second auditor to re-apportion the fixed and surplus school quota of the county of Brooke for the next fiscal year, and subsequent years, between the said connty of Brooke and the new county of Hancock, agreeably to their respective number of white tithables which may be returned therein by the commissioners of the revenue for the present year eighteen hundred and forty-eight.

This act shall commence and be in force from and after the passing thereof.

PROCEEDINGS OF THE FIRST COUNTY COURT HELD IN HANCOCK COUNTY.

In pursuance of an Act of the General Assembly of the Commonwealth of Virginia, passed January 15, 1848, the county of Hancock was established out of the northern end of Brooke county, and the first county court was organized on the tenth day of April, 1848, at the house of Samuel C. Allison, which is now known as the Manchester House. John Pittenger, David Pugh, Andrew Henderson, John Gardner, David Wylie, Wm. H. Grafton and John Mayhew were the justices constituting said court. The court elected John H. Atkinson, clerk; Robert Brown, prosecuting attorney; Josiah A. Adams, commissioner of the revenue; Thomas J. Hewitt, surveyor; and appointed the following commissioners of election: For New Manchester, James Hewitt, George Baxter, Thomas Elder, Robert Herron, David Pugh, of Peter. For Holliday's Cove: Greenbury Wilcoxen, William Beall, Isaac Van Norstrand, James Gardner and James Campbell, (miller).

David Wylie and Joseph Cameron were appointed sheriffs to hold the first election.

David Wylie, Wm. H. Grafton and John Mayhew were recommended to the governor as fit persons to execute the office of sheriff.

Wm. H. Grafton and John Mayhew were recommended to the executive as fit and proper persons to be commissioned to execute the office of coroner.

Ordered, That the county courts of Hancock county be held at the house now occupied by Samuel C. Allison, in New Manchester, until further ordered.

Wm. Bigham came into court, and on motion of John H. Atkinson, clerk of this court, was permitted to qualify as his deputy, and thereupon he took the oath of fidelity to the commonwealth, the oath prescribed by the act entitled "An act to suppress dueling, the oath to support the constitution of the United States, and the oath of office.

James Cochran was appointed constable, "the court being of the opinion that he is a man of honesty, probity and good demeanor." He took the oath of office, with James Sanders, John Longstreth and Samuel F. Marquis as sureties. Bond $2,000.

Alexander D. Pugh was also appointed a constable, with Hugh Pugh as surety, in the sum of $2,000.

Ordered, That the county surveyor proceed to meet the county surveyor of Brooke, and run and mark the line between the county of Hancock and Brooke, according to the act of 1845.

Court adjourned to meet the second Monday of May, 1848.

JOHN GARDNER, *P. J.*

List of the taxable town lots within the district of J. A. Adams, commissioner of the revenue in the county of Hancock, for the year 1848:

FOR NEW MANCHESTER.

Number of town lots,	72	
Value of buildings,		$ 95.95
Value of lots, including buildings,		194.05
Total amount of tax on each lot at $2.40 per $100 yearly value,		27.29

FOR NEW CUMBERLAND.

Number of town lots,	39	
Value of buildings,		$14.00
Value of lots including buildings,		19.00
Total amount of tax on each lot at $2.40 per $100 yearly value,		4.70

FOR COUNTY.

Total amount for county,	$692.51

List of the taxable property within the district of J. A. Adams, commissioner of the revenue in the county of Hancock for the year 1848:

One slave at 32 cents is	.32
968 horses at 10 cents are	96.80
12 gold watches at $1 are	12.00
82 silver watches at 25 cents are	20.50
157 metal clocks, at 25 cents are	39.35
236 wooden clocks, at 12½ cents are	29.50½
64 jerseys, carriages, pianoes, &c.	52.42
4 physicians,	20.00
Tax on interest of bonds, notes, &c.,	13.05

To J. H. Atkinson, services as clerk, stationery,	23 25
To A. D. Pugh, for summoning jury of inquest of commissioners,	4 83
To William H. Grafton, for holding inquest on man found, unkown,	5 00
To James Cochran, for summoning judges of election,	1 05
To Samuel C. Allison, for house for court,	15 00
To James Melvin, for writing stool for clerk,	75
	$157 13

LEVY FOR THE YEAR 1850.

List of the county levy for Hancock county, made June 1850, is as follows:

1 docket for Robert Morrow,	$1 50
1 docket for John Sunby,	1 50
1 docket for James Ross,	1 50
George Pentecost, for monuments, (omitted in last levy,)	13 00
John Gardner, for damages on road,	13 00
John H. Atkinson, clerk, for public services,	60 00
John H. Atkinson, for stationery and for other purposes,	37 54
David Wylie, for writ of *ad quod damnum*,	11 10
W. H. Grafton, " " "	7 66
David Wilce, " " "	8 85
John Long for one docket,	1 50
John Mayhew, for one docket,	1 50
Alexander Morrow, for fixing court house,	6 67
John C. Young, for temporary stairs for court house,	6 00
Hall & Blankinsop, stoves for court house,	63 25
Smith & Jacob, for 50 copies road law,	2 50
James Stevenson, balance on contract for court house,	1,549 99
James Melvin, for chairs, painting court house, &c.,	25 00
Wm. Bigham and others, for advertising for proposals,	3 00
James Stevenson, for extra work on court house,	145 45
James Stevenson, for spouting on court house,	21 86
James Stevenson, for return spouting on court house,	37 22
P. F. Gise, for stove pipe,	9 35
R. R. Gardner, commissioner of revenue, for making poll books,	5 00
Estate of Samuel C. Allison, for furnishing court place for 10 terms,	40 00
Samuel C. Allison, as commissioner for superintending court house,	5 00
Wm. H. Grafton, sheriff, for public services, holding election,	39 00
Wm. H. Grafton, sheriff, for candlestick and candles,	75
David Wylie, for holding election at Cove in 1848,	4 00
Robert Brown, prosecuting attorney for Commonwealth,	60 00
James Pugh, for a docket,	1 50
Alexander Morrow, for shovel and poker,	1 50
Jesse Edgington, for three days purging polls.	9 00
Wm. White, for three days purging polls,	9 00
Bazaleel Wells, for three days purging polls,	9 00
W. Marks, for three days purging polls,	9 00
Robert Nicholls, for three days purging polls,	9 00
G. Wilcoxen, for docket,	1 50
	$2,232 18

The levy for bridge purposes in this county made June term, 1850, is as follows:

Smith & Livengood, for an addition to the near fork of Tomlinson's run,	$56 25
James Freeman, for bridge at Ball's mill,	15 00
James Freeman, for fixing bridge at Holbert's run,	40 00
James Freeman, for repairing bridge near Gambel's saw mill,	6 36
	$117 61

COUNTY BUILDINGS.

As early as possible after the formation of Hancock county steps were taken to erect a court house. In the act establishing the county of Hancock, an election was ordered to be held to decide at which town the county seat should be fixed. The election was held, and it was gained in favor of Fairview (then New Manchester,) by only one vote.

On the 10th of July, 1848, the following persons were commissioned to select a site, ascertain the probable cost, and investigate and report a plan for a court house: Thomas Elder, John Mayhew and Alexander Morrow.

The committee made the following report, August 15th, 1848:

"We have carefully examined a number of places, and, from duly taking into consideration all the places to us shown, believe unanimously, and hereby report that the lots lying north of William McClean, one of which belongs to David Pugh (of Peter,) and the other to the heirs of Dr. McClean, dec'd, are the most suitable for the said purpose, and we recommend the same to said court. Said lots are offered free of charge for said purpose, and the title guaranteed by William Bigham."

The court approved of the report, and it was adopted. It was then ordered that lots Nos. 19 and 20 be selected to erect the court house on. Then Alexander Morrow, Wm. Bigham and Wm. Flanegin were appointed commissioners to receive proposals on the erection of the same, which was to be built of brick, with stone foundation, 50x60 feet, two stories high.

By the 11th of February, 1850, the new court house was ready, and court was held in it for the first time. Previous to this time the court held its sessions in Samuel C. Allison's building. The room in which the court is held is forty-four feet square. The structure is yet a very good one, although it has been in use for twenty-eight years.

Several years later the court appointed Thomas Brambrick and George Baxter as commissioners, to report a plan for a county jail. In the September term these gentlemen submitted a report, which was accepted by the court, and on the 9th of September, 1856, the commissioners entered into a contract for the erection of a jail with Andrew R. McConn and James Murray.

The jail is built of cut sandstone one story in height, upon which is then built the sheriff's residence of brick one story, making the building two stories high. There are two apartments in the jail. The house is 20x36 feet, and it cost the county for its erection $1,916.25.

SCHOOL DISTRICTS.

On November 13, 1848, it was ordered by the court "that the six several precincts of the school commissioners of this county shall be as follows:

First District—South boundary line, between Brooke and Hancock; north boundary, a line commencing at the mouth of King's creek and running with said creek to where the south and north forks meet, and thence with the south fork to Pennsylvania line.

Second District—South boundary, the last mentioned line north; north boundary, the line commencing at the mouth of Holbert's run, thence with said run to the forks of said run, thence along the north branch to the east end of Andrew Wylie's lane, thence with the road leading to Jenkins' mill to the Pennsylvania line.

Third District—From the mouth of Holbert's run to the mouth of Tomlinson's run, thence up Tomlinson's run to David Pugh's mill, thence by the road leading past William Ray's to where said road crosses Deep Gut, thence a straight line to Herron's coal bank, thence a straight line to Flower's mill, and thence a straight line to Andrew Wylie's, thence by the north boundary of No. 2 to the beginning.

Fourth District—The east boundary of No. 3 to the north boundary of No. 2, the Pennsylvania line on the east and Tomlinson's run on the north.

Fifth District—Commencing on the Ohio river at the Treal farm, thence with the road to New Manchester to where it crosses the south fork of Tomlinson's run, thence by the said run to the Ohio river, thence by said river to the beginning.

Sixth District—By the east line of No. 5 to Tomlinson's run, thence up said run to the Pennsylvania line, thence north with the state line to the Ohio river, thence down said river to the place of beginning.

The First district shall be attended to by Wm. Brown; the Second by David Wylie; the Third by Wm. H. Grafton; the Fourth by Thomas Elder; the Fifth by George Johnston; the Sixth by John Gardner.

POST OFFICES.

Below is given the names and number of post-offices within the county:

Fairview, New Cumberland, Holliday's Cove, Freeman's Landing, Blair, White Oak Run.

OUTLINE OF COUNTY.

Hancock occupies the most northern extremity of the state and Pan-Handle. It is bounded on the north by the Ohio river, on the east by Pennsylvania, on the south by Brooke and on the west by the Ohio. It is well watered by the creeks and their tributaries. The surface is generally undulating and may be termed hilly, although not mountainous. Its soil is fertile and produces largely of wheat, oats, corn, &c. The county is small but is highly improved and very thrifty. The farmers devote considerable attention to sheep and wool growing. Improved land will sell from $30 to $100 per acre and the unimproved from $6 to $30. There remains but little unimproved and very little land for sale.

MINERAL RESOURCES.

Whilst the fecundity of the soil is scarcely unsurpassed by any county in the state, there lies underneath it inexhaustible coal beds. For centuries this coal has been growing there for the use of man. Even hundreds of years before the western continent was conceived of, the Beneficent Being was preparing it for his creature's use and benefit. The beds are found from three to six feet in thickness. It lies very little below the ground and in many instances it is observed cropping out along the surface. The county abounds with bituminous coal veins. On almost every farm can be found coal veins. Where ever these stratas are discovered, they are known invariably to be of excellent quality of coal. Notwithstanding the plentifulness of this article, coal digging is not carried on as extensively as might be expected; comparatively few banks are operated Among those being worked at present are found one on a Mr. Cown's farm, which runs from two and a half to three feet in thickness; Broebeck's from three to four and a half feet; Flower's from three to three and a half; Sproule's from three to four feet; Robt. Herron's from four to five and a half; David Dunning is operating three banks on his place, two on Herron's run and one on Harden's; the veins are four to six feet thick, and in these banks is found what is styled the swamp coal, that continues at times for hundreds of yards, at a thickness of six feet solid, of superior quality. Besides the extensive veins of coal which abound to a greater or less extent on almost every farm within the county, there is also discovered in different localities of the same, valuable

CLAY,

which is being manufactured into fire-brick, tileing and pottery of every description, and gives rise to large brick works that are strung along the eastern banks of the Ohio for miles teeming with life and business, affording employment to hundreds of laborers. These manufactories find immediate sale for their brick, &c. Thousands of brick and tons of prepared clay are shipped up and down the Ohio. The natural and artificial facilities for shipping are excellent.

GAS.

A number of gas wells have been sunk and abundant gas found, which is used in running grist mills and brick works. It supplies the place of fuel, and is quite valuable. Two wells furnish enough gas to operate two engines, supply forty fires in the dry-house, burning ten kilns in the Clifton works, and light and fuel sufficient for two dwellings, with a surplus. One well on Tomlinson's run, sunk by W. C. Murry, runs the engine in the mill, furnishes light and fuel for two dwellings, and has a surplus of waste gas.

IRON ORE.

As is generally expected where stratas of coal exist, iron ore is usually found, although oftentimes not in large quantities. This metal abounds in some portions of the county to a limited extent; but the expense that would necessarily have to be incurred in approaching it for utilization will not justify its working. The ore, it is claimed, however, is of a superior quality. The experience of several men, a number of years ago in the furnace business, was such, pecuniarily, that it received a quietus which has continued ever since in the iron manufacturing line in the county.

LIMESTONE.

Formations of limestone in many places in the county are quite prominent, although not general, as the author is informed. In a few instances, where it is conspicuously exposed, it is quarried for use, but not extensively, and merely operated to supply home demands.

SANDSTONE.

Sandstone abounds in large quantities, and is of white, yellow and gray. Nearly one-half of it is found in large, solid seams. It is mostly fine grained and easily worked. It is quarried for local purposes, and constitutes elegant and durable building material.

FLAGSTONE.

Blue flagstone, which appears to be extensive in the county, is of a valuable nature, and is largely quarried in Grant district and shipped to Wheeling, Pittsburgh and other large cities, where it is used for paving, and as such is unsurpassed. Owing to its superior quality, the demand is great and large sales of the material are made, making the quarrying of the flagstone a profitable business in the county.

AGRICULTURE.

A glance at the beautiful hills and valleys of Hancock would at once convince the traveler of the principal pursuit of its populace. The quality of the soil suggests productiveness. Fine cultivated farms are seen in every direction in its territory. When the first settlers located here they were attracted by the richness of the soil, and at once recognized the value of the land for tillable purposes. The land was cleared of its large and dense forests, and agriculture began, continuing ever since, yielding thousands of bushels in wheat, Indian corn, oats, rye, barley, and nearly all the varieties of vegetables known. A century has elapsed, and season after season has come, freighted with rich and never entirely failing harvests, and yet the soil retains its fertility. The husbandmen, one by one, are gathered to their long homes, and give place to others, who also sow and reap off the same soil whose inexhaustible properties are made by the "powers that be" for man's benefit. Though the county is small in area, its productions will compare with any in the state as to the yield per acre.

Whilst Agriculture is one of the most ancient pursuits of man, yet it is the safest and best paying occupation that can be followed. To-day it is remunerating the farmers of Hancock nicely, for the time and labor devoted to this old time and honored vocation. In counties like Hancock, with the rich, argillaceous and calcareous soil it possesses, the husbandman may well rejoice at the large productiveness of its acres, and smile at the long waving green that covers his pasture fields. His cattle are sleek and fat, sheep in good order, with promising abundance of wool of the finest quality yearly, and other stock bringing in its money in various ways, all aggregated and considered, make the farmer's experience a pleasant one, with assurances of small fortunes, if not greater ones.

Some of as valuable and beautiful farms as can be found in the district of the Pan-handle, can be seen in Hancock county. Valuable and elegant farm-residences dot the hills and valleys, marking the wealth and prosperity of its people.

Below is given the statistics of farm produce, which is according to the census of 1860:

Wheat, 16,423 bushels; Indian corn, 61,316 bushels; Oats, 46,716 bushels; Irish potatoes, 26,002 bushels; slaughtered animals, 26,396.

The following gives a census of the wealth and taxation of the county, taken in 1870:

Assessed value of real estate,	$1,731,275 00
Assessed value of personal estate,	643,553 00
Total assessed value of real and personal estate,	2,374,828 00
True value of real and personal estate,	4,060,127 00

The number of manufactories, employees, capital and products in 1870, were as follows:

No. of establishments,	55
No. of hands employed,	306
Capital,	$267,470
Products,	260,550

The following shows the number of acres of land, valuation of farms, products, number of live stock and value, of the county in 1870:

Improved farms, (No. acres,)	30,947	
Woodland, (No. acres,)	16,941	
Other unimproved,	2,605	
Cash value of farms,		$2,317,814
Value of live stock,		$218,840
No. Horses,	835	
" Mules and asses,	12	
" Milch cows,	869	
" Working Oxen,	72	
" Other cattle,	929	
" Sheep,	26,353	
" Swine,	1,892	

The following shows the valuation of farms, products, &c., in the year 1879:

Improved farms (acres)	31,904	
Unimproved farms (acres)	17,228	
Cash value of farms,		$1,676,745
Value of farming implements and machinery,		38,489

LIVE STOCK.

Horses,	1,109	
Asses and mules,	4	
Milch cows,	1,127	
Working oxen,	140	
Other cattle,	1,657	
Sheep,	21,402	

PRODUCED.

Number pounds of flax seed,	3,337	
Number pounds of maple sugar,	31,653	
Number gallons maple molasses,	1,660	
Number pounds beeswax,	68	
Number pounds honey,	6,994	
Value of home-made manufacture,		$10,256
Animals slaughtered,	17,698	

POPULATION.

The population of the county in the year 1850 was 4,040, and in the year 1860 it contained a population of 4,445, showing ten per centum of an increase. The present population is——

THE FIRE-BRICK BUSINESS OF HANCOCK COUNTY.

(By John H. Atkinson.)

The traveler who journeys in the cars upon the Ohio shore or upon one of the numberless steamers that float upon our beautiful river, will no doubt observe quite a number of huge piles of clay of a bluish gray color, that lies at the foot of the hills along the West Virginia shore, commencing at the mouth of King's creek and extending to the head of Black's Island.

The hills here rise to about their greatest height, taking the whole course of the river, from its source to its mouth, and near each of these clay piles will be found a bank, from which the clay has been dug from beneath these hills, where it lies in a horizontal strata of from six to ten feet, overlaid by a strata of coal from two to three feet in thickness.

This arrangement brings together very cheaply, the clay for the manufacture of fire-brick, and the coal with which to run the engines used to crush the clay, and to burn the bricks when they are placed in the kilns.

Near these clay piles will be seen the engine and rolls for crushing the material before being moulded into bricks, and a number of kilns in which to burn them before being sent to market. Quite a number of houses will be seen for the workmen near to each of these works until the whole eight miles will have grown as the panorama passes, into a continuous village, of which New Cumberland may be taken as the center.

Such a settlement upon the Rhine in Germany, or upon the Tyne in England, would have a history of a thousand years or more, made interesting by a hundred legends of love and war; while here, fifty years will antedate all this industry, and nineteen twentieths of all this population.

Prior to the manufacture of fire brick, there were not fifty individuals to people those eight miles, and these were living in less than a dozen houses of the rude construction of the early settler. At the mouth of King's creek was found a large log dwelling, known as the "ferry house," part of which is still standing. Mr. Philip Beall lived in a brick house, which forms part of the one at present, near the brick-yard of Thomas Anderson. A large log house at the mouth of Holbert's run, upon the site of the Freeman Brothers' brick-yard, served for a tavern and ferry house, while Mr. John Gamble lived a few rods from the river, upon said run, and had opened the first fire clay vein in this region.

A mile further up the river was found a log house, knowu as the Black Horse tavern and ferry, now the Black Horse brick works. The site of the town of New Cumberland was then covered with a dense forest, except where small openings had been made by the grandfather and father of John Campbell, Esq. The first located upon what is called the ridge, near where the house of J. H. Atkinson now stands, and the second near the mouth of Hardin's run, upon the bank of the river.

The mill now owned by Mr. Smith, at that early date ground out the grist of the farmers for miles around, as they came upon pack-horses along the bridle-paths of fifty years ago. Another large log house, with double doors, stood upon the grounds of the present Clifton Works, having at that day served for half a century as a house for several families, and a refuge against the incursion of the Indian marauders. It still serves as a home for a family, and, although the storms of a century have passed over it, it bids fair to last a generation longer.

These completed the settlement, while all between was forest and tangled wood, which could have been purchased at from one to ten dollars per acre; the inhabitants of that day little dreaming of the wealth underlying these hills, or of the population that would succeed them.

It is about forty-nine years since the first clay was taken from the banks of Mr. John Gamble by Mr. Thomas Freeman, and by him made into brick, in the city of Pittsburgh. But experience soon taught that to prosecute the business successfully the manufacture must be conducted at the mouth of the clay bank and where coal and wood could be found in abundance with which to prepare the bricks for market. Accordingly, in the spring of 1832, Mr. James S. Porter, then a young man, moved to a small house near the present site of W. B. Freeman's brick works, and commenced the making of brick—the first made in the county. Two years afterwards Mr. Thomas Freeman followed with his family, and Freeman's Landing became known to river men, as quite a place of business, and soon opened up to the farmers of the vicinity a home market for their products.

At that date the iron mills and foundries of Pittsburgh were supplied with fire-bricks and clay from this county, and it is probable that less than 200,000 bricks supplied their yearly demands; 10,000 more would have filled all orders from here to Cincinnati, and a couple of French creek flat boats, with 30,000 bricks each, would have overstocked the market of the Queen City for a year. Pittsburgh, although known at that time as the Iron City, had but commenced the wonderful development of the iron trade; and the deft hands and vigorous minds, that in later years have made the Nail City what it now is, were then but humble workmen in the small mills of Pittsburgh.

About the year 1837 James S. Porter and Philip Beall formed a partnership under the title of Porter & Beall, at what is now the brick yard of Thomas Anderson. Thomas Freeman and Messrs. Porter & Beall for several years supplied the whole market. Then a keel-boat that would carry 20,000 brick was considered quite a vessel, but would appear rather insignificant along side of our modern keel or barge, freighted with from 100,000 to 150,000 brick. Those small boats served to carry on the trade with Pittsburgh, while Wheeling obtained her supply by small flats, propelled from that city to Freeman's landing in about two days by horse towing, or the still more primitive mode of pole or the hand towline. These laden with 5,000 or 6.000 brick and a few tons of clay would descend in about a day.

I have thus endeavored to give a history of the rise and progress of this business, and in so doing have been led to give somewhat in detail a history of that part of the country, and also a summary of the iron trade along this valley upon which the business of brick making mainly depends. Our agricultural pursuits have a constant growth, while the iron trade has been subject to many fluctuations. A season of prosperity would induce some of our most enterprising citizens to engage in the manufacture of iron, when the older manufacturers of Europe, taking advantage of the want of a protective policy in our government, would flood this country with their production, which bringing on a panic would carry ruin and disaster to our capitalists engaged in the business; and in all these trials the brick industry has risen or fallen in sympathy with the fortunes of the iron trade.

About the year 1837 bricks were made very cheaply. Good hands could be hired at $10 per month, and board, or $16 without board. Flour cost but $2.50 to $3.00 per barrel. Pork two to three cents, and good beef at from four to six cents per pound, while boats and lumber did not cost more than one third of the price now paid for them.

However, amid all discouragements, the inducements were great enough to lead several other parties about this time to enter into the business.

Mr. Philip Beall dying in the spring of 1844, Mr. James S. Porter opened a new yard where now stand the works of John Porter & Co.; and Thomas Anderson continued to make brick at the old site of Porter & Beall's yard. Mr. Anderson had moulded the fire-bricks made in the county for Mr. Freeman upon the yard of John Gamble, and had for several years carried on the pottery business where he came in 1844 to embark in the brick business upon his own account; and now, at a good old age, he continues the work upon the same site, the oldest representative of this industry in the county, if not in the United States.

Mr. Thomas Freeman's fire-brick yard was situated for several years near the present ferry landing of W. B. Freeman, when, upon the death of Mr. Robert Porter, who had for five

years carried on the business at the present site of W. B. Freeman's yard, he purchased said situation, and for many years continued the manufacture at that place. About 1846 Mr. Freeman removed with part of his family to Cincinnati, Ohio, still continuing the brick business in this county. In 1854 he removed to a beautiful country residence that overlooked the city of Madison, in Indiana, where in 1856 he died, and was buried in the private burial ground upon the land of his son, James L. Freeman, in this county, overlooking the beautiful Ohio and the scenes of his active life.

Mr. J. Gamble & Son (Henry Gamble) continued the yard first started by Thomas Freeman, and Mr. John Elliot commenced to manufacture a short distance further up Holbert's run, at what is now known as the yard of Messrs. Sutor & Brice. Mr. Joseph Stewart was making brick at the mouth of Deep Gut run in 1840, and in 1844 there was added to the rapidly growing trade a yard by Messrs. Jas. S. Porter and Wm. M. Porter, at the Black Horse, one by Messrs. Lewis K. McCoy and Lewis Shalt, at the present site of the Clifton, and another above the mouth of the Deep Gut run, called the Ætna, by Thomas Freeman.

Beginning with the season of 1838 a small trade had been opened up with the sugar planters of Louisiana, which had been wholly supplied with fire brick from England. This new market for bricks grew very rapidly until foreign manufacturers, seeking to regain their lost trade, so over run that state with English brick that they were sold as low as $10 per 1,000 in the city of New Orleans, entirely excluding our bricks from that field. This contest continuing for several years, the English sending their brick as ballast for vessels coming to New Orleans for cotton, while our manufacturers had a trip of nearly 2,000 miles to navigate in carrying their bricks to market. About the year 1843, Congress, in answer to a petition for an increase of tariff rates upon foreign brick, granted further protection to home industry, when this southern trade was regained, and ever since held by American workmen at prices satisfactory to both producer and consumer, bricks never falling so low as when without protection, nor rising so high as when taking advantage of the entire absence of American brick they made the exorbitant demand of $100 and even $125 per thousand for English brick, held by merchants ever ready to take advantage of a fluctuating market.

Sugar men themselves desiring some protection against foreign sugars were desirous to conciliate the favor of the northern manufacturer, and so freely gave their assistance in procuring and retaining for us the protection needed.

So rapidly had grown the iron trade of the Ohio Valley that the brick trade of some 200,000 in 1837 had grown to more than 1,500,000 in 1844.

In the spring of 1845, Messrs. McCoy & Shalt disposed of their yard to Messrs. Thomas Atkinson & Sons (John H. and Alexander). Messrs. Kerr & Mahan opened a yard just above the mouth of Kings creek, which, after three or four years, they sold to Messrs. Porter, Anderson & Co., and about the same date Cooper & Bros. started another immediately below the mouth of Kings creek, which changed to the firm of Cooper, Gay & Co., and again to Messrs Campbell & Logan, and still later to Messrs. Saltsman & Co.

The firm of T. Atkinson & Sons continued until the decease of the senior partner in 1850, and in 1854, J. H. Atkinson having purchased the interests of all other parties, continued the works until the year 1869, when he sold to Meesrs. Smith, Porter & Co., and the yard became known as the Clifton Works.

About the year 1846 Messrs. Bigham, Stewart and Harper commenced to make brick above and adjoining New Cumberland, and prosecuted the business until near the beginning of the war, when the property came into the hands of Smith, Anderson & Porter, since which time the works have not been in operation.

Messrs. Shanley & Flowers about 1846, opened a new yard a short distance above the mill now owned by Jeremiah Smith, and Messrs. Carson & Minn opened another, some half a mile farther up Hardin's run, at what is now Williamson's saw mill. These last two yards being at an inconvenient distance from the river and the trade becoming very much depressed, their owners abandoned the business, and the machinery was removed to more eligible sites.

In 1858, James L. Freeman started the yard at the mouth of Holbert's run, and successively took into partnership his brothers, Samuel D. and Charles A. Freeman, under the firm name of Messrs. J. L. Freeman & Bros., until 1875, when the senior partner retiring, the name was changed to Freeman Brothers.

During the year 1856, a new yard was started by J. H. Atkinson, and Thomas Garlick, adjoining that of J. H. Atkinson, under the name of Atkinson & Garlick. Thompson Mackey, having purchased an interest therein, the name was changed to T. Garlick & Co., and in 1864, by change of owners, the firm became Atkinson & Adams, for one year, when Mr. Adams removing to the west, the yard was continued by J. H. Atkinson alone, until it was purchased in 1867, by Cullen & Bros., and by them in 1871, sold to Messrs. Smith, Porter & Co., when it became merged into what is now known as the Clifton Works.

About the year 1866, Thomas Hutson, commenced to make brick just above the yard of Porter, Anderson & Co. Daniel Donehoo, became the owner of one half interest for a few years, when, selling to William Wilson, the firm became known as Messrs. Hutson & Wilson. Since then, Mr. Wilson has retired, and Mr. Hutson continues the works.

The firm of J. S. & W. M. Porter had continued the business at the Black Horse yard, admitting B. J. Smith as a partner in 1848, and in 1851 upon the sale by W. M. Porter of his interest therein, Robert Porter became a partner and the firm name was changed to J. S. Porter & Co., James S. Porter retiring about the year 1867, the firm became Smith & Porter as at the present time.

Mr. Joseph Stewart continued the works at the mouth of Deep Gut run for several years, when Hugh Muntz, his son-in-law, became a partner. Upon his death, Thomas J. Atkinson became the owner of one-third, and Smith, Porter & Co. having purchased the share of Mr. Stewart, the firm became known as Atkinson, Porter & Co.

About the year 1853 Thomas Manypenny with his three brothers, Joseph, Alexander and John, purchased the Ætna Works of Thomas Freeman and conducted the business under the name of T. Manypenny & Co. until John Manypenny, selling his interest to his brothers, and Thomas Manypenny going into business at another yard, the firm name became J. & A. Manypenny, as at present.

This brings down the history of the brick business until the year 1867, by which time the iron trade of the country, stimulated by the inflations of the war, had made wonderful advance, and for twenty-five years the expert workmen who had swarmed from the Pittsburgh hive, and settled at Wheeling, had by constant toil of the hand and head, succeeded in winning for their new home, the title of the "Nail City." Cincinnati, Louisville, Cleveland, and many another city, had fostered the iron business, until we had in a measure became independent of Europe, and could supply our own market, from a three penny nail to a railroad bar. With this rapid advance of the iron trade, the industries of our country had kept pace, and the production of our brick yards might have been set down as follows:

PRODUCTION FOR 1867.

Campbell & Logan,	300,000
Porter, Anderson & Co.,	600,000
Huston & Wilson,	400,000
Thomas Anderson,	800,000
John Porter & Co.,	800,000
W. B. Freeman,	700,000
J. L. Freeman & Bros.,	400,000
Morgan & Son,	300,000
Smith & Porter,	900,000
J. H. Atkinson (old yard),	900,000
J. H. Atkinson (new yard),	600,000
Joseph Stewart & Co.,	400,000
T. Manypenny & Co.,	700,000
Total amount,	7,800,000

During the year 1867, David Troup opened a yard about a mile above New Cumbertand, and in 1869 took into partnership Samuel Minor, who selling to David Francy, the firm became known as Francy & Troup. Mr. Troup selling his interest to Mr. George W. Stewart, and a year after Mr. Stewart buying Mr. Francy's share, he became sole proprietor and continued works to the present time.

Sometime in the year 1868 Thomas Manypenny & Sons opened a yard opposite the foot of Black's Island. In 1872 he sold the half interest therein to John T. Daniels and shortly after the remaining part to J. M. Daniels. J. T. Daniels & Bro. ran the works for some time, when they were again purchased by Thomas Manypenny who still owns them.

In 1870, John Manypenny, leaving the Ætna firm, commenced a new establishment a short distance above and took into partnership George W. Cuppy, who after a season sold his

interest to John T. Robb. That gentleman desiring to remove to California, the yard was sold to Cunningham, Graham & Co., the present owners.

During the same year Isaac Evans and B. F. Shane entered into partnership in a yard opposite the middle of Black's Island. Evans selling his interest to Porter & Co. in 1872, the firm was known as Shane, Porter & Co., which was again changed in 1876, by Shane becoming owner of the whole yard.

David Troup having purchased a site opposite the head of Black's Island, in 1874, opened the last bank upon the line, and under the name of D. Troup & Son, manufactured brick until 1877, when the yard passed into the hands of Ephraim Cooper, the present owner.

The foregoing gives, in their order of time, the founding of each yard in the county with their various changes of ownership, to the present time.

The site of the first brick yard of Thomas Freeman was abandoned for the present site of W. B. Freeman's yard, and that of John Gamble & Son, where the first bricks were made in the county, became merged in the works of Messrs. Suton & Brice. These, with the two yards abandoned upon Hardin's Run, make four that have been dropped from the list.

It is probable that about the year 1872 the manufacturing of brick had reached its greatest extent, and the products of that year may be safely estimated at 11,000,000 of brick and 12,000 tons of ground fire clay.

These brick counted at $10 per 1,000 and the clay at $1 50 per ton would in round numbers make the sum of $128,000, to which should be added at least $32,000 more which came back to our citizens for transportation, making in all $160,000, which went out in a hundred channels to pay the laborers, the farmers, the merchants, the mechanics, the boatmen and the capitalists of the country.

This was the sum which in ordinary times might be called the dividends, for distribution, upon a capital invested in lands, machinery, tools and boats of a quarter of a million of dollars to carry on the brick trade of Hancock county.

Quite a contrast could be made by comparing the equipments of one of our yards of to-day with one of forty years ago. Then the engine was one of small power which could only crush clay enough for 3,500 brick per day. Now there are crushers that can prepare 100 tons of clay ready for moulding and shipping per day. Then it was difficult to find a man with strength and endurance sufficient to shovel the clay from the rolls to the platform, ready for the second grinding. Now elevators carry it to any height desired and distribute it as it may be needed. Then "the mountain," as it was called, was the terror of the hands in shipping times. Now the incline plane with its tracks makes it an easy labor. Then the boatmen were exposed to the hardships of an open boat. Now the modern keel has all the conveniences of a comfortable home. Then, owing to the great width of the kilns, burning was a dread to both bosses and hands. Now they are as easily controlled as an ordinary fire.

Since the great panic of 1873 the brick trade has touched the bottom of hard times, but has probably not suffered more severely than the iron trade of this country, and with the revival of the great industries of the land, it is to be expected our business will revive, and that the inexhaustible mines of clay in our hills will yield in the years to come a rich harvest to those who are willing to earn their bread by the sweat of their brow, and that for long years while other communities may boast of their national banks we shall have reason to be thankful for our banks of clay.

PERSONAL PROPERTY FOR 1864.

FIRST ELECTION AFTER THE FORMATION OF THE NEW STATE.

(From the Court Journal.)

HANCOCK COUNTY, W. VA., January 26th, 1864.

Whereas in pursuance of and in conformity to an act of the legislature of West Virginia, passed November 13th, 1863, entitled "an act to regulate elections by the people," an election was held on the 14th day of January, 1864, for the various officers named in said act, and, whereas, it is shown by the certificates of said election filed in the office of the recorder of this county that for the office of supervisors the following were elected:

Grant township—Jonathan Allison, sr. Poe township—Jas. H. Pugh. Clay township—Nathan B. Grafton. Butler township—Benjamin Griffith.

Therefore, as required by law, the said persons elected as aforesaid met at the court house on the 26th of January, being the twelfth day after said election, and were duly organized as a board by electing Jonathan Allison, sr., president, and appointing David S. Nicholson as clerk. Upon examination of the certificates returned to this board it is hereby resolved, that

for the following townships the following persons are duly elected to their respective positions:

GRANT TOWNSHIP.

Treasurer, J. D. Cory; Supervisor, Jonathan Allison; Justice of the Peace, James Hewitt; Clerk, Watson Johnston; Constable, Charles Allison; Overseer of the Poor, James Allison, Inspectors of Elections, John Cunningham and George Johnston.

POE TOWNSHIP.

Supervisor, James H. Pugh; Justice of the Peace, Levi Caldwell; Treasurer, James Melvin; Clerk, Abraham Pittenger; Constable, Peter A. Snowden; Inspector of Elections, John Mayhew, sr.

CLAY TOWNSHIP.

Supervisor, Nathan B. Grafton; Justice of the Peace, Nathan Thayer; Treasurer, George W. Beaumont; Clerk, John C. Lindsey; Constable, William Lindsey; Overseer of the Poor, J. J. Tope; Inspectors of Elections, B. J. Smith and B. W. Chapman.

BUTLER TOWNSHIP.

Supervisor, Benjamin Griffith; Justice of the Peace, Lewis R. Smith; Treasurer, Philip Freshwater; Clerk, Thos. Ralston; Constable, David Campbell; Overseer of the Poor, Samuel Roberts; Inspectors of Elections, James F. Watt and Jackson Farr.

DIVISION OF HANCOCK INTO TOWNSHIPS.

On July 31st, 1863, the General Assembly of West Virginia passed an act to divide the several counties in the state into townships. Messrs. James W. Brown, Joseph W. Allison, Jonathan Allison and B. J. Smith were chosen by the authorities of state as commissioners to create townships in the county of Hancock, who proceeded to divide, or lay off, the same into four townships, namely:

Grant; Poe, which derived its name from the memorable fight Andy Poe had with Big-foot; Clay, from the great statesman; Butler, was named after an old citizen that lived in that neighborhood.

Each township at the time they were formed contained, as nearly as could be ascertained, a population of eleven hundred, and was, in the judgment of the commissioners, the best division for all county purposes that could be made.

TOWNSHIPS GIVEN THE NAME OF DISTRICTS.

On April 9th, 1872, a new constitution was adopted, and then the townships in that constitution were directed to be changed to districts. Since which time they have gone by that name. The original township surveys still retained, as in the boundaries of the townships.

TAXABLE WEALTH OF HANCOCK FOR 1869 AND 1870.

The following tables for the years 1869 and 1878 show the number of acres of land and its taxable value; the taxable value of buildings, and total value of lands and buildings as returned by the assessors for the years mentioned:

Townships.	No acres land.	Perches	Average value per acre.	Value of buildings.	Value of land and buildings.	Value of Personal Property.
Grant	18,790	74 1-5	$25.12½	$ 41,335 00	$ 472,067 96	$154,177 00

Poe "	201	0	201
Clay "	335	1	336
Butler "	214	0	214
Total,	974	7	981

HANCOCK AGRICULTURAL SOCIETY.

In 1852 the first agricultural society of the county was organized in the court house, Fairview, by electing the following named gentlemen:

President, W. L. Crawford; Secretary, Thomas Bambrick; Directors, Jacob N. Brown, James W. Brown, Thomas Elder, —— Lee, William Morrow, James H. Pugh, Joseph Burns, James Stevenson, Watson Johnson and Richard Breneman.

The society rented grounds on the farm now owned by 'Squire Sproule, about a quarter of a mile southeast of Fairview. The fair was held for two seasons with marked success, but in the year 1854, the summer that will long be remembered as a remarkably dry one by many of the people, was not considered a propicious season for holding a fair. Owing to the fact that crops had not matured perfectly, and the productions almost a total failure, the society disbanded.

A new organization was effected in 1867, there having been no fairs during the years from 1853 to 1867 in the county. The officers and directors of the new society were as follows:

J. W. Allison, President; John Bigger, Vice-President; Daniel Donahoo, Secretary; Hiram C. Bell, Treasurer. The directors were composed of the above named gentlemen with J. H. Gibson and Wm. Morrow.

The society leased ten acres of ground from D. S. Nicholson for one year with the privilege of ten, and proceeded immediately to enclose the same with a close high board fence, and erected a floral hall, mechanical hall and such other buildings necessary to make a first-class fair ground. The first fair held by the new society was on the 16th, 17th and 18th of September, and gave perfect satisfaction. It was often remarked that season by many, "What an excellent fair we did have." The society had taken great pains to make it a success. Nearly $3,000 had been incurred in fitting up the ground, which of course threw the society in debt. The fair for the next season was held on the 14th, 15th and 16th of September, with the same officers, who had been re-elected with the exception of the secretary. The former secretary declined and C. N. Collins was elected. That year did not prove as favorable as had the preceding one, and they got behind financially. The majority of the society did not feel like bearing an assessment, concluded to dispose of the fair property, and hold no more exhibitions, the indebtedness being at this time about one thousand dollars. Accordingly the improvements on the ground were offered at public sale and sold to John W. Hobbs, who held fairs for several years under an individuality, and then for some reason or other they were discontinued.

NEW MANCHESTER TURNPIKE.

Soon after an act establishing a turnpike passed the General Assembly, on February 18, 1828, a survey in accordance with said act was made, starting from Hamilton's Ferry, opposite Wellsville, Ohio, by New Manchester (then in Brooke county), to the Pennsylvania line, on the lands then owned by Thomas Wilcoxon, in Clay district. Only a part of this road at that time was constructed, and that had been done by private contributions. In 1848 another act was passed by the Assembly, that the state might contribute for its completion.

John Mayhew, John Witherspoon, Thomas J. Hewitt, William H. Grafton, George W. Chapman, Jonathan Allison, and George Baxter were appointed by the commonwealth as commissioners to open books at New Manchester for receiving subscriptions; said subscriptions not to exceed $5000, in shares of twenty-five

dollars each, to constitute a joint stock company, for the purpose of constructing and completing the road. Shortly after this act had been re-established, Mr. James Stevenson received the contract to grade and construct said road from Fairview to Wellsburg, and John Cavinor from Fairview to the Pennsylvania line. The road was re-surveyed by James G. Marshall. This, however, did not take place until 1852, when the road was completed. It lead through now Grant, Poe and Clay districts. A few alterations took place on the original road, constructed in 1828, such as changing the course, and making more even grades. The citizens subscribed about $2,000 and the commonwealth appropriated about $1,000.

The road only continued as a turnpike road for nearly three years. It is still open, however, and used as a public highway.

This, as the author is informed, was the only constructed turnpike road, and used as such. There was an act passed for the purpose of establishing a pike from Holliday's Cove, but was never constructed. That was along about the time the New Manchester turnpike road was completed.

THE HANCOCK COUNTY SABBATH SCHOOL ASSOCIATION.

This association is composed of all the different denominational Sabbath Schools within the county. A temporary organization took place in 1866; but a permanent organization was effected in the Presbyterian Church of New Cumberland, on January 2nd, 1868. Rev. S. F. Grier delivered the address of welcome.

The association has been twelve years in successful operation, increasing in interest and usefulness from year to year. It meets annually, alternately at New Cumberland and Fairview. Its sessions are of two days duration.

"Its object is to form a more perfect union of all the friends of the Sabbath School enterprise, and to promote the cause of Sabbath Schools. To co-operate with the State Sabbath School organization; encouraging and aiding Sabbath Schools generally, and to awaken an increased interest and efficiency in the work."

The first statistical report shows an enrollment of sixteen schools, (four of which failed to report,) which furnished a total enrollment of 994 scholars and 115 officers and teachers, making an aggregate total of 1,109. At present there are twenty, furnishing an enrollment of 1,406 scholars and 119 officers and teachers, which makes a total of 1,525. Total collections in schools in 1877, $592.84.

The first officers of the convention were, A. G. DeSellem, president; A. McC. Flanegan, secretary. The present officers are, Hugh Sutherin, president; Miss Ella F. Burns, treasurer; Thomas Lloyd, recording secretary; Miss Mary Mahan, corresponding secretary; T. C. Carothers, A. McC. Flanegan, A. G. DeSellem, executive committee.

HANCOCK IN THE REBELLION.

Virginia, a state that knew nothing but law and order before, became boisterous and rebellious in 1861, like a mighty hurricane on the bosom of the waters, and the waves of secession ran high and beat against the government with great force, threatening and portending its overthrow. But a portion of the state lifted higher and higher that emblem of their country, "the stars and stripes," that some were want to drag and trample under foot. Hancock stood firm with a number of its sister counties, for the preservation of its grand and glorious country.

Although being a very small county, both in territory and population, it cannot be said that it was slow in coming forward with men to put down the rebellion. At the first call for soldiers for the three months' service, Hancock responded immediately by sending in a company, besides a number of others that enlisted in other companies recruited in bordering states and counties.

The county had enrolled during this war four hundred and sixty-six men. The amount of money levied and paid by it as local bounties for volunteers mustered into the United States service was $60,830.

The quota under call of March 14, 1864, was twenty-two men, and this call was promptly filled. The next quota was eighty-four, which call was made in July, 1864, and this likewise readily responded to. It had then a total of 110, making a surplus of two over its required amount. On December 19, 1864, another demand for troops took place and its quota then was forty-eight. The total credits the county received from February 1, 1864, to August 31, 1865, was 158.

THREE MONTHS' SERVICE.

On May 17, 1861, Captain B. W. Chapman recruited company I, of the First Regiment West Virginia Infantry volunteers, for the three months' service. The following named persons were residents of Hancock:

Officers—B. W. Chapman, captain; Thomas Lloyd, first lieutenant; Richard H. Brown, first lieutenant; M. B. Campbell, second lieutenant; Charles A. Freeman, first sergeant; William Hewitt, second sergeant; W. W. Morrow, third sergeant; J. D. Caldwell, corporal; B. L. Swearingen, corporal; Wm. M. Hart, corporal; Thomas Miller, corporal; J. F. McClintock, musician; Samuel Halstead, musician.

Privates—J. O. Adams, W. G. Bonsall, J. H. Cullin, Samuel Chapman, Alex. Campbell, Ephriam Durbin, E. W. Gear, A. J. L. Kerr, G. W. Kemp, J. A. McCarty, Robert Sutor, Theo. L. Apple, S. K. Beebout, Lewis Crawford, James Curren, John W. Durbin, J. N. Edie, R. B. Hewitt, J. B. Kerr, N. Laughlin, J. C. McSwiggen, J. M. Steele, James Aten, John Baxton, Cyrus Caldwell, J. M. Cullen, J. M. Dornan, Wm. Farnsworth, J. A. Hewitt, D. L. Kerr, F. J. Lockhart, J. C. Russell, J. R. Scott, Samuel Troup, J. W. White, W. C. Webb, W. H. Thayer, D. M. Wylie, Thomas Wassen, A. H. Vance, D. N. Wylie, Jacob Winch.

The regiment was organized in May, 1861, at Wheeling, and was composed of volunteer companies from Hancock, Brooke, Ohio and Marshall counties. These companies had been formed to resist aggressions from the portions of Virginia which had seceded. When the President made the first call for 75,000 men the companies were mustered into service, for the period of three months, under command of Colonel B. F. Kelley. The first engagement took place at Philippi, Barbour county, in June. The regiment attacked Col. Porterfield and routed him completely. In the action Colonel Kelley was seriously wounded in the breast.

The regiment was separated during the remainder of their three month's service. A detachment of five companies served with General McClellan in the Rich Mountain campaign. Another detachment was with Colonel Tyler, in the campaign against General Wise, who attempted, at that time, an invasion of this portion of the state. The remainder of the regiment was stationed on the Baltimore and Ohio railroad.

The three months men were mustered out of service on the 28th day of August, 1861, and the regiment re-organized under Colonel Joseph Thoburn.

On the 14th day of November, 1861, the organization was perfected. During the period of recruiting and re-organization of the regiment, four companies were sent to Burning Springs, and thence to Romney, Va., where they were joined on the 9th of November, 1861, by the remainder of the regiment.

COMPANY F AND G.

Captain James E. Morrow recruited nearly all of company F in Hancock county, the officers and privates of which are as follows.

Officers—James E. Morrow, captain; Theodore L. Apple, first lieutenant; James L. Steele, second lieutenant; Thayer Melvin, first lieutenant; Charles A. Freeman, first lieutenant; John W. White, first lieutenant; Thomas R. Sweeney, sergeant; Samuel K. Beebout, corporal.

Privates—Peter Catlin, John Eskin, Robert Jackson, James Wycoff, James Brown, William McCrea, Octavius Reed, John Sweeney, Egbert P. Shulter, Thomas Gardner, Thomas Farnsworth, Martin Kemp, Simpson O'Brien, William Hart, Martin V. Brandon, William Chapman, Henry Farnsworth, Thomas J. Lockhart, William Allison, Benjamin Heckathorn, Abraham Moore, William Root, John Allison, Clinton Moore, Robert Marshall, George W. Hunter, George Kemp, Joshua Peterson, Jesse Kemp, James A. McCarty, John Sullivan, Samuel Chapman, John Hutchinson, John Porter, James Bradley, W. E. Lowry, W. M. Miller, William Snider, John N. McCarty, Alex. Lockhart, Henry J. Maxwell, David Householder, John Kemp, John Pearce, Nathan C. Auston, George W. White.

COMPANY G.

This company had but a few men from Hancock county. The author has been informed that the following persons included all from this county:

Officers—Oscar F. Melvin, captain; Thomas Lloyd, first lieutenant; Joseph, O. Adams, second lieutenant; George W. Edie, corporal.

Privates—C. B. Armstrong, John N. Edie, Daniel Kerr, John C. Pugh, John W. Plattenburg, Albert E. Bonsall, James E. Morrow, John A. Bonsall, Wm. G. Bonsall.

On January 7th, 1862, this regiment participated in an engagement at Blue's Gap, Virginia, and was in the command of General Lander at the evacuation of Romney, January 10th, continuing under him until his death at Paw-paw Tunnel, Virginia, which occurred in February 1862. It subsequently formed a part of the third brigade of Gen. Shield's division, and bore an active part in the battle of Winchester, Virginia, March 23rd, 1862, and served with this division during the campaign in the Valley of Virginia through the months of April, May and June, in the meantime performing creditable and laborious service.

At the battle of Port Republic, Virginia, which occurred on the 8th and 9th of June, it lost heavily.

It was assigned to the fourth brigade of Rickett's division of McDowell's corps, of the Army of Virginia, July 1862. Whilst in this command it participated in the actions at Cedar Mountain, Rappahannock Station, Thorough-fare Gap and the second battle of Bull Run, which engagements all took place in August. A detachment of five companies of this regiment was attacked, on the 5th of September, by Gen. Imboden's brigade, and repulsed with small loss. On the 11th, before day-break, it was again attacked, by surprise, by a detachment of Imboden's brigade, under command of McNeil, in which the camp and a large portion of the command were captured. On the 30th of January, 1864, it retreated to New Creek, W. Va., before a superior force under command of Gen. Early.

The regiment was sent to Wheeling on a veteran furlough on the 25th of February, 1864, and on April 1st it joined General Sullivan's command, and was attached to the second brigade under command of Colonel Thoburn.

In the months of April and May, 1864, it was in General Siegel's campaign in the Shenandoah valley and engaged in the battle of New Market, May 14th and 15th, 1864, and meritoriously engaged in the battles of Piedmont and Lynchburg, and retreated with General Hunter's army in its retreat from Lynchburg to the Kanawha river.

Participated in the campaign of General Crook against Early in the Shenandoah valley, and was in the battles of Snicker's Ferry and Winchester. August, September and October it was actively engaged with Sheridan's army, at Cedar creek, at Berryville, at Charlestown, and Halltown.

On the 26th day of November, 1864, it was mustered out of service by Lieutenant Henry C. Peck, Fourteenth United States Infantry.

TWELFTH REGIMENT—COMPANY I.

Richard Hooker Brown, Major.

Out of this regiment, which was recruited in the counties of Hancock, Brooke, Ohio, Marshall, Marion, Taylor and Harrison, company I was from this county. The regiment was organized at Camp Willey, Wheeling, W. Va.

Officers—John Henry Melvin, captain; Milton B. Campbell, first lieutenant; William Hewitt, second lieutenant; A. J. L. Kerr, first sergeant; James Porter, sergeant; James Aten, sergeant; Joseph Hewitt, sergeant; Thomas B. Bernard, sergeant; Marion M. Cullen, corporal; John S. Brobeck, corporal; Robert Ramsey, corporal; Sylvanus H. Debee, corporal; Samuel Beal, corporal; Andrew O. Apple, corporal; Van B. Bernard, corporal; Samuel Halstead, corporal; George S. Simpson, musician.

Privates—James M. Abrams, Alex. B. Allison, John W. Allison, Isaac N. Cullen, James Y. Campbell, John W. Flowers, William Fernsworth, John L. Harper, Wm. W. Haney, Wm. G. Allison, James Allison, Wm. H. Allison, Samuel H. Cullin, John M. Dornan, George W. Goddard, Alex. Hineman, John V. S. Harper, Sylvester B. Jenkins, Richard O. Allison, Peter P. Allison, Benton Applegate, W. B. Campbell, R. H. Fernsworth, Jacob Geer, Harvey Howard, John G. Hunter, W. C. Mahan, Samuel H. Miner, John C. Morrow, Henry Quear, Harper McRalston, David H. Snowden, W. W. Stewart, Milton H. Thayer, Charles A. Geer, James Swearingen, J. Bailey, George H. H. Bird, Alfred Finney, Andrew Jackson, George W. Pees, John M. Thorn, Thomas Wasson, Wheeler Hobbs, Isaac H. Miller, Jacob Quear, Joseph B. Durbin, Joseph Scott, John G. Allison, George W. Moorehead, Robert W. Pugh, John Ridinger, James R. Snowden, John A. Scott, Samuel Troup, George B. Mackey, R. H. Brown, Thomas W. Bradley, John R. Baxter, Jesse Bailey, Peter Herbert, James W. Owens, David H. Russell, James Wilson, W. H. Baxter, W. M. Hukill, W. W. Swearingen, Jos. R. Lyons, Andrew Dougherty, Charles Graham, W. E. Goddard, Morgan H. Miller, Daniel Pugh, W. B. Robb, Robert Snowden, Alex. Swearingen. Silas Wilkinson, Martin L. Carson, W. A. Scott, Joseph Scott; John S. Bailey, Cyrus Caldwell, William Jewell, David M. Patterson, C. H. Ross, I. M. Young, D. W. Cochran, W. W. Allison, Samuel B. Stewart, Wm. Beal, Wm. Thompson, John W. Greer, W. H. H. Jones.

Immediately after the organization of this regiment, it was ordered to Clarksburg, Va., which place was then threatened by rebel forces, on a raid into Western Virginia. A detachment of four companies was ordered to Beverly on the 2d of September, and on the 4th of September, the remaining companies were ordered to Buckhannon, Va. The detachment under command of lieutenant-Colonel Northcott, marched from Beverly to Webster, thence to Clarksburg, joining the regiment on the 1st of October, at Buckhannon. A slight skirmish took place at Strasburg. From this place they moved to Winchester, Va, reaching that place on the 23d of December, 1862, and there remained until the 26th or March, 1863, when it was ordered to Berryville, Va., and from thence on the 10th of May, to Clarksburg, W. Va. Here the regiment remained until the 2d of June, and then by orders, returned to Winchester, and there participated in the engagement at that place on the 13th, 14th and 15th of June, when the command of General Milroy, was attacked by the army of General Lee, then on his raid into Maryland and Pennsylvania. The regiment lost heavily in this engagement. The next engagement in which this regiment took an active part, was at the battle of New Market, on the 15th of May. The regiment formed a part of the army in the Shenandoah Valley, under command of General Hunter, and was in the Lynchburg campaign. In the battle of Piedmont, Va., this regiment, commanded by Colonel William B. Curtis, behaved with great gallantry, being the first to enter the rebel works, and captured a number of prisoners, and on the following day participated in the engagement at that place. The enemy being in superior force and strongly fortified, the army began its retreat and arrived at Parkersburg on the 5th of July.

In July and August, it participated in the campaign of General Crook, against Early, in the Shenandoah Valley, and was at the battle of Snicker's Ferry, July 18th, Winchester on the 24th, and at Cedar Creek, August 12th. The regiment participated in none of the subsequent battles in the Valley, but accompanied the army in all its campaigns. It afterwards was ordered to the army of the Potomac. It was mustered out on the 16th day of June, 1865.

FOURTH REGIMENT CAVALRY—COMPANY E.

Company F, of this regiment was recruited in this county by Capt. James H. Hibbits. It was composed chiefly of young men from eigteen years of age to twenty-four. The following named persons were members of the company:

Officers—James H. Hibbits, captain; Richard B. Hewitt, first lieutenant; Daniel P. James, second lieutenant; Jas. H. Boyd, first sergeant; Monroe Miller, sergeant; George W. Smith, sergeant; George W. Staats, sergeant; Charles A. Craft; sergeant; George Brownell, sergeant; Elijah Baker, sergeant; W. M. Panden, corporal; E. E. Robinson, corporal; W. H. McSwiggins, corporal; Samuel Summerville, corporal; David A. Hughes, corporal; James M. Orr, corporal; Isaac Washburn, corporal; Alexander Wilson, corporal; Joseph Wilson, wagoner; Samuel Moore, bugler.; Warren Mason, bugler.

Privates—Wm. Atwell, Nathan Boon, C. C. Anderson, Mansfield Bennett, Vicknell Anderson, Hamilton Boom, John Baum, T. F. Buckelew, W. H. Cochran, Henry C. Castle, Hezekiah Carpenter, Scott Dewees, Thomas Farmer, George W. Haum, Theodore J. Henry, Elijah Hill, Daniel F. Lowery, George W. McLeary, George B. Mackey, Jesse McPherson, William Ohse, Elias Palmer, James Rush, Philotis Stanly, Isaiah Smith, Lewis Wetzel, William J. Watson, George W. Zink, Lewis L. Owens, John W. Buckanan, John N. Brannon, James A. Cochran, Jas. M. Cheverount, Thomas Dody, W. M. Donohoo, Ed. E. Glass, Atkinson Hupp, James Hughes, John S. Icenhour, Joseph Lloyd, David McOllister, John B. Maxwell, Charles E. Melvin, James P. Patterson, Edward Blunkett, William L. Russell, Phillip Shotto, Oliver Varner, Thomas B. West, Henry West, Jasper Clem, Mark Starcher, Richard E. Brandon, Josiah Coon, Joseph Cook, Moses C. Carmicheal, Columbus Dewees, Daniel D. Donohoe, Charles Gilbert, W. C. Hall, Henry Hawk, John W. King, N. S. Lloyd, Ezekiel J. Moore, James H. McCay, Jacob Eumford, Thomas D. Parish, Robert Richardson, Burris Snider, Mathew Silcot, Jacob Wetzel, Wilson Walker, John M. West, Henry Ohse.

FIRST REGIMENT, WEST VIRGINIA LIGHT ARTILLERY VOLUNTEERS.

Company C—James Curren, David W. Kerns, Ephraim Durbin, William Melvin.

Company D—James C. Allison, George W. Brandon, George W. Durbin, Alonzo Reed, John C. Reed, George B. Reed, George M. Rabbitt, S. M. Swearingen, James H. Wilson, William A. Murray, George W. Conley, John W. Durbin.

KILLED IN ACTION.

Nathan C. Auston killed in the engagement at Piedmont, Virginia, June 5th, 1864.

Thomas W. Bradley killed in action at Winchester, June 13th, 1863.

John W. Durbin died of wounds received in action at Lynchburg, June 18th, 1864.

John R. French killed in the battle of New Market, May 15th, 1864.

Quite a number of the soldier boys of Hancock county sacrificed their lives because the country called them, and because they loved the Union, and were glad to fight to maintain its principles. In various ways their blood was spilled. If not in action, perhaps death resulted from wounds then received, and many met death by exposure, through hardships they had to endure—long fatigueing marches and short rations, and many things, inconceivable to the thought of the uninitiated, made up the soldier's life. Talk to the old veteran of the camp-fires, and he tells you of interesting times and good, but speak of the weary marches, or go further still, and ask him of the battles. Ah, his voice trembles as he speaks of Winchester, Piedmont and other places where soldiers lie over the field "bleeding at every vein." His face grows pale, and his eyes fill up, and it is with utmost efforts that he restrains a "thousand streams of affection" from flowing down his manly cheek. He may have lost a dear friend, a brother, or, peradventure, a father, and he falters as he relates those scenes. But he feels that his cause was a just one, and therefore rejoices even, notwithstanding all.

FREE SCHOOLS OF HANCOCK.

So inferior were the common schools, prior to the introduction of the free school system, that no comparison with the present can be made. In the first instance there was nothing to support or encourage the teacher, that he, in turn, might qualify himself to impart the proper instructions to his pupils. As a consequence many more incompetent persons could be found engaged in teaching subscription school than those having the requisite amount of information to capacitate themselves for such purposes. With little or no assurance of any stated sum for their labor, persons who would have been prepared for teaching sought other and more lucrative employment. No dependence could be placed on what they might receive, and, no doubt, it often occurred that the teacher received no compensation at all for many of the pupils under his supervision and instruction. This being about the situation of affairs, only a few schools compared with the present number were in existence previous to 1863. The youth, in an educational point of view, were growing up without being properly educated as a majority, in the absence of a long felt necessity. Children, whose parents being in meagre circumstances in life, were often debarred even from the very limited advantages found in the common subscription schools. Only perhaps in a few exceptions did such have an opportunity to attend.

But when a system was inculcated, supported by the mighty arm of the law, new and comfortable school buildings erected, competent teachers employed and regular and fair salaries paid for their services, a fund being set apart for that purpose, a new light dawned upon the educational interests of the county. This, so broad and liberal a system, allows all an equal showing for learning, whether high or low, rich or poor.

When pupils are willing to learn, they, under the present system have no excuse whatever, for not making rapid strides in their studies. School houses are numerous within the county, dotting every district. The districts too, are small, making schools eligible and convenient for pupils.

Whilst Hancock is a small county in area, it nevertheless is well supplied with school buildings, having twenty frame and two brick. The value of the buildings are estimated at $20,850 00; furniture $1,150 00; with a library valued at $65 00, containing ninety-five volumes. It employs sixteen male and thirteen female teachers. It has two graded and twenty common schools. The average number of months taught is about six.

The number of students studying orthography is 946; reading 869; writing 785; arithmetic 719; geography 263; English grammar 226; history 81; algebra 29; other branches 37. The enumeration of youth for the school year 1878–9, is 1605.

It is probable that the people of Hancock take as great an interest in the education of their children as the inhabitants of any county in the state. Being hemmed in by the two old enterprising counties of Jefferson, Ohio, and Washington, Pa., they were early impressed with the importance of education and imbued with their interest in the free school systems, so long in successful operation in those two counties. The schools are now in the most encouraging condition of prosperity, closely rivaling the best in the country. Their success is a proof of the fact that it is as requisite that the patrons be interested as that the teacher be earnest.

TEACHERS' INSTITUTE.

The Teachers' Institutes are attended with great interest, and are not conducted exclusively by the teachers, as in some counties, but the patrons, by their presence and participation, heartily second the efforts of the teachers for the mutual improvement of themselves and their pupils. The institutes are usually held as district institutes, but in 1878 a portion of the term allotted to these was occupied in attendance at the county institute.

Many questions of vital importance to the public schools are discussed in these meetings, which prove great incentives in furthering on educational interests. They also enlist the attention of the parents, and the attendance as well as interest is growing more and more each year.

COUNTY OFFICIALS.

Below are given the names of the county officials from the organization of the county in 1848 to 1878. Some of the offices are now done away with which were in vogue in the early formation of Hancock. The first and present justices are shown, the rest omitted. All the others are given in the order in which they were elected.

Justices of the Peace for 1848—John Pittenger, John Gardner, John Mayhew, David Pugh, David Wylie, Thomas Elder, Greenberry Wilcoxen, Andrew Henderson, William H. Grafton, George Johnston

Justices of the Peace for 1878—W. C. Pursey, President; Alexander G. Pugh and William McDonald, Grant district; Hugh Sproule and George Pugh, Poe district; Nathan B. Grafton and John Campbell, Clay district; E. A. Freshwater and William M Lee, Butler district.

Sheriffs—David Wylie, from 1848 to 1850; William H. Grafton, from 1850 to 1856; Jabez H. Cochran, from 1856 to 1858; Samuel Wilson, from 1858 to 1862; John W. Hobbs, from 1862 to 1866; Samuel W. Wilson, from 1866 to 1870; John Wilson, from 1870 to 1877; R. H. Brown, from 1877 to 1880.

Clerks of the Court—John H. Atkinson, A. R. McCown, Daniel Donehoo, A. McC. Flanegin.

Clerks of the Circuit Court—John H. Atkinson, A. R. McCown, Daniel Donehoo, Jasper Whims, Charles N. Collins, A. McC. Flanegin.

Prosecuting Attornies—Robert C. Brown, Thayer Melvin, James G. Marshall, Thayer Melvin, James G. Marshall, Thayer Melvin, Daniel Donehoo, John R. Donehoo, James G. Marshall.

Assessors—Josiah A. Adams, Rezin R. Gardner, A. J. Marks, James G. Marshall, Spencer A. Griffith, William Flanegin, David Jenkins, Joseph W. Allison, A. J. L. Kerr, George L. Baxter, Jason W. Hart.

County Treasurers—John Campbell, Benedict C. Brashear.

County Surveyors—Thomas Hewitt, James W. Brown.

County Recorders—William C. Allison, D. S. Nicholson, A. McC. Flanegin, John N. Edie, A. McC. Flanegin.

Coroners—William H. Grafton, John C. Long, William Morrow.

County School Superintendents—Rev. Pomeroy, C. M. Collins, T. C. Caruthers, H. C. Shepherd, Van B. Barnard.

Representatives—The following named gentlemen represented Hancock county in the House of Delegates. They are given in the order in which they were elected. The dates of their elections could not be accurately ascertained, therefore, are omitted: Thomas Bambrick, Thomas J. Hewitt, O. W. Langfitt, George McPorter, W. L. Crawford, B. J. Smith, J. H. Hibbits, Daniel Donehoo, Joseph W. Allison, John A. Campbell, L. A. Stedman, J. H. Quinn.

CHAPTER LVIII.

HISTORY OF THE TOWNS AND DISTRICTS IN HANCOCK COUNTY.

POE DISTRICT.

POE district was erected in accordance with an act passed July, 1863. It is about four miles in width and six in length, and bounded by Grant district on the north, east by Pennsylvania, south by Clay, and west by the Ohio river. It is watered by Tomlinson's run and its tributaries, through the interior and eastern portion. The district is diversified with hills and valleys. It contains excellent farming land. There are two towns located within its limits. Fairview, the county seat, and New Lexington. The former has a population of about 400 and the latter about 50. There are three school buildings and five schools; three churches, Methodist, Presbyterian and Christian. George Baxter, William C. Murry and J. Broebeck, each run a grist mill; three brick manufactories; one woolen factory, operated at present by a Mr. Shafer—P. D. Pugh is proprietor, and has leased the factory to the above named person. It also contains two tanneries. This comprises the business of Poe.

The following is a memorandum of a meeting held by the voters organizing the township, and the proceedings for several years following:

COURT HOUSE, November 21st, 1864.

At a legally called and organized meeting of the voters of Poe township, Hancock county, West Virginia, an election was held for a township committee, which resulted in the choice of the following gentlemen: William Shay, James Stevenson, George Brown, Abraham Pittinger, and Robert Campbell, all free holders in Poe township:

Resolved, That an additional five per cent be laid on the building fund. The amount being fixed by law, being deemed insufficient. On motion adjourned.

J. H. PUGH, *Superintendent.*

J. H. HARPER, *Township Clerk.*

COURT HOUSE, May 11, 1865.

At a meeting of the voters of Poe township, being legally notified and a legal number of said voters being present, said meeting proceeded, in accordance with the seventeenth clause in the act relating to township officers, to elect a township committee. The following men, being freeholders within Poe township, in the county of Hancock and state of West Virginia, were duly elected, viz: Wm. Shay, James Stevenson, George Brown, Abraham Pittenger and Robert Campbell.

On motion, resolved by said meeting, that the building fund for the accommodation of free schools in our township being fixed by law at only five cents on the hundred dollars, and being entirely insufficient, therefore an additional five cents was levied at said meeting making in all ten cents on the hundred dollars, on the taxable property of the township. Said levy, when made, amounted to six hundred and sixteen dollars and twenty-eight cents.

Also resolved, that the levy for educational purposes be to the extent of the law, if necessary. On motion, adjourned.

J. H. PUGH, *Superintendent.*

J. H. HARPER, *Township Clerk.*

COURT HOUSE, May 24, 1866.

At the regular annual meeting of the voters of Poe township, Hancock county, W. Va., the number of voters required by law being present, proceeded to levy for educational purposes, which resulted in laying three mills on the dollar. On motion adjourned.

HUGH PUGH, *Sup.*

J. H. HARPER, *Township Clerk.*

MAY 24, 1866.

On the application of Thomas Brambrick to the undersigned, Surveyors of Roads of Poe township, in the county of Hancock and State of West Virginia, and for reasons satisfactory to them, it is ordered that the division line between the middle and eastern road districts, numbers two and three be so changed as to include the residence of said Thomas Brambrick, in the middle or Court House district, commencing at the fixed corner, near Langfitt's stable, thence to the corner of Spivey, Glass and Brambrick's, thence to the mouth of Pittenger's lane on the Liverpool road, at Pugh and Morrow's line.

SAMUEL HUFF,
ALEX. ALLISON,
A. D. PUGH,
Surveyors of Roads in Districts Nos. 1, 2 *and* 3.

JUNE 15, 1866.

I certify this to be a true copy as given to me.

J. H. HARPER, *Tp. Clk.*

MURRY'S MILL.

When William Murry settled where the mill now stands, in about 1818, there then stood an old saw mill, which was in running order, and also a log grist mill, but it was worn out and not used. In the following year after his removal to this place he built a frame grist mill, and commenced operations in it as soon as completed. He continued grinding wheat for the neighborhood until 1833, when his son, William C. Murry, purchased it, who followed milling there till 1852, when it accidentally caught fire and was consumed. In 1853 his son erected the present mill, and has been engaged operating the same ever since.

In the spring of 1878 he sunk a gas well. After six weeks work he obtained gas, at the depth of 715 feet, and in sufficient quantity to run his mill by it, besides furnishing two dwellings with light and fuel, and having plenty to spare. His place and surroundings is nightly illuminated by the waste gas.

The fact that prompted Mr. M. in the first place to sink an oil well was from what occurred during the great oil excitement. He, in company with others, sunk a well at the mouth of Deep Gut run for the purpose of obtaining oil, but instead struck a strong vein of gas. This, of course, led him to conclude that there was gas on his land, and the conclusion did not prove fallacious.

FAIRVIEW.

The location of Fairview is upon a prominent eminence, 420 feet above the level of the Ohio river, and is surrounded on three sides by still higher hills, which break off with regular and sometimes abrupt indentations. These points are eligible for observation, and the scenery afforded from their tops and the town is picturesque—being well diversified by hills and valleys, and possessing none of the monotonous tameness which characterizes towns located on western prairies. As far as the eye can carry the beholder, are seen beautiful, valuable and well improved farms, whilst here and there are found narrow strips of timber intervening the cultivated lands. While Fairview can't boast of a large town, it can rejoice at having one of the healthiest situations of any in the state. Since the creation of Hancock county, in 1848, it has been made the seat of justice for the county.

WHEN LAID OUT.

Dr. David Pugh, who colonized here in an early day, located a large tract of land where Fairview is situated, and in about the year 1810 conceived the propriety of laying out a town, and, as he thought this a suitable site, accordingly laid out a portion of his land into 113 town lots that year. It was then called New Manchester, but the post office went by the name of Fairview. He afterwards enlisted in the war of 1812, and received a commission as captain.

THE TOWN IN 1814.

The town as it appeared in 1814 is gathered from a couple of old gentlemen. Their memories corroborate as nearly as possible. First, a house stood where the "Virginia House" is located; one where Mr. Lloyd's residence is found; one occupying the ground upon which Squire Plattenburg lives; one where Moore's store is situated; one where the "Manchester House" stands, (it is claimed that that is the original building still remaining of the few.)

Joseph Gamble kept a hotel; Solomon Cook, a saddler shop; Dr. McLain, practiced medicine; Samuel Moore kept store; David Kerns carried on hatting where Prosecuting Attorney Marshall's residence is now located; Thomas Moore kept a hotel in the Manchester House; a lady known as Aunt Betty Brown kept a "Tippler's house" in a house situated between

the Manchester House and McFlanegan's; Old Jacob Compton carried on the cooper business, and Louis Cline and B. Allison followed blacksmithing. It contained a population of about sixty. Its first name was New Manchester (although often called Pughtown), and went by that name for a great many years.

The village never improved very much until the county-seat was fixed here, then it received an impetus which continued but for a season and subsided. It has neither natural nor artificial advantages to ever make a commercial point. It is situated three miles from the river, at the nearest place, and as far from the railroad. It receives a daily mail by hack.

The inhabitants are social, hospitable and intelligent, generally speaking.

On February 10, 1871, it was incorporated as Fairview, but owing to extra expenses, taxes came too heavily upon its citizens, and it was requested by them to have the act of incorporation abrogated, and accordingly, on December 20, 1873, it was repealed.

The population will not exceed 450, at the present time. It has not improved any within the last few years. A good substantial school building, which does credit to the town, was erected a few years ago.

HOTELS.

Fairview affords three hotels, with ample accommodation for the "inner man." The first hotel is

THE VIRGINIA HOUSE,

situated on Market street, was originally built for hotel purposes in about 1818. A Mr. Kidd was carrying on an inn along in 1820. In 1830 Samuel Connelly took charge and continued for a number of years. He was succeeded by Thomas Hunt, and then followed by Alex. Morrow, who continued the business until his death, which occurred on December 21, 1871. After this it was carried on until 1873 by his widow, Mrs. Sarah J. Morrow, when Mr. George Stewart, the present proprietor, started. He keeps a good house. He is an excellent landlord, and his wife makes an affable landlady.

MANCHESTER HOUSE.

This hotel building, it is claimed, was the first house built in Fairview, and a hotel was kept in it in the year 1812, by Thomas Moore. It has been used as a hotel building ever since. In May, 1862, Joseph Burns started there in the tavern business, and kept up to his death, which sad event took place July 20, 1869. His widow, Mrs. Jane Burns, still continues the business.

HARPER HOUSE.

started in April, 1877. J. H. Harper, proprietor.

PHYSICIANS.

The earliest physician that practiced in this section was Dr. McLane. He was succeeded by Drs. Campbell, Shanley, Sims, McBeth, Reed, McKinsey and others.

FAIRVIEW LODGE, NO. 40, A. F. & A. M.

Under a dispensation from the Grand Lodge of West Virginia, which was received April 20, 1869, this body proceeded to work. Grand Master J. Bates instituted it. The charter was granted November 10, 1869. The original members were as follows:

Charles N. Collins, George L. Baxter, Leonard Hobbs, John Wilson, James E. Marshall, William Luke, Edward Campbell, Samuel Murry and John W. Mayhew.

The primitive officers elected and installed were as follows:

Charles N. Collins, W. M.; George L. Baxter, S. W.; Leonard Hobbs, J. W.; John Wilson, Treasurer; James E. Morrow, Secretary; James G. Marshall, S. D.; Edward Campbell, J. D.; John W. Mayhew, Tyler.

Present Officers—Daniel H. Yant, W. M.; Leonard Hobbs, S. W.; Sampson Smith, J. W.; John Wilson, Treasurer; Absalom Baxter, Secretary; Edward Campbell, Chaplain.

It has a membership at present of about 22. Initiated, 25; raised, 23; suspended, 6; deaths, 2; demitted, 4.

Nights of meeting, every Tuesday on or preceding the full of the moon. Hall on third floor of Hobb's building.

HANCOCK LODGE NO. 44, I. O. O. F.

This society was organized under a dispensation from the Grand Lodge of West Virginia on October 27, 1868. Grand officers officiating: Thomas G. Steele, Grand Secretary, and R. T. Roberts, Grand Treasurer.

The charter members were as follows: D. H. Yant, James C. Allison, Thomas Lloyd, B. F. Smith, and Samuel Moore.

The officers elected stood as follows: D. H. Yant, Noble Grand; James C. Allison, Vice Grand; Thomas Lloyd, Secretary; B. F. Smith, Permanent Secretary; Samuel Moore, Treasurer.

The present officers are: Samuel Allison, Noble Grand; Thomas R. Cunningham, Vice Grand; John H. Melvin, Recording Secretary; Simon Gibler, Permanent Secretary; Samuel Moore, Treasurer; Thomas Lloyd, Past Grand.

The number initiated since its organization is eighty-six. Its night of meeting, Saturday evenings. Hall, in second floor of Wilson's building, opposite court house. The lodge has accumulated $500. It has buried but two brethren since the organization.

EUREKA ENCAMPMENT NO. 19, I. O. O. F.

Organized September 22, 1869; Charter members, Thomas Lloyd, J. C. Allison, J. C. Gardner, B. J. Campbell, Shanon B. Lyons, Samuel Moore, and D. H. Yant, who were also the officers. Their meeting nights is twice a month. They have initiated since their formation about thirty members.

METHODIST PROTESTANT CHURCH.

At the west end of Market street, Fairview, stands a time-defaced and dilapidated brick church, which was erected in the year 1828. A half century has elapsed since its consecration took place for the worship of the true God. Among the energetic and active members of that day, who were instrumental in erecting this church building are found the names of Henry Melvin and Jesse Cisson, who have long since departed to that realm of which they were delighted to sing and talk of. Before the church was built, services had been conducted in private houses, prominent among them appears a Mr. Dougherty and Mr. Nathan Thayer. Only about ten families composed the congregation. Little is known of the Methodist history back of the date mentioned. There is, at present, only one person surviving, and still a resident of Fairview, that was a member when the building was dedicated—Mrs. James Melvin.

The original class-leaders were Henry Melvin and Jesse Cisson.

The early ministers who supplied them with the preaching of God's Word, were the Revs. George Brown, John Clark, John Cowl, and others whose names cannot be obtained.

The earliest record that is extant carries the author back to October 27, 1849, and here is found the name of Rev. W. Reeves and the officers of the church: Stewarts, Andrew Halstead and Dennis S. Bernard; trustees, John Sutton, Samuel Reed, Dillon Hodgson, James Melvin, Hanson Hobbs and John Brown.

The leaders in the year 1850 were John Milligan and D. W. Estill.

In 1850 the membership numbered over sixty.

Its last quarterly conference was held November 16, 1878.

Owing to the removal of a large majority of its members by death, and otherwise, from time to time, and the church building giving out—not considered at all safe to meet in, the organization is here fast dying. Unless active movements are soon brought into requisition, death will be written above its door. To-day the congregation's history for numerical strength reminds them of its history of 1828. It is thought by some, however, that a new building will soon replace the old one, and certainly the remaining members are not so lethargic in the cause of Methodism as to permit it to die in Fairview, at the age of little over a half century. It is too good to die so young.

DISCIPLES' CHURCH.

In 1860 the first organization of this association of christians was effected in Fairview by a Mr. Joseph Beall and a few other names. There were but few members then in and near this village. The society succeeded in erecting a small frame building to worship in, which was afterward sold and the members united with the church at New Cumberland, W. Va. Occasionally preaching was conducted at Fairview by Bishop Campbell, Prof. C. L. Loos and W. K. Pendleton, of Bethany College. The court house was used for holding worship in un-

til 1872. The Methodist Protestant Church after that was then rented for a short time. During the winter of 1873 a protracted meeting was carried on by Elders J. M. Vanhorn and E. L. Frazier, at which time quite a number of accessions were made to the association, as then styled. The members concluded after that to organize a church and accomplished the same on the 21st of February, 1874, the ceremonies being conducted by elder E. L. Frazier. Nicholas Spivey and D. H. Yant were elected as elders; Leonard Hobbs, Samuel Wilcoxen and Thomas Lloyd as deacons. The membership at that time had increased to nearly eighty. They continued to occupy the Methodist Protestant Church, being supplied with preaching by J. M. Vanhorn, S. W. Brown, Carrel Ghant, Ebert Slade and others, until the spring of 1876, being then denied the use of the house, they were again compelled to procure the use of the court house until a building could be erected. A building committee was appointed by the congregation consisting of Nicholas Spivey, D. H. Yant, John Wilson, Nathan B. Grafton, J. W. Hobbs and Thomas Lloyd. On the 20th day of March, 1876, the above committee met (adding as another member of the committee James G. Marshall, Esq.) and organized by electing Nicholas Spivey, president; John Wilson, treasurer; and Thomas Lloyd, secretary. Subscription papers were made out and the committee started it by subscribing $1,000. A building lot was purchased at a cost of one hundred and twenty-five dollars. The next meeting was held on the 15th day of March, 1876, at which time it was ascertained by the committee that $2,217 00 had been subscribed, and quite a number of the subscribers belonged to other churches as well as non-church members. The contributions were liberal, so much so that the committee felt justified in the erection of a church edifice. The committee decided to build a frame house, dimensions as follows: 38x58 feet; 18 feet to the square, with very steep roof; entire height, including belfrey, 65 feet. On the 10th day of March, 1876, the contract for building said church was let to Mr. H. M. Ralston, of Fairview. The plan and specifications were drawn by James Eaton, of Hookstown, Pa. The church was completed October 15, 1876. On September 9, 1876, it was dedicated to the worship of God. The dedicatory sermon was delivered by Prof. W. K. Pendleton, President of Bethany College, W. Va., at which time an additional subscription of $375 00 was obtained.

The building is a substantial as well as an elegant one, being furnished with dressing-rooms, comfortable seats of modern style, organ, chandeliers, carpet, good bell, all in complete order, at a cost of $3,300.

The present minister is F. J. Wilfing; N. B. Pugh and Geo. Pugh, elders; Nicholas Spivey, Leonard Hobbs, Samuel Wilcoxen, O. S. Marshall, deacons; Thomas Lloyd, Sunday-school superintendent.

THE HANCOCK COUNTY COURIER.

The *Hancock County Courier*, now in successful operation, is the first paper ever printed in the county. It was established in 1869, the first issue appearing on the 19th of February of that year. The paper was started under rather embarrassing circumstances, but by untiring labor has become one of the fixed institutions of Hancock county. The paper is strictly independent upon all subjects, and by its conservative course now enjoys a circulation of nearly seven hundred.

J. W. Plattenburg, the founder and present proprietor, is a practical printer, having had nearly thirty years' experience in the business. Mr. P., during his life, has been connected with the publication of several papers, and has come to know just what a country paper is for.

The *Courier* is a twenty-eight column paper; and printed in a clear typographical manner. The subscription is one dollar per annum, in advance.

MAIL ROUTES.

The first act passed under the constitution of the United States, establishing a postal system in this county, was by the Congress, on February 20, 1792, entitled an "Act to establish the post office and post-roads within the United States," which received the approving signature of George Washington, President, and went into effect, in accordance with its provisions, on June 1st 1792.

The first mail route established to this place, lead from Wellsburg, through Holliday's Cove. As to the exact date of the erection of the same, it cannot now be conveniently ascertained. It is put however, about 1818, or earlier. This was a weekly mail.

About 18—, there was another route established, leading from Fairview to Pittsburgh, once a week, and in 1872, it was changed to three times a week.

The Wellsburg mail route ceased in 1858, and then one was carried to Wellsville, as a daily mail about thirteen years.

In 1871, the Wellsville mail route was discontinued, and a new route from McCoy's Station, through New Cumberland to Fairview went into effect, which is daily.

POSTMASTERS.

Since the establishment of the Fairview post office, the village has had nine postmasters, as follows:

The first postmaster was Larry Kenan, an Irishman. He received his appointment under President Monroe's administration. The office was in a log cabin that stood where Esquire Plattenburg's residence is located. He was then a man of about 60 years of age. He retained the office for several years, and was then followed by Bambrick. He was the father-in-law of Thomas Bambrick.

The second postmaster was Thomas Bambrick, who received the appointment in 1823 or 1824, and held the office for a number of years. He kept the office in a small log house that stood where John Wilson's saddler shop now stands. He also dealt on a small scale, in connection with the post office, in the grocery business.

The third postmaster was John C. McCown, who received his appointment under President Van Buren, in about 1836. He removed to the old McCown building, on Market street. He carried on the dry goods business. He was postmaster quite a number of years.

The fourth postmaster was Absalom Owens, who received the appointment in 1854, and kept the office where Plattenburg lives. He had it only about a year, and was succeeded by Wilson.

The fifth postmaster was John Wilson, who received the appointment under President Buchanan, and kept it in the building where he is now carrying on the harness business.

William Shay, the sixth postmaster, was appointed in 1861, under President Lincoln, and held the office until 1866. He removed the office to the room now occupied by Samuel Moore's store.

John Wilson received the appointment again, under Johnson, and it was removed to his shop, where it was retained until 1869.

Miss Jennie Edie then received the appointment, under President Grant, and the office was removed to the private residence of Mrs. Elizabeth Edie and kept there until 1878.

In 1878 W. C. Pomeroy was appointed postmaster, and the office then removed to his store building.

Prior to the establishment of an office here the settlers were obliged to carry their letters to Charlestown, now Wellsburg, to mail them, where they also received mail, that being the nearest post office then in the county. This was twenty-two miles distant from Fairview. The inconvenience of the citizens here in receiving and sending mail can better be imagined than described.

BANDS.

The first band ever organized in the village was styled the "Fairview Brass Band." Its formation was affected in 1850 by Prof. I. J. Ruhl, of Ohio. The names of its members are given as follows: Leader, Henry Brown; First Cornet, Samuel W. Wilson; Second Cornet, John Wilson; Syrus Beall, Daniel Donehoo, John A. Prosser, Robert Wilkinson, John A. Steel, Simpson O'Brien, Oscar Cameron and Daniel F. Cornell.

This organization continued about three years, discoursing good music. The removal of some of its members caused its disorganization.

FAIRVIEW CORNET BAND.

This band organized December 10, 1876, under the immediate auspices of Prof. Charles Vannostrand. The members were as follows, viz: W. W. Wilson, Oscar F. Wilson, James M. Shay, G. W. Marshall, D. S. Marshall, J. H. Settle, John Bisman, Frank Silverthorne, J. O. Marshall, J. D. Pugh, Elmer F. Wilson, J. C. Silverthorne, H. H. Harper and Chas. Durbin.

The following officers were elected: President, W. W. Wilson; Secretary, O. F. Wilson; Treasurer, Robert A. Shay.

The instruments for the band were procured from a defunct society at Cannonsburg and cost $135. They were purchased at a bargain and are first class German silver horns.

On November 18, 1878, the society underwent a new organization, and elected non-members of the band as their officers, in order, perchance, of improvement and instruction. The following citizens were chosen as their officers: D. H. Yant, president; J. W. Plattenburg, secretary; Dr. Donehoo, musical director; John H. Settle, re-elected treasurer. The band now consists of the following named members: James M. Shay, Oscar Wilson, Frank Silverthorne, Dorwin Marshall, George Marshall, Orman Marshall, James Silverthorne, John H. Settle, Harry Harper, Elmer Wilson, W. W. Wilson, and Charles Durbin.

THE AGRICULTURAL WORKS.

In the year 1869, J. W. Allison, Alex. Morrow, D. S. Nicholson, Daniel Donehoo, William H. Pugh, John G. Hunter, James H. Pugh and Samuel Wilson, formed a corporation for the purpose of manufacturing and selling agricultural implements. This association was known as the Champion Manufacturing Company. The frame building, originally erected for a woolhouse, was purchased by this company from D. S. Nicholson, and re-arranged with an addition of a blacksmith shop 26x40 feet. As soon as the machinery could be procured and all necessary material, operations by this company began. The company continued four years, driving a very successful and fair business the first three years, but the depression of trade which swept over the whole land, was keenly felt by them. In 1873, the establishment was leased to Allison & Morrow for three years, and the business was conducted by them with some little profit. At the expiration of the lease, Mr. Allison purchased his partners' interest in the material left on hand and has been carrying it on ever since, but not as extensively as he purposes doing in 1879.

LAWYERS.

Soon after the erection of the county, R. C. Brown commenced the practice of the law. He came early in 1848 and was the first lawyer living in Fairview. He remained a few years and then removed to Iowa, but now resides in California.

Daniel Donehoo commenced practicing in Fairview in 1850. W. L. Long and the present Judge Melvin, in 1853. J. R. Donehoo, in 1855. George M. Scott, in 1857.

The present lawyers are prosecuting attorney James G. Marshall, and J. R. Donehoo.

SUMMARY OF THE BUSINESS OF FAIRVIEW.

Three dry good stores, one drug and hardware store, two blacksmith shops, four shoe shops, one chair and undertaking establishment, one cabinet shop, one wagon shop, two saddle shops, one planing mill, three hotels and two doctors, comprises the business.

THE FLATS GRAVEYARD.

Among myrtle, ivy, tangled stalks of dead rose bushes, depressed graves and broken tomb-stones, are found the following named persons buried underneath its sod. This being a denominational burial place, the Presbyterian elders are grouped together:

Robert Moore, born 1787, died 1847; John Allison, born 1780, died 1852; Henry Silverthorn, born 1774, died 1853; Hugh Sproule, born 1775, died 1855; Abraham Prosser, born 1793, died 1863; Thomas Cameron, born 1795, died 1865; John Scott, born 1791, died 1877; John Pittenger, born 1760, died 1870; Andrew Henderson, unknown.

The next are those who sacrificed their lives that their country might be spared and the union of states remain:

James R. Snowden, James Aten, Isaac Miller, Wm. B. Campbell, Wm. A. Murray, all of Company I, Twelfth West Virginia Infantry.

Next are discovered the graves of

David Pugh, born 1779, died 1855; Peter Pugh, born 1770, died 1850.

Of the very old men, the following are seen:

James Allison, born March 30, 1744, died March 27, 1844; David Miller, born 1743, died 1842; Jonathan Allison, born 1776, died 1872; John McMillan, born 1748, died 1825; George Wilhelm, born 1761, died 1849; John Miller, born 1789, died 1875; Andrew McCown, born 1767, died 1856; William Aten, born 1779, died 1860; John Marshall, born 1783, died 1860; John Gallaher, born 1754, died 1839; John Edie, born 1762, died 1842.

John Snowden, an Indian scout, who furnished valuable information and aid to the early settlers more than one hundred years ago, rendering similar service as that of Lewis Wetzel, lies buried here, with grave unmarked only by slight indentation of ground.

Alexander Morrow, born 1815, died 1871; Mrs. Sarah Harper, born 1780, died 1863; Mrs. Nancy McHenry, born 1784, died 1859; Mary Allison, born 1790, died 1876.

These are among some of the oldest and most prominent persons interred in this grave yard. Space would not admit of mentioning all that are buried here, neither would it be expected in a history of this kind. Only some of the pioneers of what is now Hancock county, are given, with a few soldiers.

CLAY DISTRICT.

This district partially occupies the central portion of the county, and is bounded on the north by Poe, east by Pennsylvania, south by Butler, and west by the Ohio river; is about three and a half miles broad, and five wide. It is the largest manufacturing district in Hancock. Its organization was effected soon after the establishing of townships. As a farming district, like all in the county, it ranks high. It contains 10,293 arable acres.

THE CLIFTON FIRE BRICK WORKS.

In the year 1844, Messrs. Lewis K. McCoy and Lewis Shall began operations in the fire brick business on the present site of the Clifton Works.

In the spring of 1845, Messrs. McCoy & Shall disposed of their brick yard to Messrs. Thomas Atkinson & Sons, who continued the business until the decease of the senior partner, in 1850; and in 1854, J. H. Atkinson having purchased the interests of all other parties, continued the making of bricks until the year 1869, when he sold to Smith, Porter & Co., and the yard became known as the Clifton Works.

During the year 1856, a new yard was started by Atkinson & Garlick, adjoining the yard of J. H. Atkinson. Thompson Mackey having purchased an interest therein, the name was changed to T. Garlick & Co., and in 1864, by change of owners, the firm became known as Atkinson & Adams for one year, when Mr. Adams removing to the west, the yard was continued by J. H. Atkinson alone, until it was purchased, in 1867, by Cullen & Bros., and by them sold, in 1876, to Smith, Porter & Co., and it became merged into what is known as the Clifton Works.

To say that the Clifton is a model establishment would hardly give the reader a satisfactory idea of its completeness in every department. The clay is ground up fine by immense rollers. The rollers of which we speak form a part of the main machinery of a brick yard.

At the Clifton the rollers are very large, and there being three sets of them, their capacity for grinding is 100 tons per day. One set of rollers is used exclusively for grinding what is termed "fine ground clay." This clay is all under cover, being sheltered by a large and substantial frame building. In connection with this department might be mentioned a *labor saving machine*, which consists of a railroad running the entire length of the building, and supported by trestle work, standing up almost to the roof of the building. The clay is conveyed on this railroad into the shed on cars, instead of on wheelbarrows, as formerly.

The brick yard.—The yard for drying the brick is very large, and all under cover. The roof works on the same principle as do the slats of a shifting window-shutter, and can be opened or closed just as desired. During the summer months, many bricks are dried on the floor of the yard, which will hold near 50,000 at one time.

The dry house is a large building on the floor of which 10,000 bricks can be kept drying at one time. The dry house enables the firm to make bricks throughout the entire winter. The Clifton's capacity for drying is 100,000 per day. Here are made every variety of form and size from the common split brick to the largest and most peculiarly shaped tile. The Clifton makes about 3,000,000 bricks per year. There are ten kilns used for burning the bricks, and ten engines for running the machinery. Through the ingenuity of Mr. Porter these engines are run by gas as a fuel.

THE ÆTNA FIRE-BRICK WORKS.

In the year 1844 operations were begun in the fire-brick trade, just above the mouth of Deep Gut run, by Thomas Freeman, who called the works "The Ætna." About the year 1853, Thomas Manypenny, with his three brothers, Joseph, Alex-

ander, and John, purchased the Ætna works of Thomas Freeman's heirs and conducted the business of T. Manypenny & Co., until John Manypenny, selling his interest to his brothers, and Thomas Manypenny going into business at another yard, the firm name became J. & A. Manypenny and continued to be the name to the present. Their capacity is 7,500 per day. The Ætna manufacture the best of bricks made, owing to the peculiar quality of the clay.

NEW CUMBERLAND.

The town of New Cumberland was first laid out in lots (forty-two in number) in the fall of 1839, by John Cuppy, immediately above the mouth of Hardin's run and upon the bank of the Ohio river. It received the name of Vernon at first, but when the sale of lots took place Mr. Cuppy in deference to the wishes of the purchasers, named it New Cumberland. The following spring Mr. John Chapman erected the first house, being the south end of the house in which Dr. Shanley now resides, and preparations were made for several buildings, which went up during the year 1841. Mr. Isaac Flowers building, where the store of Mr. Shanley now stands, and the John Gamble building and a portion of the house in which Jackson Snowden lives. Lloyd Chapman erected the present house of Isaac Cullen, and Hezekiah Flowers built the house in which he still lives. During the year 1842 quite a number of houses were added to the village, among them, the house of Mr. Shauble, built by John Chapman for John Cuppy, the proprietor of the place, and here in 1842 was delivered the first sermon ever preached in New Cumberland, by a Rev. John Jackman, a New Light or Bible Christian, as he called himself.

WHEN THE POST OFFICE WAS ESTABLISHED.

Some time during the summer of 1844 a post office was established for the first time, in the store building of N. B. & W. H. Grafton, which still stands immediately north of Dr. Shanley's residence. W. H. Grafton, sr., was appointed postmaster, and the mail came in from Holliday's Cove upon each Saturday afternoon. From 1850 the mails were carried twice a week, private subscription paying for this second trip, when in 1856 a daily mail was obtained, connecting at Elliottsville for several years, and then at McCoy's Station, upon the Cleveland and Pittsburgh railroad, and now in 1878 the Post Office Department has added another convenience by giving us two mails each day, putting our inhabitants in close connection with the business of the country.

SCHOOL BUILDINGS.

About the year 1849 the number of citizens had so increased, and the growing interests of the fire-brick business, gave such assurance of a permanent increase of population and wealth that it was determined to erect a new school house. The architect was William Langfitt, and for more than twenty years that building was school house, Methodist Church, Presbyterian Church, court house, lyceum, place of voting and town hall. For years the scenes transacted will be vividly remembered by all of our older inhabitants. Here many of our good citizens secured their first rudiments of education, and many there graduated for the business of life. The history of the sermons there delivered, of the instructions given, of the lawyers' eloquent appeals; and the inimitable fun of many a mock court, the youthful longing for oratorical renown in many a school exhibition, the stirring notes of many a political campaign, have passed away never to be perpetuated but in the memories of those who met there from 1849 to 1871, and when those memories fail, but little will be saved from that ocean where forgetfulness reigns supreme.

Upon the completion of the new school building in 1871, the old school house was sold, and with all its age and memories became the property of Dr. Shanley, and it now does service as the store house for W. P. Shanley's grocery, standing upon almost the exact site of a house built in 1841 by Isaac Flowers.

CHURCHES.

In the spring of 1840 the citizens built the little "Brick Church" under the care of the Disciple denomination which served the double purpose of church and school house until the building of the old frame school house about the year 1849.

The Disciples Church was the first to complete an organization in the village, and worshipped for many years in the little brick edifice in the old town, but removed in 1875 to their beautiful building upon the ridge. Father W. H. Grafton, Elder Eli Regal, P. H. Jones, Dr. William Beaumont, S. B. Teagarden, George P. Slade and F. J. Wilfing have at various times ministered to the congregation.

The Methodist Episcopal Church was organized in the old frame school house probably in 1849, and have always continued their organization under itinerant ministers, building their present house of worship in the year 1870. They had, at a previous date, a church building nearly completed near the present site of Prince McNeil's house, but a violent wind storm so demolished it that they concluded to sell the debris and remove to the place of the present building.

The Presbyterian congregation was organized in May, 1851, in the little brick church, with a membership of twenty-eight persons, who before that time had their church connection at the Fairview Church. For several years they worshipped, like the Methodist Episcopal, in the old frame school house, removing to their present church in 1856. Several different ministers supplied their pulpit for the first year, but the Rev. S. F. Greer becoming their pastor in 1852, has continued in that relation ever since, making a pastorate of over a quarter of a century.

The Methodist Protestants had preaching probably as far back as any of the other denominations, by Revs. Brown, Burns, Gillespie, Cowl and Dyer, but never perfected an organization until about the year 1875, with Rev. J. B. Lucas as minister, holding their services in the Town Hall. Rev. John Gregory is at present their pastor.

SABBATH SCHOOLS.

While giving a history of the different church organizations in the town, the sabbath school should not be forgotten, being an auxiliary to and a power in every congregation.

In May 1851, the first sabbath school was organized in the place, and for nearly five years was conducted as a union school, drawing its teachers and scholars from all the churches, and numbering from seventy to eighty members. The Presbyterian church having been completed on the ridge, the school found comfortable quarters in the basement of said building, and quite an improvement in appliances to those enjoyed in the old school house.

Sometime during the year 1856, the Disciples organized a school at their own church, and shortly after the Methodist Episcopal followed their example, and in 1875 the Methodist Protestant organized one in their own church, four schools had taken the place of the one at first organized, and while each may have become somewhat denominational, yet entire harmony has so far prevailed, and all are united in the one great work, that of the study of the scriptures, and leading the scholars to the Saviour.

FIRST ADDITION TO NEW CUMBERLAND.

About the year 1848 the eastern addition to the town was laid out by Joseph L. Ball, Thomas Elder and John Gamble, and the same year about 100 lots were added, in what is known as Campbell's addition to New Cumberland, below Hardin's run. In May 1850 John Cuppy added about fifty lots north of the town, and in September of that year John and Loyd Campbell made another addition of 150 lots to the south, which in all gave ample room for a city of 5,000 inhahitants, and until that number shall have found here a home, the town will continue, as it has for years, a pleasant village, where each family has ample room for gardens and fruits.

THE CONTEST FOR THE COUNTY SEAT.

In the year 1848 the county of Hancock was formed from the the northern half of Brooke, leaving to the people the selection of a site for the court house. At that election the places voted for were New Manchester and New Cumberland, the latter place receiving a majority of thirteen votes. The county court refused to remove the courts to New Cumberland, and a second election was had upon Thursday, April 25th, 1850, which resulted in a majority of forty-six votes in favor of New Cumberland, when, after much delay, the courts were finally removed, and justice dispensed in the "old frame school house," until public buildings should be erected. But divisions springing up as to the exact place where the court house should be located, nothing was done until the friends of New Manchester had obtained a third election, in 1852, which resulted, after a warmly contested canvass, in a majority of one for that place. The records and courts were carried back to New Manchester; a court house and jail erected, and there the county seat question

has rested for a quarter of a century. Doubtless the requisite majority might many years since have been secured to again re-locate the public buildings at New Cumberland, but those who had so hotly contested three former elections were not inclined to go to the expense and labor that would ensure success, and a new generation have thought more of prosecuting their legitimate business than of entering into a contest for an object which, in time, will be secured without an effort.

MECHANICS.

At the head of the list of mechanics in the town must stand Mr. John Chapman, carpenter, who erected the first house in the place and afterward assisted in the building of quite a number of houses, and who now, in ripening old age, quietly rests beneath his own vine and under a roof that was made by his own hands, in the valley east of the ridge. Besides him, there were quite a host of carpenters—Lloyd Chapman, Josiah Adams, William Lindsay, Thomas Andrews, Thomas Latimer, Thomas Bonsall, sr., Jacob Marquet and William Langfitt—without counting the boat builders that in those early days constructed the flat-boats in which most of the coal and fire-brick were transported to market.

Lewis Spivey was the first blacksmith, and had a shop on the lot now owned by Homer Thayer. Samuel Roberts also worked in the same building afterward. Joseph Mahlon and Thomas Pickering carried on the same business in the building that forms a part of the present machine shops of the Wylie Bros., and for many years Silas Wilkison carried on the same business.

Andrew Parks and Thomas Brandon were for many years the only tailors in the village, Robert Foreman setting up a shop a few years later.

Uncle Richard Allison mended boots and shoes in a part of Hezekiah Flowers' house, and among the first shoemakers were Thomas Phillis and Harry McLaughlin, the latter of whom has permanently settled upon the ridge, ready as ever to care for the soles of the people.

Wm. Monsey was the first wagon-maker, and had his shop on part of the property of the Wylie Bros., where he carried on a general business of wagon-making, manufacturing of grain cradles for farmers, and odd jobs of carpentering.

John A. Prosser added a chair factory and a paint shop in a year or so upon the same lot where he at present resides.

TEACHERS.

N. B. Grafton, was the first school teacher in the village in 1845. J. H. Atkinson taught in the winter of 1846. James L. Gray, for several years, until he was licensed to practice law; afterwards Miss Sarah Ball, Miss Melinda A. Turner, Mr. Black, Mr. Griffith, and others taught in the old school house, when, upon the completion of the present school building, Mr. H. C. Shepherd, was chosen as principal, with three assistants. This place he filled until 1877, when Mr. W. B. Swearingen was elected to that position, and two more assistants were added, making at this time six teachers and about 300 scholars, a graded school of which our people are justly proud.

PHYSICIANS.

Dr. S. F. Marquis, was the first practicing physician, but joining the great exodus to California, in 1852, he died there in 1858. Dr. W. Beaumont, also practiced medicine for many years, and erected a water cure establishment upon the hill side in the eastern addition to the town. Dr. Baguely took the place of Dr. Marquis, and practiced for a number of years. Dr. Shanley came to town about 1850, where he has resided ever since, and with Doctors P. C. McLane and Grodfrey Beaumont, attends to the ills in the flesh of our community.

MERCHANTS.

Wm. H. Grafton, sr., and Thomas Bonsall were the first to sell goods, followed closely by N. B. Grafton and W. H. Grafton, jr., A. O. Chapman, Ephriam Atkinson, Bigham & Stewart, Cyrus Prentis and A. R. McCown, and later by D. F. Connell & Co., G. W Stewart, John Daniels, Porter & Co., David Ward, W. P. Shanley, Wm. Teesdale, Thomas Swaney and others.

In February, 1845, a charter was granted to David Gregory for a ferry across the Ohio river from his lot No. 3—now Filson & Brown's—where for years a flat boat and skiff carried passengers to a landing nearly opposite. After the death of Mr. Gregory, the ferry was continued by Ephriam Atkinson, John Robb, Stuart and Wilkinson, and at this date by Messrs. Patterson & Ward. Some fifteen years since, the ferry was removed to its present site, and the landing on the Ohio side to a point more convenient to McCoy's station, on the Cleveland and Pittsburgh railroad. A steam ferry boat now conveys passengers with comfort and safety, quite an improvement to the inconvenience of thirty years ago.

About 1872 a charter was granted by John Pierce for a second ferry across the Ohio river from the Foundry landing in the lower town; this is only a ferry for foot passengers, and only a skiff is kept for the public. But it is a great convenience to quite a number of our citizens, which will be greatly increased in the future, as the Cleveland and Pittsburgh railroad have just established a new stopping place between Elliottsville and McCoy's station, and immediately opposite the site of the lower ferry.

BOATS AND TRAVEL.

Soon after the first settlement of the town; a wharf boat was kept at the landing by John Prosser (of Benjamin), and afterwards by several of the merchant firms of the place. Messrs. Chapman Brothers and Wm. Mathison & Sons each kept a coal yard at the river, and from coal boats supplied the many steamers that at that day plied their trade upon our waters.

It was during this time that the Pittsburgh and Cincinnati line of packet boats were in their flood tide of success; but few railroads then carried passengers over the country and boats that were really floating palaces, that would carry passengers from Pittsburgh to Cincinnati in forty hours were accounted as fast conveyances and luxurious resting places for those who were upon business or merely pleasure seekers.

The completion of through lines of railroads that would enable travelers to eat their supper in one city and their breakfast in the other, forever destroyed the trade and hopes of boatmen, and while the iron rail and the iron horse go on increasing their speed and perfecting their connections and comforts. The magnificent passenger packets of thirty years ago have passed away, only to be remembered as one of the links in the great chain of modern invention that have served to make us a homogenous people. Along with the disappearance of these line boats, disappeared also our coal yards and wharf boats, and while considerable trade is still carried on by the steamboats of to-day, the great majority of our freighting is done upon the railroads.

HOTELS.

Probably the first regular hotel for the accommodation of travelers was kept by James Robb, in the house now occupied by Mr. Loyd Campbell. Afterwards Messrs. E. Atkinson, James Figley, Alexander Campbell and others in the American House, and Thomas Brandon and Benton Connell at the site of the present hotel, but private boarding houses have always supplied the lack of public places at which travelers might be accommodated.

GAS WELLS.

During the great oil excitement of 1862, a stock company sunk a well upon Deep run, some twenty rods from where it enters into the river, upon the lands of Joseph Stuart. They failed to strike oil, but did strike a supply of gas, which for volume and pureness has never been equaled in the world. Not knowing the value of this gas, and not obtaining any oil, the company abandoned their lease, and for years this fountain of gas lay unused, except as it served to light up the valley and the site of New Cumberland, dispensing with dark nights and lanterns. For years it continued thus to burn, and indeed so little was known of its value, and the ease with which it could be controlled, that the proprietor, after its accidental ignition by some meddlesome boys by which the derricks and shanties around it were all consumed, offered any one five dollars that would extinguish the fire. For months it continued to send up its spurting flames with a roar and a rush that led the proprietor to believe that at any moment, a sudden ebb of the subtle fluid might communicate the fire to some great subterranean reservoir and whelm all the neighborhood with an earthquake, such as have visited the inhabitants around the volcanic mountains of South America or the old world. Many of the neighbors had much the same feelings and so met at the well to put out, if possible, this ever roaring, surging flame. To plug up this hole was not to be thought of, as workmen could not approach it near enough to work, so they sought to smother it with great stones and dirt, until a large pile had been thrown up, similar to a potato hole, in which the farmer would secure

his winter supply of potatoes; but the flames came out at every crevice from base to summit. Then old carpets bountifully showered with water from the run near by, were spread over the hillock, and more dirt was added, but still the fire was king, and as often as suppressed at one place, broke out at another, until the task was given up in despair. For weeks the mass of rocks and dirt were aglow with fire until at length all had been burned away, excepting a few remaining stones, which, red with heat, lay around the mouth of the hole.

At this opportune time a couple of philosophers who had been studying the nature of the gas appeared upon the ground, armed as simply as Gideon of old with his pitchers, with only a bucket of water each, and standing on opposite sides of the flame, at the same moment cast their buckets of water upon the heated stones. A hiss—a sudden spread of steam cut of the flame, and the fire was out. How simple, and yet how effective when one knows how!

Ever after the flames were lit and extinguished with the ease of a common lamp.

Some parties in the east hearing of the well came to see it, tested the gas, leased the premises and erected several large houses and commenced the manufacture of "soot" or carbon from which printer's ink is made.

From the carbon of this well is made the fine inks used in printing such periodicals as *Harper's Magazine, Godey's Lady's Book* and like issues from the press in our own country, entering the markets of Europe and owing to its cheapness and fineness, supplanting the inks made from soot manufactured from gas generated from coal.

In December, 1876, these carbon works were destroyed by fire, when the gas was utilized by bringing it in a large pipe to the Clifton works, where it is now used at a great saving of expense in running two engines and burning all the brick made in two yards; still a surplus was not needed, and a large pipe conveys it to the height of some forty feet, where its flame lights the whole country around.

During the last summer a second well was sunk a few rods distant from the first, when about the same depth (some 600 feet) a jet of gas was struck, about equal to, and without so far, injuring the supply of the first.

A second carbon company are now erecting works of twice the size of the first one, and expect before the first of April, 1879, to have on hand a supply of the carbon, from which the ink is to be made that will go out to all parts of the civilized world.

Several other wells which have been sunk for oil in and about town have struck more or less gas, and we should not be surprised to see, within five years from this time, all our steam generated by gas, all our houses heated and lighted by the same agency, and night literally turned into day by the gas that will not be needed for other purposes.

HANCOCK COUNTY INDEPENDENT.

The *Independent* was founded by the present proprietors, Brown & Morrow, in the year 1876. It is a neat little journal of thirty-two columns, and is the first adventure of the kind ever made in New Cumberland. The enterprise, which it was thought by some would be a failure, has proven so far to be a financial success, and its future prosperity bids fairer even than its past, pecuniarily as well as otherwise. Its subscription list is a very fair one, with increasing names each year.

BUTLER DISTRICT

is the most southerly one in the county, and is bounded on the north by Clay, east by Pennsylvania, south by Brooke and west by the Ohio. The district is nearly five miles square. There are two post offices—Holliday's Cove and Freeman's Landing—six schools, a number of churches, and six brick manufactories and two grist mills are among the most important of mention in the township.

HOLLIDAY'S COVE.

This village has three stores, two blacksmith shops, two wagon-maker shops, two shoe shops, one drug store and three churches. The population, including the portion located in Brooke county, is estimated at two hundred and fifty, with about fifty houses.

CHURCHES IN THE DISTRICT.

The Three Springs Church.—The primitive Three Springs church was a hewed log structure. It was located on the land now in the possession of Bartly Campbell, about a mile and a half east of Holliday's Cove. The church was erected in about 1790. Services were held there until in the year 1812. Of the early history of the congregation no accurate information can be procured, except that of a call dated November 20, 1799, and is signed by Philip Jackson, James Proudfoot, Samuel Merchant, Samuel Marquiss, James Merchant, William Jackson, John Goodman Young, William Lee, John Coulter, John Wylie, William Ledlie and John Orr. This call was for Rev. Elisha McCurdy, who was among the first ministers in this church. The ground upon which the church was built was donated by the two James Campbells. There is also a graveyard at the place, near where the church stood, where many of the early settlers of the neighborhood are buried. In the year 1805 a great revival, known as the "falling down," took place. The following is taken from the Life of Macurdy, concerning it.

On Sabbath, the 13th of September, 1802, preparatory to the administration of the Lord's Supper at Three Springs, which was appointed to take place on the fourth Sabbath of September an unusually large number of people attended. In the morning Mr. Macurdy lectured on Malachi 3:1–5, "Behold, I will send my messenger," &c. In the afternoon, he preached from Joshua 24:15, "Choose you this day whom ye will serve." While reading the text, uncommon solemnity pervaded the assembly. The preacher himself felt awfully solemn. He read the text a second time. The point to which he directed his efforts, in the treatment of the subject, was to bring his hearers to a decision, by showing them that they were shut up to this necessity—that they must either choose to serve God, or they must choose not to serve him. This fearful alternative, he pressed upon them, with much earnestness and solemnity. At the close of his remarks on this point, he stood silent in the tent, from which he had been addressing them. As he paused, the people, who had been scattered over a considerable space, gathered closely around the tent, as if in expectation of something further. Observing the inquiring expression, with which they gazed upon him, he resumed his discourse, and with solemn emphasis, said, "God and you must decide this question; and I now call upon you to give in your decision to God." Immediately the whole congregation rose to their feet, evincing very deep concern. Under these circumstances, he addressed them further, assuring them that God was a merciful God, and if there were any among them who had not chosen Him as their portion, they had still the opportunity to do so. And, again, he put the question, "Will you now give in your decision to serve the Lord your God?" This was the occasion of greatly increasing the anxiety which already existed, and many, unable to stand, fell back upon the benches, which were used as seats. In the midst of this intense excitement, he dismissed the congregation, and returned home. The people, themselves, after he had retired, appointed a meeting for prayer, to be held in the evening, which was attended upon with great interest. 'About fifty persons continued upon the ground, appeared unwilling to go away, and spent the most of the night in social worship.'

On the Thursday following, which was observed as a fast, preparatory to the administration of the Lord's Supper, more than usual solemnity prevailed throughout the services. A prayer-meeting was appointed, to be held in the evening, at the house of one of the elders. A number of persons proceeded thither directly from church. Mr. Macurdy followed towards evening. Before the commencement of the religious exercises, while walking near the house, and revolving in his mind what he should say to the people, he heard cries of distress, in a plat of wood-land which lay in the vicinity. Supposing them to be the cries of persons under concern about their souls, he asked one of the elders to go with him, that they might ascertain the fact. Upon their arrival at the place, they found two young women who had retired to the woods to pray, prostrate on the ground, in deep distress in relation to their eternal interests. "Their cries for mercy were very affecting." After some conversation with them, they were taken to the house, where a large crowd of people were assembled for worship. There they were very powerfully affected and cried out, on account of the pungency of their convictions. This, however, did not interfere with the services of the evening. These proceeded without interruption, and so imperceptibly and rapidly did the hours pass away, in prayer and exhortation, that before the people were aware of it the morning light dawned upon them. The whole night was spent in religious exercises.

The next morning Mr. Macurdy, and the elder who was with him, proceeded toward the church, where a meeting of the ses-

sion had been appointed to converse with applicants for admission to the Lord's table. On their way they heard cries of distress in the woods, and going to the place whence they came, found a number of anxious persons engaged in prayer. Having reached the church, they spent the day conversing with inquirers after salvation. None as yet expressed a hope, and none, of course, were admitted to the communion of the church. A prayer-meeting was again held in the evening. The night was spent, as was the preceding one, in prayer and exhortation, the exercises being continued until day-light broke unexpectedly upon them, so intense and absorbing was the interest which they felt on the occasion.

The Rev. John Brice had been previously engaged to assist at the communion. On his way to the church, on Saturday morning, Mr. Macurdy fell in with him, and informed him of the state of things in the congregation. The effect on him was overwhelming. He seemed unable to endure it, and declared that he would return home, as he felt himself unfit to preach where the Lord was thus pouring out his spirit. Through the persuasion of Mr. Macurdy he proceeded to the church and preached. During the service great solemnity prevailed. Gracious influence was imparted, and many had their minds awakened to a concern for their salvation. At the close of the meeting, when the congregation was dismissed, a number were prostrate and unable to leave the ground. Two prayer meetings were appointed for the evening, at different places in the congregation. In these the greater part of the night was spent in social worship. Few, if any, slept, so powerful and exciting was the feeling which pervaded these meetings.

On Wednesday night, September 29, "far exceeded anything that had been before; many were prostrate, crying for mercy. About the break of day on Tuesday morning, there were six persons who gave evidence of obtaining hope in Jesus." The exercises were continued until about eleven o'clock, when, with great difficulty, the people were prevailed upon to disperse. * * * *. This was a very solemn season; the people were almost universally bowed down, some deeply affected and lying prostrate, their cries for mercy being enough to pierce the Heavens, while they appeared to be on the brink of despair. Some few obtained relief before day, who have since given evidence of serious and comfortable exercise. A goodly number who have been admitted to the table of the Lord since that time, have dated their first deep and abiding convictions from that season. It was a night to be held in everlasting remembrance, for which, it is hoped, many will praise God eternally. At this time some began to speak the language of Canaan with solemn, sweet serenity of mind, and in heavenly heart affecting accents."

In the year 1812 this society erected a stone church on the land now owned by John White, where the Three Springs graveyard is. This building was used for church purposes until in 1846, when a division occurred in the congregation, and a part of them went to Paris, Pa., and assisted in the erection of a church building there, and the remaining went to Holliday's Cove. The stone church was removed but a few years ago. The members that went to the Cove formed an organization and held their meetings in the Academy building for a number of years. The society erected a church in the Cove called

THE HOLLIDAY'S COVE PRESBYTERIAN CHURCH,

which was completed in 1860, the dimensions of which were 34x40. In its early days this church had its difficulties and struggles, as nearly all others have had. But the vine God plants he waters and prunes that it may be fruitful. The church edifice cost $3,198. Among the pastors are found the names of Thos. M. Newell, G. C. Crow, J. B. Stewart, —— Billingsly, and the present pastor, J. B. Graham. Among the prominent and active members are the names of Thomas Orr, William Brown, William Withrow, G. G. Orr, James Adams and the Campbells.

Revs. Campbell, Churchill and Brown were also ministers who supplied them with the Word of God in the old stone church.

Rev. John B. Graham was called in 1865, and has filled the pulpit until the present time. His pastorage there has been fruitful "in gathering them into the fold." He was installed by Dr. Stockton, who preached the sermon, and Rev. Pomeroy delivered the charge. He is well spoken of there as a minister and citizen.

THE UNION CHAPEL

Is located near Freeman's Landing, in Butler district. The Methodist Protestant society of said place was organized in about 1835, by Rev. George Brown, with Thomas Freeman and wife, Thomas Anderson, James Black and wife, Robert White and wife, and John Sutton and wife. The first meetings were held in an old brick school house until 1857, when they erected the present church. The ministers were the same as those found in the history of the Nessly Chapel. Rev. John Gregory is the present pastor. They have a membership of about sixty.

Sabbath School.—In connection with the church, they have had a Sabbath school for a number of years. During the summer months they have an enrollment of one hundred scholars. T. F. Henderson is superintendent.

POINT PLEASANT.

The Associate Reformed Presbyterian Church Society was organized on June 22, 1867, by Rev. E. B. Calderhead, with twenty-three members. They occupy the Roach school house, which was abandoned for school purposes about eleven years ago. It was seized upon by this congregation and arranged suitably for a church. It had regular stated supplies up to 1870, since which time services have been held by Rev. J. A. Myers one-third of his time.

Sabbath School.—A Sabbath school has also been organized here, with a membership of about sixty scholars, and has proven quite an incentive to the church interests.

METHODIST EPISCOPAL CHURCH.

In 1830, a few names, among whom are the following: Ephraim Brice and wife, Archy Scott and wife, George Scott and wife, Thomas Mahan and wife, Sarah Moorehead and Martha Ralston, organized, under Rev. Kent's directions, into a Methodist Episcopal society. For a number of years their services were conducted in private houses, and for the most part in A. Scott's and T. Mahan's residences. Not until 1848 did the congregation feel able to build an edifice to worship in. They erected a brick church that year, which was dedicated, as soon as completed, by Rev. Dorsey. In the year 1861, the building was destroyed by fire. From that time up to 1875, they held divine service in the Lick Run school house. The latter part of that year a new frame church was completed on King's creek, near the Ralston mills, at a cost of $1,000. It was dedicated January 1, 1876, by Rev. James Miller, presiding elder of the Pittsburgh conference. The pulpit is filled by Rev. Stephenson at present.

Revs. Lock, Kent, Bradshaw, Dallis, Jackson, Warner, Hays, Long, Dorsey, Monroe, Loman, Barnhart, Stiffey, Baker, Hudson, Rich, Kesler, Pugh and Hudson have been ministers on the circuit.

Its present membership is about twenty-five.

Sabbath School.—A small though live Sabbath school, under the superintendency of Reason Ralston, has been in good running order for some time.

OAKLAND CHURCH

is situated on the Ridge road leading from Holliday's Cove to Fairview, on the land owned by James W. Morrow, deceased. It was erected in 1875 and dedicated November 23, 1875. The society is styled the United Presbyterian. Prior to its organization, which was effected the same year of the church's erection, some of its members attended church at Paris, Pa., Steubenville, Ohio, King's creek, Beaver county, Pa., and New Cumberland. Owing to this great inconvenience, the church-going people were prompted to build a church at the above named place to worship in.

At its organization it only had a membership of twenty, but since has increased to forty-five. Messrs. Andrew Wylie, A. J. Tarr and E. A. Freshwater were elected elders of the church and are yet filling that office. Not until January 1, 1878, did they have services regularly. A call was made in that year which Rev. J. H. Breaden accepted, and has continued to preach for them ever since.

Under the superintendency of Colonel W. L. Crawford, there exists at this church an active, flourishing and interesting Sabbath school. This school has been in successful operation ever since the formation of the society. The school numbers eighty-one.

A BAPTIST CHURCH

used to stand near where the old Swearingen grist mill is now located. The fact of its existence is about all that is known of it. Where it was situated is only indicated by the partially moss-covered debris. A grave-yard is hard by, and only a few stones are seen pointing out to the passer-by the resting-place

of a few early settlers. The last interment made here was that of a Revolutionary soldier in the year 1842, and nothing to mark his grave save that consequent indentation of ground above his mouldered clay. The members of this association who were wont to worship here are all scattered, and most of them dead.

EPISCOPALIAN CHURCH.

There also stood, in early times, a hewed log church built by this society, which was used by them for church purposes a number of years. The building stood just opposite Robert Morrow's residence. A small piece of ground adjacent was used as a grave-yard, but nothing scarcely now remains. It is said that a number of the pioneers of that section were deposited here.

THE PRIMITIVE SABBATH SCHOOLS.

The first Sabbath School in this district (Butler,) was organized at the Jefferson school house in about 1831, by John Wylie, Andrew Henderson, Samuel Maxwell, Thomas Atkinson and David Wylie, who were most instrumental in its establishment. The school numbers about thirty pupils. It was conducted under the Presbyterian denomination for about two years, and then closed.

Since that time a number of Sabbath Schools have sprung up. A union school was organized in the same house a few years later, and carried on for a time; after which the Presbyterians re-organized, and continued a Sabbath School until 1877.

PRIMITIVE MINISTERS.

The following named ministers, were, in an early day, engaged in, and endeavoring to point the way and lead the children of God home. They were among the first in the county, and Butler district:

Rev. Churchill, presbyterian; Rev. E. Macurdy, presbyterian; Rev. Samuel Reed, presbyterian; Rev. T. Morse, episcopalian; Rev. R. Brown, presbyterian; Rev. Scott, presbyterian; Rev. Campbell, presbyterian; Rev. White, presbyterian.

HENDERSON MILL.

This grist mill was erected in about the year 1825, by Andrew Henderson, and Wm. Logan, and is located on the south branch of King's creek, about three miles from its mouth. In its time, it was considered one of the best mills in the county. In 1834, the mill was sold to Mr. Mahan, who kept it until 1873, when Robt. Osborne purchased it. The mill is not now in use.

Adjoining this is a saw mill, which is being operated at present.

KING'S CREEK GRIST MILL.

In 1823, David Swearingen erected a mill on this site, a part of the frame is still in use, and has been re-weather boarded. It has been owned by different parties. Levi Standish is the present owner.

About twenty rods above the grist mill, on King's creek, a Mr. Eaton erected a saw mill not long after the completion of the above mill. Both are now operated by Standish.

There was an old log grist mill a good many years ago, built by a Mr. Hartford, located about eighty rods up the creek from where the present structure is situated, and was used years before the other was built.

LOGAN'S STILL-HOUSE.

In an early day Logan built a still-house near the Henderson mill, which was occupied for distilling liquor for several years, then abandoned.

FREEMAN'S LANDING FIRE-BRICK WORKS.

These works are owned and operated by W. B. Freeman. He has one engine in use. The capacity of the yard for drying is 40,000. The Martin brick machine is used. Four kilns for burning are found in this yard. The prepared clay shipped from the yard per day is from 1,200 to 2,000 tons. The capacity of the works for one season exceeded 1,000,000 brick. At present the proprietor is manufacturing a brick much superior to the common fire-brick, on account of different quality of clay. During the season of 1878, thirty thousand brick were manufactured by fifteen hands in nine hours and twenty minutes, the biggest day's work ever performed along the Ohio valley, in the brick manufacturing business.

THE CLINTON FIRE-BRICK WORKS,

were established by James S. Porter and Philip Beal in 1836, who operated the works for seven years. In 1843 Beal rented his interest in the manufactory to Thomas Anderson. Porter established his yard a little above the former, and dug his clay from the same bank for three years, then he opened a bank farther up the river. The works were known as T. Anderson & Co,, until 1868–9. T. Anderson at this time purchased all other interests and the works were subsequently known as T. Anderson & Son, or "The Clinton Works." They use one engine; capacity of yard 12,000 per day. The yard is all under cover. The capacity of their dry house per day is 11,000. They have four kilns which are used for burning brick. Martin's brick machine is used. The clay shipped per season is 1,000 tons.

HOLLIDAY'S COVE ACADEMY.

In 1837 a school was formed in the Cove called an Academy. It was originized by Thomas Gas, who taught there in 1838 and continued for several successive terms, meeting with marked results. The school was conducted in a building erected for church purposes by the Presbyterians and Methodists. During the time that the school was under the professorship of Thomas Gass, it had an attendance of from fifty to sixty young men and ladies. He was succeeded by Richard Gass, who continued only for one year, then followed Robert Brown. J. H. Atkinson, Esq., taught in this school several years. J. A. Wilkin and Dryden were the last teachers that conducted it as an academy, which was in 1865.

GRANT DISTRICT.

This district occupies the most northerly portion of the county. Immediately after the act passed by the general assembly of West Virginia, the township (as they were at that time styled) was organized. The district is bounded on the north and west by the Ohio river; on the east by Pennsylvania, and on the south by Poe district; is five and one-half miles in width and seven and one-half miles in length. It is the largest of the four districts, containing 18,175 acres. Good, rich farming land is found in every quarter within its boundaries. Hamilton, a village of a few houses, is situated in the northwestern part, on the Ohio river, and a post office called White Oak Run, are all the places of any note in Grant. There are seven school houses, two churches, Methodist Episcopal and Methodist Protestant, two stave factories, one cask factory, one saw mill and three blacksmith shops comprise the business in this district.

HISTORY OF THE STONE CHURCH.

About fifty-two years ago the Nessly Chapel was erected by a small band of the Methodist Protestant persuasion. The members of this society at that early day were John DeSellem and wife, Jesse Sisson and wife, Jacob Nessly and wife, Nathan Thayer and wife, Elizabeth Brenneman and Barbara Brown. There were a few other names which cannot now be ascertained.

First Trustees—Jesse Sisson, James W. Brown and —— ——

Class Leader—Jesse Sisson.

Ministers—Among the ministers on that circuit are found the names of Revs. Enos Woodward, Joel Dalby, Woodruff, Cowell, John Huntsman, John Beaty, George Hughes, John Scott, John Herbert, T. Davis, Joseph Burns, William Reeves, &c.

In 1826, the same year the church was built, it was dedicated by Rev. George Brown. Mrs. Elizabeth Nessly, a devoted and faithful christian lady, bore the major expense of the erection of this church. She has been gathered to her long home, and her remains were interred in the cemetery where many of the early settlers are buried, near the old church, which still remains.

Sabbath School.—A Sabbath school has been organized in connection with this church for a great many years, and has been carried on successfully, doing much good in promoting church interest.

ASBURY CHAPEL.

A party of six persons, who adhered to the Methodist Episcopal denomination, organized themselves into a society in now Grant district, in about the year 1818. Among its primitive members are the names of John Johnston and wife, John Lowe and wife, and the names of the other two cannot be given.

For several years subsequent to its institution, divine worship was conducted in private houses, and then services were

held in Lowe's school house until the year 1850. In that year a church edifice was erected and styled the Asbury Chapel. Its dedication took place the same year the Rev. John Spencer, of Wellsville, Ohio, but now of Oregon, officiating. The present membership exceeds one hundred. The church is located on Tomlinson's run. The early ministers that preached to them were Rev. L. Hamlin, afterwards known as Bishop, Joshua Monroe, who died in Beaver a few years since, followed for a time. The congregation is in a good, healthy, christian condition at present.

FRUIT HOUSE.

In the year 1878, Mahan, Hellings & Brother, erected a fruit house on J. L. Mahan's farm, on the bank of the Ohio river opposite Yellow creek, on the Cleveland and Pittsburgh railroad. It is built on the Nathan Helling's Patent of Philadelphia. The house is substantially built, the walls being of stone. The main building is 50 by 140 feet, and 41 feet in height, and the walls 2½ feet thick. The second is 30 by 40 feet. In the main building there are three departments—the upper is used for the ice chamber and the others for storage rooms, which are used for the preservation of domestic, foreign, dried fruits, butter, eggs, and like perishable articles.

CHAPTER LIX.

BIOGRAPHICAL SKETCHES.

REV. ELISHA MACURDY.

THE Rev. Elisha Macurdy was born October 15, 1763, in Carlisle, Pennsylvania. He was the son of John Macurdy, whose father emigrated from Ireland. His mother's maiden name was Mary Fox, whose grandfather came from England, and settled in Philadelphia, where her father afterwards resided. Elisha being the third of twelve children. His baptism took place in an old log meeting house, on Pomfret street, in his native town, by the Rev. George Duffield, D. D. Little is known of his boyhood. He enjoyed such advantages of education as were common in the place at that time. Among his instructors were Judge Creigh, and Rev. George Steel. Under the latter's direction, he commenced the study of the Latin language, but had not advanced far, when his studies were interrupted, and the school dispersed, by the breaking out of the war of the Revolution.

It was said of him that in the acquisition of knowledge he was prompt, and was early distinguished in the facility with which he communicated what he knew to others. At this period of his life it is not known whether he had any serious impressions on the subject of religion. But from his youth up abhorred the degrading vice of intemperance, and acted upon principles of total abstinence.

His father, having become embarrassed in his worldly circumstances, moved with his family to the neighborhood of Taneytown, Maryland, with a view to their improvement. But returned to Pennsylvania after a sojourn there of a year, and settled in York county, where he remained nearly four years. Not succeeding in his efforts to repair his losses, he finally removed to Ligonier Valley, Westmoreland county, Pennsylvania. Elisha continued with his father during these various changes and removals, laboring diligently for the advancement of their worldly interests.

When his father removed to Ligonier, Mr. Macurdy had reached his twenty-first year. The care and support of his father's large family devolved chiefly on him. How he should make his efforts most effective for their benefit, was the object to which he now directed his attention. Among the most valuable articles which had been saved from the wreck of his father's property, was a wagon and team of horses. He determined to employ these under his own personal direction, in the transportation of freight to and from such places as might be most profitable. Having made his arrangements accordingly, he started with his team for Baltimore. Finding sufficient employment, he continued in the business for about eighteen months, with liberal profits. With care he had been able to save as much money as was sufficient to purchase a considerable quantity of groceries on his own account. With these he loaded his wagon, and returning to Ligonier, sold them at a large advance. By this means he was enabled to purchase a farm, from the proceeds of which, under his efficient management, the family soon derived a comfortable support. Trained to industry, and accustomed to rely upon his own resources, the anticipated hardships of the undertaking were not allowed to deter him from doing what appeared, under all the circumstances of his situation, to be right and proper. In those times, the sons of the most respectable farmers in Pennsylvania were accustomed to drive their teams, not only in conveying their own produce to market, but also in carrying freight for others, when time could be spared from their agricultural labors. The undertaking was not a disreputable one, but, indeed, a dangerous employment in regard to morals, and many promising young men suffered severely in this respect; by the corrupting influence of those with whom they were obliged to mingle. And it is quite probable that young Macurdy suffered in this way from his associations. With its dangers it also had its advantages. It afforded very favorable opportunities of acquiring a practical knowledge of human character, which was improved by Elisha. Few men were his equal in this department of knowledge. He learned to bear with hardships and became familiar with human nature, which afterwards were of great importance to him when invested with the office of a minister of the gospel. By the former he was better prepared to "endure hardship, as a good soldier of Jesus Christ," and by the latter to enter more readily into the true character of his fellow sinners, and by a wise discernment of the point of attack to disarm their opposition and win them to the Saviour. Indeed, it is not to be doubted but that God was thus preparing him for those toilsome and perilous services which, in future life, he was appointed to perform, and for the wise and successful disposal of the many perplexing cases which met him in the midst of ministerial and missionary labor of a peculiarly responsible character.

At Ligonier, he had an opportunity of hearing various ministers. Among others, the Rev. James Hughes, under whose preaching he received his first serious impressions. He was awakened. His conscience sounded the alarm. He had received new light in a form very different from that in which he had been accustomed. He procured a Bible and read with care. He was dissatisfied with his present condition, and determined to change his course. He, therefore, engaged in the performance of outward duties—heard the ministers of the gospel with eager attention, and finally settled down in the confident persuasion, that he was the subject of true religion. His friends observed his change. The common sentiment of the neighborhood, was probably that which was expressed on one occasion, by a good old lady, who remarked, that, "If Mr. Macurdy had no religion, God help the world!" The truth was, however, that he had no religion in the proper spiritual import of the term. For, although he was diligent in his attention to the outward forms of religion, he erroneously rested on these forms as the ground of his acceptance with God. Like the young ruler in the Gospel, he was seeking to enter into life by some "good thing which he could do;" or, like the Jews, "being ignorant of God's righteousness, and going about to establish his own righteousness, he had not submitted himself unto the righteousness of God." His religion, therefore, was not the religion of the Gospel of Jesus Christ, being destitute of its most essential elements. In this state of mind, he continued for some time. His confidence in the safety of his condition was first shaken by hearing the Rev. John McPherrin preach a sermon founded on the following words, in Matt. 22:42; "What think ye of Christ?" The effect upon the mind of Mr. Macurdy was decisive. Under the condition of his error, he was led to abandon the hopes which he had entertained, and accounting his own righteousness as "filthy rags" in the sight of God, he had recourse to that righteousness, "which is through the faith of Christ, the righteousness which is of God by faith," as the sole ground of his dependence for eternal life. He made his first public profession of his faith in Christ, in the church of Salem, in which the Rev. Mr. McPherrin, was the pastor.

At the time that Mr. Macurdy connected himself with the church there was no settled pastor at Ligonier, the place of his residence. Feeling the importance of having the stated ministrations of the gospel, he took a leading part in securing the erection of a house of worship. To this he not only contributed of his means, but gave his own personal labor to accomplish the work.

In addition to the efforts which he made to secure the labors of various ministers, he was active in endeavoring, by his own personal exertions and influences, to promote the cause of

Christ throughout his neighborhood. Although he continued to attend carefully to his farm, he had a good deal of time to bestow on the cause of religion, and the spiritual interests of his fellow-men. When he visited any one at his residence he would invite him to walk out into the woods, and there, after talking with him faithfully about his soul, would pour out his prayer to God in his behalf. It was not long, however, after he made a profession of religion, that his mind was directed towards the work of the ministry. He felt a strong desire to preach the gospel to his fellow sinners. After considerable reflection upon the subject and advising with others, the matter was introduced before the Presbytery, and to ask their counsel. The Presbytery unanimously agreed that he should enter upon a course of study. This settled the question, and he immediately prepared to go forward. Having made the requisite arrangements, Mr. Macurdy entered the academy at Canonsburg, which had been established by Rev. Dr. John McMillan in 1790. He commenced his studies in the year 1792. He was then twenty-nine years of age. He remained at Canonsburg until 1799, during that time he completed the usual literary course prescribed in the institution, and studied theology. His theological studies were prosecuted under the direction of Dr. McMillan, assisted occasionally by the Rev. John Watson, who was one of the teachers in the academy. He was highly esteemed by his fellow students, but was not considered an eminent scholar.

At that time sacramental seasons were of great interest to the religious community throughout Western Pennsylvania. Pious students and others looked forward to them with lively concern, and made it a point to attend upon them, as far as practicable, in the different churches within their reach. Macurdy, while on his way to attend a meeting of this kind, fell in with Philip Jackson, a ruling elder, in the church of Cross Roads and became acquainted. They were men of like spirit, and had drank at the same fountain. Their intercourse soon became free and unrestrained. Philip had a son who was wild and irreligious, for whose salvation he was deeply concerned. The case was made known to Macurdy, and he desired him to turn aside with him into the woods that they might unite in prayer for his conversion. His request was complied with, and in a grove near the road, with the aged elder kneeling at his side, Mr. Macurdy poured forth his soul to God in behalf of this ungodly youth. Not long after this, young Jackson became seriously impressed and hopefully converted. Philip ever afterwards connected this happy result with Mr. Macurdy's prayer in the woods, and, on this account, was very strongly attached to him.

During his residence at Canonsburg, in August, 1796, Mr. Macurdy married Miss Sarah Briceland, daughter of Thomas Briceland, of that place, and formerly of Carlisle.

Having finished his literary and theological course of preparation, he was licensed, by the Presbytery of Ohio, on the 26th day of June, 1799, at the church of Upper Buffalo, Washington county, Pa.

The next Sabbath after he was licensed he preached his first sermon in the church of Chartiers, of which his theological instructor, the Rev. Dr. McMillan was pastor. The following Sabbath he preached at Cross Roads, where he afterwards settled. Shortly afterwards he set out on a missionary tour, accompanied by Mr. Stockton, to the town of Erie, and the region bordering on the lake of that name. On his way, he preached at Thom's tent, a few miles from the place where Butler now stands—also, at Elliott's settlement, now known as Plain Grove, at McClure's, at Sandy creek, at Brook's station, at Meadville, at Davis', on French creek. As the country between this last place and Le Boeuf was yet uninhabited he proceeded to Erie. After preaching in many destitute portions of the country, they returned to their respective homes. Remaining at home two weeks, and preaching at Cross Roads and Three Springs he again set out on a second tour, taking a similar course as his previous one. In October he returned and accepted a call at the Three Springs church at a promised salary of one hundred and twenty pounds, to be paid in regular yearly payments, one half in cash, the other half in merchantable wheat, at market price. In the same year other calls were made for him from numerous churches, but finally accepted, was ordained and installed pastor of the united congregations of Cross Roads and three Springs, by the Presbytery of Ohio in the month of June, 1800.

About the time he settled at Three Springs and Cross Roads, the subject of Indian missions began to engage the attention of the ministers. The Synod of Virginia, which at that time included this part of the church, had a commission of their body, under whose direction domestic missions on this side of the Allegheny were conducted. The presbytery of Ohio co-operated with this commission and favored sending the gospel to the Indians on their borders. Agents were sent out to explore the country in the vicinity of Sandusky, Brownstown and the river Raisin for the purpose of establishing a mission school. The tribes of Indians inhabiting that region were the Wyandots, Senecas, Mohawks and Ottawas.

The Synod of Pittsburgh was formed in May, 1802. In September, 1802, the commission of the Synod of Virginia resigned their office, and "a committee to digest a plan for the transaction of missionary business" was appointed, consisting of Revs. Thomas E. Hughes, Elisha Macurdy, Joseph Badger and James Edgar, ruling elder. They resolved themselves into a society, to be styled "The Western Missionary Society."

On the 20th of April, 1808, difficulties having sprung up in the mission at Sandusky, Macurdy in company with several other ministers went to Sandusky. He was left there to assume the duties of that mission. He remained at that station until about the last of October. During the whole time he taught regularly in the school and preached on the Sabbath. Having finished his term of engagement, he returned to Cross Roads. In 1811 he again visited Sandusky, and thus for a number of years he was especially interested in the education of the Indian. Owing to great exposure and hard labor he became obliged to resign his charge of the congregation and confine his labors at Cross Roads.

On the 26th of October, 1818, he was called to mourn the loss of his excellent wife, who was aged forty-seven. After sometime Mr. Macurdy married again. His second wife was Mrs. Sarah Colwell, relect of Robert Colwell, and daughter of Captain Oliver Brown, of Hancock county, W. Va. She was a woman of equally excellent spirit with his first wife.

He resigned his pastoral charge at Cross Roads in the fall of 1835. He was induced to do so by a growing sense of the infirmities of age, but the congregation prevailed upon him to remain through the winter, which he finally concluded to do, and in the spring of 1836, removed to the city of Allegheny, where he resided to the time of his death.

His last attendance at church was on a communion Sabbath in the month of January, 1843. On that day he sat down for the last time with the members of the First Presbyterian church of Allegheny city.

On the 22nd of July, 1845, he sank gradually as one falling asleep, until he ceased to breathe. A short time before his departure, his friend and family physician, Dr. Dale, came into the room, and having sat down at his bedside, asked him if he was aware that he was dying? He intimated that he was, by a motion of his head. Shortly after this, the doctor asked him if he would have some water? With hurried utterance, he replied, "The water of life!" These were his last words. On the day following his decease, his remains were conveyed to Cross Roads, the place of his most extended labors, where, in the midst of a large concourse of people of his former pastoral charge, they were deposited in the silent tomb, there to rest until the morning of the resurrection.

Dr. John McLane.—His father, also named John, was born in the north of Ireland. He was of Scotch parentage. His wife's name was Elizabeth. They migrated to America about the beginning of the revolutionary war, settling first east of the mountains, then removed west and located on the Allegheny river. Being a strict Seceder, and having no place to attend public worship, again removed to Washington county, Pa. He was the father of four sons and two daughters. He continued to reside in the last named place until his death. Our subject was born in Allegheny county, Pa., in 1773. Graduated at Canonsburg in 1796. He studied theology under Dr. McMillen. Married Miss Nancy Martin. He took charge of the Montour Presbyterian Church and continued there until 1809. Studied medicine under Dr. Warner of Canonsburg. Went into service as surgeon in the war of 1812 and had charge of a hospital at Plattsburg, N. Y., during the war. After his return he practiced medicine in Hickory, Pa., in co-partnership with Dr. Lisle for a short time, then removed to Florence, Pa. In 1818, he removed to a farm near Pughtown, afterward called New Manchester, but now Fairview, Hancock county, W. Va. Removed from the farm to said village, where his wife died, in 1819. In 1822, he was married to Miss Celia Cullen. He removed to Wellsville, Ohio, in 1825, and resided there until his death in 1828. He was the father of five sons and four daughters. Two sons and two daughters still survive. Dr. McLane was a man of more than ordinary ability in the

pulpit as well as in the medical profession. His services were sought after by many persons at a great distance, making it very laborious, the roads at that day being very poor, and travel was generally on horseback.

CAPT. OLIVER BROWN was born in Lexington, Massachusetts. He was of English extract. Those of his ancestors who came to America were among the first settlers of the Massachusetts colony. Their attachment for their new home became stronger as the years rolled on; their affection for the mother country weaker, until they regarded her as a cruel tyrant. Capt. Brown happened in Boston on the very day on which the memorable act of throwing the tea overboard was performed. The unusual excitement which preceded this event did not escape his observation, but he returned to Cambridge without discovering the cause of it. He had seen enough to convince him that a bold and decisive step was to be taken. He returned to Boston and repaired to the place where the tea ship was riding, he saw the party dressed in the costume and painted in the color of the Mohawk Indians, and one by one he saw them throw every box into the sea. This act was an open defiance of England, and worked up the minds of both royalists and patriots. He became a warrior in feeling, and in deed—and we next find him engaged at Lexington in the first battle of the revolutionary war—was in the battle of Bunker Hill. He was commissioned by congress on the 16th of January, 1776. He commanded the volunteer party that bore off the leaden statue of King George, from the battery of New York, and made it into bullets for the American army. He also bore a conspicuous part in command of artillery at the battles of White Plains, Harlem Heights, Princeton, Trenton, Brandywine, Germantown and Monmouth. After the close of the war he, with his family, removed to the west, and settled in Charlestown, now Wellsburg, Virginia, in 1790. At a late period of his life he united with the Episcopal Church. He died, February 17th, 1846, at Wellsburg, at the advanced age of ninty-three years.

OLIVER BROWN, was born in 1789, in Charleston, near Boston, Mass., and migrated with his father to the Cove, when but a small child, in the year 1792, and stopped at a Mr. Robert Caldwell's over night. The Indians at that time were quite troublesome, and the settlers entertained great fears of being attacked by them. His parents went to a block house not far distant, remaining there during the night for safety. They soon after settled in Wellsburg. Oliver grew up and at an early age, assisted his father in shipping flour to New Orleans, which at that time, Short creek and King's creek formed the largest exporting flouring places in the county. In 1812, our subject erected a woolen factory in the Cove, running four looms, and was engaged extensively at that early date, in that business. This factory was built several years before any were established in Steubenville. A saw mill by him was also erected near the same time. He married Miss Ann Caldwell, in 1813. Followed his vocation for the most part, from 1812 to 1850. He reared a family of several children. In the year 1833, he was called to mourn the loss of his estimable lady, who departed this life at the age 40 years. Although now over 86 years of age, our subject bids fair to live yet many years. With the exception of his hearing, he is remarkably blessed.

COL. GEORGE STEWART, of Irish descent, was born on Erin's shore. Emigrated to America previous to the Revolutionary war, and located in the eastern part of Pennsylvania. Served during the war of 1776 as colonel. It is said that whilst that memorable war continued he paid a short visit to his home, and one day three Tories, or British sympathizers, entered the house of a widow lady and conducted themselves in such a discourteous and shameful manner that the lady and her daughter were considerably alarmed. Col. Stewart was dispatched for, who immediately came to their assistance, captured the three men by threats, and held them as prisoners until he could report to headquarters, when they were justly dealt with. When capturing them he relieved them of a sword, bayonet and pistol, which remained in possession of the Stewarts until a few years ago. He was married to a lady in Lancaster county, Pa. His wife died after a union of fifteen years, leaving him a family of six children—John, George, Joseph, David, Robert and Charles. Married the second time, after the lapse of a few years, to Miss Susan Wilson, who bore him six children—Samuel, William, Benjamin, James, Mary and Rosa. He removed, with his family west, locating on Robinson's run, in Allegheny county, where they remained for several years. In the year 1790, accompanied with his family, migrated to now Hancock county, Grant district, West Virginia, and settled on the farm at present owned by Franklin Stewart, remaining there until his death, which occurred in about 1800. His relict survived until 1842, when her spirit returned to the One who gave it.

EPHRAIM BRICE, a native of Ireland, was born in Tyrone county, January 25, 1779. Married Frances Kinney in 1815; migrated to America in 1818, and settled on King's creek, now Butler district, Hancock county, W. Va., on a farm one mile up said creek, near the Henderson mills, where he lived until 1850; then he removed on the farm where his present heirs are now living. He was engaged in farming the principal part of his life. Reared a family of eight children—three sons and five daughters. They were members of the Methodist Episcopal Church. On February 6, 1868, he passed the way of all the earth, and his wife followed in 1871.

E. LANGFITT was born in 1814, near Fairview, then Brooke county, Va. His grandfather, with four of his brothers, fought in the engagement at the mouth of Big Kanawha river, at Point Pleasant, October, 17, 1774, under General Lewis, who was attacked by Indians. He, out of the five, was the only one that escaped. Four fell, pierced by bullets. Our subject's father was a soldier in the war of 1812. He located the tract of land which Ebenezer, his son, now owns, in 1813. He migrated from Beaver county, Pa., and lived on this land, following farming until he approximated the declivity of life. His death occurred on the 7th day of February, 1856, at the age of seventy-six years. Our subject took charge of the old homestead. He grasped the plow left in the furrow by his progenitor, and continued tilling and breaking up the fallow-ground ever since. In the year 1835, he married Miss Mary, daughter of Colonel John McMillan. They have a family of four boys and three daughters, all of whom are still living.

E. B. LANGFITT, a son of E. Langfitt, was born on the 23d day of March, 1846. He received his education in the common schools, living with his parents and assisting them on the farm until he arrived at the age of twenty-five years, when he left home and took charge of the farm of Mrs. Mary Marshall, where he has lived ever since. He is engaged in farming and stock-raising, in which he has thus far been successful.

PETER PUGH, father of David Pugh, was born in New Jersey and migrated with his parents to Burgettstown, Pa., in 1785. About the year 1800 they came to what is now known as Fairview, and located on a tract of land containing four hundred acres. Peter remained with his father a short time and then removed to Ohio, and he sunk the first salt well on Yellow creek, in which they obtained salt. Whilst there he entered two or three quarters of land, which he soon afterwards disposed of. He was at that time engaged in sinking salt wells. He returned to Fairview about 1810 and settled on his father's farm, where he staid but a few years, then emigrated east and went to sinking salt wells. In 1818 came back to Fairview and located on the old Pugh farm, where he remained about two years and settled on the farm now owned by his son David, living there until his death, which sad event took place in 1850, at the advanced age of eighty years.

DAVID PUGH, a son of Peter, was born near Fairview June 6, 1806. He lived and worked with his father on the farm until twenty-five years of age. On December 22, 1831, he married Miss Nancy, daughter of Mr. Jonathan Allison, a prominent citizen of the county. After his marriage he took charge of the old homestead, where he has resided ever since, engaged in agricultural pursuits. He has been elected and served several terms as overseer of the poor, and has also held the office of surveyor of roads. He has declined several times to be a candidate for office whilst strongly urged by his friends. Not many years since he erected a beautiful brick residence upon his farm, at a cost of $4,000. There are about 320 acres in his farm and all under a good state of cultivation. His family consisted of two boys and two girls, namely: Robert W. Pugh, Lizzie, who married Col. R. H. Brown, present sheriff of Hancock county, Peter A., who married Miss O. Campbell, of Cross creek village, Pennsylvania, Sarah A., who married George A. Spivey, October, 1878. He and wife are members of the Fairview Presbyterian church.

HENRY PITTENGER'S birth occurred near Fairview, April 4, 1807. He lived with his father until he arrived at the age of nineteen years. In 1821 he migrated to Richland county, Ohio,

and learned the blacksmithing business, serving an apprenticeship of two years, then came back to Virginia. In 1828, in the latter part of the year, he returned to his father's house and erected a blacksmith shop, and engaged in his occupation for two years. In the meantime he was married to Miss Eliza Abraham, of Steubenville. In 1830 he removed to Jefferson county, two miles north of Steubenville, where he carried on his trade. In 1835 he removed to within two miles of Richmond, in the same county, and remained there until 1858, then sold out and came back near Fairview, where he purchased the Hugh Pugh farm and engaged in farming, which vocation he has followed ever since. His farm contains one hundred acres, all improved. He is the father of three children. He is a member of the Fairview Presbyterian church. His grandfather, Henry, was one of the first elders in said church. He settled in now Hancock, when the Indians were numerous and when they were scalping the whites, and committing all sorts of depredations. In those days he had to go with many of the settlers to block-houses, for safety during the night.

BURGESS ALLISON migrated from Cumberland, Md., in 1801, where he was born in 1759. He came with his parents who settled in now Hancock county, on a farm in Grant district. He remained with his father until twenty-seven years of age. He served in the war of 1812. Was married to Miss Sarah Barkley in 1816. Subsequently purchased a small tract of land and proceeded to improve it. He has lived on this land up to the present and has been engaged in farming and dealing in real estate. He had at one time in his possession over seven hundred acres of land, all improved. He is the father of eight children, four of whom are still living. His wife died October, 1871, at the age of seventy-six years. They having lived together over a half century.

ENOCH W. ALLISON was born October 3, 1823. He is a son of Burgess Allison. Farming has been his vocation all his life. On August 21, 1849, he was united in the holy bonds of matrimony to Miss Mary A. Barkley. He is the father of seven children. Is at present an extensive land owner.

A. McC. FLANEGIN, county clerk, a son of William Flanegin, was born three miles south of Fairview in 1835. At the age of fourteen he commenced to learn blacksmithing. He attended school during the winter months and worked the balance of the year. He married Miss E. E. Ruggles, of Columbiana county, Ohio, in 1857. In 1858 he left off blacksmithing on account of failing health and worked on a farm for three years. After that he again engaged at his trade. In 1863 he was appointed clerk of the board of supervisors. In 1864 he was elected to the office of county recorder, serving two years, yet filling the office of clerk of the board. During 1867 and 1868 he only filled the office of clerk of the board. He was elected to the office of clerk of the county court in 1871, and entered upon the duties of that office in the following year. He held that position for the full term, six years, and in 1878 he was re-elected for six years longer. In 1874 he received the appointment of clerk of the circuit court by Judge Melvin, holding that office in connection with the other until the succeeding general election in 1876, then elected to fill the unexpired term of C. M. Collins, who had resigned. In 1878 he was also re-elected to that office for the term of six years. Himself and family are members of the Presbyterian church of Fairview.

J. R. DONEHOO, attorney-at-law, was born in Cross Creek village, Washington county, Pennsylvania, September 1st, 1834. He received a classical education at the academy in that place. Studied law under Messrs. Russell & Fitzhugh, of Wheeling. In 1855 he was admitted to practice in Hancock county, and shortly after went into practice with Z. Jacob, Esq., of Wheeling, where he continued three years. Removed to Washington, Pennsylvania, where he practiced law and edited the *Examiner*, of that place, for over three years. Married Miss Eleanor McCown, of Fairview, April 26th, 1860. During the campaign of 1863 he established and conducted the *Courier* in Steubenville, Ohio. After a year and a half of practice in Hancock county he removed to McConnellsburg, Fulton county, Pennsylvania, where he edited a paper for over three years, following his legal profession also. Elected district attorney of that county in 1866; represented the sixteenth Pennsylvania district in the New York democratic national covention of 1868; re-elected district attorney in 1869, but resigned and removed to Indiana county, Pennsylvania. Conducted the *Democrat* there for eighteen months; went to Morgantown, West Virginia, in 1871, and published a paper there for a year or two, and in 1874 removed to Fairview and resumed the law. Served two years as prosecuting attorney, under appointment of the county court, to January 1877.

J. G. MARSHALL, prosecuting attorney, was born near Fairview in 1827. Was the son of John Marshall. Went to high school in that place, under the tutorship of Profs. Silverthorn and Moore. Taught school from the year 1847 to 1849. Married Miss L. Miller in 1849. Elected to the office of commissioner of the revenue in the same year, serving in that capacity eight years, during which time he began reading law under O. W. Langfitt, Esq., of Wellsburg. Was admitted to practice December 1859. Went into partnership with his preceptor that year, continuing thus until 1865. Been elected to the office of prosecuting attorney of Hancock county four times, and is now filling that office, which term expires in 1880. Has been engaged in his legal profession for eighteen years.

J. W. PLATTENBURG, editor and proprietor of the *Courier*, was born in Washington county, Pa., in 1830. At four years of age removed with his mother to Wellsburg, W. Va. Attended common school of that place and Bethany College one year. Learned the printing trade in the offices of the *Western Transcript* and *Herald*, of Wellsburg. Followed the business in various places until the breaking out of the war. Married Miss Sarah Wetherell in 1852. Conducted the Woodford county, Ill., *Argus* for two years. He enlisted in April, 1861, in the First West Virginia three months' volunteers, during which time was engaged in the affair at Phillipi. Re-enlisted for three years in the First Virginia Infantry, and served out the term, rising from the position of sergeant to that of captain. During this service took part in the battles of Winchester, Second Bull Run (where he was taken prisoner, remaining so about a month), New Market, Port Republic, Piedmont, Lynchburg and Snicker's Gap (where he received a serious minnie ball wound in the left arm), besides numerous smaller engagements. At the conclusion of the three years' term he went into the Second West Virginia Veterans and served as captain until the end of the war. In 1869 he established the *Hancock Courier* at Fairview, being the first newspaper in the county, which he still continues to conduct.

JOHN J. HALSTEAD, now the oldest settler living in Fairview, was born in Washington county, Pa., in 1799. Migrated to then New Manchester in 1820, where he has resided ever since. On the 5th of October, same year, was united in marriage to Miss Jane Armstrong. By her he had three children. In the year 1828, he was called to mourn the death of his wife. He remained a widower until the fall of 1830, when he was married to Miss Catharine Nixon, who bore him seven children. He learned the cabinet business in his youth, and now, although somewhat infirm with the accumulation of years, still pursues the trade that his youthful ambition suggested.

REV. ROBERT B. PORTER, minister of the Fairview Presbyterian Church, was born in Fayette county, Pa., in 1851; took a classical course at Washington and Jefferson College, in that state, in 1868; was ordained as a minister June 10, 1874. On the 28th of December following he was united in marriage to Miss Celia G. Speer, of Bellevernon, on the Monongahela river, twenty-six miles south of Pittsburgh, Fayette county, Pa. His first charge was at Senecaville, Guernsey county, Ohio, remaining two years, having preached there three months previous to his ordination. On the 1st of April, 1876, he migrated to Fairview.

JAMES O. MILLER, the subject of the following sketch, was born December 18, 1837, in Allegheny county, Pa. Attended the Wilkinsburgh Academy over three years, after which he spent a year at the Jefferson College, Canonsburg, Pa., and then took a course at Duff's Commercial College, Pittsburgh. In April, 1860, he went, in company with his brother Thomas, and purchased the foundry in New Cumberland, and commenced operating the same early in April. It was continued as a general foundry until 1864, when another partner was taken in (W. J. Snodgrass), and then they paid especial attention to the manufacture of stoves, in which our subject is at present still operating. On April 3, 1873, he married Sadie O. Cowl, daughter of Rev. John Cowl. Immediately after their union they settled in the town of New Cumberland, where they have lived ever since. They have two children—one son and one daughter.

THOMAS R. SWANEY, a son of Isaac Swaney, was born in Beaver county, Pa., in 1840. Came with his parents to Hancock county, W. Va., in 1852, locating in New Lexington, where they remained until 1858, and then moved to New Cumberland. He engaged at carpentering for a while. On the 5th of September, 1861, he enlisted in company F, First Virginia Infantry, and served three years and two months, after which time he was honorably discharged and returned home. Was married to Miss Mollie A. Atkinson, daughter of Ephraim Atkinson. They settled in New Cumberland, where they have resided ever since. Their union has resulted in three sons. Engaged at present in the mercantile and livery business.

GEORGE CHAPMAN, located a thousand acre tract of land in now Hancock county, in the year 1783, near New Cumberland, and upon a part of which tract a portion of the town is situated. He came from eastern Virginia, off the Potomac river. Soon after he settled, he built a block house to protect himself and family from the invasions of the Indians, who were numerous, having entire possession of the Ohio about that time; however, there were some settlements made by the whites near the banks of the Ohio river. After completing his house, he returned east to secure money that was coming to him, leaving his wife and children in the care of a man whom he had working for him. When the time approached for his expected return, this fellow, contemplating the murder of Mr. C. for his money it was thought, came into the house early in the evening, pretending to be somewhat excited, and telling the woman (Mrs. Chapman) to take her children and flee to her nearest neighbors, as there were Indians prowling about, and he expected they would attack them. In order that her life might be preserved as well as the life of her children, he insisted on her going. Mrs. C. suspecting him and his statement, drew down a gun that was placed on wooden pins against the wall, and pointing it at the fellow, told him to leave the house, saying: "If there is any Indians about, you are the one, and if you don't quit the place I will shoot you." This so frightened the man that he fled and was never seen afterwards. She remained there nearly a week unmolested, before her husband arrived and the story was told him. It was thought by Mr. C., that he intended to rob him on his return, but his brave wife scared the cowardly villain away. They lived on that land until ther death, and were never once disturbed by the red men. Whether it was because of his strong house or not, he was permitted to live many years unmolested.

THOMAS CHAPMAN, a son of George, was born near New Cumberland, upon the land secured by his father, in the year 1786. This large tract of land was divided equally between the children, and Thomas received a hundred and sixty acres. He followed farming during his life time. He was the father of ten children, six boys and four girls. On the 3d of July, 1845, he "passed away like one falling into a peaceful sleep."

ALFRED CHAPMAN, a son of the above, was born August 6, 1814, on the old homestead. He was engaged in assisting his father on the farm until his marriage, which took place on the 11th of May, 1843. He lead Miss Sarah Mayers, daughter of Cornelius Mayers, Esq., of Knoxville, O., to the altar. Shortly after marriage he went on his present farm of one hundred and thirty-five acres, and has followed that vocation ever since. In 1866 he purchased another tract of land joining his of one hundred and forty acres. They have a family of four children living, three boys and one girl. He has an excellent farm with a good quality of coal underlying it. A bank was opened on his place in 1849 which was operated for seven years, taking from 1,000 to 3,000 bushels out per day. Veins run from four to five feet. He is the most successful and the most extensive bee culturist in the county. Is now the owner of eighty colonies of bees. In 1877 he raised 1,600 pounds of honey. Has belonged to the Disciples' Church for about thirty-two years, and his wife nearly thirty-four years.

JOHN CAMPBELL, ESQ., a son of James Campbell, was born August 12, 1820, in New Cumberland. In boyhood he attended school in a log building called the Chapman school house, where most of his early school days were spent. Considering the deficiency of the primitive schools, he obtained a liberal education. He lived with his father until he married, which took place on the 4th of March, 1841. He was married to Miss Ruth Swearingen, of Beaver county, Pennsylvania. Engaged for a short time on the farm and run a saw mill. Afterwards followed boat-building and carpentering, in which he continued for about ten years. Built what was styled the trading-boat. In 1854 went into the lumber business, and in that has been engaged most of the time since. Was elected county treasurer in 1863, in which office he served for two terms. Subsequently elected justice of the peace—filling that capacity ever since. In 1869 he was elected president of the board of education, and whilst serving as such was instrumental in the erection of the elegant school building of New Cumberland. He originated and drafted the design himself. Although meeting with the strongest opposition, at the time the building was first contemplated, he pushed the work through, which required more than ordinary effort on his part—being restrained on every hand with even bitter feeling. But being a man of determined will, completed the fine building, which is now acknowledged by all as a necessity—looked upon with pride by the citizens, and he now receives encomium for his labor and far-sightedness for the future needs of a school building. In June, 1873, he was called to mourn the death of his wife, who died leaving him a family of five children. On the 16th of June, 1874, he was again united in marriage to Mrs. Emily Hamilton *nee* Grafton, an estimable lady, as also was his first wife. She has borne him one child. He and family are members of the Disciples church.

B. F. SMITH was born in Georgetown, Brown county, Ohio, in 1811. At the early age of sixteen he apprenticed to learn the pattern-making trade, and also became a machinist, which vocations (being closely allied,) he followed for some thirteen years at Cincinnati, Ohio. In 1848 he migrated to West Virginia, and located in New Cumberland, engaging in the fire-brick business, which he has ever since been following. Married Miss Amanda Cox, daughter of Jacob Cox, of Dearborn county, Indiana. They have a family of six boys and one girl. Elected to the office of justice of the peace in 1860, serving as such for years. He was elected to the legislature in 1864-5. Is a stockholder in the Scioto Fire Brick Company, and also in the West Virginia Fire Brick Company. He and family are members of the Presbyterian Church of New Cumberland.

DR. P. C. MCLANE was born in the village of Fairview, in 1824. His father removed to Wellsville, where he died. In 1832 he returned to his native town with his widowed mother, where he remained until 1847. Commenced reading medicine in 1846 with Dr. McKenzie, and finished with Patterson & McKenzie, of Wellsville, Ohio. Attended lectures at the Ohio Medical College in 1848-9. Subsequently began the practice of medicine in the town of Hamilton, Hancock county, West Virginia, for one year, then removed to Fairview, where he followed his profession until 1852, when he started for California, staying in the golden state, following his profession there, three years. In 1856 he returned to his native town, and in the fall of that year set out for Iowa. Married Miss E. C. Hoyt, of New Haven, Connecticut, in 1859. Took charge of the Post Hospital, at Jefferson Barracks, Missouri, remaining in connection with the same till October 1865, and then he again returned east. His wife died in Ohio in 1868. After her death he again removed to Fairview, and practiced about one year. In December 1870 he married again, leading Miss M. E. Mortley, of McConnellsville, Ohio, to the altar. And in the spring of 1871 settled in New Cumberland, where he commenced the practice of his profession and has continued ever since. He is the father of three children living—two girls and one boy. He and wife are members of the Presbyterian Church.

DR. WILLIAM SHANLEY, a native of Ireland, was born in Dublin in the year 1809. He commenced reading medicine at the early age of sixteen, studying two years on "Erin's Isle." Being full of Irish patriotism, he was disgusted with his people doing homage to a foreign king. In that city on one occasion, when the whole metropolis was illuminated in honor of King William the Fourth, he could no longer restrain expressing his sentiments. Whilst looking on at the performance, he said to some one near him: "How foolish the Irish people are to lavish their money on a foreign king." The soldiers overheard his remark, and which by them was considered treason, one started, with sword drawn, after him. Recognising the dangerous situation he was in, he ran with full speed to the Castle, closely pursued by the dragoon. As he reached the spot, he turned suddenly in an entry just as the fellow struck for his head, the sword barely missing him, and was broken by striking the corner of one of the massive stone walls, and our subject escaped unhurt. He kept concealed for several days and then started for America, landing in New York harbor on the

28th day of May, 1828. He engaged in paper making in Springfield, New Jersey, where he remained four or five years. On the 28th of January, 1834, he was married to Miss Phœbe H. Clark. In the fall of 1835, he migrated west, where he devoted the most of his spare moments to the reading of medicine. He moved to Steubenville, where he worked a short time in the paper mill of Oldship & Hanna, and then resumed the study of medicine under the direction of Dr. Mayers. Afterwards removing to Wellsburg, he went in as a silent partner and rented a paper mill, and carried on the manufacture of paper for about three years, but still devoting some attention to medicine. In 1839, he attended a term at the Medical College. Removed to Fairview, to practice medcine in 1840, remaining there about seven years. Along in 1844, he engaged in the fire-brick business in connection with his profession. In 1847, he settled in New Cumberland, where he has been living ever since. He is the father of five children living. He is a member of the Presbyterian church.

James Stewart, a son of Col. George Stewart, was born in Lancaster county, Pa., in about 1787. Came with his father to now Hancock county, W. Va., in 1790, and settled in Grant district, near the Pennsylvania line. Married to Miss Catharine Fibbs. Shortly after ther union they located on a tract of land now in the possession of his son Samuel Stewart, where he lived, following farming until his death. He was the father of nine children, namely: Mary Ann, Eliza Jane, Harriet, Margaret E., George, John, Charles, William, Robert and Samuel. Eliza and Margaret are dead. Our subject's life went out in 1869, and in 1871 his wife followed him.

Robert Campbell.—The subject of this sketch was born in now Hancock county, W. Va., January 12, 1806. He obtained a limited education in the common schools of his minority days. In 1828 he married Miss Ellen Young, of Irish descent. They settled on King's creek, where they remained ten years, then removed into Clay district. After living there about eight years they moved to where James Y. Campbell now resides. They reared a family of seven children, viz: Eliza J., John H., Margaret A., William, Melissa, James Y., and Robert E. William's death occurred at Andersonville prison. He was a member of company I, Twelfth W. Va. Regiment. Our subject's wife died on the 22d of February, 1861. His second wife was Margaret Marshall, who was united to him by marriage in August, 1862. Engaged in farming. Died November 17, 1876.

James Y. Campbell enlisted in company I, of the Twelfth W. Va. Regiment, December, 1863, and was honoraby discharged from the service August, 1865.

William Snowden, a son of William Snowden, sr., was born in 1802, in Hancock county, W. Va. Married Mary Pugh in 1824. She bore him six children, four sons and two daughters. She died in 1851. He then married Miss Elizabeth Davidson, a few years later, who bore him one child. He lived on the farm now owned by William D. Snowden, and followed farming as his vocation, residing until his death, which occurred in 1873. His wife still survives him.

William Chapman was born January 23, 1782, in Virginia. Moved to then Brooke county, but now Hancock county, W. Va., with his father, George Chapman, in the fall of 1795. On the 29th of March, 1806, he married Miss Wilcoxton, who was born July 4, 1785. They settled on the farm now owned by G. W. Chapman's heirs, April 1, 1819. He was the father of nine children—four sons and five daughters. His wife died on the 2d of March, 1873. Mr. C. died April 5, 1875, at the advanced age of ninety-three years.

Jonathan Allison was born in Maryland, on the 14th of June, 1777; brought to now Hancock county, locating in Grant district, in about 1780, by his father, James Allison, who was of English extraction, and settling upon the land owned by Jonathan Allison. His first improvement was the erection of a round log house, 18x20, in which he lived for a number of years, and reared a family of children, all of whom are dead. He lived until he reached his hundredth year. Our subject was married to Miss Sarah Harmon, a lady of German descent. Their union resulted in eleven children—Charles, Samuel, James, Ross, Nancy, Sarah, Jonathan, Elizabeth, Mary, Daniel and Christina. Daniel, Christena and Ross are deceased. Soon after the marriage of Jonathan A., he settled upon the old home farm, remaining there engaged in tilling the ground until his death, which occurred June 3, 1873, aged ninety-six years. He served in the war of 1812; filled the office of sheriff for several years; served as constable for about thirty years, and at the age of ninety-one years took the census of the county.

Alexander Scott, born in the eastern part of the state of Pennsylvania. He removed to now Hancock county, West Virginia, in 1802, and located on a farm one mile northwest of Fairview. He was the father of seven children—four sons and three daughters. Principally engaged in farming. In 1812 he breathed his last. His wife survived him but a few years. His family are all dead, save two—one living in Hancock county, West Virginia, and the other in Meigs county, Ohio.

John Scott, a son of the above, was born in 1791, and came with his parents to Hancock county in 1802. He followed farming with his father until he reached manhood, and after his marriage in 1813, to Miss Sarah Stewart, he settled on his father's old home farm, where they remained during life, with the exception of about five years. He reared a family of four children—Mary, John, James C. and George. John is deceased, Mary is living in Ohio, George is in the ministry in Pennsylvania, and James C. is living on the old homestead. Our subject was married twice—his first wife died in 1839. His second wife, Jane Wallace, whom he married in 1840, died on the 7th of August, 1875, and he followed in November, 1877.

William W. Evans was born May 24, 1789, in Virginia. He was a very fine mathematician and penman. Engaged for several years in clerking in his uncle's store. In 1808 was married to Miss Sarah F. Chaplin, after which he turned his attention to farming. About 1815 he located on a tract of land situated in now Poe district, Hancock county, West Virginia. He began the improvement of his land for the purpose of raising crops. There was a little log cabin on the land when he settled, in which he lived until he could erect a better one. They had a family of nine children—Elizabeth, Martha, Jeremiah C., Isaac, William J., Joseph, Sarah, Mary, and Elizabeth. The two oldest daughters, Elizabeth and Martha, are deceased, and also Joseph. Our subject departed this life October 12, 1860; his wife in November, 1861.

Jacob Nessley was born in Lancaster county, Pennsylvania. He married Miss Elizabeth Groff, also a native of the same county. They migrated to now Hancock county, West Virginia, in 1785. They reared a family of eight children. His wife paid nearly the entire expense of the stone building known as the Nessley church, which was erected in 1820. His children married as follows: Barbara married Richard Brown, and reared a family of nine children. Jacob married Nancy Myers and reared a family of five children. Judith married John Groff. Alice married Abraham Groff and reared a family of four children. Lucy married Rev. De Selems and reared a family of six children. Elizabeth married Christian Brenneman and reared a family of eight children. John married Elizabeth Fawcet and reared a family of eight children. Nancy died unmarried.

Our subject died in the year 1832—his wife having died a few years previous to this.

Richard Brown, sr., was born in Maryland in 1748, was a soldier of the revolutionary war, serving as Colonel under the command of General George Washington. He was captured at the battle of Brooklyn, Long Island (where the Americans were defeated), August 27, 1776. Held as a prisoner for a short time and then exchanged. Soon after the close of that memorable war, he with his wife and two children migrated west settling on a tract of land containing 1,100 acres, in Holliday's Cove. At one time he also owned what is now known as Brown's Island, from whence it derived its appellation. After their removal to this county another child to them was born, making a family of three children—Richard, Rachel and Margaret. Lived on his land until his death in March 1811.

Richard Brown, jr., son of the above, was born near Baltimore, Maryland, in 1762. Came with his father west. Followed surveying making many surveys for the government. Was engaged in that business with General Harrison through Illinois and other states. In 1798 he was married to Barbara, daughter of Jacob Nessley, one of the pioneer settlers of the county. Shortly after their marriage they settled on a tract of land in Holliday's Cove, remaining there for several years, and

then moved up the river settling near the mouth of Tomlinson's run, living there until his death, which sad event took place in 1842. His relict died in 1849. In his life time he held the office of high sheriff, justice of the peace, county surveyor, and also held the office of colonel in the militia for seven years.

JOHN CUNNINGHAM was born in Washington county, Pennsylvania, August 10th, 1810. Brought to now Hancock county, West Virginia, by his father in 1819, who settled on the farm now owned by his heirs. Our subject purchased a number of tracts of land, until he owned at one time 700 acres. In first starting into business he engaged in keeping a wood-yard at the river, cutting the wood off of his land and disposing of it to the steamboats to a good advantage. Retired in 1850 from the wood business, and paid his entire attention to farming until his death, which occurred July 9th, 1878. In 1838 he married Miss Sarah J. Finley. He was the father of nine children, as follows: Samuel R., Thomas R., Robert M., David M., John F., Margaret J., Mary V., James C. and Sarah M., who is deceased. Was elected to the office of justice of the peace, filling that capacity a number of years.

JOHN GARDNER, a native of Washington county, Pennsylvania, was born on the 25th of October, 1794 When he grew to manhood he migrated to Wellsburg, and engaged in the mercantile business for a few years. Married Miss Eliza Reeves in 1820. They reared a family of three children—Rachel Ann, Reason R. and Josiah R. In 1839 he removed to now Hancock county, West Virginia, and settled on a four hundred acre tract of land, just opposite East Liverpool, Ohio. He built a fine brick residence here in 1839, in which he lived until his death, in 1878. Served as president judge of the county for several terms in Brooke and Hancock counties. He attended court regularly, seldom ever absent. Bought the first steam ferry-boat ever used at the Liverpool ferry. Was connected with stage lines, and carried the U. S. mail; also owned the steamer Swan, and carried the mail from Wheeling to Steubenville by water and from that point to the lake by stage. He was highly esteemed as a citizen.

REASON R. GARDNER, a son of John Gardner, was born October 13, 1822, in Brooke county. Came with his father to Hancock county in 1839. Was engaged as a clerk on a steamboat for a number of years. He also run the steam ferry boat at Liverpool for several years and spent a great deal of money in building up the ferry, and it is now said to be one of the best along the Ohio river. Filled the office of county assessor for one term. Married Miss Melvina Desbrow in 1864. Their union resulted in one child. Our subject's death occurred in 1878.

ROLAND ROGERS, a native of Harford county, Maryland, was born on the 15th of November, 1786. In 1807 he married Sarah Magness. Migrated to Beaver county, Pennsylvania. Removed to Hancock county about 1819, and settled in now Grant district. He followed farming. Was a soldier in the war of 1812. He died on the 30th of January, 1855. His companion lived until July 4, 1870.

SAMUEL STEWART, a son of Col. Stewart; born in Lancaster county, Pa., in 1780; came with his father to Hancock county in 1790. He assisted his progenitor in clearing away the forests and tilling the virgin soil. Was married to Miss Nancy Cochran, then moving on the farm now in the possession of Alfred Marx. Their union resulted in seven children, namely: Jacob, Susan, Mary, Samuel, Nancy, Rebecca and George. His wife died, and then he married Nancy Tucker. They removed on a farm near East Liverpool, Ohio. After the death of his second wife he again married, leading Miss Mary Flanegin to the altar. She bore him two sons, namely: Robert and James. He followed farming as his vocation until his death in 1874. His farm is now owned by his two sons—Robert and George Stewart.

WILLIAM STEWART, a son of Col. George, Stewart, was born in Lancaster county, Pa., in 1782, and settled with his father in Hancock county, W. Va., in 1795. In 1805, he married Miss Elizabeth Henderson. They located on a part of the Gardner farm, where he remained a few years, and then removed near Pittsburgh, Pa., living there seven years, returned again to Hancock county, 1812, and enlisted as a soldier in the war of 1812 under the command of Col. Small. He was the father of nine children; George, James, William, Benjamin, Elizabeth, Mary, Isabella and Rachel. George and the two latter named are deceased. Our subject died in 1858, and his wife in 1873.

ROSS ALLISON, a son of Jonathan Allison, was born in now Hancock, W. Va., on the 12th of November, 1812, and lived with his father until he arrived at the age of manhood. In 1834, he married Miss Allison, a daughter of Charles Allison, deceased, and settled in Grant district. He was the father of eight children. Principally engaged in farming during his life. On the 15th of March, 1876, he died respected and beloved by all.

ISAAC KINNEY, was born in Washington county, Pa., in 1781. At the age of twenty-five years, he married Miss Jane Ashley, of said county. He, with his wife and eight children, migrated to now Hancock county, settling on Tomlinson's run, near the present site of Baxter's mill, remaining about five years, then located on Charles' field farm. After their settlement in Hancock, four more children were born to them, making a family of twelve children, namely: Dorsey P., William, Rachel, Manney, Lucinda, John, Nancy, Eliza, Joseph, Sarah, Catharine and Eveline. Dorsey, John, Eveline and Manney, are deceased. Our subject departed this life in 1833. His widow remained on the farm until 1837, when she removed, with family, on the Gardner farm, and her boys run a ferry and kept a wood yard, selling wood to the steam boats. This business was followed by them until in 1843, when they moved on the farm now owned by Joseph Kinney, and in a few years they purchased the farm, and have engaged in farming ever since. In 1858, William purchased the farm on which he lives. This is a hundred and thirty-acre tract.

JOHN NEWELL, a native of Washington county, Pennsylvania, was born on the 9th of June, 1796. His education was obtained in the common schools of his minority days. In 1819 he married Miss Rachel Elder. They migrated to Hancock county, West Virginia, and settled in Fairview (then called Pughtown, or New Manchester), and engaged in tanning, where he followed that business for fourteen years. About 1822 his wife departed this life, and in a few years after he got married again, leading to the altar Lydia, daughter of John Edie. By her he had seven children. She died, and in 1853 he married his third wife, in the person of Joanna Frazier. He moved on the farm where he is now living, in about 1833, remaining a few years, then removed to Murry's Mill, and run the milling business for three years, then purchased the Coulter Mills (now Baxter's), staying there for several years, and then returned to his farm. He is still living—aged eighty-two years.

SAMUEL CARSON, born in Ireland. Emigrated to America, and landing in Philadelphia, remaining in the eastern part of the state for a short time, then settled in Washington county, Pennsylvania. Was married to Miss Ann Aten. Came to now Hancock county, West Virginia, in about 1797, settling on King's creek. In 1810 his wife died, and he was again married in the year following to Miss Margaret Anderson. He had eight children with his first wife and seven with his second. Was a farmer. Lived to reach his 93d year.

JOHN EDIE, a soldier of the Revolutionary war, was born in Pennsylvania in 1760. After the termination of that successful effort for liberty, he migrated to Hancock county. Held the office of county surveyor and made nearly all the earliest surveys in that region of the country. In 1790 he married Miss Rebecca Croxon. Served seven years in the legislature and filled the office of justice of the peace for many years. He was the father of eleven children. In 1840 he died at the age of eighty-one years.

ROBERT CAMPBELL, whose parents were of Scotch descent, was born on the first of April, 1772. He with three brothers and two sisters were brought to this country by their father, who located on King's creek, Hancock county, three miles above its mouth, in the year 1783-4, he being among the first settlers in that neighborhood. His father built a log cabin on his land (the first improvement made) and lived in it for some time. He was an extensive land owner, having in his possession at one time abut 1,800 acres of land in the county. Died in about 1808. Our subject obtained such an education as could be found in the common schools of that early day. At the age of twenty-six he married Miss Margaret Belland, located on King's creek and followed farming until 1809, when he built the flouring

mill on said stream, known as the Campbell mill, which is still in use. A saw mill was also erected by him adjacent the mill. A few years later he put up and operated a distillery near by his other property. He finally sold the mill property to his son James M. and paid his entire attention to agriculture the remainder of his days. Was an extensive land owner, having at one time nearly 1,900 acres. Had a family of nine children. Held the office of elder in the Presbyterian Church, and died on the 7th of May, 1835. His relict departed this life on the 2d of May, 1857.

JAMES M. CAMPBELL, a son of Robert C., was born in now Hancock county, W. Va., March 18, 1804. His early educational impressions were made upon him by William Ledlie, who taught in a log school house. On the 20th of June, 1825, he married Miss Nancy Orr. They settled on the farm where he is now living. Having purchased his father's mill property, he bought wheat and made it into flour, shipping it down the river, averaging about 3,000 barrels per year for a period of eight years, when the shipments declined on account of the scarcity of wheat in the neighborhood. He also held an interest in the fire brick business, following that in connection with milling for about eighteen years. In 1870 he sold his mill and retired from the business. He also sold his interest in the brick yard below the mouth of King's creek, but has since taken a half stock in the brick yard above said stream. On the 26th of October, 1849, he was called to mourn the loss of his wife, who died leaving seven children. He married his second wife, Miss Isabella Gallaway, in 1850, who bore him two daughters. Has held the office of elder in the Presbyterian Church, for nearly half century. Although now over seventy-four years of age, he is yet remarkably hale and hearty.

LEVI STANDISH, a descendant of Miles Standish, who came over in the "Mayflower," was born in 1820, in Beaver county, Pennsylvania, and is of the seventh generation. He followed stone-masonry and brick-laying for about eight years. In 1846 he married Miss Margaret Cowan, a resident of the same county. Soon after this he learned milling, which he followed as his principal vocation. He lost his wife in 1872. In the spring of 1876 he purchased the mill property where he is now living. In December of the same year he married Miss Martha E. Stewart, who lived but five months after marriage.

E. A. FRESHWATER, our subject, a son of Philip Freshwater, was born March 21st, 1839, in Butler district, Hancock county, West Virginia. Attended school at Paris, Pennsylvania, the pupils being taught by Rev. Campbell. On March 27th, 1867, he was married to Miss Clarinda E. Campbell, daughter of James M. Campbell. Settled on a farm near the Pennsylvania line. Raised a family of seven children—five sons and two daughters. At present he is filling the office of justice of the peace, which office he has been holding for about six years.

THOMAS ANDERSON is a native of Bedford county, Pa. His birth occurred on the 10th day of May, 1810. His father moved to Somerset county, same state, when Thomas was but four years of age. In 1824, they left and removed to Pittsburgh. Whilst residing in this city our subject learned the pottery business with a man named White. In 1831 made a trip down the Ohio, stopping with Thomas Freeman and manufactured brick for him. He made the first fire-brick that were ever made in now Hancock county. He continued making brick for two summers and then returned to his home in Pittsburgh, working at the pottery business for a while. Married Miss Martha Beard in 1836, and in the year following he removed to Hancock county, starting in the pottery business which he continued until 1843, when he then engaged in the manufacture of brick in connection with the pottery business. In 1872 he quit the former and devoted his entire attention to the latter, which he still follows. He is the father of six children —four sons and two daughters.

JOHN PURDY was born in Cumberland county, Pa., in 1777. Emigrated to Westmoreland county, when a young man. Learned carpentering and cabinet-making. In 1808 he married Miss Elizabeth Lavely. They remained in said county until 1821, when he, with wife and five children migrated to now Hancock county, W. Va. In 1824 he purchased and moved on the farm now owned by his son James Purdy, where he followed farming until his death, which sad event occurred in 1859. His wife lived until 1873, aged ninety-three years.

ALEXANDER MORROW, was born in Ireland, and was married to Susan Cassady. In 1793, he, accompanied with his wife and seven children, viz: John, William, James, Alexander, Margaret, Elizabeth and Nancy, emigrated to America, landing at Philadelphia, where they remained a few days, and then settled in the State of New Jersey, remaining there five years. In 1798, they all came west and located in now Hancock county. They purchased a 600 acre tract of land in 1800, a part of which is now owned by William Morrow. Mr. M. followed farming as his vocation. He died in about 1820, at a good old age.

JOHN MORROW, the senior son of Alexander, married Miss Eleanor Welch, in August, 1803. They reared a family of five sons and three daughters, viz: Alexander, John W., Samuel James, William, Susan, Mary and Nancy. The children were all married, save Samuel. Susan and Nancy had no issue. Alexander and John are deceased. Our subject's death occurred in 1854, at the age of 88 years. His wife died in 1864, aged 92 years.

WILLIAM MORROW lived a single life; accumulated considerable property, and died in 1839, aged about 72 years.

JAMES MORROW, married Jemima Davis along in 1800. She died after a few years of married life, and in 1812, he married Miss Nancy Elliott. They raised a family of four sons and three daughters—Charles, Alexander, James, Aaron, Susan, Isabella and Margaret. The subject died in 1825, and his wife in 1839.

ALEXANDER MORROW, married Miss Susan Welch in 1820. They reared a family of three sons and four daughters—Robert, James, Alexander, Margaret, Susan, Nancy Ann and Mary. He died at the age of 72 years; his wife in 1872, at the age of 76 years.

Margaret Morrow was united in marriage to Robert Morehead. Their family consisted of six sons and one daughter. Elizabeth Morrow married to David Pollock and moved to Ohio. Nancy Morrow married Samuel Logue, and became the mother of three children. In 1812 he died with camp-fever whilst serving in the war. She afterward married a man by the name of Tumberlick, and by him had another child.

RICHARD FOWLER, sr., was born in Brownsville, Pennsylvania. He was married to Miss Elizabeth Baker, who was born in Virginia on the 10th of March, 1798. He was married twice. His first wife gave birth to two children, as follows: Rachel Fowler, born March 13th, 1810; John Fowler, born July 25th, 1812. From his second wife the following were born, viz. Mary Fowler, February 4th, 1815; William B. Fowler, July 15th, 1816; Verlinda Fowler, June 15th, 1818; Joseph Fowler, August 2nd, 1821; Frances Fowler, October 11th, 1823; Jacob Fowler, December 22nd, 1825; Thomas H. Fowler, April 17th, 1828; Richard Fowler, July 30th, 1830; Ann E. Fowler, January 4th, 1833; Susannah Fowler, September 17th, 1835. Richard and Elizabeth are dead—the former's death occurred on the 13th of July, 1856, and the latter's on the 18th of December, 1872. Our subject engaged in farming for a livelihood.

G. L. BEAUMONT, physician and surgeon, a native of Ohio, was born in Steubenville on the 2nd of August, 1837. His parents removed to New Lisbon, where they remained only a few years and then returned to the former place in 1846. At the age of eighteen he began the study of medicine with his father, (who had acquired considerable reputation in physics.) Our subject formed the acquaintance of Miss N. A. Campbell, of New Cumberland, and was married to her in 1858. In 1869 he graduated at the Eclectic Medical College, under the new system. Upon his return from college he commenced the practice of his profession. Since he has begun he has met with flattering success. He has a family of ten children. In his business, as well as socially considered, he is courteous and agreeable.

JOHN CAMPBELL was born August 12, 1820, in what is now Hancock county, West Virginia, within one hundred and fifty rods of where he now resides, on the farm at that time belonging to the heirs of his grandfather, whose name was also John Campbell. This farm at that time contained 187 acres, which included all the first and second bottom, between the Black Horse fire brick yard, and the mouth of Hardin's run. On the 19th of August 1832, a deed was executed by all the heirs (except William, who had received his share, in a farm in Jefferson county, Ohio). W. H. Grafton and John McMillen, com-

missioners, divided the land into five shares, after setting off one-third as dower to the widow, Mary Campbell. The deed was signed by John Campbell and Elizabeth his wife, James Campbell and Agnes his wife, Lloyd Campbell and Harriet his wife, Joseph Stewart and Elizabeth his wife, and John Brandon and Mary his wife.

James, the father of the subject of this sketch, settled upon his share and subsequently bought all the other heirs out, except John. At that time a large portion of it was thickly covered with timber. The subject of this sketch remained with his father, helping clear and farm the land, till March 4, 1841, at which time he married Miss Ruth C. Swearingen, of Beaver county, Pennsylvania. They commenced house keeping about the first of April following, in the same old cabin in which he had spent most of his early life. He remained there till 1847, when he moved into his new brick house—the first brick dwelling in the town, where he remained till the fall of 1851, when one of his tenants, living in a frame house adjoining, set fire to the building, consuming three frame buildings and the wood work of the brick, together with a large portion of their contents. Mr. Campbell then built, and within three months moved into the frame house now owned and occupied by J. W. Flowers, and remained there until 1854. During this year he built and moved into the brick where he now resides. In December, 1848, he, in copartnership with his brothers, Lloyd and James, bought 64 acres of the above mentioned land, at commissioners sale, and at the same time sold some sixty-eight lots, as an addition to the town of New Cumberland. In 1849–50 they added about 120 more lots to the town and built the brick dwelling now occupied by James B. Stewart; and, in September, 1850, they sold at public auction, fifty of these lots at an average of about $50 per lot. In 1851, he built the brick dwelling, now owned and occupied by N. B. Grafton, Esq., for his mother, who occupied it till her death, which occurred August 23, 1859. In 1873, he built the frame building on the ridge, now occupied by Brown & Morrow, as a printing office, where the first newspaper ever printed in the town was published. In 1856 he engaged in the lumber business, at which he still continues.

Prior to this time, and after his first marriage, he was engaged in various occupations, such as farming, boat and house-building, and in the coal trade, &c.

In January, 1858, he was chosen justice of the peace under the old Virginia system, which office he held till 1864. On the fourth Thursday of April, of that year, he was elected county treasurer for Hancock county, and served in that capacity from June 20, 1864 to January 1, 1867, during which time he collected and disbursed $56,654 19, besides a large sum raised by private donations for soldiers families. Most of this sum was for soldiers bounties, free schools and school buildings, the free school system, having been just introduced. January, 1869, he was again elected justice of the peace, which office he has since continued to hold by successive re-elections, his last term of four years commenced January 1, 1877.

On the fourth Thursday in October, 1868, he was elected President of the Board of Education of Clay township, which included New Cumberland, in which capacity he served till January 1, 1872. In the spring of 1870, he with the other members, J. L. Freeman and J. L. Toap, decided to build the house now occupied as a graded school. After some delay for want of an architect to prepare a plan for the building, Mr. Campbell was appointed architect and submitted a plan that was approved and accepted. He was also appointed to superintend the work. The building, furniture and fixtures cost $13,300.

On the 17th of July, 1873, his wife died aged fifty-six years. After her death he spent a large portion of his time in traveling. He married for a second wife, Mrs. Emily L. Hamilton, whose maiden name was Grafton, born and raised in Wellsville, Ohio. By his first wife he raised six children, three sons and three daughters. The fourth child, a son, died at two years. The eldest daughter and youngest son remain at home with him. By his second wife he had one child, a daughter, born May 6, 1875.

RICHARD FOWLER, JR., was born in now Hancock county, W. Va., July 30, 1830. He married Miss Martha A. Peterson, daughter of Conrad Peterson, in 1859, who bore him nine children, three sons and six daughters. They settled on the farm where they are now living. His father, Richard Fowler, sr., deceased, settled and made the first improvements on said farm. He has followed farming as his vocation during life.

JONATHAN ALLISON, a son of Jonathan Allison, deceased, was born in now Hancock county, W. Va., July 6, 1820, on the farm where he is now living. The farm was settled, and improvements began by his grand-father, James Allison, deceased, in about 1780, and has been owned by the Allison's since that time. He married Miss Nancy Thompson, November 27, 1845. Their union resulted in twelve children, (three of whom are deceased), five sons and four daughters are living. They settled on the farm where they are now living, and has followed farming as his vocation. At present he owns near 900 acres of land in Grant district, in Hancock county, W. Va. He filled the office of constable for a period of about eight years.

J. W. ALLISON, was born in now Hancock county, W. Va., March 31, 1830. He married Miss Isabella S. Cory, April 27, 1852. They settled on the farm where they are now living. The farm was first settled by his grand-father, in 1801. He has followed the manufacturing of Agricultural Implements, in connection with farming as his vocation. He served two terms in the legislature. He filled the office of justice of the peace for ten years.

JAMES C. SCOTT was born April 2, 1827, in now Hancock county, West Virginia. He married Rebecca J. Conley, March 23, 1870. They settled on the old Scott farm, which was located by his grandfather, Alexander Scott, in 1802. There are several fruit trees on the farm that were bearing trees when the Scotts first settled there. He has followed farming as his vocation.

JEREMIAH C. EVANS was born August 15, 1813, in Virginia, and was brought to now Hancock county, West Virginia, by his father, William W. Evans, in 1813. He married Sarah Chapman in December, 1836. His companion deceased in April, 1839. He was again married to Elizabeth S. Sisson, November 24, 1840, to whom he has four children—James M., Elizabeth S., John and Frank S., all of whom are living. He owns and is living on the old Evans homestead farm, containing 300 acres.

GEORGE W. CHAPMAN, son of William Chapman, was born where New Cumberland is now located, in Hancock county, West Virginia, February 11, 1813. He was married May 11, 1843, to Hannah Stockdale, of Ohio. They settled on his father's farm, and in a few years purchased said farm of his father, which he owned and lived on, following farming as his vocation, until deceased. They reared a family of six children—Thomas B., Mary E., William J., Sarah A., and Jackman S. Chapman, who is at home on the farm. William and Sarah are deceased. Thomas B. and Martha A. are in Oakland, California. Mary E. is living in Pittsburgh. His wife died May 4, 1872, aged 48 years, 6 months and 29 days. He died May 25, 1878.

ISAAC W. EVANS was born in now Hancock county, W. Va., on the farm now owned by Jeremiah C. Evans, October 9, 1817. He has followed farming as his vocation during life. He married Ruth Dawson, of Beaver county, Pa., in 1836. They settled on his father's farm. At present he owns 250 acres of the old home place. Their union resulted in seven children, five sons and two daughters. B. D. Evans, William, James D., Rebecca M., John C., Catharine and William P. John C. and William are deceased.

DAVID MCCOY was born in what is now Hancock, W. Va., in 1804. He followed farming as his vocation. He married Matilda Grable, who bore him four children. His wife died in 1869. He deceased in 1874.

JAMES S. MCCOY, was born in 1838, in now Hancock county, W. Va. He followed steamboating as his vocation for a number of years, and for the last five years he has run the ferry at New Lexington. He is the father of five children, two sons and three daughters.

GEORGE BROWN, a son of Richard Brown, jr., deceased was born February 29, 1809, in Holliday's Cove, now Hancock county, W. Va. He has followed farming as his vocation during life. He married Miss Ellen Sprowle, daughter of Hugh Sprowle, of Irish descent, February 21, 1854. They settled on the farm where they are now living. The land was taken up by his grandfather, Jacob Nessley, in 1785.

JACOB N. BROWN, a son of Richard Brown, sr., was born in

now Hancock county, West Virginia, in 1805. He followed farming and trading on the Ohio river as his vocations. He was married in December 1832 to Miss Ann Myler. They settled on the farm where he is now living. They reared a family of nine children—four sons and five daughters, one of the daughters is deceased. His wife died in April 1865.

William Murry was born in Northumberland county, Pennsylvania. He was married to Jane Mills. In 1818 or 1820 he, with his wife and two children, William C. and James, came to now Hancock county, West Virginia, and settled in Poe district, where Murry's mills now stand, where he remained until in the fall of 1833, then he sold his mill property to his son William C. and moved to Jefferson county, Ohio, where he remained until his death. His wife died in 1833. And he was married again, to Margaret Latimer, who is still living, at the age of eighty years.

Samuel Allison, a son of Charles Allison, was born in now Grant district, Hancock county, West Virginia, September 8th, 1835. He married Miss Eliza Finley. They settled on the farm where they are now living. They have a family of five children—two sons and three daughters.

John H. Manypenny was born in Jefferson county, Ohio, July 31, 1827. He came to Hancock county, W. Va., in 1849, and engaged in farming with his brother for five years; then, in 1854, he commenced operations with his brothers in the fire-brick business; continued for ten years, and in 1864, he again engaged in farming as his vocation, and is following that as his occupation at present. He was married to Susan Henry in 1855; his wife deceased in 1857; he then married Mary A. Brandon in 1860, who bore him two sons; his wife died in 1864. He was again married to Mary Ann Johnston in 1865, who is still living.

James H. Stewart was born in Allegheny county, Pa., in 1810. In 1816 he was brought to now Hancock county, W. Va., by his father, William Stewart. He married Sarah Ann Pugh in 1841. They settled on the farm where they are now living. Their union resulted in eight children, six sons and two daughters, two sons and one daughter are deceased. He followed the manufacturing of fire and common bricks for twenty-five years, and the remainder of his time he has followed farming as his vocation.

Samuel Stewart, a son of James Stewart, was born on the farm where he is now living, in now Grant district, Hancock county, W. Va., in 1832. In 1859 he took a trip to Pike's Peak; remained six months and then returned home. Married Mary E. Donehoo in 1865; they settled on the farm where they are now living. They have a family of four, two sons and two daughters. He has followed farming as his vocation.

J. L. Mahon, was born in Baltimore, Md., in 1814. He came to West Virginia, with his father, in about 1816, and located in Brooke county. In 1837, he married Barbara B. Brenneman, daughter of Christian Brenneman. They settled on the farm where they are now living, in 1840. Their union resulted in ten children, four sons and six daughters. He erected a saw mill on his farm in 1850, and in 1854, he built a grist mill adjoining the saw mill, both of which he has been operating successfully. In 1878, he, in company with Hellings & Brother, erected on his farm, one of the largest fruit houses in the United States, on the Hellings' patent, of Philadelphia—a description of which can be seen in the history of the county of Hancock. He followed the manufacturing of lumber, cooperage and flour, in connection with farming and fruit growing as his vocation. He owns one of the best fruit farms in the state of West Virginia, containing 575 acres. There are 10,000 fruit trees growing on his farm at present.

John Lowary, was born in Washington county, Pa., in 1800. He was married to Jane Proudfoot. Their union resulted in five children, two of which are living. His companion died in 1837. He then married Sarah Hibbets. They reared a family of six children. In 1855, they moved to Columbiana county, Ohio, where they remained until in 1870, they then moved and settled in Hancock county, W. Va., where they are now living. He is postmaster at Oak Run post office. He served as captain and then colonel in the militia. His wife died in 1875.

John H. Campbell was born in now Hancock county, West Virginia, September 15th, 1831. He married Ruth A. McCloud in 1861. They settled in Clay district. His wife died December 24th, 1861. He married Sarah E. Pittenger, daughter of Henry Pittenger. Their union resulted in two children, one of which is deceased. His companion deceased in October 1864. He married Sarah Witherspoon March 1st, 1866. They were given five children, one of which is deceased. His wife died December 24th, 1874. He was again married, to Mary J. Hill, of Ohio. At present he owns a part of the Hugh Pugh farm, where they are now living, and he is following farming as his vocation.

William Hutson, a son of William Hutson, deceased, was born in now Hancock county, West Virginia, October 3rd, 1832. He married Elizabeth A. Stevens, March 19th, 1855. They settled in Poe district, near the Ohio river, where they remained eight years, then moved to Brooke county, West Virginia, remained there five years, and then moved on the farm where they are now living in 1868. They have a family of three children—one son and two daughters. He has followed farming as his vocation.

John Whitehill was born in Beaver county, Pennsylvania, August 5th, 1828. He married Elizabeth Willcoxon, January 1st, 1856. They settled on the farm where they are now living, located in Poe district, Hancock county, West Virginia. Their union resulted in two children—one son and daughter. He has followed farming as his vocation.

W. G. Anderson was born in Washington county, Pennsylvania, May 23, 1834. He learned the blacksmith trade and followed that business as his vocation until in 1861, then he enlisted in company L, 28th regiment, Pennsylvania volunteers. He served one month in said regiment, and then was transferred to Knapp's Pennsylvania battery. The last year he served as a veteran, and received his discharge at the close of the war. Returned home and resumed his trade as his vocation. He married Miss R. J. Maple, in 1868. They settled in Wellsville, Ohio, and in 1875, they moved to the place where they are now living—located in Clay district, near the Pennsylvania line. They have a family of five children—three sons and two daughters.

William D. Snowden was born in now Hancock county, West Virginia, August 21, 1834. He married Martha V. Scaddan, in 1862. They settled on his father's farm, where they are now living. They have a family of four children—one son and three daughters. His principal vocation is farming.

William C. Murry was born in Northumberland county, Pennsylvania, December 16, 1809. He was brought to now Hancock county, West Virginia, by his father, William Murry, in about 1818. He married Emily Abraham, of Steubenville, Ohio. He purchased his father's property, including farm and grist and saw mills, where they settled, and are living at present. Their union resulted in four children—two sons and two daughters. Both of the sons died in the late war, or the war of 1861. William A. Murry died at Richmond, Virginia, a prisoner. John R. Murry took sick while in camp, was brought home, and died in a few days after his arrival.

Absalom Baxter was born in Brooke county, W. Va., March 16, 1833. He was brought to now Poe district, Hancock county, W. Va., by his father Samuel Baxter, in 1836. He followed farming as his vocation. He married Honor Brambrick, daughter of Thomas Brambrick, deceased, November 2, 1859. They settled on the farm where they are now living, located one mile southwest of Fairview. Their union resulted in five children, Julia, Lawrence, Rachel, Annie and Ruth, all of which are living.

Alexander Morrow was born in Tyrone county, Ireland, in 1821. He emigrated to America in 1842. Landing in New York city, he continued his journey westward until he reached Freeman's landing, where he stopped and made his home in Hancock county, W. Va., since that time. He married Rachel Jane Shanley, daughter of Wm. Shanley, in 1856. They settled on the farm where they are now living. They have a family of four children, three sons and one daughter.

James W. Finley was born in Washington county, Pa., December 3, 1830. He came to now Hancock county, W. Va., with his father when about four months old. He taught two terms of school, one in the winter of 1849–50 and the other in 1850–51.

He enlisted in company K, Third Ohio Volunteer Infantry for three years or during the war. His regiment being discharged in the spring of 1864, their time having expired, he was transferred to the Thirty-third Ohio, where he remained until his time expired and was discharged from the service September, 1864, and returned home, and remained there until January, 1865, when he re-enlisted as a recruit in company A, One Hundred and Fifteenth Ohio Regiment, remaining in said regiment a short time, and its time having expired it was mustered out of the service, and he was transferred to the One Hundred and Eighty-eighth Ohio, where he remained until the close of the war when he was discharged from the service, and he returned home. He married Sarah M. Guthrie, of Beaver county, Pa., May 17, 1866. They settled in Hancock county, W. Va., where they are now living. They have a family of three children, two sons and one daughter.

JOHN R. FINLEY, was born in Washington county, Pa., April 8, 1824. He was brought to now Hancock county, W. Va., in 1831, by his father, Thomas Finley, who settled just across the Ohio river, from East Liverpool, Ohio. John R. Finley is a carpenter by trade, which he follows in connection with farming as his vocation. He married Louisa Scott, daughter, of Nathan Scott, in 1860. They settled in now Grant district. They have a family of eight children, six sons and two daughters.

ROBERT M. CUNNINGHAM, was born August 24, 1844, in now Grant district, Hancock county, W. Va. He married Mary E. Kirk, of Beaver county, Pa. They settled on the farm where they are now living. They have a family of four children, one son and three daughters. He is following farming as his vocation.

WILLAM C. PUSEY was born in Chester county, Pa., August 19, 1818. He attended school at Westchester academy. After leaving school he clerked in a store at Unionville in 1833, and in Philadelphia in 1834–5, and from thence to Oak Hill, in Lancaster county, Pa. In the spring of 1837 he came to New Garden, Columbiana county, Ohio, remained until in 1840; then moved to Wellsville, Ohio, where he followed the commission business until in 1843; then moved to Liverpool, Ohio, and engaged in the grocery business until 1844. He married Rachel A. Gardner, daughter of John Gardner, deceased, in 1844. They settled on her father's farm; remained two years, and in 1846 they moved to Wellsville, Ohio, and engaged in the mercantile business and continued the business until 1852. Then they returned to the farm where they are now living. They reared two children, Elwood F. and Clara B. He served as justice of the peace in Wellsville, Ohio, for four and one half years; filled the same office in Grant district, Hancock county, W. Va., for six years, and in the fall of 1876 he was elected to the office of Presiding Justice of Hancock county, and is holding that position at present.

They settled on the farm where they are now living. They have a family of six children—three sons and three daughters. He follows farming as his occupation.

GEORGE ALLISON was born in Washington county, Pa., in 1795; he married Jane Glenn, of said county, in 1816. In 1824, he, with his wife and four children, James, Robert, Mary and Elizabeth, came and settled on King's creek, now Hancock county, W. Va., where they remained until in 1829, when they removed and settled on the north branch of Tomlinson's run, where he is still living. One more son, Alexander, was born to them after their settlement in West Virginia; has followed farming as his vocation; his wife died in November, 1866.

DAVID ALLISON, a son of Ross Allison, deceased, was born in now Hancock county, W. Va., June 14, 1844. Married Elizabeth J. Allison, daughter of Thomas Allison. They settled on his father's farm, where they remained until 1872, then they moved on the farm where they are now living; he is following the manufacturing of staves in connection with farming as his vocation.

CHARLES ALLISON, a son of Jonathan Allison, deceased, was born in now Hancock county, W. Va., December 11, 1805, on the farm now owned by Jonathan Allison in Grant district. Was brought up a farmer, and has followed that as his vocation. His education consisted of what could be obtained in the common schools of those days. Married Sarah White, who bore him four children, Samuel, James, Mary and Nancy; his companion died September 1, 1851; he married Mary Garvin, April 29, 1852, who bore him one daughter, Susan Virginia; he owns a farm of 175 acres, located in Grant district. Served as constable for eight years.

JAMES ALLISON, a son of Jonathan Allison, deceased, was born in now Hancock county, W. Va., October 2, 1809. He has followed farming as his vocation. At present he owns 606 acres

of land in Grant district. He married Sarah Pugh, daughter of Peter Pugh, November 25, 1830. They settled on the farm where they are now living. They reared a family of eight children, Jonathan J., Sarah Ann, Nancy Jane, Peter P., Adaline, James W., Charles and William W., who served six months in the war of 1861, in the Twelfth Virginia Regiment, and died at Winchester, May 13, 1863. Peter P. Allison served nearly three years in the war of 1861, in the Twelfth Virginia Regiment.

John Wilson was born in 1818, on King's creek, Hancock county, W. Va. Located in Fairview in 1841. Finished learning the saddle and harness trade after removing to said village. Went into partnership with his brother in 1846 in that business, carrying on a shop until 1852, when his brother migrated to California. Married Miss Elizabeth Owings in 1846. He purchased his partner's interest and continued the business himself. Elected sheriff in 1870, and re-elected in 1872. He was appointed post master under President Buchanan. Was again appointed under Presdent Johnson's administration. He is still engaged in the saddlery business in Fairview. Is a member of the Christian Church. Has a family of eight children, seven boys and one girl.

J. G. Hunter, blacksmith, Fairview, was born March 21, 1844, in Washington county, Pa. Came with his grandmother to Fairview when very young. At an early age he apprenticed to learn the blacksmith trade with J. W. Allison and remained in his employ about ten years. Married Mrs. Adaline Scott, *nee* Allison, in 1868. They have a family of eight children. In 1872 he erected a shop 40x40 feet and started on his own account. They are members of the Presbyterian Church, Fairview.

George W. Stewart, was born Jan. 18, 4844, and worked at farming until he reached the age of 25. Married Miss Dora Morrow, of Fairview, January 24, 1872. In 1873, he took charge of the Virginia House, and has been engaged in that business ever since. He learned dentistry, and commenced practicing in 1877, in connection with the Hotel. They have a family of three children, Alexander T., James J. and Cora B.

John Bisman, cabinet maker, Fairview, was born in Bavaria, Germany, March 8, 1831, and emigrated to America, landing at New Orleans in 1848, where he remained a few months, and then removed to Pittsburgh, Pa., living in that city four years working at his trade. Was married to Miss Rebecca Berris, a resident of Somerset county, Pa. In 1852, he moved to Fairview, and engaged, as a journeyman a short time, and then purchased his employer's shop, continueing the business ever since. He has a family of two boys and two girls. Shop located on High street.

John Broebeck, miller, at present proprietor of the Eureka mills, formerly known as the Fairview mills, was born in the Shenandoah Valley, near Strasburg, Va., in 1837. Followed farming there for several years, and then removed to Hancock county, in 1859; married Miss Rebecca Pugh. In 1862, enlisted in Company I, 12th Regiment West Virginia, serving three years. Was under Gen. Milroy, when he was driven from Winchester, and also in a charge made near Petersburg. Come in possession of his mill in 1873. This mill was erected in 1828, by a Mr. Silverthorn, and is an old but substantial mill yet, and still retains its reputation for the manufacture of excellent flour.

W. W. Morrow, farmer, was born in Fairview, July 14, 1839. He remained with his father until about 1861, when he enlisted in the three months' service. In 1862 recruited Company D, First Virginia Artillery and received his commission as senior lieutenant in August 14, 1862, serving seventeen months. Mostly engaged in the employ of the government, from the beginning of the war to the close, in recruiting soldiers for old companies. On the 17th of August, 1863, he was united in marriage to Miss K. C. Anderson. In 1865 he commenced farming, which avocation he still follows. Pays some attention to stock raising. He has a family of six children.

William Dever, a son of John Dever, whose father migrated from Germany and settled in Maryland, in the latter end of the last century. Was a soldier of the war of 1812, and fought under General Harrison on the frontier. He afterward migrated to Beaver county, Pennsylvania. His family numbered eight children. Died at the age of 76. John was his youngest son, who had a family of twelve children, all of whom are still living, our subject being the eldest, was born in Beaver county, Pennsylvania, in 1834. At the age of sixteen he left home and came to Hancock county and apprenticed himself to G. V. Swearingen, to learn the mill-wright business, serving three years, under instruction, after which time he followed that trade on his own account until the breaking out of the rebellion, when he enlisted in Company K, Third Ohio Volunteer Infantry. Served under General McClellan in the early campaign and was in the engagement at Rich Mountain. Owing to the great exposure he was subject to in the march and in the camp, his health failed him, and he was honorably discharged from the army. He returned home and married Mrs. Swearingen in 1862. Is principally engaged at farming. He and his family are members of the Presbyterian church of Fairview.

George Baxter, (Curley,) was born near Fairview, August 19th, 1828. His father moved from near Wellsburg, where he was born. He married in 1818, and his wife lived but a few years. In 1825 he was again united in marriage, to Miss Ruth McGuire, who was born on the Hooker farm, not far from where he lived. Our subject remained with his father, assisting him in farming and attended the common schools. On the 18th of August, 1870, he married Miss Eliza Kinney, daughter of Mr. Isaac Kinney. He has been engaged in farming most of his life, and owns the old homestead, where he is now living.

T. J. Marshall, mail carrier, was born near Fairview, Hancock county, West Virginia, April 5th, 1828. He remained with his father, assisting him on the farm and attending school, until he arrived at the age of twenty, then went to buying horses and taking them east for market, and followed that business for five years. In 1852 he was married, and then went to farming for a short time, after which he took a contract for carrying the mail from Fairview to Wellsville, which he continued about eight years. In 1870 he took another contract for carrying the mail from Fairview to McCoy's Station. On this route he runs a hack in connection, carrying passengers to and from the railroad. Had a family of four children—one of whom is dead.

CLAY AND BUTLER DISTRICTS.

A. Manypenny was born April 1, 1821, in Washington county, Pa. Reared in Jefferson county, Ohio. Came to now Han county, West Va., in 1849 or 1850. Followed farming as his vocation for about five years. In 1853 or 1854, he, in company with two of his brothers, purchased the Ætna Fire Brick Works, which business he is following as his vocation at present. Married Elizabeth Robb, June 7, 1857. Their union resulted in nine children, six sons and three daughters.

He remained with his parents until eighteen years of age, then he learned the gunsmith business, which he followed for five years and then returned to farming. On the 30th of December, 1835, he was united in marriage to Susanna Osborn. They settled on his father's farm, located in Brooke county, West Virginia. In 1843 a farm was purchased by his father, for him, in Butler district. In 1862 his wife died, and in 1866 he married Miss K. J. Baker. Farm is located near the old Henderson Mill, on King's creek. He is the father of four children.

SUPPLEMENT

TO

RICHLAND DISTRICT, OHIO COUNTY.

BIOGRAPHICAL SKETCHES.

ROBERT STEWART.

Mr. Stewart was born in Washington county, Pa., in 1788, and came to Ohio county with his father John Stewart, when only ten years of age. His father was a blacksmith and was probably the first one of his trade to locate in this part of the country. He first purchased one hundred and twelve acres of land from a man named Henry Dickson, which is now a part of the well improved farm owned by the Stewart brothers. Robert Stewart, the subject of this sketch ,was raised a farmer, and like that of many others of his day, his education was neglected in his boyhood, but by close application to study during his leisure hours, he acquired sufficient education to make him a very useful man. He married, when twenty-eight years of age, a Miss Farriss, but she only lived a short time, and in 1828 he married Elizabeth Craig, and by this marriage had seven children, four sons and three daughters. Mr. Stewart was a devoted christian and member of the Presbyterian church. He died in 1876, in full faith of going to a better home. His wife had gone before him, having died in 1872.

GEORGE W. NICHOLS.

The subject of this sketch was born in Wheeling, March 6, 1818. He was a son of Hugh and Rosana Nichols, pioneers in Wheeling. Mr. Nichols was raised a farmer and received a common school education. In 1841 he married Rose Cotts, and by this marriage had eleven children. Hugh, the eldest son, was born May 1, 1842, and died November 10, 1876. John W. was born November 6, 1843. James D. born July 25, 1846. Rachel R. born December 5, 1848; she married William Lipincott. Joseph W. born March 3, 1851. Sarah E. born December 19, 1852. William A. born November 10, 1854, Isaac C. born January 2, 1856. Emma T. born January 30, 1860. Mary L. born January 20, 1858, but died when an infant. Elenor May, born May 22, 1864.

W. J. WELSHAUS

was born in Ohio county in 1825, and was a son of Joseph Welshaus, one of the pioneers of the county. Mr. Welshaus was raised a farmer and educated at the common schools. He has a finely improved farm and is devoting considerable of his time to stockraising.

JOHN W. NICHOLS.

Mr. Nichols was born in Brooke county, November 6, 1843, He is a son of George W., and grandson of Hugh Nichols. The family were of English origin, but had emigrated to America prior to the Revolutionary war. John was raised a farmer and educated in the common schools of his native county. In 1869 he married Miss Lula Cotts, daughter of John Cotts. They have had one child—a son. Mr. Nichols is an enterprising farmer and stock-raiser, making the raising of fine sheep a specialty.

SAMUEL SMITH.

Was born in England in 1820, and came to America in 1830, and in 1833 came to Wheeling and remained their eighteen years. He then purchased part of the Wayte homestead in Liberty district, containing eighty-two acres, where he now resides. He married, in 1844, Miss Jenkins. They have seven children living. Robert A., the oldest son was out in the late war—serving with the 15th West Virginia Volunteers. Mr. Smith has a fine farm and is devoting much time to the raising of improved stock. He was deputy sheriff of the county for a number of years.

WILLIAM D. HINES,

Son of Jonathan Hines, was born in Wheeling in 1836. He learned the moulders trade and worked at it for several years in Wheeling. At the breaking out of the late war, he enlisted, October 13, 1861, in the 6th West Virginia Volunteers, and served with honor until 1865, when he was mustered out. He received a wound from which he has never entirely recovered. Mr. Hines is now located on a farm in Liberty district.

JAMES M'DONALD,

Was born in Washington county, Pennsylvania, in 1801, and came to Ohio county in 1810 with his father, Archibald McDonald, who was an old Revolutionary soldier; he settled on the farm now occupied by the subject of this sketch. James was raised a farmer and received a good common school education; he has been prosperous in life, having accumulated enough to make him comfortable as long as he lives. He has now retired from hard work, but has been a man of much usefulness in his younger days.

ROBERT BERKITT

Was born in Scotland in 1827, and came to America in 1848. He located in California until he accumulated enough to buy a farm, when he came to West Virginia and located where he now lives. He married a Miss Brown, and has a fine improved farm.

HISTORY

OF THE

Pittsburgh, Cincinnati and St. Louis Railway,

FAMILIARLY KNOWN AS THE FAMOUS "PAN-HANDLE ROUTE."

ITS PROGRESS FROM ITS INCEPTION, AND PRESENT VAST IMPORTANCE.

FACTS, FIGURES AND OBSERVATIONS SHOWING ITS LEASED LINES, CONNECTIONS, PROMINENT OFFICIALS, ROLLING STOCK, EXCEPTIONAL FACILITIES TO INSURE SAFETY OF TRAVEL, EFFICIENT CONDUCT AND STATISTICS OF BUSINESS.

Interesting Sketches of Trips Along its Main Stem and Branches—Visits to its Principal Offices, and a Graphic Description of its Extensive Locomotive and Car Shops, with Significant Reference to the Matchless PULLMAN PALACE, PARLOR, HOTEL and SLEEPING CARS, as constantly Running on this Road.

SYNONYMOUS with the title of this work, the style of "Pan Handle" has somehow become, as it were, inseparably associated with the important Railroad system named in the above caption. Though really, as the following history will abundantly demonstrate, there exists neither legal or other warrantable excuse (beyond the crude theory of common usage) to justify such a departure. To trace, however, the details, *in extenso*, associated with each and all the several important railway lines now merged into, and operated under the corporate title of the "Pittsburgh, Cincinnati & St. Louis Railway Company," would be about as useless an occupation as the result would prove uninteresting to the general reader. Suffice it, if we take only a general retrospect of facts and figures as ample for historical preservation and future reference. The comprehensive system referred to may be said to have perfected itself "piece-meal"—extending over a period of several years—resulting in its present main stem, operating direct between Pittsburgh and Columbus, a distance of 193 miles, from the former of which cities it is our intention to take the initiative to our subsequent remarks. So far back as March 24th, 1849, an act was granted by the General Assembly of Pennsylvania, chartering what was styled the "Pittsburgh & Steubenville Railroad Company," authorizing the construction of a track commencing on the Monongahela river, near Pittsburgh, and running in the direction of Steubenville, on the bank of the Ohio river, to a point on the Virginia state line. Subsequently, under the provisions of a supplement to this act, passed April 21, 1852, the company received further authority to extend its road into the city of Pittsburgh—thus enabling them to make immediate connection with the Pennsylvania railroad. The work was commenced in June, 1852, and completed in October, 1865, when Steubenville became in direct communication with the east. This line, however, the Pittsburgh & Steubenville, would seem to have experienced difficulty in retaining the approving smile of "Dame Fortune," for we find under date of November 6th, 1867, its franchises and property were brought to the hammer under a decree of foreclosure at the suit of the trustees of its first mortgage. The persons for whom, and on whose account, it was then bought in, immediately organized a new corporation, to-wit, December 28th, 1867, under the name and style of the Pan-Handle Railway Company.

Now, the good people of Pennsylvania and West Virginia (then simply Virginia) desiring rail communication from the Pennsylvania state line to the Ohio river, so early as 1847, encountered all kinds of opposition in the construction of a road, which, however, a private company ultimately got into operation on a very limited scale, but only to witness its failure in 1854.* We next find, under date of March 30th, 1860, the General Assembly of Virginia incorporated what was known as the "Holliday's Cove Railroad Company," for the purpose of constructing a road from the Pennsylvania state line, to—or near—the city of Steubenville, Ohio, which ultimately took in the abandoned road bed originally laid by the private company already referred to. The first election of directors took place May 26th, 1860, when Thos. S. Clarke was made president, with

* In 1847 a petition was presented to the Virginia Legislature for the right of way, to build a Rail Road from the Ohio River, opposite Steubenville, across the Pan-Handle of Virginia, to the Pennsylvania State line, to fill a gap then existing in the present P. C. & St. L. Ry. line. The petitioners' prayer was not granted. A similar petition was presented to each succeeding Legislature till 1852, with the same result. Further effort in that direction seeming useless Messrs. Jesse Edgington and Col. Nathaniel Wells, two energetic, enterprising citizens, in 1853, undertook to build it as a private enterprise, and to that end bought from the land-owners along the line of the road, one hundred feet wide of land, the entire width of the Pan-Handle—seven miles,—and received a title in fee simple for it. The contract for building the road was given to John W. Geary in June, 1853. Mr. Geary subsequently played a conspicuous part in the history of the country, being appointed governor of the territory of Kansas,—was a prominent general in the war of the rebellion, and was afterwards elected Governor of Pennsylvania. On the 4th of July 1854, the first train ran over the road from the Ohio to the Pennsylvania state line, where a large concourse of people assembled and had a grand celebration and a public dinner. Edgington and Wells were bitterly opposed by the Virginia authorities, while engaged in the prosecution of the work. In the fall of 1853, the Governor directed the Attorney General to file in the Ohio county circuit court, a bill for an injunction enjoining them in its further prosecution. The defendants promptly met the issue. The State failed to appear and the case was dismissed. Immediately thereafter, however, the prosecuting attorney of Brooke county commenced another suit in the circuit court there, charging the defendants with a conspiracy against the laws of the State. The case was promptly met again, and after able argument, was decided against the State. Not satisfied yet, the enemies of the road succeeded in getting a bill introduced into the Legislature of Virginia in the session of 1853-4, declaring it a misdemeanor, punishable by fine and imprisonment in the penitentiary, for any person or persons, without a grant of way by the Legislature, to build a Railroad within the limits of the State. Messrs. Edgington and Wells promptly repaired to Richmond, and the result was the bill failed to pass. They run a passenger car daily each way over their road for about six months, when they discontinued their trains and the road remained idle.

Isaac Jones, Thos. A. Scott, J. Edgar Thomson and Edmund Smith, directors; Jos. D. Potts, secretary. In pursuance of this act and amendments, together with a special act of the General Assembly of Ohio, and an act of Congress—this railroad and the magnificent bridge, crossing the Ohio river at Steubenville, were constructed, between the years of 1861–5. The Steubenville & Indiana Railroad Company was chartered Feb. 24th, 1848, by a special act of the General Assembly of Ohio, authorizing the construction of a railroad—single or double track—by way of Connotten, or "Still Water Creek," to Mount Vernon, Knox county, and thence by the most eligible route to the Indiana state line, at any point between Willshire and "Fort Recovery." And it was further authorized by provisions of an act passed March 12th, 1849, amendatory of the foregoing law, to construct a branch road from Coshocton to Columbus, by way of Newark or Mount Vernon, and connect with any other railroad. The election of directors took place March 6th, 1850, when Daniel Kilgore was made president, with Dr. John Andrews, Jas. Means, Wm. McDonald, Thompson Hanna, W. K. Johnson and James Parks, directors; R. S. Moodey, secretary; D. L. Collier, treasurer; J. Blickensderfer, jr., chief engineer, and T. L. Jewett and Thos. Means, solicitors. In December, 1851, however, Mr. Kilgore becoming deceased, was succeeded in the presidency by Mr. James Means, while Mr. J. G. Morris was appointed secretary and treasurer to fill the vacancies caused by the resignation of Messrs. Moodey and Collier. Mr. W. B. Hubbard succeeded Mr. Means as president in 1855, and on his resignation, that position fell into the able hands of the Hon. Thos. L. Jewett, June 7th, 1855, and he acted in that capacity, and as receiver, down to the consolidation of the "Pan-Handle Co." with the "Holliday's Cove Company," and the "Steubenville & Indiana Railroad Company." The work on this line was commenced in 1852, and the road was completed from Steubenville to Newark April 11th, 1855. In consequence of financial difficulties, however, this organization became embarrassed, and September 2d, 1859, the Hon. Thos. L. Jewett became receiver. October, 1865, arrangements were made with the "Pittsburgh and Steubenville Railroad Company," and others, for operating the entire line from Pittsburgh to Columbus as the "Pittsburgh, Columbus & Cincinnati Railroad," and it was so operated until the consolidation referred to was effected. We should also state that the "Steubenville & Indiana Railroad Co." under date of April 17th, 1857, had consummated arrangements with the "Central Ohio Railway Company" to convey its traffic over its section, then in operation from Newark to Columbus, Ohio, but in March, 1864, the former company effected the purchase of an undivided half interest in the said line, thus completing the line of the "Steubenville & Indiana Railroad," to last named point. And now comes

THE GENERAL CONSOLIDATION.

Under date of May, 1868, the "Pan-Handle Railway Co." of Pennsylvania; the "Holliday's Cove Railroad Company," of West Virginia; and the "Steubenville & Indiana Railroad Company," of Ohio, entered into articles of consolidation under the name and style of the "*Pittsburgh, Cincinnati & St. Louis Railway Company,*" thus forming a through line from the terminus of the Pennsylvania Railroad, Pittsburgh, Pa., to the city of Columbus, Ohio, a distance of 193 miles, under the one management. This is exclusive of the Cadiz branch, from the main stem, running eight miles into an extensive agricultural and stock raising section of country, which virtually gives the corporation in question the ownership of at least 201 miles. The new company immediately organized by the election of Thos. L. Jewett, president; George B. Roberts, vice president; J. G. Morris, secretary and treasurer; A. J. McDowell, auditor; W. W. Card, superintendent; M. J. Becker, engineer; S. F. Sculi, general ticket agent; James Means, general freight agent; George D. Whitcomb, supply agent. Mr. Jewett was succeeded in the office of president by Col. Thomas A. Scott, who still retains it with exceptional ability. After all, we may be said to have only given one limb of the immense railroad system so popular under the style, or rather cognomen, of the "Pan-Handle Route," for the company still further controls an interest in the following

LEASED LINES.

The Columbus, Chicago & Indiana Central Railway, from January 22d, 1869—from Columbus to Indiana and Chicago—a distance of 580 miles.

The Little Miami and Columbus & Xenia Cos. lines from the 23d of February, 1870—195 miles—as follows: from Columbus to Xenia, Xenia to Cincinnati, Xenia to Richmond, Indiana; and Xenia to Springfield.

The Chartiers Railway Co's Road was leased December 8th, 1871—from Mansfield to Washington, Pa., 22 miles.

The Cincinnati & Muskingum Valley Co's lines in December, 1872, operating 148 miles, from Dresden junction to Morrow, Ohio.*

The Pittsburgh, Wheeling & Kentucky road—was leased February 25th, 1878, a distance of 24 miles, from its junction with the P. C. & St. L., main line, east of Steubenville bridge, to passenger depot, Wheeling.

In fact, the popular "P. C. & St. L. (or 'Pan Handle') Company," (with its associate, the "Pennsylvania Company," operating in the northwest) may be said to control the entire traffic west of Pittsburgh to Lake Erie, and affords the most complete, direct and inviting routes to Toledo, Grand Rapids, Louisville, Ashtabula, Vincennes, Chicago and St. Louis, with the safest and most efficiently organized facilities of any railway system in America.

STATISTICS OF TRACKS, BRIDGES, TUNNELS, &c.

(P. C. & St. L. Division.)

The length of the main line, as we have said, is $193\frac{3}{10}$ miles, viz:—single track, $176\frac{9}{10}$ miles—double track, $15\frac{4}{10}$ miles, side tracks $48\frac{6}{10}$ miles. Cadiz branch $8\frac{1}{10}$ miles, side tracks $0\frac{3}{10}$ mile. There are 51 wooden bridges, with an aggregate length of 7,752 feet; 23 stone bridges, with an aggregate of 2,584 feet, and 12 iron bridges, 3,353 feet, with nine tunnels aggregating 10,483 feet. All wooden bridges are gradually being renewed with stone or iron structures, and the entire main track is laid with the finest steel rails. There are 81 passenger stations and 50 freight depots between Columbus and Pittsburgh, and 2 passenger and 1 freight depot on the Cadiz branch.†

The Chartiers Railway.

This interesting and substantial track, $22\frac{8}{10}$ miles in length, with $2\frac{5}{10}$ miles of side track, is proverbial for its safety and comfort to travel. Yet there are 22 bridges—an average of one to a mile—along its entire length, aggregating 2240 feet. Two of them are iron aggregating 40 feet, while there are two substantial tunnels, respectively 300 feet and 800 feet long. There are 18 passenger stations and 9 freight depots on this road, and the track is laid on substantial cross-ties with stone ballast—one mile of 60 lb steel rails and the balance of 56 lb iron rails.

The Pittsburgh, Wheeling & Kentucky Railway.

The track of this branch—from a point near the Steubenville bridge over the Ohio river, on the main line, to the city of Wheeling, continues the whole distance $24\frac{2}{10}$ miles, along the

*This line extends from the point of junction with the main line of the C. P. & St. L. Ry., 55 miles east of Columbus, running through the city of Zanesville, and the series of important towns in Southern Ohio, to Morrow, where it makes a junction with the "Little Miami Railroad," 35 miles east of Cincinnati.

†The maximum grade per mile in Pa., is 52.8 ft. Length of straight main track in Pa., 19.7 miles. Proportion of maximum grade to whole length in Pa., 52 per cent. Proportionate length of straight main track in Pa., 53.0. Length of curved main track in Pa., 14.1 mile. Proportionate length of curved main track, in Pa., 42.0. Degrees of curvature to main track in Pa., 2762°.27'. Maximum radius of curvature in Pa., 955 feet.

bank, and in full view of the Ohio river, and has $0\frac{6}{10}$ of a mile of side tracks. It has also 290 feet of Howe Truss Bridges and 570 feet of tressel bridges—80 feet of stone arch and 155 feet of stringer bridges. Its stations are, for the most part, small—Wellsburg, the principle one, being 16 miles from Wheeling. Full history of this line is given hereafter.

A TABULAR STATEMENT

Showing the Lines Leased, Owned and Operated by the P. C. & St. L. Ry. Co.

	Miles.	Total Miles
MAIN LINE.		
Pittsburgh, Pa., to Columbus, Ohio	193	
Cadiz Branch	8.1	
CHARTIERS RAILWAY.		201.1
Mansfield to Washington, Pa.	22.8	
CINCINNATI & MUSKINGUM VALLEY RY.		
Dresden Junction to Morrow, Ohio	148.5	148.5

GENERAL OFFICERS OF THE P. C. & ST. LOUIS RAILWAY CO.

THOMAS A. SCOTT, President, Philadelphia.
WM. THAW, 2d Vice-President, Pittsburgh.
J. N. MCCULLOUGH, 3d Vice-President, Pittsburgh.
D. W. CALDWELL, General Manager, Columbus, O.
THOS. D. MESSLER, Assistant to President, Pittsburgh.
J. T. BROOKS, General Counsel, Pittsburgh.
GEORGE DRIGGS, Assistant Counsel, Pittsburgh.
J. E. DAVIDSON, Assistant Comptroller, Pittsburgh.
J. W. RENNER, Auditor, Pittsburgh.
M. J. BECKER, Chief Engineer, Columbus, O.
M. C. SPENCER, Treasurer, Pittsburgh.
CLIFFORD S. SIMS, Secretary, Philadelphia.
S. B. LIGGETT, Assistant Secretary, Pittsburgh.
W. MULLINS, Purchasing Agent, Pittsburgh.
W. STEWART, General Freight Agent, Pittsburgh.
F. H. KINGSBURY, Ass't General Freight Agent, Columbus, O.
W. L. O'BRIEN, Gen'l Passenger and Ticket Agt., Columbus.
A. D. KELLY, Acting General Baggage Agent, Columbus, O.
O. H. BOOTH, Superintendent Telegraph, Mansfield.

PROMINENT OFFICIALS OF THE P. C. & ST. LOUIS DIVISION.

S. M. FELTON, Jr., General Superintendent P. C. & St. L. Division, chief office, Pittsburgh.

J. H. BARRETT, Superintendent of Division running from Pittsburgh to Dennison, including the Chartiers Valley, Wheeling and Cadiz branches, office, Dennison.

J. R. SHALER, Superintendent of Division from Dennison to Columbus, office, Dennison.

H. B. PUMPHREY, Division Paymaster, Pittsburgh.

EQUIPMENT OF THE P. C. & ST. L. DIVISION.

74 Ten Wheel Locomotives.	149 Gondola Cars.
34 Eight Wheel Locomotives.	153 Paltform Cars.
39 Passenger Cars.	49 Caboose Cars.
13 Baggage Cars.	5 Wrecking Cars.
10 Express Cars.	2 Derrick Cars.
3 Postal Cars.	1 Special Car.
1756 Box Cars.	23 Hand Cars.
414 Stock Cars.	25 Push Cars.

CONNECTIONS EFFECTED BY THE P. C. & ST. L. RAILWAY.

In further evidence of the great advantages afforded by the above road, we add a list of the connections it is daily making at the several points hereinafter mentioned—thus establishing communication with every section of this vast continent:

At Pittsburgh, with the Pennsylvania Railroad, the Pittsburgh, Fort Wayne & Chicago Railway, Cleveland & Pittsburgh Railroad, Allegheny Valley Railroad, and Pittsburgh, Virginia & Charleston Railroad.

At Columbus, with the Cleveland, Mt. Vernon & Delaware Railroad, the Cleveland, Columbus, Cincinnati & Indianapolis; the Columbus, Springfield & Cincinnati; the Columbus & Hocking Valley, the Columbus & Toledo, and the Little Miami, also, the C. C. & I. C. Division of the P. C. & St. L. Railway.

At Mansfield, with the Chartiers Railway.

At Wheeling Junction, with the Pittsburgh, Wheeling & Kentucky Railroad.

At Mingo Junction, with the Cleveland & Pittsburgh River Division.

At Edgefield, with the Cleveland & Tuscarawas Valley and Wheeling Railway.

At Newcomerstown, with the Marietta, Pittsburgh & Cleveland Railway.

At Newark, with the Central Ohio, Lake Erie & Straitsville Divisions of the B. & O. Railroad.

At Caldwell, with the Scioto Valley Railway.

At Dresden Junction, with the Cincinnati & Muskingum Valley Railroad.

At Washington, Pa., with the Washington & Waynesburg Narrow Guage.

IMPORTANT FEATURES ADOPTED FOR THE SAFETY OF TRAVEL.

Few persons accustomed to traveling give this subject sufficient attention when selecting the most desirable routes to patronize, while a still smaller number ever conceive the enormous outlay assumed by a first-class railroad to secure safety and comfort to its patrons. In this particular, there is probably not a railroad system in the nation which takes a deeper interest than the ever reliable P. C. & St. L., as the following synopsis of facts will clearly demonstrate: All their through passenger engines are provided with the world famed "Westinghouse air brake" and a driver brake, while every passenger car is connected with the matchless "Janney coupler and platform." And further, at an increased expense, the newly devised automatic brake is being widely introduced—by which a train, or even any portion of it, happening to leave the track, or become detached, every car of the same comes to almost an immediate stand. The entire main line is laid with steel rails, firmly ballasted, and supplied with improved safety switches where such conveniences are necessary, while at every point considered more than ordinarily dangerous distant signals are unsparingly used, and experienced flag men liberally employed. The system of telegraphing is also perfect. On the double tracks the "block system" is exclusively adopted, trains being separated by intervals of space, while on the single tracks, intervals of time are found more practicable—all stationary signals being so devised, that in case of derangement, the red, or danger signal will be displayed immediately. Every bridge on

the road is laid with safety floors, that in case of the derailment of a train the wheels thereof cannot possibly penetrate the structure. A thorough inspection of all bridges is made daily by the section men, beside which they are subjected, at brief intervals, to a careful examination by experts. The strain upon bridges is constantly being calculated to meet any increased weight in rolling stock, and the very latest achievements in scientific bridge construction are adopted regardless of cost. Improved joints are used to connect the rails securely, and hence all unnecessary oscillation of trains while crossing them is prevented, and an even, smooth motion secured. And yet another special feature is there, that the management has given particular attention to—*the perfect elevation of all curves*, which, though numerous on this line, are so accurately laid and admirably adjusted that it is utterly impossible, while traveling, to detect when the train is passing over them, unless they should come under ocular observation. Under the passenger equipment, all wheels, axles and other parts of rolling stock exposed to wear or excessive strain, are thoroughly tested before being placed in service, so as to prevent the possibility of accidents, while passenger trains on the road are overhauled by competent mechanics each fifty or one hundred miles, according to the character of the road. Another important precautionary measure against accidents, this company has, at considerable expense, adopted on their principal main line freight trains, is known as "speed recorders." A very ingenious devise, carried in the conductor's car, which is so connected with the axle of the same as to accurately record the speed traveled at, and delays occasioned on every trip—thus rendering it impossible for freight trains to run beyond a prescribed speed for any purpose, without reporting the same to the disadvantage of those in charge of the train, while also showing if the engineer has duly observed his instructions to run slowly and cautiously across all bridges or other parts of the road undergoing repairs. Few railroad experiments have proved more effective than this. In fact, so strictly careful are they about their axles that a specified rule is laid down how many miles each axle shall travel, after which it is transferred to the freight service. Nor are they less particular on the subject of selecting employes for responsible positions—as conductors and engineers—the invariable rule being to promote tried and experienced servants from subordinate positions, such as shall have best fitted them for their new and responsible duties—engineers even being subjected to surgical examination, in order to detect any imperfection (should such exist) in their sight. It will thus be observed that this company lacks in nothing to insure the utmost safety to their patrons, and if it were for this consideration alone, the efficiently conducted old "Pan-Handle route" ought really to feast sumptuously of public preference and support.*

BRIEF STATISTICS OF BUSINESS.

By way of substantial evidence, bearing on the competency of this road, the following facts will be found to carry no inconsiderable weight: During the Centennial season, the P. C. & St. L. Co. delivered at Pittsburgh no fewer than 2,042 passengers, from the west *en route* for Philadelphia, in a space of fifteen hours, without delay or the most trifling accident. In 1878 they moved an average of 40,000,000 freight cars and 3,500,000 passenger cars one mile, while in the month of August, in the same year, they moved as high as 4,150,000 freight cars and 3,011,000 passenger cars over one mile. Numerous other equally conclusive and flattering evidences could be adduced were it necessary, especially in reference to excursion seasons, when they are proverbial for their liberality and promptitude in catering to the popular taste for cheap rides over long distances. In short, to conclude in this relation, we probably could not give expression to a sounder sentiment than was recently expressed to us by a fellow traveler, who said: "I have had dealings with most of the lines in this country, and were I to express my honest convictions, they would not only favor the 'Pan-Handle' for its efficient conduct and safety, but bear unqualified testimony to the ever ready spirit of enterprise and liberality on the part of its management to give universal satisfaction within the range of human possibilities."

*So much is said concerning the advantages of one line over another that the occasional traveler, not posted in regard to the merits peculiar to each, is confused; and, in consequence, is just as liable to select an indirect route, by which there are frequent annoying changes of cars and uncomfortable omnibus transfers, as he is to patronize the direct line by which through sleeping cars and coaches are run, making prompt connections in Union Depots. But the intelligent traveler will not be misled so easily. He will take a guide-book, in case of doubt, and satisfy himself of the correctness of published statements. The "Pan-Handle Route" desire that a comparison be made. It can only result in convincing the most skeptical that it is the shortest line between the East, West and South.

PITTSBURGH TO COLUMBUS.

DESCRIPTIVE ACCOUNT OF A TRIP OVER THE MAIN LINE OF THE "P. C. & ST. L. RY.," OR "PAN-HANDLE ROUTE."

How one is Whirled out of the Din, Smoke and Animation of a Manufacturing City, through Scenes of Rural Magnificence and Charming Retirement, to the Attractive Capital of the Famous "Buckeye State."

Brief Sketches of Cities, Towns, Villages and Prominent Sights along the Road, including a short VISIT TO THE "P. C. & ST. L. LOCOMOTIVE SHOPS, AT DENNISON, *Giving their Location, Capacity, Prosperity, &c.*

As it is our purpose to promptly respond to the conductor's familiar invitation "all a-board," from Pittsburgh Union Depot, we may be pardoned for suggesting that so universally popular are the characteristics, resources and specialties of the "Iron City" that to recapitulate them to American subjects would find only a fitting comparison in an endeavor to entertain them with a recital, once more, of the story that brought into popularity the famous little hatchet associated with the memory of the late George Washington. Suffice it to say that entering the new Union depot we found no trouble in discovering the location of the ticket office—so admirably is the building constructed and efficiently managed that it would, in truth, "bother a Philadelphia lawyer" to get wrong. We should remark, however, that here are the General Superintendent's offices, where Mr. S. M. Felton, Jr., skilfully manipulates the lines over "the iron horse" in its fleet career—or in other words, shoulders the responsibilities incurred in the general practical working of the entire road. He is a most efficient and accomplished gentleman, evidencing an uncompromising zeal in the discharge of his arduous duties, equalled only by the success attending his deliberations and discretionary conclusions. Receiving our ticket with all the politeness imaginable from the hands of probably one of the *finest* (in every respect) ticket agents in America, we made for the cars. But, stay—the cars are not approached by any one and every one, or you might realise the miserable experience of getting into an eastern bound train to travel out a Chicago ticket. All this is agreeably obviated and public convenience extensively promoted by the adoption of "pass in" and "pass out" gates with civil ticket inspectors, who only admit absolute passengers to the platform, and politely direct them to the precise train their ticket calls for. Taking our seat in a most comfortable

car, and a few moments finds us carefully crossing several of the prominent streets in the city until reaching what is termed Pittsburgh tunnel, a substantially built structure, laid with a solid double steel track, extending from Seventh to Fourth avenues, and emerging from it we make a brief halt at

FOURTH AVENUE CROSSING.

Leaving it, on the right will be noticed a series of extensive steel and iron works, until we reach the bridge crossing the Monongahela river, a noble structure, set upon the most substantial stone buttresses, and from which, on both sides of the cars, a splendid view is obtained of the river, the several bridges crossing it at other points and the commercial portions of the city. Once across, and the track borders, as it were, round the base of a huge hill, for some distance, confining all the attractions, (if you sit facing the engine,) to the right side of the car, with the exception of "Mount Washington," "Castle Shannon" and "Duquesne" incline planes, which terminate at the right of the track or run over it—from the top of the lofty hill already referred to. The first station of any importance is

"BIRMINGHAM,"

so named after an old town that once stood on the heights above it, but which is now incorporated into the city of Pittsburgh. Here, the clatter and smoke issuing from innumerable extensive factories–through the windows and doors of which are seen balls, bars or chaldrons of red hot metal in process of manufacture—affords conclusive evidence of the leading manufactures being still in iron or glass. And these heated caverns, with their hundreds of toiling artizans within, who verily gain their living by the sweat of "their entire bodies," we continue to view until our train is fairly through what is known as the "South Side." And then we are arrived at

"POINT BRIDGE,"

and an interesting point it is to the admirer of civil engineering.* Close to the depot, a fine, iron suspension bridge crosses the Monongahela river, built some two years ago, and having a span in the neighborhood of 800 feet. And still further, is seen a second bridge, though chiefly of timber and covered in, which unites Pittsburgh and Allegheny, as it spans the Allegheny river. Our track now commences to follow the flow of the river, which it will be seen very soon changes its name.

"TEMPERANCEVILLE,"

says our brakeman, "is the next station," and so we find it. Not that the good people of the locality are any closer disciples of Murphy than the balance of erring humanity, but we presume it was so named by some one not slow to conceive that

"No matter the man, or place—it's the same,
Their future must all depend on a name."

Arriving at the depot, may now be seen the Monongahela and Allegheny rivers joining together, which forms the head or commencement of the Ohio. Directly, we cross "Cork Run," which is about 100 feet below the track. And attention may here be called to enormous shipments of coal, by barges, passing down these rivers—it being a frequent sight to behold acres upon acres of coal, as it were, floating down with the simple assistance of a small tug.† The small stream running under the track, just prior to our arrival at "Temperanceville," we omitted to mention, is "Saw Mill Run"—as Barnum would say—"in all human probability" deriving that name from its being appropriated to the running of a saw mill. But we must leave that an open question for the present, as we are informed that we are approaching

"NIMICK" STATION,

a few hundred yards from which we cease to run with the stream of the river, as it parts our company to accommodate through other "fields of labor." Now "Nimick," be it understood, is named after a wealthy property owner in that section, and being just outside the city corporation limits, is a spot exceedingly convenient and charmingly attractive for suburban residences, which thanks to an intelligent community are rapidly growing in public estimation, and by their innumerable advantages they are unquestionably proving themselves yearly the most lucrative investment the "Almighty Dollar" can possibly be sunk into. From this depot is seen the handsome residence owned by Mr. Nimick, as also the delightful country home of Mr. Stevenson, which stands prominently on the point of a knoll, from the left side of the car. Half a mile still further, and we come to

"SHERIDAN" STATION.

so called after Mr. Wm. Sheridan, residing in a beautiful residence near to it. This is a small station in the midst of a most delightful country district, and it is only surprising that it is not more freely patronized in the way of handsome villas—it is, indeed, well worthy of more than mere passing observation from the cars, and whoever prospects the locality in view to selecting a sight will surely return more than delighted.* About two hundred yards from this depot and our train enters an extensive cutting in the solid rock, which is the approach to "Cork Run Tunnel," two-thirds of a mile in length, and securely lined all through with brick. The land above this tunnel is devoted to agriculture, while the cuttings at each end show that from the subsoil to the track must be a depth of nearly 100 feet. Resuming "scenes of rural gaiety," it becomes apparent from each side of the car that land in this section has been divided into numerous large patches, and prolific gardens demonstrate that gardening is indulged, wholesale, for the supply of Pittsburgh markets. We now come to

"INGRAM" STATION,

which likewise derives its name from a prominent family by that name, a son of which, (Mr. Thos. Ingram,) resides thereat. Everywhere abounds the richest scenery, and it needs no stretch of imagination to feel "how good it must be to live there." On leaving this station, a short distance presents on the left a kind of open plateau with several neat little homes thereon,† while the hills, "God's orchards in varied foliage," form a picturesque back ground to the scene. A little over half a mile, and we come to

CRAFTON,

approaching which, we notice to the right a Catholic church and "Broadhead" cemetery. This depot was also originally called "Broadhead," but some four or five years ago took its present name from a Mr. Craft, who resides there, though the postoffice still retains the old style of "Broadhead." Again under steam, we pass through another deep cutting in solid rock, by railroad men styled "Broadhead Cut," and next view steep ravines and lovely valleys, dotted with domesticated herds—

*The completion of "Point Bridge," with the improvements being effected at its southern terminus, by the railroad company, affords persons doing business in the lower part of the city and in Allegheny, a short and quick outlet to the adjacent country, while the regular time schedule is studiously prepared to accommodate suburban travel to the greatest possible extent.

†The track that is, and has been, following us on the right, running on trestel-work, between our train and the river, is the "Pittsburgh & Lake Erie Railroad."

*Residents fully acquainted with the superior claims of the country referred to—abounding in the loveliest prospects and singular for the salubrity of its atmosphere—will ever be found willing to accord thereto their emphatic preference, with a cordial recommend to the effect that "though so near it is so far" from the characteristics of city life that retirement here enjoyed is the cheapest privilege earth can afford.

†Among them are the residences of Mr. W. McCandless, Mr. Jas. Macken, &c., and on the distant hill will be seen the villas of Mr. Ingram and Mr. Von Bonhorst, commanding specially fine prospects.

which scenes alternate on each side of the track—until we approach

"IDLEWOOD."

Now, it will naturally be concluded that there is a significance in this name, which is best tested by visiting the charming woodlands abounding there in midsummer, and if you don't feel like rusticating, or, in other words, "*idling*" away an hour or two in the grateful shades, why, then accord your verdict for a more appropriate name to this delightful spot. The depot, however, was formerly known as "Cemetery crossing," as the Chartiers cemetery is here located, and the county road leading thereto crosses the track at this point. From the left side of the cars, at the depot, a pretty circular walk will be observed winding round the hill, which leads to what are termed "Idlewood Cottages," a famous summer resort which has led to a change in the name of the station, and whither resort, each season, large numbers of pleasure seekers to indulge in rural pastimes. Looking from the right side of the car, are two conspicuously handsome residences, respectively owned by Mr. Patterson and Mr. J. D. Biggerts, their locations, architecture and surroundings winning for them the admiration of thousands who gaze upon them during a mazy flight behind "the iron horse." Less than a mile, brings us, next, to a stopping point, for short called

"JACOBUS,"

a platform chiefly for the accommodation of the extensive Novelty Works, there run by Messrs. Jacobus & Nimick, as seen from the right side of the car. This important manufacturing institution employs an average of at least 200 hands, though the district around is essentially agricultural, the land on either side of the track attesting in no measured degree to the skill, enterprise and industry of the local "knights of the plow." Yet a little further and we find ourselves crossing the famous "Chartiers creek," after which, from the right side of the car will be observed the "Pennsylvania Lead Co.'s Works," one of the largest and most popular enterprises of the kind in America. Also the mines and coke ovens of the "Mansfield Coal and Coke Co.," who operate on a scale of exceptional magnitude. And this brings us to

"NORTH MANSFIELD,"

approaching which, from the left side of the car, we get a distinct view, in the distance, of the Chartiers Cemetery and "Idlewood Cottages," which were obscured from view by the large hill at the last station. Speaking of Mansfield, it must be understood that two boroughs are usually included. "North Mansfield" depot is really in "Mansfield Borough," while Mansfield Junction depot (a little over half a mile beyond) is in "Chartiers Borough," the two being divided by the Chartiers creek. Mr. Samuel McQuilty is the burgess of one and Mr. W. F. Ford of the other, though the two boroughs have only one postoffice, and that is in "Mansfield Borough," being known as "Mansfield Valley" Postoffice. Leaving "North Mansfield" station, as the R. R. officials designate it, we at once realize that we are emerging somewhat from "pastures green and towering forests," as houses present themselves, numerically, in town proportions. From the right side of the cars, as we approach

MANSFIELD JUNCTION DEPOT,

there is suddenly brought to our view a very fine newly built brick public school, with town clock in its tower; the entire structure probably costing in the neighborhood of $15,000. Mr. T. T. Taylor is the Superintendent at the present time. By looking back from the car window on the top of a hill or point, may be seen the very handsome country residence owned by Mr. Ford. As the train enters the junction depot, to the left is an engine shed, rendered necessary from the fact that three or four engines have usually to be kept here. Taking up our position on the north side of the depot, noticeably will be observed the handsome residence owned by Mr. David Steen, a wealthy and influential local coal producer, also the attractive residences of his two sons, William and Thomas, and his son-in-law, Mr. A. D. Walker. To the extreme left, on a point of the hill, is the fine residence of Mr. Jacob Doolittle, once the chief owner of property in this section and still a wealthy land owner, while the villas of Messrs. A. S. Rowland, W. J. Glenn, Hon. W. Hill, W. Ewing, J. Lee, and others, afford a striking and interesting variety in architectural effect. From the west end of the south platform, a view is obtained up the Main street, presenting quite a number of fine stores, while over the "ridge"—as they call it—or, we should rather say, hill, may be found a number of extremely fine suburban villas owned by Messrs. M. B. Brown, Samuel Canada, Hugh Lee, W. J. Cook, D. Davis, D. Foster, Dr. Hope, &c. In the vicinity of Mansfield the hills are lofty and richly charged with "black diamonds." Coal mines are extensively operated, but there is no manufacture carried on, of any moment, beyond those already named, with the addition of a planing mill, steam flouring mill and brick yard. There are eight religious denominations in the united boroughs, though it is creditably asserted that the population, all told, does not exceed 3,000 or 4,000 inhabitants. A small weekly paper is published here, called the "Item," owned and edited by Mr. Knepper, who keeps his constituency promptly posted on things in general and with an "itemized" account of local doings. There are from fifteen to twenty stores neatly kept and efficiently run in the united boroughs, but we failed to recognize a good hotel. Mansfield being the junction of the Chartiers Railroad with the main stem of the P. C. & St. L. Ry., all passengers from the west going south, and from the south going west, change here. Ten regular stopping trains arrive and depart daily, and there is an office of the Western Union Telegraph Co., and Adam's express agency at the depot—which building, though erected some eight or nine years ago, is kept in good order. Mr. W. H. Roberts, who has been with the company several years, is agent, and a gentleman whom we found exceedingly courteous and attentive in the discharge of his responsible duties.

WE NOW LEAVE MANSFIELD,

and to the right almost immediately observe what is called the "Grant" mines, operated by Messrs. Jones & Wilson, though owned by Ex-Judge Mellon. Soon after, to the left, is "Camp Hill" mine, owned and operated by Messrs. D. Steen & Sons, while still further, on the right, come the "Fort Pitt" mines, operated by the "Fort Pitt Coal Co.," nearly opposite to which are the "Pittsburgh Union mines," worked by Mr. J. McConnell. We now come to

"WALKER'S MILL"

station, so named after Mr. Isaac Walker, an extensive and influential farmer and miller, whose fine brick residence and prosperous flouring mill may be seen from the depot. The groves and dells in this locality, will be observed, form delightful prospects. After leaving the depot, to the right we come to the extensive stone quarry owned by Mr. Isaac Walker, and a second, in close proximity, the property of the P. C. & St. L. Ry. Co., from which the road is very largely supplied. On the left, we pass another charming dell and then come in view of a cluster of houses accommodating probably 150 or 200 persons—chiefly miners. Soon after, from the same side of the car, will be observed a flourishing lime stone quarry, conducted by a Mr. Jackson, and then we approach

HAYS' STATION,

a delightful rural spot

"Where feathered songsters love to chant—
And sweetest flowers bloom."

To the right will be seen "Cherry mines," almost opposite the station, leaving which, we next pass through another heavy rock cutting, computed at 60 feet deep and probably 300 or 400 feet long. Then we come to Gregg's station, simply a shed and platform—the local resident, after whom it is called, residing in a nice homestead located on the hill, as seen from the left side of the car. It will be particularly observed that agriculture is the leading pursuit here followed with abundant success, confirmed by a goodly sprinkling of very attractive farm buildings. As our train crosses the creek the views obtained from both sides of the car are specially interesting—particularly on the left, where we approach the "Oak Ridge" mines, directly after which comes

"OAK DALE STATION."

Here there are from 800 to 1,000 inhabitants and the locality is popular for being the seat of "Oak Dale Academy," a handsome and influential educational institution, patronized extensively by pupils even from considerable distances, who unsparingly avail themselves of the liberal advantages afforded by the reduced fares governing school tickets, as adopted on this line. Now, "Oak Dale," it may be remarked, is quite a flourishing village, possessing an excellent flouring mill, a malt house, Odd Fellows' Hall, &c., with three or four well conducted stores, while it would appear to lack in nothing usually found in a desirable rural market town.* As a situation for the erection of suburban villas it is unexcelled, as an elderly gentleman resident from there remarked to us, "he should always consider that he owed at least ten years of his life to taking up his abode in so healthful and recluse a situation." Indeed, there may here be witnessed some of the prettiest residences on this line of rail, among them being most prominent, those erected by Mr. Guy, Mr. Ewings, and Mr. McFarland. Leaving Oak Dale to the left, we next strike the "National" mines, operated by the "Consolidated Coal and Mining Co.," of Cincinnati, subsequently coming to

"NOBLESTOWN STATION,"

the depot being on the right side of the track, and from the appearance at which, of two fair sized, though somewhat weatherworn Hotels—the "Exchange" and "Pan-Handle" houses—one would natually infer that a live business was rather the rule than the exception. There are from 800 to 1,000 inhabitants here, whose main occupations consist of farming and mining, while several neat country residences relieve the otherwise monotonous rustic surroundings; noticeably among them being the fascinating homes of Mr. Herron, Mr. Greer, &c. We have now come to the end of the double track from Pittsburgh, and in response to the "all right" whistle from the locomotive, we take a parting glance at fair Noblestown and pursue the "narrower path" that leads, next, to

"ARLINGTON," OR "WILLOW GROVE."

The former style is derived from a plat of lots designed for suburban villas in that vicinity, while the latter is the name appropriately adopted by the railway officials. Neither of these names, however, or even any other still more attractive one, could be ill bestowed on so delightful a region—fashioned by nature, as it were,

"Wherein the wise might raise neat homes,
And healthful live forever."

So general are charming prospects on every hand that it would be impossible for the most fastidious to discriminate a preference among the objects of interest. Leaving "Willow Grove" depot, there will be noticed on the right, the specially attractive villas of Mr. McVay and Hon. Vincent Miller—each, alike, the subject of general comment and admiration among passing travelers on the rail. On the left, we next approach "Laurel Hill" mines, conducted by Messrs. W. P. Rend & Co., of Chicago, while almost opposite is "Brier Hill" mines, also a prosperous enterprise. And this brings us to

M'DONALD'S STATION,

with its 1,000 or 1,500 inhabitants where,

"At the close of day, when labor's done,
And all around is still,
It's homeward wends each weary one
That works the plow or mill."

The green sward and valued strata of the mighty hills, here still employ the best energies of the major part of the populace, though as a country seat this locality is also pre-eminently adapted. On the left will be seen the very fine residences of Mr. S. S. Johns and Mr. T. H. Cook, while on the right stands a neat U. P. Church and the pretty villas of Dr. Cook, Dr. McDonald and Mr. Lindsay, though of all, probably, the most attractive is the stone built homestead on the magnificent farm of Mr. John McDonald, after whom the depot is named—a gentleman whose name is proverbial for raising some of the finest stock in America. Proceeding yet nearly a mile and a half further, as we take in views of delightful woodland scenery, on the left, and we arrive at

"PRIMROSE STATION,"

modest in its surroundings as the veritable flower after which it is named—from whence is seen to the right, in a cluster of trees, the secluded residence of the McDonald Bros., who cultivate a rich farm of some nine hundred acres, and like their universally respected pater, are gentlemen very popular for their fine stock. A quarter of a mile hence, and we pass "Robins' Block Vein Coal" mines, owned by Mr. T. Burr Robins, near to which is a small cluster of houses or a village chiefly populated by miners. To the right will also be observed the pretty farm residence of Mr. McBurney—the rural surroundings being superb. To the left we soon approach "Midway" mines, operated by Mr. G. W. Crawford, and then comes

MIDWAY STATION.*

being so named from being mid-way between Pittsburgh and Steubenville. The only fine villa residences here calling for special reference are those of Mr. T. Burr Robins on the left and Mr. Donaldson on the right—gentlemen much respected in the neighborhood. Just past the depot, to the left, will be seen the "Walnut Hill" mines—the property of the "Walnut Hill Coal Co.," and we strike a deep rock cut probably 300 feet long, and 50 to 60 feet deep.

BULGER STATION.†

There is little to call attention to here, or yet until we have passed through Bulger Tunnel, 300 feet in length, as also the next station—"Raccoon"—when we cross a very fine iron bridge, put up last summer, and which spans "Raccoon creek."

BURGETTSTOWN,

the succeeding stop, is a place of probably 1,500 to 2,000 inhabitants, and commands a mill or two, wagon shop, &c., but is mainly supported by agriculture—the farmers in this section being very skillful and well-to-do-men. There are also the utmost facilities here for the dissemination of religion and education—a number of good stores—and we are not quite sure but there is also a small weekly paper. Leaving here, about a mile and three-quarters finds us hurrying through another immense rock cutting and subsequently we enter what is called

*All along the line, and particularly from Oak Dale, will milk cans be found at the depots, the farms on this road daily supplying immense quantities of milk to Pittsburgh City.

*Midway is quite a rising little town, with probably 1,000 inhabitants, excellent churches, school house, and all other accessories essential to a well regulated and prosperous community.

†We are here at the greatest altitude along the route.

"Dinsmore tunnel," (about 400 feet long), and emerging from which, our train soon stops at Dinsmore depot. But

"DINSMORE," "HAMLIN'S" AND "PARIS ROAD" STATIONS,

all in succession, less than five miles apart, and possess few features of any moment beyond their exquisite rural prospects. The latter depot, however, takes its name from a road there located, leading to Paris, Washington county, Pa., and ere we arrive at

COLLIER'S STATION

we cross the state line—leaving Pennsylvania to travel through West Virginia. Collier's is a small station, but a very serviceable one to R. R. men, as it is appointed with special switches and extra tracks for the convenience of dividing trains.

HOLLIDAY'S COVE,

as a stopping point, is so named after a cove discovered on the property of a Mr. Holliday at that place, and it is here that the name of "Holliday's Cove," originated as applied to the old "Holliday's Cove Railroad Co," already referred to in this work. "Edgington" station comes next; after which we arrive at

WHEELING JUNCTION,

around which clusters considerable interest, as it brings to our view the famous Ohio river, the romantic and grotesque hills that appear to encircle the West Virginia shore, the magnificent Steubenville bridge across the river, and the Pittsburgh, Wheeling & Kentucky division of the "Pan-Handle" system that makes direct communication with Wheeling.* It is within a few rods of the old terminal depot of the first railroad ever laid down here—and among other interesting prospects, we command a very pleasing birdseye view of Steubenville city. On the original road referred to, (so persistently put through by Messrs. Edgington and Wells,)† the first train was chartered on the 4th of July, 1854, but the enterprise very soon afterwards collapsed, yet the following reminiscenes of said road may still be seen from the left side of our train, just as it enters upon the bridge. Close to, yet a little below our track, there still stands, in a hollow, the frame of the first and only car ever run on the "Edgington and Wells Railroad," but which, for considerably over a score of years, has been used as a small dwelling house, while at a little distance therefrom is an old two-story frame that still bears the name of "Pan-Handle Hotel," it having been the original terminus of the old road. Such a primitive looking structure, in full view of the modern extensive bridge crossing the Ohio, affords a happy contrast in the matter of railroad enterprise, as compared with a quarter of a century ago. This magnificent structure, from the right of the car, as the train stands in front of Wheeling Junction depot, presents a gigantic enterprise and very fine piece of engineering,‡ (see full sized illustration). As our train crosses the viaduct, the view up and down the river is very fine, as also the distant woodland scenery, and glimpses obtained of

STEUBENVILLE,

at which depot we soon arrive. The station house, though somewhat small, is a very neat and substantial structure, the platform spacious, and indications everywhere assure of our having arrived at about the most prominent road-side town on our trip. Steubenville is in the eastern portion of Ohio, probably one hundred miles from the centre, and may be said to be nearly half way between New York and Chicago. It is 150 miles from Columbus, 270 miles from Cincinnati, 42 miles from Pittsburgh, and 22 miles from Wheeling. The population is estimated at probably 15,000, and among its leading manufactories are the Jefferson Iron and Nail Works, Beatty Flint Glass Tumbler Works, Acme Flint Glass Chimney Works, Clinton Paper Mills, P. C. & St. L. car shops, Steubenville Machine shops, Cincinnati Coal Co.'s coal shaft, Ohio & Pennsylvania Coal Co.'s coal mines, Pan-Handle Chemical Works, Ohio Foundry, McDevitt's wool factory, Anderson's and Travis' planing mills, Ætna and McFeeley's flouring mills, O. Pa. & W. Va. wool warehouse, Alacana Steel Works, Miller's White Lead Works, Basler's Ale and Beer Brewery, Butte's Beer Brewery, Clark & Curfman's Carriage Works, J. Murphy's Carriage Works, the Anchor and Hineman's Soap Works, Mingo Iron Works, Steubenville Furnace and Iron Co., Pearce & Son's Furniture Factory, Johnson's Copperas Works, Smallwood & Winning's Keg Factory, Steubenville Coal & Mining Co.'s Works, Union Marble Works, Sword's Marble Works, Long's Medical Laboratory, Well's Creek Test Oil Co., Staple's Boat Yard, Elliott's Tannery, Richardson's Boiler Works, Robinson & Irwin's Machine Shops, Patent Roof Manufactory, and Hays' Vinegar Works. Not a bad showing for one town, and even yet there may be some small institutions that could be added. There are twenty-one churches here, representing fourteen denominations, two national and three private banks, two extensive school buildings, with four sub-district schools, four hotels, two of them very good, two railroad depots, and four well appointed liveries. Steubenville boasts one of the neatest houses for entertainment, known as Garrett's Hall, seating from 850 to 1000 persons, which is a special inducement to the best companies traveling. We may further enumerate the following, as recently published, (with the substance of the foregoing facts,) in a series of interesting articles through the columns of the *Steubenville Daily Gazette*—there are thirteen cigar factories, eleven carpenters and builders, three lumberyards, extensive "Grangers" wool house, three brick yards, two planing mills, an extensive steam dyeing house, five carpet weavers, two candy factories, two plumbers and gas fitters, two slate roofers, six tin stores, several heavy wagon manufacturers, five private coal banks, not associated with any other local enterprises, &c. Steubenville has probably one of the handsomest court houses in this or even adjoining states, and contains the home office of the Jefferson Insurance Corporation. Nor should we fail to add that the Steubenville Ladies' Seminary is an extensive, time-honored and admirably patronized institution; while there are five newspapers printed in the town—two daily and two weekly—one of which is the *Steubenville Daily Herald*, (Rep.) ably edited and controlled by Mr. P. B. Conn, who also issues a *Weekly Herald*, and the other, differing in politics from its cotemporary, is the *Steubenville Daily Gazette*, one of the spiciest democratic dailies published anywhere, being controlled by Messrs. McFadden & Hunter, who also command a very wide circulation for their popular *weekly edition* of the "GAZETTE." The *Sunday Local* is the only Sunday paper—and a capital one at that, owned and edited by Mr. A. M. Matlack.

Steubenville is an old incorporated town and has ever been characterized for commercial solidity and judicious enterprise. The P. C. & St. L. Ry. Co. have extensive car shops located here, employing from 200 to 220 men under the superintendence of Mr. A. K. Mansfield, an accomplished mechanic and a trusty servant for some years in the Company's employ. At these shops new work is made a specialty, and the admirable rolling stock on the old "Pan-Handle" line is a high compliment to them, though, of course, incidental repairs occasionally intrude themselves on their attention. As a manufacturing town—so is it commercially—one of the most inviting places in Ohio, to the capitalist, for it possesses the utmost facilities both by land and water. Property is very reasonable in price, and the local progressive spirit of its merchants and inhabitants generally is equalled only by their attachment to their town.

*See our trip, described elsewhere in this book, from "Wheeling Junction to Wheeling."

†See foot-note to general history of "P. C. & St. L. Ry," in early part of this work.

‡Put up in 1861–3, and consists of eight spans, the length, including abutment walls, being 2,060 feet. From low water mark to lower edge of cords over the main channel span is 95½ feet, and the whole is constructed on the most substantial masonry. It is probably one of the finest and safest structures of its kind in America.

But we hear our conductor's musical voice once more ringing out "all aboard," as though every one was deaf—and probably his patience is somewhat tested with our delay—hence we resume our seat. "The picture all the way from the Ohio to Columbus is one of marvelous beauty in the leafy month of June, with that other attribute of teeming wealth. And all along, through the three states between Pennsylvania and Missouri, the scenery is charming, and we might almost say, invariably rich with promise of a glorious harvest.

"Sweet fields stand dressed in living green
With rivers of delight."

Golden wheat fields wave in the breeze, and impatiently await the reaper, while here and there stand clusters of great, pussy stacks, rich with the freshly garnered treasures of the field; pastures veined with babbling brooks and specked with flocks and herds; great meadows of timothy and clover; orchards laden with fruit and vineyards with the promise of a full vintage; neat farm houses embowered in groves; busy little towns and villages all the way, where they make everything from a hair pin to a steam engine; green forests crowning the hills and bright streams coursing through the valleys, while over all shines the summer sun, with cloud-shadows here and there sailing across the wide landscape."—*Steubenville Daily Gazette.* For probably half a mile we command a view of the city, and from the left side will be seen, (before leaving the corporation limits) the ruins of Mears' flouring mill and distillery, though the distant view of West Virginia's shore, and the surface of the ever restless Ohio river, (dotted with steamers and barges) relieves the prospect of anything approaching monotony. We pass the famous Jefferson Iron and Nail Works, as also extensive coke ovens, and then resume the indulgence of scanning "God's broad acre" in all its magnificence, until arriving at

MINGO JUNCTION,

where connection is made with the Cleveland & Pittsburgh Railroad, as witnessed running parallel with our track on the left, though lower, and between us and the river. From here will also be seen the Mingo Iron Furnace, an extensive and important enterprise. Out in the river will be observed a large flat island, some twenty to thirty years ago known as "Potter's Island," when there was herbage and trees growing upon it—but which "time and tide" have borne away *entirely* on their swift wings. We should remark, however, that the genuine original name of this island was "Mingo Island," which name it has recently re-assumed and is still known by. About quarter of a mile from the last station will be observed on the left what is termed "Mingo Bottom," Wellsburg being still further in the distance. We now cross the creek bridge and soon come to the first of a series of curves in the track, it will amply repay passengers to look out for. We also pass, to the left, what is known as "Adams' Bottom," the beautiful valley being surrounded with rich foliaged woodlands, Mr. G. J. Adams' residence being on the right, while Mr. Henry Adams conducts a fine farm further up the hill. Having passed round Gould's curve,* which describes two-thirds of a complete circle, we soon come to two other lesser curves—the whole winding, as it were, in snake form, through scenery of unsurpassed grandeur, until we arrive at

ALEXANDRIA ROAD STATION,

taking its name from Alexandria, Ohio. After leaving here we approach yet another curve, crossing a fine truss bridge that spans Cross creek. To the left about 400 yards from the station amid a pretty woodland scene will be observed a ravine or hollow between the hills, down which General Morgan descended during his famous raid in the Rebellion, and it was not far from here that he burned the railroad bridge while devastating the track. Soon after, comes "Irondale," where trains occasionally stop, though the next regular station is

SMITHFIELD,

named after Smithfield, Ohio, which is located to the south. A mile-and-a-half from here we enter what is known as "Tunnel 13" (signifying thirteen miles from Steubenville). It is about 300 feet in length and a remarkably solid excavation, emerging from which we approach

SKELLEYS,

a small road side station in an exceedingly fertile agricultural district. A few minutes from here and our train dashes into another deep cutting connected with "Tunnel 17," 1,000 feet long.

BLOOMFIELD

is the next station, and located between two tunnels, as upon leaving it we soon strike "Tunnel 18," in the neighborhood of 600 feet long. And here we must remark, observing the test of an ingenious telegraph contrivance for the protection of trains passing through tunnels. It is the device of Mr. Lang, the efficient telegraph superintendent on this division, located at Dennison, and is operated as follows: At each end of the tunnel is a bell, having connection with the track, the rails of which, for the entire length of the tunnel being charged with electricity. Directly the wheels of any train comes in contact with them—and while remaining so—the bells start, and keep up, an incessant ringing. Consequently, no train is allowed to enter until the ringing has ceased. Again, should a portion, even to a single car of a freight train, become detached while passing through the tunnel, so long as a wheel remains on the track the ringing signal continues to warn approaching trains, from either direction. The experiment has been in operation for some time, and affords the most satisfactory results, which we should not feel in the least surprised to find will bring it into genreal use. Next comes

UNIONPORT,

a small road side station in these days, but in 1854 it savored of somewhat greater importance as it was the terminus of the "Steubenville and Indiana Railroad." Having next passed

MILLER'S STATION,

a convenient stopping point for an important agricultural district, we come to

CADIZ JUNCTION,

from which a branch extends in the neighborhood of eight miles to Cadiz, a prosperous borough of about 2,500 inhabitants, and the county seat of Harrison county—a section of country extensively popular for stock raising and remunerative farm lands. The junction, itself, is simply a small village with two or three stores. Continuing our journey on the main track, half a mile, and the dark shadow which soon pervades our car suggests that we are once more beclouded with mighty towering rocks, through which is excavated "Tunnel 25," about 800 feet long. Then comes

FAIRVIEW,

an incorporated village of 600 or 800 inhabitants, though the postoffice retains the original name of "Jewett." It is quite a pleasant place to reside at, possessed of ample means for the religious and mental training of its people, and withal, highly favored as a farming district. There is ample hotel accommodation. Leaving here, and passing "Rumley Crossing" without a stop, two miles brings us to

NEW MARKET STATION,

though the postoffice address here, is "Scio." It is also an incorporated village of some 600 inhabitants, and claims con-

*This curve has frequently been credited with equal attractiveness to the famous "Horse Shoe bend," and is extensively known by that name. The finest view is obtained from the platform of the rear car.

siderable prestige as a seat of learning from the location thereat of "Scio Seminary"—admirably conducted, extensively patronized and exceedingly popular for its many superior advantages. Yet four miles further on our journey, and we arrive at

MASTERVILLE,

a place of about 500 inhabitants, though possessing no special features of interest beyond those characterizing, also, the succeeding incorporated village of Bowerstown, which for prolific farms has few equals in the State. About a mile and a half hence we pass through "Tunnel 42," 800 feet in length, connected with which is an immense cutting, and from the left side of the car is soon observed the "Philadelphia Coal Mines," operated by Messss. Tuscan & Co. Now we arrive at

PHILADELPHIA ROAD

depot, which derives its name from a pike at that point leading to New Philadelphia, Ohio. Though from here delightful rural prospects are all abounding, in special features beyond, there is but little or nothing to expatiate upon. Or, in other words, as we once heard the sentiment otherwise expressed:

"It's one of those places, devoid of much show,
But when you talk planting—and making crops grow—
There's few to surpass it—I'd have you to know."

On nearing the next station, the number of tracks abreast, in front of the depot—the activity of locomotives switching about, and especially the rush made by passengers to agreeably employ the fifteen minutes delay in the indulgence of "creature comforts" at the hotel or refreshment counter, afford no uncertain indications that we are arriving at Dennison, which is within a few miles of being precisely midway between Pittsburgh and Columbus—the former being 93 miles, and the latter 100 miles therefrom. But we here propose to break our journey in view to furnishing some account of the surroundings, —resuming the trip hereafter.

DENNISON, AS A RAILWAY POINT,

is exceedingly popular—for its upshot, growth and support have been, and is, still derived from "the track of the iron horse." Even so late as 1863–4 the present town site was nothing but fields, and an isolated house or two was all that could be discovered, even though a microscopic examination be resorted to. But now we find here located the offices of

THE DIVISION SUPERINTENDENTS—

Mr. J. H. Barrett, of the Pittsburgh division, and Col. Jas. R. Shaler of the Columbus division—also the important locomotive shops of the P. C. & St. L. R'y. Mr. Barrett is heart and soul a railway man, having acquired about as competent a knowledge of the various systems as the best. He has really devoted the most of his life to a study of railroads, having been promoted, while with this company, first from chief train dispatcher to master of transportation over the entire road, which position he filled with zeal and ability until within some five or six years ago, when the said district was divided. He was then assigned the half extending from Dennison to Columbus, and subsequently promoted to the additional charge of from Pittsburgh to Dennison, including the Wheeling, Washington and Cadiz branches, while Col. Jas. R. Shaler, also a faithful and competent official in the service of the same company for the past six years, was assigned the superintendence of the division running from Dennison to Columbus, which he still presides over with so much ability and success. Through the offices of these gentlemen are issued all the important changes and improvements in the detail operations of the road, including the periodical

REVISIONS OF THE TIME CARDS.

The compiling of these intricate indispensables is accomplished by a most ingenious and unerring device, known as a time chart. Along the upper edge of this chart are consecutive numbers of hours and minutes, and down the left side, opposite the names of the stations, distances by miles are represented, while the centre of the card is ruled in small black spaces, much resembling the face of a honey comb. Over its surface each train designated on its course by a thread, and its progress, time and passing points are indicated by the locating of a number of pins. By this method a completed chart shows at a glance all the trains on the road at one time, thus precluding the possibility of them running anywhere on each others time if the schedule is only rigorously adhered to. Few people have any conception of the anxiety, care and responsibility incurred in framing a new schedule—for to vary the running of a single train necessitates a readjustment of the chart throughout.

DENNISON—PAST AND PRESENT.

The name of Dennison was derived from Ex-Gov. Dennison, a considerable landowner in that place. It was laid out in 1865 by what was known as the Dennison Land Company, consisting of T. L. Jewett, G. W. McCook and G. W. McIlvaine. These gentlemen, anticipating the location here of the shops and round house, saw the propriety of securing the ground, of which they still hold considerable. The shops were entered upon in 1865, and immediately the town began to spring up. The number of inhabitants increased rapidly, and not feeling it by any means agreeable to be subservient to the local government of Urichsville, directly a sufficient population warranted the application, it was made and obtained from the Legislature granting to Dennison the charter of an incorporated village, and being divided from Urichsville, half a mile distant, by "Little Still Water Creek," that stream was adopted as the boundary line. From this time Dennison never switched from "the track of progress," and being exclusively supported by the "P. C. & St. L." shops it may consistently be termed "a railroad town" in every sense. Quite a large number of railroad employes have also erected their own residences outside the lots controlled by the Land company, and the population of the town, at present presided over by Mr. Thos. McCormick as mayor, may fairly be estimated at 1,500. Among the most attractive residences we may mention those occupied by J. H. Barrett, Esq., Col. J. R. Shaler, Mrs. Denmead, Mr. Ross Kells, Dr. Brown (the Presbyterian Church parsonage) and others owned by Messrs. McCormick, Welsh, G. L. Lang, J. Ansell, J. M. Mosier, &c. This being the only station between Pittsburgh and Columbus, at which a brief delay is necessary for a a change of locomotives, it has always been popular for the convenience of

A FIRST-CLASS REFRESHMENT COUNTER,

where passengers could recuperate the inner feelings at a nominal cost, during a protracted journey. Some eighteen months ago, that institution came into the hands of Mr. W. A. Bovey, a prominent resident in the neighborhood for the past twenty-five years, and a gentleman whose circumstances, extreme affability and enterprise pre-eminently adapt him for its efficient conduct. In addition to the bountifully supplied refreshment counter, where a grateful public, by the thousands, can attest to constantly meeting with everything clean, neat and wholesome as though prepared at their own homes, immediately to the east and in the rear of that stand, within a few feet of the platform, it will be observed that Mr. Bovey further conducts

A CAPITAL HOTEL AND DINING ROOM,

whence such passengers resort, from each train, who desire an excellent full meal, served sprightly and associated with every home comfort, at ordinary rates. The dining room is particularly inviting, with its number of snow white covered tables

set for any emergency, and it is surprising how cool and fresh it is kept during the heated summer weather. There is here a seating capacity for nearly one hundred persons at a time, and we speak from experience when we say that host Bovey's *cusine* is unsurpassed by similar institutions on any other line in the Union. He has also the additional accommodation of twenty-seven neatly appointed sleeping chambers for guests, with cozy ladies' parlors and every other accessory usually found at a first-class hotel; and better still, we are glad to hear that steps are being taken by Mr. Bovey for the remodelling and extending of his platform refreshment counter, after which it will be 100 feet long, and entered from the front by double glass folding doors—lit by eight windows during the day and attractive chandeliers by night. The interior will be graced with plate-glass mirrors and the counters tastefully fitted with handsome urns, tankards, &c., while the addition of a barber's shop and commodious bath rooms will not be overlooked. In short, it is Mr. Bovey's intention, that in the foregoing respects travelers shall find Dennison equally inviting with the best depots on any line in the country.

TAKING OUR WALKS ABROAD,

we found that Dennison had three places of public worship—Presbyterian, Episcopal and Catholic—a reading room and library, and an exceedingly neat and well appointed literary hall—admirably adapted to the presentation of entertainments—being under the control of the "Tuscarawas Library and Reading Room Association," of which organization Col. Jas. Shaler is the president, and Mrs. Newton acts as librarian The railroad company contributed handsomely to the establishment of the foregoing indulgences, and their employes are made beneficiaries, while the general public are subject to a small due. A more inviting and well kept institution we have seldom inspected. The Presbyterian, or as it is generally called "the Railway Church," was built some eight years ago, mainly at the instigation of Mr. W. W. Card, then superintendent on the P. C. & St. L., and Mr. Thos. Denmead, at that time master mechanic at the Dennison shops of the same road. The railroad company, in their accustomed spirit of generosity towards their employes, lent substantial aid towards its construction, as did also the two gentlemen already named from their private means, and the result has been the construction of a most attractive and commodious building at a cost of some $20,000—it having a seating capacity for about 600 persons. Internally it is neatly fitted throughout with solid black walnut—reversible seats, similar to those in the cars, and the whole comfortably upholstered in crimson plush. It is suitably carpeted, perfectly heated and ventilated, and has an organ and choir gallery at one end, containing a very fine pedal pipe organ of full compass. The pastor is the Rev. C. J. Hunter, whose privilege it is to share the highest regard of a large congregation and a distinguished position in the estimation of the Presbytery. The Episcopalian Church, though much smaller, is a perfect little model in its construction. It was built in 1877, will seat about 200 persons, and is a frame structure upon a substantial stone base. It is finished inside very plainly in a light walnut, presenting a remarkably neat and comely appearance for a house dedicated to the worship of God. It contains a suitable pipe organ, and the stained glass windows have a rich effect—particularly a magnificent memorial window inserted to the memory of the late Rev. W. Probasco, rector of Massillon, who rendered much spiritual consolation to the laity of this parish while it was yet a mission station. It may be said, however, that it was mainly through the Christian zeal and liberality of Col. Shaler that this interesting sacred edifice was first erected, and we understand that steps are already being taken to immediately erect a parsonage connected therewith. The Rev. J. M. Hillyar is the minister in charge, having received his appointment some twelve months ago, and in return for his characteristic energy in his sacred calling he shares the respect and sympathies of quite a considerable and influential congregation. The Catholic Church is small, but very repletely fitted and well attended, being under the spiritual care of the Rev. Father Hawe, who is much beloved and manifests the utmost sincerity, ability and enthusiasm in his labor of love. In Dennison there is further

A VERY COMMODIOUS PUBLIC SCHOOL BUILDING

said to have been constructed at a cost of $5,000—well lit and ventilated—and at present commanding an average attendance of about 200 to 250 children, who are instructed under the superintendence of Mr. A. C. Bagnell.

COMMERCIALLY SPEAKING,

there is no gainsaying the fact that though Dennison has quite a good representation of well stocked and ably conducted stores, a considerable amount of trade, ostensibly belonging to it, falls to the share of Urichsville, where a large number of the railroad men have shown a preference to reside—the distance being so trifling—or the probabilities are that the former would, to-day assume even much larger proportions. With the foregoing outline of the town in general we now propose to take in what may emphatically be styled "*the lion sight*," or in other words,

AN INSPECTION OF THE P. C. & ST. L. RY. CO.'S LOCOMOTIVE SHOPS.

The "Iron Horse" at Home—How He is Cared for and Stabled—An Insight to What is Necessary to Sustain Thoroughly Efficient Motive Power for an Important Railroad System.

Dennison can probably boast one of the most replete, thoroughly appointed and ably conducted—if not most extensive—locomotive works in the country. The P. C. & St. L. road here controls a perfect "hive of mechanical industry," employing an average of at least 400 hands the year round. On the south side of the depot, upon forty acres of ground, will be observed a series of substantial brick buildings, conspicuous among which is what is termed an extensive "Round House"—or, if you please, a *stable*, with suitable stalls for the "wonderful iron horse of the nineteenth century." To the gentlemanly and generous attentions of Mr. Ross Kells—the master mechanic—are we largely indebted for subsequent information freely given while *chaperoning* us through the institution over which he has the privilege of presiding. Commencing with

THE MACHINE SHOP,

which is 310 feet by 90 feet, lighted by innumerable windows, and an extensive perpendicular sky-light in the roof, we were not a little surprised to gaze upon so interesting and diversified a scene of mechanical and physical animation. In this department the erecting and fitting is conducted under the able foremanship of Mr. W. A. Stone—no fewer than fourteen tracks running into the building. Among the numerous appliances in active operation—for 150 men are employed in this shop alone—we noticed a magnificent 6 foot lathe for turning "driving wheels," beside a score of lesser lathes for various purposes. Also, quartering, slotting, heading and bolting machines, drill presses, wheel presses, planers, boring mills, and so on. At the west end of this shop some wood work is also performed, such as constructing locomotive cabs, bumpers, "end sills," &c., involving the additional use of scroll saws, mortising machines and other modern devices in artifice. In fact, so re-

pletely appointed are the departments, that at these shops, the present year, they completely built engine No. 15, "from stem to stern," and she is one of the best locomotives now on their hands. Usually, however, they only put together their engines and conduct general repairs, turning out an average of fifty-two engines a year—or, one a week. Ascending a stair case at the west end of this building we were introduced to the pattern making and storage rooms, near to which is

"THE DRAFTING ROOM,"

in charge of Mr. W. P. Edwards. Here, we decidedly struck a "bonanza"—something entirely new, novel and instructive, in the way of copying plans and drawings by sun-light—similar to the principle of photography, only much more simple. It is a process by which duplicates may be produced within even ten minutes, in fine weather—thus enabling one man to easily accomplish the work of nine draftsmen, on complicated designs, in one day. Through the kindness of Mr. Edwards, who has decidedly become an adept in the manipulation of the art, we are enabled to give some idea of the process. He first prepares a solution of red prussiate of potash, adds a solution of ammonia—citrate of iron—and mixing, preserves them from the light. With this combination he sensitizes his paper in a dark room—subsequently dries it, and it is ready for use. To perform the printing, a large plate of glass in a frame is necessary. The drawing is placed therein, face to the glass—the sensitized surface of the copying paper is laid on the back of the original to be copied, and a flannel padded and perfectly even back-board fills up the frame, when it is carefully screwed down. The frame is then turned up to the sun light, and exposed to its influence for a few minutes according to the light's strength. The copy is next taken out, thoroughly rinsed through a running stream of clear water, and the result is as follows: The dark lines on the original have left white ones on the copy, while the balance of the sheet has turned a deep blue —and thus a perfect *fac simile* of the original is secured. The process is simple to a degree, and perfect as photography, while copies are so cheaply, expeditiously and faithfully produced that the advantages thus conferred are of inestimable value—enabling mechanics in every department of the company's service to have their own copy of the draft they are engaged upon. Indeed, Mr. Edwards did suggest that he could even take us a photograph by his novel process, but having too much regard for the misappropriation of material such an experiment would incur, on so ordinary a visage, we bowed our acknowledgments and were soon introduced to

"THE BOILER ROOM,"

where the "rattle, rattle, rattle," and "rattle, tap, tap" of the industrious hammers furnished one with a lively conception of the precise locality nature had selected for the organ of hearing. This building, 80x100 feet, gives employment to about 45 hands and is under the foremanship of Mr. J. C. Johnson. Two sets of rolls, punch and shears, bolt cutter and bolt machines were being run sprightly, and nothing was wanting to convince one that this shop was contributing its full quota to the general activity of the works. Taking a breath of fresh air, for we verily imagined workers in iron and steel could hardly be constructed as other men, in the matter of standing heat (assuming ourselves to be among the decided majority coming under the style of others), we nerved up to explore

"THE SMITH'S SHOP,".

a fine building, 80x120 feet, in which we were cordially received by Mr. Geo. Miser, the foreman. Here we found about 50 "sons of vulcan," "with broad and sinewy arms," scattering broadcast a shower of sparks—not "like chaff on a threshing floor," but verily to be comparisoned only to a mighty hail storm. The merry "anvil chorus" that saluted us, intensified in its noise by the sprightly "thugs" from a 30 cwt. steam hammer, attesting to Solomon's wisdom—were it necessary—when he ascribed all honor to the smith, as the king of artificers. This shop would seem to be the veritable key to the whole business, for upon it is made calls from every section of the works, and if we may judge from "the willing toil of the hardy crew," they are equal to any and every emergency. From here we proceed to

"THE ROUND HOUSE,"

so called from the fact of its being built in the form of a semi-circle, with a host of tracks running into as many apparent stalls, while in the centre of the yard a ponderous 50 foot turntable is constructed to transfer the engines to or from any stall in the building. Among the makes of engines we noticed particularly the Baldwin eight and ten wheel, the Pittsburgh Locomotive Works eight and ten wheel, and the Norris eight and ten wheel, which average in weight from 34 to 40 tons each. J. W. Rusk is foreman in this department, and merits commendation for the general tidiness and system everywhere apparent. Indeed, the passenger engines are the handsomest and cleanest kept we ever saw. Retracing our steps to the main building, we enter a branch therefrom, and find ourselves in

"THE ENGINE ROOM,"

where a fine 60-horse power stationary engine, the pink of cleanliness, is noiselessly revolving an immense fly-wheel in response to the promptings of a cylinder with a 24-inch stroke. Robert McCulloch, to whom this department is entrusted, is a time-tried and most efficient servant, having been with the company over eighteen years. Now entering what is termed

"THE TOOL ROOM,"

the same system and good order that governs every department again suggests itself—"a place for everything and everything in its place." Here are carefully arranged to view, on shelves, reamers, bits, machine and hand taps, dies, &c., without end—a full set of templets for duplicating standard parts of locomotives, and, in fact, everything the mechanic can call for. A window is provided, whereat applications are made for whatsoever is wanted, near to which a book bears witness of whatever goes out—whence it went and to whom. Adjoining this department, we step into

"THE STORE ROOM,"

measuring 30x40 feet, and from the variety of its contents it could not be more appropriately named unless styled "*a multum in parvo*"—for there is literally everything, piled up or arranged around, in systematic order, from flues, springs, bar iron, buckets, brooms, lamps, lamp chimneys, down to matches, spriggs and even tacks. And this brings us to what is termed

"THE OIL ROOM,"

a solid brick structure, semi-detached and designed especially for the purpose to which it is applied. Here, in the cellar, are stowed ten large tanks with a capacity of ten barrels each, containing lard oil, carbon oil, paraphine and black oil, the contents being drawn off by a cyphon in a room above—hence, the whole of the combustibles are cut off perfectly from anything likely, or even possible, to ignite them. The upper room is used for the storage of waste, tow, &c.—the whole is perfectly heated by steam, and is kept under special lock and key. From here we were introduced to

THE ROUND HOUSE OFFICE,

a convenient and tastefully fitted room for the special use of engineers. It is attached to, or connected with, the "Round

House," and as the men alight from their "iron steeds," this cozy reception room is at their elbows. It contains a series of wardrobes, desks, time cards, bulletin boards, mirrors, pictures, and in fact everything to be desired for their comfort. Here they can make out their reports at leisure, and indulge social intercourse among themselves without interference—and from appearances, the boys regulate the order of their apartment with a taste and neatness that would excite crimson to the cheeks of full many a *materfamilias* who is so want to exclaim, "Oh! that husband of mine!"

THE BRASS HOUSE,

or what might be consistently put as the brass casting hall, is a semi-detached structure on the premises, presided over by Mr. Isaac Denmead, than whom, in his specialty, there are few more competent mechanics. On entering we were received with a good natured smile of welcome that flit over as jolly and frank a countenance as man could desire to greet—the worthy "disciple of shining metal" being up to the elbows fashioning moulds for the boiling composition, while around were crucibles innumerable, and a "slack air furnace" was noiselessly performing its part in the work on hand. Adjoining the casting hall is Mr. D's office and finishing room—or perhaps, we should say store room, for there were castings of every size, shape and make packed around, that suggested the proportions of a wholesale warehouse, while hundreds of patterns were hung around. Employing only a very limited number of hands under him, the excellent order displayed in the conduct of this shop may be said to redound all the more to Mr. Denmead's personal exertions, as he conducts the whole of the brass castings and car bearings for the company's shops. On our continued ramble we next came in contact with

THE COMPANY'S ICE-HOUSE.

This we found to be a substantial, tall frame building, 50x60 feet, in which, every season, an immense quantity of the purest ice to be obtained is stored for the purpose of replenishing ice coolers in the cars, through the heated summer months, as trains are delayed at the depot. Though a somewhat humble looking structure, as compared with the others among which it is associated, the good offices to which it is employed far more than compensate for its appearance—suggesting to us that "we should never take a bird by its feathers." After this we were taken through

THE SAND HOUSE,

where we found a worthy son of the "Emerald Isle" to be "officer and high private on duty." "Matthew O'Donnell," remarked Master Mechanic Kells, as we entered—and the affable humor that flowed with the good-natured smile put on by Mat. left little doubt that we were introduced to the right "gintleman." Surrounded with huge bins of sand—each containing that commodity in a process of drying or refinement—and with three stoves, or ovens, at command for drying, we found Mat's responsible duty was to keep up a constant and sufficient supply of fine dry sand for the use of locomotives in wet weather, to prevent them from slipping—"an' faith he's the boy phat kin do it." Adjoining is also the hostler's house, where several animals are kept for transient light work around. Happening to speak about their water supply, Mr. Kells remarked that the Company had established

THEIR OWN WATER WORKS,

which we subsequently found to be a most efficient institution, consisting of a very fine reservoir on a lofty hill. Its capacity is 450,000 gallons, and it supplies the whole shops and Company's premises contiguous. There is an engine-house connected therewith, containing a fine Knowles' pump that throws 350 gallons per minute.

THE CAR REPAIR SHOP.

Proceeding to the east end of the yard we found yet another important branch department, as above. It is a wooden structure, 240 feet long, and employs quite a large number of men, being under the foremanship of Mr. D. F. Andregg. The ease and alacrity with which the ponderous cars and their several heavy parts are here handled by the mechanics is something marvelous, and the expeditious manner in which repairs are conducted only excites one's surprise that this department is never run out of a job, were it not a pretty generally conceded fact that for wear and tear a railroad has few equals short of an army train in active service. And finally we come to

THE OFFICES AND OFFICERS OF THE MOTIVE POWER DEPARTMENT.

The offices are located in the western end of the wing running from the main building and form a continuation from the store room. The chief clerk of motive power is Mr. Charles Peirce, son of a former master mechanic at these shops, and who has himself been in the company's service since 1872, he filling his present position with the utmost attention and efficiency. The Master Mechanic—Mr. Ross Kells—is strictly what his title implies—a thorough master of mechanics—one who has worked his way up from the vise by sheer perseverance and integrity. He engaged with this company in 1856 at their Steubenville shops, and was removed here as a foreman in 1865. A few years later he became general foreman of the shops, and subsequently (at the death of his predecessor, Mr. Elbridge Peirce, who had previously succeeded the late Mr. Thomas Denmead) he, in turn, received his present appointment, and in that capacity remains still, one of the Company's most valued and faithful servants. Mr. W. A. Stone, at present the general foreman under Mr. Ross Kells, has been with this company over thirteen years, and from the bench has preëminently fitted himself for his present responsible position, which he fills so efficiently. Indeed, old servants is the rule in this Company's employ, and a very desirable one, too, which may be said to largely conduce to the proverbial safety of the road and its rolling stock. Taking the shops and yards as a whole, for orderly appearance, systematic working and completeness, the most uninitiated could not fail to recognize ample reason to extend hearty congratulations to the management of the road, whose privilege it is, we again repeat, to control one of the finest and best regulated, if not largest, locomotive shops to be met with in the country.

DENNISON TO COLUMBUS, OHIO.

OUR THROUGH TRIP ON THE MAIN LINE CONTINUED.

Having passed a pleasant half day in Dennison, meeting with the utmost civilities and attentions of the railroad officials, sweetened in no measured degree by the generous hospitalities and accomplished entertainment of host Bovey, of the Railroad Hotel, we resumed our seat with a resolve now to accomplish our journey through. Half a mile, and we find ourselves

AT URICHSVILLE.

This is a much older and larger town than Dennison, being divided therefrom, on the east (as we have said), by "Little Still Water Creek," and on the west it is divided from the village of Edgefield by "Big Still Water Creek." Urichsville was laid out in 1833, by one Michael Urich, then residing in an old log hut which still stands at the head of the town. A Mr. Welch was the first post master and Michael Urich opened the first hotel. Down to 1864–5 the growth of the town had been but very slow, and in those days a whole block is said to have been sold for $500, which now could not be purchased for

less than $6,000 to $8,000. It was the opening of the P. C. & St. L. C'y shops at Dennison that gave life to this town and enhanced its property in a superlative degree. The town has now two good hotels (the "United States" and the "Central"), both of which run omnibusses to meet every train from the East at Dennison. A small weekly paper is published here—"The Tuscarawas Chronicle"—owned and edited by Mr. James Graham. There are two capital banks and three places of public worship. The Methodist Church is a fine building, at which the Rev. Jas. Rogers officiates—the Moravian Church is under the spiritual direction of the Rev. J. M. Levering, and the Disciples' place of worship is in charge of the Rev. J. H. Dodd. The population of Urichsville is about 2,300, and in addition to receiving a large amount of support from the railroad shops it is favored with the trade from a large and wealthy agricultural district around. Captain Paris is Mayor, and is to be congratulated on the business like appearance of the town over which it is his privilege to preside. There are perhaps as fine public schools in Urichsville as in any portion of the State—the magnificent structure being put up in 1874 at a cost of $30,000. The architect was a Mr. Mosher, of Columbus, and the board of trustees at the time, whose names worthily adorn a tablet on the building—for they engineered the project with indomitable perseverance and ingenuity—were: Messrs. E. A. Parish, W. A. Bovey, F. McCauley, C. Forney, B. Wilkins and A. Holmes. The present superintendent is Professor Ray, who has been in charge for two years, and is assisted by a staff of ten competent assistants—the total enrollment of the school being from 700 to 800 pupils. The building is internally fitted to perfection, having ten class rooms, and three play rooms in the basement, while the entire grounds upon which the building stands, yards included, is three acres. Not far distant we also observed a fine fair ground, to all appearance, but which is known as "Dennison and Urichsville Driving Park." It was recently opened by a private company, and though there has only, as yet, been one meeting thereon, that occasion proved most conclusively what a popular enterprise had been floated. The track, which is half a mile round, is one of the finest to be found anywhere—solid, even and smooth—while the stand, stables, floral or refreshment hall and other buildings are substantial, neat and convenient. For a country town Urichsville is very pleasant to reside in; business is not subject to serious fluctuations, and as a rule the tradesmen are shrewd, solid and enterprising. The next station we find to be.

EDGEFIELD,

the point at which we make connection with the Cleveland, Tuscarawas Valley & Wheeling Railway, at present running from Edgefield to Black River, though the company are actively engaged in cutting a section between Edgefield and Bridgeport, Ohio. To the left, from the car window will be seen the Magraw planing mill and lumber yard, as also an engine shed belonging to the C. T. V. & W. Ry. Co.,—but with these exceptions this stopping point is simply a railroad track crossing. Nevertheless, Edgefield, as a farming district, is thickly populated and represented by agriculturists of means and wide experience. Leaving Edgefield, a distance of some half mile affords magnificent scenes of rich woodlands on the sides of lofty hills, while the soft, pure air wafted therefrom, over mantled fields of rich herbage or waving grain, suggests that

"To live among such charming scenes
A "round old age" would win."

Next we come to

TRENTON,*

(a depot and siding) after passing which, it will soon be seen from the right, that we first strike the Tuscarawas river, which we continue to view for three-quarters of a mile. To the left we pass Trenton mines, now fallen into disuse, while the distant woodland scenery, from the left side of the cars, appears even to intensify in beauty and extent, until we strike what is termed "Gravel siding," where the Railroad company get most of their excellent ballast. Then we approach

GNADENHUTTEN,

a rural station with a name of decided Indian derivation, and located in a prominent historical section. It was near here, during the last century that some ninety Moravian Indians were enticed into huts and massacred innocently for supposed blood thirsty depredations, and to the memory of the red skinned martyrs a magnificent monument has of late years been erected, which is a noble shaft, standing sixty feet high—procured by public subscription, and supplied by a prominent Chicago firm.* At the same point, a nice public park has also been laid out with pleasant walks through it, but it is to be regretted that in late years local residents have seen fit to appropriate part thereof to a burial ground. In the fall and winter seasons, when the trees are divest of foliage, a sight of this memorial monument is obtained from the car windows, as the train is crossing the railway bridge spanning the river near the depot. Gnadenhutten is a village of probably 300 to 500 inhabitants, whose residences are scattered, and, of course, agriculture is the exclusive occupation, while every year brings quite a large number of visitors to the monument and park. Leaving the depot, a distance of about two hundred yards brings us to a very fine bridge crossing the Tuscarawas river, from which it is only a little over half a mile till we arrive at

"LOCK 17,"

originally a great grain shipping point on the Cleveland and Portsmouth Canal, which water course—popularly known as the "poor man's highway"—we here first observe from the right side of the car, as it is called into requisition to propel the "Clay Flouring Mills," run by Mr. John Heck. Behind will also be observed a small brick structure used for a church and school house, nestled, as it were, in a bunch or cluster of trees. From here the canal runs, within half a mile of the track, all the way to Newark, though frequently being unobservable from the cars. There is a scattered population of

*Some two miles hence, (Trenton being the nearest station) is found the following interesting relict: Among the earliest and most zealous workers as a Moravian missionary in this section was David Zeisberger, who with his co-worker, one Edwards, terminated their earthly pilgrimage here, and their graves are still kept green—that of the former bearing a small marble slab, on which may yet be very imperfectly traced—"David Zeisberger, who was born 11th April, 1721, in Moravia, and departed this life 7th November, 1808, aged 87 years, 7 months and 6 days. This faithful servant of the Lord labored among the Moravian Indians, as a missionary, during the last 60 years of his life." Some friendly hand, perhaps a relative, placed the stone there many years after the good man's death. Those acquainted with the history of the Moravian missions will readily recognize the deeply interesting associations with the above names, while others, less fortunate, will find a perusal of the same, as set forth in "Caldwell's History of the Pan Handle"—or "History of Belmont and Jefferson counties," published this year, yield them a feast of the most intensely interesting historical lore.

*Howe's History informs us that "The first white inhabitants of Tuscarawas county were the Moravian missionaries and their families They had their stations on the Tuscarawas, or either, Indian stations—Shoenbrun, Gnadenhutten and Salem. The site of the first is about two miles of New Philadelphia; seven miles farther south was Gnadenhutten, in the immediate vicinity of the present village of that name; and about five miles below that was Salem, a short distance from the village of Port Washington. The first and last mentioned were on the west side of the Tuscarawas, now near the margin of the Ohio canal. Gnadenhutten is on the east side of the river. It was here that the massacre took place on the 8th of March, 1782, which for cool barbarity is perhaps unequalled in the history of Indian wars. The Moravian villages on the Tuscarawas were situated about midway between the white settlements near the Ohio, and some war-like tribes of Wyandots and Delawares on the Sandusky. There was a British station at Detroit and an American one at Fort Pitt, (Pittsburgh) hence the Moravians were situated, and held neutral grounds, between the two fires. In the autumn of 1781, an English officer, named Elliott, two Delaware chiefs and 300 warriors visited Gnadenhutten and compelled the Indian christians, (or Moravian settlers) to proceed west for safety. After suffering from cold and hunger during the winter, about 150 Moravian men, women and children returned to Gnadenhutten to recover their corn left the preceding fall on the stalk. Several Indian depredations being reported at this time, from Pennsylvania and Virginia a company of 100 men formed under Col. Williamson, as a corps of militia Under false pretexts, they induced the Moravian Indians to surrender their arms, subsequently securing them in two houses, males in one and females in the other. A council was held forthwith, and upon taking a vote, only eighteen were disposed to show mercy and the balance voted to slaughter the whole lot, which was promptly carried out in the most merciless manner; only two boys miraculously escaping to bear witness to the barbarous cruelty of the white men toward their unfortunate race. After perpetrating the heinous deed, Williamson and his followers set fire to the houses containing the bodies, and marched to Shoenbrun, the upper Indian town."

about 200 inhabitants, and the admirable cultivation of the productive river bottom lands leaves little doubt that farming is profitably and extensively carried on. Having passed "Lock 17" about a mile, or a mile and a half, from the rear of the train a splendid view is obtained, as the track runs between the canal and river for some half mile, within fifty or sixty feet of each, while the backgrounds of thickly wooded hills contributes in no measured degree to enhance the richness and beauty of the scene. The Tuscarawas river abounds in fish—principally pike, salmon, bass and perch—its banks being frequently lined with disciples of "Isaac Walton." The two water courses subsequently branch away from the track in opposite directions, after which, from the right side, will be seen a saw mill and the flouring mill run by Messrs. Barney, Demoss & Co., when we come to

FORT WASHINGTON.

This is an incorporated village of 500 or 600 inhabitants, with Mr. B. Ross for its Mayor. It was laid out by a Col. Knight, and by him named. There are a few stores, good schools, and everything essential to a growing agricultural district's "own little head center" for supplying daily necessaries. This place, too, in canal boating times, was a noted point for the shipment of grain, and to-day fully realizes the advantages accruing from the dawn of the iron track. It will be noticed from here, on, that the track on this division is remarkable for its straight, level road-bed, a direct run frequently being made of two or three miles without any curves. From a half to a mile distance from the depot we pass the splendid farm and buildings owned by the Stocker Bros., and soon after come to a side track leading to the Glasgow and Port Washington Coal and Iron Company's furnaces and mines, an enterprise of exceptional magnitude. The company make their headquarters in Glasgow, England, and employ about a million and a quarter in their enterprise, operating some 200 acres of coal and black band iron ore. They have a splendid furnace, a number of other buildings, and run their own locomotive for hauling between their works, mines and the main railroad track. Their side track runs around a high hill, and by a careful look out from the main line, after passing their switch and the small platform depot, called

"GLASGOW,"

a glimpse of their furnace stack may be obtained in the distance, between the hills. Beyond "Glasgow" the diversified scenery on the left side of the car even increases in interest as we near

NEW COMERSTOWN STATION.

We pass a remarkably neat frame residence, with fine barn standing near, on 200 acres of ground, and once owned by Col. John Knight, known as "The Knight property," but where a Mr. E. K. Anderson at present lives, but whether as the owner we are unable to state. Some two hundred yards and a small school house is observed, a branch only of the chief school in the town. From the left also is seen a woolen mill on the banks of the river and amid the trees—it belonging to the estate of the late Mr. James Peeling. And still further will be particularly noticed a very attractive frame residence owned and occupied by the widow of the late Hon. R. H. Nugent. New Comerstown has a population of 1,100 and its mayor is Mr. S. F. Timmons. A very neat cemetery is also seen near the track, which has been open about seventeen years, in which the fine monuments to the memory of the late Mr. John Miskimen and wife, originally wealthy property owners in the neighborhood, and the late Col. R. H. Nugent are most conspicuous. A little further on will be seen a newly-erected foundry, built by Mr. T. Furgeson, and then on the right of the car we come to saw and planing mills, run by Wilson, Benton & Co. Near by is the public school, Mr. Joseph Rey, superintendent, and the Lutheran church, conducted by the Rev. U. J. Knisley. There are here also a Protestant Methodist church, under the Rev. Dibble; an Episcopal Methodist, under the Rev. Harrold, and a Presbyterian church in charge of the Rev. Riggle. There are three or four hotels, the "Commercial," at the depot, by T. Lybarger, who also controls a refreshment stand called "The Lybarger House," on the opposite side of track, where the Marietta and Cincinnati Railroad crosses, while the "Shields House" is conducted by Mr. W. H. Mayberry, at the depot, and the "Globe House" is located in the town. There is a sprightly little paper published here called "The Eye," edited by Messrs. Kent & Furgeson, and which is quite a compliment to the town. The name of New Comerstown is said to have originated among the Indians, one of whom took unto himself a white woman who happened to cross their path, when a second white woman, straggling into their tents, was named, for distinction, "Newcomer"—hence "New Comerstown."* It is a very old town, and claims a population in the neighborhood of 1,100 inhabitants. Just after leaving the depot, on the left, will be observed a fine brick residence, probably the largest in this part of the county, owned by Mr. James M. Burt, a retired farmer, who also owns about 1,000 acres of land in West Lafayette township. Still further we observe, on the left, a branch of the Tuscarawas river gracefully winding its way through scenes of rural magnificence until we reach a very fine iron railroad bridge, where the main river and its branch unites. At this point the rural scenery on both sides of the car is something grand, presenting almost every country feature of interest that eye could desire to rest upon. The next station is

"OXFORD,"

at which, opposite the depot, stands the attractive farm residence of Mr. Daniel Leighnenger, while the district around abounds in specially fertile farms. From here it is about four miles to

WEST LAFAYETTE,

which township being formed about the time of the famous General Lafayette's death, it was called after him. But a mile before we reach this depot, on the left is seen a small cluster of houses known as "Loos' Corners," being at the crossing of the Coshocton and Jacobsport pike roads, while west of that is what is known as "Hickory Flats." As we approach West Lafayette the grounds are very flat but splendidly cultivated and present a glorious scene. To the left is a neat brick school house, under the superintendence of Mr. H. Gorsline, as also the pretty residence, surrounded with trees, wherein resides the widow of the late Mr. Samuel Ketcham. The village has probably 400 inhabitants and supports two comfortable hotels;

*LEGEND OF THE WHITE WOMAN AND NEW COMERSTOWN.—We learn from history that at the junction of the Killbuck and Walhonding rivers, a few miles northwest of the present Coshocton, lived, as early as 1750, Mary Harris, a white woman. She had been captured in one of the colonies by the Indians between 1730 and 1740, and was then a girl verging into womanhood. Her beauty captivated a chief, who made her his wife in the Indian fashion of that day. About 1740 the tribe of Custologa had retired into this valley where the white woman became one of the inhabitants with her warrior, and where they raised a wigwam which formed the nucleus of an Indian town near the forks of the stream above named. Mary Harris had been sufficiently long with the Indians to become fascinated with their nomadic life and entered into all its romantic avenues, followed Eagle Feather, her husband, to all the hunts in the valley, and whenever he went off with a war party to take a few scalps, she mixed his paint and laid it on, and plumed him for the wars, always putting him up sufficient venison and parched corn for the journey. She was specially careful to polish his little hatchet and admonish him not to return without some good long-haired scalps for wigwam ornaments. So prominent did she become that the town was named "The White Woman Town," and the river from thence to the Muskingum was called, in honor of her, "The White Woman River." All went well until Eagle Feather came home, one day, from beyond the Ohio river with another white woman whom he intended should live with Mary and also share his affections. But Mary failed to see happiness from this standpoint, and, naming her "The New Comer," made things singularly lively for the lady. Some time afterwards Eagle Feather was found one morning with his head split open and the tomahawk remaining in the cloven skull, while "The New Comer" had fled. She was subsequently overtaken and tomahawked, the body being afterwards found by one Andrew Burney, of "The White Woman Town," and buried. Mary Harris married again, had children, and removed west in 1778-9. After that she became oblivious in history, but the river from Coshocton to the mouth of the Killbuck is still called "The White Woman River."

one conducted by Mr. S. Gorsline and the other by Mr. John Wier. On leaving the depot, a conspicuous looking two-story frame, painted slate color, will be observed on the left, which has been designed for a Grangers' Hall. Still further from the track will also be noticed a long white frame, with special windows, which is the Baptist Church, conducted by the Rev. Jones, and yet another mile and we notice between the hills what is called "Walker's Run," a famous coal region. By close observation the train will now be noticed to pass through a perfect forest of trees, in which the track forms a most delightful shady avenue. The sparkling surface of the Tuscarawas river occasionally peeping through the foliage as if to remind one that

"He who sent the herbage green,
The waving crops and forest scene,
Was mindful of their needs—and so
Bid creeks and rivers ceaseless flow."

From the left is seen the "Pentwyn Mines," operated by Messrs. Kessingham & Prosser, who ship extensively. Soon after passing here, from the right side of the car may be observed, though very imperfectly through the trees, about a mile hence, a small village known as "Canal Louisville," having two places of worship (a Baptist and a Methodist church), with a population in the neighborhood of 100 to 200 people. We again rush through rich foliaged avenues till we come to the "Beach Hollow" mines, also operated by Messrs. Kessingham & Prosser, near which is located a water tank, on the side of the track, and the occasional stoppage of trains here for a supply of water affords passengers an opportunity of enjoying one of the finest prospects the admirer of nature could hope to meet with. Anterior to railroads, the old Cadiz & Coshocton pike was the main artery for trade and commerce through this section, as the river, within man's memory, in these days, was never navigable beyond the capacity of rafts or what was termed "arks." Leaving the water tank, the track presents quite a curve, or double curve, if you will, as it is soon apparent from a glance out of the last door on the train that we have just been describing the form of the letter S, after which we are informed that it is a comparative straight run into Newark. Now is the time to gaze out on the right side of the car, and away in the distance, over the rich foliaged trees, will be seen a high hill occasionally peeping out with a sort of green mantle encircling its summit—or circular grass plat peak. That is the famous historical point where in 1764 Col. Boquet marched up to with his army [from Pennsylvania, against the Indians, and there camped—commanding a view of the three rivers and the entire surrounding country. It was there he compelled the Indians to surrender 260 white prisoners, without the loss of a man, and with equal success did he accomplish his return march.* Near by is also where the Tuscarawas and Walhonding (or "white woman") rivers join and form the Muskingum, which runs to and joins the Ohio at Marietta. About an eighth of a mile from Coshocton, on the left, will be observed a sort of half circle, sandy bottom valley, or river bed, with fine wooded hills on its banks, after which we strike the "Home Mines," operated by Mr. G. W. Rickets. Being only about 200 yards from the depot, once more turn to the right of the car, and a final and much more distinct view of Boquet's camping grounds is visible ere we come to a stand at the depot.

*Among the captive children surrendered on this occasion to Col. Boquet was one whom no one claimed, and whose after history proved full of romance. She proved to be the daughter of one John Grey, heiress to half her father's farm in Mifflin county, Pa., but which property during her absence had reverted by law to her aunts and uncles, on the supposition of her death, and though, on her return from captivity, neither she nor her mother could recognize each other, by the stratagem of Colonel Boquet identity was unquestionably established by the old lady singing a hymn that she always sung to her child in infancy, when the familiar strains caused the long-lost child to rush into the old lady's arms. Col. Boquet's success in conquering the Indians made him a brigadier general, but he died in 1766, at Pensacola, of fever.

COSHOCTON*

is a very old town, around which clusters much interesting history dating back in the last century. It was here that the Delaware Indians established their last capitol, which they named "Goschackgunk," it being located between the present railroad track and the forks of the river, as seen from the right side of the car, and that capitol was destroyed in the neighborhood of 1781 by Col. Broadhead. Coshocton has ever given evidence of enterprise and effected a gradual healthy growth to its present importance. The town was incorporated in 1808, thus establishing it among the earliest in the State. The present mayor is Hugh Rickett, Esq., and the population is estimated at something over 2,000 inhabitants. Being the county seat of Coshocton county, it has a capital court house and public square that cost over $100,000, while it has some six or seven religious denominations worshiping within its limits, among them the Methodist church, under the Rev. Brown; Presbyterian, Rev. E. Hunt; Baptist, Rev. Joseph Hunter; Lutheran, Rev. Nunnemacher; Catholic, Rev. Father Jacquet, &c. First class schools are conducted in the eastern and western portions of the city, under the competent supervision of Professor Henry, as superintendent; two banks, (the First National and Stewart's private bank,) beside two excellent weekly papers that zealously protect the interests of their constituency. Both are old established and edited with considerable ability. They are the *Coshocton Democrat*, by Mr. J. C. Fish, and the *Coshocton Age*, by Mr. Search. In the way of manufacture, we find here an important steel works, paper mill, planing, grist and flouring mills, fine cooper shop, &c., while most of the stores are quite a compliment to their proprietors. There is an opera house and three capital hotels—the "Price House," east of the depot, run by Mr. Harrison Price; the "McDonald House," at depot, by Mr. G. W. McDonald, and the "Central," in the west part of the city, conducted by Messrs. Seward and McCabe. There are quite a number of very attractive residences at Coshocton, particularly that belonging to Mr. J. G. Stewart, opposite the depot; others owned by Mr. Eustace Hays, Mr. Lewis D' Moss and Mr. S. Lambertson, and quite a number on Chestnut street, including those occupied by Messrs. Jackson Hay, Anderson Johnson, William Walker, E. T. Spangler, Seth McLain, &c. Coshocton is a great mineral and agricultural district, both cannel and bituminous coal being mined here in almost endless quantities, while the land around, for agricultural purposes, is said to be so desirable and rare to obtain that it must be at forced sale if a purchase could be effected at $70 to $80 per acre. Leaving Coshocton the route is productive of little interest till we have proceeded about a mile and arrived at the old "New York," but now "Union" mines, run by a Mr. Robinson. They are prolific and extensively worked, being located in a splendid lay of country. About half a mile therefrom may be seen, from the right side of the car, a genuine mound, near which, so late as 1860, bullets were often picked up, and it is said that huge skeletons have there been found.

†"Col. Charles Williams was the first settler in Coshocton county, though born in Washington county, Maryland, in 1764. He married Susan Carpenter, on the banks of the Ohio river, in the vicinity of Wheeling; emigrated to the salt works on the Muskingum river, and subsequently removed to the forks of the Muskingum, and built a cabin on the banks of this latter stream where Coshocton now stands. This was in the year 1800. The next year George and Thomas Carpenter arrived, also William and Samuel Morrison. These men, making their home with Col. Williams, the first year raised a crop of corn on "the prairie," four miles up White Woman's creek. This was probably the first crop of corn raised in the county by the whites, and was in 1801. The same year Michael Miller located here, and lived seven weeks on venison, bear meat, and other game without bread of any kind. * * * * From 1805 to 1812 the population of the county increased very rapidly, as is shown by the fact that Coshocton county, embracing at that time part of what is Holmes county, furnished four companies for the war of 1812, under Captains Adam Johnston, Tanner, Beard and Evans. * * * * * Coshocton was laid out in 1802 by Ebenezer Buckingham and John Matthews, of Marietta, under the name of Tuscarawas. The county was organized and the name of the county seat was changed in April, 1811. The first mill in the county was built by Jesse Fulton in 1812, and the first brick house in Coshocton was erected in 1816, corner of Cadiz and Second streets (the Fitchey house). It is said that Louis Phillippe, afterward King of France, visited Coshocton, in the character of a schoolmaster, during his exile."—*Ohio Annals*, by C. H. Mitchener.

It is probably 50 to 60 feet high, and near by stands the ruins of an old log hut. Next we pass the old "Rock Run" mines, which have now fallen into disuse, and presently again obtain glimpses of the Muskingum river from the right side of the cars. Crossing a fine trestle-work bridge that spans the river, we come to

FRANKLIN STATION,

whereat will be observed the "Summit Mines," operated by F. S. Barnes & Co., but beyond these there is little of special interest till we arrive at

CONNERSVILLE.

Here is seen the "Connersville Mine," run by Mr. T. R. Morton, as also a small brick church or school house near the depot platform, suggesting beyond doubt, that

"'Neath America's standard, it matters not where,
Your lot may be cast to breathe freedom's pure air—
There's spiritual comfort and learning as well
To be found on the mountain—in forest and dell."

Shortly before arriving at the next station, having again proceeded about the eighth of a mile between the canal and river, we approach a fine elevator on the right and almost opposite, across the track, is a beautiful residence, the whole owned by a widow lady by the name of Mrs. Robinson, whose son conducts the business of the elevator. Yet a little further, on the right, and there will be noticed a saw mill, on the canal bank,

"That's cleft full many a lusty log to shield our pioneers."

Next we come to

ADAMS' MILLS DEPOT

where there is a scattered village of probably two hundred inhabitants. A fine mill will be seen on the right and a small school house on the left of the cars. The residences round here are for the most part small and humble, with the exception of the rural abode of Mr. H. A. Smith, which is exceptionally attractive. Following the canal, about half a mile distant, on the right, it will be seen to run through a splendid large dam or lake, admirably adapted to a small boat and suggestive of affording "a happy hunting ground" for "ye manipulator of ye rod and line." But calling to mind Dr. Johnson's definition of a "fishing-rod"—which was that it "consisted of a pole, with a string at one end and a fool at the other," we beg to be excused from giving further expression to our enthusiasm in this direction, and simply note the sentiment of our brakeman, which still rings on the ear—

"DRESDEN JUNCTION

is the next station." Alighting from the car we were promptly informed that the Cincinnati & Mount Vernon train was on the opposite side of the depot, and it was well that it was—for the junction depot has little else to keep it company. It is however, located on a most agreeable and convenient spot, but without any buildings around it, except a miniature "Refreshment Saloon," and small boarding house with livery accommodation. Thanks for this to a Mr. R. Donaker, from whom we were glad to receive assurances of something in the hotel line, much better, in the near future, as there is unquestionably a need of good accommodations at this point. Now Dresden is quite a little town, about 1½ miles from the junction, and supplies hacks from its hotels to meet the various trains, while the C. & M. V. Road also runs through it. It is a town of some 1,500 inhabitants, has seven or eight places of worship, excellent school and its own newspaper, appropriately styled the *Dresden Doings*, neatly gotten up and spicily edited by a Mr. W. Smith. The hotels are the "Osborne House," kept by Mr. T. Osborne, the "American House," by Mr. B. Green, and the "White House," by Mr. John Watson, while in the way of manufactures will be found a woolen mill, three flouring mills, foundry, &c., besides a very fine grain house, the property of Messrs. Jones & Son. Dresden is an old town, and from its location derives most of its support from agriculture. Leaving the junction our train soon crosses another very fine bridge and we again enter upon the indulgence of magnificent rural scenes, though we have bid farewell to the last coal works on this line. Some five or six miles from the last station brings us to the little town of

FRAZEYSBURG,

having a population of about 500 persons, and we are informed it is an incorporated village. There will be observed here a a planing mill and of course a flouring mill—the chief support, commercially, being derived from agricultural and mining pursuits—iron ore is also prolific in this section.

NASHPORT ROAD, HANOVER AND MONTGOMERY'S

follow in succession, but are simply road side stations affording little variety in the way of attractions to comment upon, unless we repeat the sentiment:

"Wherever the eye, upon nature may dwell,
Commanding rare prospects of hillside or dell—
Perfection's the rule—to the plain humble sod,
Bidding man to look up, from nature to God."

Next we approach

NEWARK,

another of the most important towns along our present route, to arrive at which our train crosses the north fork of Licking creek, ere we come to a stand. Newark* is an important centre for manufactures, and boasts a population of 12,000 inhabitants, while it is the junction of the P. C. & St. L. with the Central Ohio, Lake Erie and Straitsville divisions of the B. & O. R. R. The present Mayor is J. W. Bigelow, Esq., and the educational facilities here are said to be second to those of no other town in the State—so many as seven school houses being under the able superintendence of Professor Hartzler. There are some twelve or thirteen places of worship, though some of the pastorates are going under change at the present time, and we are enabled only to give the following: Second Presbyterian, Rev. G. A. Beattie; Trinity Episcopal, Rev. F. M. Hall; Methodist Episcopal; Baptist, Rev. D. E. Owen; German Presbyterian, Rev. J. Kromer; Congregational, Rev. E. Jones; and Catholic, the Rev. Father De Callia. The town is an old one, yet still growing, and its tradesmen are shrewd business men of more than average enterprise. There are four capital papers published here, viz: The *Advocate*, by W. D. Morgan; the *American*, by Messrs. Clark & Underwood; the *Banner*, by W. R. Scott; and the *Advance*, by J. B. Lawlor. Prominent among the industrial enterprises are the "Newark Rolling Mills," the "Star Glass Works," by Shields, King & Co.; portable engine works by H. & F. Blandy, portable engine works, and saw mill, by Sheidler & McNamar; stove foundry by Ashley & Kibler; engine foundry, by J. E. Thomas & Co.; beside a number of smaller enterprises, such as flouring mills, wagon shops, &c. The freight agent in the employ of the P. C. & St. L., at this depot, is Mr. A. B. Jackson, who has worthily filled his present position for the past sixteen years, while the ticket agent, Mr. J. M. Malone, has served the company faithfully for seven years—four years, during which, in his present capacity, at Newark. Leaving Newark, much as the town merits a still more lengthy notice—withheld only as our space is somewhat limited—we next come to

LOCKPORT,

which is in Licking county, and has a population of about 300 inhabitants. There is a rolling mill here, owned by parties in and around Newark, but that is all in the way of manufactures.

*It is the county seat for Licking county, and possesses a very fine fair ground and race track; this county's annual meetings being always very largely attended.

There is a suitable school house, but no church building in the village, near the western part of which the railroad runs through a portion of the old fort, part of which can be distinctly seen on the south, or from left side of the car.

GRANVILLE SIDING

is simply a convenient stopping point, but without a depot, taking its name from the "Feeder" that ran from Granville town (three miles north) to the canal south—the proposed crossing of the Ohio Central Railroad. From here we next approach

UNION STATION,

also in Licking county, though probably not blessed with a population to exceed 75 to 100 persons. It is, however, the depot for Granville town, three miles north, and has one store, owned by a Mr. N. Nash. The principal residents here are Messrs. A. Cunningham, Asa Parks, Felix Ford, senior and junior, W. H. Tyhurst and R. Kyle. East of the station one half mile, and on the north side, is the residence of Mrs. Jakeway, while west, one half-mile, and in a nice secluded grove (on the north side) is the residence of Mr. William Schisler. Just north of this, and conspicuous from the road, is the County Infirmary, and still further, in the same direction, the residence of Mr. J. A. Lee, formerly owned by Mr. Elias Fassett and later by Mr. Frank Dunlevy.

KIRKERSVILLE STATION

takes its name from the town of Kirkersville, two miles south, and, being very sparingly populated, only commands one store, kept by Messrs. Rugg Bros. There are telegraph and express offices at the depot. On south side of station is the neat residence and productive farm owned by Mr. L. Beecher, as also a saw mill and tile mill, owned by Messrs. Wygart & Morrow, while one mile west, on the south side, close to the road, is the attractive residence of Mr. J. M. Stoddard—the first residence and farm south was originally owned by the late George Vance, and, we believe, succeeded to by his family. And this brings us to

PATASKALA STATION,

still in Licking county. The population here numbers about 700, and its name, which is of decided Indian derivation, is taken from the creek running near by. It has two good flouring mills, run by Messrs. Peters & Son and Jesse Horn as proprietors thereof, respectively. Two saw mills, by Messrs. Peters & Bro., and N. R. Pheaster; one handle factory, by N. G. Blanser, and a cigar manufactory by G. Lynn. Also a capital general store, Messrs. Mead & Youmans; dry goods and grocery, Hildreth and Stratton; dry goods and notions, H. & O. D. Ashbrook; grocery, C. L. Roberts; drugs, H. L. Beem; drugs and grocery, J. H. Baird & Bros. and J. W. Burnside; hardware, S. D. Whitehead; boots and shoes, D. H. Travel & Sons and Geo. W. Taylor; harness and saddles, H. C. Arnold; hardware and stoves, L. E. Skinner; furniture and agricultural implements, S. & J. Travel; merchant tailor, W. B. Arnold; jewelers, S. Ramey & Son; and two livery stables, by Messrs. Rinker & Outcalt and Rosengrant & Bro. There are three millinery establishments, conducted by Mrs. E. Davis, Mrs. W. Arnold and Miss Eliza Clarke; a job printing office by Mr. E. Davis, and a bakery by Mr. A. J. Clifton. In the matter of hotel accommodations, the "American House," under the efficient conduct of Mr. William Outcalt, affords ample entertainment for all comers. There are three places of worship here: the Presbyterian Church, in charge of the Rev. T. H. Kohr; a Methodist Episcopal, under the teachings of the Rev. D. Y. Murdock, and a United Brethren Church, presided over by the Rev. Joseph Hopkins. In the way of education, there are five schools, (graded) under the able superintendence of Prof. S. Stoughton. The principal residences on the north side of the railroad at this point are those of Messrs. W. C. Elliott, C. H. Elliott, J. S. Youmans and Jesse Green, (farm and residence.) On south side Messrs. W. H. Mead, E. B. Joseph, O. Nichols, M. V. Joseph, and J. H. Stimson. Just east of the town is Mr. M. E. Youman's residence and farm, with Mr. Joseph Atkinson's residence next south. Then one half-mile northeast is the residence and farm of S. Philbrook, while the neat cottage residence north of the water station is occupied by Mrs. C. Moore. Mr. W. Elliott is the popular agent at Pataskala, to whom, with Mr. S. B. Howe, telegraph operator, we are indebted for courtesies extended. A mile hence, and we draw up at

COLUMBIA CENTER,

having a population of about 200 inhabitants. There are two churches here, a "Congregational" and "Christian Union," while there is a good school under the superintendence of Mr. Robert Foregraves. The principal residents are Messrs. Stoel Mills, Edmund Besse and Jacob Anderson. A short distance south of town are the prominent residences of Mr. Samuel Vand and Mr. Reuben Alward, while one mile west, on the south side, is the neat residence of Mr. George Gilbert.

SUMMIT STATION

can probably claim from 75 to 100 inhabitants. Has a "Christian Union" church, but no school house in the village. A. D. Morgan keeps a hat and shoe store and H. Moore, a general store. There is here a B. & O. express and telegraph office, and the most prominent citizens are Messrs. Overturf, Jas. Stewart, David McIntosh, George Holcomb, Levi Geast and James Layton. One mile west, on the south side, is the residence of Mr. Wm. Williams. It may be interesting to learn that this last station derives its name from being the highest point between Columbus and Newark, there being a gradual ascent almost the entire distance of fourteen miles from Columbus. We next come to

BLACKLICK,

the first depot we strike in Franklin county, having a population of probably 300. There are no church buildings here, but one school house. The freestone quarries seen, just before arriving at the depot, being the property of Mr. S. R. Armstrong. Near the west side of the town, south of the road, is the farmstead and lands owned by Mr. Ezekiel Compton.

TAYLOR STATION

claims in the neighborhood of 200 inhabitants, is a delightful rural depot, but makes no display of ecclesiastical architecture, though there is ample provision made for educational purposes. A short distance west, and from the left side of the cars, may be seen the attractive residence of Mr. David Taylor, Jr., one half mile before arriving at the next station, which is

BIG WALNUT,

in Franklin county, There will be observed on the right a fine residence owned by Mr. Andrew Morrison, while one mile west of the depot, on the same side, will be noticed the rural home of Mr. Corbin Zane. Big Walnut depot derives its name from being a telegraph and water station located on Big Walnut creek, but it is not surrounded with any prominent residences.

ALUM CREEK SIDING,

which is the next point of call, is only a side track, half a mile east of a creek bearing the same name. Really, however, the correct original name of the latter was "Elm creek," which has been perverted to "Alum creek." From this water course is seen (on the north side) the famous "Water Cure" conducted successfully by Dr. Shepherd, and beyond it "St. Mary's Academy." A little to the west of the "Water Cure," and on the

same side, are several acres of land devoted exclusively to gardening, and owned by Mr. Adam Dich. Next we arrive at

CALDWELL STATION,

two miles east of Columbus, and the junction of the Scioto Valley Railway, with the Columbus and Newark Division of the P. C. & St. L., and B. & O. Railroads. A little beyond the junction, on the left side of the track will be observed the "Revolving Scraper Factory," and still half a mile further on, to the right, we come in view of the P. C. & St. L. Ry. Co's "round house"—a substantial structure where their locomotives are stabled and admirably cared for, as demonstrated in the fact, (which has frequently escaped the lips of travelers) that the old "Pan Handle" engines are among the finest—and "kept up to the handle" with the most attractive and serviceable locomotives—that ever turned a wheel on this American continent.

ARSENAL SWITCH,

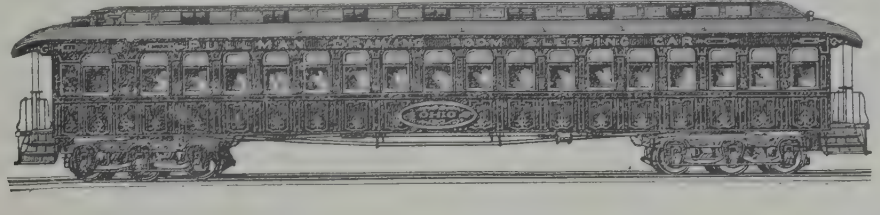
is so named from the "arsenal" standing in sight, not far from the right hand side of the track, and of which we might say

"This is the arsenal. From floor to ceiling
Like a huge organ rise the burnished arms
But from their silent pipes, no anthem pealing
Startles the citizens with strange alarms,

yet it is a lively quarter for the initiation of recruits and the frequent entertainment of accomplished regiments, while the band attached, has attained almost a national reputation for excellence as the "Columbus Barrack's or Garrison Band." We are now virtually in Columbus corporation, hence we will skip over the last mile of the city sights, the more speedily to refer to

COLUMBUS UNION DEPOT.

It will be found one of the largest, lightest, best arranged and most efficiently kept terminals in the country—lofty and unusually free from all unnecessary smoke and noise beyond the actual requirements of traffic. On the left are ranged a series of rooms including every facility for the comfort and convenience of passengers, from the refreshment counter and dining room down to a free reading room and library, the ticket office being located in the center, where the indefatigable agent, Mr. Edward Pagels, officiates with so much attention and politeness. In a previous article, and under the head of "Connections made by the P., C. & St. L. Ry.," we give the names of the several lines running into this noble and substantial structure—hence to repeat them would be unnecessary. Columbus, we need hardly say, as the capital of the famous "Buckeye" State, has a widespread popularity equal with that of Pittsburgh for its manufacturing resources, therefore to elaborate on the city, its trade, commerce and characteristics, would only be, to the average American citizen, like resorting to an exhaustive argument in the hope of convincing him that Chicago and St. Louis were in the West. We may remark, however, that the General Manager of the P., C. & St. L. Ry—D. W. Caldwell, Esq., than whom a more experienced, energetic and gentlemanly representative no road in the nation need desire—has his offices located here, as also Col. W. L. O'Brien, General Ticket Agent, whose superior ability, careful discretion and uniform affability retain for him such universal popularity. Having now completed a most agreeable trip, and indulged innumerable pleasing associations during our series of inquiries, we should be lacking in becoming respect—if not common gratitude—did we fail to pay a parting tribute to the uniform kindness, civilities and attentions of the P., C. & St. L. officials, EVERYWHERE—from the highest to the lowest—with whom we have come in contact, which has positively converted our apparent tedious task into an absolute season of the highest enjoyment.



TRAVELING REDUCED TO A SCIENCE.

SAMPLE PRIVILEGES AND CONVENIENCES FOUND ON THE P. C. & ST. L. RY.—THE PULLMAN PALACE CAR COMPANY'S WONDERFUL ACHIEVEMENTS.

There was a day—and that at no remote period—when to journey over this vast American continent was deemed a feat far from a sinecure achievement. And in those days nothing fell upon the ear of the weary, footsore traveler with such a ring as the rude invitation of the teamster on the pike when he sung out, "Jump into my wagon, and we'll all take a ride." But with the universal metamorphosis that have dawned in modern life, what a revolution has been instituted in the modes of travel! No longer is a progressive community satisfied with seeing the jaded stage horses of yore superseded by the ponderous locomotive that dashes through tunnels, climbs mountains and bounds frantically through mighty ravines, but as if "to render perfection perfect," the skill and ingenuity of man has positively reduced the old-time monotony of traveling to an absolute season of the highest enjoyment. Figuratively speaking, if you should desire, or necessity requires you, to take a trip in these days from St. Louis to New York, a distance of 1,062 miles, you need take no concern. All that is necessary is simply to take an early supper and board the cars. Indulge a pure Havana cigar until "old Sol" has fairly sunk to rest in the western horizon, and then retire to a couch of ease and comfort in a chamber of elegance. On awaking in the morning you are politely presented with a sumptuous bill of fare, feast "royally," as you would in the most competent hotel in a metropolitan city, and retire to your drawing room (car), from the window of which you take in an endless and diversified series of delightful panoramic views, from actual nature, at a pace fully equal to the capacity of your comprehensive faculties to digest. An epicurean dinner, consisting of everything in season—fish, game, fowl, meats, fruit, and even the indispensable "side issues," such as hoc, port, claret or champagne—next awaits your pleasure. After this comes the usual "noontide nap," followed by a brief association with new-made acquaintances, the cracking of jokes and interchange of opinions and experiences from cushions of ease, surrounded with cheerful tapestry and trappings of palatial grandeur, well calculated to enhance the gratification of your interview. Supper, in due season, once more graces the festive board, and you partake, after which the exhilarating fumes of another regalia again wears around the hour for rest. You retire, and, with the morning's sun, "rise in the East." Yes, even in New York, as unconscious of having traveled nearly eleven hundred miles as though your privilege had rather been the indulgence of a brief season's hospitalities at the "White House," the distinguished guest of America's Chief Executive! Why, such an achievement, on the face of it, would seem ample to shock the confi-

dence of the most credulous. And yet such indulgences are the daily experience of travelers over the ever reliable and efficiently conducted old "Pan Handle Route." But the question naturally suggests itself—to whom is especial credit due for the perfecting and regulating of the essential details to so extraordinary a combination of privileges? when we cheerfully respond—

"THE PULLMAN PALACE CAR COMPANY."

ORIGIN OF THE SLEEPING CAR SYSTEM.

About the year 1858, sleeping cars were adopted by a few of the leading railways in the country. The cars then used were, for the most part, crude and unsatisfactory in their arrangement and appointments. They were constructed under a variety of patents, and employed various devices which had not been perfected by experience, and in many instances ordinary passenger cars were utilized. They served, however, to educate the traveling public to the existing want, and demonstrated the necessity of something better.

These cars were, moreover, confined to the roads of the railway companies owning them, and were unsuited to the necessities of travel on long lines, being chiefly used to accommodate local travel, and then only in case the road was of sufficient length to occupy an entire night in the transportation of its passengers.

It soon became apparent that a class of cars that would furnish accommodations adequate to the wants of both night and day travel, together with a system that should afford continuous and unbroken communication between far distant points over several distinct lines of railway, would supply a growing want of the traveling public, and probably largely increase the passenger traffic.

It was not easy, nor indeed possible, for a great number of independent railway companies to unite upon a uniform pattern of car, to perfect uniform arrangements, or to utilize the many different inventions and devices, which, combined, make up the comfort and convenience of a sleeping car. Even had any general plan been suggested by one or more companies for acting in concert, some companies would not, perhaps, have found it convenient, at any given time, to furnish their proportion of cars; nor would it have been easy to decide, without experience, what, in such a case, equity between the roads, would have demanded.

It is obvious that the constant provision of abundant supplies of bedding and changes of linen, and the necessary laundry arrangements, as well as the selection of suitable devices for heating, ventilating, constructing and operating cars with special reference to their use as sleeping apartments, are the very essence of a successful sleeping-car system; yet this was foreign to the regular business of railway companies, and less likely to receive their careful attention than that of a company especially organized for the purpose. Hence the necessity for a separate organization, which should be able to make arrangements of a uniform character, with the different railway companies, on such reasonable terms as would appeal to their interests.

The organization of such a company, which should be charged with the duty of providing the accommodations required by an intelligent public, presented questions of much magnitude and importance. The problem was to build cars which should embrace inventions and improvements perfected by the best ingenuity and skill of the country, and thus meet the just demands of the traveler, secure the railways a fair equivalent for their service, and at the same time provide a reasonable return upon the capital invested.

The foundation for such a company was laid by Mr. Geo. M. Pullman, who had originally conceived this idea and was then operating, to a limited extent, sleeping cars in the west.

For the purpose of perfecting this system on a scale which would extend its usefulness to the immediate demands of the traveling public, and also keep pace with its growing wants he organized a company in 1867, known as "Pullman's Palace Car Company," incorporated under a special charter granted by the State of Illinois.

The management of its business, together with the advantages of the system, have so recommended it that at the present time more than seventy railway companies, not only in the United States and Canada, but also in England and on the Continent, have contracted for the use of Pullman cars.

The contracts are made for a long term of years and cover over forty thousand miles of railway, on which it now controls and operates more than seven hundred cars.

The Pullman Company represents a cash outlay of twelve million dollars and upwards.

These facts present the best evidence of the great importance of the conveniences which the Pullman cars, and the system under which they are operated, afford the public and the railway companies who have adopted them.

It is but a few years since the first sleeping-car—a rude adaptation of the ordinary coach—was attempted; and it is much more recently that the necessity of frequent changes of cars by day and night, in a journey over several roads, was obviated by the establishment of continuous sleeping-car lines, by means of which not only the hurried business man but also solitary women, children and invalids are conveyed in a luxurious cars half way across the continent without a change and with astonishing ease and freedom from anxiety.

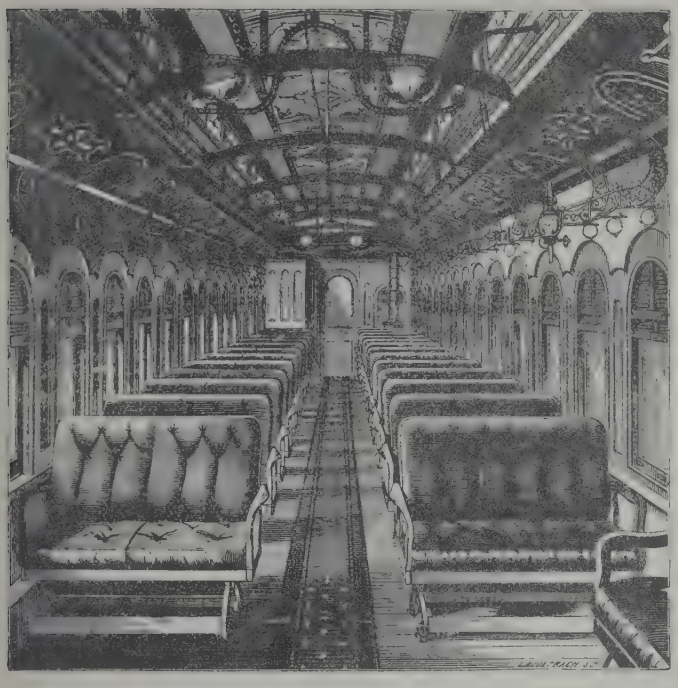
We believe every candid traveler will admit that there is no expense of his journey which he pays so willingly. In the ordinary car the passenger takes his chance of a seat when he enters. In the sleeping-car he is the absolute owner, for the journey, of a certain selected portion, the purchase of one berth entitling him to a whole seat, or twice the space belonging to him in the day car.

Secure in the possession of his berth, section, state-room or drawing-room, the favored passenger can sleep, sit, read, write, eat, converse, or comfortably stretch out and gaze through the wide plate-glass windows at the flying landscape. The wealth of a railway bondholder cannot give greater luxury or privacy in traveling than the poorest man can command for $2 for a journey of hundreds of miles.

The annual average cost of operating a Pullman car, including its repairs, together with maintenance of upholstery, bedding and equipments, and pay of employees, is about $4,000. One considerable item of expense is the car service. In addition to the conductor and porter of each car, many other employees are required in the general conduct of the business. It has a thoroughly military system of inspectors who are constantly moving over its lines, noting the efficiency and deportment of every conductor and porter, and marking his conduct according to a certain scale of excellence.

The far-sighted enterprise that is constantly increasing the cost and completeness of appointments—that is all the time experimenting with new devices to add to the traveler's comfort, and that not only keeps pace with the public demand, but in advance of it, and at frequent intervals brings out a new marvel of luxury ahead of all that preceded it—all these contributions of money and genius are fairly entitled to handsome reward.

It is believed that the public will never consent to return to the old plan of frequent changes of cars and broken travel, but, instead of taking any step backward, will demand even further improvements. These, so far as attainable, the Pullman Company can furnish, if its efforts to meet the public wants shall be as thoroughly seconded by the railway interests and community at large in the future as they have been in the past.



"THE PULLMAN OPEN SLEEPER,"

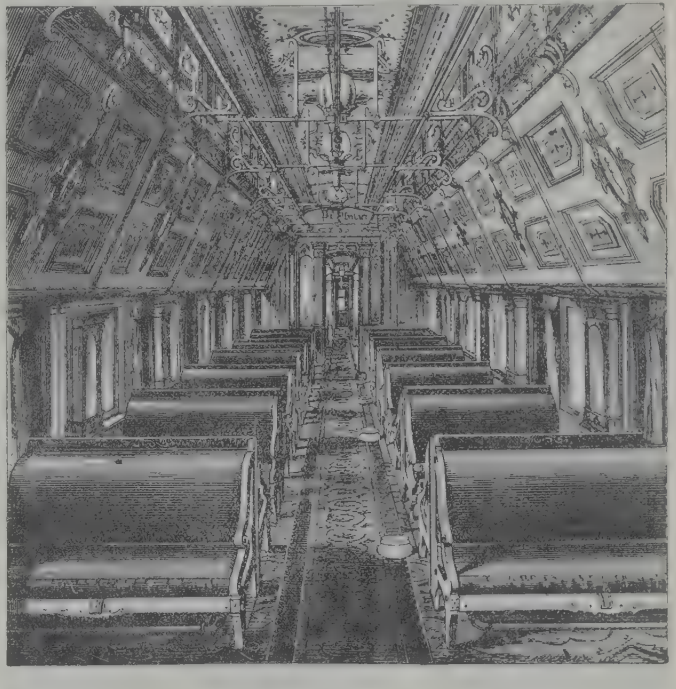
to the uninitiated, by day, much resembles an ordinary first-class car—so far as the seating facilities are concerned. But the internal fittings, decorations, plated lamps and upholstering are much more elegant, while the toilets and other conveniences, for ladies and gentlemen, at the respective ends of the car, afford indications that the accommodations provided are something extra. It is not until night-fall that the full advantages afforded by these model traveling chambers of ease and repose are fully realized. Not until the liveried attendant has transformed the scene, and a series of cozy, full draped beds have been fully prepared "in apple-pie order." Then awaits you the comparative comfort of your own couch at home, and as you ensconse yourself between sheets of snow-flake whiteness, 'tis in such an hour—such a moment—you realise with Montgomery—

"How sweet at evening's close
To draw around a weary breast
The curtain of repose."

No clatter and jolting—rolling or tossing—for these magnificent cars are constructed regardless of expense. They are balanced on the most approved and highly tempered springs, have improved couplings, and every wheel is composed of a patent compressed paper material that is next to a perfect non-conductor of sound. In blissful ignorance of the fact that you are being whirled through the air at from thirty to fifty miles per hour, you have barely time to fully vision in your sleep the probable denouements that await you at your journey's end, ere you find yourself awaking to an experience of the realities. Cheered to encounter the buffetings of commercial life—refreshed by a sound natural sleep—or, mayhap, invigorated to indulge pleasure pursuits in the society of your friends, then it is that you see and appreciate the advantage, the comfort and satisfaction of a sleeping car. Mean, indeed, would be the selfish disposition that could begrudge the nominal additional expense thus incurred. Virtually, not more than the average damage inflicted on a good suit of clothes where penuriousness has subjected them to a season of incessant rocking, twisting and groveling, in a dusty seat, in the vain hope of catching a series of broken naps—invariably resulting in a feeling much easier imagined than described. It was the frequent necessity for taking long journeys that lead to the perfecting of these cars, and the immense advantage they have proved richly entitles them to unlimited patronage. But with their characteristic enterprise, ingenuity and liberality, the "Pullman Palace Car Company" conceived yet greater advantages, and resolved next to combine drawing rooms in their cars, and even to produce

DRAWING-ROOM CARS FOR DAY TRAVEL.

Then dawned experiment upon experiment, expense upon expense, resulting in the adoption of easy-backed chairs, settees and lounges, richly upholstered; floors carpeted with handsome pile Brussels carpet, and blinds and lamps were introduced of corresponding magnificence, until an apartment was produced of palatial grandeur. Society promptly appreciated the idea, and no sooner was it seen "that it was good" than



"THE DRAWING-ROOM SLEEPING CAR"

was introduced, combining not only the familiar associations of home by day, but also the comforts of one's own chamber by night. In the most exquisite style imaginable the cars were so ingeniously constructed that to metamorphose them was only the work of a few moments, elegant retiring rooms receiving their guests the while. The toilet rooms were appointed to the minutest detail. Marble-top washstands, plate-glass mirrors and the advantage of handsome spring blinds (by which the light could be regulated at pleasure) were among the prominent features adopted, together with special apartments so arranged that invalids, families, or private parties might engage and occupy distinct rooms, enclosed within richly engraved and obscured glass doors, secure from observation or intruders. In fact the elegance and completeness of these cars then seemed to suggest that absolute perfection had been arrived at. And such would have decidedly been the verdict of any one short of the enterprising "Pullman Palace Car Company," but their motto being "Excelsior!" with indomitable perseverance they again set to work, and next dawned their wonderful

"HOTEL DRAWING-ROOM CAR,

such a charming *multum in parvo* as only the most extraordinary genius could commence to devise. These cars are absolute marvels, and so completely furnished and appointed, even to a professional cook, that, added to all the privileges hitherto referred to, they afford the utmost advantages of a first-class

metropolitan hotel. At one end is the kitchen, fitted with range, shelves, cupboard, ice chest, tables, and a full complement of culinary utensils. Adjoining it is a waiter's room (easily converted into a snug little sleeping apartment for that individual) surrounded with china, glass and linen cupboards, and flanked with a bread locker, &c. Near by is the wine chest and conductor's desk—the entire arrangement not occupying over a quarter of the car's length. The cellar or receptacle for the preservation of game, fish, fowl, meats, milk, butter, &c., consists of a large iron ventilated safe affixed to the under part of the car, wherein, during the hottest weather, everything is kept perfectly cool, fresh and sweet at a low degree of temperature, occasioned by the incessant draught surrounding it, produced by the velocity of the train. At the opposite end of the car from the kitchen department are admirably fitted toilets and a handsome private drawing-room. The center of the car, on each side of a richly carpeted aisle, affords a series of easy and handsomely upholstered seats, in front of which small tables may be drawn out at meal times, when the scene presented can be compared only to the inviting comparison afforded by a first-class banqueting apartment in a suburban villa. But, better still, you are not confined to prescribed meal hours—for you give an order when you please and for what you

[Pullman Parlor Car—with Revolving Chair Seats.]

like. It is duly prepared in epicurean style and served in the most tasteful and accomplished manner. The immense advantages over taking hasty "snacks" or so-called "meals" at roadside refreshment counters, will at once be apparent. Your food is specially and carefully prepared to your peculiar taste and laid before you in the most presentable manner. You sit down at perfect ease and indulge at your pleasure, while the trifling extra costs over a gobble in a refreshment saloon, is more than compensated for by the simple relief from an anxiety of being left behind while dispatching a few morsels of "you know not what." This comparatively new and important feature in railroading is something absolutely wonderful, and speaks volumes in honor to American ingenuity, skill and enterprise, but nothing short of a personal experience can possibly convey a correct estimate of how much society is indebted to the "Pullman Palace Car Company" for their astonishing achievements.

In addition to the foregoing styles of cars the Pullman Company also run an "EXCLUSIVE HOTEL CAR" and an "EXCLUSIVE PARLOR CAR," with a "SPECIAL PARLOR CAR"—the latter being open for engagement by special parties where the conveniences of a whole car may be required; and it is needless to say that the superb manner in which that traveling palace is furnished is simply immense.

THE BEAUTIFUL CHARTIER'S VALLEY.

Its Rural Fascinations—Fertility—Healthfulness and Pre-eminent Claims to the Location of Suburban Residences, as Suggested During a most Delightful Ride from Mansfield to Washington, Pa., over the Popular "Pan Handle Route."

To admirers of nature—and particularly such as take special delight in improving "God's broad acres"—there is probably not a section of country to be found, for its extent, more inviting and remunerative than the territory it is now our purpose to review. Boarding the P. C. & St. L. train, at Mansfield—which, by the way, is quite an interesting country town, and an extensively patronized site for suburban homes*—barely two hundred yards are traveled ere we cross a bridge spanning the famous "Chartier's creek"—a feat, we are politely informed by the affable conductor, it will be our privilege to repeat *twenty-two times* before arriving at Washington. Without for a moment questioning the necessity for this wholesale "bridging over the distance," we nevertheless resolve, if possible to keep tally for curiosity's sake. No sooner are we prepared to take in the surrounding prospects than the freshness, sweetness and purity of the air breaks upon us, exhilarating to a degree. Rich pasture lands, dotted with lowing herds, and traversed by full many a feathered songster on its daily mission for food—hills, dales and groves thickly wooded and/or owned with variegated foliage—each in happy contrast flourish in the association of the graceful winding creek, as its stream of crystal purity ripples a ceasless and audible attestation to the perfective works of nature. Gazing upon such a scene—enhanced by the brilliant rays of a resplendent noon day sun, why should we wonder to recognize conspicuously, in such seclusion, the united skill of the architect and artizan displayed on delightful villas for the enjoyment of rural homes in such a model Paradise—

"Away from the turmoil, bustle and strife—
The worries and cares of commercial life;
Where health holds its own, in retirement sweet,
And nature's fair beautees constantly greet."†

But the brakeman announcing

"LEASDALE"

suggests we are expatiating a little too freely between stations. This is a small country stopping point, about a mile and a half from Mansfield, and named after the late Col. Lea, who was once a prominant and popular resident near by. Soon after passing the depot, from the right side of the car may be seen in the distance, on the hill side, in a cluster of trees, a neat and substantial structure, forming the residence and out buildings on the Allegheny county farm, which is not only ex-

*See full account given in Trip over Main Line.

†A recent writer, referring to "The Desirability of Suburban Homes," says: "The health and pleasure of his family, appeals to the business man for a home in the country—free from the impure atmosphere and incessant excitement inseparable from a large manufacturing centre. Families, even of limited means, will find it far cheaper and infinitely more comfortable to permanently reside in country villas, when such are easy of access from whence the head of the family is associated with business. And those having city employment will further discover that the walk to and from a depot, in connection with a short and refreshing railway ride, much more agreeable, and pleasant, than a tedious "jig, jag," between widely separated points in the city in a crowded street car. It has been proven, "time and again," upon the most unquestionable computation that rural homes not only pay for themselves in a little time, but while doing so invariably secure for their occupants health, happiness and longevity."

tensive but exceedingly fertile. About a mile hence is Bower Hill, near to where Nevill's property was burned during the Whisky Insurrection,* while on the left side of the cars will be noticed an extensive coal works on the bank of the creek. Passing

"WOODVILLE" STATION,

to the left, we observe where "Peter's Run"† flows into the Chartier's creek through a comparative ravine, thickly wooded. Arriving now at

"BRIDGEVILLE" STATION,

near the mouth of "McLaughlin's Run," we find a few stores and a number of highly attractive residences. Most notable among which being the "Norwood Springs Hotel," conducted by Mr. Wright and extensively patronized by Pittsburgh's citizens as a country resort. Its rooms are large, airy, well ventilated and handsomely furnished—lighted by gas, and open into spacious halls within, and broad piazzas without. The architecture of the building is exceedingly fine, its conveniences perfect and the manner the business is conducted affords a flattering compliment to "mine host," whose facilities for the conduct of a sumptuous *cuisine* enables him to entertain his guests "royally." Leaving Bridgeville, for over a mile the woodland scenery is magnificent, while the highly cultivated farms contribute a diversity of mantled fields that enhance the beauty of the scene immeasurably. Coming to

HASTINGS' STATION,

Clark's coal works will be observed on the right, while the clatter of milk cans on the depot platform leaves little doubt but we are in the midst of a rich dairy district, from whence the "Iron City" is extensively supplied with that nutritious indispensable.‡ Again, continuing our course, we shortly observe, from the left side of the car, an old mill dam or sort of miniature cascade, which marks the spot where probably the first flouring mill in Western Pennsylvania once stood. It was erected over eighty years ago, and shared wide popularity as "Winfield's mill," but it fell a prey to an excessive flood about two years ago, leaving the stream still flowing as if to perpetuate the sentiment of the poem on "The River"—

"Men may come, and men may go,
But I flow on forever."

Two miles brings us to

"BOYCE'S STATION,"

where Boyce's old mill and a few isolated residences alone appear to warrant the necessity for a railroad stopping point, though the eligible sites that everywhere abound for the location of country residences, seem to invite those with means, from crowded cities, in the forcible interrogation—

"However can you, who have means at command,
Inducements of country enjoyments withstand;
To be parboil'd and smoked, in city or town,
'Mid confusion enough to turn brains upside down?"

But we are now warned of our near approach to

HILL'S STATION,

on arriving at which we find it located near the mouth of "Brush Run," and named after Mr. William Hill, an extensive local land owner. There is a splendid ravine running between the hills, opposite this depot, leading to a disclosure of as fine a tract of country as eye could desire to dwell upon. Some fifty rods from the depot and we are in Washington county, receiving the intimation from our brakeman that the next station is

"GREER'S,"

and in due course, at "Greer's" we arrive, that station being so named after a worthy old pioneer by the name of Robert Greer, who still

"Plows and sows, and reaps and mows
In hopes of toil's reward."

His farm, like others in the locality, is an ornament and compliment to the county. Leaving the station, as we gaze from the left side of the cars, the richly wooded lofty hills present a magnificent sight, while the creek still continues within sight of the track. The next stop is at

"VAN EMMANS,"

named after Joseph Van Emmans, who owned property there at the time of the location of the road. From here the hills commence to recede, as it were, and a more open country with leveler grounds continues as we penetrate the county. We next come in view of the original "Morganza" property, once owned by old Col. Morgan, of revolutionary fame, passing which about a half a mile distant, to the right side of the car, is seen the "Morganza Institution," containing some three hundred boys and girls, and commanding about 500 acres of land. It is really the Pennsylvania Reform School, and instead of being entitled to the name of "Morganza," because it is supposed to stand on the old "Morganza" property, the fact is that the property in question was formerly owned by three families named Bracken. The buildings, at the distance, have a very pretty appearance, and near

MORGANZA STATION,

to the left of the cars, will be observed a newly constructed water works to supply the aforesaid buildings. We next approach

"CANNONSBURG,"

quite a town of probably 1,500 to 1,800 inhabitants. Before arriving at the depot, from the left side of the car will be observed a neat fair ground of twenty-two acres, with first-class half mile track. This place was orignally laid out about 1790, and was the seat of the old "*Jefferson College" for some seventy-five years. It is an incorporated town, with Mr Espee as burgess, and boasts beside a grist and planing mill, a fulling mill, excellent lime-stone quarry, coal mines, wagon and smiths' shops, &c. It is quite an interesting country town, surrounded by a wealthy agricultural district. Between here and Washington, a distance of some six miles, there are three other stations, viz:

"HOUSTON'S," "EWING'S MILLS," AND "COOK'S,"

with interesting scenery much similar to that marking the previous portion of the route—if anything different, perhaps affording more extended views. Each of said stations is named after a prominent resident in its neighborhood, and though barely distinguishable by the scattered private villas and farm residences, each alike, is conveniently positioned in a rich and prosperous agricultural territory.† Arriving at the ancient town of

*"The Whisky Insurrection" of 1791-4 grew out of an attempt to collect an excise tax on this liquor, in Western Pennsylvania.

†This stream is the only object in the "Pan-Handle Territory" upon which history has unquestionably fastened the derivation of its name upon an Indian chief. It is named after the famous "Indian Peter," who came to that stream every year in early days, to make salt, and of whom the Pittsburgh *Leader* recently remarked: "In Brownsville is the remains of an Indian grave-yard, where lies the body of the famous chieftain, 'Indian Peter,' who for many years led his warriors in battle against the white settlers, but afterwards relented and distinguished himself as the peace advocate among the Indians, at the conference held in 1767 at California, seven miles down the river."

‡A competent literary authority writes from the "Nail City" as follows: "The farms of their Chartier's Valley are the richest the State affords, and the product of their dairies ever meet with a distinctive preference in Pittsburgh market, while I am assured that the ice cut from the Chartier's creek is the purest andmost extensively sought after for scientific and medicinal purposes."

*This institution was recently removed to Washington, Pa., where it was incorporated with the Washington College, the two still being conducted there as "The Washington and Jefferson College."

†Desirable locations for country homes we should remark, however, are not confined, to the Chartier's Valley. As far west as Steubenville, on either side of the Pittsburgh, Cincinnati & St. Louis Railway, property possessing peculiar advantages of location, and at convenient distances from Pittsburgh, can be purchased at low prices and on the most liberal terms.

WASHINGTON,*

the seat of Washington county, and terminus of this branch of the P. C. & St. L. Ry., we found the conveniences and attentions of a first-class depot. Upon making the acquaintance of Mr. D. I. Roberts, the efficient and gentlemanly agent, we were not slow to find in him a rich fund of local information for one who was simply making an inquisitorial excursion. The earliest settlement of Washington extends away back in the last century and there was a time, in the early part of this century when it was a place of considerable importance for those days, while at present it can boast of a population in the neighborhood of five or six thousand inhabitants. It is an incorporated town with Mr. Samuel Hazlett for burgess, and is an important educational center. Here are located the "Washington and Jefferson College," Dr. G. P. Hayes, president; "Washington Female Seminary" (with few if any equals in the State) Miss Sherrard, principal; and a new Episcopalian Preparatory College, just about to be opened under the direction of the Rev. Samuel Earp. There is also one of the finest public schools in Washington to be found in any part of America, under the superintendence of Mr. Welsh, late of Syracuse, beside capital union and night schools in prominent parts of the town. Washington has grown very considerably in the past nine or ten years, but is not characterised for its manufactures. It has, however, two excellent carriage works, small agricultural works, flouring mills, woolen mill and steam tannery. Nor should we omit to mention the fact that Washington is the seat of Dr. Le Moyne's noted crematory, that has of late years engrossed so much public attention in scientific circles. The town has a capital Court House, and the stores are, for the most part exceedingly fine, two of them in particular, presided over by Mr. Caldwell and Mr. Smith, respectively, being of metropolitan proportions and worthy the leading thoroughfares of the largest cities in the Union. In the matter of railroad facilities, in addition to the P. C. & St. L. branch terminating here, the "Hempfield Branch of the B. & O.," and the Waynesburg narrow gauge line runs into Washington, but Wheeling being thirty miles distant and Pittsburgh only thirty-one miles, of course these towns take much local trade, and the latter, being so much the larger commercial center, it is looked upon as the prominent market town for the district. Washington—particularly the eastern portion of the town—owes much of its growth to the facilities afforded by the Chartier's Branch of the P. C. & St. L. Ry., which has not only cultivated an immense business in the past but is to-day developing the entire country along its line of road at a marvelous pace. In the matter of literary publications, Washington is fully up to the standard. So early as 1808, the *Reporter* was commenced and found hearty support. In 1817 the *Examiner* also came into circulation, and in 1851 the *Review* was issued—the latter becoming consolidated in 1865, as *The Review and Examiner* (Democratic) under which title the said publication is still carried on efficiently by Messrs. Johnson & Neale. The *Washington Observer*, a first-class (Independent) weekly, entered the field in 1871 and is still very ably and successfully run by Messrs. Shellman & Campbell. The *Elevator*, a Temperance monthly, came out in 1874, being issued by Messrs. Johnson & Neale, and the *Evening Reporter*, a live little daily, with capital circulation, was launched in 1876 by Messrs. Moore & Christman. Nor is this all, for last year, 1878, Mr. A. H. Ecker also came forward with the *Washington Democrat*, which is also finding a wide circulation. Nor should we omit to state that Messrs. Shellman & Campbell, with their characterstic enterprise, last year circulated *The Farmer's Advocate*, issued quarterly with an immense free circulation that induced extensive advertising patronage.

*Washington county, Pa., of 1781, may very justly claim an existence as a portion of Virginia under the original charter granted to Sir Walter Raleigh, by Queen Elizabeth, on the 25th day of March, 1584. James I., in 1606, divided the entire colony between the London and Plymouth land companies, and the southwestern portion of Pennsylvania, claimed by Virginia, belonged to the Plymouth land company. Charles I., being successor to James, gave extensive grants of lands to Lord Fairfax and Lord Baltimore, which caused much difficulty in 1634. Virginia was divided in eight shires or counties, which, since the Revolution, have been further divided into one hundred and fifty-two counties, of which fifty-three are in Virginia. The original act of the Legislature of Pennsylvania under date of March 28th, 1781, gave to Washington county its metes and bounds. The borough of Washington was a portion of Strabane township, and was originally called "Catfish Camp," from two facts: first, from an Indian Chief by the name of Catfish, of Kuskee Indians, who owned the land so early as 1759. The stream also bears his name. Then, again, in 1769, when David Hodge purchased the three tracts of land from the Hunter family, the patent designates one as catfish camp, because it was the resting place of persons traveling from Red Stone Old Fort to Wheeling—hence it was called "Catfish Camp." When the town was laid out by David Hodge, October 13, 1781, he gave it the name of Basstown, but on the 4th of November, 1784, the name was changed to Washington. On the 18th of February, 1810, it was incorporated as a borough, and its limits were extended in 1854.—*Illustrated Pennsylvania*, by William H. Engle, M. D.

WHEELING JUNCTION TO WHEELING.

How we were Wound Round the Charming "Skirts" of West Virginia in Full View of Ohio's Most Attractive "Dress," Decked in Verdant Green and Animated with Natural Ornamentations of Matchless Interest.

A Fascinating Section of Country, Abounding in Lovely Locations for the Establishment of Rural Homes, and where a Peaceful Life can be Spent with Economy, Ease and Comfort, to the Enhancement of Worldly Prosperity and Old Age.

There is, probably, no section of road identified with the entire "Pan Handle" system equally meriting of special comment with that included in the above caption. Except it be the superbly rich district so familiar as the "Chartier's Valley," extending from Mansfield to Washington, Pa., though the special attractions of the two widely differ in their geological aspect—the superior expanse and animation, marking the surface of the Ohio river, also affording a wide contract, as compared with the still graceful windings of the famous Chartier's creek. Indeed both lines of railroad so abound in magnificent prospects that it would be impossible—along one or the other—for the most fastidious not to gratify his peculiar taste, in a pre-eminent degree, should he be in quest of a location to

"Share God's bounty in a rural home,
And sip life's sweetest draughts."

Leaving Wheeling Junction, under the experienced "conductorship" of Capt. Tate—whose affability and attentions, it may be said, have inseparably associated his popularity with that of the road—our attention is first attracted by the singular comparison of sights here afforded by the two States of Ohio and West Virginia—separated by that ever restless and historical stream, the Ohio river. To the left, towering above us, we commence to follow a continuous chain of lofty hills, thickly wooded, and presenting the grandest display of rich and varied foliage, once forming a covert for roaming beasts of prey, but now intersected with wild flowers, winding paths, and not unfrequently patches of nutritious herbage. These hills are, however, in many parts, too steep for pasture or adoption to agricultural pursuits, hence their forest like attractiveness has become so little impaired at the hands of our enterprising pioneers, while their rocky nature, below the subsoil, is frequently disclosed by rude stony projections and naturally formed grotto spectacles, of rare attractiveness, in the solid rock. To the right, as you sit facing the engine, a few rods from the depot, the first building (an old frame) still bears the almost obsolete sign of the "Pan-Handle House," and was the original ter-

minus of the first railroad cut in this section. But it now stands only a rude relic, with the old stage coach, well calculated to inspire us (in these days of progression) with the poetic sentiment of

"Who weeps for the days that are gone?
Not a man that can think—not one!"

Beyond it we take in a magnificent view of the fine bridge constructed by the P. C. & St. L. Ry. Co., spanning the river, and from its western extremity breaks upon our vision a fine view of the city of Steubenville*—its noble court house, ecclesiastically designed temples for Divine worship, manorial residences, secluded villas, and even busy streets, with here and there pillars of smoke ascending in the air in testimony to its importance as a manufacturing centre and as a hive of commercial industry. It will further be noticed that while we are being comfortably "carried around" the margin of West Virginia "on iron rails" we have the satisfaction of observing, (across the river) others, by the car load, being similarly treated in Ohio, on the track of the "Cleveland & Pittsburgh Railway," which likewise contributes its aid to enhance the business interests of the town and county seat just referred to. Nor is the river less condescending in rendering its best services for Steubenville's prosperity, it runs—(for it never stands)—between us and the corporation line of the latter place. But we are nearing our first stop, prior to which, will be observed on the left a delightful glen recently cleared by Mr. Wells (who is owner of the property) for the reception of visitors, and named by Mrs. Dr. Reid, "Fairy Glen," to which our readers might with pleasure and profit turn their attention. In short, a more inviting field for mineralogical and botanical research—and to indulge a free and agreeable picnic, neither the States of Ohio or Virginia can boast. And yet a little further, to the right, at a somewhat declining position from the track is the fine old mansion owned by Nathaniel Wells, Esq., the veteran worker in the people's cause, who so successfully operated in conjunction with a Mr. Edgington in opening up the first railroad that ever run in the vicinity of the present Wheeling Junction, then known as the "Edgington and Wells Railroad."† We now arrive at

MIDDLE FERRY,

as its name implies, being so called because it is the centre one of three ferries connecting on this side with the P. W. & Ky. line. As we draw up at the platform, (for station house there is none,) the ferry will be observed on the right, a small steamboat plying across the river every ten minutes to Steubenville landing (320 yards) which will probably be best located from the cars on this side by noting the foot of the slip directly in front of a fine hotel building, on the opposite side, displaying in bold letters the sign of the "St. Nicholas House." On this side there are only two or three isolated houses beyond the residence owned by Mr. Wells, whose family originally owned the major part of the tract of land here located, but Mr. Nathaniel is said to retain only some 200 to 300 acres of it, while he also controls the ferry to Steubenville. And now we must be pardoned for a somewhat lengthy comment on a subject of exceptional interest. Mr. Wells is here the fortunate possessor of some 200 acres of magnificent hillside property, which he generously throws open to the public, year in and year out. A spot, we believe, unsurpassed in America to which excursionists may resort, with equal pleasure and profit, in the investigation of geology, or in fact, the study of any other perfective characteristic in nature. The property in question—a hill rising to an altitude of about 300 or 350 feet, is not only owned, *but in person* cared for, by Mr. Wells, and has been aptly termed "one of God's most inviting gardens." "Anterior to the present owner coming into possession of the said property in 1836"—recently remarked that live local daily paper, the *Steubenville Gazette*—the entire area of the hillside was without a step, walk, plateau or even seat, but he having liberally made provisions in all these respects, we ascended two tiers of steep wooden steps that landed us, with weary legs, upon a rugged path at an altitude of about 150 feet, and we took to the left, under the shade of rich foliage, where only a few yards ahead a seat awaited us with two ever flowing streams of crystal water. Proceeding a little farther we came to a platform provided for picnic dancing parties, seated around—and having rested, we advanced only a litle further along a zig zag path till we arrived at the famous "Blowing Spring," so named from the blowing sound it makes during springing—equally as loud as a jeweler's blow pipe, though continuous. Here Mr. Wells originally found a cave filled with broken fallen rocks, which he had removed, affording a space of seventy-six feet by seven feet and seven feet high, presenting all the grandeur of the caves on St. Michael's Mount, in England, where the tradition of "Jack the Giant Killer" was founded. Cold, sullen and sepulchral hang the surroundings, and the echo of the voice seems to arouse the inwardness of the conscience as one approaches the spring, with the words, "Let us drink." A neatly cut trough is provided, as also seats for visitors, and though we pass this object of interest, comparatively lightly, to take a general survey, believe us, reader, it forms a conundrum for the scientist and a mystery to the world. It blows at intervals, and would seem to stop at pleasure, but defies all definition. Continuing our course yet 200 yards, we come to "Diamond Springs," cracks resembling a diamond as the pure water gushes from the crevices. Subsequently passing the "Twin Springs," the rugged grotto scenery presented, is indeed rich, but yet another 200 yards, and we are confronted with the gigantic "Parlor Rock," having the appearance, as one gazes upwards, of a pantomimic scene of leviathan cliffs of 150 feet overhanging us in honeycomb splendor, the result of the weather's operations, yet perfectly awe-inspiring in its grandeur. Still further and we approach the favorite seat of the late Secretary Stanton, formed in a cliff at least 100 feet high, where, in his youth, he resorted to study in seclusion—hence to him was it dedicated. As we here stood and beheld the sublime work of the "Great Master," with a deep ravine at our feet, the lofty trees striving in vain to tip the mighty rocks, and contemplating that we were treading the paths of the red man centuries ago, we could not desist musing—

"How trivial man's conceptions, Lord,
When thou reveal'st thy works."

In exquisite grandeur the towering oak, the beech, sycamore and sugar tree, with scores of others, at immense altitudes, would seem to have grown to shelter secluded spots in the gigantic rocks. Passing "Stanton Rock" we ascended yet sixty feet, almost perpendicular, and arrived at the summit of the hill, indulging the most exquisite panoramic bird's-eye view of the city, until locating the top of the steps we ascended and took our course to the right. Then came another plateau, where swings were erected, and the rough grandeur of the rocks again seemed to tower as if laughing at the humble attempts of the mightiest trees to reach them—such a scene of grotto, and natural wrought rustic beauty, the naturalist seldom beholds. Arriving at the "Castle rocks," we found them presenting an invincible front high as the cedars of Lebanon, and equally grand in grotesque beauty presenting the veritable home of the famous sea king

"Who calls all he has, for his own,
In one hundred fathoms deep."

But we must hurry up. Rounding the south end of the hill we return by the track of the P. W. & Ky. R. R., and soon sight a magnificent isolated spiral rock called the "Devil's

*For further account see trip over main stem.

†Fully described in a foot note under the head of "History of the P. C. & St. L. Ry,"—in the first chapter.

Pulpit," some 200 tons, standing forty feet high, and resting on a pivot of about ten inches in circumference—to look at—just the kind of treacherous box one's idea would depict to place his "Satanic Majesty" in, to get rid of him. But still grander we next come to one of the finest and most perfect Indian sepulchres ever witnessed in this country, discovered in 1834, internally 18 feet by 7 feet, egg-shaped, and 7 feet high in the centre—hewn out of one huge solid stone, centuries ago. When found it was filled with human skeletons that lay in a mass huddled together, grinning at the explorer as he removed the stone from the entrance. This is really one of the most valuable and interesting curiosities we ever saw. From here, on to the ferry, the woodland crested hillside is splendid to behold, while rabbits gambol and squirrels chirp to bid the visitor, as it were, a welcome to their rural home of nature's grandeur. Resuming our trip along the smooth running track (in which there is a graceful winding), we next arrive at

LOWER FERRY,

where a small ferryboat runs across to the Ohio shore, in the vicinity of the famous "Jefferson Furnace and Nail Works,"* clearly visible from our car. Here we find a platform only and a few houses to the right of the track, while we also pass the railway company's gravel bank from which they obtain the greater part of their rough ballast for the tracks. And soon we come to

MAHON'S,

simply a crossing, near to which, on the left, is the fine brick residence of Mr. Thomas Mahon, a well-to-do farmer, more familiarly recognizable as "Uncle Tom," being a worthy "disciple of the plow," whose affability and genial turn of mind retains for him universal respect. But, not being afflicted with neighbors to disturb him "on the even tenor of his ways," he can well afford to be "Uncle" to a whole community and keep in store an ever ready friendly greeting for all. Not far distant is Mr. Burgoyne's farm, and adjoining to it is Mr. Devinney's land. Opposite will be seen from the right side of the car, and across the river, "Mingo Iron Works," with the village (or "Mingo town") in the rear of it, that spot being associated with highly interesting reminiscences as recorded in Indian history and the early settlement of Ohio by the whites. Passing over about another mile of the most interesting part of the road, we suddenly hear the announcement from our brakeman that we are at

CROSS CREEK.

This is certainly a beautiful and secluded spot, with somewhat more the appearance of business than the last place. There is a platform and switch, with a warehouse, owned by Mr. C. Devinney, who purchases grain, wool, &c., besides acting as depot agent. Soon after leaving the depot we cross a bridge spanning Cross creek, where it will amply repay to secure a view from the platform of the rear car. The surface of the Ohio, dotted with steamers, barges, &c.; the lovely distant hills, vales and magnificent farm lands of the "Buckeye State," and the picturesque view of the Pittsburgh and Cleveland Railroad, on that side of the river, contribute to a scene of rare attractiveness. A few moments and our fleet locomotive dashes past the coal mines, owned by Mr. Lazear, located on the left of the track, and we find ourselves at

LAZEARVILLE,

a rural stopping point named after Mr. Lazear, a prominent director of this line, residing at Wellsburg, and who laid out a little town here about the time the road was opened. We may take occasion to compliment that gentleman's excellent judgment in the selection of so delightful a spot to induce the erection of suburban residences. The healthful advantages rare prospects, exceptional facilities and fertility of the soil here afforded, will be found matchless, while we understand that the liberal terms submitted are such as to merit the immediate and careful consideration of all desiring to establish for themselves a delightful country home. There are, however, at present only some half dozen sites taken and residences erected thereon, which leaves abundant choice for intending purchasers. Leaving this depot, from the left of the cars, we soon observe Brook County Cemetery, one of the finest burial grounds in this section of the State, being neatly laid out, abundantly shaded with drooping trees and shrubs, and containing a rare variety of imposing monuments, tombstones, tablets, &c. The major part of the bodies originally buried in the old Wellsburg cemeteries were, upon its opening, exhumed and reinterred here. This cemetery, however, has only been opened some fifteen years. An amusing incident is related of an Eastern traveler, who, upon passing Lazearville depot, remarked, "Well, well! bless me, that's a remarkable good-sized cemetery for so small a town," little dreaming it was the representative institution of an entire county. About a mile hence, and to the right, we come in view of a very fine fair ground, with excellent race track and extensive outbuildings, within the corporation limits of Wellsburg, the annual meetings at which are invariably a great success, enjoying a widespread popularity for fine stock and the enjoyment of first-class turf indulgences. Across the river will be seen the coal works of the Pittsburgh Coal and Iron Company, on the track of the C. & P. R. R., just before Lagrange depot is arrived at on the same line. It is a prosperous enterprise, and employs quite a large number of hands. Nearly opposite the fair ground, on the left, is Mrs. Freshwater's fine residence, probably one of the most attractive in the county, while several other charming residences, on the same side of the track, we continue to view until our train arrives at

WELLSBURG,

the county seat of Brooke county. It is said there are few cities in the State, either older* or as old as this, while in the annals of history its record in the past has furnished an unlimited amount of exceptionally interesting reading. Across the river, though not seen from the depot, is Lagrange, Ohio, quite a little village. Wellsburg is a solid business place of about 2,500 inhabitants, being largely supported by a wealthy and successful agricultural community. It is possessed of capital schools and ample church accommodation, while the stores throughout the town are thoroughly stocked and presided over by men of superior business tact and experience. There are two excellent weekly newspapers printed here, which jealously guard the interests of the ancient borough—the *Herald*, owned and most ably edited by a Mr. Jacob, and the *News*, controlled with ability and enterprise by Mr. A. Glass. Good hotel accommodations are provided, and the general good order of the city—its healthfulness and numerous other advantages—make it a most desirable locality in which to live. In the way of

*Few places are equally favored with Steubenville in the location of so extensive and successful an enterprise as this. The grounds occupied by the Jefferson Furnace and Nail Works may be fairly estimated at twenty acres, whereon are erected two very large blast furnaces, and two exceptionally fine nail mills or factories. There is also a prolific coal mine connected and one hundred and thirteen coke ovens, the latter, when in full run, contributing in the neighborhood of five thousand bushels of coke per day. The mine and ovens are only about eighty or a hundred yards from the main buildings and connected with a track, the entire product of both mines and ovens being consumed in the works. This firm manufactures 100 to 120 sizes and varieties of nails, from three-quarters of an inch to seven inches long, and the capacity of the works is 180,000 kegs, or 9,000 tons per year. They employ, on an average from 500 to 550 hands, paying out for wages every two weeks $12,000, in addition to which, for limestone and kegs, bought locally, with a host of incidental expenses, another $2,500—or an aggregate of $348,000 a year. Mr. D. Spaulding is president and takes general supervision; Mr. Calvin B. Doty is vice president, and, as a practical nailer, is superintendent of the nail department; Mr. C. H. Spaulding is secretary.

*Report has generally had it that Wellsburg was laid out in 1795, but records on file in Ohio county Court House show that at the January term of the county court of Ohio, in 1791, Charles Prather produced the plat of "Charlestown" (now Wellsburg) in open court. Moses Chapline was clerk of the court at the time, and Jas. Griffith was the surveyor who surveyed the plat of "Charlestown." Not bad authority to settle the subject.

manufacturer, there is a capital paper mill, reaper and mower establishment, carriage and smith shops, mills, &c. Those taking a lively interest in historical research and who may be desirous of locating a villa residence in the country—still commanding the advantages of ready access to a live town—can select no finer place than the vicinity of Wellsburg. Mr. James Hervey is at present Mayor of the city, and may be congratulated upon his good fortune to preside over so interesting a county seat and so prosperous and peaceable a community—one special good feature in the local government of this borough precludes the establishment or conduct of any saloons or restaurants where intoxicating liquors are provided for public indulgence. Senator W. H. Tarr, of the West Virginia Legislature, and a member of an old and influential family in this section, resides here. In addition to occupying a very fine country seat himself, he also owns other attractive residences in the city and is a gentleman exceedingly popular. There is a depot here, the principal one between the Junction and Wheeling, at which is found a telegraph office, express agency, &c., and Mr. J. P. Kline is the respected agent, most indefatigable in his attentions to business. Leaving Wellsburg, about a quarter of a mile and we cross Buffalo creek, the mouth of which Washington and Crawford visited in 1770, while it is a stream most popular in historical lore, both for its adjacent hunting grounds and for being where

"Reckless chiefs and wiley braves—
Blood-thirsty—lurk'd around,
Our noble pioners to find
And fell them to the ground."

From the left we soon observe the neat white frame residence of Mr. Forbes, partner in the firm of Forbes and Carmichael, whose coal shoot crosses the track a very short distance further on, and from which the engines on this line are supplied with coal. Next we cross the Wellsburg and Beech Bottom county road, which crosses our track several times. Having also witnessed Bowman's coal chute, on the left, we are politely informed that we are at

BEECH BOTTOM,

a strictly rural district of singular attractiveness and fertility. Here the country is specially open and the river is temporarily lost to view, though "mother earth," highly cultivated, fully makes up the deficiency with a diversity of crops that strike every one passing with admiration at their perfection. A platform simply marks the stopping point, yet it is one not unsparingly patronized by surrounding residents even from a considerable distance. Nature's richest mantle still continues to surround us until, as we flit past Mr. E. Wells' farm on the left, we come in view of Mr. Robert Miller's homestead.

MILLER'S,

is so named after the Miller family. Mr. Robert Miller and his sons conduct prosperous farms near the crossing and switch here located, but it will be observed that sufficient space has been reserved by the railway company for the erection of a depot at some time—thus suggesting their presumption that this point is destined to future active growth. Immediately opposite the depot, in the midst of a fine field, will be observed an ancient mound, covered with locust trees and surmounted with a rude board stand under their graceful shades. This is what is known as old Beach Bottom race track, but is now only occasionally resorted to for the indulgence of picnics, for which it is a truly charming spot. This, we believe, is the only ancient mound to be witnessed from the cars along this track, though its entire length is through an interesting historical section of country. Across the river will be seen "Rush Run" coal works, doing an extensive business along the Ohio shore. Next comes

HEDGES',

which will again be found a crossing, only, with no houses around it, except one, to the left, which is occupied by a widow lady by the name of Hedges, after whose husband this calling point was named. There is nothing in the vicinity to dwell upon, except the beautiful country scenery, so we will pass on to

WINDSOR.

Here a Mr. Windsor would seem to be, as it were, "monarch of all he surveys," for beyond his own desirable residence, near the depot, there are only some three or four small tenant, cottages—all of which he owns. Mr. Windsor has also a large warehouse at the west end of the platform, from which he ships considerable grain and other produce by water. Mr. John Day also owns a neat farm south of Mr. Windsor's, and this brings us to

SHORT CREEK,

thus named from the creek running under the track west of the depot. Here is a platform, warehouse and switch, also a small store and tavern—"Short Creek House"—the whole in charge of Mr. Joseph Wilson, who further acts as the railway company's agent and keeps the post office. There are probably some forty to fifty persons residing within a brief range; while still further in the country are some capital farms. Across the river from here may be seen the agricultural village of Warren, Ohio—

"A prosp'rous little country town
That's nobly earned its own renown—
Though not remarkable to fame,
It's growing "smart"—and that's the same."

M'CULLOCH'S

comes next, known on the river as "Burns' Landing"—at which Mr. M. McCulloch, an influential farmer, resides—though south of this point nearly the whole of the river front is covered, to Riley's farm. Tiltonville, on the Ohio side of the river, may be fairly viewed from here, situated on the track of the Cleveland and Pittsburgh line, that has run almost parallel with us all the way from Steubenville. Also the extensive farm owned by Capt. Moore.

WILSON'S,

we are acquainted, is the next call, approaching which we observe, in the river, the first of three islands, called "The Sisters," the water in the channel only being navigable on the north side. There is simply a platform again at Wilson's and its name is derived from that of a gentleman who formerly owned the property thereabouts, but it was subsequently purchased by a Mr. Youngman, who resides in the only house near the platform.

LARKIN'S

is a flag station, where passengers are permitted to get their hands into railroading for themselves, by signaling the required trains. The whole region round is delightful for the location of villa residences, which, we shall be surprised if the near future does not bring in goodly numbers; it is, in fact, a rural location that can only be fully appreciated by paying it a personal visit. It is called after Mr. Larkin, a successful farmer residing on the hill, about a mile from the depot, and who is also a member of Wheeling's City Council.

WILLOW SPRINGS,

like the previous stopping point, is surrounded by rural prospects, and derives its name from a fine spring at the foot of a willow in that neighborhood. Mr. J. C. McCord here farms and conducts market gardening for supply to Wheeling market. We find only a simple platform—houses, "like angel's visits," being "few and far between." Looking in the direction of the

river we are now in view of the second "Sister Island," which is frequently flooded, yet each season produces quite a little crop of corn.

GLENN'S RUN.

Near the platform, to the left, will be seen the attractive brick residence of Mr. Barr, attorney at law, and also the summer resort of Dr. Bates and family, of Wheeling. There are no other houses very close thereto, but the district is characterized for extensive garden plats, cultivated to supply city markets. Glenn's Run, after which this stopping point is named, will be observed to run under the track, west of the depot; on the left will also be seen an orchard, known as Green's Grove, freely used for pic nic parties. The middle "Sister Island," seen on the right, is very fertile and farmed by Mr. McCord. Glancing over the river, we begin to site Martin's Ferry and its manufacturing interests—the first four of the latter, in rotation, being Laughlin's extensive nail factory, Excelsior glass works, Ætna mill and Benwood blast furnace, a large keg factory, &c. We are now also passing the third af the "Sister Islands" and the surface of the river affords increasing evidences of maritime activity. Crossing the boundary line between Richland and Washington districts, Ohio county—to which Wheeling corporation limits extends—we soon arrive at the

"TOP MILL,"

a platform that is not only an advantage to the adjacent country people and the numerous employes at the "Top Mill," but also to a large number of citizens of North Wheeling. The extensive manufacturing institution, adjacent to it is the popular "Top Mill," blast furnace and nail works. From here the view of Martin's Ferry, across the river, has largely increased in extent. In addition to its manufactories already referred to, are now visible Spence, Baggs & Co's foundry; L. Spence's agricultural works, "Star" planing mills, Warwood's agricultural works, &c.; also extensive vineyards. Leaving the "Top Mill," other manufacturing institutions crowd upon us, as we proceed in the direction of Wheeling depot, far too rapidly to enumerate in detail, but among them are included prominently Fox & Ott's North Wheeling glass bottle works, Sweeney & Son's foundry and ship building yard, the "Superior" machine works, Bell's stove foundry, Wilson & Dunlevy's keg factory, the city water works, and so on—most of them, if not all, surrounded with residences—the track running parallel with, and only a block from, Main street. On the right side, having passed the ferry, a little south of the "Top Mill," will be observed the commencement or point of Wheeling Island, marked by a gravelly beach, shrubs and trees (Ætnaville iron works, Ohio, being opposite). We now continue to get full views of the Island, at intervals, until the magnificent suspension bridge,* connecting it with Wheeling, comes in full view, and passing under it, a few yards, we find ourselves arrived at

WHEELING TERMINUS,

a fact readily realized from the presence and jargon of over zealous "runners" for the various hotels. The agent here is Mr. J. M. Belleville, by whom the depot is conducted with much satisfaction. Wheeling is the capital of West Virginia and county seat of Ohio county, having a population of some 30,000 to 35,000—it is about 92 miles below Pittsburgh, and by far, the largest and most important city in the State. In addition to being the terminus of the P. W. & Ky. Ry., (of the "Pan Handle" system) it is also the end of the Wheeling Division of the B. & O., and the western terminus of the P., B. & W., or Hempfield Road, while by means of its admirable suspension bridge across the river, easy and prompt connection can be made at Bridgeport with the C. & P. R. R. Wheeling is essentially a manufacturing city and one of steady growth, its main manufactures being iron, nails, and glass, (not forgetting—if you please—stogies.) Her manufacturing establishments number about three hundred, and the value of the articles manufactured annually amount to about $10,500,000—the chief item in which, being nails, having secured for it the style of "Nail City." The real estate, in the city of Wheeling, according to the latest returns, is valued at $9,945,621 00, while the personal property amounted to $4,943,094 00. In the way of street railroads, it has over nine miles of track in operation; with a perfect system of water and gas works. It has some thirty churches and a large variety of religious denominations, with a perfect educational system in the way of schools, colleges and seminaries. There are two first-class daily papers—the *Intelligencer* and *Register*, with some six or eight "weeklies" published in the city, and several hotels—one of them equal to the reception of the most distinguished guests. The architecture of the public buildings and leading business blocks is very attractive and the drives and suburban residences in the extreme city limits, and the environs, are especially interesting and enjoyable. Nor should we fail to remark that Wheeling is also famous as a shipping port, its fleet of fine river steamers having few equals, and contributing immensely to its commercial success, while in the way of boating, for recreation, it has some six or eight excellent boat clubs, out of which successful oarsmen have been produced, who have spread the name and fame of the "Nail City" even far wider than we can hope to accomplish by the publication of this brief sketch of

A TRIP FROM WHEELING JUNCTION TO WHEELING.

*This bridge, one of the largest, if not *the largest* single span structure of the kind in the world, spans 1,010 feet from the summit of the towers on the opposite shores, each of which stands 153½ feet above the low water level of the river. The highest elevation of the flooring is immediately over the channel of the river, 212 feet from Wheeling shore, where the top of the flooring is a fraction over 93 feet above low water. The hight from low water to the *bottom* of the flooring, *i. e.* the lowest projecting timbers, is 91½ feet leaving that space for the passage of steamers and vessels. Resisting strength, 297 tons. Engineer, Charles Ellett, jr., Esq.

PITTSBURGH, WHEELING & KENTUCKY RAILWAY.

ITS ORIGIN, PROGRESS AND SUCCESS—WELLSBURG ENTITLED TO THE HONOR OF ITS INCEPTION.

"From small acorns giant oaks grow," was never more forcibly illustrated than in the inception and success of the above road. So far back as 1867 and 1868, the seat of justice for Brooke county saw no good reason why the "giant achievement of the iron age" should not be her privilege as well as that of neighboring towns. Or, in other words, why Wellsburg should not be included on the "march of progress" by commanding railroad facilities commensurate with her necessities. Accordingly, J. H. Pendleton, Esq., L. Applegate, Esq., A. Kuhn, Esq. and Thomas Everett, Esq., all of Wellsburg, put their heads together—raised a capital fund necessary to comply with the law—$20,000—and J. H. Pendleton drew up the charter for a road to connect with the old "Pan Handle" line. Now, in evidence of the popular chord they had struck, we next find the common council of Wellsburg discussing their enterprise, which resulted in that corporate body voting a sum of $200, payable to the order of Messrs. Thos. Everett, Adam Kuhn and J. H. Pendleton, to be used at their discretion for the purpose of securing a charter for their proposed road. An application was duly made to the Legislature of West Virginia, and the charter granted on the 17th of July, 1868, as follows:

AN ACT TO INCORPORATE THE "PAN HANDLE RAILROAD COMPANY.

(Passed July 15th, 1868.)

"Be it enacted by the Legislature of West Virginia that for the purpose of constructing a railroad from the Holliday's Cove Railroad in Brooke county, to the town of Wellsburg, and thence to the city of Wheeling, it shall be lawful to open books

in the town of Wellsburg, under the direction of Adam Kuhn, Thomas Everett, William H. Harvey, Lewis Applegate, and A. M. Buchanan; and in the city of Wheeling under the direction of Sobieski Brady, Thomas Sweeney, J. C. Acheson, Thos. H. Logan and Andrew Wilson, and at such other place or places as the commissioners or any three of them may decide, and under the control of such other agents as they may appoint, for the purpose of receiving subscriptions to an amount not less than twenty thousand nor more than five hundred thousand dollars, to be divided into shares of fifty dollars each. And so soon as the sum of twenty thousand dollars shall have been subscribed, the subscribers, and those who may hereafter become associated with them, and their successors, shall be, and they are hereby incorporated by the name and style of "The Pan Handle Railroad Company," subject to all the provisions and entitled to all the benefits now conferred by law upon internal improvement companies, (in which the State has no interest) and especially to the provisions of chapters fifty-six, fifty-seven and sixty-one of the code of Virginia, edition of 1860, except as herein otherwise provided. In all meetings of the stockholders, each share-holder shall be entitled to cast one vote for each share of stock he may own, and should the amount of stock subscribed, be in the judgment of the directors, insufficient to complete and equip said road, it shall be lawful for the said board to borrow, from time to time, such sums of money as it may deem proper, at a rate of interest not exceeding seven per cent, and secure the payment thereof by a lien upon their road and property, or such portion thereof as they may deem advisable. It shall be lawful for the boards of supervisors of the counties of Brooke and Ohio, respectively, to subscribe, on behalf of said counties to the capital stock of said company to such an amount as to said board may seem proper, provided the assent of the voters of said counties be first had thereto, the same to be ascertained in the manner provided by the ninth section of chapter seventy-eight, passed October 21st, 1863; but said section shall not otherwise apply to the subscription herein authorized; and should such subscription be made on behalf of said counties, or either of them, it shall be lawful for the board of supervisiors to raise the money necessary to make the same by issuing the bonds of the counties, respectively, bearing interest payable at such times as such board may deem best, and provide for the payment of the same at maturity, as in other cases of county indebtedness, and may also exempt said bonds from taxation for county and township purposes. The provisions of this section shall apply to any of the townships of said counties. The like authority to subscribe to the capital stock of said company, such an amount as she may deem proper, is hereby conferred upon the city of Wheeling, the assent of her voters being first had and obtained in the manner now provided by law. The Legislature reserves the right to alter or amend this act."

Once in possession of this act we find them imbued with still stronger confidence and seeking for an extension of franchise, for under date of March 1st, 1869, they further obtained the following:

"AN ACT TO AUTHORIZE THE PAN-HANDLE RAILROAD COMPANY TO EXTEND THEIR ROAD TO THE KENTUCKY STATE LINE.

"Be it enacted by the Legislature of West Virginia, that the Pan-Handle Railroad Company, incorporated by an act passed July 15th, 1868, shall have authority to extend its road from the city of Wheeling in the direction of the Kentucky State line, through each section of the State contiguous to the Ohio river as said company may deem most desirable. The counties and townships through which the extension hereby may pass, shall respectively have the same rights to subscribe to the capital stock of said railroad as by the fourth section of said law are conferred upon the counties of Brooke and Ohio, and may raise money in like manner and upon similar terms. The Legislature reserves the right to amend or reppeal this act."

It will be observed that up to this time the style of "Pan-Handle Railroad Company" had been adhered to, but receiving their new powers, we still further find, under date of February 16th, 1871, another act granting a change in their corporate title, which reads:

"AN ACT TO AMEND THE CHARTER OF THE PAN-HANDLE RAILROAD COMPANY.

"Be it enacted by the Legislature of West Virginia, that the charter of the Pan-Handle Railroad Company, incorporated by an act of Legislature, passed July 15th, 1868, and amended by the act passed March 1st, 1869, be further amended as follows: The corporate name of said company is hereby changed to the name of the Pittsburgh, Wheeling and Kentucky Railroad Company, and all contracts and liabilities to or from said Pan-Handle Railroad Company shall be transferred to the said Pittsburgh, Wheeling and Kentucky Railroad Company, which shall succeed to all the rights and be responsible for all the obligations of said 'Pan-Handle Railroad Company.' All proceedings or suits now pending on behalf of the Pan-Handle Railroad Company may be prosecuted without delay by the insertion of the name of the new corporation in place of the Pan-Handle Railroad Company, and be tried and decided just as though such change of party had not been made. Any county or municipal corporation or township may subscribe to the capital stock of said company under the provisions of the charter applicable to the county of Brooke and to raise the money necessary to pay such subscription, any such township, county or municipal corporation may issue its time bonds bearing not more than eight per cent interest, and such bonds and their interest, whether heretofore or hereafter, shall be exempt in the hands of the holder from all taxation other than for State purposes. The maximum capital stock of the company is hereby fixed at eight millions of dollars, or such less amount as may be fixed by the board of directors of said company, and the board are authorized to receive subscriptions of land and other property from persons or corporations in payment of subscriptions to the capital stock upon such equitable terms as may be agreed to by the board and such subscribers, which land or property shall be disposed of by the company as soon as practicable at fair prices. The said company shall not construct their work within less than twenty feet of the dwelling of the land owner without his consent, but this prohibition shall not apply to tenant houses, nor to towns where the consent of the corporate authorities to use the street has been obtained."

In proof of the popular interest manifested in Ohio county for the opening of this road, it may not be out of place to give the vote taken in January 1872:

		For.	*Against.*

West Liberty	"	15	187
Total,		2,588	494

At the first meeting of the directory, Mr. J. H. Pendleton was unanimously appointed counsel for the company, and he has ably filled that responsible position to the present time. Capt. John McLure, also of Wheeling, was not slow to appreciate the

importance of the enterprise, and with his characteristic enterprise and energy cast in his willing and valuable coöperation to have the road completed through to the "Nail City."

A capital of between $300,000 and $400,000 was decided upon to open up a track. Brooke county handsomely contributed $115,000, and Ohio $245,000, added to the original $20,000 subscribed from private funds by the charter members or incorporators. The work was got under way about 1870 and pressed forward until completed. The sum of $365,000 was expended, but $15,000 of the original private stock has not even been paid up yet, though means for its recovery are in operation. For the sum named ($365,000) the company completed the grading, which, by the way, was very favorable to their limited means; and also constructed all necessary bridges and culverts. There are certainly no tunnels on the road, but three heavy bridges, crossing "Cross Creek," "Buffalo Creek," and "Short Creek," aggregated from $6,000 to $10,000 each, while some of the massive culverts were almost as expensive as bridges. The construction in question was managed in two divisions, the upper one being entrusted to a Mr. Barclay, and the lower one to Messrs. Hill, Case and another gentleman whose name we have been unable to ascertain. About 1874, however, circumstances transpired necessitating a cessation of work for some eighteen months, when a new contract had to be entered into with the P., C. & St. L. Railway Company that enabled them to complete the work of construction. By virtue of a lease extending over ninety-nine years, the P., C. & St. L. Railway Company, then laid the rails, put on the rolling stock, and on the 25th day of February, 1878, ran their first train, since when the road has continued in operation and daily improved in every respect. The first president of the company was Mr. Adam Kuhn, the second Mr. Lewis Applegate, and third Mr. Chester D. Hubbard, of Wheeling, who still retains the position. The construction of this road is of the most substantial and safe character,* and depots are being erected as required. With their accustomed liberality, the P. C. & St. L. Railway Company offer every inducement and facility for the encouragement of excursions over this road, and from the number of special trains they are called upon to run, together with the rapid growth of their regular traffic, show how highly the public appreciate their liberal and attentive catering. Another important feature about the P. W. & Ky. (or as many call it the "Pe-wy-ke") is the fascinating route (for river and rural scenery) it affords between Wheeling and Pittsburgh.† Particularly should we refer to a novel feature they have adopted in the regatta season. During the Wheeling regatta and boat races—their track running parallel with and close to the river—they put on a special regatta train, with open cars, and run slowly abreast of the boats over the track in each race, which largely enhances the pleasure of visitors to those annual aquatic gatherings—a privilege that has met with unbounded support. Nor has Brooke county annual fair shared less advantage from the opening of this road, as special trains also largely increase the attendance thereat, while the increased shipment of grain induced by its extra facilities is no inconsiderable item, as the road runs through probably one of the most valuable and prolific sections of the State.

*See general history of P. C. & St. L. Railway.
